

MELSOFT

SCREEN DESIGN SOFTWARE

# SW1DND-GTWK3-E

GT Designer3 (GOT2000)  
Screen Design Manual

# SAFETY PRECAUTIONS

---

Be sure to read these instructions before using this product.

Before using the product, read this manual and the relevant manuals introduced in this manual carefully and handle the product properly with full attention to safety.

Note that these precautions apply only to this product.

In this manual, the safety instructions are ranked as "WARNING" and "CAUTION".

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

Indicates that incorrect handling may cause hazardous conditions, resulting in minor or moderate injury or property damage.

Note that failure to observe the  CAUTION level instructions may also lead to serious results depending on the circumstances.

Be sure to observe the instructions of both levels to ensure personal safety.

Please keep this manual in accessible place and be sure to forward it to the end user.

## [Test Operation Precautions]

---

- When testing the operation (For example, turning bit devices ON/OFF or changing the current value of a word device value, the current or set value of a timer/counter value, or the current value of a buffer memory value), thoroughly read the relevant manual to fully understand the operating procedures.

When testing, never change the data of the devices that control the operation essential for the system.

Incorrect output and malfunction may result in an accident.

## [Precautions for Use of the Data Storage]

---

- If a SD card installed to Drive A of the GOT is removed while the GOT is accessing it, the GOT may stop processing for about 20 seconds.

In the meantime, you cannot use the GOT and functions which operate in the background (including the screen refresh, alarms, loggings and scripts) also stop.

The effects to the system operation may lead to some troubles.

Check that the SD card access LED is off before removing the SD card.

- Do not remove the data storage from the file server (drive N) that is being accessed by the GOT, or the system operation may be affected.

Before removing the data storage, check the relevant system signal to make sure that the data storage is not being accessed.

- If the data storage installed to the GOT is removed while the GOT is accessing it, the data storage or files may be damaged.

Check the SD card access LED or system signals to confirm that the data storage is not being accessed before removing the data storage from the GOT.

## [Precautions for Remote Control]

---

- Remote control is available through a network by using GOT functions, including the SoftGOT-GOT link function, the remote personal computer operation function, the VNC server function, and the GOT Mobile function.

If these functions are used to perform remote control of control equipment, the field operator may not notice the remote control, possibly leading to an accident.

In addition, a communication delay or interruption may occur depending on the network environment, and remote control of control equipment cannot be performed normally in some cases.

Before using the above functions to perform remote control, fully grasp the circumstances of the field site and ensure safety.

- When operating the server (GOT) of the GOT Mobile function to disconnect a client, notify the operator of the client about the disconnection beforehand. Not doing so may cause an accident.

---

## [DESIGN PRECAUTIONS]

---

- To maintain the safety of the system incorporating the GOT, take measures against unauthorized access from external devices via a network.

To maintain the safety against unauthorized access via the Internet, take measures such as installing a firewall.

---

## [Precautions for Exclusive Authorization Control]

---

- Make sure to fully understand the GOT network interaction function before using this function to control the authorization among pieces of equipment to prevent simultaneous operations.

The exclusive authorization control of the GOT network interaction function can be enabled or disabled for each screen. (For all screens, the exclusive authorization control is disabled by default.)

Properly determine the screens for which the exclusive authorization control is required, and set the control by screen.

A screen for which the exclusive authorization control is disabled can be operated simultaneously from pieces of equipment. Make sure to determine the operation period for each operator, fully grasp the circumstances of the field site, and ensure safety to perform operations.

# CAUTIONS FOR USING THIS SOFTWARE

---

## ■1 Memory capacity and hard disk space of a personal computer

For the required memory capacity and hard disk space, refer to the following.

→1.1.1 Operating environment

## ■2 Error message displayed at this software startup or during data editing

[Operation will be terminated because of insufficient memory. Would you like to stop?]

If the above message appears, exit some running applications or restart Windows to create enough memory space.

## ■3 Changing a device type

When a word device is specified with a bit, if its device type is changed from the bit device to the word device, the device is displayed as [??] depending on the settings.

If the device is displayed as [??], set the device again.

Example) D0.b0 → D0 D0.b5 → ??

## ■4 Windows setting

If the default Windows font size is changed, GT Designer3 windows or others appear improperly.

Use this software with the default Windows font size.

### INTRODUCTION

---

How to Use Help .....	A - 26
List of Manuals for GT Works3 .....	A - 27
Abbreviations, Generic Terms, Model Icons .....	A - 29
Graphics Mode Icons .....	A - 36
Terms List .....	A - 37

### FUNDAMENTALS OF GT Designer3

---

1.1 Basic Description of GT Designer3.....	1 - 2
1.1.1 Operating environment .....	1 - 3
1.1.2 Supported models .....	1 - 5
1.1.3 List of the supported models for each function.....	1 - 6
1.2 Checking the Followings before Drawing .....	1 - 13
1.2.1 BootOS, CoreOS and package data .....	1 - 13
1.2.2 Project .....	1 - 14
1.2.3 Screen types and the specifications .....	1 - 16
1.2.4 Specifications of drawing .....	1 - 32
1.2.5 Font specifications .....	1 - 33
1.2.6 Specifications of available devices .....	1 - 42
1.2.7 Drive configuration of the target GOT for data transfer .....	1 - 46

### CREATING A PROJECT

---

2.1 Startup and Exit of GT Designer3.....	2 - 2
2.1.1 Starting GT Designer3.....	2 - 2
2.1.2 Exiting GT Designer3 .....	2 - 3
2.1.3 Switching the display language of GT Designer3.....	2 - 3
2.2 Screen Layout of GT Designer3 .....	2 - 5
2.2.1 Menus.....	2 - 7
2.2.2 Toolbar and shortcut keys .....	2 - 29
2.2.3 Editor tab, work window.....	2 - 41
2.2.4 Work tree .....	2 - 42
2.2.5 Status bar .....	2 - 49
2.3 Creating and Editing a Project.....	2 - 50
2.3.1 Creating a project .....	2 - 50
2.3.2 Opening a project .....	2 - 58

# CONTENTS

---

2.3.3	Closing a project.....	2 - 64
2.3.4	Deleting a project.....	2 - 64
2.3.5	Giving a title to a project.....	2 - 65
2.4	Setting a Screen Design.....	2 - 67
2.4.1	Selecting a screen design .....	2 - 68
2.4.2	Precautions.....	2 - 69
2.4.3	[Screen Design] dialog .....	2 - 70
2.5	Creating, Opening, and Closing a Screen .....	2 - 71
2.5.1	Creating a screen .....	2 - 71
2.5.2	Opening and closing screens .....	2 - 75
2.6	Basic Operations of the Drawing Screen.....	2 - 80
2.6.1	Selecting a screen editor to be edited .....	2 - 82
2.6.2	Switching the display status of objects to be displayed on the screen editor .....	2 - 83
2.6.3	Redisplaying a selected screen editor.....	2 - 83
2.6.4	Setting information to be displayed on the screen editor.....	2 - 84
2.6.5	Displaying the grid .....	2 - 86
2.6.6	Displaying the two-point press inactive area .....	2 - 86
2.6.7	Switching the layer display .....	2 - 86
2.6.8	Displaying guidelines.....	2 - 87
2.6.9	Scaling the size of items on the screen editor .....	2 - 89
2.6.10	Cascading or arranging open screen editors.....	2 - 90
2.6.11	Copying the image of a screen editor to the clip board .....	2 - 90
2.7	Changing Screen Property .....	2 - 91
2.7.1	Property of base screens.....	2 - 91
2.7.2	Properties of window screens.....	2 - 102
2.7.3	Property of report screens .....	2 - 113
2.8	Managing the Created Screen.....	2 - 122
2.8.1	[Screen Image List] window.....	2 - 122
2.9	Viewing the Image of the Created Screen .....	2 - 124
2.9.1	Displaying a preview.....	2 - 124
2.9.2	Displaying the preview of a window screen on the screen editor of a base screen ...	2 - 127
2.10	Copying and Deleting Screens .....	2 - 129
2.10.1	Copying screens.....	2 - 129
2.10.2	Deleting screens.....	2 - 130
2.11	Performing a Data Check .....	2 - 131
2.11.1	[Data Check List] window .....	2 - 132
2.11.2	[Check Item Setting] dialog.....	2 - 133
2.11.3	Details of the exported file .....	2 - 135
2.12	Protecting a Project with a Security Key.....	2 - 136
2.12.1	Specifications of the security key authentication .....	2 - 138
2.12.2	How to use the security key authentication .....	2 - 140
2.12.3	Precautions.....	2 - 148
2.12.4	[Security Key Setting] dialog.....	2 - 149
2.12.5	[Security Key Management] dialog.....	2 - 152
2.13	Protecting a Project by Registering Users .....	2 - 155
2.13.1	Specifications of the project security .....	2 - 156
2.13.2	How to use the project security .....	2 - 160

2.15.2	Saving a project in the workspace or the single file format (*.GTX) .....	2 - 182
2.15.3	Saving a project in the single file format (*.GTXS) with system applications .....	2 - 185

## SIMULATION

---

3.1	Specifications.....	3 - 2
3.1.1	Simulation-supported GOTs .....	3 - 3
3.1.2	Monitoring-supported Controllers .....	3 - 4
3.1.3	Available devices for monitoring .....	3 - 10
3.1.4	Simulation-supported/unsupported functions .....	3 - 30
3.1.5	Destination to save data .....	3 - 39
3.2	Connecting.....	3 - 41
3.2.1	Connecting with the controller simulators .....	3 - 41
3.2.2	Connecting with Mitsubishi Electric products .....	3 - 42
3.2.3	Connecting with non-Mitsubishi Electric products .....	3 - 58
3.3	Precautions.....	3 - 59
3.3.1	Precautions for using GT Simulator3.....	3 - 59
3.3.2	Precautions for connecting with the controller simulators .....	3 - 61
3.3.3	Precautions for connecting with PLC CPU .....	3 - 63
3.3.4	Version of the project data to be simulated .....	3 - 63
3.4	Simulation Procedure .....	3 - 64
3.4.1	Simulating the project being edited .....	3 - 64
3.4.2	Simulating a saved project .....	3 - 66
3.5	Screen Layout of GT Simulator3 .....	3 - 69
3.5.1	Menus.....	3 - 70
3.5.2	Toolbar .....	3 - 71
3.5.3	Screen for simulation .....	3 - 72
3.5.4	Status bar .....	3 - 73
3.6	Basic Operations of GT Simulator3 .....	3 - 74
3.6.1	Setting options.....	3 - 75
3.6.2	Opening a project .....	3 - 83
3.6.3	Starting or exiting simulation .....	3 - 85
3.6.4	Updating the project to be simulated .....	3 - 86
3.6.5	Operations of the screen for simulation.....	3 - 86

# CONTENTS

---

3.6.6	Exiting GT Simulator3.....	3 - 86
3.7	Useful Functions of GT Simulator3.....	3 - 87
3.7.1	Taking snap shots .....	3 - 87
3.7.2	Printing the screen being simulated .....	3 - 88
3.7.3	Displaying the information of the project being simulated .....	3 - 89
3.7.4	Operating the numerical input or text input with a keyboard .....	3 - 90
3.7.5	Using the device monitor .....	3 - 91
3.7.6	Referring to resource data.....	3 - 97
3.7.7	Displaying a script error.....	3 - 98
3.7.8	Displaying an object script error .....	3 - 99
3.7.9	Displaying scroll bars.....	3 - 100
3.7.10	Displaying the simulation screen in full screen mode.....	3 - 101
3.8	Troubleshooting .....	3 - 103
3.8.1	Error messages (GOT2000 Series simulator) .....	3 - 103
3.8.2	Troubleshooting for saving files.....	3 - 106

## COMMUNICATING WITH GOT

---

4.1	Data Transfer.....	4 - 2
4.1.1	Route for the data transfer.....	4 - 3
4.1.2	Types of the data to be transferred to the GOT.....	4 - 6
4.2	Setting a System Application to be Written to the GOT.....	4 - 10
4.2.1	Specifications of the application setting.....	4 - 10
4.2.2	How to use the application setting.....	4 - 11
4.3	Transferring the Data between the Personal Computer and the GOT .....	4 - 14
4.3.1	Connecting the personal computer to the GOT .....	4 - 14
4.3.2	Transferring data .....	4 - 18
4.4	Transferring the Data between the Personal Computer and the GOT via PLC CPU .....	4 - 28
4.4.1	Connecting the personal computer and PLC CPU .....	4 - 32
4.4.2	Transferring data .....	4 - 40
4.5	Transferring the Data with Data Storage .....	4 - 41
4.5.1	Writing a package data into the GOT .....	4 - 41
4.5.2	Starting up the package data from data storage .....	4 - 43
4.5.3	Installing the BootOS or the CoreOS to the GOT .....	4 - 44
4.6	Transferring Data between the Personal Computer and GT01-RS4-M.....	4 - 47
4.7	Precautions.....	4 - 48
4.8	Data Transfer Setting.....	4 - 51
4.8.1	[PC (Data Transfer)] dialog.....	4 - 51
4.8.2	[Communicate with GOT] dialog.....	4 - 52
4.8.3	[Write Option] dialog (for writing data to one GOT) .....	4 - 61
4.8.4	[Application Selection] dialog.....	4 - 63
4.8.5	[Select Resource Data] dialog .....	4 - 66
4.8.6	[Resource Data Write Result] dialog .....	4 - 67
4.8.7	[GOT Information - Detail] dialog.....	4 - 68
4.8.8	[Communication Configuration] dialog.....	4 - 69
4.8.9	[Batch Write to multiple GOTs] dialog .....	4 - 75
4.8.10	[Write Option] dialog (for writing data to multiple GOTs in one go) .....	4 - 77
4.8.11	[Communication Status] dialog.....	4 - 78

# CONTENTS

4.8.12	[Communicate with Memory Card] dialog .....	4 - 79
4.9	Troubleshooting .....	4 - 82

## COMMON SETTING

---

5.1	Changing the GOT Type of the Project ([GOT Type Setting]) .....	5 - 2
5.1.1	Specifications of the GOT type change .....	5 - 3
5.1.2	Graphics mode ([Graphics Setting]) .....	5 - 7
5.1.3	Precautions .....	5 - 11
5.1.4	[Type Setting] dialog .....	5 - 13
5.1.5	[Output] window .....	5 - 19
5.2	Setting the GOT Basic Operations ([GOT Environmental Setting]) .....	5 - 20
5.2.1	Setting for switching screens to be displayed on the GOT ([Screen Switching/Window]) .....	5 - 21
5.2.2	Setting for switching the language displayed on the GOT ([Language Switching]) .....	5 - 32
5.2.3	Setting dialog windows ([Dialog Window]) .....	5 - 38
5.2.4	Setting key windows ([Key Window]) .....	5 - 42
5.2.5	Setting a device which controls the GOT operations or notifies the GOT status ([System Information]) .....	5 - 60
5.2.6	Configuring the security settings for displaying screen data on the GOT ([Screen Security]) .....	5 - 80
5.2.7	Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Operator authentication)) .....	5 - 84
5.2.8	Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Level authentication)) .....	5 - 104
5.2.9	Configuring the security settings for operating the utility and the monitor functions ([Functional Operation Security]) .....	5 - 106
5.2.10	Configuring the security setting for transferring data ([Data Transfer Security]) .....	5 - 115
5.2.11	Configuring the settings for creating the operation history of the GOT ([Operation Log]) .....	5 - 118
5.2.12	Configuring the settings for converting the text to Kanji character on the GOT ([KANJI KANJI Conversion]) .....	5 - 163
5.2.13	Setting a screen to be displayed on the GOT at startup ([Startup Logo]) .....	5 - 168
5.3	Setting the Utility Function ([GOT Setup]) .....	5 - 170
5.3.1	Configuring the settings of the display of the GOT ([Display Setting/Language Setting]) .....	5 - 171
5.3.2	Setting the identification information to the GOT ([GOT ID No.]) .....	5 - 174
5.3.3	Setting buzzer volume or utility call key of the GOT ([Operation Setting/Utility Call Key]) .....	5 - 179
5.3.4	Configuring the settings for a mouse and a keyboard used with the GOT ([USB Host]) .....	5 - 181
5.3.5	Setting the GOT time setting method ([Time Setting]) .....	5 - 186
5.3.6	Setting target channels for the FA transparent function ([Transparent Mode Setting]) .....	5 - 193
5.3.7	Configuring the settings of the GOT internal device monitor ([GOT Internal Device Monitor]) .....	5 - 194
5.3.8	Configuring the settings of the SoftGOT-GOT link function ([SoftGOT-GOT Link]) ...	5 - 195
5.3.9	Configuring the settings of the VNC server function ([VNC Server]) .....	5 - 196
5.3.10	Configuring the settings of the sequence program monitor ([Sequence Program Monitor]) .....	5 - 197

# CONTENTS

---

5.3.11	Configuring the settings of the backup/restoration function ([Backup/Restore]).....	5 - 198
5.3.12	Configuring the settings for a wireless LAN ([Wireless LAN Setting]) .....	5 - 202
5.3.13	Configuring the settings of the system launcher function ([System Launcher]).....	5 - 211
5.3.14	Configuring the settings of the iQSS utility function ([iQSS Utility]) .....	5 - 212
5.3.15	Configuring the network drive settings ([Network Drive]) .....	5 - 214
5.4	Setting the GOT Ethernet Interface ([GOT Ethernet Setting]) .....	5 - 221
5.4.1	Setting the GOT IP address .....	5 - 221
5.4.2	Configuring the settings common to Ethernet interfaces.....	5 - 225
5.4.3	Setting the IP filter .....	5 - 226
5.5	Configuring the Communication Method between the GOT and the Controller ([Controller Setting]).....	5 - 231
5.5.1	Setting channels .....	5 - 231
5.5.2	Setting the routing information.....	5 - 236
5.5.3	Configuring the setting of the MELSEC redundant function .....	5 - 238
5.5.4	Configuring the settings for switching the target station No. for monitoring .....	5 - 240
5.5.5	Configuring the settings for switching the buffer memory unit No. of the monitoring target.....	5 - 247
5.6	Setting the Interaction Function for Equipment on Ethernet ([GOT Network Interaction]).....	5 - 252
5.6.1	Specifications of the GOT network interaction function.....	5 - 253
5.6.2	How to use the GOT network interaction function .....	5 - 255
5.6.3	Precautions.....	5 - 259
5.6.4	[GOT Network Interaction] dialog .....	5 - 260
5.7	Checking the Interface Settings of the GOT ([I/F Communication Setting]) .....	5 - 261
5.7.1	Specifications of the I/F communication setting .....	5 - 261
5.7.2	How to use the I/F communication setting.....	5 - 262
5.7.3	[I/F Communication Setting] dialog.....	5 - 263
5.8	Comment Setting ([Comment]).....	5 - 265
5.8.1	Specifications of comments.....	5 - 265
5.8.2	How to use comment.....	5 - 267
5.8.3	Precautions.....	5 - 275
5.8.4	Setting comments.....	5 - 276
5.9	Registering Parts ([Parts]) .....	5 - 294
5.9.1	Outline of parts .....	5 - 294
5.9.2	Specifications of parts .....	5 - 295
5.9.3	How to use parts ([Parts]).....	5 - 296
5.9.4	Precautions.....	5 - 305
5.9.5	[Parts Image List] window.....	5 - 306
5.9.6	[Parts Setting] dialog .....	5 - 307

## BASIS OF SETTING AND EDITING

# INTRODUCTION

---

Thank you for choosing Mitsubishi Electric Graphic Operation Terminal (Mitsubishi Electric GOT).  
Read this manual and make sure you understand the functions and performance of the GOT thoroughly in advance to ensure correct use.

- How to Use Help ..... A - 26

# How to Use Help

- ⇒ 0 Displaying Help
- 0 Using Help

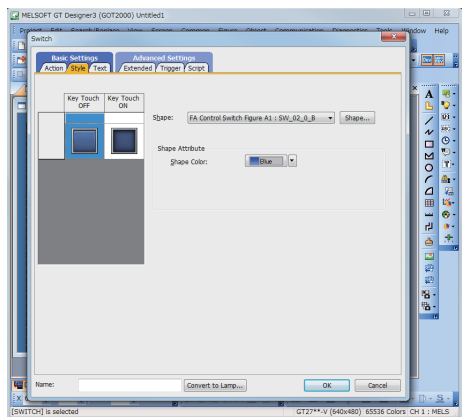

## Displaying Help

### ■ 1 Displaying Help from the menu

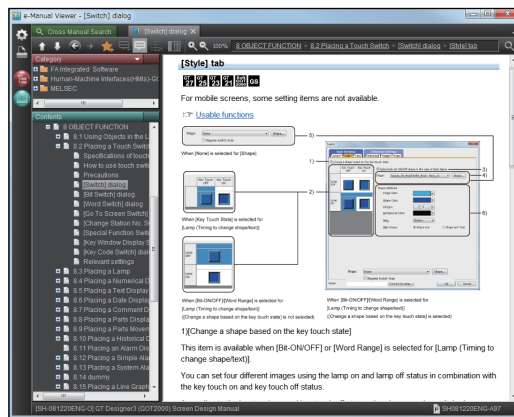

To display Help, select [Help] → [GT Designer3 Help] from the menu.

### ■ 2 Displaying a page corresponding to the operation status of GT Designer3

To display a page corresponding to the operation status of GT Designer3, press [F1] key while operating GT Designer3.

Press [F1] key while displaying the [Style] tab in the [Switch] dialog.

The page corresponding to the [Style] tab in the [Switch] dialog is shown.

### ■ 3 Precautions in displaying Help

#### (1) Relationship between Help and the screen design software

The Help displayed in GT Designer3 (GOT2000) is for GT Designer3 (GOT2000).

To view Help of GT Designer3 (GOT1000), switch the screen design software mode from GT Designer3 (GOT2000) to GT Designer3 (GOT1000).

To switch the screen design software mode, use one of the following methods.

- Create a new project.
- Open GOT1000 project data.
- Select [Project] → [Start GT Designer3 (GOT1000)] from the menu.

#### (2) Switching the screen design software mode while Help is displayed

While Help is displayed, switching the screen design software mode cannot switch Help.

To switch Help, switch the screen design software mode, and then display Help.

#### (3) Starting GT Designer3

GT Designer3 starts in the mode used last time.

(The first startup of GT Designer3 activates GT Designer3 (GOT2000).)

To switch the screen design software mode, use one of the following methods.

- Create a new project.
- Open GOT1000 project data.
- Select [Project] → [Start GT Designer3 (GOT1000)] from the menu.

## Using Help

Help is viewable using e-Manual Viewer.

For information on how to use e-Manual Viewer, refer to the following.

- ⇒ e-Manual Viewer Help

# List of Manuals for GT Works3

The electronic manuals related to this product are installed together with the screen design software.  
If you need the printed manuals, consult your local sales office.

## ■ 1 List of Manuals for GT Designer3(GOT2000)

### e-Manual

e-Manual refers to the Mitsubishi FA electronic book manuals that can be browsed using a dedicated tool.  
e-Manual has the following features:

- Required information can be cross-searched in multiple manuals.
- Other manuals can be accessed from the links in the manual.
- Hardware specifications of each part can be found from the product figures.
- Pages that users often browse can be bookmarked.

### (1) Screen design software-related manuals

Manual name	Manual number (Model code)	Format
GT Works3 Installation Instructions	-	PDF
GT Designer3 (GOT2000) Screen Design Manual	SH-081220ENG (1D7ML9)	PDF e-Manual
GT Converter2 Version3 Operating Manual for GT Works3	SH-080862ENG (1D7MB2)	PDF
GOT2000 Series MES Interface Function Manual for GT Works3 Version1	SH-081228ENG	PDF

### (2) Connection manuals

Manual name	Manual number (Model code)	Format
GOT2000 Series Connection Manual (Mitsubishi Electric Products) For GT Works3 Version1	SH-081197ENG (1D7MJ8)	PDF
GOT2000 Series Connection Manual (Non-Mitsubishi Electric Products 1) For GT Works3 Version1	SH-081198ENG	PDF
GOT2000 Series Connection Manual (Non-Mitsubishi Electric Products 2) For GT Works3 Version1	SH-081199ENG	PDF
GOT2000 Series Connection Manual (Microcomputers, MODBUS/Fieldbus Products, Peripherals) For GT Works3 Version1	SH-081200ENG	PDF
GOT2000 Series Handy GOT Connection Manual For GT Works3 Version1	SH-081867ENG (1D7MS9)	PDF

### (3) GT SoftGOT2000 manuals

Manual name	Manual number (Model code)	Format
GT SoftGOT2000 Version1 Operating Manual	SH-081201ENG	PDF e-Manual

### (4) GOT2000 series user's manuals

Manual name	Manual number (Model code)	Format
GOT2000 Series User's Manual (Hardware)	SH-081194ENG (1D7MJ5)	PDF e-Manual
GOT2000 Series User's Manual (Utility)	SH-081195ENG (1D7MJ6)	PDF e-Manual
GOT2000 Series User's Manual (Monitor)	SH-081196ENG (1D7MJ7)	PDF e-Manual

**(5) Manuals related to GT Works3 add-on projects**

Manual name	Manual number (Model code)	Format
GT Works3 Add-on License for GOT2000 Enhanced Drive Control (Servo) Project Data Manual (Fundamentals)	SH-082072ENG (1D7MV1)	PDF e-Manual
GT Works3 Add-on License for GOT2000 Enhanced Drive Control (Servo) Project Data Manual (Screen Details)	SH-082074ENG (1D7MV3)	PDF e-Manual

**■ 2 List of Manuals for GT Designer3(GOT1000)**

Refer to the Help and manuals for GT Designer3(GOT1000)

# Abbreviations, Generic Terms, Model Icons

The following shows the abbreviations, generic terms, and model icons used in Help.

## ■ 1 GOT

## ■ 5 Software

### (1) Software related to GOT

Abbreviations and generic terms	Description
GT Works3	SW1DND-GTWK3-J, SW1DND-GTWK3-E, SW1DND-GTWK3-C
GT Designer3 Version1	Screen design software GT Designer3 for GOT2000/GOT1000 series
GT Designer3	Screen design software for GOT2000 series included in GT Works3
GT Designer3 (GOT2000)	
GT Designer3 (GOT1000)	Screen design software for GOT1000 series included in GT Works3
Speech synthesis license	GT Works Text to Speech License (SW1DND-GTVO-M)
Add-on license	GT Works3 add-on license for GOT2000 enhanced drive control (servo) project data (SW1DND-GTSV-MZ)
GT Simulator3	Screen simulator GT Simulator3 for GOT2000/GOT1000/GOT900 series
GT SoftGOT2000	Monitoring software GT SoftGOT2000
GT Converter2	Data conversion software GT Converter2 for GOT1000/GOT900 series
GT Designer2 Classic	Screen design software GT Designer2 Classic for GOT900 series
GT Designer2	Screen design software GT Designer2 for GOT1000/GOT900 series
DU/WIN	Screen design software FX-PCS-DU/WIN for GOT-F900 series

### (2) Software related to iQ Works

Abbreviations and generic terms	Description
iQ Works	Abbreviation of iQ Platform compatible engineering environment MELSOFT iQ Works
MELSOFT Navigator	Generic term for integrated development environment software included in the SW DNC-IQWK (iQ Platform compatible engineering environment MELSOFT iQ Works) (□ indicates a version.)
MELSOFT iQ AppPortal	SW □ DND-IQAPL-M type integrated application management software (□ indicates a version.)

### (3) Other software

Abbreviations and generic terms	Description	
GX Works3	SW □ DND-GXW3-E (-EA) type programmable controller engineering software (□ indicates a version.)	
GX Works2	SW □ DNC-GXW2-□ type programmable controller engineering software (□ indicates a version.)	
Controller simulator	GX Simulator3	Simulation function of GX Works3
	GX Simulator2	Simulation function of GX Works2
	GX Simulator	SW □ D5C-LLT-E (-EV) type ladder logic test tool function software package (SW5D5C-LLT (-V) or later versions) (□ indicates a version.)
GX Developer	SW □ D5C-GPPW-E (-EV)/SW □ D5F-GPPW (-V) type software package (□ indicates a version.)	
GX LogViewer	SW □ DNN-VIEWER-E type software package (□ indicates a version.)	
MI Configurator	Configuration and monitor tool for Mitsubishi Electric industrial computers (SW □ DNNMICONF-M) (□ indicates a version.)	
PX Developer	SW □ D5C-FBDQ-E type FBD software package for process control (□ indicates a version.)	
MT Works2	Motion controller engineering environment MELSOFT MT Works2(SW □ DND-MTW2-E) (□ indicates a version.)	
MT Developer	SW □ RNC-GSV type integrated start-up support software for motion controller Q series (□ indicates a version.)	
CW Configurator	C Controller module configuration and monitor tool (SW1DND-RCCPU-E) (□ indicates a version.)	
MR Configurator2	SW □ DNC-MRC2-E type servo configuration software (□ indicates a version.)	

Abbreviations and generic terms	Description
MR Configurator	MRZJW □ -SETUP type servo configuration software ( □ indicates a version.)
FR Configurator	Inverter setup software (FR-SW □ -SETUP-WE) ( □ indicates a version.)
NC Configurator2	CNC parameter setting support tool (FCSB1221)
NC Configurator	CNC parameter setting support tool
FX Configurator-FP	Parameter setting, monitoring, and testing software packages for FX3U-20SSC-H (SW □ D5CFXSSCE) ( □ indicates a version.)
FX3U-ENET-L Configuration tool	FX3U-ENET-L type Ethernet module setting software (SW1D5-FXENETL-E)
RT ToolBox2	Robot program creation software (3D-11C-WINE)
RT ToolBox3	Robot program creation software (3F-14C-WINE)
MX Component	MX Component Version □ (SW □ D5C-ACT-E, SW □ D5C-ACT-EA) ( □ indicates a version.)
MX Sheet	MX Sheet Version □ (SW □ D5C-SHEET-E, SW □ D5C-SHEET-EA) ( □ indicates a version.)
CPU Module Logging Configuration Tool	CPU module logging configuration tool (SW1DNN-LLUTL-E)

## ■ 6 License key (for GT SoftGOT2000)

Abbreviations and generic terms	Description
License key	GT27-SGTKEY-U

## ■ 7 Others

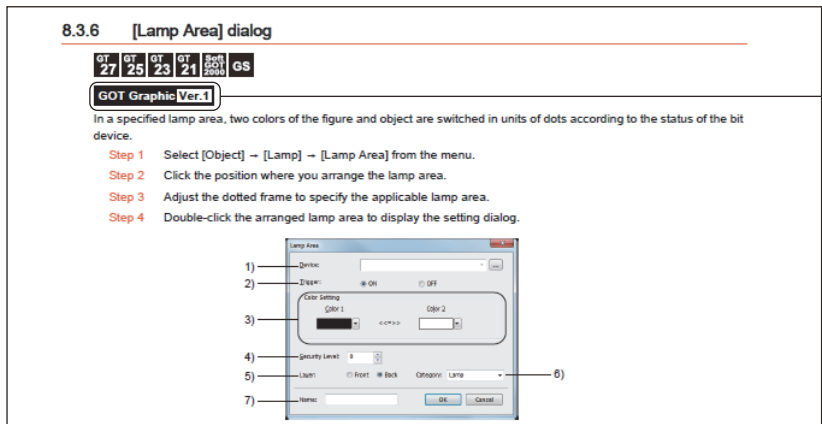

Abbreviations and generic terms	Description
IAI	IAI Corporation
AZBIL	Azbil Corporation
OMRON	OMRON Corporation
KEYENCE	KEYENCE CORPORATION
KOYO EI	KOYO ELECTRONICS INDUSTRIES CO., LTD.
JTEKT	JTEKT Corporation
SHARP	Sharp Corporation
SHINKO	Shinko Technos Co., Ltd.
CHINO	CHINO CORPORATION
TOSHIBA	TOSHIBA CORPORATION
TOSHIBA MACHINE	TOSHIBA MACHINE CO., LTD.
PANASONIC	Panasonic Corporation
PANASONIC IDS	Panasonic Industrial Devices SUNX Co., Ltd.
HITACHI IES	Hitachi Industrial Equipment Systems Co., Ltd.
HITACHI	Hitachi, Ltd.
HIRATA	Hirata Corporation.
FUJI	FUJI ELECTRIC CO., LTD.
MURATEC	Muratec products manufactured by Murata Machinery, Ltd.
YASKAWA	YASKAWA Electric Corporation
YOKOGAWA	Yokogawa Electric Corporation
RKC	RKC INSTRUMENT INC.
ALLEN-BRADLEY	Allen-Bradley products manufactured by Rockwell Automation, Inc.
CLPA	CC-Link Partner Association
GE	GE Intelligent Platforms, Inc.
HMS	HMS Industrial Networks
LS IS	LS Industrial Systems Co., Ltd.
mitsubishi india	Mitsubishi Electric India Pvt. Ltd.
ODVA	Open DeviceNet Vendor Association, Inc.
SCHNEIDER	Schneider Electric SA

Abbreviations and generic terms	Description
SICK	SICK AG
SIEMENS	Siemens AG
PLC	Programmable controller manufactured by each corporation
Control equipment	Control equipment manufactured by each corporation
Temperature controller	Temperature controller manufactured by each corporation
Indicating controller	Indicating controller manufactured by each corporation
Controller	Controller manufactured by each corporation

# Graphics Mode Icons

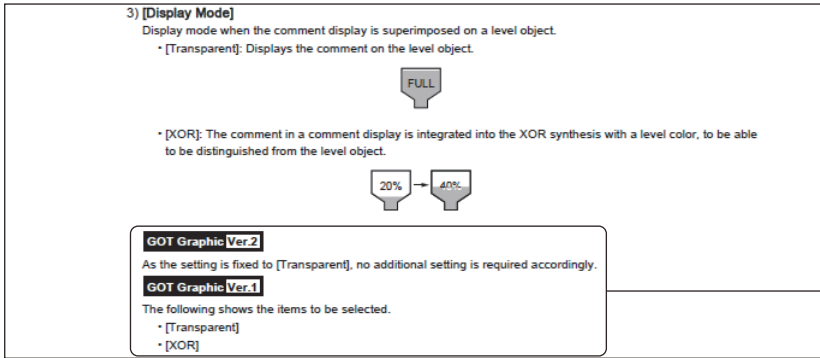

The following explains the graphics mode icons used in this manual.

Example) For indicating the applicable graphics mode

Graphics mode applicable to the described function or setting

Example) For indicating the difference between graphics modes

Details of each graphics mode

Icon	Description
Without graphics mode icons	Both GOT Graphic Ver.2 and GOT Graphic Ver.1 are applicable.
<b>GOT Graphic Ver.2</b>	GOT Graphic Ver.2 is applicable. Details of GOT Graphic Ver.2 are given under its icon.
<b>GOT Graphic Ver.1</b>	GOT Graphic Ver.1 is applicable. Details of GOT Graphic Ver.1 are given under its icon.

## Terms List

---

The following shows the terms used in Help.

Terms	Description
Object	Functions operated with a device on the screen
Input object	A touch switch, numerical input, text input, and alarm display in the objects
Attribute	Setting items in figures and objects Example) A monitor device, font and text color
Label	A system label, global label, and label (GT Designer3)
Window	Available for operating other windows during the display in the windows displayed on the software Example) [Environmental Setting] window
Dialog	Not available for operating other windows during the display in the windows displayed on the software Example) [GOT Type Setting] dialog
Data storage	An SD card, a USB memory, a CF card installed in a card reader, and others
Ethernet interface	GOT interface for Ethernet communication: <ul style="list-style-type: none"><li>• Ethernet standard port</li><li>• Ethernet standard port 1</li><li>• Ethernet standard port 2</li><li>• Ethernet extended port</li></ul>

# 1. FUNDAMENTALS OF GT Designer3

---

1.1	Basic Description of GT Designer3. . . . .	1 - 2
1.2	Checking the Followings before Drawing . . . . .	1 - 13

## 1.1 Basic Description of GT Designer3

GT Designer3 is software to create screens for GOT2000 series and GOT1000 series.

This software enables you to create and simulate a project, and transfer data between the GOT and a personal computer.

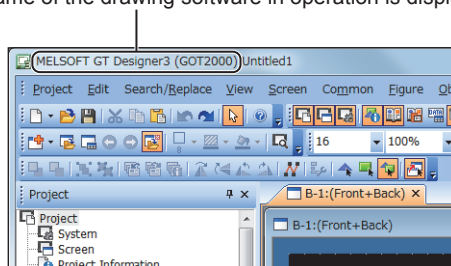

GT Designer3 consists of the following drawing software.

- GT Designer3(GOT2000): Drawing software for GOT2000 series
- GT Designer3(GOT1000): Drawing software for GOT1000 series

For the project which cannot be edited or the operation in the drawing software in operation, the supported drawing software is started.

The title bar of the window indicates which drawing software you are operating.

The name of the drawing software in operation is displayed.

Each drawing software has own Help.

Pressing [F1] key will display Help for the drawing software you are operating.

### ■ 1 Project creation

GT Designer3 manages the data used to operate the GOT for each project.

Set screens to be displayed on the GOT and functions which operate with the GOT for the created project.

⇒2. CREATING A PROJECT

### ■ 2 Simulation

You can simulate the operations of the GOT set in the project being created with GT Designer3 on a personal computer using GT Simulator3.

You can simulate the project created with GT Designer3 using only GT Simulator3.

Projects for GOT2000 series, GOT1000 series, and GOT-A900 series GOTs can be simulated using only GT Simulator3.

⇒3. SIMULATION

### ■ 3 Data transfer

Created projects and the data required for operating the GOT are written into the GOT from GT Designer3.

The resource data stored in the GOT can be read from the GOT to GT Designer3.

For the data transfer between GT Designer3 and the GOT, use a communication cable, network, or the data storage.

⇒4. COMMUNICATING WITH GOT

## 1.1.1 Operating environment

The following shows the operating environment for GT Designer3.

Item	Description
Model	Personal computer that Windows runs on.
OS (English, Simplified Chinese, Traditional Chinese, Korean, German, or Italian version)	<ul style="list-style-type: none"> <li>• Microsoft Windows 10 Enterprise (32 bit, 64 bit) <sup>*1*2*4*6*7</sup></li> <li>• Microsoft Windows 10 Pro (32 bit, 64 bit) <sup>*1*2*4*6*7</sup></li> <li>• Microsoft Windows 10 Home (32 bit, 64 bit) <sup>*1*2*4*7</sup></li> <li>• Microsoft Windows 10 IoT Enterprise 2016 LTSC (64 bit) (English OPK, or English OPK and a language pack for localization) <sup>*1*2*4*6*7</sup></li> <li>• Microsoft Windows 8.1 Enterprise (32 bit, 64 bit) <sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8.1 Pro (32 bit, 64 bit) <sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8.1 (32 bit, 64 bit) <sup>*1*2*4*5</sup></li> <li>• Microsoft Windows 8 Enterprise (32 bit, 64 bit) <sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8 Pro (32 bit, 64 bit) <sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8 (32 bit, 64 bit) <sup>*1*2*4*5</sup></li> <li>• Microsoft Windows 7 Enterprise (32 bit, 64 bit) <sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Ultimate (32 bit, 64 bit) <sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Professional (32 bit, 64 bit) <sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Home Premium (32 bit, 64 bit) <sup>*1*2*4</sup></li> <li>• Microsoft Windows 7 Starter (32 bit) <sup>*1*2</sup></li> <li>• Microsoft Windows Vista Enterprise (32 bit) Service Pack1 or later <sup>*1*2</sup></li> <li>• Microsoft Windows Vista Ultimate (32 bit) Service Pack1 or later <sup>*1*2</sup></li> <li>• Microsoft Windows Vista Business (32 bit) Service Pack1 or later <sup>*1*2</sup></li> <li>• Microsoft Windows Vista Home Premium (32 bit) Service Pack1 or later <sup>*1*2</sup></li> <li>• Microsoft Windows Vista Home Basic (32 bit) Service Pack1 or later <sup>*1*2</sup></li> <li>• Microsoft Windows XP Professional (32 bit) Service Pack3 <sup>*1*2</sup></li> <li>• Microsoft Windows XP Home Edition (32 bit) Service Pack3 <sup>*1*2</sup></li> </ul>
CPU	Intel Core 2 Duo Processor 2.0 GHz or more recommended
Memory	<ul style="list-style-type: none"> <li>• For a 64-bit OS: 2 GB or more recommended</li> <li>• For a 32-bit OS: 1 GB or more recommended</li> </ul>
Display	Resolution XGA (1024 × 768 dots) or higher
Hard disk space	<ul style="list-style-type: none"> <li>• For installation: 5 GB or more recommended</li> <li>• For execution: 512 MB or more recommended</li> </ul>
Display color	High Color (16 bits) or higher

Item	Description
Other software	<p>To use the simulation function on a personal computer, one of the following software applications must be installed.</p> <ul style="list-style-type: none"> <li>• GX Simulator3 (included in GX Works3 Version1.007H or later)</li> <li>• GX Simulator2 (included in GX Works2 Version1.12N or later)</li> <li>• GX Simulator Version5.00A or later</li> <li>• MT Simulator2 (included in MT Works2 Version1.70Y or later)</li> </ul> <p>The required software version depends on the controller to be simulated.</p> <p>⇒3. SIMULATION</p>
	<p>To use the document display function, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• Document Converter</li> <li>• Ghostscript GPL8.50 to 9.15 (Free software) *8</li> </ul> <p>To use the files of Microsoft Word, Microsoft Excel, or Microsoft PowerPoint, the following software also must be installed.</p> <ul style="list-style-type: none"> <li>• PostScript printer driver supplied with Windows</li> <li>• Microsoft Office 2003, Microsoft Office XP, Microsoft Office 2000 (Required only when the files of Microsoft Word, Microsoft Excel, or Microsoft PowerPoint are used)</li> </ul>
	<p>To use the remote personal computer operation function (Ethernet), the following software must be installed.</p> <ul style="list-style-type: none"> <li>• VNC server software (UltraVNC 1.0.5, 1.0.5.6, 1.1.9.6, or 1.2.1.1)</li> <li>• Windows terminal server function (Windows Server 2003)</li> <li>• Terminal service function software (RDPGateway(rdp2vnc))</li> </ul>
	<p>To use the remote personal computer operation function (Serial), one of the following software must be installed.</p> <ul style="list-style-type: none"> <li>• Remote Personal Computer Operation Driver (DMT-DD)</li> <li>• Remote Personal Computer Operation Driver (TSC-DD)</li> <li>• Remote Personal Computer Operation Driver (MES_2X)</li> </ul> <p>Use the software compatible with the personal computer OS used for the remote personal computer operation function (Serial).</p> <p>⇒10.4.2 Specifications of the remote personal computer operation (Serial)</p>
	<p>To use the VNC server function, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• VNC client software (UltraVNC1.1.9.6, 1.0.9.6.2, or 1.0.8.2)</li> </ul>
	<p>To use the multimedia function, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• Multimedia Interaction Tool</li> <li>• Multimedia Interaction FTP Service</li> <li>• Quick Time Player or QuickTime 7 Pro</li> </ul>
	<p>To display Help, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• e-Manual Viewer</li> </ul>
	<p>To display PDF manuals, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• Adobe Reader7 or later recommended</li> </ul>
Other hardware	<p>Use the hardware compatible with the above OS.</p> <ul style="list-style-type: none"> <li>• For installation: mouse, keyboard, DVD-ROM drive</li> <li>• For execution: mouse, keyboard</li> <li>• For printing: printer</li> </ul> <p>Use the following hardware when required.</p> <ul style="list-style-type: none"> <li>• For simulation (Only when outputting the buzzer sound): Sound card, speaker</li> </ul>

\*1 For installation, the standard user or administrator account is required.

For installation on Windows XP, the administrator authority is required.

To interact GT Designer3 with other MELSOFT applications which are used under the administrator authority, use GT Designer3 under the administrator authority.

\*2 The following functions are not supported.

- Application start in Windows compatibility mode
- Fast user switching
- Change your desktop themes (fonts)
- Remote desktop
- DPI setting other than the normal size (For Windows XP and Windows Vista)
- Setting the size of text and illustrations on the screen to any size other than [Small-100%] (For Windows 10, Windows 8.1, Windows 8, and Windows 7)

\*3 Windows XP Mode is not supported.

\*4 The touch feature is not supported.

\*5 Modern UI Style is not supported.

\*6 Hyper-V is not supported.

\*7 Tablet mode is not supported.

\*8 Versions 8.50, 8.71, and 9.15 of the software are validated by our company.

### Operating environment on iQ Works

When starting GT Designer3 from MELSOFT Navigator, the operating environment of GT Designer3 is same as that of MELSOFT Navigator.

→ iQ Works Installation Instructions

## 1.1.2 Supported models

GT Designer3 is compatible with the following GOTs.

GOT	GOT type	Model
GT27	GT27**-X (1024x768)	GT2715-XTBA GT2715-XTBD
	GT27**-S (800x600)	GT2712-STBA GT2712-STWA GT2712-STBD GT2712-STWD GT2710-STBA GT2710-STBD GT2708-STBA GT2708-STBD
	GT27**-V (640x480)	GT2710-VTBA GT2710-VTWA GT2710-VTBD GT2710-VTWD GT2708-VTBA GT2708-VTBD
	GT2705-V (640x480)	GT2705-VTBD

### 1.1.3 List of the supported models for each function

The following shows the supported models for each function.

#### 1 Simulation

Function	Description	Supported models
Simulation	Simulates the project you are editing.	GT27 GT25 GT23 GT21 GS SoftGOT2000

#### 2 Common setting

Function	Description	Supported models
Screen Switching	Switches the screen displayed on the GOT.	GT27 GT25 GT23
Language Switching	Switches the language displayed on the GOT.	GT21 GS SoftGOT2000
Operation Log	Logs the operation performed on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
KANA-KANJI Conversion	Converts texts to kanji on the GOT	GT27 GT25 GT23 GT21 GS SoftGOT2000
Startup Logo	Sets the logo displayed at the GOT startup.	GT27 GT25 GT23 GT21 GS SoftGOT2000
USB Mouse/Keyboard Function	Not available to GT25HS-V. Operates the GOT with a USB mouse or USB keyboard.	GT27 GT25 GT23 GT21 GS SoftGOT2000  (Only available to GT2107-W of GT21 models)

Function	Description	Supported models
Time Setting	Sets the GOT time setting method.	GT27 GT25 GT23
FA Transparent Function	Transfers data between the personal computer and a PLC CPU via the GOT.	GT21 GS SoftGOT2000
SoftGOT-GOT Link Function	Monitors the GOT by using the personal computer (GT SoftGOT2000).	GT27 GT25 GT23 GT21 GS SoftGOT2000
Station No. Switching	Switches the station number of the GOT monitoring target.	GT27 GT25 GT23
Buffer memory unit No. switching	Switches the buffer memory unit No. of the GOT monitoring target.	GT21 GS SoftGOT2000
GOT Network Interaction	Controls pieces of equipment on the same network to prevent simultaneous operations.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Comment	Register a character string to be displayed on an object.	GT27 GT25 GT23
Parts	Register a figure or image to be displayed on the object.	GT21 GS SoftGOT2000

■3 Figure

Function	Description	Supported models
Text	Draws a text. The drawn text is fixed.	GT27 GT25 GT23
Logo Text	Draws a logo text. The drawn text is fixed.	GT21 GS SoftGOT2000
Line	Draws a line.	
Line Freeform	Draws a freeform line.	
Rectangle	Draws a rectangle.	
Polygon	Draws a polygon.	
Circle	Draws a circle.	
Arc	Draws an arc.	
Sector	Draws a sector.	
Scale	Draws a scale.	
Piping	Draws a piping.	
Paint	Fills the framed area of the figure on the screen.	
Import Image	Imports an image file into the screen.	
Import DXF data	Imports a DXF data into the screen.	
Import IGES data	Imports an IGES data into the screen.	
Capture	Specifies a rectangle range or a window to be captured, and places it on the screen.	

## ■ 4 Object function

Function		Description	Supported models
Touch Switch	Switch	Touch switch with multiple functions	  
	Bit Switch	Touch switch to switch ON/OFF of a bit device	
	Word Switch	Touch switch to change the value of a word device	
	Go To Screen Switch	Touch switch to switch the screen	
	Change Station No. Switch	Touch switch to switch the station No. of the GOT monitor target	
	Special Function Switch	Touch switch to display the utility or the screen for the monitor function	
	Key window display switch	Touch switch to display a key window	
	Key Code Switch	Touch switch to enter a key code	
Lamp	Bit Lamp	Lamp controlled by the bit device	  
	Word Lamp	Lamp controlled by the word device	
	Lamp Area	Lamp area controlled by the bit device	
Numerical Display/Input	Numerical Display	Object to display a device value (numeric value)	  
	Numerical input	Object to input the device value (numeric value)	
Text Display/Input	Text Display	Object to display the device value (text)	  
	Text Input	Object to input the device value (text)	
Date/Time Display	Date Display	Object to display the date	  
	Time Display	Object to display the time	
Comment Display	Bit Comment	Object to display the comments The bit device controls the displayed comments.	  
	Word Comment	Object to display the comments The word device controls the displayed comments.	
	Simple Comment	Object to display the comments The displayed comments are fixed.	
Parts Display	Bit Parts	Object to display the parts The bit device controls the displayed parts.	  
	Word Parts	Object to display the parts The word device controls the displayed parts.	
	Fixed Parts	Object to display the parts The displayed parts are fixed.	
Parts Movement	Bit Parts	Object to move the parts The bit device controls the displayed parts.	  
	Word Parts	Object to move the parts The word device controls the displayed parts.	
	Fixed Parts	Object to move the parts The displayed parts are fixed.	
Historical Data List Display		Object to display the history of the device values collected by the logging function	  

Function		Description	Supported models
Alarm Display	Alarm Display (User)	Object to display the alarms collected by the user alarm observation. Set the monitored alarm per project.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Alarm Display (System)	Object to display the alarms collected by the system alarm observation. Set the monitored alarm per project.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Simple Alarm Display	Object to display the alarms collected by monitoring the device Set the monitored alarm per object.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	System Alarm Display	Object to display the alarms collected by monitoring the system Set the monitored alarm per object.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Recipe Display (Record List)		Place an object to list the records of a recipe. This object must be used in combination with the recipe function.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Graph	Line Graph	Object to indicate the device values as a line graph.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Trend Graph	Object to indicate the device values in chronological order as a graph.	
	Bar Graph	Object to indicate the device values as a bar graph.	
	Statistics Bar Graph	Object to indicate the ratio of each device value compared to the total value of multiple devices as a bar graph.	
	Statistics Pie Graph	Object to indicate the ratio of each device value compared to the total value of multiple devices as a pie graph.	
	Scatter Graph	Object to indicate the device values as a scatter graph with the X and Y coordinates representing two devices, respectively.	
Graphical Meter	Historical Trend Graph	Object to indicate, in chronological order as a graph, the device values collected by the logging function.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Sector Meter	Place an object to display a device value on a sector meter.	
	Semicircle Meter	Place an object to display a device value on a semicircle meter.	
	Bar (Vertical) Meter	Place an object to display a device value on a vertical bar meter.	
Meter	Bar (Horizontal) Meter	Place an object to display a device value on a horizontal bar meter.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Level	Place an object to display a device value by filling the specified area.	
Slider	Panel Meter	Place an object to display a device value on a meter.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Slider	Object to specify the device value (numeric value) by sliding the knob along the bar.	
Document Display		Displays a document on the screen.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Video/RGB display object		Not available to GT2705-V. Displays an RGB image on the screen.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Function		Description	Supported models
Script parts		Place an object to create a script. When the GOT displays the screen on which this object is placed, if the trigger condition for the created script is satisfied, the script runs.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Set Overlay Screen		Overlays a screen on another screen.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Window Position		Specifies the display position for overlap windows, superimpose windows, or key windows.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Key Window Object	Input Value Area Setting	Object to display the value you are inputting.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Input Range Area Setting	Object to display the available range for inputting values.	
	Input Maximum Value Area Setting	Object to display the available range for inputting the maximum value.	
	Input Minimum Value Area Setting	Object to display the available range for inputting the minimum value.	
	Previous Value Area Setting	Object to display the previous value.	
Print	Numerical Print	Place an object to print a device value (numerical value).	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Text Print	Place an object to print a device value (text).	
	Bit Comment Print	Place an object to print a comment. A bit device controls the comment to be printed.	
	Word Comment Print	Place an object to print a comment. A word device controls the comment to be printed.	
Hyperlink		Place an object to access a website or a file in the GOT public folder, or make a phone call.	GT27 GT25 GT23 GT21 GS SoftGOT2000

## ■ 5 Functions performed on the background of the GOT

Function		Description	Supported models
Alarm	User Alarm Observation	Collects the alarms by monitoring the device.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	System Alarm Observation	Collects the alarms by monitoring the system.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Alarm Popup Display	Displays the collected alarms in a popup window.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Function	Description	Supported models
Logging	Collects device values.	GT27 GT25 GT23
Recipe	Executes the batch write or batch read on multiple devices.	GT21 GS
Device Data Transfer	Transfers data between devices.	SoftGOT2000
Trigger Action	Executes the selected action by using the set device or sampling cycle as a trigger.	
Time Action	Executes the selected action by using the set time as the trigger.	
Hard Copy	Captures the operating screen of the GOT.	
Script	Controls the set action by using the script.	

## ■ 6 Functions used with peripheral devices

Function	Description	Supported models
Barcode	Not available to GT25HS-V. Uses a barcode reader on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
RFID	Not available to GT25HS-V. Uses a RFID controller on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Remote Personal Computer Operation (Ethernet)	Operates the personal computer on the GOT via Ethernet.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Remote Personal Computer Operation (Serial)	Not available to GT2705-V. Operates the personal computer on the GOT by using the RGB display function.	GT27 GT25 GT23 GT21 GS SoftGOT2000
VNC Server	Monitors the GOT by using the personal computer	GT27 GT25 GT23 GT21 GS SoftGOT2000  (Only available to GT2107-W of GT21 models)
Video Display	Not available to GT2705-V. Displays the images, which are taken with a video camera, on the GOT.	GT27 GT25 GT23 GT21 GS
RGB Display	Not available to GT2705-V. Displays the images, which are sent from the personal computer, on the GOT.	SoftGOT2000
Multimedia	Not available to GT2705-V. Records or plays the images, which are taken with the video camera, on the GOT.	
External I/O function / Operation Panel function	Not available to GT25-W, GT2505-V, and GT25HS-V. Uses an external I/O device, or an operation panel on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
Video output function	Not available to GT2705-V. Outputs the GOT screen to an external display.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Function		Description	Supported models
Report function		Not available to GT25HS-V. Collects and prints device values.	     
Sound Output		Not available to GT2505-V and GT25HS-V. Outputs the sound on the GOT.	     
Server / Client		Monitors the device of the controller, which the GOT is monitoring, by using other personal computers or the GOTs.	  
Mail Send		Sends a mail from the GOT.	  
FTP Server		Transfers a file between the GOT (FTP server) and the peripheral device (FTP client).	     
File transfer function	FTP transfer	Not available to GT2105-Q. Transfers a file between the GOT (FTP client) and a peripheral (FTP server).	     
	GOT internal transfer	Copies or moves a file to another drive or folder within the GOT.	     
GOT Mobile function		Monitors a controller through the GOT from tablets or other information devices.	  
MES Interface function		Sends an SQL statement from the GOT to a personal computer database. →GOT2000 Series MES Interface Function Manual for GT Works3 Version1	  

## 1.2 Checking the Followings before Drawing

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 1.2.1 BootOS, CoreOS and package data
- 1.2.2 Project
- 1.2.3 Screen types and the specifications
- 1.2.4 Specifications of drawing
- 1.2.5 Font specifications
- 1.2.6 Specifications of available devices
- 1.2.7 Drive configuration of the target GOT for data transfer

### 1.2.1 BootOS, CoreOS and package data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

To activate the GOT, the following data are required.

#### ■1 BootOS and CoreOS

The BootOS and the CoreOS are used to activate the GOT.

They are installed on the GOT by factory default.

To use additional functions, upgrading the BootOS and the CoreOS are required.

For the additional functions mentioned above, refer to the following.

- ⇒ 12.12 Upgraded Additional Function List

#### ■2 Package data

The package data consists of a project, system applications (standard functions and extended functions), and communication drivers.

- Project
  - Data of screens and settings that is configured with GT Designer3
  - ⇒ 1.2.2 Project
- System application (standard function)
  - Application that is required for operating the GOT and displaying the utility
- System application (extended function)
  - Application that is required for using some functions, such as the system monitor function and the logging function
- Communication driver
  - Driver that is required for the GOT to communicate with controllers

## 1.2.2 Project

Project is the data of the screen and setting configured with GT Designer3.

Each created project is managed individually.

The project has two types: workspace format project, a single file format project.

- ■ 1 Workspace format project
- 2 A single file format project

When you save the project on GT Designer3, select the format.

For the compatibility between GT Designer3 Version2 and other existing software, refer to the following.

- 12.9.1 Compatibility of projects

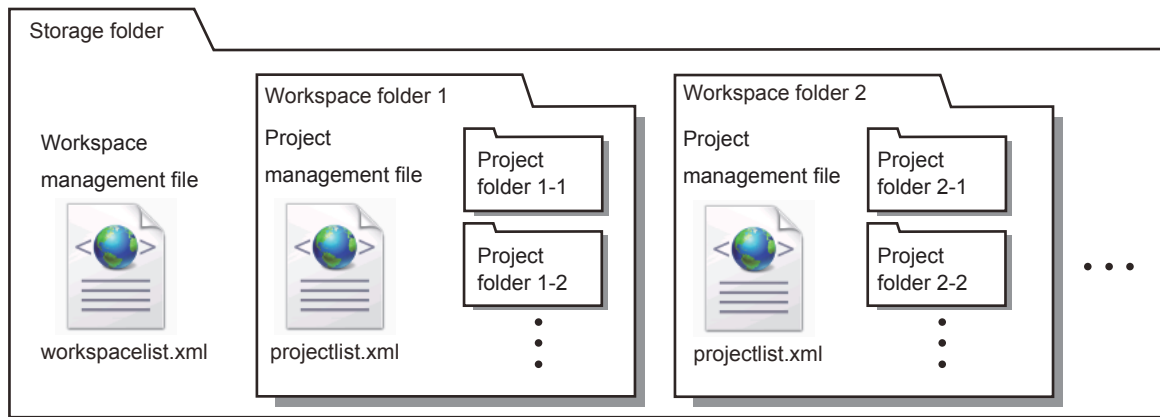

### ■ 1 Workspace format project

The workspace format project is the file format to manage multiple projects in the workspace.

The workspace format project consists of multiple folders and files as the figure below.

- Workspace management file (workspacelist.xml)  
This is the management information of the workspace in a storage folder.
- Project management file (projectlist.xml)  
This is the management information of the projects in the workspace.
- Project folder  
This folder stores the project.

#### Point

#### Migration, renaming, or deletion of the workspace format project

If you operate (migrate, rename, or delete) the folders or files in the workspace by using Windows Explorer or others, the project may not be opened.

Operate the project by using GT Designer3.

## ■2 A single file format project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

A single file format project is the file format to manage the project as a single file.

Copy, migrate, or rename the files by using Windows Explorer or others.

A single file format project has the following extensions.

- GTX  
File format that the project only is stored in a single file.
- GTXS  
File format that the package data consisting of the project, the system applications and communication driver related to the project is stored in a single file.  
With the fixed version of the project, system applications, and communication driver, they can be used on the GOT without any downgrade of their functions which are set in the project, regardless of the old version of GT Designer3 which is used to transfer GTXS project to the GOT.  
This provides the convenience when you save the project as a completed data.
- G2  
File format which is used to store the project in the GOT or a data storage.
- GTCNV  
File format which is used to convert the GOT800 project and others into the GOT2000 project with GT Converter2.

## 1.2.3 Screen types and the specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Screen types
  - 2 Screen specifications
  - 3 Functions arrangeable on the screen

### ■ 1 Screen types

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the relation between the screens created by GT Designer3 and screens displayed on the GOT.

- (1) Screens created with GT Designer3
- (2) Display order
- (3) Overlap-display specifications

#### (1) Screens created with GT Designer3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following screen types can be created with GT Designer3.

##### (a) Base screen

A screen that becomes the base of the GOT screen display.

The control of displaying a base screen is performed with a screen switching device.

##### (b) Window screen

A screen displayed as an overlap window, superimpose window, a key window, and a dialog window on the GOT.

- Superimpose window

A window superimposed on a base screen and displayed as a part of the base screen.

Up to two (superimpose window 1 and 2) superimpose windows can be displayed simultaneously.

The control of displaying the window screen is performed with a screen switching device.

- Overlap window

A pop-up window displayed over a base screen.

Up to five (overlap window 1 to 5) overlap windows can be displayed simultaneously.

(GT23 and GT21 can only display overlap window 1 and 2.)

The display position of an overlap window can be moved with a touch operation or a display position specification device.

The control of displaying the window screen is performed with a screen switching device.

- Key window

A pop-up window displayed on a base screen for the input by the numerical input function.

The display position of the key window can be moved by the touch operation.

Two types of key windows are provided: standard key window and user-created key window.

- Dialog window

A window displaying error or warning messages, and the GOT system messages in the foreground.

While a dialog window is displayed, other screens cannot be operated.

For GT21, other screens are operable even when a dialog window is displayed.

The control of displaying the window screen is performed with a screen switching device.

(c) **Report screen**

A window for outputting the data by the report function.

This screen is not displayed on the GOT.

(d) **Mobile Screen(GT27, GT25)**

A screen to be displayed on information devices, such as a tablet, when the GOT Mobile function is used.

This screen is not displayed on the GOT.

(2) **Display order**

The following shows the order of the screens displayed on the GOT.

- Base screen

Displayed at the back.

- Superimpose window 1, 2

Superimposed on a base screen and displayed as a part of the base screen.

- Overlap window 1 to 5

Displayed on the front of a base screen.

When multiple overlap windows are displayed, a later displayed or the last operated window is displayed on the front.

The stacking order of overlap windows is settable in the [Environmental Setting] window ([Screen Switching/Windows]) as well.

- Key window

Displayed on the front of a base screen and an overlap window.

- Dialog window

Displayed in the foreground of the displayed windows.

### (3) Overlap-display specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (a) Display order of overlapping figures and objects

Overlapping figures and objects are displayed according to the order of layers they belong to.  
The display order of objects between a base screen and superimposed window depends on the settings.  
→5.1.4 [Type Setting] dialog

#### (b) A base screen and a superimpose window

An input object on a base screen operates even when the object overlaps a superimpose window.  
For GT21, the input object overlapping a superimpose window does not operate.  
When input objects on a superimpose window and a base window overlap each other, both of the objects operate by touching.  
(If you touch the input objects too quickly, only the input object on the superimpose window may operate.)

#### (c) An overlap window and a key window

- When hidden behind an overlap window or a key window, the figures and the objects are not displayed and the input objects do no work.  
To check or operate the figures and the objects behind the overlap window, close or move the overlap window.
- A touch operation is invalid in the surrounding area of 16 dots from an overlap window or a key window with a title bar displayed.  
(When the title bar is hidden, the touch operation is valid in all the areas.)

## ■ 2 Screen specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the screens created with GT Designer3.

- (1) Base screen specifications
- (2) Window screen specifications
- (3) Report screen specifications
- (4) Mobile screen specifications
- (5) Layer

(1) Base screen specifications

Model	Screen size (width × height) (dots)	Registrable number of screen	Registrable screen number
GT27**-X (1024×768)	Horizontal display: 1024 × 768 Vertical display: 768 × 1024	4096	0 to 32767
GT27**-S (800×600)	Horizontal display: 800 × 600 Vertical display: 600 × 800		
GT27**-V (640×480)	Horizontal display: 640 × 480 Vertical display: 480 × 640		
GT2705-V (640×480)	Horizontal display: 640 × 480 Vertical display: 480 × 640		
GT25**-WX (1280×800)	Horizontal display: 1280 × 800 Vertical display: 800 × 1280		
GT25**-W (800×480)	Horizontal display: 800 × 480 Vertical display: 480 × 800		
GT25**-S (800×600)	Horizontal display: 800 × 600 Vertical display: 600 × 800		
GT25**-V (640×480)	Horizontal display: 640 × 480 Vertical display: 480 × 640		
GT2505-V (640×480)	Horizontal display: 640 × 480 Vertical display: 480 × 640		
GT23**-V (640×480)	Horizontal display: 640 × 480 Vertical display: 480 × 640		
GT2107-W (800×480)	Horizontal display: 800 × 480 Vertical display: 480 × 800	2048	
GT2105-Q (320×240)	Horizontal display: 320 × 240 Vertical display: 240 × 320		
GT2104-R (480×272)	Horizontal display: 480 × 272 Vertical display: 272 × 480		
GT2104-P (384×128)	Horizontal display: 384 × 128 Vertical display: 128 × 384		
GT2103-P (320×128)	Horizontal display: 320 × 128 Vertical display: 128 × 320		
GT SoftGOT2000	640 × 480 to 1920 × 1200 (The maximum size depends on set resolution.)	4096	

## (2) Window screen specifications

Model	Screen size (width × height) (dots)	Registrable number of screen	Registrable screen number
GT27**-X (1024×768)	Horizontal display: 16 × 2 to 1024 × 768 Vertical display: 16 × 2 to 768 × 1024	1024	0 to 32767
GT27**-S (800×600)	Horizontal display: 16 × 2 to 800 × 600 Vertical display: 16 × 2 to 600 × 800		
GT27**-V (640×480)	Horizontal display: 16 × 2 to 640 × 480 Vertical display: 16 × 2 to 480 × 640		
GT2705-V (640×480)	Horizontal display: 16 × 2 to 640 × 480 Vertical display: 16 × 2 to 480 × 640		
GT25**-WX (1280×800)	Horizontal display: 16 × 2 to 1280 × 800 Vertical display: 16 × 2 to 800 × 1280		
GT25**-W (800×480)	Horizontal display: 16 × 2 to 800 × 480 Vertical display: 16 × 2 to 480 × 800		
GT25**-S (800×600)	Horizontal display: 16 × 2 to 800 × 600 Vertical display: 16 × 2 to 600 × 800		
GT25**-V (640×480)	Horizontal display: 16 × 2 to 640 × 480 Vertical display: 16 × 2 to 480 × 640		
GT2505-V (640×480)	Horizontal display: 16 × 2 to 640 × 480 Vertical display: 16 × 2 to 480 × 640		
GT23**-V (640×480)	Horizontal display: 16 × 2 to 640 × 480 Vertical display: 16 × 2 to 480 × 640x		
GT2107-W (800×480)	Horizontal display: 16 × 2 to 800 × 480 Vertical display: 16 × 2 to 480 × 800		
GT2105-Q (320×240)	Horizontal display: 16 × 2 to 320 × 240 Vertical display: 16 × 2 to 240 × 320		
GT2104-R (480×272)	Horizontal display: 16 × 2 to 480 × 272 Vertical display: 16 × 2 to 272 × 480		
GT2104-P (384×128)	Horizontal display: 16 × 2 to 384 × 128 Vertical display: 16 × 2 to 128 × 384		
GT2103-P (320×128)	Horizontal display: 16 × 2 to 320 × 128 Vertical display: 16 × 2 to 128 × 320		
GT SoftGOT2000	16 × 2 to 1920 × 1200 (The maximum size depends on set resolution.)		

The display size of window screens depends on the window types.  
The following shows the specifications for each window type.

(a) Superimpose window

Model	Screen size (width × height) (dots)	Number of displayable screens on one base screen
GT27**-X (1024×768)	Horizontal display: 16 × 2 to 1024 × 768 Vertical display: 16 × 2 to 768 × 1024	2
GT27**-S (800×600)	Horizontal display: 16 × 2 to 800 × 600 Vertical display: 16 × 2 to 600 × 800

### (3) Report screen specifications

The report window is for outputting the data by the report function.  
For the specifications of the report screen, refer to the following.

⇒ 10.11.2 Specifications of the report function

### (4) Mobile screen specifications

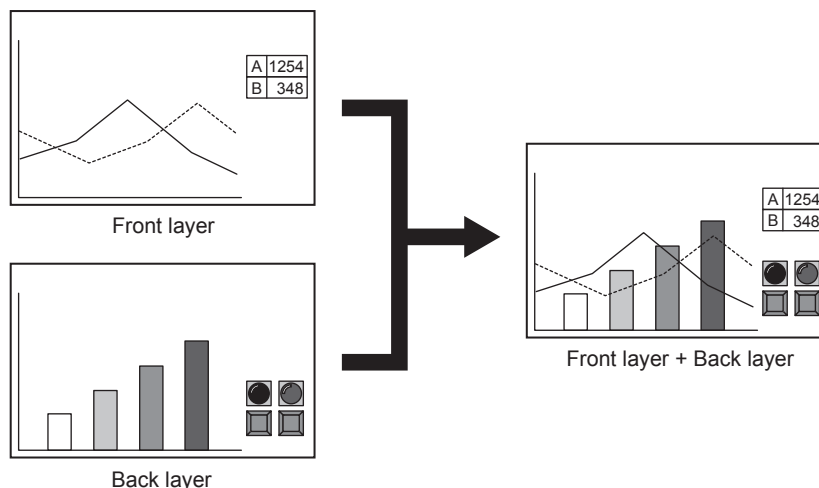

The mobile screen is displayed on information devices, such as a tablet, when the GOT Mobile function is used.  
For the specifications of the mobile screen, refer to the following.

⇒ 10.18.2 ■ 3 Mobile screen

### (5) Layer

A base screen and a window screen created with GT Designer3 consist of a front layer and a back layer.  
Placing the figures and objects separately on the front layer and the back layer ensures that the GOT displays the figures and objects in the superimposition order created with GT Designer3.

• Front layer

The front layer is displayed as a transparent sheet. In the area where no figure or object is placed, the back layer is visible.

**GOT Graphic Ver.2**

The transparent color setting is not available.

**GOT Graphic Ver.1**

Set the transparent color of the front layer.

The part of the figures and objects, whose color is the same as the transparent color of the front layer, also becomes transparent.

• Back layer

The back layer is displayed behind the front layer.

The layer specifications for window screens depend on the window screen display on the GOT.

Model	Specifications
GT27, GT25, GT SoftGOT2000	<ul style="list-style-type: none"> <li>• Superimpose windows, overlap windows, and key windows Figures and objects are arranged on the front layer and back layer. The display order on the GOT conforms to the overlap order on GT Designer3.</li> <li>• Dialog windows The front layer and back layer are combined into one layer on the GOT, and the object stacking order adjustment is applied.</li> </ul> <p><b>GOT Graphic Ver.2</b> The object stacking order adjustment is always enabled.</p> <p><b>GOT Graphic Ver.1</b> To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog. →5.1.4 [Type Setting] dialog</p>
GT23	<ul style="list-style-type: none"> <li>• Superimpose windows Figures and objects are arranged on the front layer and back layer. The display order on the GOT conforms to the overlap order on GT Designer3.</li> <li>• Overlap windows, key windows, and dialog windows The front layer and back layer are combined into one layer on the GOT, and the object stacking order adjustment is applied.</li> </ul> <p><b>GOT Graphic Ver.2</b> The object stacking order adjustment is always enabled.</p> <p><b>GOT Graphic Ver.1</b> To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog. →5.1.4 [Type Setting] dialog</p>

For how to superimpose the figures and objects by using the layers or the screens for which superimposition by using the layer is enabled, refer to the following.

→6.5.5 ■ 3 Superimposition

### ■ 3 Functions arrangeable on the screen

- ⇒(1) Figure
- (2) Object
- (3) Functions performed on the background of the GOT

#### (1) Figure

The following figures can be drawn.

- Text
- Logo Text
- Line
- Line Freeform
- Rectangle
- Polygon
- Circle
- Arc
- Sector
- Scale
- Piping
- Paint
- Import Image
- Import DXF data
- Import IGES data
- Capture

Figures with the lamp attribute are processed as a lamp object.

#### (2) Object

##### (a) Base screen

Up to 1024 objects can be arranged.

Objects arranged after the 1024th objects are not displayed on the GOT.

(For GT21, up to 100 input objects are operable, including the input objects on the window screen being displayed.)

##### (b) Window screen

Up to 512 objects can be arranged.

Objects arranged after the 513th objects are not displayed on the GOT.

##### (c) Report screen

For the specifications of the report screen, refer to the following.

- ⇒10.11.2 Specifications of the report function

The following shows the arrangeable objects and the maximum number of objects that can be set.

Function		Maximum number of objects per screen
Touch Switch	Switch	<ul style="list-style-type: none"> <li>• Base screen: 1024 objects per screen</li> <li>• Window screen: 512 objects per screen</li> </ul>
	Bit switch	
	Word switch	
	Go to screen switch	
	Change station No. switch	
	Special function switch	
	Key window display switch	
	Key code switch

## 1.2.4 Specifications of drawing

### 1 Screen and coordinate

The horizontal direction on the screen is regarded as the X coordinate, and the vertical direction the Y coordinate. The coordinate (X, Y) indicates the distance from the origin (0, 0) at the top-left of the screen. The unit of the coordinate is dot.

Example 1) When GT27-S (800 × 600) is installed horizontally

Example 2) When GT27-S (800 × 600) is installed vertically

## 1.2.5 Font specifications

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Available fonts differ depending on the figures and objects.

Check the available fonts in the setting of each figure and object.

You can also specify the character code for the text display, text input, and others.

For the Shift JIS code, the GOT can only display the JIS level 1 and level 2 characters.

The following shows available fonts with GT Designer3.

Classification	Font type	Font image	KANJI region	Supported models
Standard font	6 × 8 dots	6x8dot	Not supported	GT27 GT25 GT23 GT21 GS SoftGOT2000
	12-dot Standard	12dot Standard	Supported	
	16-dot Standard (Mincho)*1	16dot Standard Mincho	Supported	
	16-dot Standard (Gothic)*1	16dot Standard Gothic	Supported	
HQ font	12-dot HQ Mincho	12dot HQ Mincho	Supported	
	12-dot HQ Gothic	12dot HQ Gothic	Supported	
	16-dot HQ Mincho	16dot HQ Mincho	Supported	
	16-dot HQ Gothic	16dot HQ Gothic	Supported	
TrueType font	TrueType Mincho	TrueType Mincho	Not supported	
	TrueType Gothic	TrueType Gothic	Not supported	
	TrueType Numerical (Gothic)	123456	Not supported	
	TrueType Numerical (7-Segment)	123456	Not supported	
Outline font	Outline Square style*2	Outline Kaisho	Supported	GT27 GT25 GT23 GT21 GS SoftGOT2000
	Outline Gothic*2	Outline Gothic	Supported	(Only available to GT2107-W of GT21 models)
Windows font	TrueType font and OpenType font of Windows installed in a personal computer	Windows font	Not supported	GT27 GT25 GT23 GT21 GS SoftGOT2000

\*1 For GT23 and GT21, the font type is specified as the the 16-dot standard font.

Set a typeface (Gothic or Mincho) by project.

→5.1.4 [Type Setting] dialog

\*2 For GT2107-W, the font type is specified as the outline font.

Set a typeface (Kaisho or Gothic) by project.

KANJI region is a region where Chinese characters are used (such as Japan and China).

Some Chinese characters look different depending on the region where Chinese characters are used.

The font that supports the specification of KANJI region can display Chinese characters of Unified CJK Ideographs of Unicode in the style of the specified region.

Unified CJK Ideographs are Chinese characters that consist of Chinese (Simplified), Chinese (Traditional), Japanese, and Korean, all of which are standardized in Unicode.

GT Designer3 is compatible with the following KANJI regions.

KANJI region	Language	Font image
Japan	Japanese	
China	Chinese (Simplified)	
	Chinese (Traditional)	

If the KANJI regions are specified for individual figure or object, Chinese characters of different KANJI regions can be displayed on the single screen, and comments for each KANJI region can be displayed by language switching.

## ■ 1 Detailed font specifications

The following shows detailed specifications of available fonts with GT Designer3.

○ : Supported , × : Unsupported

Classification	Font type	Basic size and how to specify size	Character pitch <sup>1</sup>	Character color <sup>2</sup>	Character effect <sup>3</sup>	Easily-distinguishable font <sup>6</sup>
Standard font	6 × 8 dots	Fixed to 6 × 8 dots	Fixed	65536 colors	• Bold • Shadow • Engrave	×
	12-dot Standard	• One-byte: 6 × 12 dots • Two-byte: 12 × 12 dots 1 to 8 (integral multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
	16-dot Standard (Mincho) <sup>5</sup>	• One-byte: 8 × 16 dots • Two-byte: 16 × 16 dots 0.5 times or 1 to 8 times (integral multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
	16-dot Standard (Gothic) <sup>5</sup>	• One-byte: 8 × 16 dots • Two-byte: 16 × 16 dots 0.5 times or 1 to 8 times (integral multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
HQ font	12-dot HQ Mincho	• One-byte: 6 × 12 dots • Two-byte: 12 × 12 dots 2 to 8 times (even multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
	12-dot HQ Gothic	• One-byte: 6 × 12 dots • Two-byte: 12 × 12 dots 2 to 8 times (even multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
	16-dot HQ Mincho	• One-byte: 8 × 16 dots • Two-byte: 16 × 16 dots 2 to 8 times (even multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○
	16-dot HQ Gothic	• One-byte: 8 × 16 dots • Two-byte: 16 × 16 dots 2 to 8 times (even multiple) for height and width	Fixed	65536 colors	• Bold • Shadow • Engrave	○

Classification	Font type	Basic size and how to specify size	Character pitch <sup>1</sup>	Character color <sup>2</sup>	Character effect <sup>3</sup>	Easily-distinguishable font <sup>6</sup>
TrueType font	TrueType Mincho	8 to 240 dots (set in 1 dot unit) for height and width	Proportional	65536 colors	• Bold • Shadow • Engrave	×
	TrueType Gothic	8 to 240 dots (set in 1 dot unit) for height and width	Proportional	65536 colors	• Bold • Shadow • Engrave	×
	TrueType Numerical (Gothic)	16 to 240 dots (set in 4 dot units) for height and width <sup>7</sup>	Fixed	65536 colors	-	×
	TrueType Numerical (7-segment)	16 to 240 dots (set in 4 dot units) for height and width <sup>7</sup>	Fixed	65536 colors	-	×
Outline font	Outline Square style <sup>9</sup>	8 to 240 dots (set in 1 dot unit) for height and width	Fixed or proportional <sup>4</sup>	65536 colors	• Bold • Shadow • Engrave	×
	Outline Gothic <sup>9</sup>	8 to 240 dots (set in 1 dot unit) for height and width	Fixed or proportional <sup>4</sup>	65536 colors	• Bold • Shadow • Engrave	×
Windows font		8 to 240 dots (set in 1 dot unit) for height and width	Proportional	65536 colors	• Bold • Shadow • Engrave • Italic <sup>8</sup> • Underline <sup>8</sup>	×

\*1 A character pitch is the width of character.

A proportional font is a font type that has different character widths for each character.

\*2 For GT2104-P and GT2103-P, 32-level monochrome is used.

\*3 The following shows an example of a style.

\*4 The character pitch differs depending on the object on which the outline font is used.

\*5 For GT23 and GT21, the font type is 16-dot Standard.

Set a font (Gothic/Mincho) for each project.

⇒5.1.4 [Type Setting] dialog

\*6 The slashed zero and the crossbar I are used in this font, which distinguish themselves easily from other characters.

The following shows an example image when this setting is enabled.

\*7 For GT21, the setting range for the height and width is 16 dots to 128 dots (in 4-dot units).

\*8 Not available when Windows fonts are used for comment groups.

\*9 For GT2107-W, the font type is specified as the outline font.

Set a typeface (Kaisho or Gothic) by project.

⇒5.1.4 [Type Setting] dialog

### (1) Standard font

The font specifications applied to 12-dot Standard, 16-dot Standard (Mincho), and 16-dot Standard (Gothic) differ depending on the combination of the following settings.

- [Standard language] in the [GOT Type Setting] dialog  
Specify a language used as the standard language.  
⇒5.1.4 [Type Setting] dialog
- [16dot Standard Font] of the [GOT Type Setting] dialog

Only available to GT23 and GT21.

Specifies the font of [16dot Standard].

- [KANJI Region] for figures, objects and comments  
Specify KANJI regions per unit such as figures, objects, and comments.

(a) **6 × 8 dots**

A font that the ASCII code supports (0x20 to 0x7E).

Characters which the ASCII code does not support are displayed in one-byte rectangle.

On the GOT, characters in one-byte rectangle in a character string are not displayed.

(b) **12-dot Standard, 16-dot Standard (Mincho), and 16-dot Standard (Gothic) (12-dot Standard and 16-dot Standard for GT23 and GT21)**

Fonts that Unicode 2.1 supports.

Characters of the Latin-1 Supplement or the Latin Extended-A are displayed in one-byte characters.

The fonts differ depending on the standard language setting.

Font type	[Standard language] and font	Supported model
[12dot Standard]	<ul style="list-style-type: none"> <li>• [Japanese], [English], [Korean(Hangul)] The font is Gothic.</li> <li>• [Chinese(Simplified)] The font is Mincho.</li> <li>• [Chinese(Traditional)] The font is Gothic.</li> </ul>	
[16dot Standard Mincho]	<ul style="list-style-type: none"> <li>• [Japanese], [English], [Korean(Hangul)] The font is Mincho.</li> <li>• [Chinese(Simplified)] The font is Mincho.</li> <li>• [Chinese(Traditional)] The font is Gothic.</li> </ul>	
[16dot Standard Gothic]	<ul style="list-style-type: none"> <li>• [Japanese], [English], [Korean(Hangul)] The font is Gothic.</li> <li>• [Chinese(Simplified)] The font is Mincho.</li> <li>• [Chinese(Traditional)] The font is Gothic.</li> </ul>	
[16dot Standard]	<p>The font varies depending on the setting of [16dot Standard Font] in the [GOT Type Setting] dialog. The [16dot Standard] setting is only available to GT21 and GT23.</p> <ul style="list-style-type: none"> <li>• [Japanese], [English], [Korean(Hangul)] The font is Gothic when [16dot Standard Font] is [Gothic]. The font is Mincho when [16dot Standard Font] is [Mincho].</li> <li>• [Chinese(Simplified)] The font is Mincho.</li> <li>• [Chinese(Traditional)] The font is Gothic.</li> </ul>	

If the standard language and the KANJI region are specified, Unified CJK Ideographs can be displayed in Chinese characters of the specified KANJI region.

[Standard language]	Display of kanji
[Japanese], [English], [Korean(Hangul)]	<p>Characters of Unified CJK Ideographs are displayed in Chinese characters of Japanese (Shift-JIS). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region.</p> <ul style="list-style-type: none"> <li>• [China(GB)-Mincho]: Chinese (Simplified) (GB2312)</li> <li>• [China(Big5)-Gothic]: Chinese (Traditional) (Big5)</li> </ul>
[Chinese(Simplified)]	<p>Characters of Unified CJK Ideographs are displayed in Chinese characters of Chinese (Simplified) (GB2312). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region.</p> <ul style="list-style-type: none"> <li>• [Japanese]: Chinese characters of Japanese (Shift-JIS)</li> <li>• [China(Big5)-Gothic]: Chinese (Traditional) (Big5)</li> </ul>
[Chinese(Traditional)]	<p>Characters of Unified CJK Ideographs are displayed in Chinese characters of Chinese (Traditional) (Big5). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region.</p> <ul style="list-style-type: none"> <li>• [Japanese]: Chinese characters of Japanese (Shift-JIS)</li> <li>• [China(GB)-Mincho]: Chinese (Simplified) (GB2312)</li> </ul>

**(2) HQ font**

A font with higher resolution than a standard font.

The font specifications applied to an HQ font differ depending on the following settings.

- [Standard language] in the [GOT Type Setting] dialog  
Specify a language used as the standard language.  
    ⇒ 5.1.4 [Type Setting] dialog
- [KANJI Region] for figures, objects and comments  
Specify KANJI regions per unit such as figures, objects, and comments.

**(a) 12-dot HQ Mincho, 12-dot HQ Gothic, 16-dot HQ Mincho, 16-dot HQ Gothic**

Fonts that Unicode 2.1 supports.

Characters of the Latin-1 Supplement or the Latin Extended-A are displayed in one-byte characters.

The fonts differ depending on the standard language setting.

- [Japanese], [English], [Korean(Hangul)]  
The font for 12-dot HQ Mincho and 16-dot HQ Mincho is Mincho.  
The font for 12-dot HQ Gothic and 16-dot HQ Gothic is Gothic.
- [Chinese(Simplified)]  
The characters are displayed in Mincho.
- [Chinese(Simplified)]  
The characters are displayed in Gothic.

If the standard language and the KANJI region are specified, Unified CJK Ideographs can be displayed in Chinese characters of the specified KANJI region.

Standard font	Display of kanji
[Japanese], [English], [Korean(Hangul)]	Characters of Unified CJK Ideographs are displayed in Chinese characters of Japanese (Shift-JIS). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region. • [China(GB)-Mincho]: Chinese (Simplified) (GB2312) • [China(Big5)-Gothic]: Chinese (Traditional) (Big5)
[Chinese(Simplified)]	Characters of Unified CJK Ideographs are displayed in Chinese characters of Chinese (Simplified) (GB2312). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region. • [Japanese]: Chinese characters of Japanese (Shift-JIS) • [China(Big5)-Gothic]: Chinese (Traditional) (Big5)
[Chinese(Traditional)]	Characters of Unified CJK Ideographs are displayed in Chinese characters of Chinese (Traditional) (Big5). When the following KANJI regions are specified for figures or objects, characters of Unified CJK Ideographs are displayed in Chinese characters of a specified KANJI region. • [Japanese]: Chinese characters of Japanese (Shift-JIS) • [China(GB)-Mincho]: Chinese (Simplified) (GB2312)

**(3) TrueType font**

**(a) TrueType Mincho, TrueType Gothic**

Fonts that Unicode 2.1 supports.

Characters of the Latin-1 Supplement or the Latin Extended-A are displayed in one-byte characters.

Characters of Unified CJK Ideographs are displayed in Chinese characters of Japanese.

**(b) TrueType Numerical (Gothic), TrueType Numerical (7-Segment)**

Fonts that the ASCII code supports (0x2D to 0x3A, 0x41 to 0x46, 0x4E, 0x6F).

These fonts are available only for displaying numerical values.

#### (4) Outline font

Only available to GT2107-W of GT21 models.  
A font with higher resolution than a standard font.

Fonts that Unicode 2.1 supports.

The outline font supports the display of Thai.

A Thai character can be composed of parts put above, below, right, or left.

In addition, many curves are used in each character. Hence, if a small size is applied to a character, you may find difficulty in reading the character.

The recommended character size for displaying Thai is 20 dots or more.

When a standard language and a KANJI region are specified, Unified CJK ideographs can be displayed in Chinese characters or Japanese kanji characters according to the specified KANJI region.

[Standard language] <sup>*1</sup>	Display of kanji
[Japanese], [English], [Korean(Hangul)]	Unified CJK ideographs are displayed in Japanese kanji characters (Shift-JIS). When one of the following KANJI regions is specified for a figure or object, Unified CJK ideographs are displayed in Chinese characters. • [China(GB)-Mincho]: Simplified Chinese (GB2312 or GBK) • [China(Big5)-Gothic]: Traditional Chinese (Big5)
[Chinese(Simplified)]	Unified CJK ideographs are displayed in Simplified Chinese characters (GB2312 or GBK). When one of the following KANJI regions is specified for a figure or object, Unified CJK ideographs are displayed in Japanese kanji characters or Traditional Chinese characters. • [Japanese]: Japanese kanji (Shift-JIS) • [China(Big5)-Gothic]: Traditional Chinese (Big5)
[Chinese(Traditional)]	Unified CJK ideographs are displayed in Traditional Chinese characters (Big5). When one of the following KANJI regions is specified for a figure or object, Unified CJK ideographs are displayed in Japanese kanji characters or Simplified Chinese characters. • [Japanese]: Japanese kanji (Shift-JIS) • [China(GB)-Mincho]: Simplified Chinese (GB2312 or GBK)

\*1 GT2107-W does not support [Korean(Hangul)] and [Chinese(Traditional)].

Antialiasing smooths out the jagged text on the screen.

#### GOT Graphic Ver.2

Antialiasing is always enabled.

#### GOT Graphic Ver.1

To enable antialiasing, select [Enable the antialiasing to smooth jagged text edges] in the [Type Setting] dialog.

GT23 does not support antialiasing.

→5.1.4 [Type Setting] dialog

#### (5) Windows font

The TrueType font and OpenType font of Windows installed to a personal computer.

Vertical fonts are unavailable.

Displayable characters, fonts, and character pitches differ depending on Windows fonts used.

When using Windows fonts, note the following points.

##### (a) Opening a created project with another personal computer

When Windows font used in the project has not been installed to the personal computer, and if a set text is changed, a different font is applied.

If the computer to open the project does not have the used Windows font, install the font to the computer.

##### (b) Using the Windows fonts installed during an operation of GT Designer3.

Restart GT Designer3 to use the Windows fonts installed during an operation of GT Designer3.

## ■2 Applications and the recommended fonts

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

A font has individual imaging speed and the way of specifying the character size. Therefore, appropriate fonts differ depending on the applications.

The following shows the applications and the recommended fonts. Refer to the table as rough guides.

Application	Recommended fonts*1	
	Specifying character size by 1 dot unit.	Specifying character size by magnification
Not switching a displayed text (figures (characters), comment display (simple))	<ul style="list-style-type: none"> <li>• TrueType Mincho</li> <li>• TrueType Gothic</li> <li>• Outline Square style</li> <li>• Outline Gothic</li> <li>• Windows font</li> </ul>	<ul style="list-style-type: none"> <li>• 6 × 8 dots</li> <li>• 12-dot Standard</li> <li>• 16-dot Standard (Mincho)</li> <li>• 16-dot Standard (Gothic)</li> <li>• 12-dot HQ Mincho</li> <li>• 12-dot HQ Gothic</li> <li>• 16-dot HQ Mincho</li> <li>• 16-dot HQ Gothic</li> </ul>
Switching and displaying a text with a comment (comment display, alarm observation)	<ul style="list-style-type: none"> <li>• Outline Square style</li> <li>• Outline Gothic</li> </ul>	<ul style="list-style-type: none"> <li>• 12-dot Standard</li> <li>• 16-dot Standard (Mincho)</li> <li>• 16-dot Standard (Gothic)</li> <li>• 12-dot HQ Mincho</li> <li>• 12-dot HQ Gothic</li> <li>• 16-dot HQ Mincho</li> <li>• 16-dot HQ Gothic</li> </ul>
Objects (numerical display, numerical input)	<ul style="list-style-type: none"> <li>• Outline Square style</li> <li>• Outline Gothic</li> </ul>	<ul style="list-style-type: none"> <li>• 6 × 8 dots</li> <li>• 12-dot Standard</li> <li>• 16-dot Standard (Mincho)</li> <li>• 16-dot Standard (Gothic)</li> <li>• 12-dot HQ Mincho</li> <li>• 12-dot HQ Gothic</li> <li>• 16-dot HQ Mincho</li> <li>• 16-dot HQ Gothic</li> <li>• TrueType Numerical (Gothic)</li> <li>• TrueType Numerical (7-Segment)</li> </ul>
Objects (text display, text input)	<ul style="list-style-type: none"> <li>• Outline Square style</li> <li>• Outline Gothic</li> </ul>	<ul style="list-style-type: none"> <li>• 6 × 8 dots</li> <li>• 12-dot Standard</li> <li>• 16-dot Standard (Mincho)</li> <li>• 16-dot Standard (Gothic)</li> </ul>

\*1 [16dot Standard Mincho] and [16dot Standard Gothic] are replaced with [16dot Standard] for GT23.

### ■3 Displaying text on the GOT

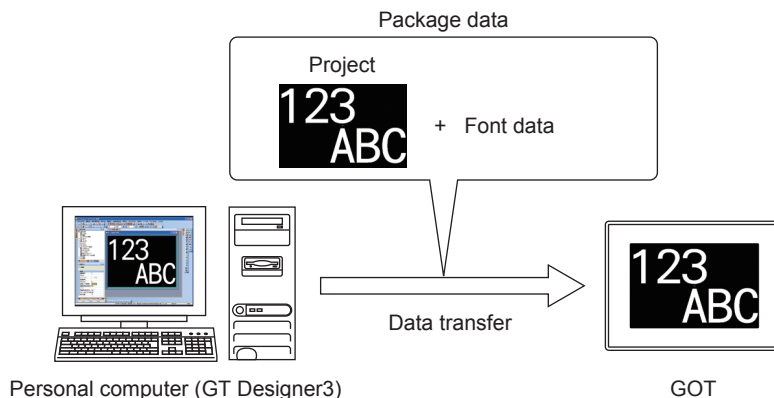

- (1) Project and font data
- (2) Utility language

#### (1) Project and font data

To display characters arranged with GT Designer3 on the screen of the GOT, install the font data of the font of the characters to the GOT together with the project (screen data).

When package data is written to the GOT, necessary font data is automatically incorporated into package data according to the standard language setting and the KANJI region setting.

The following shows the required settings for each font.

Classification	Settings
Standard font	The font data is automatically incorporated into package data by configuring one of the following settings. <ul style="list-style-type: none"> <li>• Set [Standard Language] in the [Type Setting] dialog.</li> <li>• Set [16dot Standard Font] (for GT23 only) in the [Type Setting] dialog.</li> <li>• Set [KANJI Region] for a figure, object, or comment.</li> </ul>
HQ font	The font data is automatically incorporated into package data by configuring one of the following settings. <ul style="list-style-type: none"> <li>• Set the HQ font for a figure or object.</li> <li>• Select the HQ font in the comment attribute setting.</li> </ul>
TrueType font	The font data is automatically incorporated into package data when the TrueType font is set for an object or others.
Outline font <sup>*1*2</sup>	The alphanumeric/kana font data is automatically incorporated into package data by configuring one of the following settings. <ul style="list-style-type: none"> <li>• Select [Alphanumeric/Kana] in [Outline Font] in the [Type Setting] dialog.</li> <li>• Set the outline font for a figure or object.</li> </ul>
	The font data of Japanese kanji or Chinese characters is automatically incorporated into package data by configuring one of the following settings. <ul style="list-style-type: none"> <li>• Select [Kanji] in [Outline Font] in the [Type Setting] dialog.</li> <li>• Set the outline font for a figure or object.</li> <li>• Set [KANJI Region] for a figure or object.</li> </ul>
	The font data of Hangul is automatically incorporated into package data by configuring one of the following settings. <ul style="list-style-type: none"> <li>• Select [Hangul] in [Outline Font] in the [Type Setting] dialog.</li> <li>• Set the outline font for a figure or object.</li> </ul>
Windows font	The font data is automatically incorporated into package data when the Windows font is set for an object or others.

\*1 Only available to GT2107-W of GT21 models.

\*2 For GT2107-W, restrictions are placed on the typeface data and KANJI region data in the GOT as shown below.

- Multiple typefaces of data cannot coexist in the GOT.
- Three or more KANJI regions of data cannot coexist in the GOT.

**(2) Utility language**

The following shows the relationship between the displayable languages in the utility and the required font data.

Displayable language in the utility	Required font data
Japanese	One of the following system applications is required. <ul style="list-style-type: none"> <li>• [Standard Function]-[Standard Font]-[Japanese]</li> <li>• [Extended Function]-[Standard Font]-[Japanese]</li> </ul>
English	The language can be selected regardless of the standard font installed on the GOT.
Chinese (Simplified)	One of the following system applications is required. <ul style="list-style-type: none"> <li>• [Standard Function]-[Standard Font]-[Chinese(Simplified)]</li> <li>• [Extended Function]-[Standard Font]-[Chinese(Simplified)]</li> </ul>
Chinese (Traditional)*1	One of the following system applications is required. <ul style="list-style-type: none"> <li>• [Standard Function]-[Standard Font]-[Chinese(Traditional)]</li> <li>• [Extended Function]-[Standard Font]-[Chinese(Traditional)]</li> </ul>
Korean*1	The language can be selected regardless of the standard font installed on the GOT.

\*1 GT21 does not support this item.

For how to add a system application to be installed on the GOT, refer to the following.

→4.2 Setting a System Application to be Written to the GOT

**4 Precautions**

**(1) Chinese characters which cannot be displayed with a specified KANJI region**

If a specified KANJI region does not have Chinese character to be displayed, the character is displayed in Chinese character of another KANJI region that has the corresponding Chinese character.

The system finds the alternative KANJI region in order of Japanese, Chinese (Simplified), and Chinese (Traditional).

**(2) Precautions for enabling antialiasing**

**(a) Text width change**

Enabling or disabling antialiasing may change the text width.

The set text may not appear entirely on a figure or object, or the margin of a figure or object may be increased.

Check the sizes of figures and objects after changing the antialiasing setting.

**(b) Layers on which objects are placed**

When antialiasing is enabled, place the object using an outline font on the back layer.

If you place such an object on the front layer, antialiasing may not be processed properly.

**(3) Timing for reflecting the font setting on GT SoftGOT2000 or GT Simulator3**

The following settings of the [Type Setting] dialog are reflected at the start of monitoring or simulation.

- [Graphics Setting]
- [Enable the antialiasing to smooth jagged text edges] in the [Type Setting] dialog

→5.1.4 [Type Setting] dialog

If you change the setting after the start of monitoring or simulation, restart the relevant software.

If you open the project data without restarting the software, the characters cannot be displayed correctly in the specified font.

## 1.2.6 Specifications of available devices

- ■ 1 Available devices and setting ranges
- 2 Data type of devices

### ■ 1 Available devices and setting ranges

The following shows the devices that GT Designer3 can set and the setting ranges of the devices.

Device	Setting range	Device No. representation	
GOT internal device	GOT bit register (GB)	GB0 to GB65535 (GB0 to GB2047 for GT21)	
	GOT data register (GD)	GD0 to GD65535 (GD0 to GD2047 for GT21)	
	GOT special register (GS)	GS0 to GS2047	
SoftGOT2000 internal device *4	SoftGOT bit register (SGB)	SGB0 to SGB65535	
	SoftGOT data register (SGD)	SGD0 to SGD65535	
Gateway device (EG) *2	EG0 to EG32767	Decimal number	
GOT Mobile device **2	GOT Mobile bit register (VGB)		VGB0 to VGB32767
	GOT Mobile data register (VGD)		VGD0 to VGD32767
Controller device	Depends on the controller.		Depends on the controller.
System label *1	Depends on the setting.		-
Global label *2	Depends on the setting.	-	
Label (GT Designer3)	Depends on the setting.	-	
OMRON NJ/NX tag **3	Depends on the setting.	-	
RSLogix 5000 tag **3	Depends on the setting.	-	
AB native tag **2	Depends on the setting.	-	

\*1 Not available to GT SoftGOT2000.

\*2 Not available to GT21.

\*3 Not available to GT2105-Q.

\*4 Only available to GT SoftGOT2000.

**(1) GOT internal devices (GB, GD, and GS)**

Devices that the GOT has in itself.

The devices can be used regardless of a connection type of the GOT. However, they cannot be controlled in sequence programs by a controller.

If the GOT is powered off or reset, the GOT sets the GOT internal device values to 0.

The GOT internal device includes the GOT bit register, GOT data register, and GOT special register.

Device	Description
GOT bit register (GB)	<p>Can be used as bit devices.</p> <p>The devices come in useful if they are used in processing that does not need connection by way of a controller, such as the following.</p> <ul style="list-style-type: none"> <li>• Screen switching device</li> <li>• Work area for the script function</li> <li>• Read value storage area for bar codes.</li> </ul>
GOT data register (GD)	<p>Can be used as word devices.</p> <p>The devices come in useful if they are used in processing that does not need connection by way of a controller, such as the following.</p> <ul style="list-style-type: none"> <li>• Screen switching device</li> <li>• Work area for the script function</li> <li>• Read value storage area for bar codes.</li> </ul>
GOT special register (GS)	<p>Special register that the GOT has in itself.</p> <p>Internal information, communication status, and error information of the GOT are stored.</p> <p>By monitoring the GOT special register, various GOT information can be checked and the GOT can be operated.</p>

The GOT internal devices have the area where functions are assigned or use prohibited areas used by the system. For details of the devices and use prohibited areas, refer to the following.

⇒ 12.1 GOT Internal Device

**(2) SoftGOT2000 internal devices (SGB and SGD)**

SoftGOT2000 internal device refers to a data storage area used by GT SoftGOT2000.

SoftGOT2000 internal devices are usable for any connection type, but they cannot be controlled by the sequence program of a controller.

When you exit GT SoftGOT2000, these devices are reset to 0.

The SoftGOT2000 internal devices are classified into two types: SoftGOT bit registers and SoftGOT data registers.

Device	Description
SoftGOT bit register (SGB)	<p>Can be used as bit devices.</p> <p>The devices come in useful if they are used in processing that does not need connection by way of a controller, such as the following.</p> <ul style="list-style-type: none"> <li>• Screen switching device</li> <li>• Work area for the script function</li> <li>• Read value storage area for bar codes.</li> </ul>
SoftGOT data register (SGD)	<p>Can be used as word devices.</p> <p>The devices come in useful if they are used in processing that does not need connection by way of a controller, such as the following.</p> <ul style="list-style-type: none"> <li>• Screen switching device</li> <li>• Work area for the script function</li> <li>• Read value storage area for bar codes.</li> </ul>

The SoftGOT2000 internal devices are also usable to monitor the data collected by the data collector of Edgecross. To monitor the collected data, assign the data to SoftGOT2000 internal devices in the Edgecross interaction function setting on GT SoftGOT2000.

For the Edgecross interaction function setting, refer to the following.

⇒ GT SoftGOT2000 Version1 Operating Manual

**(3) Gateway device (EG)**

Virtual devices used by the server/client function.

Controller devices can be assigned and the device values can be stored to the gateway devices.

The gateway devices can be monitored from other GOTs and personal computers. You can monitor the controller devices via the GOT indirectly.

⇒ 10.13.2 ■ 5 Gateway device

#### **(4) GOT Mobile device (VGB, VGD)**

The GOT Mobile device is a virtual device usable for a client.

Assign GOT internal devices (GB and GD) to GOT Mobile devices for a client. The GOT Mobile devices are used as internal devices for the client.

Multiple clients are controllable individually by assigning different GOT internal devices for each client.

The virtual device is not initialized at the start of monitoring a mobile screen. Therefore, the device holds the value that is stored immediately before the monitoring.

⇒10.18.2 ■ 4 GOT Mobile device (VGB and VGD)

#### **(5) Controller device**

Devices a controller has.

The GOT can monitor the controller devices.

The devices that GT Designer3 can set differ depending on the controller.

⇒12.2 Device Range and Settings of Each Controller

#### **(6) System label**

Label used commonly to each project in the workspace for iQ Works.

Assign a controller device to a system label before using the system label.

For setting the system label, refer to the following.

⇒6.1.2 How to set system labels

#### **(7) Global label**

This label is used for connection to RCPUR or the motion controller CPU (MELSEC iQ-R series) only.

To use global labels of GX Works3 and MT Developer2, import them to GT Designer3.

For setting the global labels, refer to the following.

⇒6.1.3 How to set global labels

#### **(8) Label (GT Designer3)**

This label is used on GT Designer3 only.

To use labels (GT Designer3), assign devices to them on GT Designer3.

For setting the labels (GT Designer3), refer to the following.

⇒6.1.4 How to set labels (GT Designer3)

#### **(9) OMRON NJ/NX tag**

This tag is created with OMRON programming software.

To use OMRON NJ/NX tags, import them to GT Designer3.

For information on how to set the OMRON NJ/NX tags, refer to the following.

⇒6.1.6 How to set OMRON NJ/NX tags

#### **(10)RSLogix 5000 tag**

This is a tag created with ALLEN-BRADLEY programming software.

To use RSLogix5000 tags, import them to GT Designer3.

For setting the RSLogix5000 tags, refer to the following.

⇒6.1.7 Using RSLogix 5000 tags

#### **(11)AB native tag**

This is a tag created with ALLEN-BRADLEY programming software.

To use AB native tags, import them to GT Designer3.

For setting the AB native tags, refer to the following.

⇒6.1.8 How to set AB native tags

## ■2 Data type of devices

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the data types that are available for GT Designer3.

Data type	Description	Data length	Data range
Signed BIN 16	Signed binary value	16 bits	-32768 to 32767
Signed BIN 32		32 bits	-2147483648 to 2147483647
Unsigned BIN 16	Unsigned binary value	16 bits	0 to 65535
Unsigned BIN 32		32 bits	0 to 4294967295-
BCD16	Binary coded decimal	16 bits	0 to 9999-
BCD32		32 bits	0 to 99999999-
Real number	Single-precision floating-point number	32 bits	Signed 13 digits representation (Decimal point format only)*1

\*1 The real number precision is given up to the sixth decimal point.

The accuracy of the 7th and later decimal points cannot be guaranteed.

When a number having 7th or later digits is displayed on the GOT, the displayed value may differ from the value displayed on the programming tool for the controller.

Example) When the value of a real number (floating point data) of the controller is 4.123

- Value displayed on the programming tool of the controller: 4.123000
- Value displayed on the GOT (if displayed up to 6th digit): 4.123000
- Value displayed on the GOT (if displayed up to 13th digit): 4.1230001449585

For the details of the real number (floating point), refer to the following manual.

→ QnUCPU User's Manual (Function Explanation, Program Fundamentals)

## 1.2.7 Drive configuration of the target GOT for data transfer

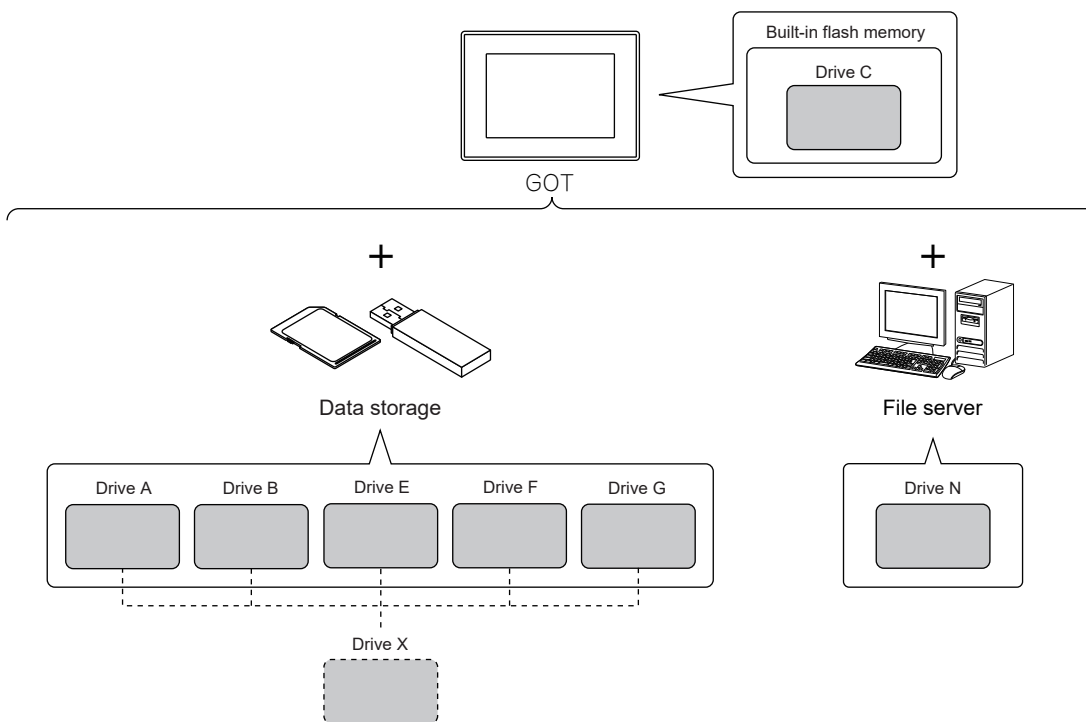

- ■ 1 GT27
- 2 GT25
- 3 GT23
- 4 GT21

### ■ 1 GT27

#### (1) Drive configuration

The following shows the drive configuration of the GOT.

Drive	Name	Description, Condition of use
Drive A	Standard SD card	An area where projects, system applications (extended functions), and resource data are stored. Insert an SD card to the SD card interface to use.
Drive B	USB Drive	An area where projects, system applications (extended functions), and resource data are stored. Install data storage to the USB interface (host) of the GOT. →(2) Installing the data storage and assigning the drive to GT27
Drive C	Built-in flash memory (user area)	An area where projects and system applications (extended functions) are stored. Always available.
Drive E	USB Drive	An area where projects, system applications (extended functions), and resource data are stored. The following models do not have drive E. • GT2712-STWA • GT2712-STWD • GT2710-VTWA • GT2710-VTWD Install data storage to the USB interface (host) of the GOT. →(2) Installing the data storage and assigning the drive to GT27
Drive F	USB Drive	
Drive G	USB Drive	
Drive N	Network drive	Folder on the file server (such as a personal computer) that is connected to the GOT by Ethernet. →5.3.15 Configuring the network drive settings ([Network Drive])
Drive X	Current drive	A drive that is running a project. *1

\*1 When drive C is running the project, the current drive is drive A.  
 For the specifications of the USB interface of the GOT or data storage, refer to the following.  
 →GOT2000 Series User's Manual (Hardware)

## (2) Installing the data storage and assigning the drive to GT27

The specifications of the drive assignment depend on the GOT model.

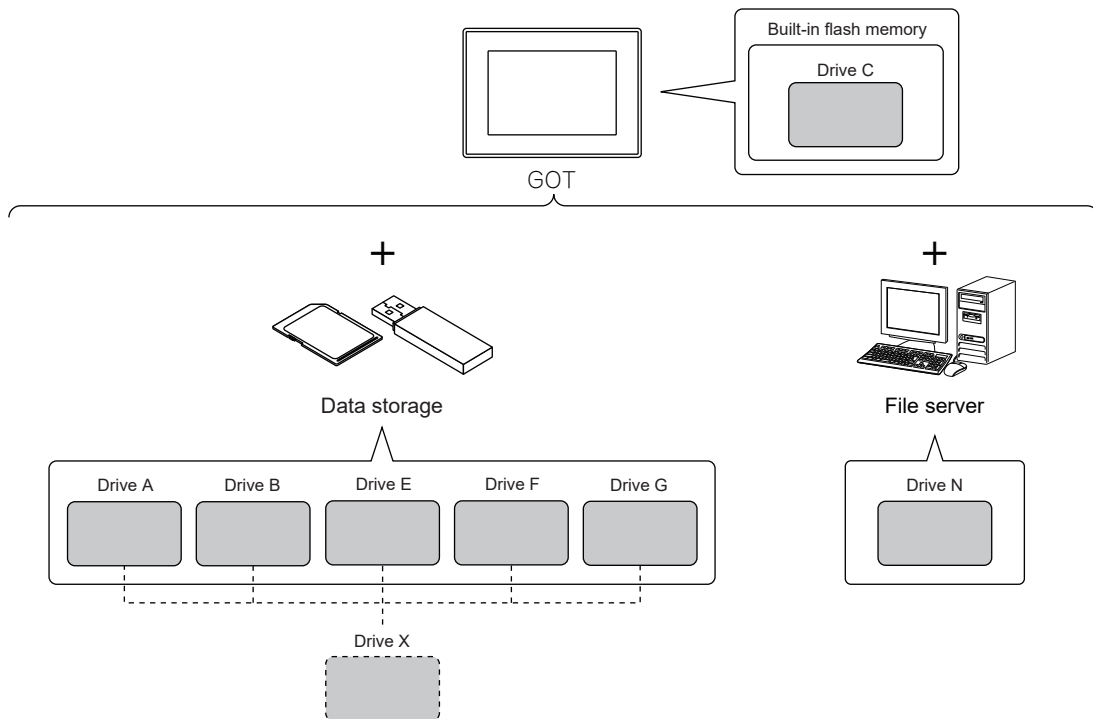

GOT	Specifications
GT2715-XTBA GT2715-XTBD GT2712-STBA GT2712-STBD GT2710-STBA GT2710-STBD GT2710-VTBA GT2710-VTBD GT2708-STBA GT2708-STBD GT2708-VTBA GT2708-VTBD GT2705-VTBD	Type which has two channels for the USB interface (host). Up to three types of USB drives can be installed per channel by using a USB hub or a card reader. Up to four USB drives can be installed for two channels. <ul style="list-style-type: none"> <li>• USB interface (host) on the back of the GOT                The USB drive installed first is assigned to the B drive.                After that, the USB drives are assigned to the F drive and G drive according to the order of the installation.</li> <li>• USB interface (host) on the front of the GOT.                The USB drive installed first is assigned to the E drive.                After that, the USB drives are assigned to the F drive and G drive according to the order of the installation.</li> </ul>
GT2712-STWA GT2712-STWD GT2710-VTWA GT2710-VTWD	Type which has one channel for the USB interface (host). Up to three USB drives can be used. The USB drive installed first is assigned to the B drive. After that, the USB drives are assigned to the F drive and G drive according to the order of the installation.

## 2 GT25

### (1) Drive configuration

The following shows the drive configuration of the GOT.

Drive	Name	Description, Condition of use
Drive A	Standard SD card	An area where projects, system applications (extended functions), and resource data are stored. Insert an SD card to the SD card interface to use.

Drive	Name	Description, Condition of use
Drive B	USB Drive	An area where projects, system applications (extended functions), and resource data are stored. The following models do not have drive B. • GT2505-V • GT25HS-V Install data storage to the USB interface (host) of the GOT. →(2) Installing the data storage and assigning the drive to GT25
Drive C	Built-in flash memory (user area)	An area where projects and system applications (extended functions) are stored. Always available.
Drive E	USB Drive	An area where projects, system applications (extended functions), and resource data are stored. The following models do not have drive E. • GT2512F-STNA • GT2512F-STND • GT2510-VTWA • GT2510-VTWD • GT2510F-VTNA • GT2510F-VTND • GT2508-VTWA • GT2508-VTWD • GT2508F-VTNA • GT2508F-VTND • GT2507T-WTSD Install data storage to the USB interface (host) of the GOT. →(2) Installing the data storage and assigning the drive to GT25
Drive F	USB Drive	
Drive G	USB Drive	
Drive N	Network drive	Folder on the file server (such as a personal computer) that is connected to the GOT by Ethernet. →5.3.15 Configuring the network drive settings ([Network Drive])
Drive X	Current drive	A drive that is running a project. *1

\*1 When drive C is running the project, the current drive is drive A.

For the specifications of the USB interface of the GOT or data storage, refer to the following.

→GOT2000 Series User's Manual (Hardware)

## (2) Installing the data storage and assigning the drive to GT25

The specifications of the drive assignment depend on the GOT model.

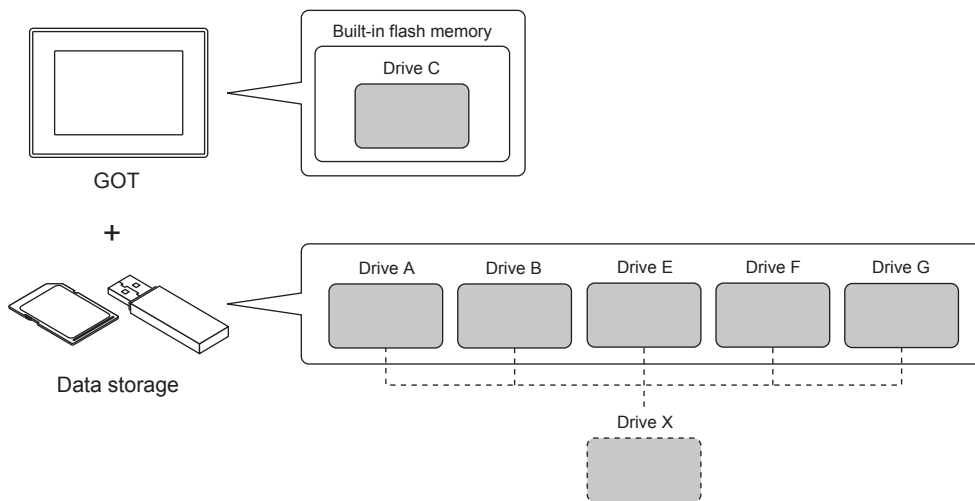

GOT	Specifications
GT2512-STBA GT2512-STBD GT2510-VTBA GT2510-VTBD GT2508-VTBA GT2508-VTBD	Equipped with two USB interfaces (Host). Up to three USB drives are connectable to each interface through a USB hub or card reader. Up to four drives are connectable to the two interfaces in total. • USB interface (Host) on the GOT rear face The USB drive connected first is assigned to drive B. The USB drives connected later are assigned to drives F and G in the order of connection. • USB interface (Host) on the GOT front face The USB drive connected first is assigned to drive E. The USB drives connected later are assigned to drives F and G in the order of connection.
GT2510-WXTBD GT2510-WXTSD GT2507-WTBD GT2507-WTSD	Equipped with one USB interface (Host). Up to four USB drives are usable. The USB drive connected first is assigned to drive B. The USB drives connected later are assigned to drives E, F, and G in the order of connection.
GT2512F-STNA GT2512F-STND GT2510-VTWA GT2510-VTWD GT2510F-VTNA GT2510F-VTND GT2508-VTWA GT2508-VTWD GT2508F-VTNA GT2508F-VTND GT2507T-WTSD	Equipped with one USB interface (Host). Up to three USB drives are usable. The USB drive connected first is assigned to drive B. The USB drives connected later are assigned to drives F and G in the order of connection.
GT2505-VTBD GT2506HS-VTBD GT2505HS-VTBD	Equipped with one USB interface (Host). Up to three USB drives are usable. The USB drive connected first is assigned to drive E. The USB drives connected later are assigned to drives F and G in the order of connection.

### 3 GT23

#### (1) Drive configuration

The following shows the drive configuration of the GOT.

Drive	Name	Description, Condition of use
Drive A	Standard SD card	An area where projects, system applications (extended functions), and resource data are stored. Insert an SD card to the SD card interface to use.
Drive B	USB Drive	An area where projects, system applications (extended functions), and resource data are stored. Install data storage to the USB interface (host) of the GOT. ⇒(2) Installing the data storage and assigning the drive to GT23
Drive C	Built-in flash memory (user area)	An area where projects and system applications (extended functions) are stored. Always available.
Drive E	USB Drive	An area where projects, system applications (extended functions), and resource data are stored.
Drive F	USB Drive	Install data storage to the USB interface (host) of the GOT.
Drive G	USB Drive	⇒(2) Installing the data storage and assigning the drive to GT23
Drive X	Current drive	A drive that is running a project. *1

\*1 When drive C is running the project, the current drive is drive A.

For the specifications of the USB interface of the GOT or data storage, refer to the following.

⇒GOT2000 Series User's Manual (Hardware)

#### (2) Installing the data storage and assigning the drive to GT23

Up to four types of USB drives can be installed by using a USB hub or a card reader.

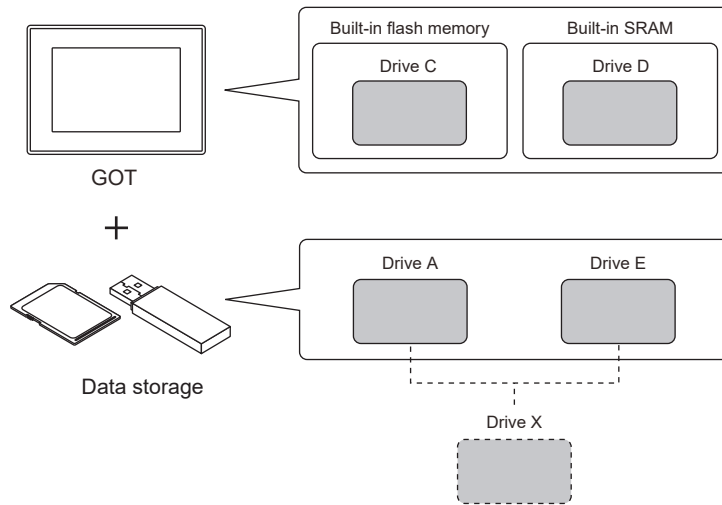

The installed data storage is assigned in order of drive B, drive E, drive F, and drive G according to the order of the installation to the GOT.

## 4 GT21

### (1) Drive configuration

The following shows the drive configuration of the GOT.

Drive	Name	Description, Condition of use
Drive A	Standard SD card	An area where projects, system applications, and resource data are stored. To use an SD card on GT2103-P, mount the SD card unit (GT21-03SDCD) on the GOT.
Drive C	Built-in flash memory (user area)	An area where projects are stored. Always available.
Drive D	Built-in SRAM	Available to GT2107-W, GT2105-Q, GT2104-R, and GT2104-P. An area where the resource data is stored. Always available.
Drive E	USB Drive	An area where projects, system applications, and resource data are stored. Only available to GT2107-W. Connect data storage to the USB interface (host) of the GOT.
Drive X	Current drive	A drive that is running a project. *1

\*1 When drive C is running the project, the current drive is drive A.

For the specifications of the USB interface of the GOT or data storage, refer to the following.

⇒GOT2000 Series User's Manual (Hardware)

### (2) Installing the data storage to GT21

To use drive A of GT2103-P, insert an SD card into the SD card unit.

# 2. CREATING A PROJECT

## 2.1 Startup and Exit of GT Designer3

- ⇒2.1.1 Starting GT Designer3
- 2.1.2 Exiting GT Designer3
- 2.1.3 Switching the display language of GT Designer3

### 2.1.1 Starting GT Designer3

The following shows the procedure for starting GT Designer3.

- Step 1** From the Windows start menu, select [MELSOFT] → [GT Works3] → [GT Designer3] to start GT Designer3.  
\*1\*2
- \*1 How to open the start menu differs depending on the Windows version.  
Check how to operate Windows.
- \*2 For GT Works3 version 1.136S or earlier, [MELSOFT Application] appears instead of [MELSOFT].
- Step 2** Select an operation in the [Select Project] dialog.

#### Point

##### (1) Drawing software to be started

GT Designer3 consists of the following drawing software.

- GT Designer3(GOT2000): Drawing software for GOT2000 series
- GT Designer3(GOT1000): Drawing software for GOT1000 series

GT Designer3 startup will activate the drawing software used at the previous time.

For the project which cannot be edited or the operation in the drawing software in operation, the supported drawing software is started.

##### (2) Operating on iQ Works

Part of the function of iQ Works cannot be used with GT Designer3 when GT Designer3 is not started from MELSOFT Navigator.

Start GT Designer3 from MELSOFT Navigator.

#### ■ 1 [Select Project] dialog

##### 1) [New] button

Creates a new project.

- ⇒2.3.1 Creating a project

##### 2) [Utilize Data] button

Utilizes a sample project or existing project to create a new project.

- ⇒11.1 Searching for Utilizable Data (Utilize Data)

##### 3) [Open] button

Opens a saved project.

- ⇒2.3.2 Opening a project

##### 4) [Show this dialog when starting GT Designer3]

Displays the [Select Project] dialog at startup of GT Designer3.

Whether to display or hide the [Select Project] dialog at startup of GT Designer3 can be also selected in the [Operation] tab of the [Option] dialog.

- ⇒11.10.3 Customizing the operation

## 2.1.2 Exiting GT Designer3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Exit GT Designer3 by performing either of the following operations.

- Select [Project] → [Exit] from the menu.
- Click the [×] button on the title bar of GT Designer3.

## 2.1.3 Switching the display language of GT Designer3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

By switching the display language of GT Designer3, you can use GT Designer3 in multiple languages on one personal computer.

The following shows how to switch the display language.

- Step 1** Select [View] → [Switch Display Language] from the menu to display the [Switch Display Language] dialog.
- ■ 1 [Switch Display Language] dialog
- Step 2** Select a language to be switched to in [Display Language], and click the [OK] button.
- Step 3** Exit GT Designer3.
- Step 4** Start GT Designer3 again to switch the display language.

The display language of the Help and sample projects is also switched accordingly.  
If you need the latest Help and sample projects, contact your local sales office.

### ■ 1 [Switch Display Language] dialog

#### 1) [Switch Display Language]

Select a language to be switched to.

### ■ 2 Precautions

#### (1) Languages supported on the personal computer

When the personal computer does not support a language to be switched to, screen layouts collapse and characters become garbled on GT Designer3.

Install a language pack or others on the personal computer as needed.

#### (2) Restrictions on the display language switching

##### (a) Items to which the display language switching is not applied

The display language switching is not applied to the following items.

Item	Display specifications
Some right-click context menu items	The display language depends on the OS language.
Setting items and buttons in some dialogs	The display language depends on the OS language.
Manuals	The display language depends on the language version of the manual installed.

##### (b) Display language for importing files

After exporting a file using the following functions, you cannot import the file to GT Designer3 whose display language is different.

- Wireless LAN setting
- Label group
- Comment group
- User alarm observation
- Logging
- Recipe

- Device data transfer

**(c) File format of exported files**

When display languages differ between GT Designer3 and the OS, export files in the Unicode text format. CSV files may not be exported properly.

**(d) MES interface function**

When display languages differ between GT Designer3 and the OS, the [MES Interface] dialog is displayed in English.

**(e) Data browser**

When starting multiple modules of GT Designer3, you cannot copy data between the modules whose display languages are different.

**(f) Adding the supplemental fonts for each language on Windows 10**

To perform the display language switching on Windows 10, add the supplemental fonts for the target language. For information on how to add the supplemental fonts for each language, refer to the manual of your personal computer or Windows Help.

**(3) Operation when multiple modules of GT Designer3 are started**

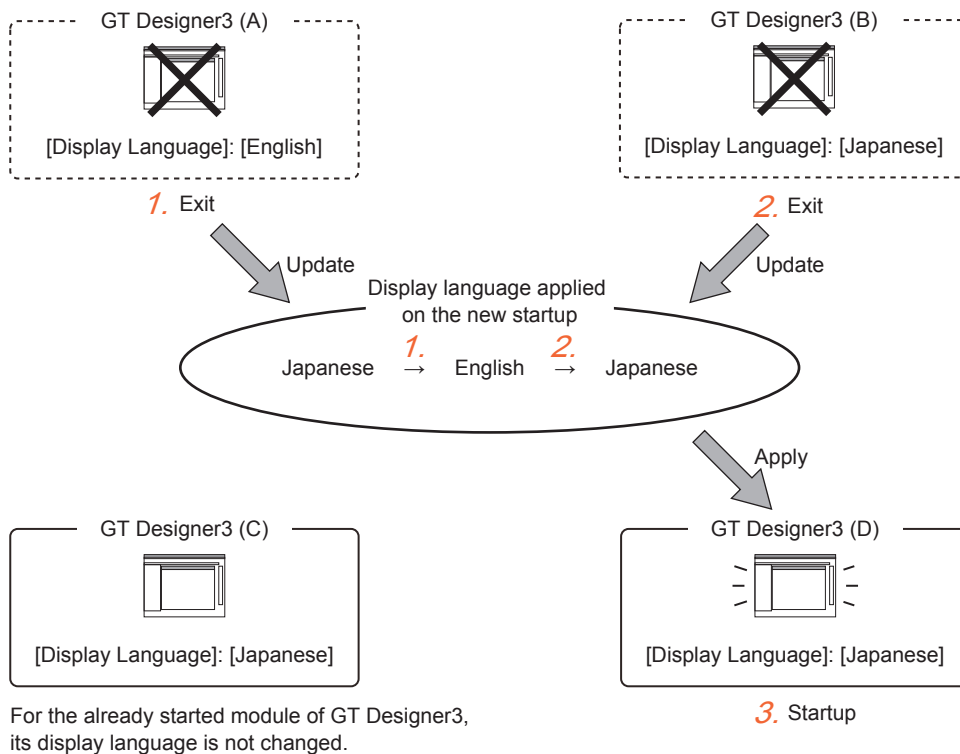

The display language is shared among all modules of GT Designer3.

When the display language setting is changed, the setting change is reflected by exiting GT Designer3 where the setting change is made.

The display language of the last exited GT Designer3 is applied when you newly start a GT Designer3 module.

Example) When exiting GT Designer3 (A) ([Display Language]: [English]), and then exiting GT Designer3 (B) ([Display Language]: [Japanese])

Japanese is applied as the display language when GT Designer3 (D) is newly started.

## 2.2 Screen Layout of GT Designer3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the screen layout of GT Designer3.

### 1) Title bar

Displays the software name.

The title bar displays a project name (workspace format) and a file name with a full path (single file format) according to the format in which the project is being edited.

### 2) Menu bar

GT Designer3 can be operated from pull-down menus.

⇒2.2.1 Menus

### 3) Toolbar

GT Designer3 can be operated by buttons.

⇒2.2.2 Toolbar and shortcut keys

### 4) Docking window

A window that can be docked with the screen of GT Designer3.

The docking location can be customized.

⇒11.10.2 Customizing the docking window

The following shows the types of windows that can be docked.

Item	Description
[Utilize Data (Screen)] window	Searches a screen of another project which can be utilized. ⇒11.1 Searching for Utilizable Data (Utilize Data)
[Project] window	Displays the list of the settings of the whole project. ⇒2.2.4 ■ 1 [Project] window
[System] window	Displays the list of settings such as the GOT type settings, environmental settings, and controller settings. ⇒2.2.4 ■ 2 [System] window
[Screen] window	Lists created base screens, window screens, report screens, and mobile screens. You can create or edit a base screen, window screen, report screen, or mobile screen. ⇒2.2.4 ■ 3 [Screen] window

Item	Description
[Property] window	Displays the list of settings of a selected screen, figure, or object. You can edit the settings without opening the setting dialog of a figure, object and others. →11.9 Checking and Editing Settings of Screens and Objects (Property Sheet)
[Library] window	Displays the list of figures and objects registered in the library. You can utilize or edit the figures and objects and create a new figure or object in the library. →8.1 Using Objects in the Library
[Device Search] window	Search the project for matching devices, labels, or tags. →11.8.1 Searching for a device (Device search)
[Data Browser] window	Displays the list of the settings in the project. You can search or edit the settings of a figure, object and others. →11.8.5 Searching for and editing a specific setting (Data Browser)
[Data Check List] window	Displays the list of data check results. →2.11.1 [Data Check List] window
[Output] window	Displays the list of the change history when the project is converted because of change of the GOT type or other reasons. →5.1.5 [Output] window
[Controller Type List] window	Displays the connection status of each channel. →5.5.1 ■ 6 [Controller Type List] window
[Data View] window	Displays the list of the figures and objects on the screen editor. You can select a figure or object on the [Data View] window. →6.5.2 ■ 3 [Data View] window
[Screen Image List] window	Displays the icons of base screens, window screens, and mobile screens. You can create or edit a base screen, window screen, or mobile screen. →2.8.1 [Screen Image List] window
[Category List] window	Displays the list of categories and figures and objects classified in each category. You can edit a category and execute batch change to the settings of devices by the category. →11.7.4 [Category List] window
[Parts Image List] window	Displays the list of the images of registered parts. You can create a new part or edit the existing parts. →5.9.5 [Parts Image List] window

### 5) Editor tab

Displays the tabs of the windows and screen editors which are displayed on the work window.

→2.2.3 Editor tab, work window

### 6) Work window

Displays screen editors, the [Environmental Setting] window, the [GOT Setup] window, and other windows.

→2.2.3 Editor tab, work window

### 7) Screen editor

Creates a screen to be displayed on the GOT by arranging figures and objects on the screen editor.

→2.5 Creating, Opening, and Closing a Screen

### 8) Status bar

Displays the following contents according to the position of the mouse cursor, a selected figure, or object.

- Description of the item over which the mouse cursor is moved.
- The GOT type, color settings, and controller settings of the project being edited.
- Coordinates of a selected figure or object

## 2.2.1 Menus

		[Operation Setting/Utility Call Key]	Set a buzzer sound and the utility call key for the GOT. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[USB Host]	Not available to GT25HS-V. Configure the settings for using a mouse and keyboard on the GOT. GT27 GT25 GT23 GT21 GS SoftGOT2000 (Only available to GT2107-W of GT21 models)
		[Time Setting]	Set the GOT time setting method. GT27 GT25 GT23
		[Transparent Mode Setting]	Set the target channel for the FA transparent function. GT21 GS SoftGOT2000
		[GOT Internal Device Monitor]	Set whether to use the GOT internal device monitor of the GOT diagnostics function. GT27 GT25 GT23 GT21 GS SoftGOT2000
	[Advanced Setting]	[SoftGOT-GOT Link]	Configure the settings for the SoftGOT-GOT link function. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[VNC Server]	Configure the settings for the VNC server function. GT27 GT25 GT23 GT21 GS SoftGOT2000 (Only available to GT2107-W of GT21 models)
		[Sequence Program Monitor]	Configure the settings for the sequence program monitor. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[Backup/Restoration]	Configure the settings for the backup/restoration function. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[Wireless LAN Setting]	Not available to GT2505-V and GT25HS-V. Configure the wireless LAN settings. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[System Launcher]	Configure the system launcher settings. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[iQSS Utility]	Configure the iQSS utility settings. GT27 GT25 GT23 GT21 GS SoftGOT2000
		[Network Drive]	Configure the network drive settings. GT27 GT25 GT23 GT21 GS SoftGOT2000

Menu		Description	Supported models
[GOT Ethernet Setting]	[GOT IP Address Setting]	Not available to GT2105-Q. Set the IP address of the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[GOT Ethernet Common Setting]	Not available to GT2105-Q. Configure the GOT Ethernet setting.	
	[IP filter Setting]	Not available to GT2105-Q. Configure the IP filter setting.	
[Controller Setting]		Configure the settings for communicating with controllers.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Menu	Description	Supported models
[PC (Data Transfer)]	Set the interface for connecting GT Designer3 (personal computer) with the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Bar Code]	Not available to GT25HS-V. Configure the settings for using a barcode reader on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[RFID]	Not available to GT25HS-V. Configure the settings for using a RFID controller on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[PC Remote Operation]	Configure the settings for operating the personal computer from the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[VNC Server]	Configure the settings for viewing the GOT display contents from the personal computer.	GT27 GT25 GT23 GT21 GS SoftGOT2000  (Only available to GT2107-W of GT21 models)
[Video/RGB Input]	Not available to GT2705-V. Configure the settings for displaying the video data taken with a video camera on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Multimedia]	Not available to GT2705-V. Configure the settings for recording or playing the video data taken with a video camera on the GOT.	SoftGOT2000
[External I/O / Operation Panel]	Not available to GT25-W, GT2505-V, and GT25HS-V. Configure the settings for using an external I/O device and operation panel with the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[HDMI/RGB Output]	Not available to GT2705-V. Configure the settings for outputting the GOT screen data to an external display.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Printer]	Configure the settings for using a printer on the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Sound Output]	Not available to GT2505-V and GT25HS-V. Configure the setting for outputting sounds from the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[GOT (Extended Computer)]	Set the interface for the connection to the GOT (Extended Computer).	GT27 GT25 GT23 GT21 GS SoftGOT2000

[Peripheral Setting]

Menu		Description	Supported models
[GOT Network Interaction]		Configure the settings for controlling pieces of equipment on the same network to prevent simultaneous operations.	
[GOT Mobile Setting]		Configure the settings for using the GOT as the server in the GOT Mobile function.	
[I/F Communication Setting]		Lists the interface settings of the GOT.	
[Label]	[Open]	Lists label groups.	
	[New Label Group]	Create a label group.	
	[Label Group Property]	Change the number and title of a label group.	
[Comment]	[Open]	Lists comment groups.	
	[New Comment Group]	Create a comment group.	
	[Comment Group Property]	Change the number and title of a comment group.	
	[New Row]	Create a row at the bottom of the comment group being edited.	
	[Insert Row]	Insert a new row into a comment group being edited.	
	[Insert Column]	Insert a new column into a comment group being edited.	
	[Import]	Imports a comment group from a file.	
	[Export]	Outputs a comment group to a file.	
	[Search]	Searches a comment in a comment group.	
	[Jump]	Displays the row of a specified comment No.	
	[Attribute Setting]	Changes the attribute of a selected row.	
	[Attribute Display/Non-Display]	Switches between displaying and hiding the attribute of a comment group.	

Menu		Description	Supported models
[Alarm]	[Alarm Common Setting]	Sets devices which convert alarm files.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[User Alarm Observation]	Configures the settings for collecting alarms by monitoring target devices.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[System Alarm Observation]	Configures the settings for collecting alarms by monitoring the system.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[Alarm Popup Display]	Configures the setting for displaying collected alarms in a popup window when the alarms are collected.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Logging]		Configures the settings for collecting device values.	SoftGOT2000
[Recipe]	[Recipe Common Setting]	Sets devices for control used by the recipe function.	
	[Recipe]	Configures the settings for executing batch write or batch read on multiple devices.	
[Script]	[Script]	Sets scripts.	
	[Script List]	Displays the list of scripts.	
	[Script Symbol]	Sets script symbols.	
	[Object Script Symbol]	Sets object script symbols.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Device Data Transfer]		Configures the settings for transferring data between devices.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Trigger Action]		Sets actions with the devices or sampling cycle that trigger the actions.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Time Action]		Sets actions with time that triggers the actions.	
[Hard Copy]		Captures the operating screen of the GOT.	
[MES Interface]		Configures the settings for sending SQL statements from the GOT to the personal computer database.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Application in Use Setup]		Sets a system application to be written to the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Parts]	[Parts Image List]	Displays the list of part images.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[Parts Setting]	Configures the part settings.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[New]	Creates a new part.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Sound]	[Sound Files]	Not available to GT2505-V and GT25HS-V. Lists the sound files to register or edit the files.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[Touch Key Sound Setting]	Not available to GT2505-V and GT25HS-V. Configure the setting to use a specified sound file for the touch key sound.	SoftGOT2000

## ■ 7 [Figure]

Menu		Description	Supported models
[Text]		Draws a text.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Logo Text]		Draws a logo text.	
[Line]		Draws a line.	
[Line Freeform]		Draws a freeform line.	
[Rectangle]		Draws a rectangle.	
[Polygon]		Draws a polygon.	
[Circle]		Draws a circle.	
[Arc]		Draws an arc.	
[Sector]		Draws a sector.	
[Table]		Draws a table.	
[Scale]		Draws a scale.	
[Piping]		Draws a piping.	
[Paint]		Fills the framed area of the figure on the screen.	
[Import Image Data]		Imports an image file into the screen.	
[Import DXF Data]		Imports a DXF data into the screen.	
[Import IGES Data]		Imports an IGES data into the screen.	
[Capture]	[Specify Rectangle Range]	[Import as JPEG Data]	Specifies a rectangle range to be captured, and places it on the screen.
		[Import as Bit Map]	
	[Import Window]	[Import as JPEG Data]	Specifies a window to be captured, and places it on the screen.
		[Import as Bit Map]	

## ■ 8 [Object]

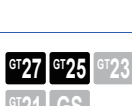

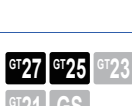

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Menu		Description	Supported models
[Select Library]	[Library List]	Displays the [Library] window.	GT27 GT25 GT23 GT21 GS SoftGOT2000
	[System Library]	Displays the [Library] window with data of [System Library] shown in the tree view.	
	[My Favorites]	Displays the [Library] window with data of [My Favorites] shown in the tree view.	

Menu		Description	Supported models			
[Switch]	[Switch]	Place a touch switch with multiple functions.				
	[Bit Switch]	Place a touch switch to switch ON/OFF of a bit device.				
	[Word Switch]	Place a touch switch to change the value of a word device.				
	[Go To Screen Switch]	Place a touch switch to switch a screen.				
	[Change Station No. Switch]	Place a touch switch to switch the station number of the GOT monitoring target.				
	[Special Function Switch]	Place a touch switch to display the utility or the screen for a monitor function.				
	[Key Window Display Switch]	Place a touch switch to display a key window.				
	[Key Code Switch]	Place a touch switch to enter a key code.				
[Lamp]	[Bit Lamp]	Place a lamp controlled by a bit device.				
	[Word Lamp]	Place a lamp controlled by a word device.				
	[Lamp Area]	Place a lamp area object controlled by a bit device.				
[Numerical Display/Input]	[Numerical Display]	Place an object to display a device value (numerical value).				
	[Numerical Input]	Place an object to input a device value (numerical value).				
[Text Display/Input]	[Text Display]	Place an object to display a device value (text).				
	[Text Input]	Place an object to input a device value (text).				
[Date/Time Display]	[Date Display]	Place an object to display the date.				
	[Time Display]	Place an object to display the time.				
[Comment Display]	[Bit Comment]	Place an object to display a comment. A bit device controls the displayed comment.				
	[Word Comment]	Place an object to display a comment. A word device controls the displayed comment.				
	[Simple Comment]	Place an object to display a comment. The displayed comment is fixed.				
[Parts Display]	[Bit Parts]	Place an object to display parts. A bit device controls the displayed parts.				
	[Word Parts]	Place an object to display parts. A word device controls the displayed parts.				
	[Fixed Parts]	Place an object to display parts. The displayed parts are fixed.				
[Parts Movement]	[Bit Parts]	Place an object to move parts. A bit device controls the displayed parts.				
	[Word Parts]	Place an object to move parts. A word device controls the displayed parts.				
	[Fixed Parts]	Place an object to move parts. The displayed parts are fixed.				
	[Parts Move Route]	Set a route to move parts.				
[Historical Data List Display]		Place an object to display the history of device values collected by the logging function.				

Menu		Description	Supported models
[Alarm Display]	[Alarm Display (User)]	Place an object to display the alarms collected by the user alarm observation.	     
	[Alarm Display (System)]	Place an object to display the alarms collected by the system alarm observation.	     
	[Simple Alarm Display]	Place an object to display the alarms collected by monitoring devices. Set the alarms to be monitored by object.	     
	[System Alarm Display]	Place an object to display the alarms collected by monitoring the system. Set the alarms to be monitored by object.	     
[Recipe Display (Record List)]		Place an object to list the records of a recipe. This object must be used in combination with the recipe function.	     
[Graph]	[Line Graph]	Place an object to display device values in line graph.	     
	[Trend Graph]	Place an object to display device values in chronological order in graph.	     
	[Bar Graph]	Place an object to display device values in bar graph.	     
	[Statistics Bar Graph]	Place an object to display the ratio of each device value to the total device values in bar graph.	     
	[Statistics Pie Graph]	Place an object to display the ratio of each device value to the total device values in pie graph.	     
	[Scatter Graph]	Place an object to display two device values as a point in scatter graph by assigning the two devices to the X and Y coordinates respectively.	     
[Graphical Meter]	[Historical Trend Graph]	Place an object to display the device values collected by the logging function in chronological order in graph.	     
	[Sector Meter]	Place an object to display a device value on a sector meter.	     
	[Semicircle Meter]	Place an object to display a device value on a semicircle meter.	     
	[Bar (Vertical) Meter]	Place an object to display a device value on a vertical bar meter.	     
[Meter]	[Bar (Horizontal) Meter]	Place an object to display a device value on a horizontal bar meter.	     
	[Level]	Place an object to display a device value by filling the specified area.	     
[Slider]	[Panelmeter]	Place an object to display a device value on a meter.	     
		Place an object to specify a device value (numeric value) by sliding the knob along the bar.	     

Menu		Description	Supported models
[Document Display]		Place an object to display a document on a screen.	 SoftGOT2000
[Video/RGB display]		Not available to GT2705-V. Place an object to display an RGB image. Displaying video images will be supported soon.	 SoftGOT2000
[Script Parts]		Place an object to create a script.	 SoftGOT2000
[Set Overlay Screen]		Place an object to overlay a called screen on a base screen.	 SoftGOT2000
[Window Position]	[Overlap1]	Place an object to specify the display position of overlap window 1.	 SoftGOT2000
	[Overlap2]	Place an object to specify the display position of overlap window 2.	 SoftGOT2000
	[Overlap3]	Place an object to specify the display position of overlap window 3.	 SoftGOT2000
	[Overlap4]	Place an object to specify the display position of overlap window 4.	 SoftGOT2000
	[Overlap5]	Place an object to specify the display position of overlap window 5.	 SoftGOT2000
	[Superimpose1]	Place an object to specify the display position of superimpose window 1.	 SoftGOT2000
	[Superimpose2]	Place an object to specify the display position of superimpose window 2.	 SoftGOT2000
	[Key Window]	Place an object to specify the display position of the key window.	 SoftGOT2000
[Key Window Object]	[Input Value Area Setting]	Place an object to display the value being input.	 SoftGOT2000
	[Input Range Area Setting]	Place an object to display the range of values that can be input.	 SoftGOT2000
	[Input Maximum Value Area Setting]	Place an object to display the maximum value that can be input.	 SoftGOT2000
	[Input Minimum Value Area Setting]	Place an object to display the minimum value that can be input.	 SoftGOT2000
	[Previous Value Area Setting]	Place an object to display the value that is input previously.	 SoftGOT2000
	[Project Setting]	Configure the settings of key windows in the project.	 SoftGOT2000
[Print]	[Numerical Print]	Place an object to print a device value (numerical value).	 SoftGOT2000
	[Text Print]	Place an object to print a device value (text).	 SoftGOT2000
	[Bit Comment Print]	Place an object to print a comment. A bit device controls the comment to be printed.	 SoftGOT2000
	[Word Comment Print]	Place an object to print a comment. A word device controls the comment to be printed.	 SoftGOT2000
[Hyperlink]		Place an object to access a website or a file in the GOT public folder, or make a phone call.	 SoftGOT2000
[My Favorites]		Displays objects registered in [My Favorites] in the library.	 SoftGOT2000

## ■ 9 [Communication]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Menu	Description	Supported models
[Write to GOT]	Writes data from the personal computer (GT Designer3) to the GOT.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Read from GOT]	Reads data from the GOT to the personal computer (GT Designer3).	GT21 GS SoftGOT2000
[Verify GOT]	Compares the project being edited with the project in the GOT.	
[Communication Configuration]	Sets the method of the communication between the personal computer (GT Designer3) and the GOT.	
[Batch Write to multiple GOTs]	Not available to GT2105-Q. Writes data to multiple GOTs in one go with a personal computer (GT Designer3).	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Write to Memory Card]	Writes data to data storage.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[CSP+ for iQSS Data Write]	Writes iQSS data (CSP+) to a data storage.	GT27 GT25 GT23 GT21 GS SoftGOT2000
[Communicate with GT01-RS4-M]	Transfers data between the personal computer (GT Designer3) and GT01-RS4-M.	GT27 GT25 GT23 GT21 GS SoftGOT2000

## 2.2.2 Toolbar and shortcut keys

GT27 GT25 GT23 GT21 SoftGOT2000 GS

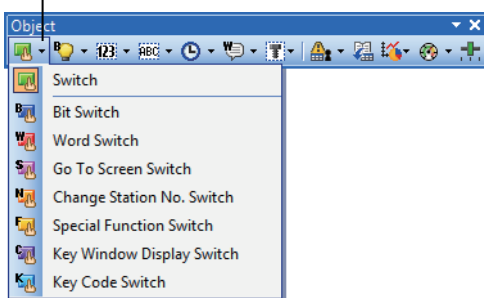

- ➔ ■ 1 [Main]
- 2 [Window Display]
- 3 [View]
- 4 [Screen]
- 5 [Edit]
- 6 [Figure]
- 7 [Object]
- 8 [Align]
- 9 [Draw Figure]
- 10 [Communication]
- 11 [Diagnostics]
- 12 [Simulator]
- 13 [Report]
- 14 [Coordinate/Size]
- 15 [My Favorites]

- You can switch between displaying and hiding the toolbar items of GT Designer3 with the [Display] menu.

- Some buttons may not be displayed on the toolbar.  
 Select the hidden buttons from the toolbar to display them on the pull-down menu.

Displays hidden switches.

Displays a selected button on the toolbar.  
 Example) When the [Word Switch] button is selected

- You can check shortcut keys on each pull-down menu.

## ■ 1 [Main]

### 1) [New] button

Creates a new project.

Shortcut key: [Ctrl] + [N]

Item	Description
[Utilize]	Searches projects that can be utilized.

### 2) [Open] button

Opens a saved project.

Shortcut key: [Ctrl] + [O]

### 3) [Save] button

Overwrites the project being edited.

Shortcut key: [Ctrl] + [S]

### 4) [Cut] button

Cuts a selected target.

Shortcut key: [Ctrl] + [X]

### 5) [Copy] button

Copies a selected target.

Shortcut key: [Ctrl] + [C]

### 6) [Paste] button

Pastes a copied or cut target to a selected area.

Shortcut key: [Ctrl] + [V]

### 7) [Undo] button

Cancels the last operation.

Shortcut key: [Ctrl] + [Z]

### 8) [Redo] button

Redoes the operation canceled by [Undo].

Shortcut key: [Ctrl] + [Y]

### 9) [Figure or Object Selection] button

Enables the mouse cursor to select a figure and object.

### 10) [GT Designer3 Help] button

Displays GT Designer3 Help.

Shortcut key: [F1]

## ■2 [Window Display]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) **[Docking Window: Project Tree] button**  
Displays or hides the [Project] window.  
Shortcut key: [Alt] + [0]
- 2) **[Docking Window: Screen Tree] button**  
Displays or hides the [Screen] window.
- 3) **[Docking Window: System Tree] button**  
Displays or hides the [System] window.
- 4) **[Docking Window: Data Browser] button**  
Displays or hides the [Data Browser] window.  
Shortcut key: [Ctrl] + [E]
- 5) **[Docking Window: Property Sheet] button**  
Displays or hides the [Property] window.  
Shortcut key: [Alt] + [1]
- 6) **[Docking Window: Library List] button**  
Displays or hides the [Library] window.  
Shortcut key: [F9]
- 7) **[Docking Window: Library List (Template)] button**  
Displays the [Library] window with displaying the template screen in tree view.  
Shortcut key: [Alt] + [F9]
- 8) **[Docking Window: Data View] button**  
Displays or hides the [Data View] window.
- 9) **[Docking Window: Utilize Creation (Screen)] button**  
Displays or hides the [Utilize Creation (Screen)] window.
- 10) **[Docking Window: Data Check List] button**  
Displays or hides the [Data Check List] window.
- 11) **[Docking Window: Output] button**  
Displays or hides the [Output] window.
- 12) **[Docking Window: Verify Result] button**  
Displays or hides the [Verify Result] window.
- 13) **[GOT Type Setting] button**  
Displays the [GOT Type Setting] dialog.
- 14) **[GOT Environmental Setting: Screen Switching/Window] button**  
Displays the [Environmental Setting] window.
- 15) **[GOT Setup: Basic Setting: Display Setting/Language Setting] button**  
Displays the [GOT Setup] window.
- 16) **[GOT Ethernet Setting] button**  
Displays the [GOT Ethernet Setting] window.
- 17) **[Controller Setting] button**  
Displays the [Controller Setting] window.
- 18) **[Label: Open] button**  
Displays the [Label Group List] dialog.
- 19) **[Comment: Open] button**  
Displays the [Open Comment Group] dialog.
- 20) **[Docking Window: Device Search] button**  
Displays or hides the [Device Search] window.  
Shortcut key: [Ctrl] + [F]

- 21) **[Device List: Screen] button**  
Displays the [Device List] window.
- 22) **[Text List] button**  
Displays the [Text List] window.

### ■ 3 [View]

- 1) **[Snap]**  
Sets the moving distance of a figure and an object on the screen editor.
- 2) **[Zoom]**  
Sets the magnification of the screen editor.
- 3) **[Expansion] button**  
Increases the magnification of the screen editor in increments of 10%.  
Shortcut key: [Ctrl] + [Num+]
- 4) **[Reduction] button**  
Reduces the magnification of the screen editor in decrements of 10%.  
Shortcut key: [Ctrl] + [Num-]
- 5) **[Whole Screen] button**  
Resizes the screen display area of the screen editor according to the editor window size.  
This item is unavailable when [All Screens] is selected in [Zoom] on the [View] menu.
- 6) **[Grid Interval]**  
Sets the distance between the lines of the grid on the screen editor.
- 7) **[Grid Color]**  
Sets the grid color of the screen editor.
- 8) **[ON] button, [OFF] button**  
Switches the display status of objects on screen editors between ON and OFF.  
Shortcut key: [F7] (The display of devices can be off by [F8] as well.)
- 9) **[Previous State] button**  
Switches the states of objects to be displayed on screen editors in descending order.
- 10) **[Next State] button**  
Switches the states of objects to be displayed on screen editors in ascending order.
- 11) **[State No.]**  
Switches the states of objects to be displayed on screen editors by selecting the state No.
- 12) **[Display Items: Device] button**  
Switches between displaying and hiding devices on screen editors.
- 13) **[Display Items: Device of Label] button**  
Displays or hides the devices that are assigned to system labels and labels (GT Designer3) on screen editors.
- 14) **[Display Items: Object ID] button**  
Switches between displaying and hiding object IDs on screen editors.
- 15) **[Layer Display: Front] button, [Layer Display: Back] button, [Layer Display: Front+Back] button**  
Switches layers to be displayed.  
Not available to GT21.
- 16) **[Language Switching Preview Column No.]**  
Sets a comment column No. to be displayed on the screen editor.  
The setting range is [1] to [30].

## ■4 [Screen]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [New] button

Creates a new screen.

Item	Description
[Base Screen]	Creates a new base screen.
[Window Screen]	Create a new window screen.
[Report Screen]	Creates a new report screen.
[Mobile Screen]	Creates a mobile screen. Available to GT27 and GT25.
[Dialog Window Wizard]	Creates a window screen for a dialog window.
[Utilize]	Searches a screen of another project which can be utilized.

### 2) [Open] button

Opens a selected window.

### 3) [Screen Image List] button

Displays the [Screen Image List] window.

### 4) [Previous Screen] button

Opens a screen whose screen number is one smaller than that of a screen being edited.

Shortcut key: [Ctrl] + [Alt] + [P]

### 5) [Next Screen] button

Opens a screen whose screen number is one greater than that of a screen being edited.

Shortcut key: [Ctrl] + [Alt] + [N]

### 6) [Open Closed Screens] button

Switches between setting and canceling screens that are closed as the target for the operation of [Previous Screen] or [Next Screen].

### 7) [Screen Background Color] button

**GOT Graphic Ver.2**

Select a background color, gradient, and pattern for the screen.

**GOT Graphic Ver.1**

Select a background color for the screen.

### 8) [Screen Color Pattern] button

**GOT Graphic Ver.1**

Select a pattern for the screen background.

### 9) [Screen Color Pattern Color] button

**GOT Graphic Ver.1**

Select a pattern color for the screen background.

### 10) [Preview] button

Displays the preview of the screen being edited.

Shortcut key: [Ctrl] + [I]

## ■ 5 [Edit]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) **[Stacking Order: Moves to front] button**  
Moves selected figures and objects to the front.
- 2) **[Stacking Order: Moves to back] button**  
Moves selected figures and objects to the back.
- 3) **[Group] button**  
Groups selected figures and objects.  
Shortcut key: [Ctrl] + [G]
- 4) **[Ungroup] button**  
Cancels the grouping of selected figures and objects.  
Shortcut key: [Ctrl] + [U]
- 5) **[Template Registration: Register to Template] button**  
Registers a selected figure or object to the template.
- 6) **[Template Registration: Register from Template] button**  
Deletes a selected figure or object from the template list.
- 7) **[Edit Template Attribute] button**  
Edits the template attribute of selected template information.
- 8) **[Turn/Invert: Flip Horizontal] button**  
Flips a selected figure horizontally.  
Shortcut key: [Ctrl] + [H]
- 9) **[Turn/Invert: Flip Vertical] button**  
Flips a selected figure vertically.  
Shortcut key: [Ctrl] + [J]
- 10) **[Turn/Invert: Rotate Left] button**  
Rotates a selected figure 90 degrees counterclockwise.  
Shortcut key: [Ctrl] + [L]
- 11) **[Turn/Invert: Rotate Right] button**  
Rotates a selected figure 90 degrees clockwise.  
Shortcut key: [Ctrl] + [R]
- 12) **[Edit Vertex] button**  
Changes the length of a freeform line or a polygon line.
- 13) **[Align: Custom] button**  
Aligns selected figures and objects.
- 14) **[Object of Selection: Shape] button**  
Sets only figures as the targets for selecting.
- 15) **[Object of Selection: Object] button**  
Sets only objects as the targets for selecting.
- 16) **[Object of Selection: Shape + Object] button**  
Sets figures and objects as the targets for selecting.
- 17) **[Object of Selection: Overlay Screen] button**  
Switches between setting and canceling set overlay screens as the targets for selecting.

■ 6 [Figure]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) **[Text] button**  
Draws a text.
- 2) **[Logo Text] button**  
Draws a logo text.
- 3) **[Line] button**  
Draws a line.
- 4) **[Line Freeform] button**  
Draws a freeform line.
- 5) **[Rectangle] button**  
Draws a rectangle.
- 6) **[Polygon] button**  
Draws a polygon.
- 7) **[Circle] button**  
Draws a circle.
- 8) **[Arc] button**  
Draws an arc.
- 9) **[Sector] button**  
Draws a sector.
- 10) **[Table] button**  
Draws a table.
- 11) **[Scale] button**  
Draws a scale.
- 12) **[Piping] button**  
Draws a piping.
- 13) **[Paint] button**  
Fills the framed area of the figure on the screen.
- 14) **[Import Image Data] button**  
Imports an image file into the screen.
- 15) **[Import DXF Data] button**  
Imports a DXF data into the screen.
- 16) **[Import IGES Data] button**  
Imports an IGES data into the screen.
- 17) **[Capture: Specify Rectangle Range] button**

Item	Description
[Import as JPEG Data]	Specifies a rectangle range to be captured in the JPEG format, and places it on the screen.
[Import as Bit Map]	Specifies a rectangle range to be captured in the BMP format, and places it on the screen.

18) **[Capture: Window Specification] button**

Item	Description
[Import as JPEG Data]	Specifies a window to be captured in the JPEG format, and places it on the screen.
[Import as Bit Map]	Specifies a window to be captured in the BMP format, and places it on the screen.

## 7 [Object]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Switch] button

Item	Description
[Switch] button	Touch switch with multiple functions
[Bit Switch] button	Touch switch to switch ON/OFF of a bit device
[Word Switch] button	Touch switch to change the value of a word device
[Go To Screen Switch] button	Touch switch to switch the screen
[Change Station No. Switch] button	Touch switch to switch the station No. of the GOT monitor target
[Special Function Switch] button	Touch switch to display the utility or the screen for the monitor function
[Key Window Display Switch] button	Touch switch to display a key window
[Key Code Switch] button	Touch switch to enter a key code

### 2) [Lamp] button

Item	Description
[Bit Lamp]	Lamp controlled by the bit device
[Word Lamp]	Lamp controlled by the word device
[Lamp Area]	Lamp area controlled by the bit device

### 3) [Numerical Display/Input] button

Item	Description
[Numerical Display]	Object to display a device value (numeric value)
[Numerical Input]	Object to input the device value (numeric value)

### 4) [ASCII Display/Input] button

Item	Description
[ASCII Display]	Object to display the device value (text)
[ASCII Input]	Object to input the device value (text).

### 5) [Date/Time Display] button

Item	Description
[Date Display]	Object to display the date
[Time Display]	Object to display the time

### 6) [Comment Display] button

Item	Description
[Bit Comment]	Object to display the comments The bit device controls the displayed comments.
Word comment	Object to display the comments The word device controls the displayed comments.
[Simple Comment]	Object to display the comments The displayed comments are fixed.

### 7) [Parts Display] button

Item	Description
[Bit Parts]	Object to display the parts The bit device controls the displayed parts.
[Word Parts]	Object to display the parts The word device controls the displayed parts.

Item	Description
[Fixed Parts]	Object to display the parts The displayed parts are fixed.

### 8) [Alarm Display] button

Item	Description
[Alarm Display (User)]	Object to display the alarms collected by the user alarm observation.
[Alarm Display (System)]	Object to display the alarms collected by the system alarm observation.
[Simple Alarm Display]	Object to display the alarms collected by monitoring the device Sets the monitored alarm per object.
[System Alarm Display]	Object to display the alarms collected by monitoring the system Sets the monitored alarm per object.

### 9) [Recipe Display (Record List)] button

Places an object to list the records of a recipe.

This object must be used in combination with the recipe function.

### 10) [Graph] button

Item	Description
[Line Graph]	Object to indicate the device values as a line graph.
[Trend Graph]	Object to indicate the device values in chronological order as a graph.
[Bar Graph]	Object to indicate the device values as a bar graph.
[Statistics Bar Graph]	Object to indicate the ratio of each device value compared to the total value of multiple devices as a bar graph.
[Statistics Pie Graph]	Object to indicate the ratio of each device value compared to the total value of multiple devices as a pie graph.
[Scatter Graph]	Object to indicate the device values as a scatter graph with the X and Y coordinates representing two devices, respectively.
[Historical Trend Graph]	Object to indicate, in chronological order as a graph, the device values collected by the logging function.

### 11) [Graphical Meter] button

Item	Description
[Sector Meter]	Places an object to display a device value on a sector meter.
[Semicircle Meter]	Places an object to display a device value on a semicircle meter.
[Bar (Vertical) Meter]	Places an object to display a device value on a vertical bar meter.
[Bar (Horizontal) Meter]	Places an object to display a device value on a horizontal bar meter.

### 12) [Slider] button

Object to specify the device value (numeric value) by sliding the knob along the bar.

## ■ 8 [Align]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Align: Align left] button

Aligns the left sides of all selected figures and objects with the left side of the leftmost figure or object.

#### 2) [Align: Center(left and right)] button

Horizontally centers all selected figures and objects.

#### 3) [Align: Align right] button

Aligns the right sides of all selected figures and objects with the right side of the rightmost figure or object.

#### 4) [Align: Align top] button

Aligns the top sides of all selected figures and objects with the top side of the topmost figure or object.

5) **[Align: Center(top and down)] button**

Vertically centers all selected figures and objects.

6) **[Align: Align bottom] button**

Aligns the bottoms of all selected figures and objects with the bottom of the lowest figure or object.

7) **[Align: Align equally to X] button**

Evenly and horizontally aligns all selected figures and objects.

8) **[Align: Align equally to Y] button**

Evenly and vertically aligns all selected figures and objects.

9) **[Align: Custom] button**

Displays the [Align] dialog.

■ 9 **[Draw Figure]**

1) **[Line Style] button**

Sets the line type of a selected figure.

2) **[Line Width] button**

Sets the line width of a selected figure.

3) **[Line Color] button**

Sets the line color of a selected figure.

4) **[Pattern] button**

Sets the pattern of a selected figure.

5) **[Shape Color] button**

Sets the pattern color of a selected figure.

6) **[Background Color] button**

Sets the pattern background color of a selected figure.

7) **[Text Color] button**

Sets a text color.

8) **[Style] button**

Sets a character effect.

9) **[Text Solid Color] button**

Sets the color of the shade of a text.

■ 10 **[Communication]**

1) **[Write to GOT] button**

Writes data from the personal computer (GT Designer3) to the GOT.  
Shortcut key: [Shift] + [F11]

2) **[Read from GOT] button**

Reads data from the GOT to the personal computer (GT Designer3).

3) **[Verify GOT] button**

Compares the project being edited with the project in the GOT.

#### 4) [Communication Configuration] button

Sets the method of the communication between the personal computer (GT Designer3) and the GOT.

#### 5) [Batch Write to multiple GOTs] button

Not available to GT2105-Q.

Writes data to multiple GOTs in one go with a personal computer (GT Designer3).

### ■ 11 [Diagnostics]

1)

#### 1) [GOT Diagnostics] button

Displays the GOT error information.

### ■ 12 [Simulator]

1) 2) 3) 4)

#### 1) [Simulator: Start] button

Starts GT Simulator3 and executes a simulation.

Shortcut key: [Ctrl] + [F10]

#### 2) [Simulator: Update] button

Updates the project in simulation with the project being edited.

Shortcut key: [Alt] + [F10]

#### 3) [Simulator: Setting] button

Configures the communication settings and other settings of GT Simulator3.

#### 4) [Simulator: End] button

Exits GT Simulator3.

### ■ 13 [Report]

1) 2) 3) 4) 5) 6) 7) 8) 9) 10)

#### 1) [Line] button

Arranges a line.

#### 2) [Text] button

Arranges a text.

#### 3) [Print:Numerical Print] button

Place an object to print a device value (numerical value).

#### 4) [Print:Text Print] button

Place an object to print a device value (text).

#### 5) [Print:Bit Comment Print] button

Place an object to print a comment.

A bit device controls the comment to be printed.

6) **[Print:Word Comment Print] button**

Place an object to print a comment.

A word device controls the comment to be printed.

7) **[Set for Header] button**

Sets the selected row as the header.

8) **[Set for Footer] button**

Sets the selected row as the footer.

9) **[Set for Repeat] button**

Sets the selected row to be repeatedly printed.

10) **[Object of Selection:Report Line] button**

Sets only report lines as the targets for selecting.

■ 14 **[Coordinate/Size]**

1) **[X]**

Sets the X coordinate of the upper left vertex of a selected figure or object in dots.

2) **[Y]**

Sets the Y coordinate of the upper left vertex of a selected figure or object in dots.

3) **[Width]**

Sets the width of a selected figure or object in dots.

4) **[Height]**

Sets the height of a selected figure or object in dots.

■ 15 **[My Favorites]**

Displays figures and objects registered in the favorite of the [Library] window.

## 2.2.3 Editor tab, work window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows what are displayed in the editor tab and work window.

### 1) Work window

Area where screen editors and other windows are displayed.

The following shows the screens to be displayed in the work window.

- Screen editor
- [Environmental Setting] window
- [GOT Setup] window
- [Controller Setting] window
- [Comment List] window
- [Device List] window
- [Text List] window

### 2) Editor tab

Displays the tabs of the windows and screen editors which are displayed on the work window.

When a tab is selected, the corresponding window is displayed in the topmost position in the work window.

- **Scroll button**  
Scrolls the position of a selected tab sideways.  
The button can be used when tabs are too many to be displayed in the editor tab.
- **Pull-down menu button**  
Displays the list of screen editors and windows being displayed in the work window.  
This button displays a screen editor or window selected from the pull-down menu in the topmost position.
- **Close button**  
Closes a selected tab.

Right-click a tab to display menus to operate the tab.

- **[Close this Tab]**  
Closes the right-clicked tab.
- **[Close All Tab on the Left]**  
Closes all the tabs on the left side of the right-clicked tab.
- **[Close All Tab on the Right]**  
Closes all the tabs on the right side of the right-clicked tab.
- **[Close All Other]**  
Closes all the tabs except the right-clicked tab.
- **[Close All]**  
Closes all the displayed tabs.

To switch between displaying and hiding the editor tab, select [Display] → [Editor tab] from the menu.

## 2.2.4 Work tree

The work tree refers to the [Project] window, [System] window, or [Screen] window.

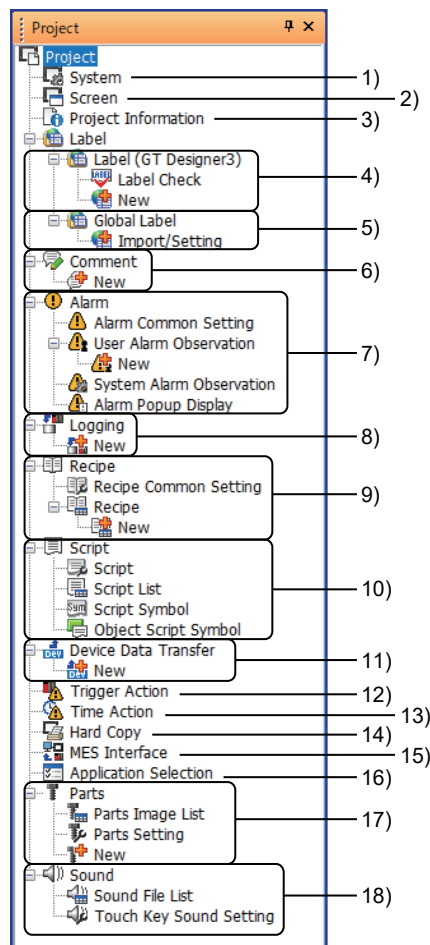

- ■ 1 [Project] window
- 2 [System] window
- 3 [Screen] window

### ■ 1 [Project] window

The [Project] window lists the settings of the whole project.

Double-click an item to display the setting dialog.

#### 1) [System]

Displays the [System] window.

- ■ 2 [System] window

#### 2) [Screen]

Displays the [Screen] window.

- ■ 3 [Screen] window

#### 3) [Project Information]

Set a project title and a creator's name.

#### 4) [Label (GT Designer3)]

Displays the list of set label groups.

Each one can be copied and pasted with the [Edit] menu.

Item	Description
[Label Check]	Updates labels (GT Designer3) and checks them.

Item	Description
[New]	Create a label group.

### 5) [Global Label]

Not available to GT21.

Lists the imported global labels.

Item	Description
[Import/Setting]	Displays the [Global Label List] dialog. →6.1.3 ■ 2 Importing global labels 6.1.3 ■ 6 [Global Label List] dialog

### 6) [Comment]

Lists the set comment groups.

Each one can be copied and pasted with the [Edit] menu.

Item	Description
[New]	Create a comment group.

### 7) [Alarm]

Item	Description
[Alarm Common Setting]	Set devices that convert alarm files.
[User Alarm Observation]	Lists the settings of placed user alarm observation. Each one can be copied and pasted with the [Edit] menu. Double-click [New] to configure the settings for collecting alarms by monitoring devices.
[System Alarm Observation]	Configure the settings for collecting alarms by monitoring the system.
[Alarm Popup Display]	Configure the settings for displaying collected alarms in a popup window when the alarms are collected.

### 8) [Logging]

Lists the set logging settings.

Each one can be copied and pasted with the [Edit] menu.

Item	Description
[New]	Configure the settings for collecting device values.

### 9) [Recipe]

Item	Description
[Recipe Common Setting]	Set control devices for the recipe function.
[Recipe]	Lists the set recipe settings. Each one can be copied and pasted with the [Edit] menu. Double-click [New] to configure the settings for executing batch write or batch read on multiple devices.

### 10) [Script]

Item	Description
[Script]	Set scripts.
[Script List]	Lists the scripts.
[Script Symbol]	Set script symbols.
[Object Script Symbol]	Set object script symbols.

### 11) [Device Data Transfer]

Lists the set device data transfer settings.

Each one can be copied and pasted with the [Edit] menu.

Item	Description
[New]	Configure the settings for transferring data between devices.

### 12) [Trigger Action]

Set actions triggered by devices or sampling.

### 13) [Time Action]

Set actions triggered by time.

14) **[Hard Copy]**

Configure the settings for capturing the active screen on the GOT.

15) **[MES Interface]**

Configure the settings for sending SQL statements from the GOT to the personal computer database.

16) **[Application Selection]**

Select system applications to be written to the GOT.

17) **[Parts]**

Item	Description
[Parts Image List]	Lists the part images. Each one can be copied and pasted with the [Edit] menu.
[Parts Setting]	Configure the part settings.
[New]	Create a part.

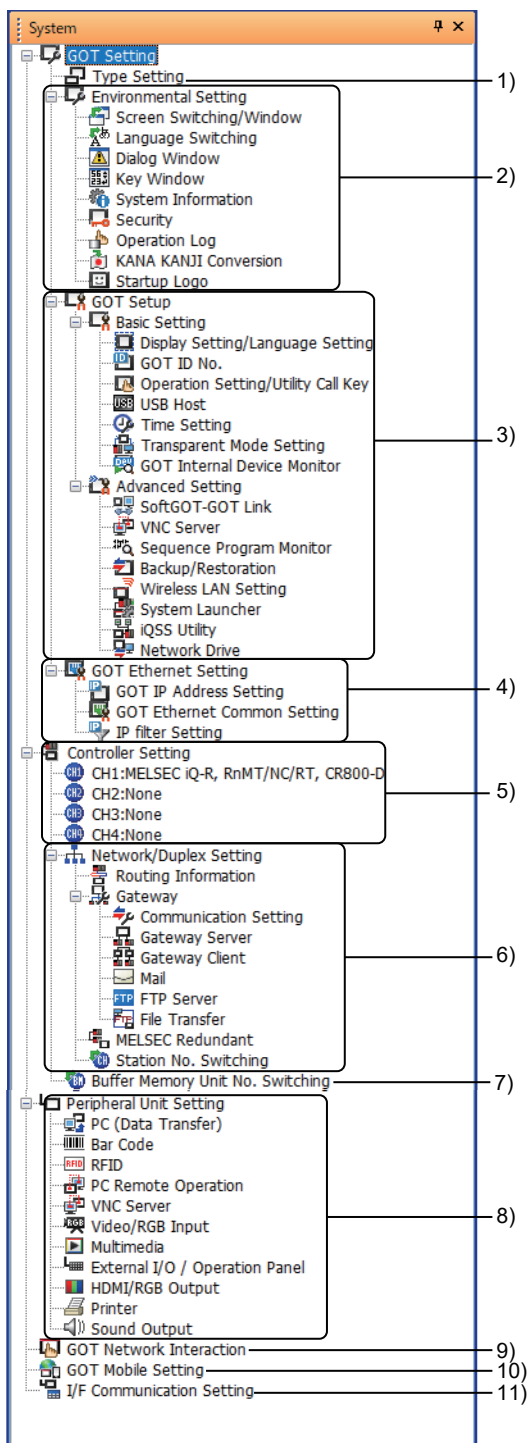

18) **[Sound]**

Item	Description
[Sound File List]	Lists the sound files to register or edit the files.
[Touch Key Sound Setting]	Configure the setting to use a specified sound file for the touch key sound.

## ■2 [System] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [System] window lists the settings, including the GOT type settings, environmental settings, and controller settings. Double-click an item to display the setting dialog.

### 1) [Type Setting]

Change the model setting of the project.

### 2) [Environmental Setting]

Item	Description
[Screen Switching/Window]	Configure the settings of screen switching.
[Language Switching]	Configure the settings of language switching.

Item	Description
[Dialog Window]	Configure the settings of the system message dialog window.
[Key Window]	Configure the settings of key windows in the project.
[System Information]	Set devices that handle the system information.
[Security]	Configure the security settings for the GOT operations.
[Operation Log]	Configure the settings for collecting operation history events of the GOT.
[KANA KANJI Conversion]	Configure the settings for converting characters into kanji on the GOT.
[Startup Logo]	Set the initial screen displayed at the GOT startup.

### 3) [GOT Setup]

Item	Description
[Basic Setting]	<ul style="list-style-type: none"> <li>• [Display Setting/Language Setting] Configure the display settings of the GOT.</li> <li>• [GOT ID No.] Set unique information to the GOT.</li> <li>• [Operation Setting/Utility Call Key] Set a buzzer sound and the utility call key for the GOT.</li> <li>• [USB Host] Configure the settings for using a mouse and keyboard on the GOT.</li> <li>• [Time Setting] Set the GOT time setting method.</li> <li>• [Transparent Mode Setting] Set the target channel for the FA transparent function.</li> <li>• [GOT Internal Device Monitor] Set whether to use the GOT internal device monitor of the GOT diagnostics function.</li> </ul>
[Advanced Setting]	<ul style="list-style-type: none"> <li>• [SoftGOT-GOT Link] Configure the settings for the SoftGOT-GOT link function.</li> <li>• [VNC Server] Configure the settings for the VNC server function.</li> <li>• [Sequence Program Monitor] Configure the settings for the sequence program monitor.</li> <li>• [Backup/Restoration] Configure the settings for the backup/restoration function.</li> <li>• [Wireless LAN Setting] Configure the wireless LAN settings.</li> <li>• [System Launcher] Configure the system launcher settings.</li> <li>• [iQSS Utility] Configure the iQSS utility settings.</li> <li>• [Network Drive] Configure the network drive settings.</li> </ul>

### 4) [GOT Ethernet Setting]

Item	Description
[GOT IP Address Setting]	Set the IP address of the GOT.
[GOT Ethernet Common Setting]	Configure the GOT Ethernet setting.
[IP filter Setting]	Configure the IP filter setting.

### 5) [Controller Setting]

Configure the settings for communicating with controllers.  
The number of channels depends on the GOT model.

### 6) [Network/Duplex Setting]

Item	Description
[Routing Information]	Configure the settings for monitoring other networks.

Item	Description
[Gateway]	<ul style="list-style-type: none"> <li>• [Communication Setting] Configure the communication settings for the server/client function.</li> <li>• [Gateway Server] Configures the settings of the server function.</li> <li>• [Gateway Client] Configure the settings for the server function.</li> <li>• [Mail] Configure the settings for the mail send function.</li> <li>• [FTP Server] Configure the settings for the FTP server function.</li> <li>• [File Transfer] Configure the settings for the file transfer function (FTP transfer or GOT internal transfer).</li> </ul>
[MELSEC Redundant]	Configure the settings for monitoring the MELSEC redundant system.
[Station No. Switching]	Configure the settings for switching the station number of the monitoring target.

#### 7) [Buffer Memory Unit No. Switching]

Configure the settings for switching the buffer memory unit No. of the monitoring target.

#### 8) [Peripheral Unit Setting]

Item	Description
[PC (Data Transfer)]	Set the interface for connecting GT Designer3 (personal computer) with the GOT.
[Bar Code]	Configure the settings for using a barcode reader on the GOT.
[RFID]	Configure the settings for using a RFID controller on the GOT.
[PC Remote Operation]	Configure the settings for operating the personal computer from the GOT.
[VNC Server]	Configure the settings for viewing the GOT display contents from the personal computer.
[Video/RGB Input]	Configure the settings for displaying the video data taken with a video camera on the GOT.
[Multimedia]	Configure the settings for recording or playing the video data taken with a video camera on the GOT.
[External I/O / Operation Panel]	Configure the settings for using an external I/O device and operation panel with the GOT.
[HDMI/RGB Output]	Configure the settings for outputting the GOT screen data to an external display.
[Printer]	Configure the settings for using a printer on the GOT.
[Sound Output]	Configure the setting for outputting sounds from the GOT.
[GOT (Extended Computer)]	Set the interface for the connection to the GOT (Extended Computer).

#### 9) [GOT Network Interaction]

Configure the settings for controlling pieces of equipment on the same network to prevent simultaneous operations.

#### 10) [GOT Mobile Setting]

Configure the settings for using the GOT as the server in the GOT Mobile function.

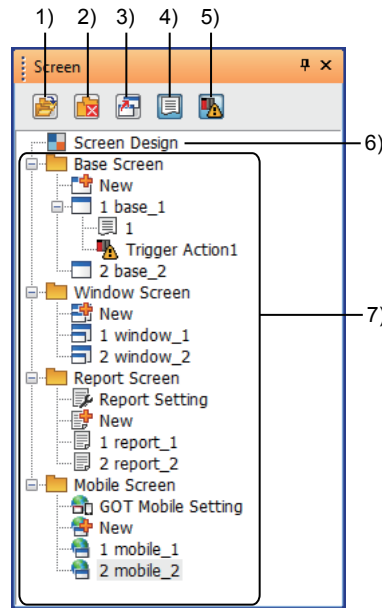

#### 11) [I/F Communication Setting]

Lists the interface settings of the GOT.

### ■ 3 [Screen] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [Screen] window lists the created base screens, window screens, report screens, and mobile screens. Double-click an item to display the setting dialog.

1) **[Unfold All] button**

Expands the tree.

2) **[Fold All] button**

Collapses the tree.

3) **[Overlay Screen] button**

Displays or hides the hierarchy of set overlay screens in the tree.

4) **[Script (Screen)] button**

Displays or hides the screen script settings in the tree.

5) **[Trigger Action (Screen)] button**

Displays or hides the screen trigger action settings in the tree.

6) **[Screen Design]**

Displays the [Screen Design] dialog.

7) **[Base Screen], [Window Screen], [Report Screen], and [Mobile Screen]**

Lists the created base screens, window screens, report screens, and mobile screens.

Each one can be copied and pasted with the [Edit] menu.

The copied screen appears after it is pasted in the list.

When displaying and editing the screens are prohibited by the project security, the list is displayed as shown below.

Item	Description
[New]	Create a base screen, window screen, report screen, or mobile screen.
[Report Setting]	Configure the settings for the report function.
[GOT Mobile Setting]	Configure the settings for using the GOT as the server in the GOT Mobile function.

## 2.2.5 Status bar

Displays the following contents according to the position of the mouse cursor, a selected figure, or object.

- Description of the item over which the mouse cursor is moved.
- The GOT type, color settings, and controller settings of the project being edited.
- Coordinates of a selected figure or object

Switch between displaying and hiding the status bar by selecting [Display] → [Status bar] from the menu.

If system labels are used, the system label change notification icon appears when there is a change in system labels.

→6.1.2 ■ 4 (4) System label update notification

## 2.3 Creating and Editing a Project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 2.3.1 Creating a project
- 2.3.2 Opening a project
- 2.3.3 Closing a project
- 2.3.4 Deleting a project
- 2.3.5 Giving a title to a project

### 2.3.1 Creating a project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to create a project.

- Creating a new project  
Create a new project.  
By using the wizard, you can configure required settings accordingly.  
At the default setting, the wizard is displayed.
  - ⇒ ■ 1 Using the wizardYou can also create a project without using the wizard.
  - ⇒ ■ 2 Without using the wizard
- Creating a project utilizing a saved project  
Search a project that can be utilized from stored projects by specifying conditions such as a keyword.  
You can create a project based on the searched project.
  - ⇒ 11.1 Searching for Utilizable Data (Utilize Data)

#### Point

##### Operating on iQ Works

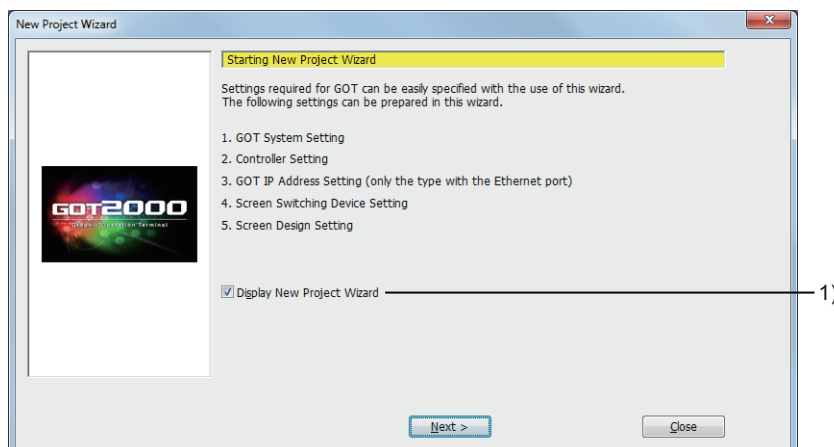

A new project cannot be created with GT Designer3 when GT Designer3 is started from MELSOFT Navigator.  
Create a new project with MELSOFT Navigator.

#### ■ 1 Using the wizard

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows an example of creating a GT27 project.

- Step 1** Either of the following operations displays the [New Project Wizard] dialog.
- Click the [New] button in the [Select Project] dialog.
  - Select [Project] → [New] from the menu.
- Step 2** Click the [Next] button.

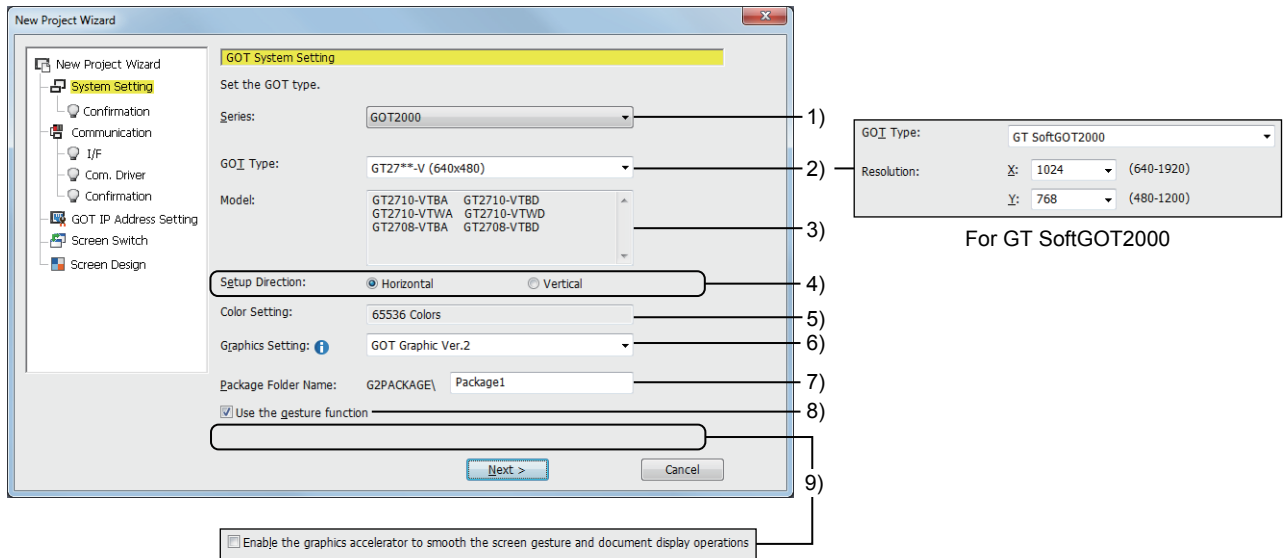

#### 1) [Display New Project Wizard]

Select this item to display the wizard when creating a new project.

You can display or hide the wizard also in the [Operation] tab of the [Option] dialog.

**Step 3** Set [Series] and [Type] then click the [Next] button.

**1) [Series]**

Select the GOT series.

- [GOT2000]:  
Creates a project for the GOT2000 series.
- [GOT1000]:  
Creates a project for the GOT1000 series by starting GT Designer3 (GOT1000).  
Click the [OK] button, and then the confirmation message appears.

**2) [GOT Type]**

Select the GOT model.

The following shows the items to be selected.

- [GT27\*\*-X (1024×768)]
- [GT27\*\*-S (800×600)]
- [GT27\*\*-V (640×480)]
- [GT2705-V (640×480)]
- [GT25\*\*-WX (1280×800)]
- [GT25\*\*-W (800×480)]
- [GT25\*\*-S (800×600)]
- [GT25\*\*-V (640×480)]
- [GT2505-V (640×480)]
- [GT23\*\*-V (640×480)]
- [GT2107-W (800x480)]
- [GT2105-Q (320×240)]
- [GT2104-R (480×272)]
- [GT2104-P (384×128)]
- [GT2103-P (320×128)]
- [GT SoftGOT2000]

In [Name], you can check the model names of the GOTs that belong to the selected model.

1.1.2 Supported models

If you select [GT SoftGOT2000], set the resolution.

Item	Description
[Resolution]	Set the resolution of GT SoftGOT2000. • [X]: [640] to [1920] dots • [Y]: [480] to [1200] dots

**3) [Name]**

Names of the GOT models that belong to the selected model in [GOT Type].

**4) [Setup Direction]**

Set the installation direction of the GOT.

The following shows the items to be selected.

- [Horizontal]
- [Vertical]

#### 5) [Color Setting]

Displays the number of display colors of the GOT type selected in [Type].

When [GT2105-Q (320x240)] is selected for [Type], select the number of display colors.

The following shows the items to be selected.

- [65536 Colors]
- [32(Grayscale)]

#### 6) [Graphics Setting]

Not available to GT23 because the setting is fixed to [GOT Graphic Ver.1].

The following shows the items to be selected.

- [GOT Graphic Ver.2]
- [GOT Graphic Ver.1]

For the details of the graphics modes, refer to the following.

⇒5.1.2 Graphics mode ([Graphics Setting])

#### 7) [Package Folder Name]

Set the name of the folder that stores the package data.

Use up to 32 alphanumeric characters and symbols for the folder name.

For the character strings available and unavailable for folder names, refer to the following.

⇒12.4 Restrictions for Folder Names and File Names used in GOT

This item is required for project creation. Always set this item.

#### 8) [Use the gesture function]

Only available to GT27.

Enables the GOT operation by gesture.

⇒11.12 Zooming and Scrolling the Monitor Screen of the GOT (Screen Gesture Function)

11.13 Operating Objects by the Gesture (Object Gesture Function)

#### 9) [Enable the graphics accelerator to smooth the screen gesture and document display operations]

Only available to GT27.

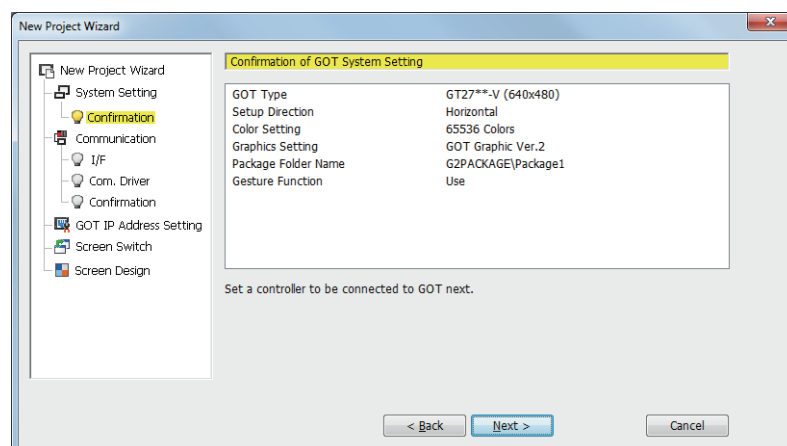

### GOT Graphic Ver.1

Enables the graphics accelerator for the screen gesture function and the document display.

When the graphics accelerator is enabled, the operations of the screen gesture function and the document display become smooth.

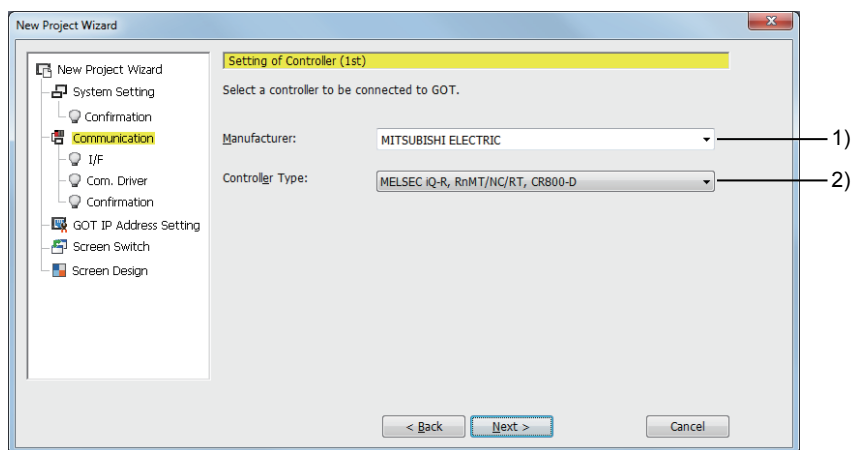

⇒5.1.4 [Type Setting] dialog

**Step 4** Check the settings in step 3 and click the [Next] button.

**Step 5** Set [Manufacturer] and [Type] then click the [Next] button.

(For GT SoftGOT2000, proceed to step 10.)

### 1) [Manufacturer]

Select the manufacturer of the controller connected to the GOT.

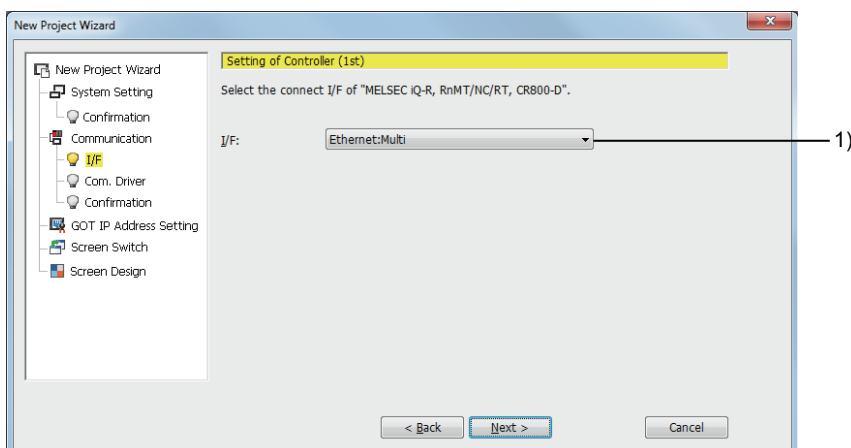

### 2) [GOT Type]

Select the controller type connected to the GOT.

For the controllers that belong to the type selected with [Type], refer to the following.

⇒ 12.2.1 Correspondence between the setting of [Controller Type] and the controller used

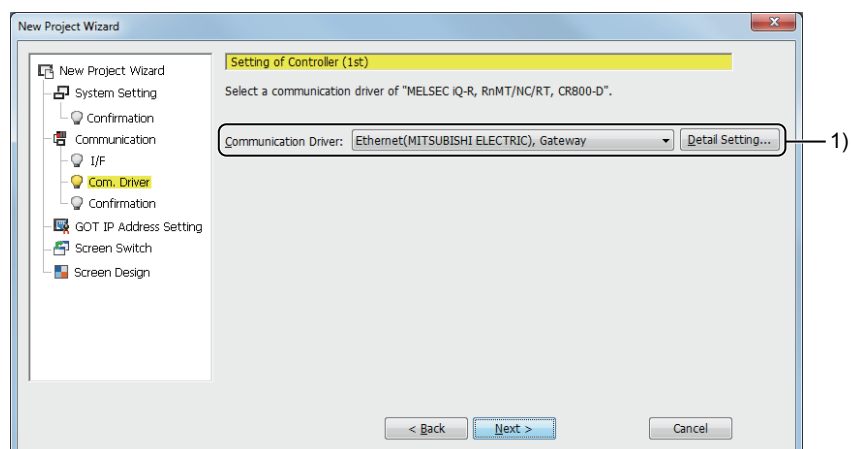

**Step 6** Select [I/F] then click the [Next] button.

### 1) [I/F]

Select the interface of the GOT that connects the controller.

**Step 7** Set [Communication Driver] and click the [Next] button.

### 1) [Communication Driver]

Select the communication driver according to the connection type of the GOT and controller.

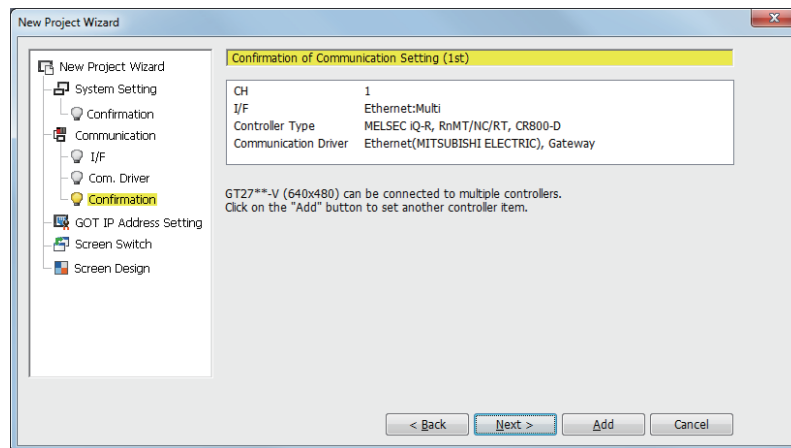

Selectable communication driver differs depending on the settings of [Manufacturer], [Type], and [I/F].

Configure the setting according to the controller and the connection type used.

→GOT2000 Series Connection Manual For GT Works3 Version1 compatible for a controller used

Item	Description
[Detail Setting] button	Click this button to display the [Detail Setting] dialog. The setting items differ depending on the [Communication Driver] setting. →GOT2000 Series Connection Manual For GT Works3 Version1 compatible for a controller used

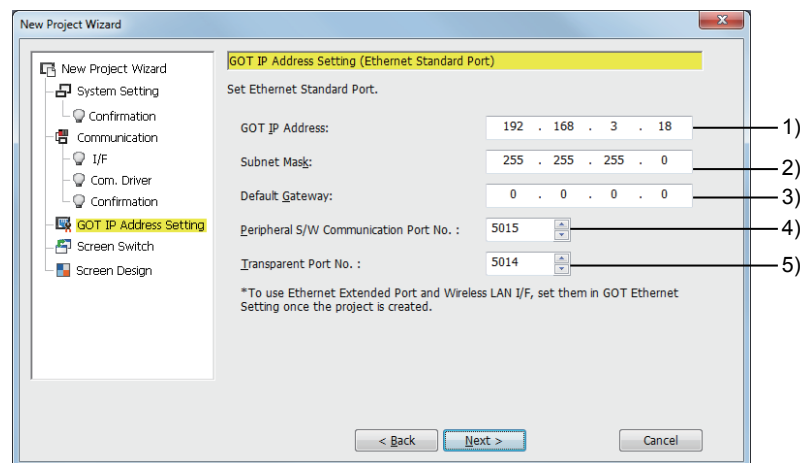

- Step 8** When the settings for the controller are complete, click the [Next] button.  
(If an Ethernet interface of the GOT is not selected, proceed to step 10.)  
To add other controllers, click the [Add] button.  
(Proceed to step 5.)

You can change or add the controller settings in the [Controller Setting] window.

→5.5.1 ■ 4 [Controller Setting]

- Step 9** Configure the GOT Ethernet setting, and click the [Next] button.

- 1) **[GOT IP Address]**  
Set the IP address of the GOT.  
The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
- 2) **[Subnet Mask]**  
Set the subnet mask for the GOT.  
The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
- 3) **[Default Gateway]**  
Set the default gateway.  
The setting range is [0.0.0.0] to [255.255.255.255].
- 4) **[Peripheral S/W Communication Port No.]**  
Set the port No. used for the communication with GT Designer3.  
The setting range is [1024] to [65534].  
Do not set the port number used for the other settings.

Duplication of the port number disables communication.

### 5) [Transparent Port No.]

Set the port number used for the FA transparent function.

The setting range is [1024] to [65534].

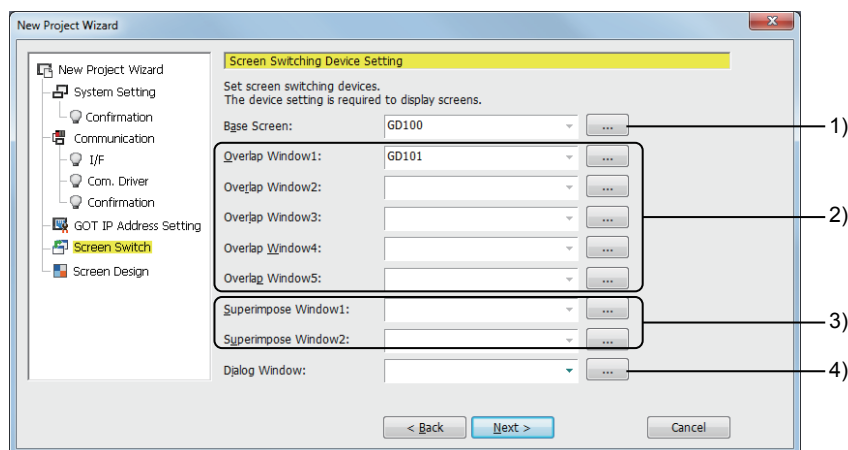

Do not set the port number used for the other settings.

Duplication of the port number disables communication.

**Step 10** Set screen switching devices for the base screen and other necessary windows then click the [Next] button.

You can also set the screen switching devices in the [Environmental Setting] window.

⇒5.2.1 ■ 5 [Screen Switching/Window]

#### 1) [Base Screen]

Set a screen switching device for a base screen.

#### 2) Overlap window

Set screen switching devices for overlap window 1 to 5.

For GT23 and GT21, you can set the screen switching devices for overlap window 1 and 2 only.

#### 3) Superimpose window

Set screen switching devices for superimpose window 1 and 2.

#### 4) [Dialog Window]

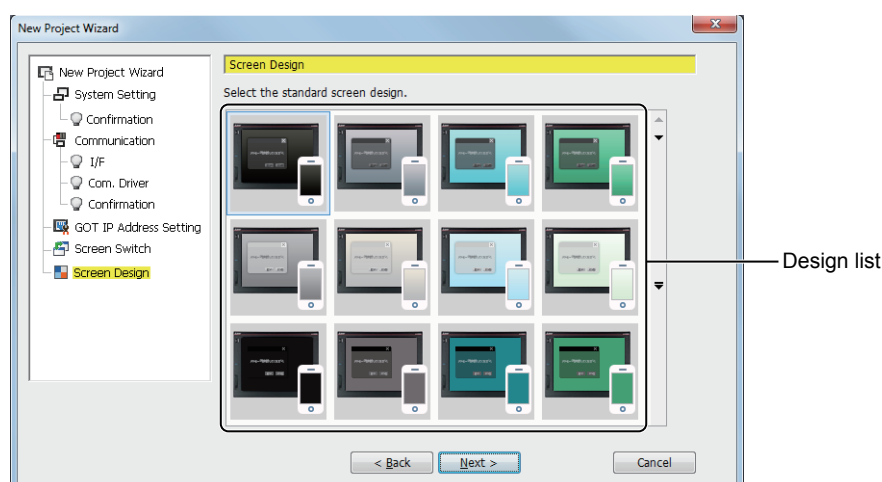

Set a screen switching device for a dialog window.

**Step 11** Select a screen design, and click the [Next] button.

The selected design is applied to all target screens in the project.

The selectable designs differ depending on the selection for [Graphics Setting] in the [Type Setting] dialog.

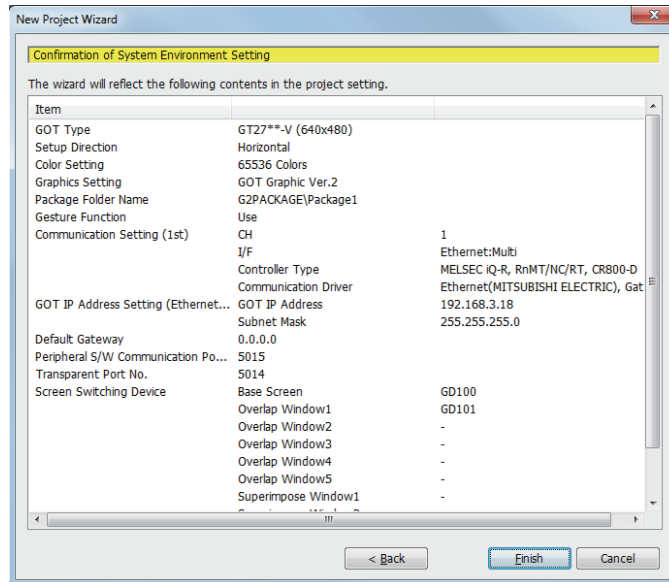

⇒5.1.4 [Type Setting] dialog

You can also select a screen design in the [Screen Design] dialog.

⇒2.4.3 [Screen Design] dialog

**Step 12** Check the settings with the wizard then click the [Finish] button to complete the settings.

## ■ 2 Without using the wizard

You can set whether to display or not the wizard when creating a new project in the [Operation] tab of the [Option] dialog. At the default setting, the wizard is displayed.

⇒ 11.10.3 ■ 1 [Option] dialog ([Operation] tab)

### (1) Setting a model when creating a new project

If the settings of the [Operation] tab of the [Option] dialog are configured as described below, the [GOT Type Setting] dialog and the [Controller Setting] window appear when a new project is created.

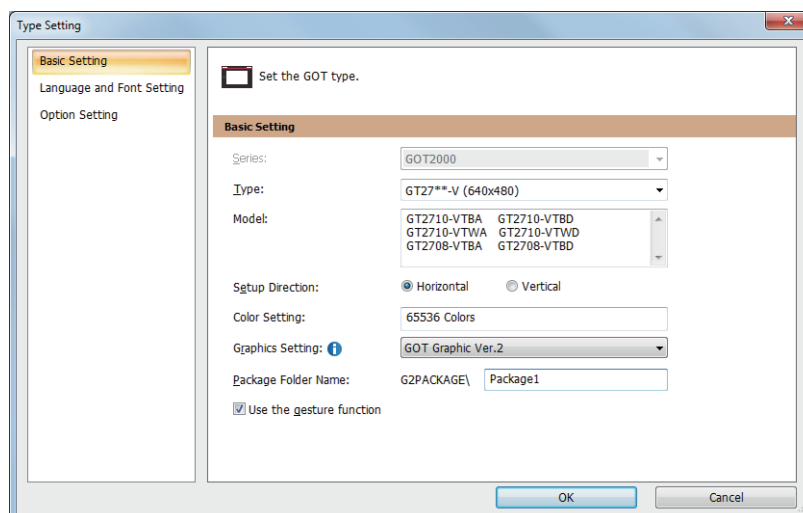

- [Display New Project Wizard] is cleared.
- [Perform type setting at the time of creating a new project] is selected.

**Step 1** Either of the following operations displays the [GOT Type Setting] dialog.

- Click the [New] button in the [Select Project] dialog.
- Select [Project] → [New] from the menu.

**Step 2** Click the [OK] button after the required settings.

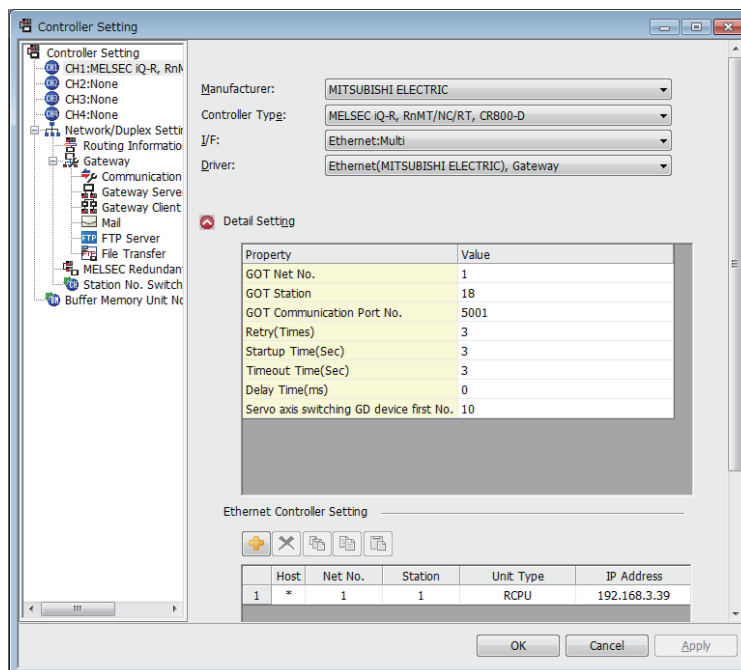

⇒ 5.1.4 [Type Setting] dialog

**Step 3** A project is created and the [Controller Setting] window appears.

**Step 4** Select the manufacturer, model, GOT interface, and communication driver for the controller to be connected then click the [OK] button.

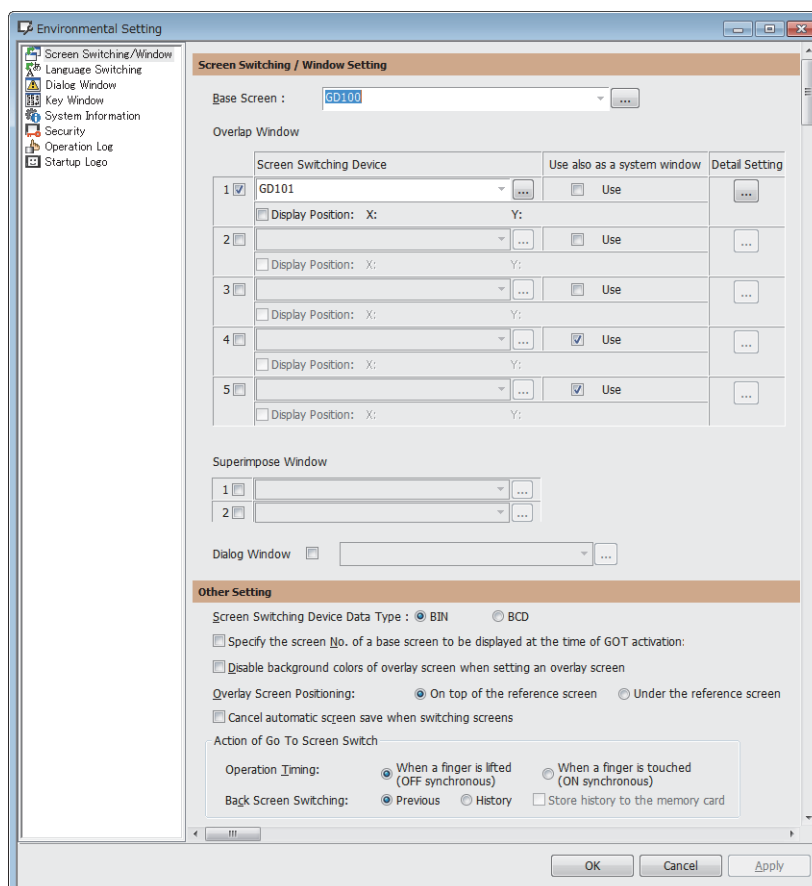

⇒ 5.5.1 ■ 4 [Controller Setting]

**Step 5** Select [Common] → [GOT Environmental Setting] → [Screen Switching/Window] from the menu to display the [Screen Switching/Window] window of the [Environmental Setting] window.

**Step 6** Set screen switching devices for the base screen and other necessary windows then click the [OK] button.

⇒5.2.1 ■ 5 [Screen Switching/Window]

## (2) Creating a new project without setting a model

If the settings of the [Operation] tab of the [Option] dialog are configured as described below, the project is created with the model setting of the last edited project.

- [Display New Project Wizard] is cleared.
- [Perform type setting at the time of creating a new project] is cleared.

### ■ 3 Searching a utilizable project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Search a project that can be utilized from sample projects or saved projects with a keyword.  
You can create a project efficiently by utilizing an existing project.

⇒ 11.1 Searching for Utilizable Data (Utilize Data)

### 2.3.2 Opening a project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In GT Designer3, you can open projects of the following formats.

GOT	Available project format
GOT2000 Series	<ul style="list-style-type: none"><li>• Workspace format</li><li>• Single file format (*.GTX, *.GTXS, *.G2, *.GTCNV)</li></ul> <p>You can transfer a project with a system application (package data) to the GOT without opening the project. You cannot open a project that has the workspace format if another user has opened the project. A single file format project (*.GTX, *.GTXS) opens in a read-only mode if another user has opened the project. You cannot save the read-only project. ⇒ ■ 1 Opening a project for GOT2000</p>
GOT1000 Series	<ul style="list-style-type: none"><li>• Workspace format</li><li>• Single file format (*.GTW, *.GTE, *.G1)</li></ul> <p>There are two alternatives: convert a project into the GOT2000 equivalent, or start GT Designer3 (GOT1000) to edit the project with keeping a GOT1000 project. ⇒ ■ 2 Opening a project for GOT1000</p>
GOT900 Series	<ul style="list-style-type: none"><li>• Single file format (*.GTD)</li></ul> <p>Converts the project into the GOT1000 equivalent by starting GT Designer3 (GOT1000). To edit the project as a GOT900 project, use GT Designer2 Classic. To convert the project into the GOT2000 equivalent, convert the project into the GOT1000 equivalent in advance. ⇒ ■ 3 Opening a project for GOT900</p>

#### Point

#### (1) Project to which a security key is assigned

To open a project to which a security key is assigned, GT Designer3 must have the matched security key.

⇒ 2.12 Protecting a Project with a Security Key

#### (2) Project for which project security is set

When a project for which project security is set is about to be opened, the system requires user authentication.

⇒ 2.13 Protecting a Project by Registering Users

#### (3) Operating on iQ Works

##### (a) Opening a project

A project cannot be opened with GT Designer3 when GT Designer3 is started from MELSOFT Navigator.

Open a project with MELSOFT Navigator.

##### (b) Project format

When GT Designer3 is started from MELSOFT Navigator, the project format that can be handled with GT Designer3 is the workspace format project only.

When using a single file format project, save the project in the workspace created with MELSOFT Navigator with the following procedure.

Step 1. Start only GT Designer3, and then open the single file format project.

Step 2. Select [Project] → [Save As] from the menu, and save the project in a workspace of MELSOFT Navigator as a workspace format project.

# 1 Opening a project for GOT2000

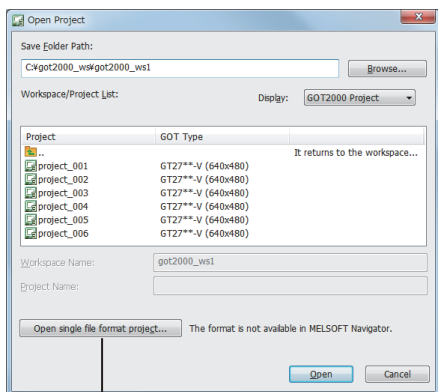

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Project] → [Open] from the menu to display the [Open Project] dialog.

Switch the screens according to the format of the project.

- Workspace format: Open the project from the [Open Project] dialog (workspace format).
  - ⇒ ■ 4 [Open Project] dialog (workspace format)
- Single file format: Open the project from the [Open Project] dialog (single file format).
  - ⇒ ■ 5 [Open Project] dialog (single file format)

[Open Project] dialog (workspace format)

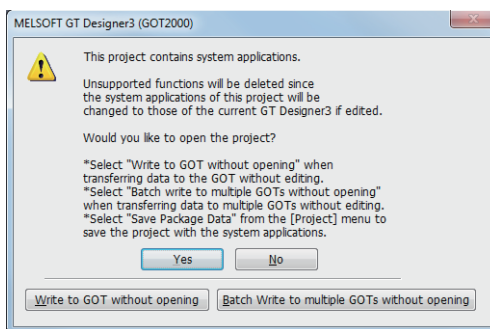

Switching to the [Open Project] dialog (single file format)

[Open Project] dialog (single file format)

Switching to the [Open Project] dialog (workspace format)

**Step 2** In the [Open Project] dialog, select the project, and then click the [Open] button to open the project. When the project with a system application (package data) is opened, the following dialog appears.

By clicking the [Write to the GOT without Open] button, you can transfer the project to the GOT without opening the project.

To write package data to multiple GOTs without opening the relevant project, click the [Batch Write to multiple GOTs without opening] button.

⇒ 4. COMMUNICATING WITH GOT

## ■ 2 Opening a project for GOT1000

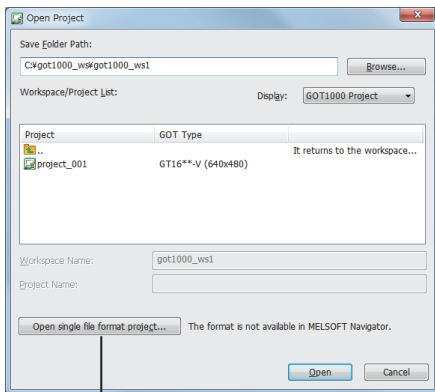

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Project] → [Open] from the menu to display the [Open Project] dialog.

Switch the screens according to the format of the project.

- Workspace format: Open the project from the [Open Project] dialog (workspace format).
  - ⇒ ■ 4 [Open Project] dialog (workspace format)
- Single file format: Open the project from the [Open Project] dialog (single file format).
  - ⇒ ■ 5 [Open Project] dialog (single file format)

[Open Project] dialog (single file format)

Switching to the [Open Project] dialog (workspace format)

**Step 2** In the [Open Project] dialog, select the project, and then click the [Open] button to display the following dialog.

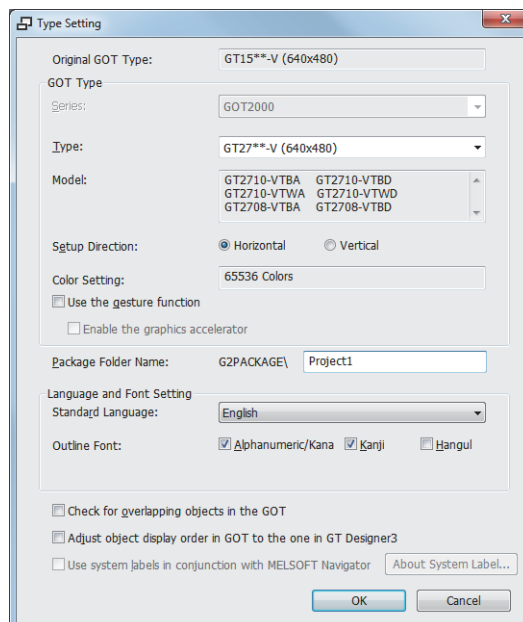

**Step 3** Select the editing method of the project and click the [OK] button.

- [Start GT Designer3 (GOT1000) and edit the GOT1000 data as is]  
GT Designer3 (GOT1000) is started then the project is opened.
- [Convert the project to GOT2000 data and edit it in GT Designer3 (GOT2000)]  
A project is converted to the GOT2000 equivalent.  
The [GOT Type Setting] dialog appears.  
Proceed to the step 4.

**Step 4** Set the GOT type that the project belongs to after the conversion and click the [OK] button. The project is converted then opens.

⇒ 5.1.4 [Type Setting] dialog

**Step 5** The conversion operation is listed in the [Output] window.

→ 5.1.5 [Output] window

### 3 Opening a project for GOT900

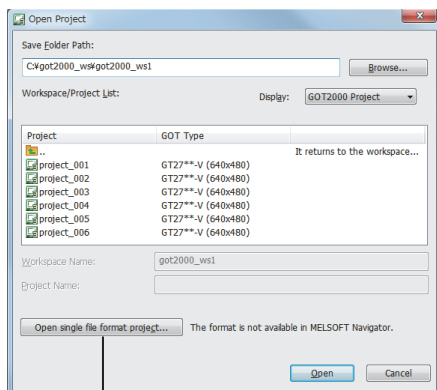

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

**Step 1** Select [Project] → [Open] from the menu to display the [Open Project] dialog.

When the [Open Project] dialog (workspace format) appears, switch the dialog to the [Open Project] dialog (single file format).

→ 5 [Open Project] dialog (single file format)

[Open Project] dialog (workspace format)

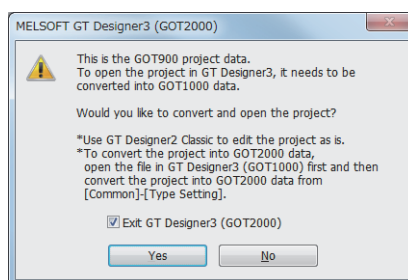

[Open Project] dialog (single file format)

Switching to the [Open Project] dialog (single file format)

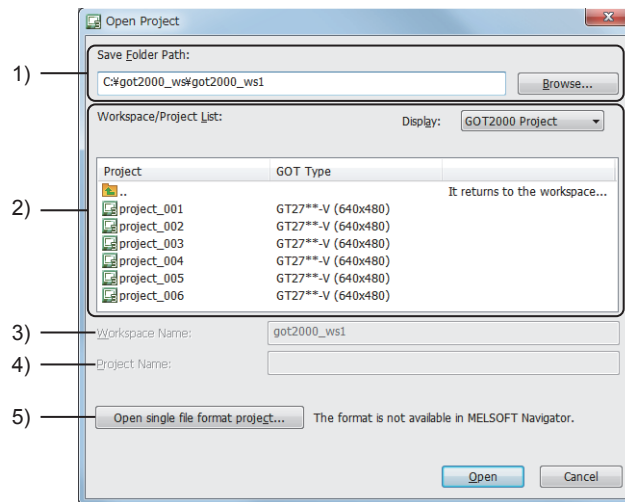

**Step 2** In the [Open Project] dialog (single file format), select the project, and then click the [Open] button to display the following dialog.

**Step 3** Click the [Yes] button to switch the screen design software to GT Designer3 (GOT1000).

Convert the project into the GOT1000 equivalent by using GT Designer3 (GOT1000).

#### ■ 4 [Open Project] dialog (workspace format)

##### 1) [Save Folder Path]

Set the destination path to save the project.  
The path can be set from the [Browse] button.

##### 2) [Workspace/Project List]

The workspaces and projects in the path set in the [Save Folder Path] are displayed.  
If a workspace is double-clicked, the projects in the workspace are displayed.  
If the [Open] button is clicked, a selected project opens.

Item	Description
[Display]	Select the target projects to be displayed in [Workspace/Project List]. <ul style="list-style-type: none"> <li>• [All Folder]: Displays GOT2000 projects and GOT1000 projects.</li> <li>• [GOT2000 Project]: Displays GOT2000 projects.</li> <li>• [GOT1000 Project]: Displays GOT1000 projects.</li> </ul>

##### 3) [Workspace Name]

Displays the workspace name selected in [Workspace/Project List].

##### 4) [Project Name]

Displays the project name selected in [Workspace/Project List].  
Up to 200 characters can be used for the total number of the characters of [Save Folder Path], [Workspace Name], and [Project Name].  
"\" at the end of the project name is not counted as a character.

##### 5) [Open single file format project] button

Switches the dialog to the [Open Project] dialog (single file format).

➡ ■ 5 [Open Project] dialog (single file format)

#### Point

##### Project not displayed in [Workspace/Project List]

The following workspace and project are not displayed in [Workspace/Project List].

- Workspace that does not have the workspace management file
- Project that does not have the project management file
- Workspace that has not been registered to the workspace management file
- Project that has not been registered to the workspace management file

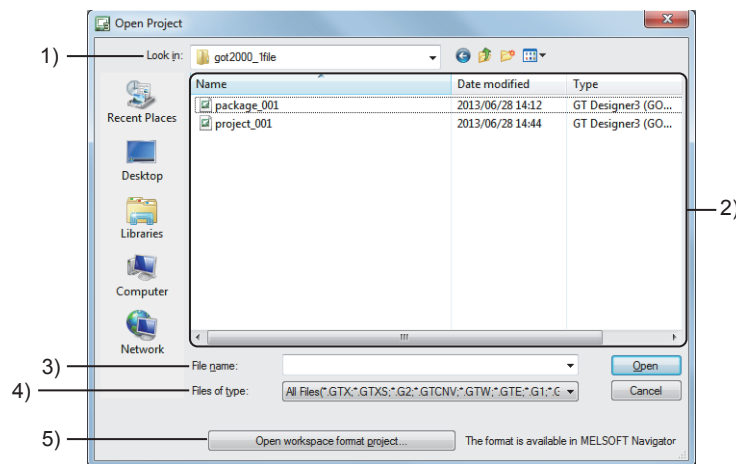

Do not operate (migrate, rename, or delete) the folders or files in the workspace by using Windows Explorer or others.

Otherwise, the states listed above and thus they cannot be opened.

## ■ 5 [Open Project] dialog (single file format)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Look in]

Select a location where the project has been saved.

### 2) File list

Lists the files saved in the location specified in [Look in].

### 3) [File name]

Input the file name of the project to be opened.

Click the [Open] button to open the project having the input file name.

### 4) [Files of type]

Select the file type of the files to be displayed in the file list.

- [All file (\*.GTX;\*.GTXS;\*.G2;\*.GTCNV;\*.GTW;\*.GTE;\*.G1;\*.GTD)]
- [GOT2000 File (\*.GTX;\*.GTXS;\*.G2;\*.GTCNV)]
- [GOT1000 File (\*.GTW;\*.GTE;\*.G1)]
- [GOT900 File (\*.GTD)]

### 5) [Open workspace format project] button

Switches the dialog to the [Open Project] dialog (workspace format).

→ ■ 4 [Open Project] dialog (workspace format)

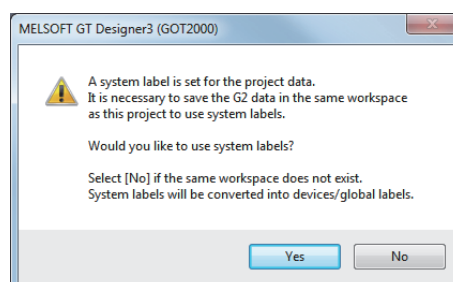

## Point

### Opening a single file format project (\*.G2) in which a system label has been set

When a single file format project (\*.G2) is opened, the system label set in the project cannot be used if the project in the original workspace format does not exist.

If the project in the original workspace format does not exist, save the project with the G2 format as the workspace format with the following procedure.

Step 1 Use GT Designer3 to open a G2 format project in which a system label is set. The following dialog appears.

Step 2 Click the [Yes] button.

Step 3 Select [Project] → [Save as] from the menu and save the G2 format project in the original workspace. You can use the system label properly.

### 2.3.3 Closing a project

Select [Project] → [Close] from the menu to close the project.

When GT Designer3 is started from MELSOFT Navigator, [Close] cannot be selected from the menu.

### 2.3.4 Deleting a project

- ■ 1 Deleting a workspace format project
- 2 Deleting a single file format project

#### ■ 1 Deleting a workspace format project

**Step 1** Select [Project] → [Delete] from the menu to display the [Delete Project] dialog.

**Step 2** Select a project to be deleted from [Workspace/Project List] and click the [Delete] button. The selected project is deleted.

#### (1) [Delete Project] dialog

#### 1) [Save Folder Path]

Set the destination path to save the project.  
The path can be set from the [Browse] button.

#### 2) [Workspace/Project List]

The workspaces and projects in the path set in the [Save Folder Path] are displayed.  
If a workspace is double-clicked, the projects in the workspace are displayed.  
Click the [Delete] button to delete the selected project.

Item	Description
[Display]	Select the target projects to be displayed in [Workspace/Project List]. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [GOT2000 Project]</li> <li>• [GOT1000 Project]</li> </ul>

#### 3) [Workspace Name]

Displays the workspace name selected in [Workspace/Project List].

#### 4) [Project Name]

Displays the project name selected in [Workspace/Project List].

#### ■ 2 Deleting a single file format project

Delete files of the project using Windows Explorer or other methods.

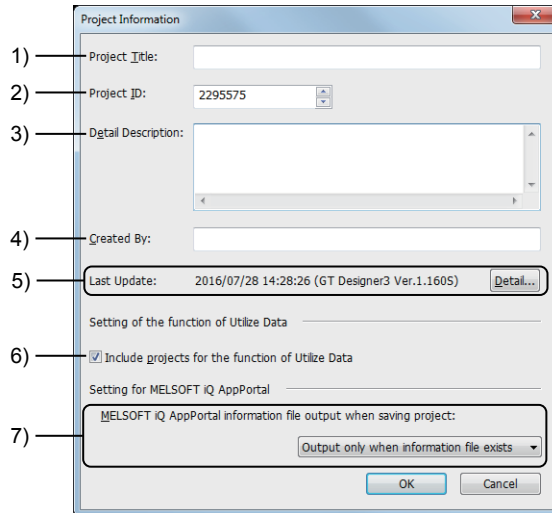

## 2.3.5 Giving a title to a project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set a title, a creator's name, and other information for a project.

- Step 1 Select [Project] → [Project Information] from the menu to display the [Project Information] dialog.
- Step 2 Set each item, and then click the [OK] button to complete the settings.

### ■ 1 [Project Information] dialog

#### 1) [Project Title]

Set the title for the project.  
Up to 32 characters can be set.

#### 2) [Project ID]

Set a project ID.  
A project ID is automatically given to the project when a project is created.  
The setting range is [1] to [4294967295].

#### 3) [Detailed Description]

Set text information for the project.  
Up to 512 characters can be set.  
A line feed is counted as two characters.

#### 4) [Created By]

Set the creator's name of the project.  
Up to 64 characters can be set.

#### 5) [Last Update]

Displays the latest date and time at which the project was saved and the GT Designer3 version.  
Click the [Detail] button to display the [Edit Version History] dialog.

- Edit history  
The edit history of the project is displayed.
- [Delete Edit History] button  
Deletes the edit history.

#### 6) [Include projects for the function of Utilize Data]

Includes projects in the search targets for when a project is created utilizing another project.

## 7) [MELSOFT iQ AppPortal information file output when saving project]

Select the setting to output a MELSOFT iQ AppPortal information file when a workspace format project or a single file format project (\*.GTX or \*.GTXS) is saved.

The following shows the items to be selected.

- [Always output]  
Outputs a MELSOFT iQ AppPortal information file each time the project is saved.
- [Output only when information file exists]  
Overwrites an existing MELSOFT iQ AppPortal information file when the project is saved.
- [Not output (delete information file)]  
Does not output a MELSOFT iQ AppPortal information file when the project is saved.  
Deletes an existing MELSOFT iQ AppPortal information file.

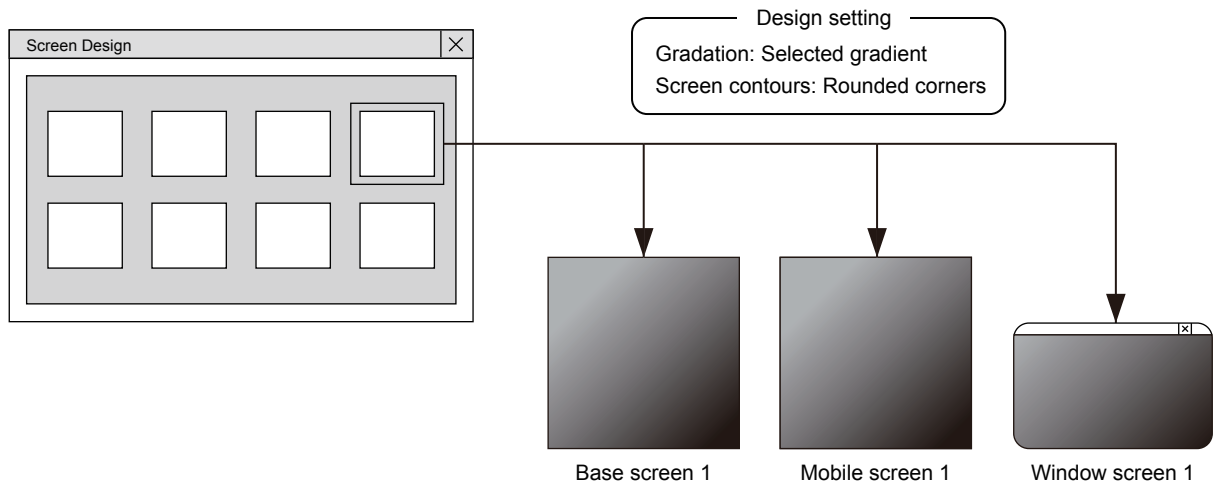

For the details of MELSOFT iQ AppPortal, refer to the following.

→iQ AppPortal Operating Manual

## 2.4 Setting a Screen Design

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can set a screen design that is applied to all base screens, window screens, and mobile screens in the project.

The following items are preset.

Screen	Setting item
Base screen	<ul style="list-style-type: none"> <li>• Background color</li> <li>• Gradation</li> <li>• Pattern</li> </ul>
Window screen	<ul style="list-style-type: none"> <li>• Background color</li> <li>• Gradation</li> <li>• Pattern</li> <li>• Transparency</li> <li>• Screen contours</li> <li>• Shadow</li> </ul>
Mobile screen	<ul style="list-style-type: none"> <li>• Background color</li> <li>• Gradation</li> <li>• Pattern</li> </ul>

## 2.4.1 Selecting a screen design

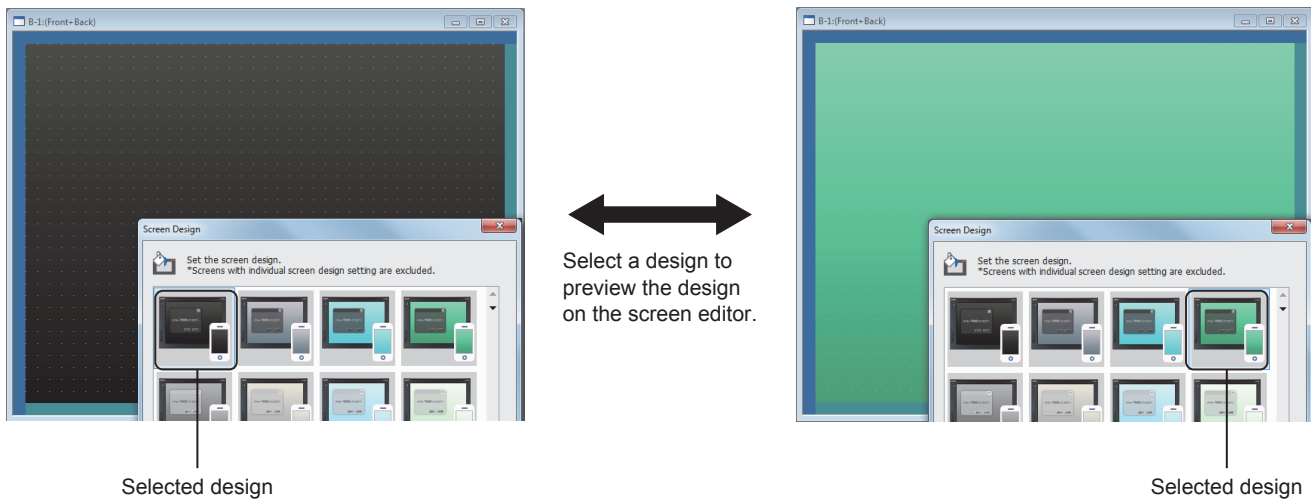

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the following locations, select a screen design that is applied to all target screens in the project.

- New project wizard
  - ⇒2.3.1 ■ 1 Using the wizard
- [Screen Design] dialog

The following shows the procedure for selecting a design in the [Screen Design] dialog as an example.

- Step 1** Select [Screen] → [Screen Design] from the menu to display the [Screen Design] dialog.  
⇒2.4.3 [Screen Design] dialog
- Step 2** Select a design from the design list to preview the selected design on the screen editor.  
Click the [OK] button to apply the design to all target screens.

To use a design other than the designs in the [Screen Design] dialog, set an individual screen design.

- ⇒2.4.1 ■ 1 Creating a base screen

### ■ 1 Creating a base screen

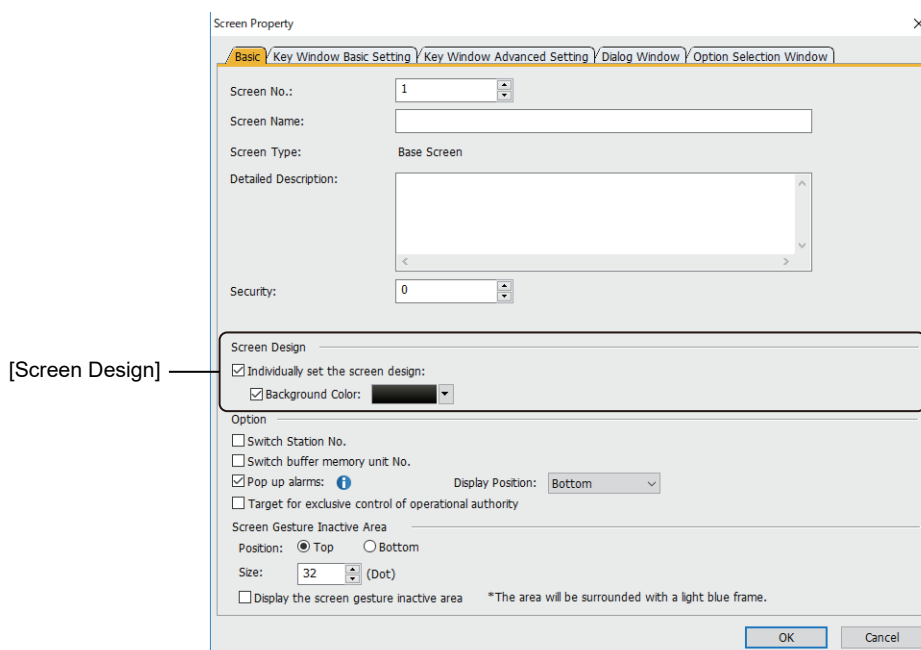

Set an individual screen design in the [Screen Property] dialog.

For the [Screen Property] dialog for each screen type, refer to the following.

- Base screen
  - ⇒2.7.1 Property of base screens
- Window screen
  - ⇒2.7.2 Properties of window screens
- Mobile screen
  - ⇒10.18.7 Mobile screen properties

The following shows the procedure for setting an individual screen design for base screen 1 as an example.

- Step 1** Select base screen 1.
- Step 2** Select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog.
- Step 3** Select [Individually set the screen design] to enable the individual screen design setting.
- Step 4** Set [Screen Design] and click the [OK] button to apply the setting to base screen 1.

## 2.4.2 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Precautions for drawing

#### (1) Editing or adding a screen design

You cannot edit the designs in the [Screen Design] dialog, or add new designs to the dialog.

To use a design other than the designs in the [Screen Design] dialog, set an individual screen design.

⇒ 2.4.1 ■ 1 Creating a base screen

#### (2) Project for which project security is set

If editing a project is prohibited, you cannot change the specified design in the [Screen Design] dialog.

#### (3) Behavior when the [Reflect the setting in all screens] button is clicked

The specified design is not applied to the screens satisfying all the following conditions.

- Editing a screen is prohibited by the project security.
- [Individually set the screen design] is selected in the [Screen Property] dialog.

### ■2 Precautions for use

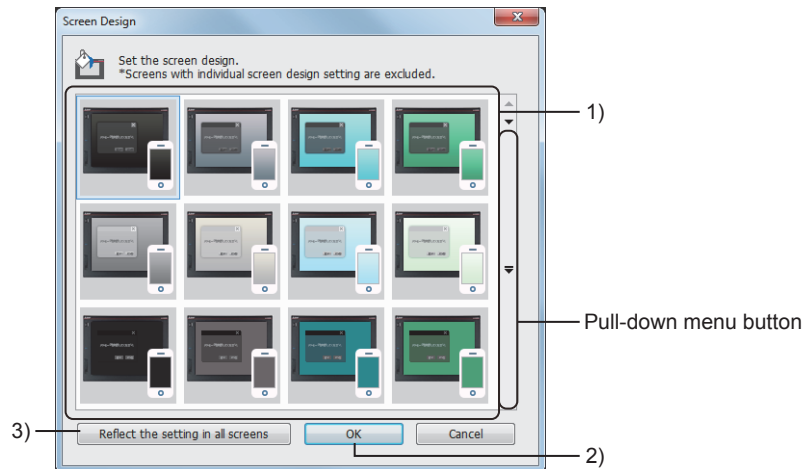

#### (1) Display of a screen with a gradient background on the GOT

As the screen display method differs between the GOT and a personal computer, a screen with a gradient background may look different on the GOT.

## 2.4.3 [Screen Design] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Screen] → [Screen Design] from the menu to display the [Screen Design] dialog.

### 1) Design list

Select a design that is applied to all base screens, window screens, and mobile screens in the project.

Click the pull-down menu button to display all designs.

The selectable designs differ depending on the selection for [Graphics Setting] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

### 2) [OK] button

Applies the selected design to all target screens.

The design is not applied to a screen for which [Individually set the screen design] is selected in the [Screen Property] dialog.

### 3) [Reflect the setting in all screens] button

Applies the selected design to all target screens.

The design is also applied to a screen for which [Individually set the screen design] is selected in the [Screen Property] dialog.

Upon the application of the design, [Individually set the screen design] is deselected in the [Screen Property] dialog.

After clicking this button, you cannot restore the screens to their former design.

## 2.5 Creating, Opening, and Closing a Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 2.5.1 Creating a screen
- 2.5.2 Opening and closing screens

### 2.5.1 Creating a screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to create a screen.

- Creating a screen
  - Create a base screen, window screen, or report screen.
    - ■ 1 Creating a base screen
    - 2 Creating a window screen
    - 3 Creating a report screen
  - Create a mobile screen.
    - 10.18.7 Mobile screen properties
  - You can create a window screen to be displayed on the GOT as a dialog window efficiently by using the wizard.
    - ■ 4 Creating a window screen for a dialog window
- Creating a screen utilizing a saved project
  - Search sample projects and saved projects for a screen to be utilized with keywords.
  - You can create a screen efficiently by utilizing.
    - 11.1 Searching for Utilizable Data (Utilize Data)

#### Point

##### Editing a project for which project security is set

If a login user has access on which project editing is banned, the user cannot create any screen.

- 2.13 Protecting a Project by Registering Users

#### ■ 1 Creating a base screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Either of the following operations displays the [Screen Property] dialog.

- Select [Screen] → [New] → [Base Screen] from the menu.
- Double-click [Base Screen] → [New] on the tree in the [Screen] window.

Screen Property

Basic | Key Window Basic Setting | Key Window Advanced Setting | Dialog Window | Option Selection Window

Screen No.: 1

Screen Name:

Screen Type: Base Screen

Detailed Description:

Security: 0

Screen Design

Individually set the screen design:

Background Color: [Black]

Option

Switch Station No.

Switch buffer memory unit No.

Pop up alarms: [i] Display Position: Bottom

Target for exclusive control of operational authority

Screen Gesture Inactive Area

Position:  Top  Bottom

Size: 32 (Dot)

Display the screen gesture inactive area \*The area will be surrounded with a light blue frame.

OK Cancel

**Step 2** Click the [OK] button after the required settings.

⇒2.7.1 Property of base screens

**Step 3** A base screen is created and a screen editor appears on the work window.

## ■ 2 Creating a window screen

**Step 1** Either of the following operations displays the [Screen Property] dialog.

- Select [Screen] → [New] → [Window Screen] from the menu.
- Double-click [Window Screen] → [New] on the tree in the [Screen] window.

Screen Property

Basic | Key Window Basic Setting | Key Window Advanced Setting | Dialog Window | Option Selection Window

Screen No.: 1

Screen Name:

Screen Type: Window Screen

Detailed Description:

Security: 0

Screen Size...

Screen Design

Individually set the screen design:

Background Color: [Color Picker]

Transparency: 30 (%)

Screen Contour: Rounded

Radius: 6 (Dot)

Option

Switch Station No.

Switch buffer memory unit No.

Target for exclusive control of operational authority

OK Cancel

**Step 2** Click the [OK] button after the required settings.

⇒2.7.2 Properties of window screens

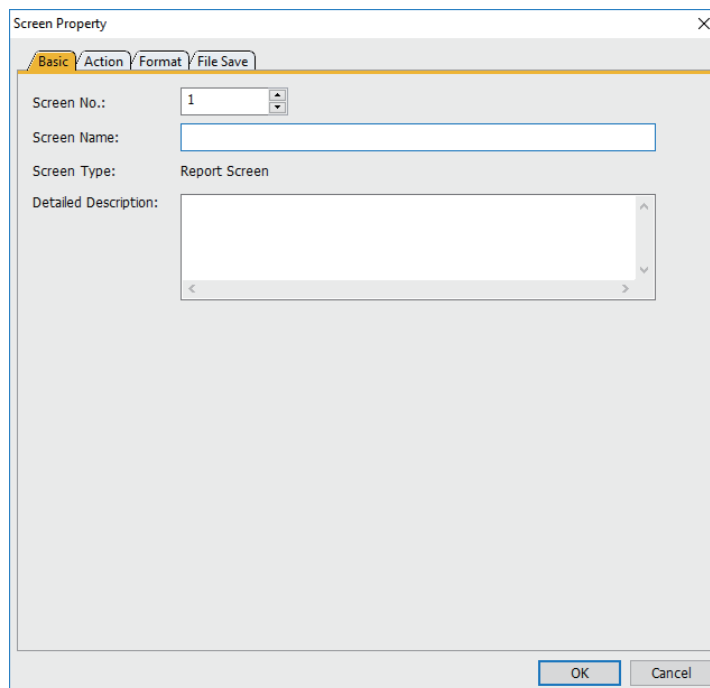

**Step 3** A window screen is created and a screen editor appears on the work window.

### ■ 3 Creating a report screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

- Step 1** Either of the following operations displays the [Screen Property] dialog.
- Select [Screen] → [New] → [Report Screen] from the menu.
  - Double-click [Report Screen] → [New] on the tree in the [Screen] window.

- Step 2** Click the [OK] button after the required settings.

⇒ 2.7.3 Property of report screens

- Step 3** A report screen is created and a screen editor appears on the work window.

### ■ 4 Creating a window screen for a dialog window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Screen] → [New] → [Dialog Window Wizard] to display the [Dialog Window Wizard] dialog.

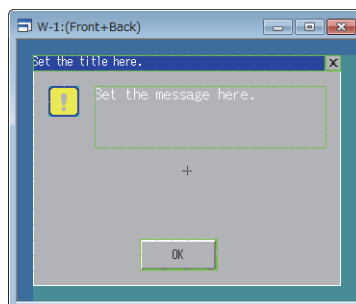

⇒ (1) [Dialog Window Wizard] dialog

- Step 2** Click the [OK] button after the required settings.

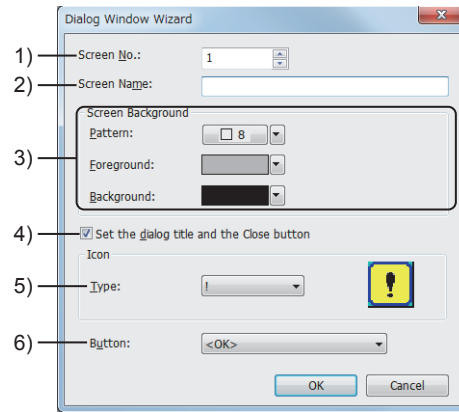

- Step 3** A window screen is created and a screen editor appears on the work window.

Example)

- [Set the dialog title and the Close button]: selected
- [Type]: [!]
- [Button]: [Yes or No]

## (1) [Dialog Window Wizard] dialog

### 1) [Screen No.]

Set a screen number.

The setting range is [1] to [32767].

### 2) [Title]

Set the title of the screen.

Up to 32 characters can be set.

### 3) [Screen Background]

Select a pattern, pattern color, and pattern background color of the screen.

The pattern is displayed over the background color.

### 4) [Set the dialog title and the Close button]

Select this item to arrange the dialog title and a close button on the window screen.

### 5) [Type]

Select an icon to be arranged on the window screen.

When an icon is selected, the image of the icon is displayed on the [Dialog Window Wizard] dialog.

### 6) [Button]

Select the type of a button to be arranged on the window screen.

## ■ 5 Searching a screen to be utilized

Search sample projects and saved projects for a screen to be utilized with keywords.

You can create a screen efficiently by utilizing.

⇒ 11.1 Searching for Utilizable Data (Utilize Data)

## 2.5.2 Opening and closing screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Opening screens
- 2 Closing screens

### ■ 1 Opening screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ (1) Opening screens from the [Screen] window
- (2) Opening screens from the [Screen Image List] window
- (3) Opening screens from the menu

Up to 25 screens can be opened.

A number smaller than 25 can be set as the maximum number of screens that can be opened.

- ➔ 11.10.3 ■ 1 [Option] dialog ([Operation] tab)

#### Point

##### Project for which project security is set

When project security is set for each screen, displaying or editing screens is disabled according to the access level set for each screen.

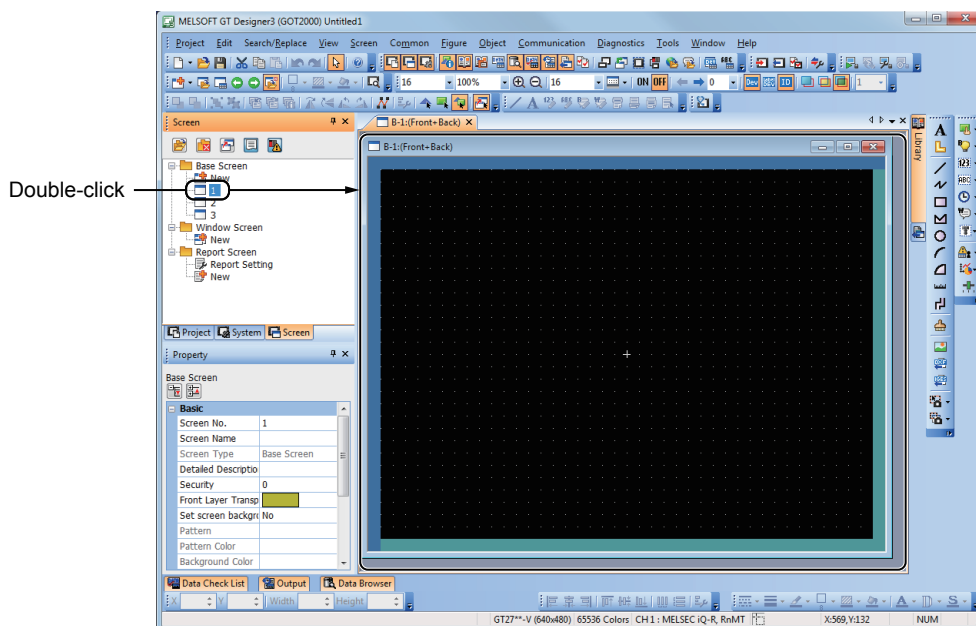

- ➔ 2.13 Protecting a Project by Registering Users

#### (1) Opening screens from the [Screen] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

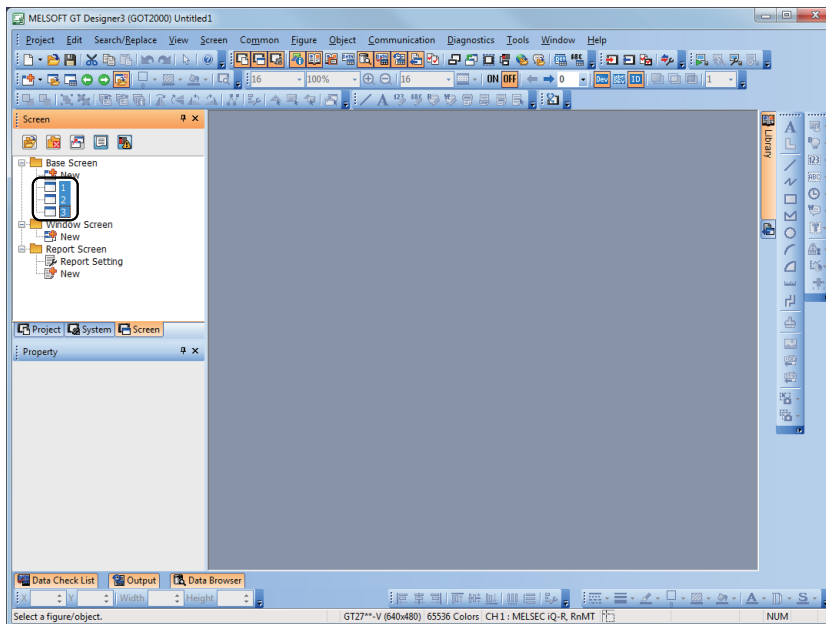

##### (a) Opening screens one by one.

Double-click the screen to be opened on the [Screen] window to display a screen editor on the work window.

## (b) Opening multiple screens simultaneously

**Step 1** Select multiple screens to be opened while pressing the [Ctrl] or [Shift] key.

**Step 2** Either of the following operations displays a screen editor on the work window.

- Press the [Enter] key.
- Right-click on the selected screen and select [Open] from the menu.

## (2) Opening screens from the [Screen Image List] window

Base screens, window screens, and mobile screens are displayable from the [Screen Image List] window.

**Step 1** Select [Display] → [Docking Window] → [Screen Image List] from the menu to display the [Screen Image List] window.

⇒ 2.8.1 [Screen Image List] window

**Step 2** Double-click the image of a screen to be opened to display a screen editor on the work window.

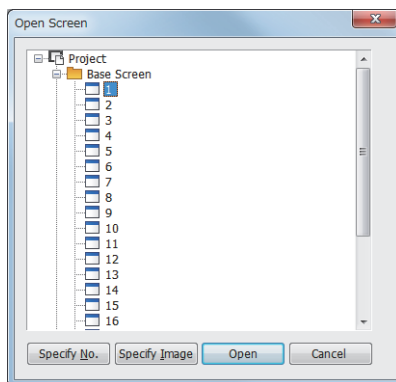

## (3) Opening screens from the menu

### (a) Opening a screen specifying the screen number

**Step 1** Select [Screen] → [Open] from the menu to display the [Open Screen] dialog.

⇒ ■ 3 [Open Screen] dialog

**Step 2** Click the [Number Specification] button to display the [Number Specification] dialog.

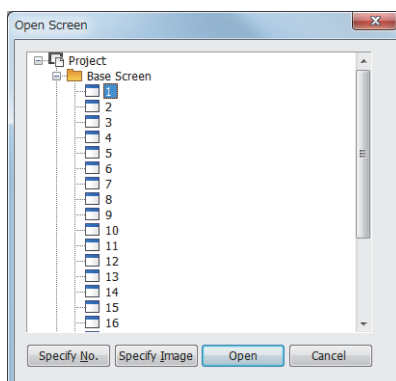

**Step 3** Set [Screen Type] and [Screen No.] then click the [Open] button to display a screen editor on the work window.

**(b) Opening a screen checking the corresponding screen image**

**Step 1** Select [Screen] → [Open] from the menu to display the [Open Screen] dialog.

→ ■ 3 [Open Screen] dialog

**Step 2** Click the [Specify Image] button to display the [Screen Image List] dialog.

**Step 3** Select a screen and click the [OK] button to display a screen editor on the work window.

## ■ 2 Closing screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Closing a single screen

Either of the following operations closes a screen being edited.

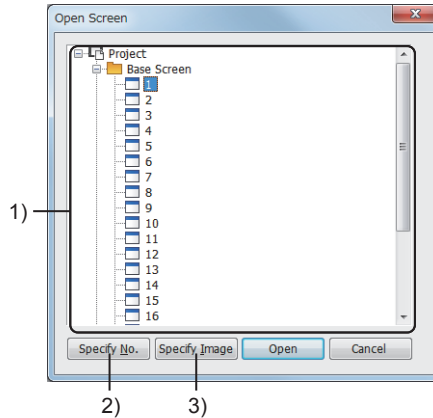

- Select [Screen] → [Close] from the menu.
- Click the [×] button on the title bar on the screen editor.

### (2) Closing all screens

Select [Screen] → [Close All] from the menu to close all screens.

## ■ 3 [Open Screen] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) List of screens

Lists the created base screens, window screens, report screens, and mobile screens.

### 2) [Number Specification] button

Displays the [Number Specification] dialog.

Specify a screen number to open the corresponding screen.

- **[Screen Type]**

Select the type of a screen to be opened.

- **[Screen No.]**

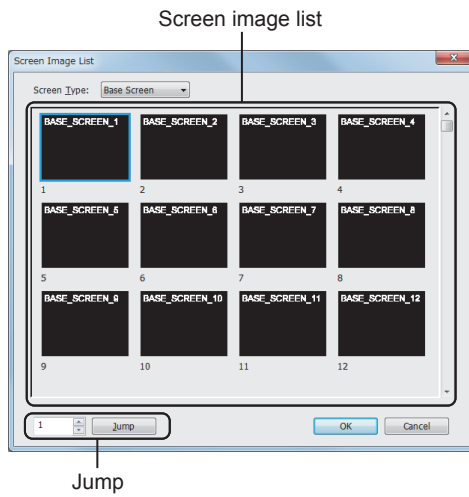

Set the screen number of a screen to be opened.

### 3) [Specify Image] button

Displays the [Screen Image List] dialog.

You can open a screen by selecting the corresponding screen image.

- **[Screen Type]**  
Select the type of a screen to be opened.
- **Screen image list**  
Displays screen images.
- **Jump**  
Specify a screen number and click the [Jump] button to select the screen in the screen image list.

## 2.6 Basic Operations of the Drawing Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the layout of the screen editor.

### 1) Screen display area

This area is displayed on the GOT.  
Figures and objects can be arranged on this area.

### 2) Blank area

This area is not displayed on the GOT.  
Figures and objects cannot be arranged on this area.

### 3) Temporary area

This area is not displayed on the GOT.  
Figures and objects can be temporarily arranged on this area.  
The data size of a screen includes the size of the figures and objects arranged on the temporary area.  
Before writing package data to the GOT, delete the figures and objects on the temporary area.

For how to arrange and set figures and objects, refer to the following.

⇒6.5 Placing and Editing Figures and Objects

For the operations of the screen editor, refer to the following.

- ⇒2.6.1 Selecting a screen editor to be edited
- 2.6.2 Switching the display status of objects to be displayed on the screen editor
- 2.6.3 Redisplaying a selected screen editor
- 2.6.4 Setting information to be displayed on the screen editor
- 2.6.5 Displaying the grid
- 2.6.6 Displaying the two-point press inactive area
- 2.6.7 Switching the layer display
- 2.6.8 Displaying guidelines
- 2.6.9 Scaling the size of items on the screen editor
- 2.6.10 Cascading or arranging open screen editors
- 2.6.11 Copying the image of a screen editor to the clip board

### ■ 1 How a figure and an object arranged on the boundary between areas are dealt with.

To display a figure and an object on the GOT, arrange them in the screen display area.  
Perform a data check to check if some figures or objects have a part extending to the temporary area.

⇒2.11 Performing a Data Check

When figures or objects are arranged on the boundary between the screen display area and temporary area, they are displayed on the GOT as described below.

**(1) How a figure is displayed**

The GOT displays only the part that lies in the screen display area.

**(2) How the paint on a figure is displayed**

Only when a paint mark is placed in the screen display area, the marked figure is painted.

**(3) How an object is displayed**

The GOT displays only the part that lies in the screen display area.

If the object frame is in the screen display area, it can be displayed on the GOT.

#### (4) How a superimpose window is displayed

When a window, on which an arranged figure or object extends to the temporary area, is displayed as a superimpose window on the GOT, the extending part is displayed on the GOT.

When the superimpose window is hidden, the extending part is left on the base screen.

Switching the base screen updates the screen to remove the left extending part.

### 2.6.1 Selecting a screen editor to be edited

To select a screen editor to be edited, click any part of the screen editor displayed on the work window.

The selected screen editor is displayed at the topmost position.

When multiple screen editors are displayed, the followings are more useful.

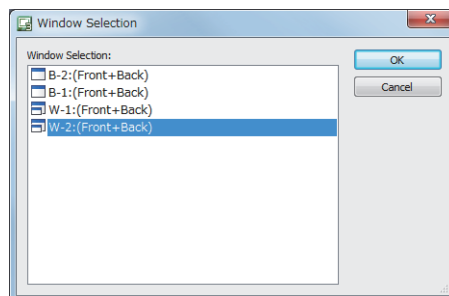

#### ■ 1 Selecting a screen editor with the editor tab

Select a screen editor with the editor tab to display the selected editor at the topmost position.

⇒ 2.2.3 Editor tab, work window

#### ■ 2 Selecting a screen editor in the [Window Selection] dialog

**Step 1** Select [Window] → [Select Windows] from the menu to display the [Window Selection] dialog.

**Step 2** Select a screen editor to be edited and click the [OK] button to display the selected editor at the topmost position.

## 2.6.2 Switching the display status of objects to be displayed on the screen editor

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Switching the display status between ON and OFF

Select [View] → [ON/OFF Display Switching] from the menu to switch between the on status image and off status image of each object on the screen editor.

If a condition is set to an object, the image of the object switches between OFF with the condition No.0 and ON with the condition No.1.

### ■2 Switching the display status by specifying the state No.

Select [View] → [State No.] → [Previous State] or [Next State] from the menu to switch between displaying and hiding the objects on the screen editor according to the state No.

If the display status of an object is switched between ON and OFF, the display of the object switches between OFF with state No.0 and ON with state No.1 or more.

## 2.6.3 Redisplaying a selected screen editor

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When the paint is used for a figure, a part of the figure may be left unpainted.

To display the screen correctly, redisplay the screen editor.

**Step 1** Select a screen editor to be redisplayed.

**Step 2** Select [View] → [Refresh] from the menu to redisplay the selected screen editor.

Example) When an object on a painted figure is moved

An object on a painted figure is moved.

Some area remains unpainted on the figure.

To redisplay the object, select [Display] → [Refresh] from the menu.

## 2.6.4 Setting information to be displayed on the screen editor

You can switch between displaying and hiding the following items on the screen editor.

- Device
- Device of label (device assigned to a system label or a label (GT Designer3))
- Object ID
- Paint
- Object
- Object frame
- Template information
- Touch area
- Frame

### ■ 1 [Device]

Select [View] → [Display Items] → [Device] from the menu to display or hide devices on the screen editor.

### ■ 2 [Device of Label]

Select [View] → [Display Items] → [Device of Label] from the menu to display or hide the devices assigned to system labels and labels (GT Designer3) on the screen editor.

### ■ 3 [Object ID]

Select [View] → [Display Items] → [Object ID] from the menu to display or hide object IDs on the screen editor.  
The object ID is displayed only for objects.

### ■ 4 [Paint]

Select [View] → [Display Items] → [Paint] from the menu to display or hide paints on the screen editor.

### ■ 5 [Object]

Select [View] → [Display Items] → [Object] from the menu to display or hide objects on the screen editor.

## ■6 [Object Frame]

Select [View] → [Display Items] → [Object Frame] from the menu to display or hide object frames on the screen editor.

## ■7 [Template Information]

Select [View] → [Display Items] → [Template Information] from the menu to display or hide the template information on the screen editor.

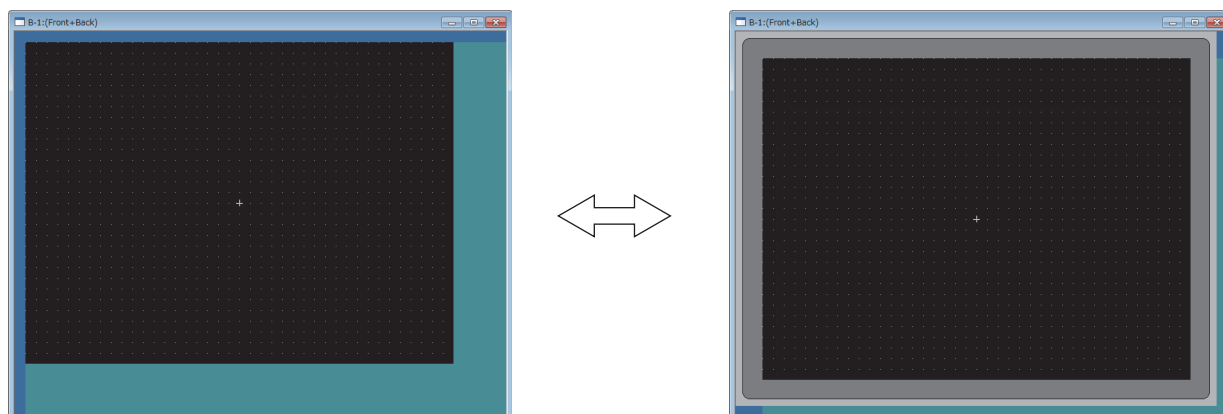

## ■8 [Touch Area]

Select [View] → [Display Items] → [Touch area] from the menu to display or hide the touch area on the screen editor.

## ■9 [Frame]

Select [View] → [Display Items] → [Frame] from the menu to display or hide the GOT frame on the screen editor.

## ■10 [Option]

Select [View] → [Display Items] → [Option] from the menu to display the [Option] dialog.

In this dialog, you can configure the settings displayed on the screen editor.

→ 11.10.5 ■ 1 [Options] dialog ([View] tab)

## 2.6.5 Displaying the grid

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can display the screen editor with equally-spaced points (a grid) which give an indication to arrange figures and objects.

Select [View] → [Grid] → [Front], [Back], or [None] from the menu to display or hide the grid on the screen editor.

[Front]

[Back]

[None]

## 2.6.6 Displaying the two-point press inactive area

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can display the two-point press inactive area on the screen editor.

Select [View] → [Two-point Press Inactive Area] → [Front], [Back], or [None] from the menu to display or hide the two-point press inactive area on the screen editor.

[Front]

[Back]

[None]

To enable the two-point touch on the GOT, the touched points must be in different two-point press inactive areas. Place the points for the two-point touch in different two-point press inactive areas.

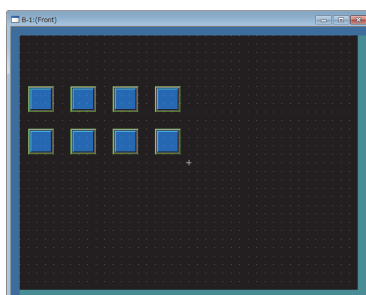

→8.2.3 ■ 2 (1) Simultaneous 2-point press

## 2.6.7 Switching the layer display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [View] → [Layer] → [All screens], [Front], [Back], or [Front+Back] from the menu to switch the layers to be displayed.

- [All screens]  
Switches between all screen editors and individual screen editor as the target for the layer switching.
- [Front], [Back], [Front+Back]  
Switches the layers to be displayed.

[Front]

[Back]

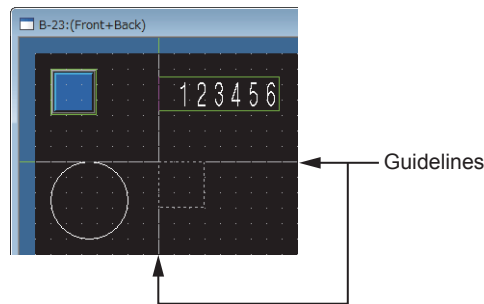

[Front and Back]

## 2.6.8 Displaying guidelines

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When moving a figure or object, you can display guidelines to indicate a position relation between other figures and objects.

Select [View] → [Guidelines (auxiliary line)] → [Display], [Shape], [Object], [Shape+Object], [Same Type], or [Custom] from the menu to change the display of guidelines.

- [Display]  
Displays or hides guidelines.
- [Figure]  
Displays guidelines in relation to existing figures.
- [Object]  
Displays guidelines in relation to existing objects.
- [Figure and Object]  
Displays guidelines in relation to existing figures and objects.
- [Same Type]  
Displays guidelines in relation to the same type of existing figures or objects as those being moved.
- [Custom]  
[Displays the Guidelines (auxiliary line)] dialog.  
You can customize guidelines such as where they are displayed.  
→ ■ 1 [Guidelines (auxiliary line) setting] dialog

### Point

#### (1) Guidelines displayed for grouped figures or objects

When you group figures or objects, the guidelines are displayed for the figure or object group.

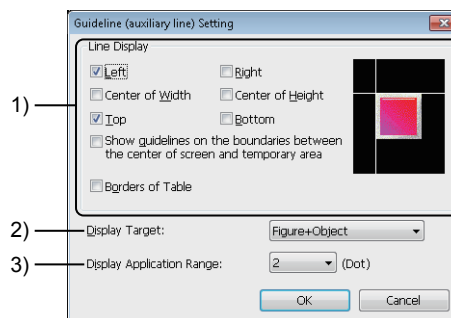

#### (2) Cases in which guidelines are not displayed

Guidelines are not displayed in the following cases.

- In the touch area of a touch switch
- When performing operations with a keyboard

#### ■ 1 [Guidelines (auxiliary line) setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Line Display]

Set where to display guidelines.

Item	Description
[Left], [Right], [Center of Width], [Center of Height], [Up], [Down]	Set the position of guidelines displayed on a figure or an object being moved. Select each item to display the image of corresponding guideline in the [Guidelines (auxiliary line)] dialog.
[Show guidelines on the boundaries between the center of screen and temporary area]	Select this item to display guidelines on the boundaries between the center of the screen and the temporary area.
[Borders of Table]	Set whether to display guidelines for table borders. Select this item and set where to display the guidelines for table borders.

## 2) [Display Target]

Select targets for guidelines.

- [Figure]  
Displays guidelines in relation to existing figures.
- [Object]  
Displays guidelines in relation to existing objects.
- [Figure and Object]  
Displays guidelines in relation to existing figures and objects.
- [Same Type]  
Displays guidelines in relation to the same type of existing figures or objects as those being selected.

## 3) [Display Application Range]

A figure or object can be automatically in alignment with an existing figure or object. Select the distance (in dot) between a figure/object to be moved and existing figures/objects.

The available value is [0], [2], [4], and [8].

Moving an existing figure or object while pressing the [Alt] key disables the setting for [Display Application Range].

Example) Correcting a vertical position

- [Display Application Range]: [8]  
Drag the figure or object, which should be vertically aligned, within 8 dots from the target for the alignment. Doing so horizontally aligns the figure or object being moved with the target figure or object.

Before correction (away more than 8 dots)

After correction (moved within 8 dots)

## 2.6.9 Scaling the size of items on the screen editor

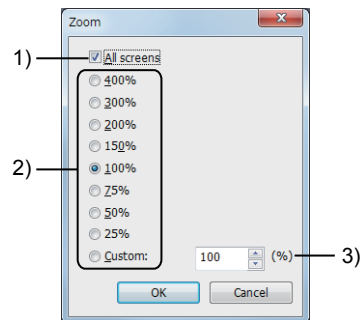

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [View] → [Zoom] → one of the following items from the menu to change the display magnification of the screen editor.

- [All Screens]  
Applies a specified display magnification to all screen editors.
- [400%], [300%], [200%], [150%], [100%], [75%], [50%], [25%]  
Changes the display magnification of the screen editor to the selected magnification.
- [Custom]  
Displays the [Zoom] dialog.  
The display magnification of the screen editor is customizable.  
→ ■ 1 [Zoom] dialog
- [Whole Screen]  
Resizes the screen display area of the screen editor according to the editor window size.  
This item is not selectable when [All Screens] is selected.

### ■ 1 [Zoom] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) **[All screens]**  
Applies the display magnification setting to all screen editors.
- 2) **Display magnification**  
Select the display magnification of a selected screen editor.
- 3) **Custom magnification**  
Specify the display magnification in units of 1%.  
The setting range is [25] to [400].

## 2.6.10 Cascading or arranging open screen editors

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Select [Window] → [Cascade], [Arrange Sideways], or [Arrange Lengthways] from the menu to cascade or arrange screen editors and windows which are displayed on the work window.

[Cascade]

[Arrange Sideways]

[Arrange Lengthways]

## 2.6.11 Copying the image of a screen editor to the clip board

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Select [Screen] → [Copy Screen Image to the Clipboard] from the menu to copy the image of a screen editor being edited to the clip board.

Only the image within the screen display area is copied.

## 2.7 Changing Screen Property

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can change the screen properties including the screen number, background color, and the key window setting that can be enabled per screen.

- ⇒ 2.7.1 Property of base screens
- 2.7.2 Properties of window screens
- 2.7.3 Property of report screens

For information on how to set the mobile screen properties, refer to the following.

- ⇒ 10.18.7 Mobile screen properties

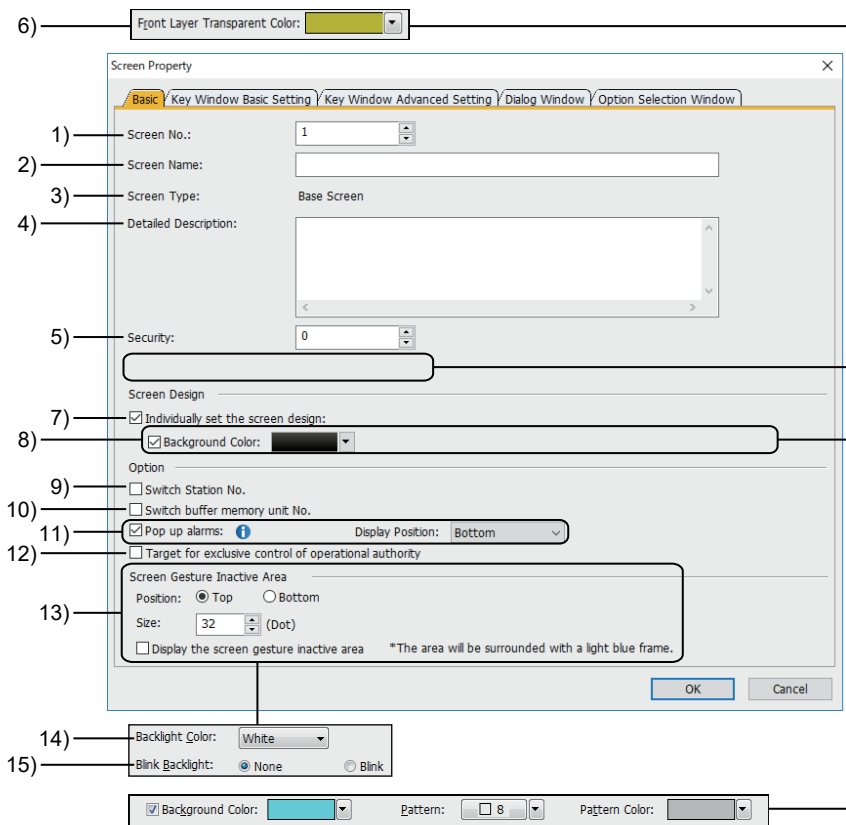

### 2.7.1 Property of base screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** By either of the following operations, select a base screen whose screen property is to be changed.
- Clicking any part of the screen editor
  - Selecting a screen in the [Screen] window
- (If you select multiple screens with the [Ctrl] key or [Shift] key, you can change the properties of the screens at a time.)
- ⇒ 2.2.4 ■ 3 [Screen] window
- Step 2** Select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog (for base screen).
- ⇒ ■ 1 [Basic] tab
- 2 [Key Window Basic Setting] tab
  - 3 [Key Window Advanced Setting] tab
  - 4 [Dialog Window] tab
  - 5 [Option Selection Window] tab
- Step 3** Click the [OK] button after the required settings to reflect the setting.
- When you select multiple screens in the [Screen] tree, the settings are reflected to all the selected screens.

## 1 [Basic] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Screen No.]

Set a screen number.

The setting range is [0] to [32767].

If you display the [Screen Property] dialog selecting multiple screens, this value cannot be changed.

### 2) [Title]

Set the title of the screen.

Up to 32 characters can be set.

### 3) [Screen Type]

Displays the screen type.

### 4) [Detailed Description]

Set the explanation for the screen.

Up to 512 characters can be set.

A line feed is counted as two characters.

### 5) [Security]

Set the security level.

The setting range is [0] to [15].

If you do not use the security function of the GOT, select [0].

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 6) [Front Layer Transparent]

Not available to GT21.

#### **GOT Graphic Ver.1**

Set the transparent color of the object arranged on the front layer.

⇒6.5.5 ■ 3 (2) Using layers

The parts of the objects whose colors are set to the transparent color become transparent, and the back layer can be seen through them.

⇒6.4.2 Color settings

### 7) [Individually set the screen design]

Enables the individual screen design (including the background color), instead of the design selected in the [Screen Design] dialog.

## 8) [Background Color]

### GOT Graphic Ver.2

Select a background color.

For the color setting, refer to the following.

→6.4.2 Color settings

### GOT Graphic Ver.1

Select a background color, pattern, and pattern color for the screen.

The pattern is displayed on the background color.

For the color setting, refer to the following.

→6.4.2 Color settings

## 9) [Switch Station No.]

Enables the station No. switching by screen.

→5.5.4 Configuring the settings for switching the target station No. for monitoring

## 10) [Switch buffer memory unit No.]

Enables the buffer memory unit No. switching by screen.

→5.5.5 Configuring the settings for switching the buffer memory unit No. of the monitoring target

## 11) [Pop up alarms]

An alarm pops up when an alarm occurs.

Item	Description
[Display Position]	Select the position to display an alarm to be popped up. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Up]</li> <li>• [Center]</li> <li>• [Down]</li> </ul>

Configure the following settings additionally.

- User alarm settings or system alarm settings
  - 9.1.2 ■ 7 [User Alarm Observation] dialog
  - 9.1.3 ■ 5 [System Alarm Observation] dialog
- Alarm popup display setting
  - 9.1.4 ■ 4 [Alarm Popup Display] dialog

## 12) [Target for exclusive control of operational authority]

Not available to GT21.

Enables the authorization control for the base screen.

→5.6 Setting the Interaction Function for Equipment on Ethernet ([GOT Network Interaction])

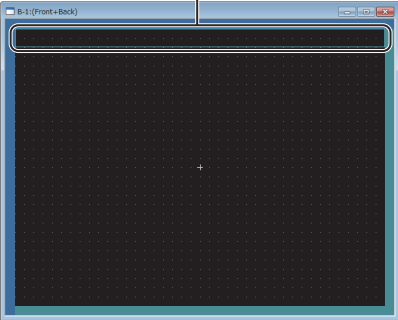

## 13) [Screen Gesture Inactive Area]

Only available to GT27.

Set an area (screen gesture inactive area) where object operations are enabled even in the screen gesture mode.

→11.12.1 ■ 1 Screen gesture mode

Item	Description
[Position]	Select a position to arrange the screen gesture inactive area. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Top]: Specifies the area from the top edge of the base screen to the position specified with [Size].</li> <li>• [Bottom]: Specifies the area from the bottom edge of the base screen to the position specified with [Size].</li> </ul>
[Size]	Set the height of the screen gesture inactive area. The setting range is [16] dots to [100] dots.

Item	Description
[Display the screen gesture inactive area]	<p>Displays the box indicating the screen gesture inactive area on the screen editor.            Arrange the switch for switching to the screen gesture mode in the screen gesture inactive area.            →11.12 Zooming and Scrolling the Monitor Screen of the GOT (Screen Gesture Function)</p> <p style="text-align: center;">Screen gesture inactive area</p> 

#### 14) [Backlight Color]

Only available to GT21-P.

The following shows the items to be selected.

- [White]
- [Green]
- [Red]
- [Pink]
- [Orange]

#### 15) [Blink Backlight]

Only available to GT21-P.

The following shows the items to be selected.

- [None]
- [Blink]

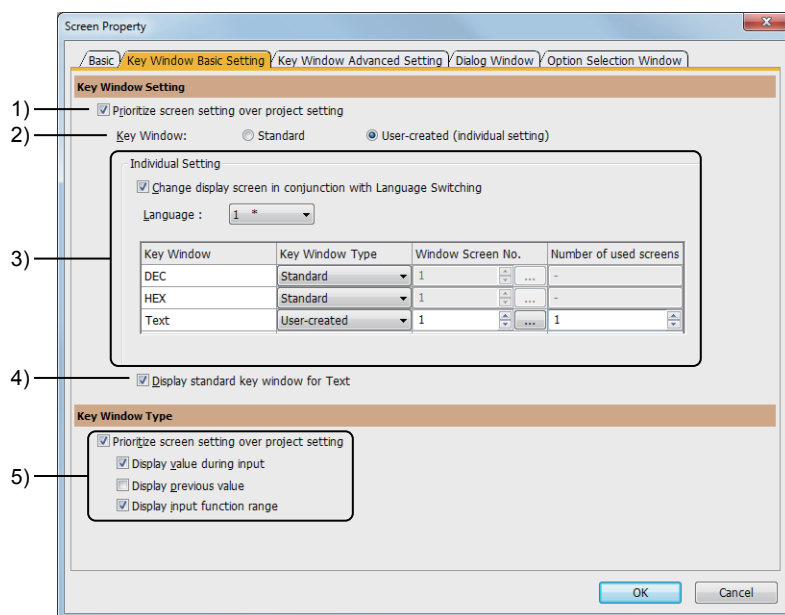

### ■ 2 [Key Window Basic Setting] tab

The following shows the basic settings of key windows for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→5.2.4 ■ 4 [Key Window]

#### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Key Window Setting] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

## 2) [Key Window]

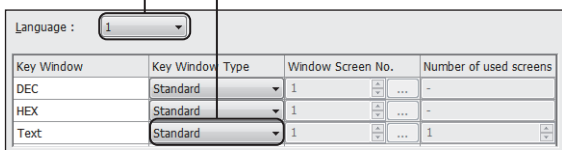

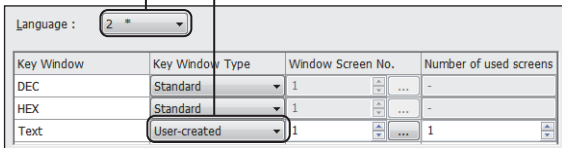

Select the type of a key window to be used.

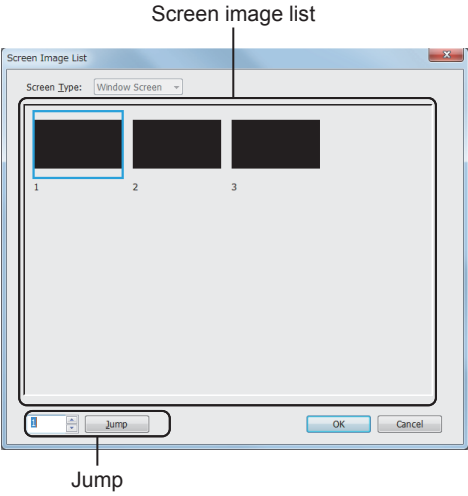

The following shows the items to be selected.

- [Standard]  
Uses the standard key window pre-installed in the GOT.
- [User-created (individual setting)]  
Uses the standard key window or the user-created key window.  
Set the key window to be used in [Individual Setting].

## 3) [Individual Setting]

Set the key window to be used for each input target.

Item	Description
[Change display screen in conjunction with Language Switching]	Changes the key windows to be used in conjunction with the value of the language switching device.
[Language]	<p>Select the value of the language switching device. The setting range is [1] to [30]. →5.2.2 Setting for switching the language displayed on the GOT ([Language Switching]) For each value of the language switching device, you can set a key window to be used. If you select [User-created] in [Key Window Type], [*] is added to the value of the selected range. Example)</p> <ul style="list-style-type: none"> <li>• If the value of the language switching device is 1, the standard key window is used for text input.</li> <li>• If the value of the language switching device is 2, the user-created key window is used for text input.</li> </ul> <p>Select [1] for [Language] and select [Standard] for [Key Window Type] in [Text].</p>  <p>Select [2] for [Language] and select [User-created] for [Key Window Type] in [Text].</p> 
[Key Window]	The use of each key window
[Key Window Type]	<p>Select the type of key windows according to their uses. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Standard] Uses the standard key window.</li> <li>• [User-created] Uses the created window screen as a key window. Set the window screen to be used in [Window Screen No.].</li> </ul>

Item	Description
[Window Screen No.]	<p>If you select [User-created] in [Key Window Type], set the window screen number to be displayed as a key window. Click the [...] button to display the [Screen Image List] dialog. You can check the image on the screen when selecting a window screen.</p> <div style="text-align: center;">  <p style="text-align: center;">Screen image list</p> <p style="text-align: center;">Jump</p> </div> <ul style="list-style-type: none"> <li>• <b>[Screen Type]</b> Displays the screen type.</li> <li>• <b>Screen image list</b> Displays screen images.</li> <li>• <b>Jump</b> Specify a screen number and click the [Jump] button to select the screen in the screen image list.</li> </ul>
[Number of used screens]	<p>This can be set only to [Text]. Set the number of key windows used for text input. With the window screen set in [Window Screen No.] as the first on the list, window screens are used for the set number as key windows. To switch key windows, arrange key code switches to which the following operations are set.</p> <ul style="list-style-type: none"> <li>• [Window Screen Switching for Text (next)]</li> <li>• [Window Screen Switching for Text (previous)]</li> <li>• [Window Screen Switching for Text (specified screen No.)]</li> </ul> <p>→8.2.11 [Key Code Switch] dialog</p>

#### 4) [Display the standard key window for text]

Not available to GT21.

Uses the standard key window for text input.

#### 5) [Prioritize screen setting over project setting]

Not available to GT21.

Prioritizes the settings of [Key Window Type] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

Item	Description
[Display value during input]	<p>Displays the value being input in the key window. To display the value in the user-created key window, arrange the input value area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>
[Display previous value]	<p>Displays the previous value in the key window. To display the previous value in the user-created key window, arrange the previous value area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>
[Display input function range]	<p>Displays the valid input range in the key window. To display the valid input range in the user-created key window, arrange the input range area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>

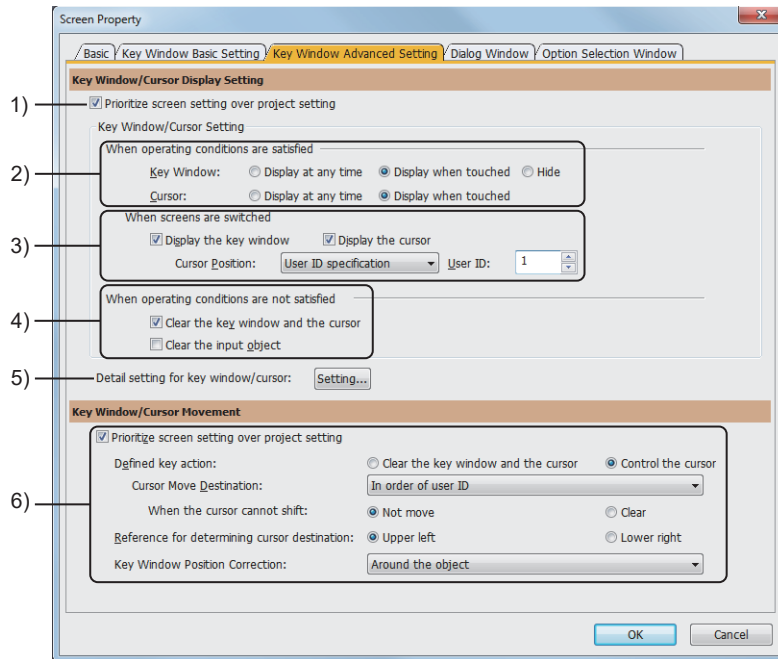

### ■ 3 [Key Window Advanced Setting] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the advanced settings of key windows for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→ 5.2.4 ■ 4 (2) [Advanced Setting] tab

#### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Display settings of the key window and cursor] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

#### 2) [When operating conditions are satisfied]

Configure the display settings of the key window and cursor for when the operating conditions of the objects for input are satisfied.

Item	Description
[Key Window]	Configure the display settings of the key window for when the operating conditions of the objects for input are satisfied. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Display at any time] (Not available to GT21.)</li> <li>• [Display when touched]</li> <li>• [Hide]</li> </ul>
[Cursor]	Not available to GT21. Configure the display settings of the cursor for when the operating conditions of the object for input are satisfied. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Display at any time]</li> <li>• [Display when touched]</li> </ul>

#### 3) [When screens are switched]

Configure the display settings of the key window and cursor to switch screens for when the operating conditions of the object for input are satisfied.

Item	Description
[Display the key window]	Displays a key window when the screen is switched.
[Display the cursor]	Displays a cursor when the screen is switched. Set the position to display the cursor in [Cursor Position].

Item	Description
[Cursor Position]	Select the position to display the cursor when the screen is switched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left] Displays the cursor at the object nearest to the upper left corner of the screen.</li> <li>• [User ID minimum] Displays the cursor at the object with the smallest user ID.</li> <li>• [User ID specification] Displays the cursor at the object with the specified user ID. Set the user ID of the object on which the cursor is displayed in [User ID].</li> </ul>
[User ID]	Sets the user ID of the object on which the cursor is displayed. The setting range is [1] to [65535].

#### 4) [When operating conditions are not satisfied]

Not available to GT21.

Configure the display settings of the key window and cursor for when the operating conditions of the objects for input are not satisfied.

Item	Description
[Clear the key window and the cursor]	Deletes the key window and cursor when the operating conditions of the objects for input are not satisfied.
[Clear the input object]	Deletes the key window, the cursor, and the objects for input when the operating conditions of the objects for input are not satisfied.

#### 5) [Key Window Advanced Setting]

Click the [Setting] button to display the [Display Detail Setting] dialog.

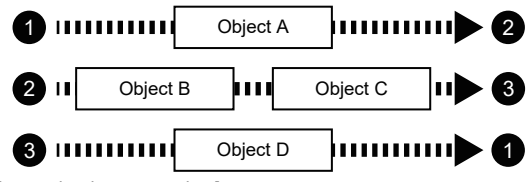

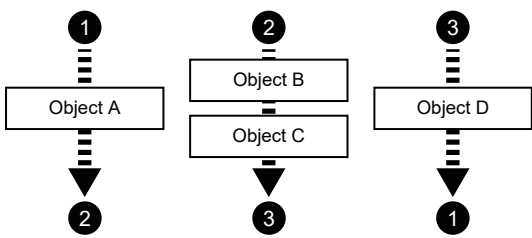

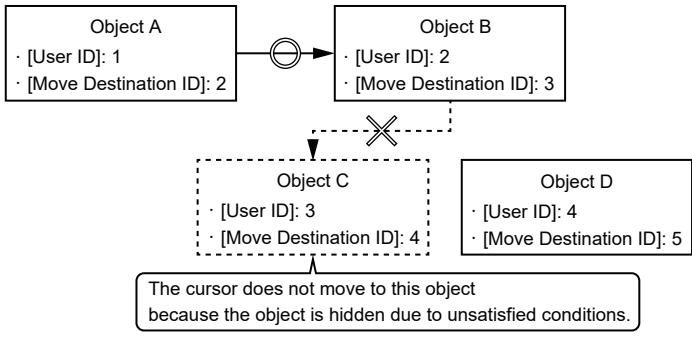

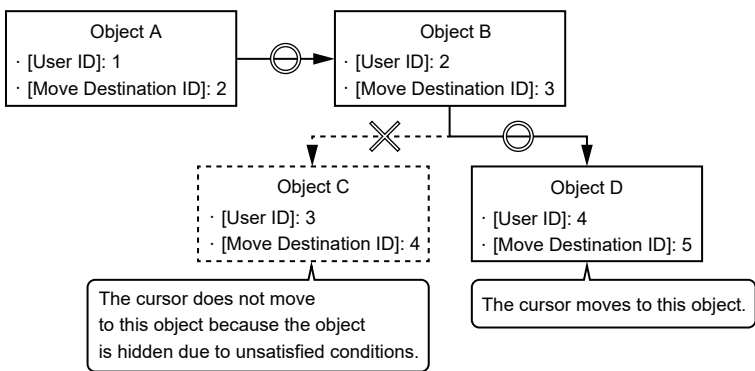

- **[Cursor Type]**  
Select the action of the cursor to be displayed on the input area.
  - [1-character blink]  
Blinks the area for one character in the input area.
  - [Highlight all + 1-character blink]  
Highlights the characters displayed in the input area, and blinks the area for one character.
- **[Display the cursor with a touch on the Enter/arrow key when the cursor is hidden]**  
Not available to GT21.  
Displays the cursor when the enter key or an arrow key is touched while the cursor is hidden.
- **[Display the valid input range when an invalid value is input in Numerical Input]**  
Not available to GT21.  
Displays the dialog indicating the valid input range when an invalid value is input in numerical input.
- **[Display the input confirmation dialog when setting the function of Numerical/Text Input]**  
Displays the confirmation dialog when numerical values or text are input.
- **[Check the input range while entering numerical values]**  
Not available to GT21.  
Checks the range while numerical values are input.
- **[Display the title bar on the user-created key window]**  
Not available to GT2104-P and GT2103-P.  
Displays the title bar of a user-created key window.  
For the precautions on hiding the title bar, refer to the following.  
→5.2.4 ■ 3 (2) Setting to close the key window whose title bar is hidden

#### 6) [Prioritize screen setting over project setting]

Prioritizes the settings of [Operations of the Key window and Cursor] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

Item	Description
[Defined key action]	Select the action of the key window and cursor when the enter key is touched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Clear the key window and the cursor] Deletes the key window and cursor.</li> <li>• [Control the cursor] Moves the cursor to the specified position. Select a position to move the cursor in [Cursor Move Destination].</li> </ul>

Item	Description
	<p>Select a position to move the cursor. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Same operation as the right arrow key] Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [Same operation as the down arrow key] Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [In order of user ID] Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor does not move. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul>  <ul style="list-style-type: none"> <li>• [Subsequently valid user ID] (Not available to GT21) Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor moves to the object specified with [Move Destination ID] of the hidden destination object. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul>  <ul style="list-style-type: none"> <li>• [Not move] Does not move the cursor even after the entry is confirmed.</li> </ul>

[Cursor Move Destination]

Item	Description
[When the cursor cannot shift]	This item is displayed when [Cursor Move Destination] is set to [In order of user ID] or [Subsequently valid user ID]. Select how the cursor moves when no destination object exists. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move]</li> <li>• [Clear]</li> </ul>
[Reference for determining cursor destination]	Select the standard to determine a position to move the cursor. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left]</li> <li>• [Lower right]</li> </ul>
[Key Window Position Correction]	Select an action of the key window when it overlaps the input target object. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move]</li> <li>• Keeps the key window displayed even if it overlaps the input target object.</li> <li>• [To the four corners of the screen]</li> </ul> Displays the key window at one of the four corners so that it does not overlap the input target object. Displays the key window on the lower right of the screen if it overlaps the input target object wherever it is. <ul style="list-style-type: none"> <li>• [Around the object]</li> </ul> Displays the key window according to the position of the input target object.

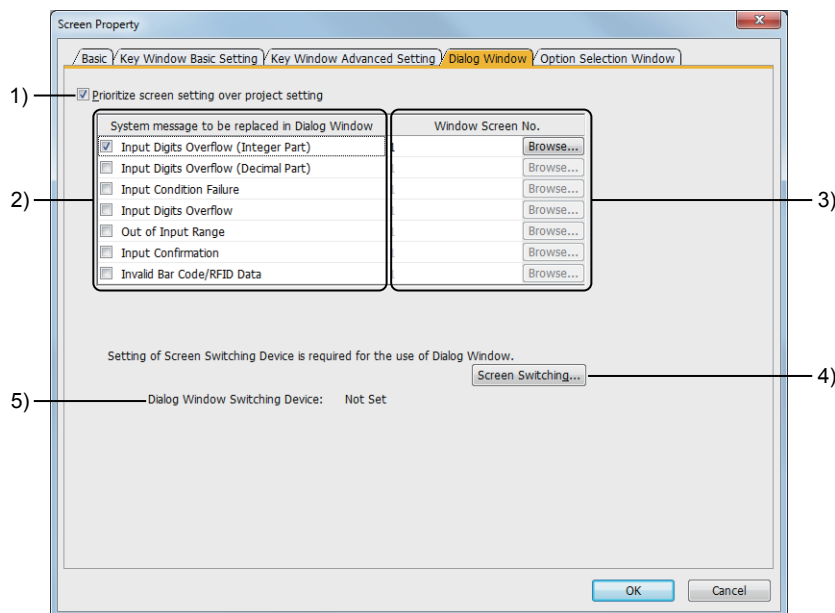

#### ■ 4 [Dialog Window] tab

The following shows the settings of the dialog window for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→5.2.3 ■ 4 [Dialog Window...]

#### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Dialog Window] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

#### 2) [System message to be replaced in Dialog Window]

Select a system message to be replaced by the dialog window.

Replaces the selected system message with the window screen set in [Window Screen No.].

The following shows the items to be selected.

- [Input Digits Overflow (Integer Part)]
- [Input Digits Overflow (Decimal Part)]
- [Input Condition Failure]
- [Input Digits Overflow]
- [Out of Input Range]
- [Input Confirmation]

- [Barcode/RFID Data invalid]

For the system messages of each item, refer to the following.

⇒ 5.2.3 ■ 2 How to use dialog windows

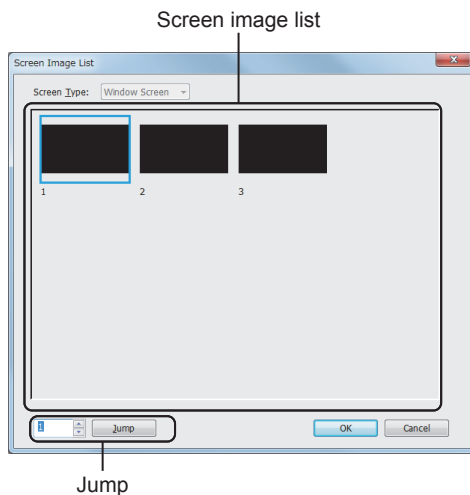

### 3) [Window Screen No.]

Set a screen number of the window screen to be displayed instead of the system message.

The setting range is [0] to [32767].

Click the [Browse] button to display the [Screen Image List] dialog.

You can check the image on the screen when selecting a window screen.

- **[Screen Type]**  
Displays the screen type.
- **Screen image list**  
Displays screen images.
- **Jump**  
Specify a screen number and click the [Jump] button to select the screen in the screen image list.

### 4) [Screen Switching] button

Displays the [Environmental Setting] dialog.

⇒ 5.2.3 ■ 4 [Dialog Window...]

### 5) [Dialog window Switching Device]

The currently set screen switching device for a dialog window

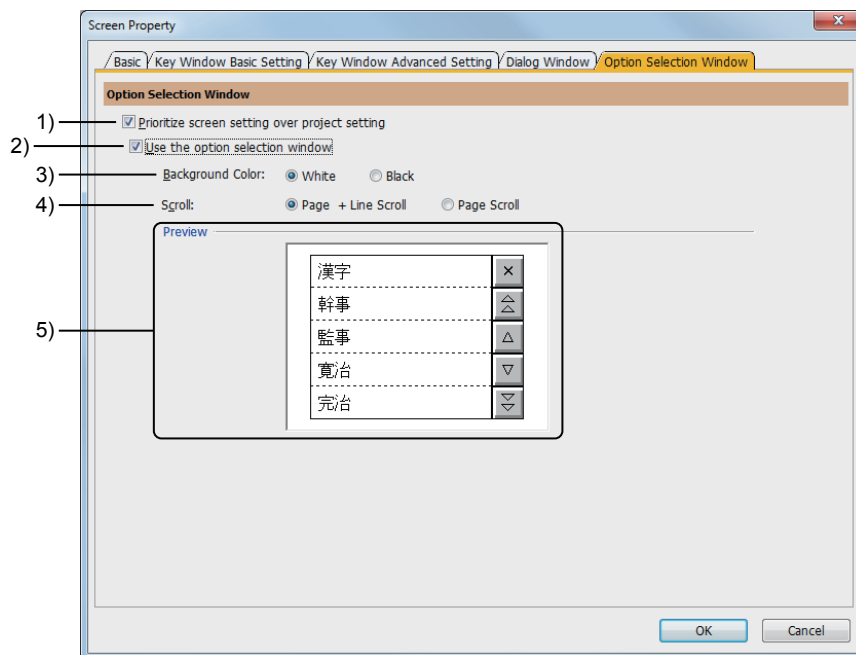

## ■ 5 [Option Selection Window] tab

The following shows the settings of the KANA-KANJI conversion for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

⇒ 5.2.12 ■ 4 [KANA KANJI Conversion]

### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Option Selection Window] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

2) **[Use the option selection window]**

Uses the option selection window to convert hiragana to kanji.

3) **[Background Color]**

Select the background color of the option selection window.

4) **[Scroll]**

Select the key to be displayed in the option selection window.

- [Page + Line Scroll]: Displays the key to scroll the screen by page and line.
- [Page Scroll]: Displays the key to scroll the screen by page.

5) **[Preview]**

Displays the preview of the option selection window which the settings of [Background Color] and [Scroll] are reflected.

## 2.7.2 Properties of window screens

---

**Step 1** By either of the following operations, select a window screen whose properties are to be changed.

- Clicking any part of the screen editor
- Selecting a screen in the [Screen] window

(If you select multiple screens with the [Ctrl] key or [Shift] key, you can change the properties of the screens at a time.)

⇒ 2.2.4 ■ 3 [Screen] window

**Step 2** Select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog (for window screen).

- ⇒ ■ 1 [Basic] tab
- 2 [Key Window Basic Setting] tab
- 3 [Key Window Advanced Setting] tab
- 4 [Dialog Window] tab
- 5 [Option Selection Window] tab

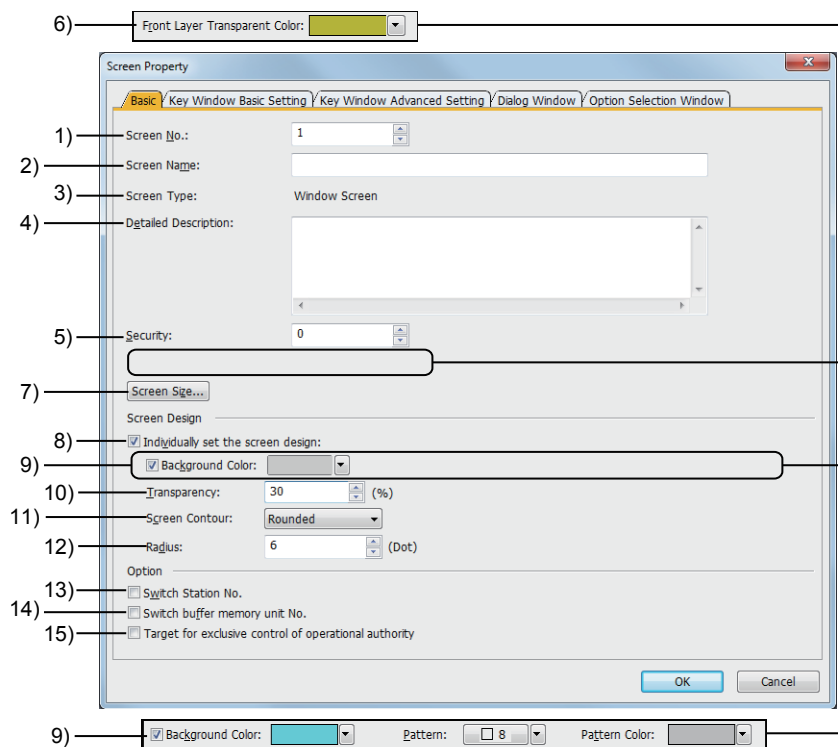

**Step 3** Click the [OK] button after the required settings to reflect the setting.

When you select multiple screens in the [Screen] tree, the settings are reflected to all the selected screens.

## 1 [Basic] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Screen No.]

Set a screen number.

The setting range is [0] to [32767].

If you display the [Screen Property] dialog selecting multiple screens, this value cannot be changed.

### 2) [Title]

Set the title of the screen.

Up to 32 characters can be set.

### 3) [Screen Type]

Displays the screen type.

### 4) [Detailed Description]

Set the explanation for the screen.

Up to 512 characters can be set.

A line feed is counted as two characters.

### 5) [Security]

Set the security level.

The setting range is [0] to [15].

If you do not use the security function of the GOT, select [0].

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 6) [Front Layer Transparent]

Not available to GT23 and GT21.

#### **GOT Graphic Ver.1**

Set the transparent color of the object arranged on the front layer.

⇒6.5.5 ■ 3 (2) Using layers

The parts of the objects whose colors are set to the transparent color become transparent, and the back layer can be seen through them.

⇒6.4.2 Color settings

### 7) [Screen Size] button

Displays the [Change Window Size] dialog.

Specify a numerical value to change the size of the window screen.

- **[X Range]**  
Setting range of the horizontal size
- **[X]**  
Set the horizontal size (dot).
- **[Y Range]**  
Setting range of the vertical size
- **[Y]**  
Set the vertical size (dot).
- **[Edit] button**  
This button is not displayed when the screen is newly created.  
Changes the size of window screens on the screen editor.

Drag the handles to change the screen size.

Change the screen size and click any part other than the handles to confirm the change.

### 8) [Individually set the screen design]

Enables the individual screen design (including the background color), instead of the design selected in the [Screen Design] dialog.

### 9) [Background Color]

#### **GOT Graphic Ver.2**

Select a background color.

For the color setting, refer to the following.

⇒6.4.2 Color settings

For a window screen, if [Screen Contour] is set to [Rounded], the gradient area of the window screen varies depending on whether its title bar is displayed.

Position the window screen on the screen editor of the base screen, and check the window screen image in the [Screen Preview] window.

⇒2.9.1 Displaying a preview

#### **GOT Graphic Ver.1**

Select a background color, pattern, and pattern color for the screen.

The pattern is displayed on the background color.

For the color setting, refer to the following.

⇒6.4.2 Color settings

### 10) [Transparency]

#### **GOT Graphic Ver.2**

Set the transparency of the window screen.

The setting range is [0]% to [100]%.

### 11) [Screen Contour]

#### **GOT Graphic Ver.2**

Set the contours of the window screen.

The following shows the items to be selected.

- [Rectangle]

- [Rounded]

## 12) [Radius]

### GOT Graphic Ver.2

When [Rounded] is selected for [Screen Contour], set the circle radius.

The following shows the items to be selected.

[0] dots to  $(n - 1) / 2$  dots

n: Window screen height or width, whichever is smaller (dots)

The fractional portion of the result is rounded off.

## 13) [Switch Station No.]

Enables each screen to switch station No.

→5.5.4 Configuring the settings for switching the target station No. for monitoring

## 14) [Switch buffer memory unit No.]

Enables the buffer memory unit No. switching by screen.

→5.5.5 Configuring the settings for switching the buffer memory unit No. of the monitoring target

## 15) [Target for exclusive control of operational authority]

Not available to GT21.

Enables the authorization control for the base screen.

→5.6 Setting the Interaction Function for Equipment on Ethernet ([GOT Network Interaction])

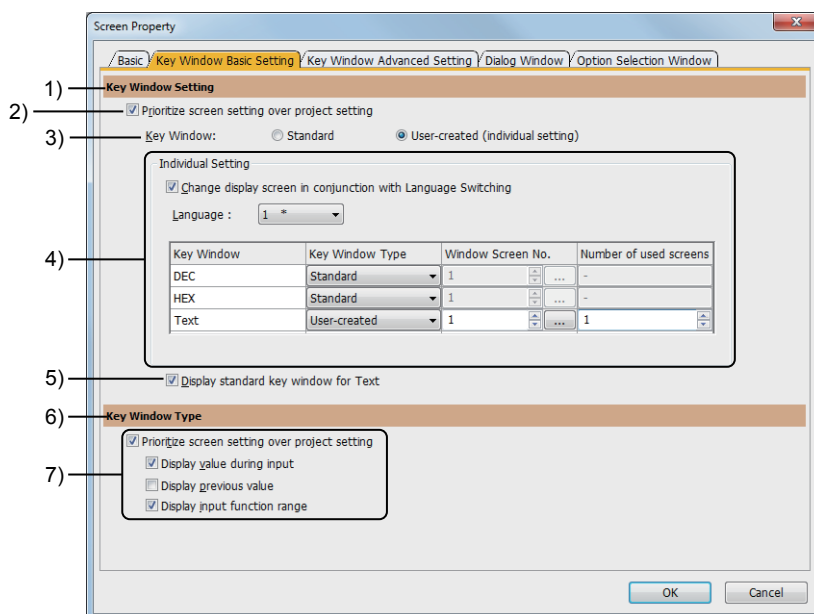

## ■2 [Key Window Basic Setting] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the basic settings of key windows for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→5.2.4 ■ 4 (1) [Basic] tab

### 1) [Key Window Setting]

Type settings of the key window to be used

### 2) [Prioritize screen setting over project setting]

Prioritizes the settings of [Key Window Setting] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

### 3) [Key Window Setting]

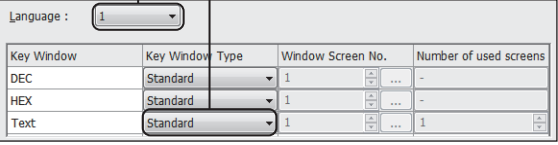

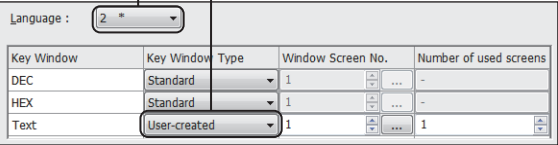

Select the type of a key window to be used.

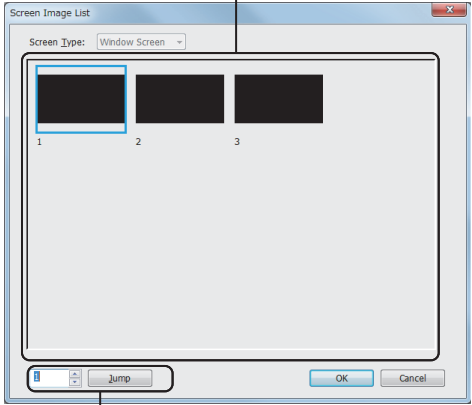

The following shows the items to be selected.

- [Standard Key Window]  
Uses the standard key window pre-installed in the GOT.
- [User-created screen Key window (individual)]  
Uses the standard key window or the user-created key window.  
Set the key window to be used in [Individual Setting].

#### 4) [Individual Setting]

Set the key window to be used for each input target.

Item	Description
[Change display screen in conjunction with Language Switching]	Changes the key windows to be used in conjunction with the value of the language switching device.
[Language]	<p>Select the value of the language switching device. The setting range is [1] to [30]. For each value of the language switching device, you can set a key window to be used. If you select [User-created] in [Key Window Type], [*] is added to the value of the selected range. Example)</p> <ul style="list-style-type: none"> <li>• If the value of the language switching device is 1, the standard key window is used for text input.</li> <li>• If the value of the language switching device is 2, the user-created key window is used for text input.</li> </ul> <p>Select [1] for [Language] and select [Standard] for [Key Window Type] in [Text].</p>  <p>Select [2] for [Language] and select [User-created] for [Key Window Type] in [Text].</p> 
[Key Window]	The use of each key window
[Key Window Type]	<p>Select the type of key windows according to their uses. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Standard] Uses the standard key window.</li> <li>• [User-created] Uses the created window screen as a key window. Set the window screen to be used in [Window Screen No.].</li> </ul>

Item	Description
[Window Screen No.]	<p>If you select [User-created] in [Key Window Type], set the window screen number to be displayed as a key window. Click the [...] button to display the [Screen Image List] dialog. You can check the image on the screen when selecting a window screen.</p> <p style="text-align: center;">Screen image list</p>  <p style="text-align: center;">Jump</p> <ul style="list-style-type: none"> <li>• <b>[Screen Type]</b> Displays the screen type.</li> <li>• <b>Screen image list</b> Displays screen images.</li> <li>• <b>Jump</b> Specify a screen number and click the [Jump] button to select the screen in the screen image list.</li> </ul>
[Used Screen No.]	<p>This can be set only to [Text]. Set the number of key windows used for text input. With the window screen set in [Window Screen No.] as the first on the list, window screens are used for the set number as key windows. To switch key windows, arrange key code switches to which the following operations are set.</p> <ul style="list-style-type: none"> <li>• [Window Screen Switching for Text (next)]</li> <li>• [Window Screen Switching for Text (previous)]</li> <li>• [Window Screen Switching for Text (specified screen No.)]</li> </ul> <p>→8.2.11 [Key Code Switch] dialog</p>

### 5) [Display the standard key window for text]

Not available to GT21.

Uses the standard key window for text input.

### 6) [Key Window Type]

Not available to GT21.

Settings of the information displayed on the key window.

### 7) [Prioritize screen setting over project setting]

Not available to GT21.

Prioritizes the settings of [Key Window Type] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

Item	Description
[Display value during input]	<p>Displays the value being input in the key window. To display the value in the user-created key window, arrange the input value area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>
[Display previous value]	<p>Displays the previous value in the key window. To display the previous value in the user-created key window, arrange the previous value area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>
[Display input function range]	<p>Displays the valid input range in the key window. To display the valid input range in the user-created key window, arrange the input range area setting on the window screen. →8.31 Placing an Object to Display the Input Information</p>

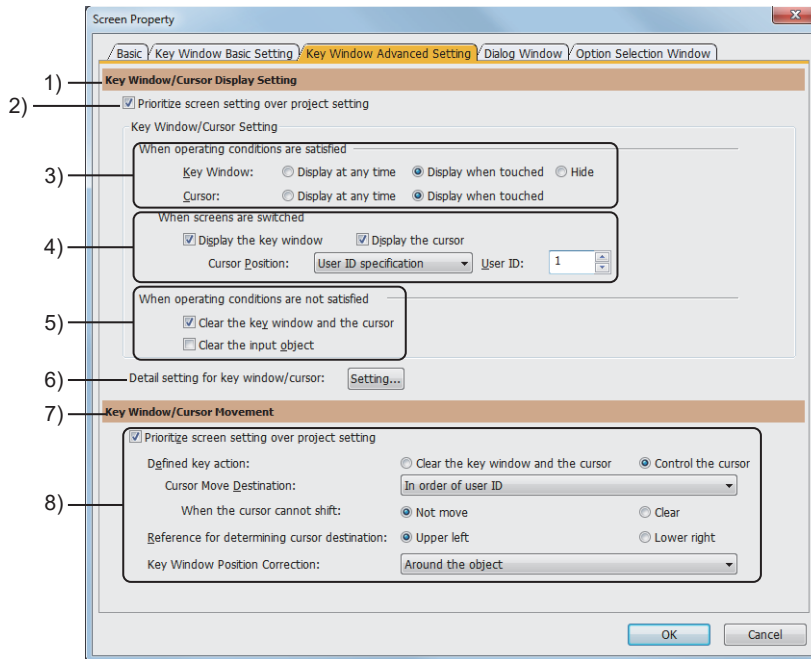

### ■ 3 [Key Window Advanced Setting] tab

The following shows the advanced settings of key windows for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→5.2.4 ■ 4 (2) [Advanced Setting] tab

#### 1) [Key Window Display Setting]

Display settings of the key window and cursor

#### 2) [Prioritize screen setting over project setting]

Prioritizes the settings of [Display settings of the key window and cursor] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

#### 3) [When operating conditions are satisfied]

Configure the display settings of the key window and cursor for when the operating conditions of the objects for input are satisfied.

Item	Description
[Key Window]	Configure the display settings of the key window for when the operating conditions of the objects for input are satisfied. The following shows the items to be selected. • [Display at any time] (Not available to GT21.) • [Display when touched] • [Hide]
[Cursor]	Not available to GT21. Configure the display settings of the cursor for when the operating conditions of the object for input are satisfied. The following shows the items to be selected. • [Display at any time] • [Display when touched]

#### 4) [When screens are switched]

Configure the display settings of the key window and cursor to switch screens for when the operating conditions of the object for input are satisfied.

Item	Description
[Display the key window]	Displays a key window when the screen is switched.
[Display the cursor]	Displays a cursor when the screen is switched. Set the position to display the cursor in [Cursor Position].

Item	Description
[Cursor Position]	Select the position to display the cursor when the screen is switched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left] Displays the cursor at the object nearest to the upper left corner of the screen.</li> <li>• [User ID minimum] Displays the cursor at the object with the smallest user ID.</li> <li>• [User ID specification] Displays the cursor at the object with the specified user ID. Set the user ID of the object on which the cursor is displayed in [User ID].</li> </ul>
[User ID]	Sets the user ID of the object on which the cursor is displayed. The setting range is [1] to [65535].

### 5) [When operating conditions are not satisfied]

Not available to GT21.

Configure the display settings of the key window and cursor for when the operating conditions of the objects for input are not satisfied.

Item	Description
[Clear the key window and the cursor]	Deletes the key window and cursor when the operating conditions of the objects for input are not satisfied.
[Clear the input object]	Deletes the key window, the cursor, and the objects for input when the operating conditions of the objects for input are not satisfied.

### 6) [Key Window Advanced Setting]

Click the [Setting] button to display the [Display Detail Setting] dialog.

- **[Cursor Type]**  
Select the action of the cursor to be displayed on the input area.
  - [1-character blink]  
Blinks the area for one character in the input area.
  - [Highlight all + 1-character blink]  
Highlights the characters displayed in the input area, and blinks the area for one character.
- **[Display the cursor with a touch on the Enter/arrow key when the cursor is hidden]**  
Not available to GT21.  
Displays the cursor when the enter key or an arrow key is touched while the cursor is hidden.
- **[Display the valid input range when an invalid value is input in Numerical Input]**  
Not available to GT21.  
Displays the dialog indicating the valid input range when an invalid value is input in numerical input.
- **[Display the input confirmation dialog when setting the function of Numerical/Text Input]**  
Displays the confirmation dialog when numerical values or text are input.
- **[Check the input range while entering numerical values]**  
Not available to GT21.  
Checks the range while numerical values are input.
- **[Display the title bar on the user-created key window]**  
Not available to GT2104-P and GT2103-P.  
Displays the title bar of a user-created key window.  
For the precautions on hiding the title bar, refer to the following.  
→5.2.4 ■ 3 (2) Setting to close the key window whose title bar is hidden

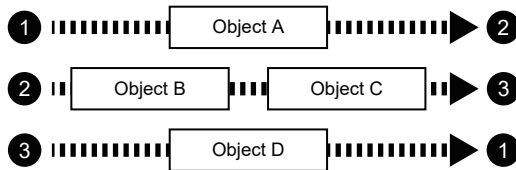

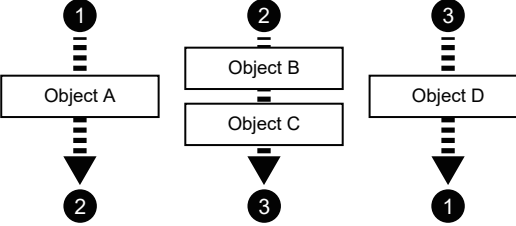

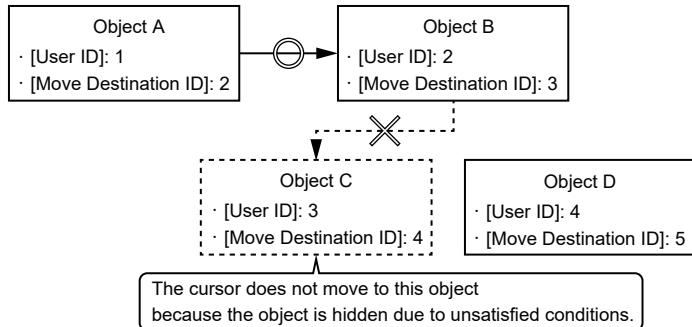

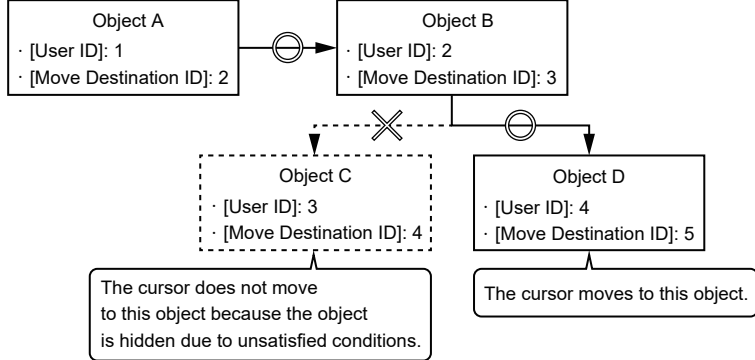

### 7) [Key Window/Cursor Movement]

Operation setting of the key window and cursor

### 8) [Prioritize screen setting over project setting]

Prioritizes the settings of [Operations of the Key window and Cursor] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

Item	Description
[Defined key action]	Set the action of the key window and cursor when the enter key is touched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Clear the key window and the cursor] Deletes the key window and cursor.</li> <li>• [Control the cursor] Moves the cursor to the specified position. Select a position to move the cursor in [Cursor Move Destination].</li> </ul>

Item	Description
	<p>Select a position to move the cursor. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Same operation as the right arrow key] Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [Same operation as the down arrow key] Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [In order of user ID] Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor does not move. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul> <p>[Cursor Move Destination]</p>  <ul style="list-style-type: none"> <li>• [Subsequently valid user ID] (Not available to GT21) Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor moves to the object specified with [Move Destination ID] of the hidden destination object. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul>  <ul style="list-style-type: none"> <li>• [Not move] Does not move the cursor even after the entry is confirmed.</li> </ul>

Item	Description
[When the cursor cannot shift]	This item is displayed when [Cursor Move Destination] is set to [In order of user ID] or [Subsequently valid user ID]. Select how the cursor moves when no destination object exists. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move]</li> <li>• [Clear]</li> </ul>
[Reference for determining cursor destination]	Select the standard to determine a position to move the cursor. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left]</li> <li>• [Lower right]</li> </ul>
[Key Window Position Correction]	Set the action of the key window when it overlaps the input target object. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move]</li> <li>• Keeps the key window displayed even if it overlaps the input target object.</li> <li>• [To the four corners of the screen]</li> </ul> Displays the key window at one of the four corners so that it does not overlap the input target object. Displays the key window on the lower right of the screen if it overlaps the input target object wherever it is. <ul style="list-style-type: none"> <li>• [Around the object]</li> </ul> Displays the key window according to the position of the input target object.

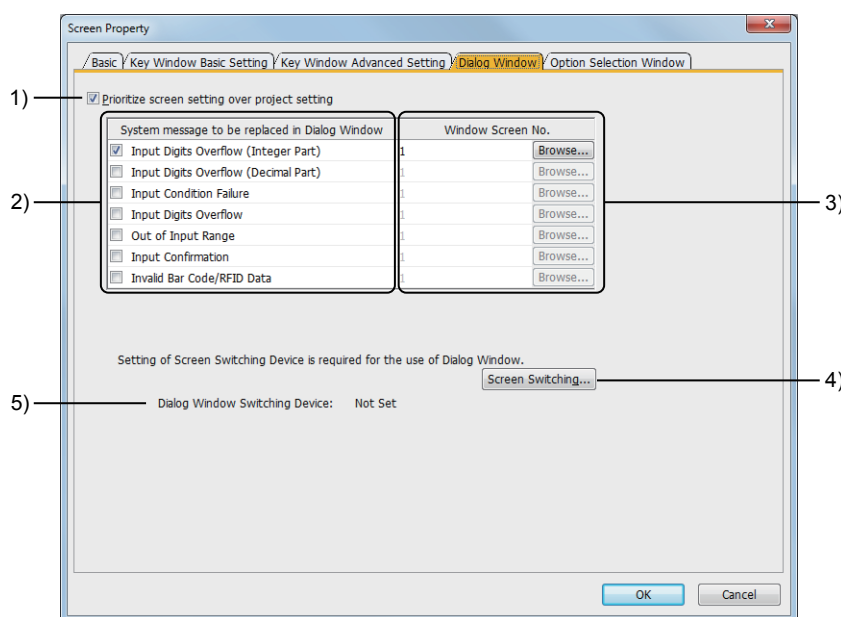

#### ■ 4 [Dialog Window] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the settings of the dialog window for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

→ 5.2.3 ■ 4 [Dialog Window...]

##### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Dialog Window] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

##### 2) [System message to be replaced in Dialog Window]

Select a system message to be replaced by the dialog window.

Replaces the selected system message with the window screen set in [Window Screen No.].

The following shows the items to be selected.

- [Input Digits Overflow (Integer Part)]
- [Input Digits Overflow (Decimal Part)]
- [Input Condition Failure]
- [Input Digits Overflow]
- [Out of Input Range]
- [Input Confirmation]

- [Barcode/RFID Data invalid]

For the system messages of each item, refer to the following.

⇒5.2.3 ■ 2 How to use dialog windows

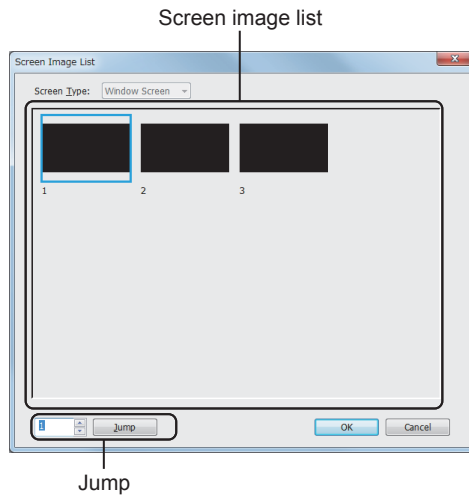

### 3) [Window Screen No.]

Set a screen number of the window screen to be displayed instead of the system message.

The setting range is [0] to [32767].

Click the [Browse] button to display the [Screen Image List] dialog.

You can check the image on the screen when selecting a window screen.

- **[Screen Type]**  
Displays the screen type.
- **Screen image list**  
Displays screen images.
- **Jump**  
Specify a screen number and click the [Jump] button to select the screen in the screen image list.

### 4) [Screen Switching] button

Displays the [Environmental Setting] dialog.

⇒5.2.3 ■ 4 [Dialog Window...]

### 5) [Dialog window Switching Device]

The currently set screen switching device for a dialog window

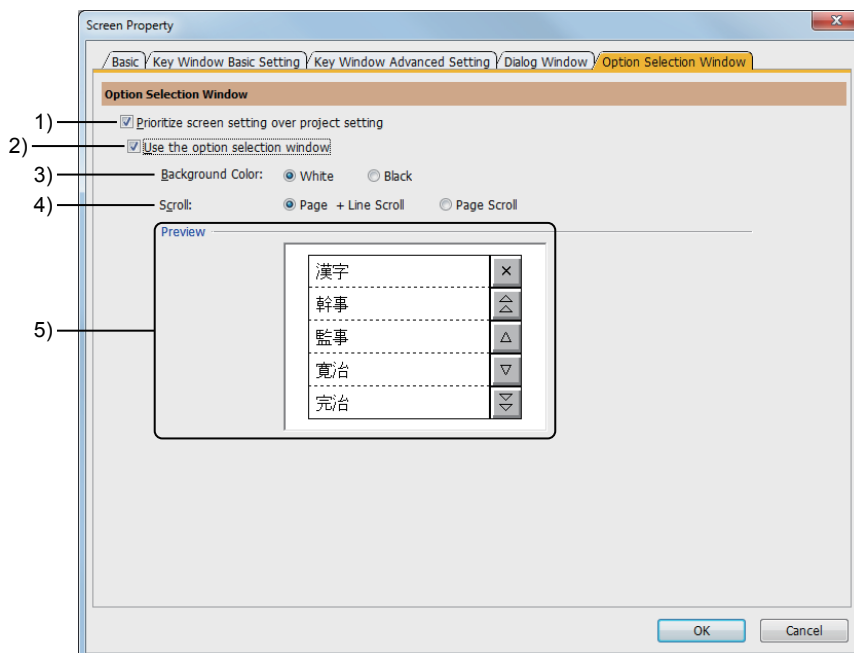

## ■ 5 [Option Selection Window] tab

The following shows the settings of the KANA-KANJI conversion for each screen.

For the settings for each project, configure the settings in the [Environmental Setting] window.

⇒5.2.12 ■ 4 [KANA KANJI Conversion]

### 1) [Prioritize screen setting over project setting]

Prioritizes the settings of [Option Selection Window] in the [Screen Property] dialog over the settings for each project in the [Environmental Setting] window.

## 2) [Use the option selection window]

Uses the option selection window to convert hiragana to kanji.

## 3) [Background Color]

Select the background color of the option selection window.

## 4) [Scroll]

Select the key to be displayed in the option selection window.

- [Page + Line Scroll]: Displays the key to scroll the screen by page and line.

- [Page Scroll]: Displays the key to scroll the screen by page.

## 5) [Preview]

Displays the preview of the option selection window which the settings of [Background Color] and [Scroll] are reflected.

## 2.7.3 Property of report screens

**Step 1** By either of the following operations, select a report screen whose screen property is to be changed.

- Clicking any part of the screen editor
- Selecting a screen in the [Screen] window

(If you select multiple screens with the [Ctrl] key or [Shift] key, you can change the properties of the screens at a time.)

⇒ 2.2.4 ■ 3 [Screen] window

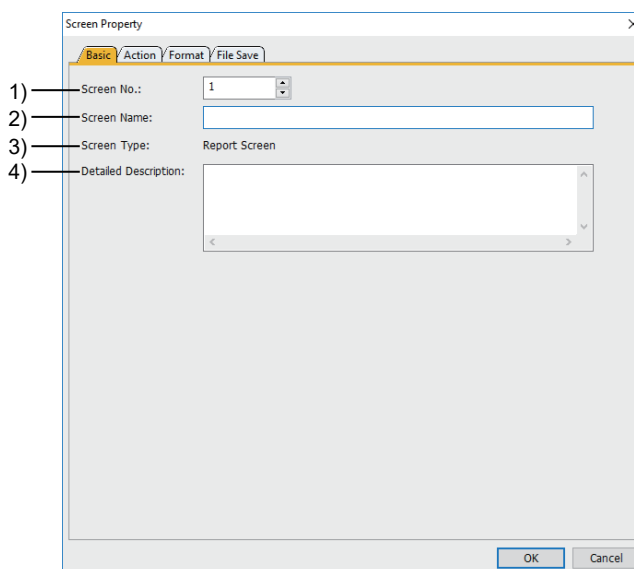

**Step 2** Select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog (for report screen).

- ⇒ ■ 1 [Basic] tab
- 2 [Action] tab
- 3 [Format] tab
- 4 [File Save] tab

**Step 3** Click the [OK] button after the required settings to reflect the setting.

When you select multiple screens in the [Screen] tree, the settings are reflected to all the selected screens.

### ■ 1 [Basic] tab

#### 1) [Screen No.]

Set a screen number.

The setting range is [1] to [32].

If you display the [Screen Property] dialog selecting multiple screens, this value cannot be changed.

2) **[Screen Name]**

Set the title of the screen.  
Up to 32 characters can be set.

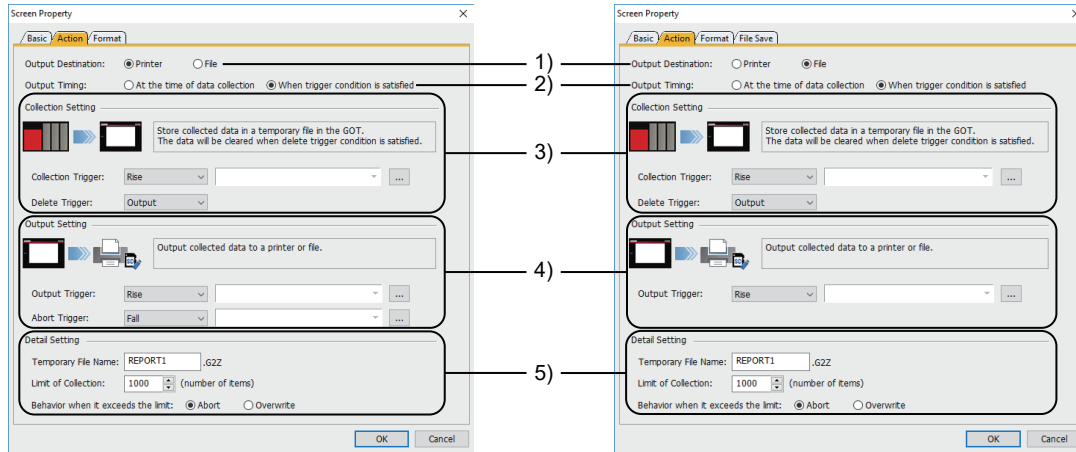

3) **[Screen Type]**

Displays the screen type.

4) **[Detailed Description]**

Set the explanation for the screen.  
Up to 512 characters can be set.  
A line feed is counted as two characters.

■ 2 **[Action] tab**

When [Output Destination] is set to [Printer]

When [Output Destination] is set to [File]

1) **[Output Destination]**

Set the destination to which a report is output.  
The following shows selectable items.

- [Printer]
- [File] (GT27, GT25, and GT23)

2) **[Output Timing]**

Set the timing for outputting data to a report.  
The following shows selectable items.

- [At the time of data collection]  
This item appears when [Printer Type] is set to [Serial] in the [Printer] dialog.  
→ 10.11.8 [Printer] dialog

Outputs the collected data to a report simultaneously with data collection.

- [When trigger condition is satisfied]

Stores the collected data into a temporary file, and collectively outputs the data to a report when the output trigger condition is satisfied.

3) **[Collection Setting]**

Item	Description
[Collection Trigger]	<p>Select a trigger to collect the data. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Rise] Collects the data at the rise of the bit device. Specify a bit device.</li> <li>• [Fall] Collects the data at the fall of the bit device. Specify a bit device.</li> <li>• [Sampling] This item is selectable when [Output Timing] is set to [When trigger condition is satisfied]. Collects the data at a constant period. The setting range is [3] to [3600] seconds.</li> </ul>

Item	Description
[Delete Trigger]	<p>This item appears when [Output Timing] is set to [When trigger condition is satisfied]. Select this item to use the trigger that clears the data stored in the data storage. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Rise] Deletes the data at the rise of the bit device. Specify a bit device.</li> <li>• [Fall] Deletes the data at the fall of the bit device. Specify a bit device.</li> <li>• [Power-on] Deletes the data at the GOT startup.</li> <li>• [Output] Deletes the data upon its output.</li> </ul>

#### 4) [Output Setting]

Item	Description
[Output Trigger]	<p>This item appears when [Output Timing] is set to [When trigger condition is satisfied]. Select a trigger to output the collected data. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Rise] Outputs the data on the rising edge of a bit device. Specify a bit device.</li> <li>• [Fall] Outputs the data on the falling edge of a bit device. Specify a bit device.</li> </ul>
[Abort Trigger]	<p>This item appears when [Output Destination] is set to [Printer]. Select a trigger to abort an output. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [None] Does not use the abort trigger.</li> <li>• [Rise] Aborts an output on the rising edge of a bit device. Specify a bit device.</li> <li>• [Fall] Aborts an output on the falling edge of a bit device. Specify a bit device.</li> </ul>

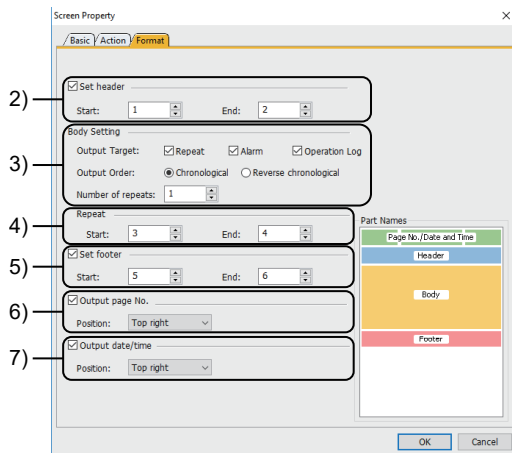

#### 5) [Detail Setting]

This item appears when [Output Timing] is set to [When trigger condition is satisfied].  
Set the details of a temporary file that stores the collected data until the data is output.

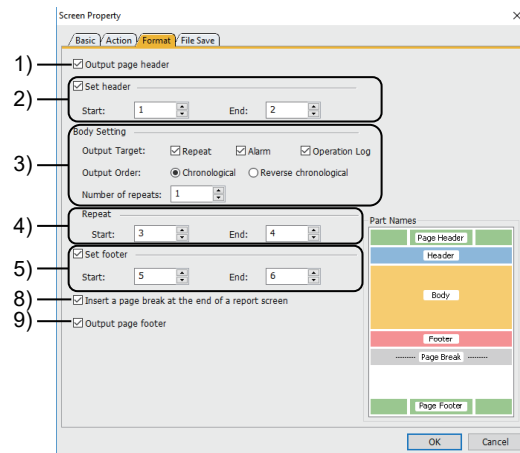

Item	Description
[Temporary File Name]	<p>Name a temporary file. A temporary file will be created per report screen. Up to eight one-byte alphabetic characters (uppercase) and numbers (0 to 9) can be entered. Specify a unique temporary file name.</p>
[Limit of Collection]	<p>Set the maximum number of collections of data to be stored into a temporary file. The setting range is [1] to [10000]. If you display the [Screen Property] dialog selecting multiple screens, this value cannot be changed.</p>
[Behavior when it exceeds the limit]	<p>Select how data will be collected and stored into a temporary file if the maximum number of collections of data in the file is exceeded. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Abort] Aborts the data collection. The data collection will resume after the data in the temporary file is deleted by the delete trigger.</li> <li>• [Overwrite] Continues the data collection, and overwrites the temporary file.</li> </ul>

### ■ 3 [Format] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When [Output Destination] is set to [Printer]

When [Output Destination] is set to [File]

#### 1) [Output page header]

Not available to GT21 and GT SoftGOT2000.

This item appears when [Specification] is set to [Direct] or [Device] in the [File Save] tab.

Outputs the page header.

For the page header, refer to the following.

→ 10.11 Outputting the Collected Data as a Report (Report Function)

#### 2) [Set header]

Set the header.

Make sure that the number of lines to be output does not exceed the set value of [Page Lines] in the [Report Setting] dialog.

→ 10.11 Outputting the Collected Data as a Report (Report Function)

The header lines are not settable as the footer or repeat lines.

- [Start]  
Specify the start line of the header.
- [End]  
Specify the end line of the header.

#### 3) [Body Setting]

Item	Description
[Output Target]	<p>Select an item to be output. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Repeat]</li> <li>• [Alarm]</li> <li>• [Operation Log] (GT27, GT25, GT23, and GT SoftGOT2000)</li> </ul> <p>For the settings required to output an alarm line, refer to the following. → 10.11.3 ■ 4 Settings to output alarm lines</p> <p>For the settings required to output an operation log line, refer to the following. → 10.11.3 ■ 5 Settings to output operation log lines</p>
[Output Order]	<p>Not available to GT21. This item appears when [Output Timing] is set to [When trigger condition is satisfied] in the [Action] tab.</p> <p>Select the order in which data is output from a temporary file. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Chronological]</li> <li>• [Reverse chronological]</li> </ul>

Item	Description
[Number of repeats]	<p>Not available to GT21.</p> <p>This item appears when [Output Timing] is set to [When trigger condition is satisfied] in the [Action] tab.</p> <p>Specify the number of times that the specified lines are repeated.</p> <p>The setting range is [0] to [9999].</p> <p>To output the data of all temporary files in the data storage, specify the following value: the set value of [Limit of Collection] in the [Action] tab - 1.</p> <p>If you display the [Screen Property] dialog selecting multiple screens, this value cannot be changed.</p>

#### 4) [Repeat]

Specify lines to be output repeatedly.

Make sure that the number of lines to be output does not exceed the set value of [Page Lines] in the [Report Setting] dialog.

The repeat lines are not settable as the header or footer lines.

Item	Description
[Start]	Specify the start line to be output repeatedly.
[End]	Specify the end line to be output repeatedly.

#### 5) [Set footer]

Set the footer.

Make sure that the number of lines to be output does not exceed the set value of [Page Lines] in the [Report Setting] dialog.

The footer lines are not settable as the header or repeat lines.

- [Start]  
Specify the start line of the footer.
- [End]  
Specify the end line of the footer.

#### 6) [Output page No.]

This item appears when [Output Destination] is set to [Printer] in the [Action] tab.

Outputs page numbers.

Select where the page number will be output with [Position].

The setting is fixed to [Top right].

#### 7) [Output date/time]

This item appears when [Output Destination] is set to [Printer] in the [Action] tab.

Outputs the date and time on which a report is printed.

Select where the date and time will be output with [Position].

The following shows selectable items.

- [Top left]
- [Top center]
- [Top right]

The year, month, day, hour, minute, and second will appear in that order.

Example) 18/07/01 16:53:41

#### 8) [Output page footer]

Not available to GT21 and GT SoftGOT2000.

This item appears when [Specification] is set to [Direct] or [Device] in the [File Save] tab.

Outputs the page footer.

For the page footer, refer to the following.

→ 10.11 Outputting the Collected Data as a Report (Report Function)

#### 9) [Insert a page break at the end of a report screen]

Not available to GT21 and GT SoftGOT2000.

This item appears when [Output Destination] is set to [File] and [Output Timing] is set to [When trigger condition is satisfied] in the [Action] tab.

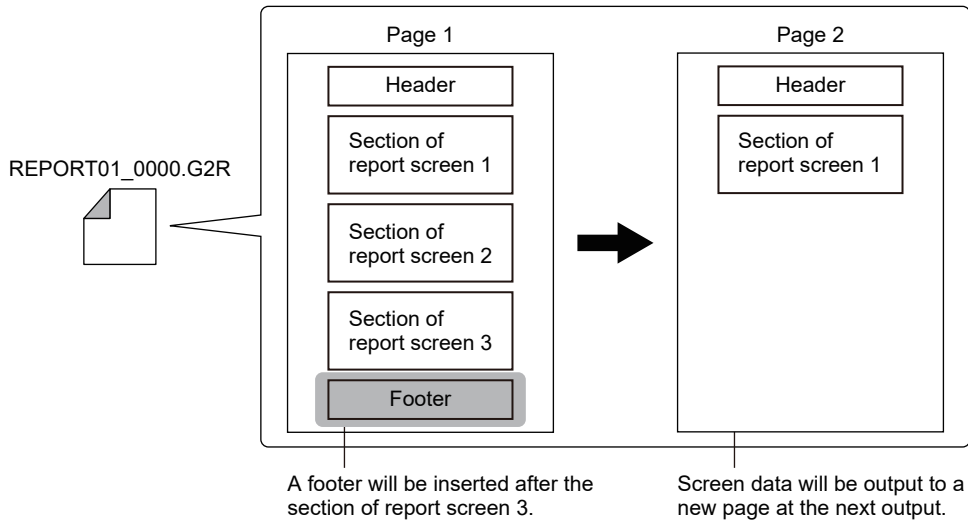

Inserts a page break after a report screen section.

If you output the data of multiple report screens to one report file, you can insert a page break after the section of your preferred report screen.

Example) Inserting a page break after the section of report screen 3 when outputting the data of report screens 1 to 3 repeatedly

The following shows how the data of report screens 1 to 3 are output.

Report screen	Settings
Report screen 1	<ul style="list-style-type: none"> <li>[Specification] in the [File Save] tab: [Direct]</li> <li>[File Name] in the [File Save] tab: REPORT01</li> <li>[Insert a page break at the end of a report screen]: Not selected</li> </ul>
Report screen 2	<ul style="list-style-type: none"> <li>[Specification] in the [File Save] tab: [Add to other report file]</li> <li>[Screen No.] in the [File Save] tab: 1</li> <li>[Insert a page break at the end of a report screen]: Not selected</li> </ul>
Report screen 3	<ul style="list-style-type: none"> <li>[Specification] in the [File Save] tab: [Add to other report file]</li> <li>[Screen No.] in the [File Save] tab: 1</li> <li>[Insert a page break at the end of a report screen]: Selected</li> </ul>

#### ■ 4 [File Save] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [File Save] tab appears when [Output Destination] is set to [File] in the [Action] tab.

When [Specification] is set to [Direct]

When [Specification] is set to [Device]

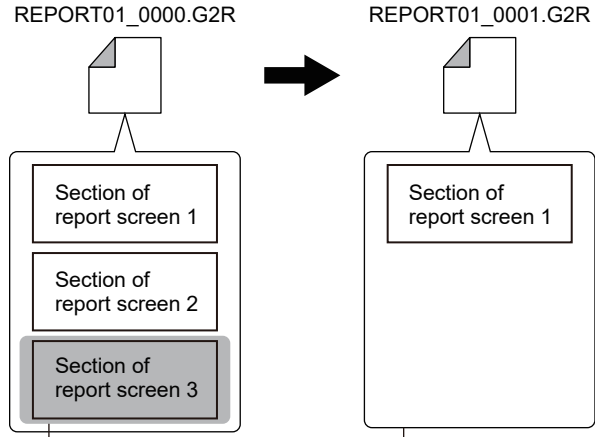

When [Specification] is set to [Add to other report file]

## 1) [Destination]

Item	Description
[Specification]	<p>Select how to specify a destination report file. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Direct] Saves the screen data to the user-specified file. The specified file will be created when the screen data is output to the file.</li> <li>• [Device] Saves the screen data to the file that is specified with the user-specified devices. The specified file will be created when the screen data is output to the file.</li> <li>• [Add to other report file] Adds the screen data to the report file created for another report screen.</li> </ul> <p>For information on how to specify a report file, refer to the following. →10.11.2 ■ 7 (1) Specifying a report file</p>
[Drive Name]	<p>This item appears when [Specification] is set to [Direct]. Select the drive to which a report file will be saved. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> <li>• [N:Network Drive]</li> <li>• [X:Current Drive]</li> </ul> <p>For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer</p>
[Folder Name]	<p>This item appears when [Specification] is set to [Direct]. Specify the folder to which a report file will be saved. For the restrictions on the folder name used in the GOT, refer to the following. →12.4 Restrictions for Folder Names and File Names used in GOT</p>
[File Name]	<p>This item appears when [Specification] is set to [Direct]. Set the name of a report file. For the restrictions of the file name used in the GOT, refer to the following. →12.4 Restrictions for Folder Names and File Names used in GOT Specify a unique report file name. For the details of a report file, refer to the following. →10.11 Outputting the Collected Data as a Report (Report Function)</p>
[Add date information to the file name]	<p>This item appears when [Specification] is set to [Direct]. Appends the creation date (year, month, and day) to the name of the report file.</p>
[Separate destinations for each GOT]	<p>Available to GT27 and GT25. This item appears when [Drive Name] is set to [N:Network Drive]. Automatically creates a folder for each GOT to save report files. Each folder is named as the IP address of each GOT. →5.3.15 ■ 4 Creating a folder for each GOT</p>
[Device]	<p>This item appears when [Specification] is set to [Device]. Specify the start device of consecutive devices that store the path to the report file. →6.1.1 How to set devices Unicode is supported. Data will be read from the specified devices starting from the lower-order bits. NULL (0x00) is supported as the termination character.</p>
[Maximum number of characters]	<p>This item appears when [Specification] is set to [Device]. Specify the maximum number of characters in the name of a report file. The setting range is [4] to [74].</p>
[Screen No.]	<p>This item appears when [Specification] is set to [Add to other report file]. Specify a screen number or screen name to add the screen data to an existing report file. The setting range of the screen number is [1] to [32].</p>

## 2) [File Management]

Item	Description
[Behavior when the capacity is insufficient]	<p>This item appears when [Specification] is set to [Direct] or [Device].            Select how screen data will be saved to a report file when the destination drive does not have enough free space.            The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Delete old files]</li> <li>• [Output no files]</li> </ul>
[Switch files after an output]	<p>This item appears when [Output Timing] is set to [When trigger condition is satisfied] in the [Action] tab.            Write-protects the destination report file once report screen data is output to the file.            The destination report file will be switched to a new one at the next output.            If you output the data of multiple report screens to one report file, you can set when the destination file switching will occur.            Example) Switching the destination report file after the data of report screen 3 is output when outputting the data of report screens 1 to 3 repeatedly            The following shows how the data of report screens 1 to 3 are output.</p> <ul style="list-style-type: none"> <li>• Report screen                [Specification] in the [File Save] tab: [Direct]                [File Name] in the [File Save] tab: REPORT01                [Switch files after an output]: Not selected</li> <li>• Report screen 2                [Specification] in the [File Save] tab: [Add to other report file]                [Screen No.] in the [File Save] tab: 1                [Switch files after an output]: Not selected</li> <li>• Report screen 3                [Specification] in [Destination]: [Add to other report file]                [Screen No.] in the [File Save] tab: 1                [Switch files after an output]: Selected</li> </ul> <div style="text-align: center;">  </div>

## 3) [Option]

This item appears when [Specification] is set to [Direct] or [Device].

Item	Description
[Control Device]	<p>Specify a device to control the output of a report file.            →6.1 Device Settings            A word device is settable.            For the function of each bit of the device, refer to the following.            →(1) [Control Device]</p>
[Notification Device]	<p>Specify a device to notify the output status of a report file.            →6.1 Device Settings            A word device is settable.            For the function of each bit of the device, refer to the following.            →(2) [Notification Device]</p>

**(1) [Control Device]**

The following shows the function of each bit of the set device.

Bit number	Function
b0	When this bit is turned on, b0 of the notification device turns off and the destination report file is write-protected. The destination report file will be switched to a new one at the next output.
b1	When this bit is turned on while GS524.b0 is on, a page break is inserted. If the footer is set in the previously output report screen, the footer will be output and then a page break will be inserted. This function is valid for the report screens where the output destination is set to a file. For GS524, refer to the following. → 12.1.3 GOT special register (GS)

**(2) [Notification Device]**

The following shows the function of each bit of the set device.

Bit number	Function
b0	Turns on when a report file is created. Turns off when the destination report file becomes write-protected under the following conditions. <ul style="list-style-type: none"> <li>• B0 of the control device is turned on.</li> <li>• The data of a report screen is output when [Switch files after an output] is enabled for the screen.</li> </ul>
b1	Turns on when an output is aborted due to data storage anomalies. Turns off after the data storage recovers from the anomalies and the output is complete. When [Output Timing] is set to [At the time of data collection], up to 200 files of alarm and operation log data collected during the output interruption will be held. Any files over the 200 file limit will be discarded. The held data will be output upon resumption of output.
b2	Turns on when the output is aborted because the report file name is unspecified, duplicate, or invalid. Turns off after the report file name is specified correctly and the output is complete. When [Output Timing] is set to [At the time of data collection], up to 200 files of alarm and operation log data collected during the output interruption will be held. Any files over the 200 file limit will be discarded. The held data will be output upon resumption of output.
b3	Turns on when any files of alarm and operation log data over the 200 file limit are discarded due to the causes mentioned above. Turns off after the causes are eliminated and the output is complete.

## 2.8 Managing the Created Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The created screen is displayed on the [Screen] window and [Screen Image List] window. You can copy or delete the screen on each window.

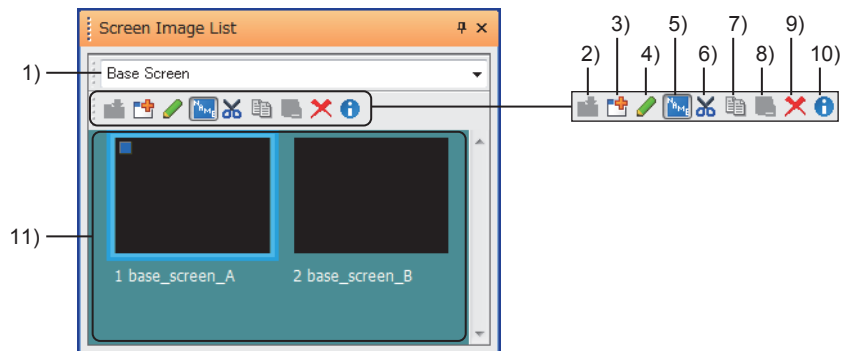

- [Screen] window  
Displays the screen view tree with the screen number and title of the created screens. Whether the script and trigger action is set for each screen can be displayed.  
→2.2.4 ■ 3 [Screen] window
- [Screen Image List] window  
The mobile screen is available to GT27 and GT25.  
Displays the icons of created base screens, window screens, and mobile screens.  
→2.8.1 [Screen Image List] window

### 2.8.1 [Screen Image List] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Either of the following operations displays the [Screen Image List] window.

- Select [Display] → [Docking Window] → [Screen Image List] from the menu.
- Select [Screen] → [Screen Image List] from the menu.

#### 1) Screen types

Select the type of the screen to be displayed in the screen image list. The following shows the items to be selected.

- [Base Screen]  
Displays base screens.
- [Window Screen]  
Displays window screens.
- [Mobile Screen] (GT27 and GT25)  
Displays the icons of mobile screens.
- [An image of set overlay screen(Base Screen)]  
Displays the icons of base screens for the set overlay screen function.
- [An image of set overlay screen(Window Screen)]  
Displays the icons of window screens for the set overlay screen function.
- [An image of set overlay screen(Mobile Screen)] (GT27 and GT25)  
Displays the icons of mobile screens for the set overlay screen function.

#### 2) [Register] button

Creates a new screen utilizing the figure or object selected on the screen editor.

#### 3) [New] button

Creates a new screen of the type selected in the screen types.

#### 4) [Edit] button

Opens the screen selected in the screen image list.

#### 5) [Name] button

Switches between displaying and hiding screen numbers and titles in the screen image list.

6) **[Cut] button**

Cuts the screen selected in the screen image list.

7) **[Copy] button**

Copies the screen selected in the screen image list.

8) **[Paste] button**

Pastes the screen cut or copied in the screen image list.

The screen appears after the paste.

9) **[Delete] button**

Deletes the screen selected in the screen image list.

10) **[Property] button**

Displays the [Screen Property] dialog of the screen selected in the screen image list.

11) **Screen image list**

Lists the images of the created screens.

When the display or edit of a screen is disabled by the project security, the screen image is displayed as shown below.

## 2.9 Viewing the Image of the Created Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

⇒ 2.9.1 Displaying a preview

2.9.2 Displaying the preview of a window screen on the screen editor of a base screen

### 2.9.1 Displaying a preview

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select the screen editor of the base screen or window screen to display the preview.

⇒ 2.6.1 Selecting a screen editor to be edited

**Step 2** Select [Display] → [Preview] from the menu to display the [Screen preview] window.

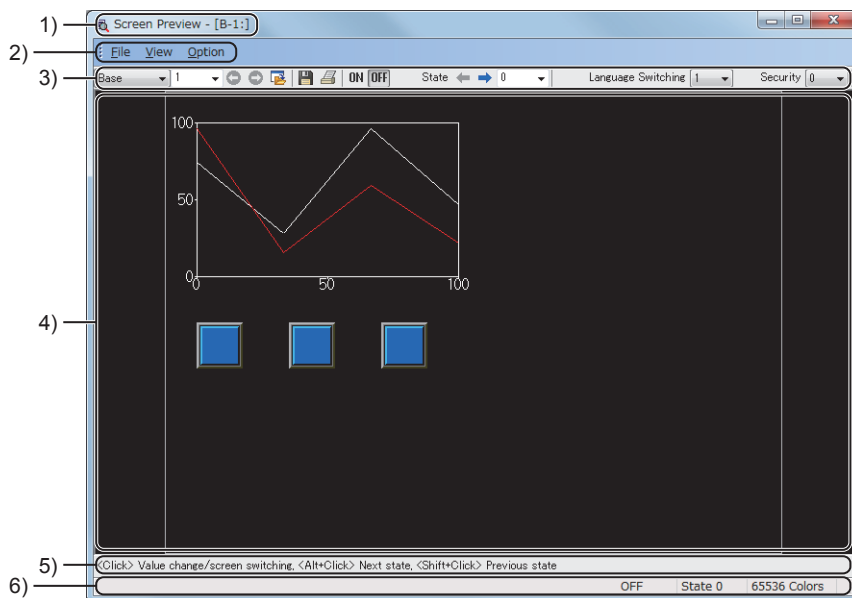

Edit the screen editor to apply the edit contents to the [Screen Preview] window.

⇒ ■ 1 [Screen preview] window

■ 2 Precautions

#### ■ 1 [Screen preview] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) Title bar

Screen number and title of the previewed screen

#### 2) Menu bar

Operate the [Screen Preview] window from the pull-down menu.

⇒ (1) Menu bar

#### 3) Toolbar

Use the buttons and other items to operate the [Screen Preview] window.

⇒ (2) Toolbar

#### 4) Display section

Displays the preview of the screen editor.

Each time you click the superimposed part of objects while holding down the [Ctrl] key, the selected object is shifted in order from the topmost object.

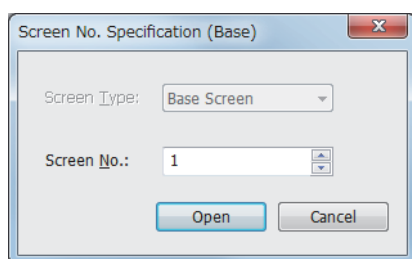

Right-click the display section to display the menu.

The available items are the same as those in [Display] in the menu.

⇒ 2.9.1 ■ 1 (1) (b) [Display]

Click a Go To Screen switch for which an option other than [Fixed] is selected in [Next Station] to display the [Screen No.Specification] dialog.

In this dialog, you can set the destination screen number.

- **[Screen Type]**  
Displays the screen type.
- **[Screen No.]**  
Set the destination screen number.  
The setting range is [0] to [32767].

Click the numerical display, numerical input, text display, or text input to display the [Preview Value] dialog. In this dialog, you can change the value to be displayed.

- **[Preview Value]**  
Set the value to be displayed.

### 5) Description bar

Displays the operation description of the [Screen Preview] window.

### 6) Status bar

The following are displayed according to the position of the mouse cursor and setting of the preview.

- Type and condition of an object which the mouse cursor is pointed to
- Condition in preview
- Number of colors being previewed

### (1) Menu bar

#### (a) [File]

Menu	Description
[Save]	Saves the image of the display section in the BMP format. Shortcut key: [Ctrl] + [Shift] + [S]
[Print]	Prints the image of the display section.
[Printer Setting]	Sets the printer for printing.
[Output in reverse]	Switches between reversing the color and leaving the color unreversed when an image is output to a printer or file.
[Fill Black at Text BG]	Outputs an image with the text in white and background in black to a printer or file.
[Dithering]	Outputs an image with the intermediated color added to the two-tone monochrome to a printer or file.
[Copy Screen Image to Clip Board]	Captures the image of the display section.
[Close]	Closes the [Screen Preview] window.

#### (b) [Display]

Menu	Description
[Menu and Title]	Switches between displaying and hiding the menu bar and title bar.
[Toolbar]	Switches between displaying and hiding the toolbar.
[Status bar]	Switches between displaying and hiding the status bar.
[Description Bar]	Switches between displaying and hiding the description bar.
[Next Screen]	Switches to a screen whose screen number is one greater than that of the currently displayed screen.
[Previous Screen]	Switches to a screen whose screen number is one smaller than that of the currently displayed screen.
[Use Preview No.]	Switches between enabling and disabling the preview number as the column No. of the comment group.

Menu	Description
[ON Image]	Switches between on and off of the object to be displayed.
[Next State]	Switches the states of objects to be displayed on screen editors in ascending order.
[Previous State]	Switches the states of objects to be displayed on screen editors in descending order.
[Overlap Window1]	Switches between displaying and hiding the overlap window 1.
[Overlap Window2]	Switches between displaying and hiding the overlap window 2.
[Overlap Window3]	Switches between displaying and hiding the overlap window 3.
[Overlap Window4]	Switches between displaying and hiding the overlap window 4.
[Overlap Window5]	Switches between displaying and hiding the overlap window 5.
[Superimpose 1]	Switches between displaying and hiding the superimpose window 1.
[Superimpose 2]	Switches between displaying and hiding the superimpose window 2.
[Key Window]	Switches between displaying and hiding the key window.
[Dialog Window]	Switches between displaying and hiding the dialog window.
[PC Remote Operation]	Switches between displaying and hiding the remote screen.
[65536 Colors]	Previews a screen in 65536 colors.
[32(Grayscale)]	Previews a screen in 32-level grayscale.
[Show the Screen Only]	Deletes the menu bar and other bars to display only the image of the display section. Double-clicking the display section also switches the display. Shortcut key: [Shift] + [F4]

(c) [Option]

Menu	Description
[Open the editing screen in conjunction with Screen Preview]	Switches between displaying and hiding the screen editor of the screen displayed on the [Screen Preview] window.
[Display the frame around the selected item]	Switches between displaying and hiding the frame of the target which mouse cursor is pointed to.

(2) Toolbar

- 1) **[Screen Type]**  
Select the type of the screen to be displayed.
- 2) **[Screen No.]**  
Select the screen number of the screen to be displayed.
- 3) **[Previous Screen]**  
Switches to a screen whose screen number is one smaller than that of the currently displayed screen.
- 4) **[Next Screen]**  
Switches to a screen whose screen number is one greater than that of the currently displayed screen.
- 5) **[Open the editing screen]**  
Displays the screen editor of the screen displayed on the [Screen Preview] window.
- 6) **[Save]**  
Saves the image of the display section in the BMP format.
- 7) **[Print]**  
Prints the image of the display section.
- 8) **[ON], [OFF]**  
Switches between on and off of the object to be displayed.
- 9) **[Previous State]**  
Switches the states of objects to be displayed on screen editors in descending order.
- 10) **[Next State]**  
Switches the states of objects to be displayed on screen editors in ascending order.
- 11) **[State No.]**

Switches the states of objects to be displayed on screen editors by selecting the state No.

## 12) [Language Switching]

Select the column No. for a comment group to be displayed.

## 13) [Security]

Select the security level.

Only the objects which can be displayed in the selected security level are displayed.

## 14) [Color Setting]

Only available to GT2105-Q.

Select the number of colors for previewing a screen.

## ■ 2 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Object which cannot be displayed on the preview window

The parts movement is not displayed on the [Screen Preview] window.

## 2.9.2 Displaying the preview of a window screen on the screen editor of a base screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When arranging a window position in the screen editor of the base screen, you can display the preview of the window screen.

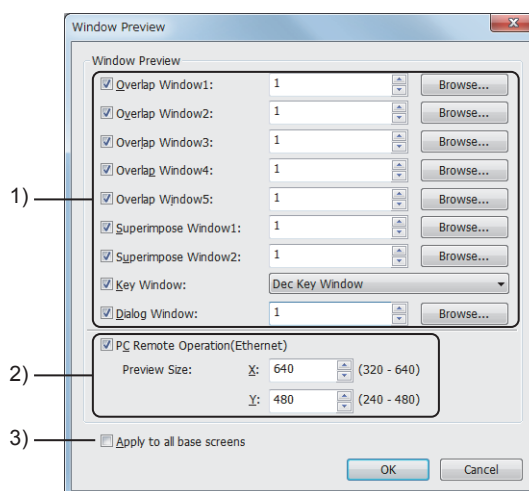

**Step 1** Select [Display] → [Window Preview] → [Setting] from the menu to display the [Window Preview] dialog.

→ ■ 1 [Window Preview] dialog

**Step 2** Set the window screen to be displayed in the preview of each screen. Then click the [OK] button.

### ■ 1 [Window Preview] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) Window preview

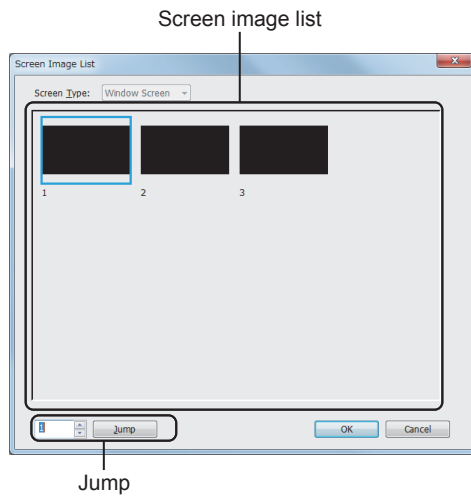

Set the window screens, such as an overlap window, to be displayed on the screen editor.

Set the screen number of window screens to be displayed.

The setting range is [0] to [32767].

Click the [Browse] button to display the [Screen Image List] dialog.

You can check the image on the screen when selecting a window screen.

- **[Screen Type]**  
Displays the screen type.
- **Screen image list**  
Displays screen images.
- **Jump**  
Specify a screen number and click the [Jump] button to select the screen in the screen image list.

Item	Description
[Overlap Window1]	Displays the preview of overlap window 1.
[Overlap Window2]	Displays the preview of overlap window 2.
[Overlap Window3]	Displays the preview of overlap window 3. GT23 and GT21 does not support this item.
[Overlap Window4]	Displays the preview of overlap window 4. GT23 and GT21 does not support this item.
[Overlap Window5]	Displays the preview of overlap window 5. GT23 and GT21 does not support this item.
[Superimpose Window1]	Displays the preview of superimpose window 1.
[Superimpose Window2]	Displays the preview of superimpose window 2.
[Key Window]	Displays the preview of the key window. Select a standard key window to be displayed. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Dec Key Window]</li> <li>• [Hex Key Window]</li> <li>• [Text Key Window]</li> </ul>
[Dialog Window]	Displays the preview of the dialog window.

## 2) Remote personal computer operation (Ethernet)

Displays the preview of the remote screen of the remote personal computer operation function (Ethernet).  
GT23, GT21 and GT SoftGOT2000 do not support this item.

Item	Description
[Preview Size]	Set the size of the window.

## 3) [Apply to All Base Screens]

Applies the settings in the [Window Preview] dialog to all the base screens.

## 2.10 Copying and Deleting Screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 2.10.1 Copying screens
- 2.10.2 Deleting screens

### 2.10.1 Copying screens

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Screens can be copied from the [Screen] window, [Screen Image List] window, and menu. For the operation of the [Screen] window and [Screen Image List] window, refer to the following.

- ⇒ 2.2.4 ■ 3 [Screen] window
- 2.8.1 [Screen Image List] window

The following shows how to copy screens from the menu.

- Step 1** Select [Screen] → [Copy] from the menu to display the [Copy Screen] dialog.
- ⇒ ■ 1 [Copy Screen] dialog
- Step 2** Select the screen to be copied in the screen list and set [Destination No.] and [Number of Copy].
- Step 3** Click the [Copy] button to create a screen.

#### Point

##### (1) Setting of the screen trigger action and screen script

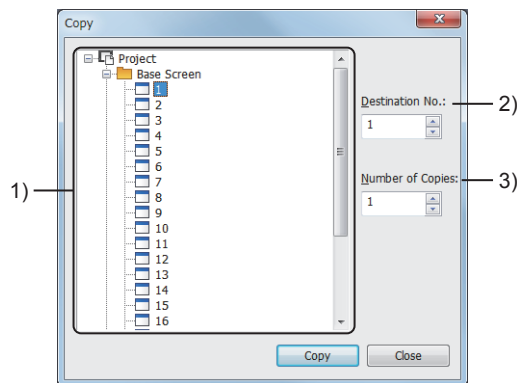

When the trigger action or script is set to the screen to be copied, the setting of the trigger action or script is also copied.

##### (2) Project for which project security is set

The screen for which displaying is prohibited cannot be copied.

#### ■ 1 [Copy Screen] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### 1) List of screens

List of the created screens

Select a screen to be copied.

Use the [Ctrl] key or [Shift] key to select up to 25 screens of the same type.

##### 2) [Destination No.]

Set the screen number of the screen to be created.

The setting range depends on the screen type.

- Base screen, window screen, or mobile screen: [0] to [32767]
- Report screen: [1] to [32]

##### 3) [Number of Copy]

Set the number of copies.

The setting range depends on the screen type.

- Base screen, window screen, or mobile screen: [1] to [100]

- Report screen: [1] to [32]

The screen numbers after the second copied screen are set sequentially from the number set in [Destination No.]. If you copy the screens exceeding the number of the maximum number of the screen setting or range of the screen number, the screens cannot be copied.

## 2.10.2 Deleting screens

Screens can be deleted from the [Screen] window, [Screen Image List] window, and the menu. For the operation of the [Screen] window and [Screen Image List] window, refer to the following.

⇒ 2.2.4 ■ 3 [Screen] window

2.8.1 [Screen Image List] window

The following shows how to delete screens from the menu.

**Step 1** Select [Screen] → [Delete] from the menu to display the [Delete Screen] dialog.

⇒ ■ 1 [Delete Screen] dialog

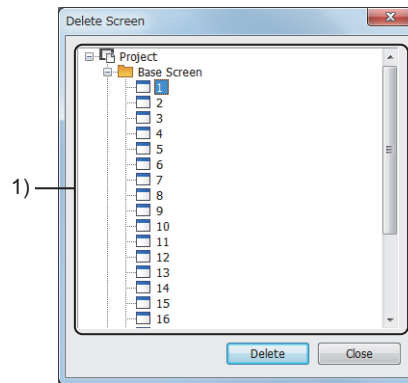

**Step 2** Select the screen to be deleted in the screen list and click the [Delete] button to delete the screen.

### Point

#### Project for which project security is set

The screen for which editing is prohibited cannot be deleted.

#### ■ 1 [Delete Screen] dialog

##### 1) List of screens

List of the created screens

Select a screen to be deleted.

Use [Ctrl] key or [Shift] key to select multiple screens of the same type.

## 2.11 Performing a Data Check

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Checking that no error exists in the project

Select [Tool] → [Data Check] → [Check] from the menu to display the check result in the [Data Check List] window.

→2.11.1 [Data Check List] window

To narrow the check items, change the setting in the [Check Item Setting] dialog.

To display the [Check Item Setting] dialog, perform one of the following operations.

- Select [Tool] → [Data Check] → [Item Setting] from the menu.
- Click the [Option] button in [Data Check List] to select [Check Item Setting] from the pull-down menu.

→2.11.2 [Check Item Setting] dialog

### ■2 Exporting the check result

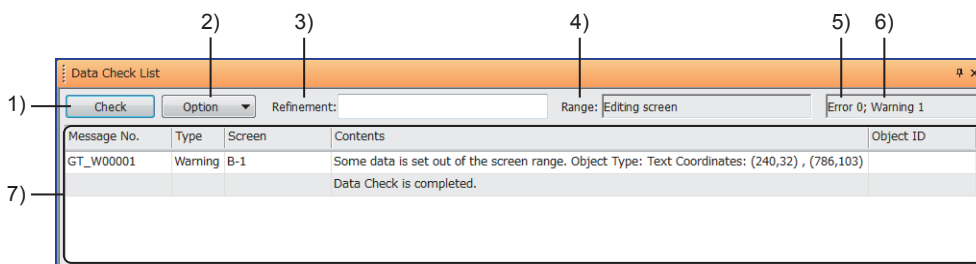

You can export the check result in a CSV format or Unicode text format.

**Step 1** Click the [Option] button in the [Data Check List] window and select [Export] from the pull-down menu to display the [Save As] dialog.

**Step 2** Set [File name] and [Files of type] and click the [OK] button to export the check result.

→2.11.3 Details of the exported file

## 2.11.1 [Data Check List] window

### 1) [Check] button

Checks the items selected in the [Check Item Setting] dialog.

### 2) [Option] button

Operates the [Data Check List] window from the pull-down menu.

Item	Description
[Check Item Setting]	Displays the [Check Item Setting] dialog. In this dialog, you can set the check target and check item. →2.11.2 [Check Item Setting] dialog
[Export]	Exports the check result as a CSV file or Unicode text file. Set [File name] and [Files of type] in the displayed dialog and click the [Save] button. →2.11.3 Details of the exported file

### 3) [Refinement]

Narrow the displayed contents of the check result by keywords.

Up to 128 characters can be set.

To narrow the contents using multiple keywords, separate each keyword with one-byte spaces.

### 4) [Range]

Range selected in [Object No.] of the [Check Item] dialog

### 5) Number of errors

Number of settings which do not perform operation

### 6) Number of warnings

Number of settings which cause unintentional operation

### 7) List of check results

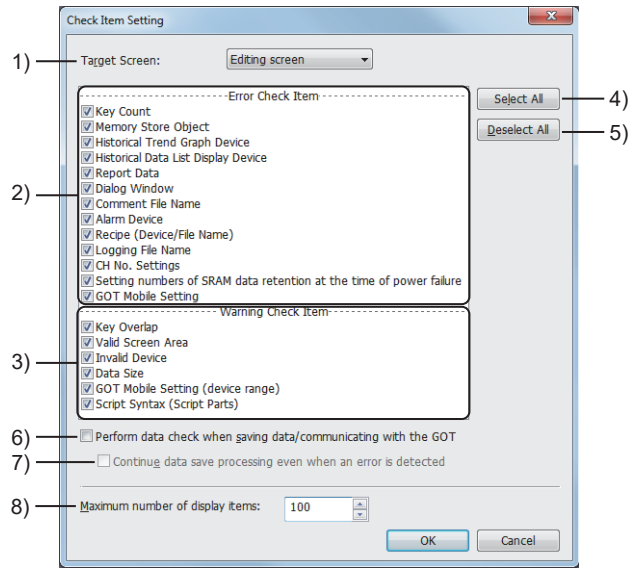

Displays the check result.

Double-click a result to jump to the position which causes an error or warning.

Item	Description
[Message No.]	Message No. of an error or warning
[Type]	Type of a detected event <ul style="list-style-type: none"> <li>• [Error]: Setting which does not perform operation</li> <li>• [Warning]: Setting which causes unintentional operation</li> </ul>
[Screen]	Screen with the cause of an error or warning <ul style="list-style-type: none"> <li>• [B-n]: Base screen ("n" indicates the screen number.)</li> <li>• [W-n]: Window screen ("n" indicates the screen number.)</li> <li>• [R-n]: Report screen ("n" indicates the screen number.)</li> <li>• [M-n]: Mobile screen ("n" indicates the screen number.)</li> </ul>
[Contents]	Message which shows the description of an error or warning
[Object ID]	Object ID of the cause of an error or warning

## 2.11.2 [Check Item Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Object No.]

Select the check target.

The following shows the items to be selected.

- [All screens]  
Select this item to check all the screens in the project and common settings.
- [Open Screen]  
Select this item to check all the opened screens and common settings.
- [Editing screen]  
Select this item to check the screen whose screen editor is displayed at the topmost position and common settings.

### 2) [Error Check Item]

Items for checking whether any setting which does not perform operation exists

Select the items to check.

Item	Description
[Key Count]	Checks whether 1024 or more touch switches are arranged in one screen.
[Memory Store Object]	Checks whether 16 or more scatter graphs (when [Store Memory] is set) are arranged in one screen.
[Historical Trend Graph Device]	Checks whether a mismatch exists in the logging setting and device setting in the historical trend graph.
[Historical Data List Display Device]	Checks whether a mismatch exists in the following settings. <ul style="list-style-type: none"> <li>• Logging setting and device setting in the historical data list display</li> <li>• Device format in the historical data list display and device display</li> </ul>
[Report Data]	Checks the following settings of the [Screen Property] dialog (report screen). <p>Settings in the [Action] tab</p> <ul style="list-style-type: none"> <li>• Checks whether the setting of [Temporary File Name] in [Detail Setting] is duplicated with other report screens.</li> </ul> <p>Settings in the [Format] tab</p> <ul style="list-style-type: none"> <li>• Checks whether the total number of header, footer, and repeat lines exceeds the set value of [Page Lines] in the [Report Setting] dialog.</li> </ul> <p>Settings in the [File Save] tab</p> <ul style="list-style-type: none"> <li>• Checks whether the save destination setting is duplicated with other report screens.</li> <li>• Checks whether the specified report screen exists and [Output Destination] is set to [Printer] when [Specification] is set to [Add to other report file].</li> </ul> <p>Checks the following settings in the [Report Setting] dialog.</p> <ul style="list-style-type: none"> <li>• Checks whether the total number of characters specified for [Text] and [Device] in the [Edit Page Header/Page Footer] dialog exceeds the set value of [Page Columns] in the [Report Setting] dialog.</li> </ul>

Item	Description
[Dialog Window]	Checks the following for the setting in the [Screen Property] dialog of the base screen and window screen or [Dialog Window] in the [Environmental Setting] window. <ul style="list-style-type: none"> <li>• Checks whether the screen number of a window screen which does not exist is set to a dialog window.</li> <li>• Checks whether the screen size of the window screen is 320 × 240 or more.</li> </ul>
[Comment File Name]	Not available to GT23 and GT21. Checks the comment group settings for duplicate comment text file paths. For comment text files, refer to the following. →5.8.2 ■ 5 Importing or exporting comments
[Alarm Device]	Checks that the alarm device and alarm range are set correctly in the user alarm observation.
[Recipe (Device/Alarm name)]	Checks the following for the setting in the [Recipe Common Setting] dialog and [Recipe] dialog. <ul style="list-style-type: none"> <li>• Checks that the common control device and external notification device are not duplicated with the screen switching device or station No. switching device.</li> <li>• Checks that the recipe files (file path) in each recipe setting are not duplicated.</li> </ul>
[Logging File Name]	Checks that the settings(file path) of the destination to save files in each logging setting are not duplicated.
[CH No. Settings]	Checks that any channel which is not used is not set to the following settings. <ul style="list-style-type: none"> <li>• [CH No. for Station No. Switching] in [Station No. Switching] in the [Controller Setting] window</li> <li>• [Adjust CH No.] in the [Adjust] tab in [Time Setting] in the [GOT Setup] window</li> <li>• [Broadcast CH No.] in the [Broadcast] tab in [Time Setting] in the [GOT Setup] window</li> <li>• [Controller CH No.] in [Transparent Mode Setting] in the [GOT Setup] window</li> </ul>
[Number of the retains data in the SRAM user area under power failure]	Not available to GT21. Checks the following. <ul style="list-style-type: none"> <li>• The SRAM power-failure backup function is enabled for a maximum of 10 alarm observation settings.</li> <li>• The SRAM power-failure backup function is enabled for a maximum of 20 logging settings.</li> </ul>
[GOT Mobile Setting]	Not available to GT23, GT21, and GT SoftGOT2000. Checks the following. <ul style="list-style-type: none"> <li>• Checks that GOT Mobile devices (VGB and VGD) are only specified in the mobile screens and in the [GOT Mobile Setting] window.</li> <li>• Checks that specified GOT Mobile devices (VGB and VGD) are within the setting ranges.</li> <li>• Checks that [Use GOT Mobile function] is selected when a mobile screen is used.</li> </ul>

### 3) [Alarm Check Item]

Items for checking that any setting which causes unintentional operation does not exist.

Select the items to check.

Item	Description
[Key Overlap]	Checks whether the following objects are overlapped. <ul style="list-style-type: none"> <li>• Touch switch</li> <li>• Numerical input</li> <li>• Text input</li> <li>• Historical data list (when [Single Touch Operation] is set)</li> <li>• Trend graph (when [Single Touch Operation] is set)</li> <li>• Historical trend graph (when [Single Touch Operation] is set)</li> <li>• Alarm display</li> <li>• Simple alarm display (when [Operation] is selected in [Touch Mode])</li> <li>• Slider</li> <li>• Recipe Display (Record List)</li> </ul> Objects in the temporary area are not checked. The overlap of an object on a screen opened using the set overlay screen and an object on the basic screen is not checked.
[Valid Screen Area]	Checks that objects are not arranged out of the screen display area.
[Invalid Device]	Checks that any device for which [??] is set does not exist.
[Data Size]	Checks the total size of the project size and SRAM user area to be used.
[GOT Mobile Setting (device range)]	Not available to GT23, GT21, and GT SoftGOT2000. Checks that the GOT internal devices (GB and GD) assigned to GOT Mobile devices (VGB and VGD) are not specified for other settings.
[Script Syntax (Script Parts)]	Checks the script parts for possible errors in their scripts.

### 4) [Select All] button

Checks all the items in the check item.

5) **[Deselect] button**

Unchecks all the items in the check item.

6) **[Data Checking at Save or Communication]**

Performs a data check when a project is saved and package data is transferred.

7) **[Continue Save Processing even with Error]**

Saves a project even if an error is found when the project is saved.

8) **[Maximum number of display items]**

Set the maximum number of errors and warnings displayed in the [Data Check List] window.

The setting range is [1] to [1000].

### 2.11.3 Details of the exported file

The following shows the details of the exported file of a check result.

	A	B	C	D	E
1)	1 Data Check List				
	2 Target Screen:Editing screen				
	3				
	4 Message No.	Type	Screen	Contents	Object ID
	5 GT_E00002	Error	B-1	The setting number of touch keys exceeds 1000.	Multiple
	6 GT_W00001	Warning	B-1	Some data is set out of the screen range. Object Type: Rectangle Coordinates: (580,91) , (650,161)	
	7			Data Check is completed.	
	8				
	2)	3)	4)	5)	6)

1) **[Target Screen]**

Target screens which are selected in [Target screen] of the [Check Item Setting] dialog

2) **[Message No.]**

Message No. of a detected error or warning

3) **[Type]**

Type of a detected event

- [Error]: Setting which does not perform operation
- [Warning]: Setting which causes unintentional operation

4) **[Screen]**

Screen with the cause of a detected error or warning

- [B-n]: Base screen ("n" indicates the screen number.)
- [W-n]: Window screen ("n" indicates the screen number.)
- [R-n]: Report screen ("n" indicates the screen number.)
- [M-n]: Mobile screen ("n" indicates the screen number.)

5) **[Contents]**

Message which shows the description of a detected error or warning

6) **[Object ID]**

Object ID of the cause of a detected error or warning

## 2.12 Protecting a Project with a Security Key

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 2.12.1 Specifications of the security key authentication
- 2.12.2 How to use the security key authentication
- 2.12.3 Precautions
- 2.12.4 [Security Key Setting] dialog
- 2.12.5 [Security Key Management] dialog

The security key authentication restricts project operations by using a security key.

When assigning a security key to GT Designer3, a project, and the GOT, you can operate the project only by using the matched security key.

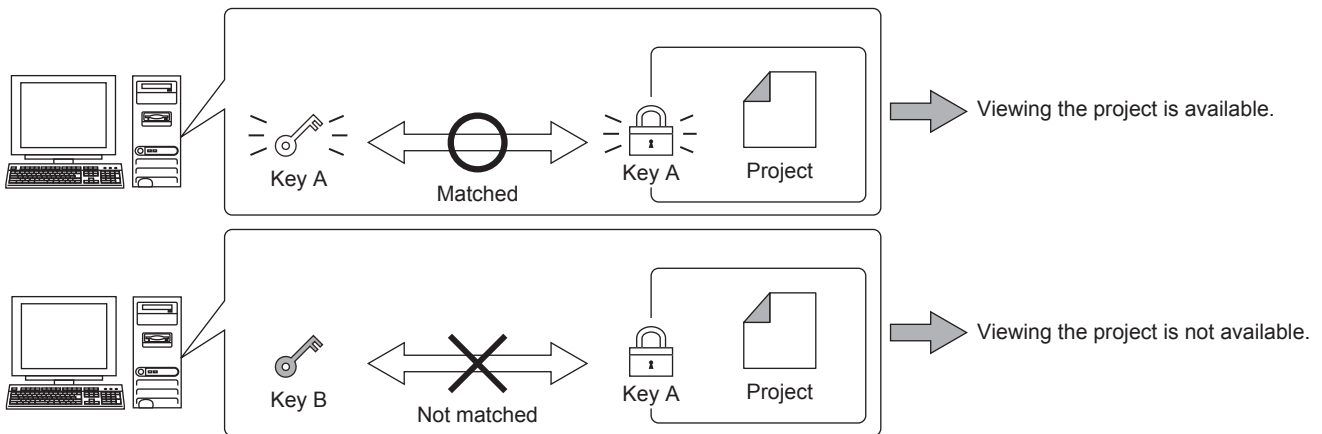

Security key assignment target	Operation
GT Designer3	Viewing a project to which the security key is assigned is available.
Project	The following operations are restricted. <ul style="list-style-type: none"> <li>• Viewing the project on GT Designer3</li> <li>• Executing the project on the GOT</li> </ul>
GOT	Executing a project to which the security key is assigned is available.

### ■ 1 Operations restricted with a security key

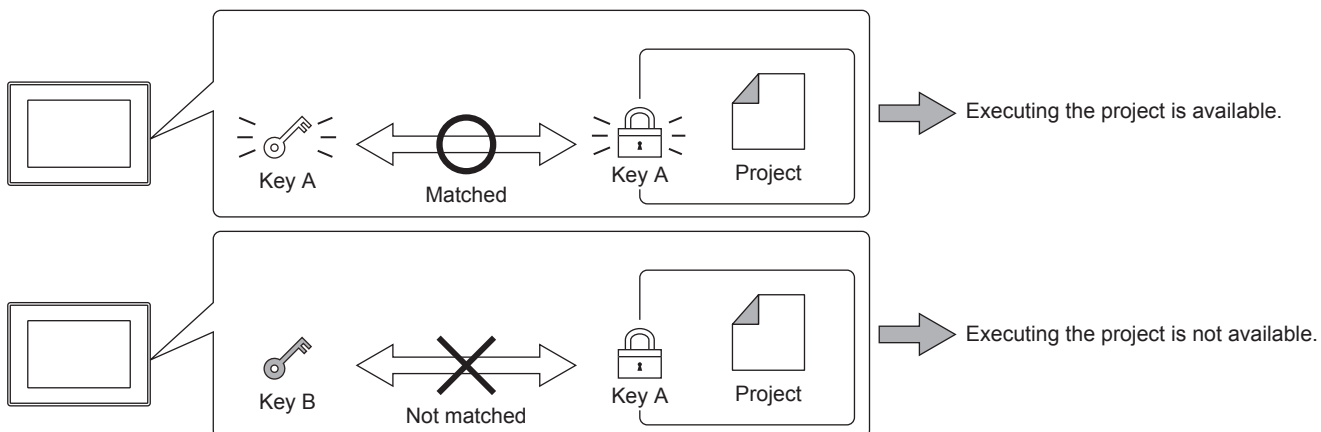

#### (1) Viewing a project on GT Designer3

A project protected with a security key can only be viewed on GT Designer3 that has the matched security key.

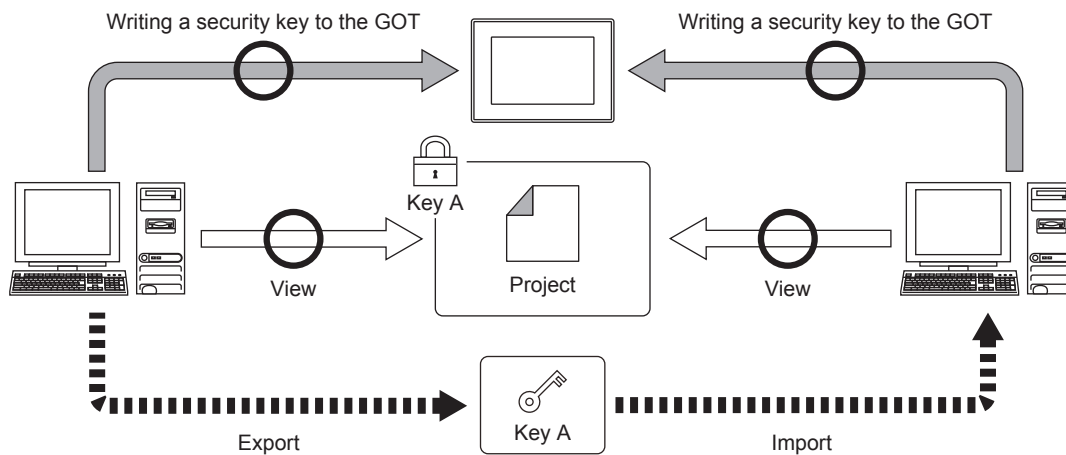

## (2) Executing a project on the GOT

A project protected with a security key can only be executed on the GOT that has the matched security key.

## ■2 Copying a security key

A security key can be assigned to multiple personal computers by exporting and importing the key. Operation authority restrictions and the expiration date are settable for the security key to be exported.

## 2.12.1 Specifications of the security key authentication

- ⇒ ■ 1 Operations restricted by the security key authentication
  - 2 Security key specifications
  - 3 Project-related specifications
  - 4 GOT-related specifications

### ■ 1 Operations restricted by the security key authentication

The security key authentication restricts the following operations.

- Viewing a project on GT Designer3
- Executing a project on the GOT

To restrict operations other than the above, use the following security functions.  
Using multiple security functions in combination further strengthens the security.

#### (1) Function restricting project operations

Function	Description
Project security	Restricts unregistered users to view or edit a project by registering users with the project. Also restricts operations by screen according to the access level of each user. ⇒2.13 Protecting a Project by Registering Users

#### (2) Function restricting communication with the GOT

Function	Description
Data transfer security	Restricts data transfer between the personal computer (GT Designer3) and the GOT with a password. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
IP filter	Restricts access to the GOT by Ethernet by registering IP addresses with the filtering list. ⇒5.4.3 ■ 4 [IP Filter Setting]

#### (3) Function restricting the GOT operations

Function	Description
Screen security	Restricts the display of screens and objects on the GOT by registering users with the GOT. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
Functional operation security	Restricts the display of the utility, and operations of some monitor functions. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### ■ 2 Security key specifications

#### (1) Number of registrable security keys

Security keys registered on GT Designer3 are shared among all of the MELSOFT applications, such as GX Works3.  
Up to 128 security keys are registrable by user account on the personal computer.

#### (2) Name of a security key

You cannot create a security key with the same name as an existing security key.

Even if you delete the existing security key and then create a new one with the same name, the new one is recognized as a different security key.

#### (3) Deletion of a security key

Even if GT Designer3 is uninstalled, security keys still remain in the personal computer.

To delete security keys, use GT Designer3.

- ⇒2.12.2 ■ 1 (1) Creating a security key

#### (4) Authority of a security key

The operation authority and the expiration date are settable for a security key to be exported.

Security key	Operation authority	Expiration date
New security key	Not restricted	Not set

Security key	Operation authority	Expiration date
Security key to be exported	Whether to allow the following operations after the security key is imported is settable. <ul style="list-style-type: none"> <li>Exporting the security key</li> <li>Assigning the security key to a project</li> <li>Writing the security key to the GOT</li> </ul>	The expiration date for using the security key is settable.

### ■ 3 Project-related specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Project to which a security key can be assigned

The following shows the formats of projects to which a security key can be assigned.

- Workspace format for the GOT2000 series
- Single file format (\*.GTX, \*.GTXS)

#### (2) Number of security keys that can be assigned to a project

One security key can be assigned to one project.

Assigning a security key to the project again overwrites the already assigned security key.

#### (3) Project viewing availability according to security key assignment

The following shows the project viewing availability according to the security key assignment.

GT Designer3	Project	View of project
Security key assigned	Security key assigned (The security key matches the one on GT Designer3.)	Available
	Security key assigned (The security key does not match the one on GT Designer3.)	Not available
	No security key assigned	Available
No security key assigned	Security key assigned	Not available
	No security key assigned	Available

#### (4) Transferring data containing a protected project

Package data containing a protected project is written to drive C of the GOT only.

The package data cannot be directly opened from the data storage.

### ■ 4 GOT-related specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Version of the BootOS

To enable the security key authentication on the GOT, install version J or later of BootOS.

→4.5.3 Installing the BootOS or the CoreOS to the GOT

#### (2) Number of security keys writable to the GOT

One security key can be written to one GOT.

#### (3) Project execution availability according to security key assignment

The following shows the project execution availability according to the security key assignment.

GOT	Project	Execution of project
Security key assigned	Security key assigned (The security key matches the one on the GOT.)	Available
	Security key assigned (The security key does not match the one on the GOT.)	Not available
	No security key assigned	Available
No security key assigned	Security key assigned	Not available
	No security key assigned	Available

#### (4) Communication method for writing/deleting a security key to/from the GOT

To write/delete a security key to/from the GOT, connect the personal computer to the GOT.

The security key cannot be written to the GOT via a data storage.

## 2.12.2 How to use the security key authentication

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to set the security key authentication to protect a project.

**Step 1** To use the security key authentication, prepare a security key at first.

Create or import a security key.

→ 2.12.2 ■ 1 (1) Creating a security key

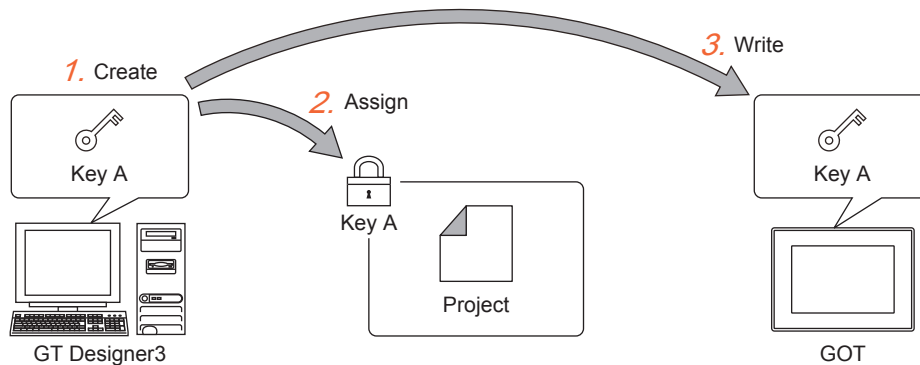

2.12.2 ■ 4 (2) Importing a security key

**Step 2** Assign the security key to a project to be protected.

→ 2.12.2 ■ 2 (1) Assigning a security key to a project

**Step 3** Write the security key to the GOT that executes the protected project.

→ 2.12.2 ■ 3 (1) Writing a security key to the GOT

For how to delete, export, or import a security key, refer to the following.

→ ■ 1 Creating or deleting a security key

■ 2 Assigning/deleting a security key to/from a project

■ 3 Writing/deleting a security key to/from the GOT

■ 4 Copying a security key

### ■ 1 Creating or deleting a security key

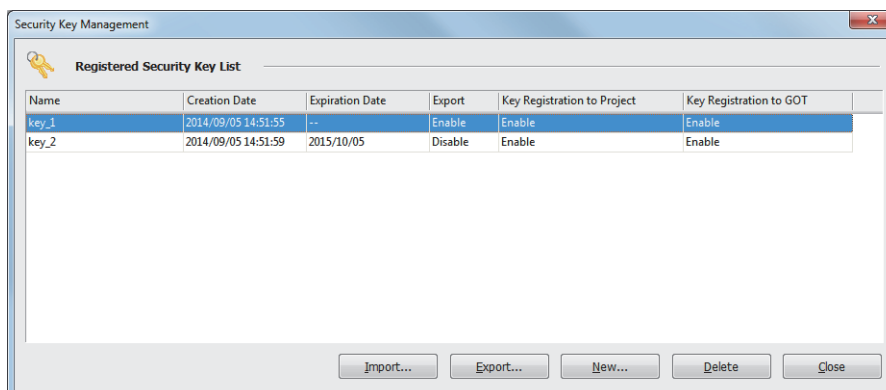

GT27 GT25 GT23 GT21 SoftGOT2000 GS

## (1) Creating a security key

**Step 1** Select [Project] → [Security] → [Security Key Management] from the menu to display the [Security Key Management] dialog.

⇒ 2.12.5 [Security Key Management] dialog

**Step 2** Click the [New] button to display the [New Security Key] dialog.

⇒ 2.12.5 ■ 1 [New Security Key] dialog

**Step 3** Set [Name], and click the [OK] button to create a security key.

## (2) Deleting a security key from GT Designer3

You cannot delete a security key, which is assigned to the project being edited.

When deleting a security key, you cannot view a project protected with the security key.

The deleted security key cannot be restored.

Even if you create a security key with the same name, the new one is recognized as a different security key.

If you need to restore the security key in case of a deletion, export the security key in advance.

**Step 1** Select [Project] → [Security] → [Security Key Management] from the menu to display the [Security Key Management] dialog.

⇒ 2.12.5 [Security Key Management] dialog

**Step 2** Select a security key, and click the [Delete] button to delete the security key.

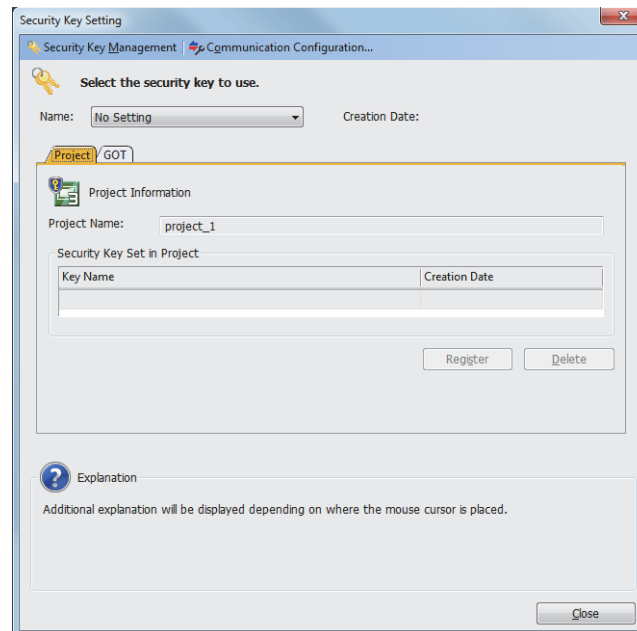

## ■ 2 Assigning/deleting a security key to/from a project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Assigning a security key to a project

- Step 1** Prepare a security key on GT Designer3.
- ➔ 2.12.2 ■ 1 Creating or deleting a security key
  - 2.12.2 ■ 4 (2) Importing a security key
- Step 2** Open a project to which the security key is assigned.
- ➔ 2.3.2 ■ 1 Opening a project for GOT2000
- Step 3** Select [Project] → [Security] → [Security Key Setting] from the menu to display the [Security Key Setting] dialog.
- ➔ 2.12.4 [Security Key Setting] dialog

- Step 4** Select a security key in [Name], and click the [Register] button on the [Project] tab.
- Step 5** The project is protected, and the assigned security key name appears in [Security Key Set in Project].

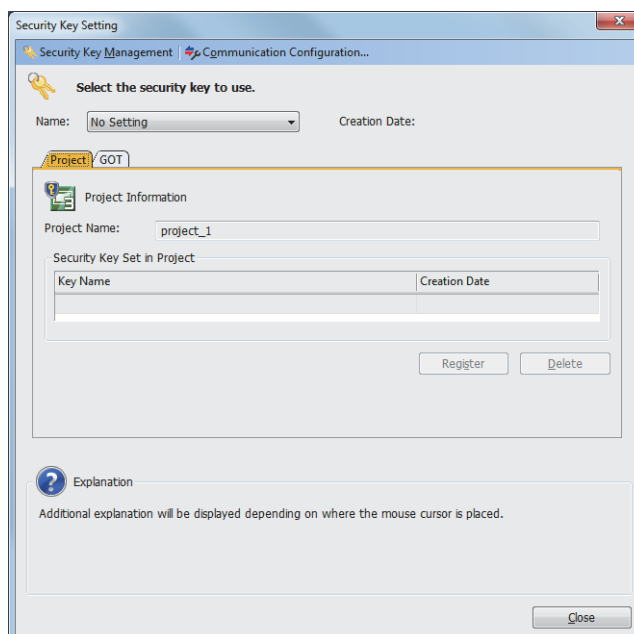

### (2) Deleting a security key from a project

- Step 1** Open a project from which a security key is deleted.
- To open the project to which a security key is assigned, GT Designer3 must have the matched security key.
- ➔ 2.3.2 ■ 1 Opening a project for GOT2000

**Step 2** Select [Project] → [Security] → [Security Key Setting] from the menu to display the [Security Key Setting] dialog.

⇒ 2.12.4 [Security Key Setting] dialog

**Step 3** Click the [Delete] button on the [Project] tab.

**Step 4** The project is unprotected, and the field of [Security Key Set in Project] is blank.

### ■ 3 Writing/deleting a security key to/from the GOT

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Writing a security key to the GOT

**Step 1** Connect the personal computer with the GOT.

⇒ 4.3 Transferring the Data between the Personal Computer and the GOT

4.4 Transferring the Data between the Personal Computer and the GOT via PLC CPU

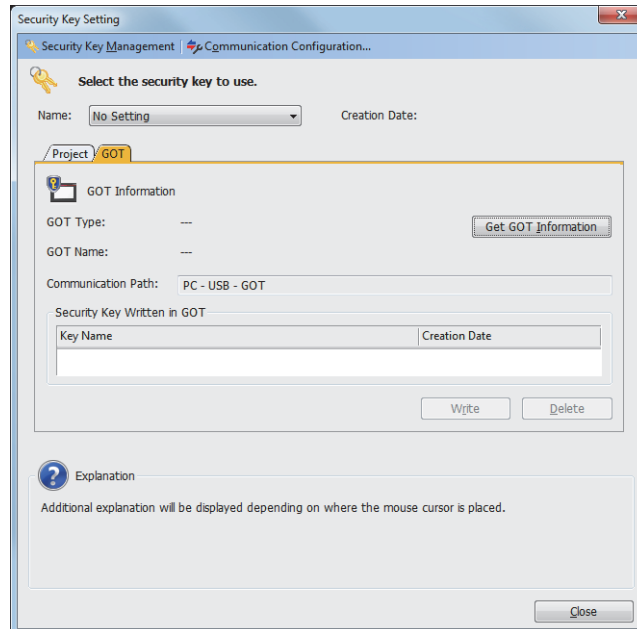

**Step 2** Prepare a security key on GT Designer3.

⇒ 2.12.2 ■ 1 Creating or deleting a security key

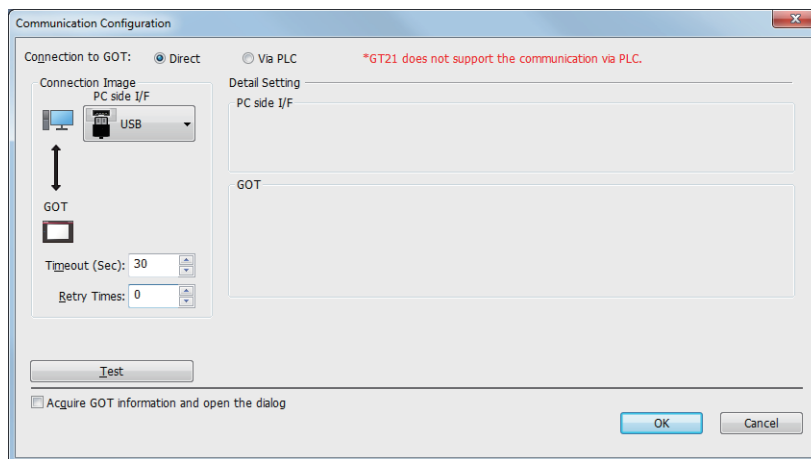

2.12.2 ■ 4 (2) Importing a security key

**Step 3** Select [Project] → [Security] → [Security Key Setting] from the menu to display the [Security Key Setting] dialog.

⇒ 2.12.4 [Security Key Setting] dialog

- Step 4** Click the [Communication Configuration] button to display the [Communication Configuration] dialog.  
 ↳4.8.8 [Communication Configuration] dialog

- Step 5** Set the data transfer path, and click the [OK] button.  
**Step 6** On the [GOT] tab of the [Security Key Setting] dialog, click the [Get GOT Information] button to display the GOT information.  
**Step 7** Select a security key in [Name], and click the [Write] button.  
**Step 8** The security key is written to the GOT, and its name appears in [Security Key Written in GOT].

## (2) Deleting a security key from the GOT

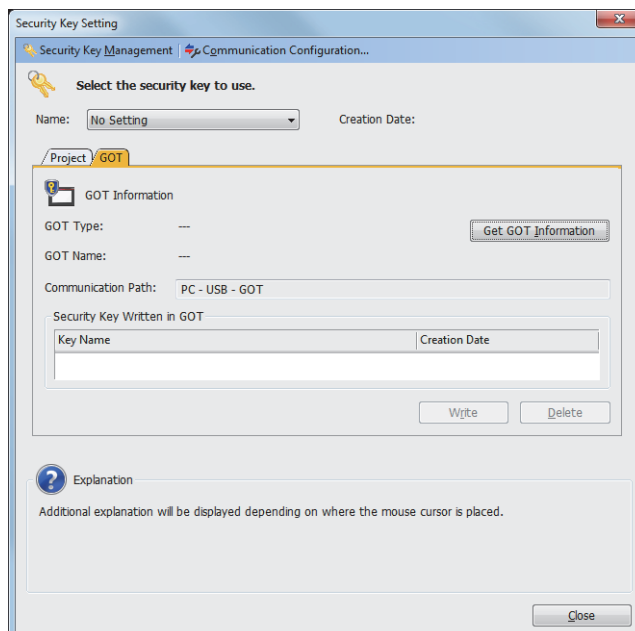

To delete a security key from the GOT, use GT Designer3 which does not need a security key matching the one on the GOT.

When the GOT has a project protected with a security key, deleting the security key from the GOT deletes data except the following ones from drive C of the GOT.

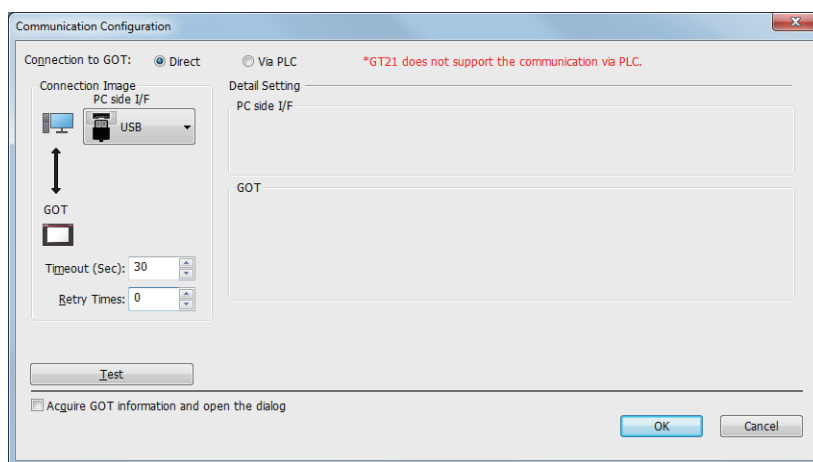

- BootOS
- Individual identification information (that is required for data transfer by Ethernet, such as the GOT IP address)

Read necessary data from the GOT in advance.

- Step 1** Connect the personal computer to the GOT.  
 ↳4.3 Transferring the Data between the Personal Computer and the GOT  
 4.4 Transferring the Data between the Personal Computer and the GOT via PLC CPU
- Step 2** Select [Project] → [Security] → [Security Key Setting] from the menu to display the [Security Key Setting] dialog.  
 ↳2.12.4 [Security Key Setting] dialog

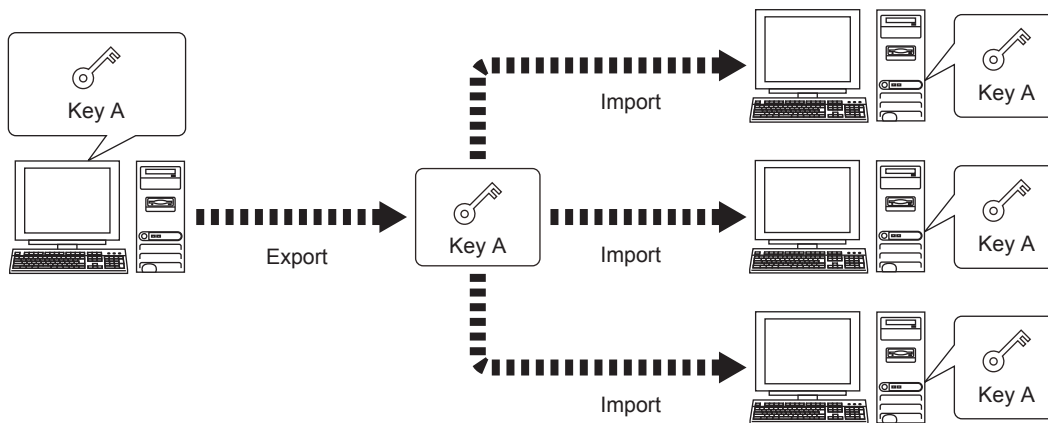

- Step 3** Click the [Communication Configuration] button to display the [Communication Configuration] dialog.  
 → 4.8.8 [Communication Configuration] dialog

- Step 4** Set the data transfer path, and click the [OK] button.  
**Step 5** On the [GOT] tab of the [Security Key Setting] dialog, click the [Get GOT Information] button to display the GOT information.  
**Step 6** Click the [Delete] button.  
**Step 7** The security key is deleted from the GOT, and the field of [Security Key Written in GOT] goes blank.

## ■ 4 Copying a security key

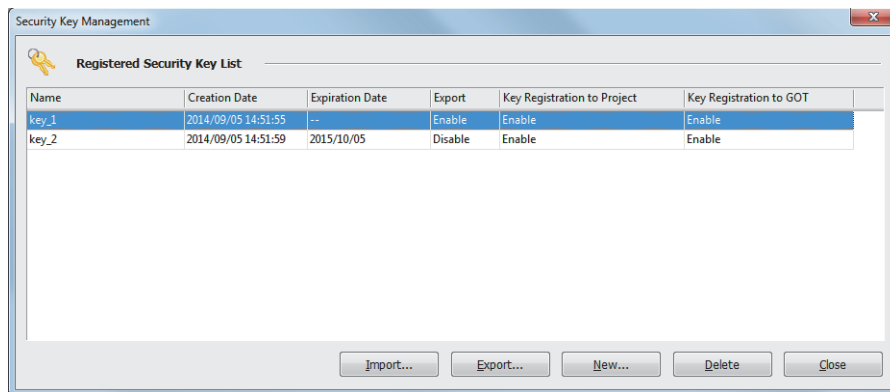

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Exporting a security key

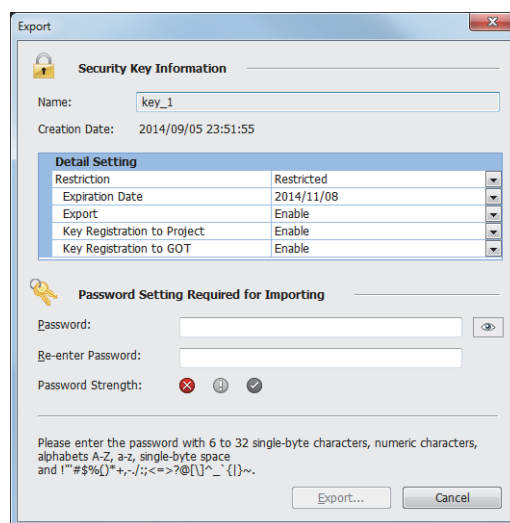

**Step 1** Select [Project] → [Security] → [Security Key Management] from the menu to display the [Security Key Management] dialog.

⇒ 2.12.5 [Security Key Management] dialog

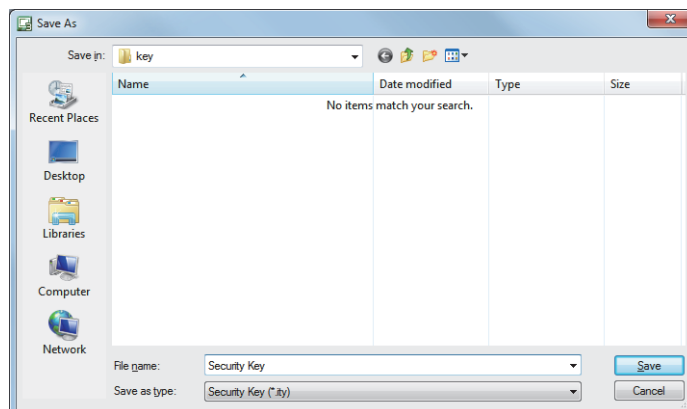

**Step 2** Select a security key, and click the [Export] button to display the [Export] dialog.

⇒ 2.12.5 ■ 3 [Export] dialog

**Step 3** Set [Detail Setting], [Password], and [Re-enter Password]. Then, click the [Export] button to display the [Save As] dialog.

**Step 4** Set [File name], and click the [Save] button to export the security key (\*.ity).

## (2) Importing a security key

**Step 1** Select [Project] → [Security] → [Security Key Management] from the menu to display the [Security Key Management] dialog.

⇒ 2.12.5 [Security Key Management] dialog

**Step 2** Click the [Import] button to display the [Open] dialog.

**Step 3** Select a file, and click the [Open] button to display the [Password Authentication] dialog.

⇒ 2.12.5 ■ 2 [Password Authentication] dialog

**Step 4** Enter the password, and click the [OK] button to import the security key.

## 2.12.3 Precautions

---

### ■ 1 Loss of a security key

If losing a security key due to a deletion operation, personal computer failures, or others, you cannot view the protected project.

The lost security key cannot be restored by creating a new one with the same name.

Take enough measures, such as exporting security keys and backing up them on another personal computer.

### ■ 2 Management of a personal computer that has security keys

If a personal computer having security keys is stolen, it is difficult to prevent the unauthorized view and falsification of projects.

To prevent the unauthorized use of the personal computer including data, take theft-prevention measures and other measures enough, such as deleting unnecessary user accounts.

### ■ 3 Writing/deleting a security key to/from the GOT

#### (1) Data in the GOT when a security key is deleted

When the GOT has a project protected with a security key, deleting the security key from the GOT deletes data except the following ones from drive C of the GOT.

- BootOS
- Individual identification information (that is required for data transfer by Ethernet, such as the GOT IP address)

Read necessary data from the GOT in advance.

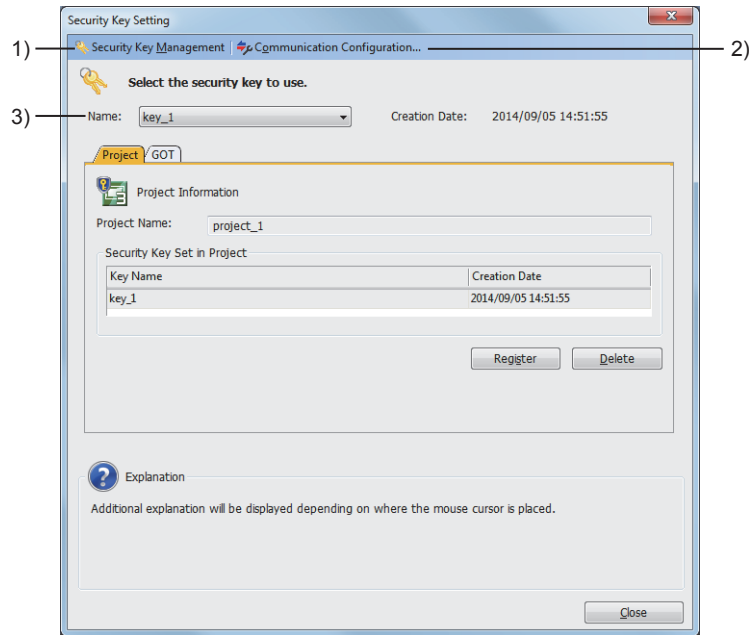

#### (2) Operation in the utility

When the GOT has a project protected with a security key in drive C, the following operations are disabled in the utility.

- [Package management]: Uploading data from drive C to the other drives
- [GOT data pkg. acquisition]: Copying data while the project in drive C is executed

## 2.12.4 [Security Key Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Key Management] button

Displays the [Security Key Management] dialog.

→ 2.12.5 [Security Key Management] dialog

### 2) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

→ 4.8.8 [Communication Configuration] dialog

### 3) [Name]

Select a security key to be assigned to a project or the GOT.

To create a security key, select [New].

→ 2.12.5 ■ 1 [New Security Key] dialog

Configure the security key setting for a project or the GOT by switching the tabs according to the assignment target.

→ ■ 1 [Project] tab

■ 2 [GOT] tab

## ■ 1 [Project] tab

GT27

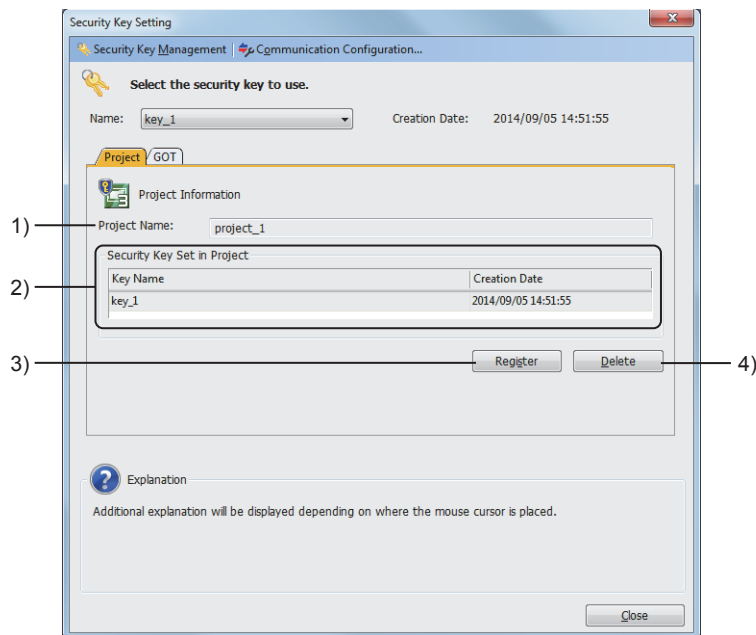

GT25

GT23

GT21

SoftGOT2000

GS

### 1) [Project Name]

Name of the project being edited

### 2) [Security Key Set in Project]

Name and creation date of the security key assigned to the project

### 3) [Register] button

Assigns a security key to the project.

### 4) [Delete] button

Deletes the security key assigned to the project.

## ■ 2 [GOT] tab

GT27

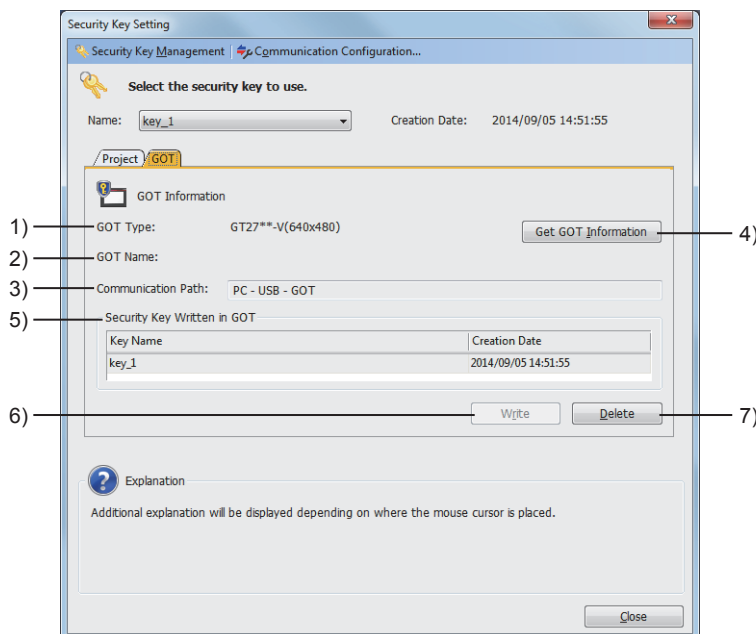

GT25

GT23

GT21

SoftGOT2000

GS

### 1) [GOT Type]

GOT type information acquired from the GOT

When the GOT type information cannot be acquired, writing/deleting a security key to/from the GOT is disabled.

2) **[GOT Name]**

GOT name information acquired from the GOT

3) **[Communication Path]**

Communication path between the personal computer and the GOT

4) **[Get GOT information] button**

Acquires information from the GOT, and enables writing/deleting a security key to/from the GOT.

5) **[Security Key Written in GOT]**

Name and creation date of the security key written to the GOT

6) **[Write] button**

Writes a security key to the GOT.

7) **[Delete] button**

Deletes the security key from the GOT.

When the GOT has a project protected with a security key, deleting the security key from the GOT deletes data except the following ones from drive C of the GOT.

- BootOS
- Individual identification information (that is required for data transfer by Ethernet, such as the GOT IP address)

Read necessary data from the GOT in advance.

## 2.12.5 [Security Key Management] dialog

### 1) [Registered Security Key List]

Lists security keys that can be used on GT Designer3, including the ones created with GX Works3.

Item	Description
[Name]	Name of the security key
[Creation Date]	Creation date and time of the security key
[Expiration Date]	Expiration date of the security key Upon expiry of the date, [Expired] is displayed.
[Export]	Displays the status whether exporting the security key is enabled.
[Key Registration to Project]	Displays the status whether assigning the security key to a project is enabled.
[Key Registration to GOT]	Displays the status whether writing the security key to the GOT is enabled.

### 2) [Import] button

Displays the [Open] dialog.  
Import a security key.

### 3) [Export] button

Displays the [Export] dialog.  
Export the security key selected in [Registered Security Key].  
→ ■ 3 [Export] dialog

### 4) [New] button

Displays the [New Security Key] dialog.  
Create a security key.  
→ ■ 1 [New Security Key] dialog

### 5) [Delete] button

Deletes the security key selected in [Registered Security Key].  
You cannot delete a security key, which is assigned to the project being edited.  
When deleting a security key, you cannot view a project protected with the security key.  
The deleted security key cannot be restored.  
Even if you create a security key with the same name, the new one is recognized as a different security key.  
If you need to restore the security key in case of a deletion, export the security key in advance.

## ■ 1 [New Security Key] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Name]

Specify the name for the security key.

Up to 128 characters can be set.

Spaces at the beginning or end of the name are deleted.

You cannot specify a name already used for another security key.

## ■ 2 [Password Authentication] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Password]

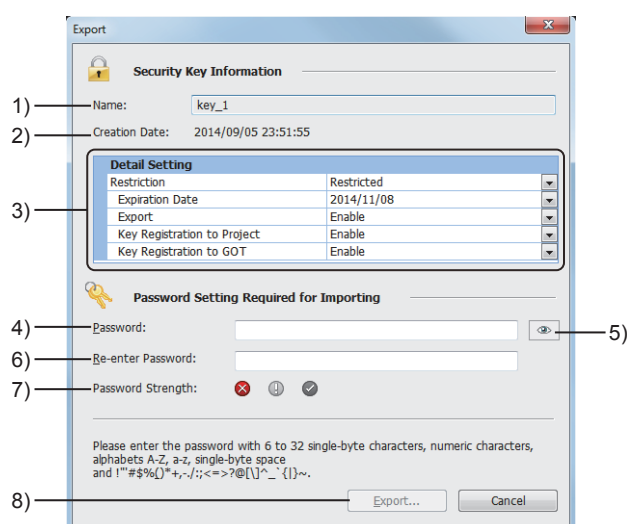

Enter the password for the security key to be imported.

### 2) Password display switching button

Hides or displays the characters entered in [Password].

## ■ 3 [Export] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Name]

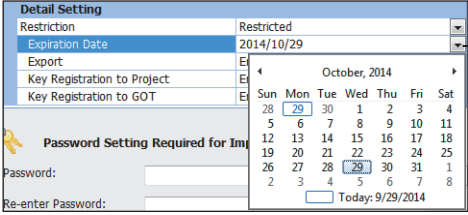

Name of the security key to be exported

### 2) [Creation Date]

Creation date of the security key to be exported

### 3) [Detail Setting]

Set restrictions on the security key to be exported.

Item	Description
[Restriction]	Select whether to restrict the authority of the security key to be exported. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Restricted]</li> <li>• [Not Restricted]</li> </ul>
[Expiration Date]	Set the expiration date of the security key in year/month/day format. Enter a date directly, or select a date from the popup calendar as shown below.  <p>You cannot set a past date. When exporting an imported security key that has the expiration date, you cannot set a new expiration date later than the already set one.</p>
[Export]	Select the authority to export the security key. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Enable]</li> <li>• [Disable]</li> </ul>
[Key Registration to Project]	Select the authority to assign the security key to a project. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Enable]</li> <li>• [Disable]</li> </ul>
[Key Registration to GOT]	Select the authority to write the security key to the GOT. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Enable]</li> <li>• [Disable]</li> </ul>

#### 4) [Password]

Set the password for importing the security key.

The password must be between 6 to 32 characters.

Numeric characters, A to Z, a to z, a one-byte space, and the following symbols are available.

!"#\$%&'()\*+,-./:;<=>@[ ]^\_`{|}~

Capital letters and small letters are distinguished.

It is recommended to make a complicated password by combining alphanumeric characters (capital letters and small letters) and symbols.

#### 5) Password display switching button

Hides or displays the characters entered in [Password].

#### 6) [Re-enter Password]

Input the same password as the one input in [Password].

When the password is not hidden, no re-entry is required.

#### 7) [Password Strength]

Displays the strength of the password.

To export a security key, a medium or strong strength password is required.

#### 8) [Export] button

Displays the [Save As] dialog.

Set the file name and the storage destination, and then click the [Save] button to store the security key.

## 2.13 Protecting a Project by Registering Users

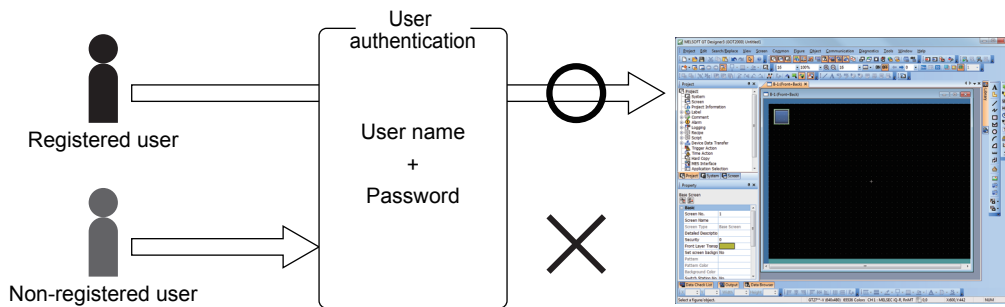

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Setting the project security restricts displaying and editing a project.  
For specifications and settings of the project security, refer to the following.

- ⇒ 2.13.1 Specifications of the project security
- 2.13.2 How to use the project security

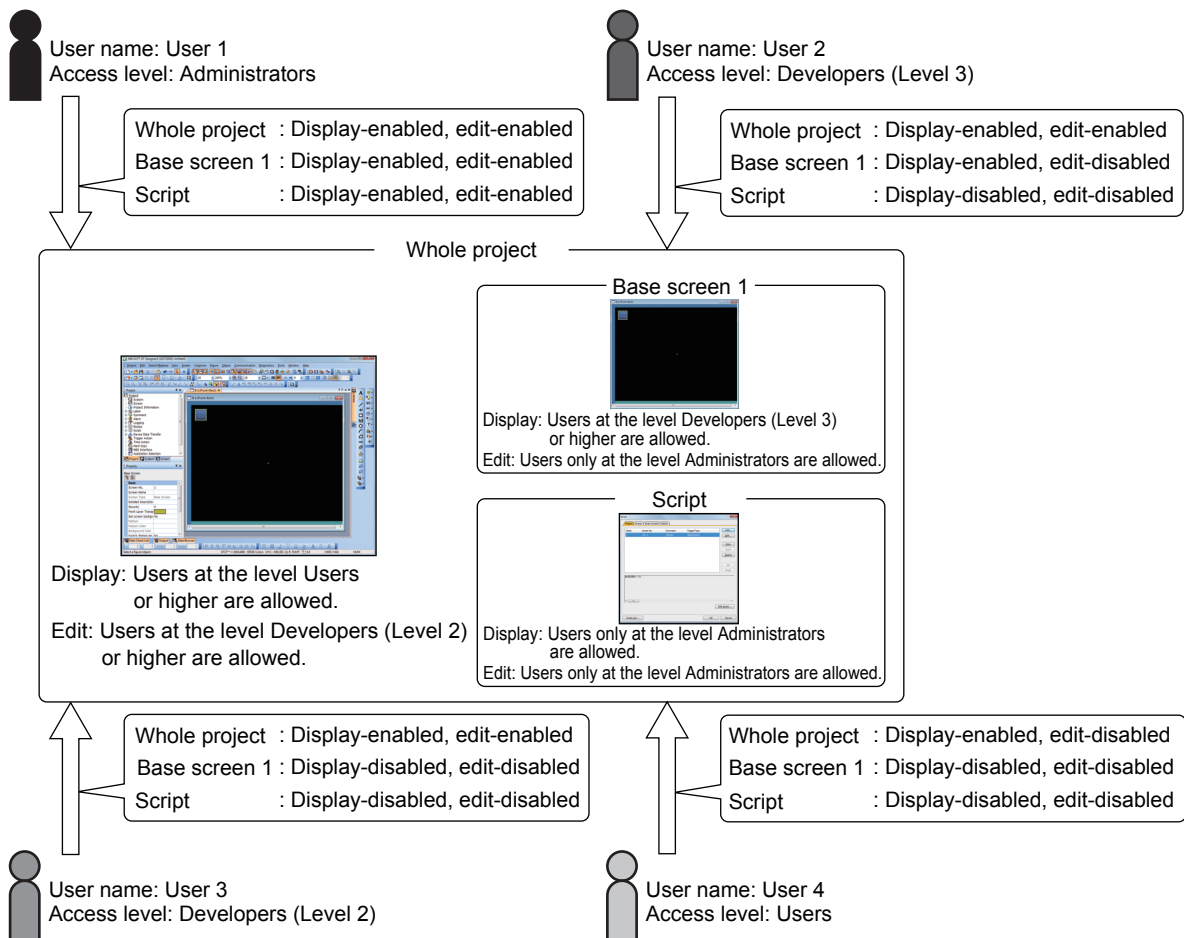

### ■1 Preventing a project from being browsed by unauthorized people

For the project which users are registered to, the user authentication is required for opening the project.  
Only registered users can open the project.

### ■2 Restricting for displaying and editing a project according to the access level of users

You can set restriction for displaying and editing the settings of the project according to the user's access level.  
You can set restriction for displaying and editing specific screens and scripts individually besides the whole project.

## 2.13.1 Specifications of the project security

- ⇒ ■ 1 Operation restricted by the project security
  - 2 Concept of the project security
  - 3 Operating the project to which the project security is set
  - 4 Restricting the project operation by the access authority

### ■ 1 Operation restricted by the project security

The project security restricts the following operations.

- Viewing and editing a project on GT Designer3
- Viewing and editing a project by screen according to the user access level

To restrict operations other than the above, use the following security functions.  
Using multiple security functions in combination further strengthens the security.

#### (1) Function restricting project operations

Function	Description
Security key authentication	Restricts a project to be viewed on GT Designer3 or executed on the GOT by protecting the project with a security key. ⇒2.12 Protecting a Project with a Security Key

#### (2) Function restricting communication with the GOT

Function	Description
Data transfer security	Restricts data transfer between the personal computer (GT Designer3) and the GOT with a password. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
IP filter	Restricts access to the GOT by Ethernet by registering IP addresses with the filtering list. ⇒5.4.3 ■ 4 [IP Filter Setting]

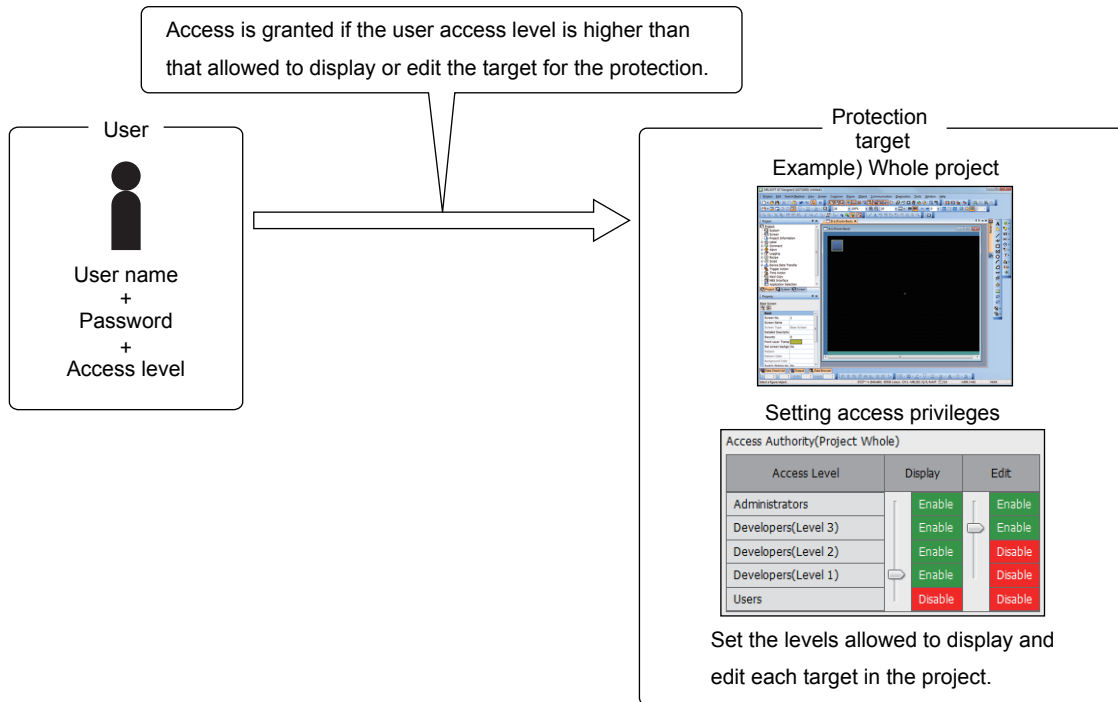

#### (3) Function restricting the GOT operations

Function	Description
Screen security	Restricts the display of screens and objects on the GOT by registering users with the GOT. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
Functional operation security	Restricts the display of the utility, and operations of some monitor functions. ⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

## ■2 Concept of the project security

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When registering users to the project, set their user names and passwords for authentication and their access level. The access privilege set for the project, screens, or others and the user's access level determine whether the user can display and edit the project or not.

### (1) Number of registrable users

Up to 128 users can be registered.

### (2) Access level

The following five access levels are provided.

### (3) Access privilege type

The following two access privileges are provided.

#### • Display

Allows the user to display the project or screen settings.

The users whose access levels do not allow them to display the project or settings cannot display the setting dialog or screen images.

#### • Edit

Allows the user to edit, delete, and save the project or screen settings.

The users whose access levels do not allow them to edit the project or settings can display the setting dialog or screen images, but cannot change the settings.

If displaying is disabled, editing is always disabled.

#### (4) Setting access privileges

You can set a bottom access level for displaying and editing each target in the project.  
If displaying is disabled, editing is always disabled.

Access Level	Access Privilege	
	Display	Edit
Administrators	Enable (fixed)	Enable (fixed)
Developers(Level3)	Select Enable or Disable.	Select Enable or Disable.
Developers(Level2)	Select Enable or Disable.	Select Enable or Disable.
Developers(Level1)	Select Enable or Disable.	Select Enable or Disable.
Users	Select Enable or Disable.	Disable (fixed)

#### (5) Protection target

The following shows the targets which you can set the access privileges for.

- Whole project
- Base screen, window screen, report screen, and mobile screen
- Script

Always set an access privilege for the whole project.

You can also set the access privilege for each base screen, window screen, report screen and mobile screen, or those screens by screen type, and the whole of scripts. This allows specific users to display or edit the relevant screens or scripts.

##### (a) Whole project

You can collectively protect all settings in a project (such as the screen setting and common setting).

##### (b) Base screen, window screen, report screen, and mobile screen

Setting restriction stronger than the access privilege set for the whole project to the screens allows specific users to display or edit the screens.

Access privileges can be set per screen.

##### (c) Script

Setting restriction stronger than the access privilege set for the whole project to the scripts allows specific users to display or edit the scripts.

The same access privilege is set for the project scripts, the screen scripts, the script symbols and the script list.

The scripts of script parts objects, object scripts, and object script symbols are not protected.

If access privileges are set for the scripts individually, the script data is always stored in the project (internal data).

### ■ 3 Operating the project to which the project security is set

#### (1) Logging in to a project

To open the project to which the project security is set, the user authentication is required.

Input the registered user name and password to log in to the project.

To log in to the project with another user name, close the project and open it again.

If any password or user information is changed, the changes are effective in the next login.

#### (2) Package data transfer and the project security

##### (a) Writing the package data

The setting of the project security is written to the GOT with the package data.

If a project with the project security in the GOT is overwritten by writing package data with different project security into the GOT, the project security in the GOT is overwritten as well.

The project security can be set even after the package data is written to the GOT.

##### (b) Reading the package data

If the project security is set to a project in the GOT and the project is read from the GOT, the project security is read as well.

To open the project read from the GOT, the user authentication is required.

To restrict reading a project from the GOT, set a password for the data transfer beside the one for the project security.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### (3) Canceling the project security

Deleting all the registered users cancels the project security.

→ 2.13.2 ■ 3 (2) Deleting a user

## ■ 4 Restricting the project operation by the access authority

The following shows available operations and unavailable operations according to the user's access privilege.

### (1) Operations for the project

#### (a) Display-allowed and edit-allowed users

The users can open the project to add, change, or delete screens or settings including the common setting and save the project.

The access privilege for the screen that has been newly added or overwritten is set as follows.

- The screen that has been newly added  
The same access privilege set for the whole project is applied to the screen that has been newly added.
- The screen that has been overwritten  
The same access privilege set for the screen that has been overwritten is applied to the target screen to be overwritten.

If the access authority is set for screens or scripts individually, the following operations are restricted.

Operation	Restriction	Condition
Changing the GOT type	In the [GOT Type Setting] dialog, the change of [Type] cannot be determined.	The project includes a screen or a script that cannot be edited by the user who is logging in.
Changing the communication settings	In the [Controller Setting] window, the changes of [Manufacturer] and [Type] cannot be determined.	
Verifying projects between the GOT and GT Designer3	The project in GT Designer3 cannot be verified with the one in the GOT.	The project includes a screen or a script that cannot be displayed by the user who is logging in.
Verifying the project being opened with the saved project	The project being opened cannot be verified with the saved project.	

#### (b) Display-allowed and edit-prohibited users

The users can open the project, but cannot add, change, and delete the settings and save the project.

Only the following operations are allowed for those users.

- Deleting a project
- Writing the package data to the GOT or the data storage
- Verifying projects between the GOT and GT Designer3
- Verifying the project being opened with the saved project
- Setting the project security
- Printing (Display-disabled screens or scripts cannot be printed.)

If the access authority is set for screens or scripts individually, the following operations are restricted.

Operation	Restriction	Condition
Verifying projects between the GOT and GT Designer3	The project in GT Designer3 cannot be verified with the one in the GOT.	The project includes a screen or a script that cannot be displayed by the user who is logging in.
Verifying the project being opened with the saved project	The project being opened cannot be verified with the saved project.	

#### (c) Display-prohibited and edit-prohibited users

The users cannot open the project.

The users cannot write the package data to the GOT or the data storage.

### (2) Operations for the screens

#### (a) Display-allowed and edit-allowed users

The users can display, copy, change, and delete the screens.

If a screen to be displayed by the set overlay screen or in the window preview is display-disabled, a dummy screen will be displayed.

#### (b) Display-allowed and edit-prohibited users

The users can display and copy the screens, but cannot change or delete them.

The users can copy figures and objects on the screens, but cannot arrange, move, change, and delete them.

If a screen to be displayed by the set overlay screen or in the window preview is display-disabled, a dummy screen will be displayed.

(c) **Display-prohibited and edit-prohibited users**

The users cannot display, change, and delete the screens.

The information of the display-disabled screens is not displayed in the windows where the list of the settings is displayed such as the data browser.

The display-disabled screens are displayed when simulation is executed.

(3) **Operations for the scripts**

(a) **Display-allowed and edit-allowed users**

The users can display and change the script setting.

Even when the users are allowed to edit scripts, they cannot edit the screen script set on an edit-disabled screen.

(b) **Display-allowed and edit-prohibited users**

The user can display the script setting, but cannot add, change or delete the setting.

(c) **Display-prohibited and edit-prohibited users**

The user cannot display the script setting.

The information of the scripts is not displayed in the windows where the list of the settings is displayed such as the data browser.

(4) **Operations for the libraries**

Even the users who are not allowed to edit the project can register, change, and delete the library data.

## 2.13.2 How to use the project security

---

- ⇒ ■ 1 For the first setting of the project security
  - 2 Logging in to the project
  - 3 User management (addition, deletion, and change)
  - 4 Setting an access privilege
  - 5 Changing a password

### ■ 1 For the first setting of the project security

First, register a user whose access level is Administrators.

- Step 1** Select [Project] → [Security] → [User Management] from the menu to display the [User Addition] dialog.  
(After the first user is registered →, the [User Management] dialog is displayed by the operation above.)
- Step 2** Set [User Name], [Access Level], [Password], [Re-enter Password] and click the [OK] button.
  - ⇒ 2.13.4 [User Addition] dialog
- Step 3** The set user is registered and the user is logged in the project.
- Step 4** Overwrite the project.
  - ⇒ 2.15.1 Overwriting a project
- Step 5** Add other users and set the access privilege of them.
  - ⇒ ■ 3 User management (addition, deletion, and change)
  - 4 Setting an access privilege

#### Point

#### **User name and password management**

Do not forget the user name and the password for Administrators.

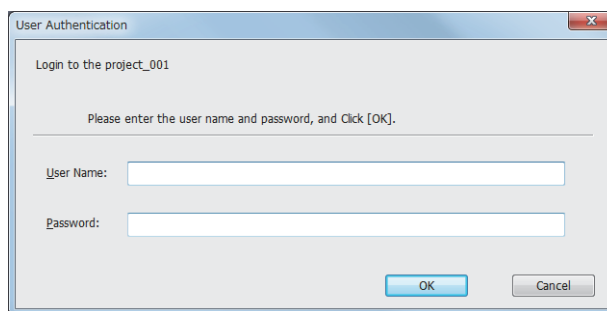

If you do so, you cannot open the project.

### ■ 2 Logging in to the project

- Step 1** Open the project with GT Designer3.
  - ⇒ 2.3.2 Opening a project

- Step 2** The [User Authentication] dialog is displayed.  
Input the user name and the password for logging in and click the [OK] button.

- Step 3** When the user is authorized, the project opens.  
The name of the user who is logged in the project is displayed on the status bar of GT Designer3.

### ■ 3 User management (addition, deletion, and change)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Only the users who are allowed to edit the whole project can manage the user information.  
The manageable range of users differs depending on the access level of the user who is logged in.

- Administrators  
The user can add other users and change the user information over the full range of the access levels.
- Developers(Level3), Developers(Level2), or Developers(Level1)  
The user can add other users or change the user information. However, the access level of the users to be added or changed must be lower than that of the user who is logged in.
- Users  
The user cannot add other users and change the user information.

#### (1) Adding a user

- Step 1** Select [Project] → [Security] → [User Management] from the menu to display the [User Management] dialog.  
⇒ 2.13.5 [User Management] dialog
- Step 2** Click the [Add] button to display the [User Addition] dialog.  
⇒ 2.13.4 [User Addition] dialog
- Step 3** Set [User Name], [Access Level], [Password], [Re-enter Password] and click the [OK] button to register the set user.
- Step 4** Click the [OK] button in the [User Management] dialog to determine the setting.

#### (2) Deleting a user

- Step 1** Select [Project] → [Security] → [User Management] from the menu to display the [User Management] dialog.  
⇒ 2.13.5 [User Management] dialog
- Step 2** Select a user to be deleted and click the [Delete] button to delete the user.
- Step 3** Click the [OK] button in the [User Management] dialog to determine the change.

#### (3) Changing the user information

- Step 1** Select [Project] → [Security] → [User Management] from the menu to display the [User Management] dialog.  
⇒ 2.13.5 [User Management] dialog
- Step 2** Select a user to be changed and click the [Replace] button to display the [Change User Data] dialog.  
⇒ 2.13.6 [Change User Data] dialog
- Step 3** Set [User Name] and [Access Level] and click the [OK] button to change the user information.
- Step 4** Click the [OK] button in the [User Management] dialog to determine the change.

### ■ 4 Setting an access privilege

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Only the users who are allowed to edit the whole project can set the access privilege.

- Step 1** Select [Project] → [Security] → [Setup Access Authority] from the menu to display the [Setup Access

Authority] dialog.

⇒2.13.7 [Setup Access Authority] dialog

**Step 2** Set the access privilege and click the [OK] button to determine the setting.

## ■5 Changing a password

Only the users who are allowed to edit the whole project can change the passwords.

### (1) Changing the password of the user currently logging in

**Step 1** Select [Project] → [Security] → [Change Password] from the menu to display the [Change Password] dialog.

⇒2.13.8 [Change Password] dialog

**Step 2** Set [Old Password], [New Password], and [Re-enter Password] and click the [OK] button to change the password.

### (2) Changing the password of the user who is managed by the project

**Step 1** Select [Project] → [Security] → [User Management] from the menu to display the [User Management] dialog.

⇒2.13.5 [User Management] dialog

**Step 2** Select the user whose password is to be changed and click the [Password change] button to display the [Change Password] dialog.

⇒2.13.8 [Change Password] dialog

**Step 3** Set [New Password] and [Re-enter Password] and click the [OK] button to change the password.

**Step 4** Click the [OK] button in the [User Management] dialog to determine the change.

## 2.13.3 Precautions

---

### ■1 Protecting the script data

If the script data is stored to another file (external data), the script data is not protected.

To protect the script, store the script data in the project (internal data).

⇒9.9.5 ■4 [Option] tab

### ■2 Protecting parts and scripts set for an edit-disabled screen

Even if users are disallowed to edit a screen, an edit-enabled part, script, or others set for the screen is not protected.

### ■3 Screen display for simulation

When simulation is executed, even the display-disabled screens are displayed.

### ■4 Converting the project security set by the old version of GT Designer3

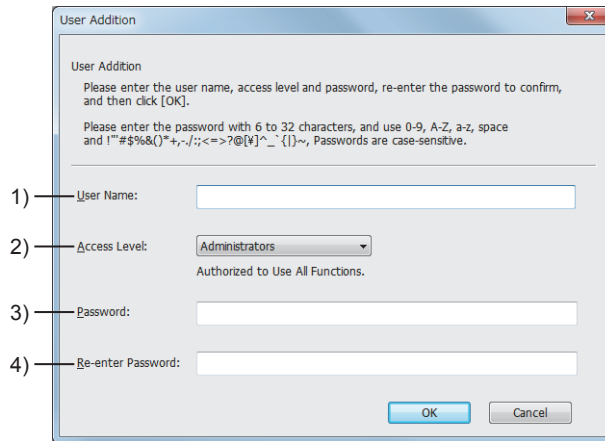

If you convert a project in which the project security is set by GT Designer3 Version1.43V or older for GOT2000 series, the read-disabled setting is converted into the display-disabled setting, and the write-enabled setting into the edit-disabled setting.

### ■5 When you forget a user name and a password

When you forget a password, log in to the project as the user whose access level is Administrators and change the password.

If you forget the user name and the password for the user whose access level is Administrators, you cannot open the project.

Delete the project and create a new project.

**1) [User Name]**

Set a user name for authentication.

Up to 20 characters can be set.

Numeric characters, A to Z, a to z, a one-byte space, and the following symbols are available.

!"#\$%&()\*+,-./:;<=>@[ ]^\_`{|}~

Capital letters and small letters are distinguished.

You cannot place a one-byte space at the end of a user name.

You cannot set a user name which is already registered.

**2) [Access Level]**

Select an access level for the user to be set.

The following shows the items to be selected.

For the first setting of the project security, the user access level is fixed to [Administrators].

The selectable range of the access levels differs depending on the access level of the user who is logged in.

- Administrators
  - The user can select one from all the access levels.
- Developers(Level3), Developers(Level2), or Developers(Level1)
  - The user can select an access level which is lower than that of the user who is logged in.

**3) [Password]**

Set a password for authentication.

The password must be between 6 to 32 characters.

Numeric characters, A to Z, a to z, a one-byte space, and the following symbols are available.

!"#\$%&'()\*+,-./:;<=>@[ ]^\_`{|}~

Capital letters and small letters are distinguished.

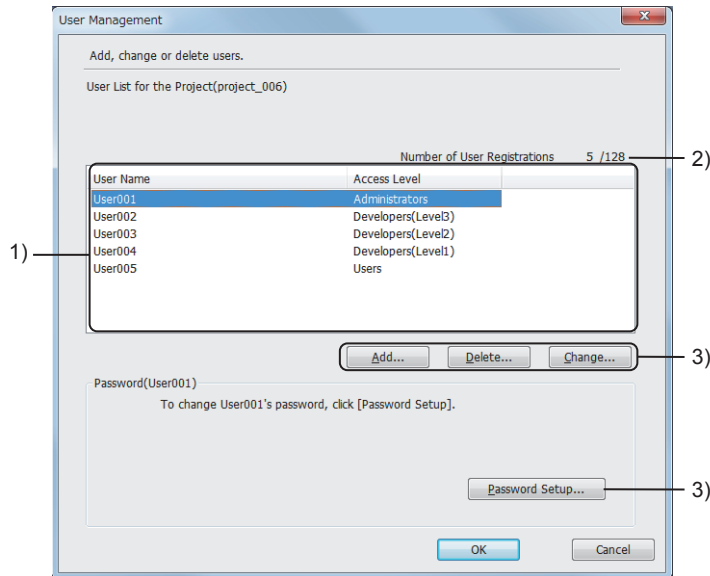

The input password is displayed as asterisks.

**4) [Re-enter Password]**

Input the same password as the one input in [Password].

The input password is displayed as asterisks.

## 2.13.5 [User Management] dialog

### 1) User list

Displays the user names and the access levels of the registered users.

### 2) [Number of User Registrations]

The number of the registered users

### 3) Management button

Use these buttons to manage the users.

The manageable range of users differs depending on the access level of the user who is logged in.

- Administrators

The user can add other users and change the user information over the full range of the access levels.

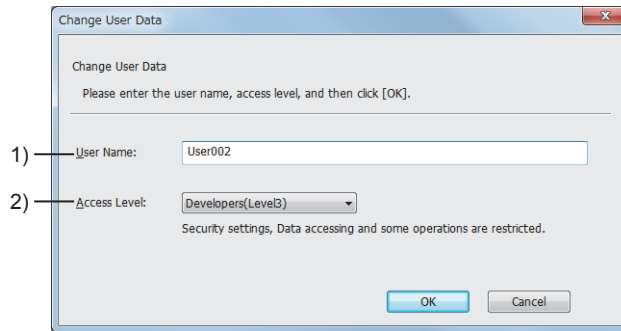

- Developers(Level3), Developers(Level2), or Developers(Level1)

The user can add other users or change the user information. However, the access level of the users to be added or changed must be lower than that of the user who is logged in.

Item	Description
[Add] button	Displays the [User Addition] dialog. Click this button to add a user. →2.13.4 [User Addition] dialog
[Delete] button	Deletes the user selected in the user list. Deleting all the registered users cancels the security setting.
[Replace] button	Displays the [Change User Data] dialog. You can change the access level and the password of the user selected in the user list. →2.13.6 [Change User Data] dialog
[Password Setup] button	Displays the [Change Password] dialog. You can change the password of the user selected in the user list. →2.13.8 [Change Password] dialog

## 2.13.6 [Change User Data] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [User Name]

Set a user name for authentication.

Up to 20 characters can be set.

Numeric characters, A to Z, a to z, a one-byte space, and the following symbols are available.

!"#\$%&()\*+,-./:;<=>@[ ]^\_`{|}~

Capital letters and small letters are distinguished.

You cannot place a one-byte space at the end of a user name.

You cannot set a user name which is already registered.

### 2) [Access Level]

Select an access level for the user to be set.

The following shows the items to be selected.

The selectable range of the access levels differs depending on the access level of the user who is logged in.

- Administrators

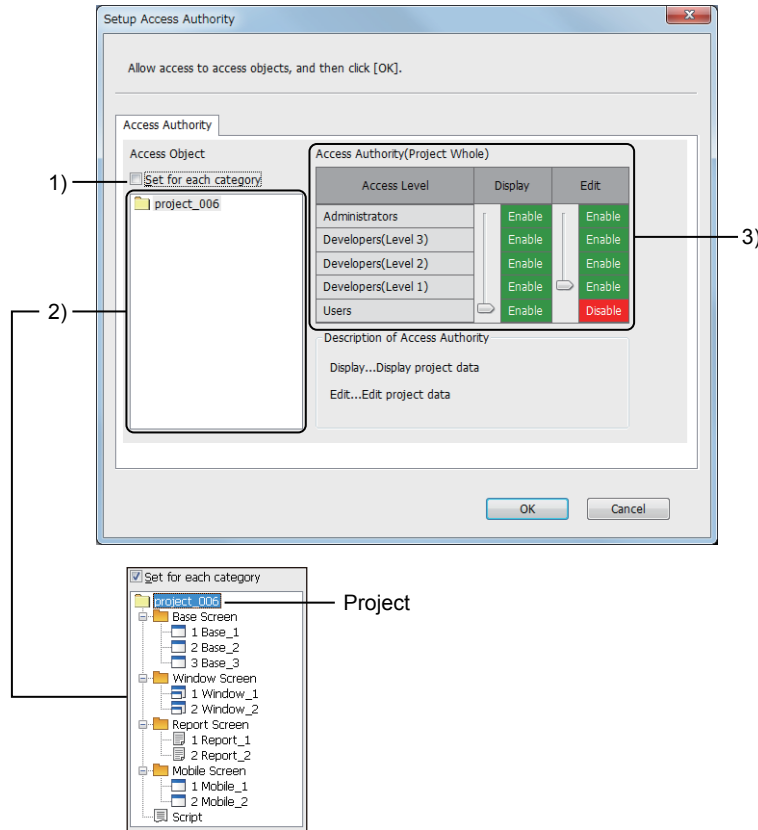

The user can select one from all the access levels.

- Developers(Level3), Developers(Level2), or Developers(Level1)

The user can select an access level which is lower than that of the user who is logged in.

## 2.13.7 [Setup Access Authority] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Set per Target]

Allows you to set the access privilege for the base screens, window screens, report screens, mobile screens, or the whole of scripts.

Displays the targets for which the access privilege are set in the tree view in the access target list.

### 2) Access target list

Select a target for which the access privilege is set.

Item	Description
Project	Set an access privilege for the whole project. The display style of the project name differs depending on the project format. <ul style="list-style-type: none"> <li>• Workspace format: Project name</li> <li>• Single file format: File name</li> </ul>
[Base Screen], [Window Screen], [Report Screen], and [Mobile Screen]	Lists the base screens, window screens, report screens, and mobile screens. The access privilege is settable for each screen. To set the access privilege by screen type, select [Base Screen], [Window Screen], [Report Screen], or [Mobile Screen].
[Script]	Sets the same access privilege for the project scripts, screen scripts, script lists, and the whole script symbols. This setting is not applied to script parts, object scripts, and object script symbols.

### 3) [Access Privilege]

Move each slider up and down to set an access privilege for a target selected from the access target list.

Item	Description
[Display]	Set a bottom access level for displaying the target selected in the access target list.
[Edit]	Set a bottom access level for editing the target selected in the access target list.

The settable range of the access privilege differs depending on the access level of the user who is logged in.

- Administrators

The user can set an access privilege for each target over the full range of the access levels.

- Developers(Level3), Developers(Level2), or Developers(Level1)

The user can set an access privilege for each target within the range of the access level of the user who is logged in or the lower level.

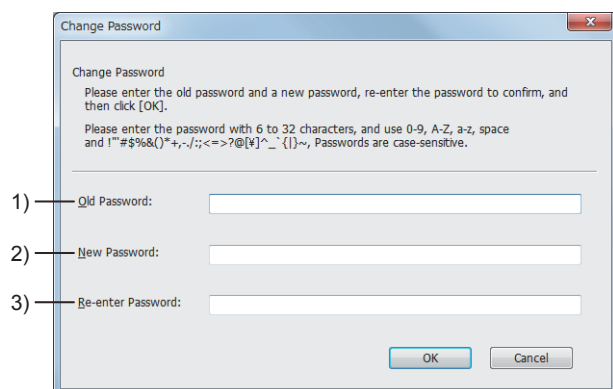

Example) For the user whose access level is Developers(Level2)

Access Level	Display	Edit
Administrators	Enable	Enable
Developers(Level 3)	Enable	Enable
Developers(Level 2)	Enable	Enable
Developers(Level 1)	Enable	Disable
Users	Disable	Disable

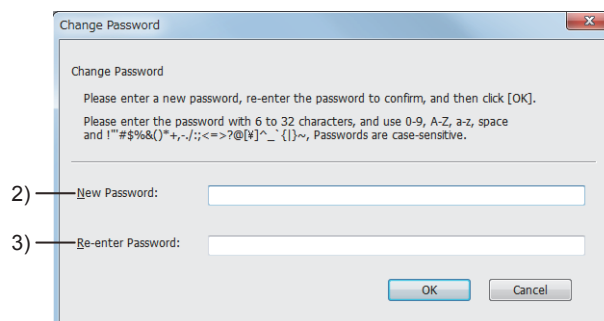

The setting range is Developers (Level 2) or lower.

If the access privilege is set for the screens and scripts individually, only the user who is allowed to edit the screens or the scripts can change their access levels.

## 2.13.8 [Change Password] dialog

When the password of a login user is changed

When the password of a user who is not logged in is changed

### 1) [Old Password]

Input the current password for authentication.  
The input password is displayed as asterisks.

### 2) [New Password]

Set a new password.  
The password must be between 6 to 32 characters.  
Numeric characters, A to Z, a to z, a one-byte space, and the following symbols are available.  
!"#\$%&'()\*+,-./:;<=>?@[^\_`{|}~  
Capital letters and small letters are distinguished.  
The input password is displayed as asterisks.

### 3) [Re-enter Password]

Input the same password as the one input in [New Password].  
The input password is displayed as asterisks.

## 2.14 Printing or Outputting a Project to a File

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

The settings and screen images of the created project can be printed or output to a file.  
The data output to a file can be edited and used for each type of documents.

- ⇒ 2.14.1 Specifications for printing and outputting files
- 2.14.2 How to print and output files
- 2.14.3 Precautions
- 2.14.4 [Page Settings] dialog
- 2.14.5 [Print Preview] window
- 2.14.6 [Print] dialog

### 2.14.1 Specifications for printing and outputting files

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

- ⇒ ■ 1 Specifications for printing
- 2 Specifications for outputting files

#### ■ 1 Specifications for printing

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

The following shows the contents to be printed.

[Items for Print]	Content to be printed
[Cover]	Outputs the title, date, and/or other items set in the [Print] dialog.
[Screen Name]	Outputs the screen title.
[Screen Image List]	Outputs the list of the screen images.
[Screen Image/Setting]	Outputs the screen properties and designs, the settings of the objects on the screens, and the startup logo image.
[Common]	Outputs the project information and common settings (including type setting and controller setting).
[Recipe Setting]	Outputs the recipe common setting and recipe setting.
[Logging Setting]	Outputs the logging setting.
[Device Data Transfer]	Outputs the device data transfer setting.
[Device]	Outputs the list of the devices used in the project and the positions of each device.
[Label (GT Designer3)]	Outputs the list of registered label groups, or the list of labels (GT Designer3) registered in a label group.
[Comment]	Outputs the registered comments and attributes.
[Parts]	Outputs the parts settings and details of the registered parts (part numbers, names, and images).
[Script]	Outputs the script settings (script settings, script symbols, and script options).
[Sound]	Outputs the sound file list and the touch key sound setting.
[Category]	Outputs shapes, objects, and screen numbers and coordinates where each shape or object is arranged for each category.
[My Library]	Outputs screen numbers, names, and images of the shapes and objects registered for each folder in my library.

## 2 Specifications for outputting files

### (1) File formats for output

#### (a) Setting

The settings of the project can be output in the following formats.

- CSV format
- Unicode text format

#### (b) Screen image

The images of base screens, window screens, report screens, and mobile screens can be output in the following formats.

- BMP format
- JPEG format

### (2) Files to be output

#### (a) Text file

The following table lists the targets to be output to a text file and those file names.

When [Add project name to the file name] is selected, the following is prepended to a file name.

- For a workspace format project: Project name
- For a single file format project: Project file name (excluding its extension .GTX)

Example) When [Cover] is selected for [Items for Print] and the project file name is "Project1.GTX"  
In this case, the file name is "Project1-Cover.CSV" or "Project1-Cover.TXT".

[Items for Print]	Files to be output	Content to be printed
[Cover]	Cover.CSV/TXT	Outputs the title, date, and other items set in the [Print] dialog.
[Screen Name]	Screen Name.CSV/TXT	Outputs the screen title.
[Screen Image/Setting]	Screen Image Setting.CSV/TXT	Outputs the screen properties and designs, and the settings of the objects on the screens.
[Common]	Common Setting.CSV/TXT	Outputs the project information and common settings (including type setting and controller setting).
[Recipe Setting]	Recipe Common.CSV/TXT	Outputs the recipe common setting.
	Recipe Setting-****.CSV/TXT	Outputs the recipe setting. [****] indicates the recipe No. to be output.
[Logging Setting]	Logging Setting-****.CSV/TXT	Outputs the logging setting. [****] indicates the logging ID to be output.
[Device Data Transfer]	Device Data Transfer-****.CSV/TXT	Outputs the device data transfer setting. [****] indicates the device data transfer ID to be output.
[Device] ([List])	Device List-CH*.CSV/TXT	Outputs the controller devices used in the project for each channel. [*] indicates CH No. to be output.
	Device List-GOT.CSV/TXT	Outputs the GOT internal devices used in the project.
[Device]([Detail])	Device Detail-CH*.CSV/TXT	Outputs the controller devices used in the project and the positions of each device for each channel. [*] indicates CH No. to be output.
	Device Detail-GOT.CSV/TXT	Outputs the GOT internal devices used in the project and the positions of each device.
[Label (GT Designer3)]	Label Group List.CSV/TXT	Outputs the list of registered label groups.
	Label Group-***.CSV/TXT	Outputs the list of labels (GT Designer3) registered in a label group. [***] indicates the label group number.
[Comment]	Comment List-***.CSV/TXT	Outputs the registered comments. [***] indicates group No. to be output.
	Comment List-***Attribute.CSV/TXT	Outputs the comment attributes. [***] indicates group No. to be output.
[Parts]	Parts.CSV/TXT	Outputs the parts settings and details of the registered parts (part numbers and names).
[Script]	Script.CSV/TXT	Outputs the script settings (script settings, script symbols, and script options).

[Items for Print]	Files to be output	Content to be printed
[Sound]	Sound Files.CSV/TXT	Outputs the sound file list and the touch key sound setting.
[Category]	Category.CSV/TXT	Outputs shapes, objects, and screen numbers and coordinates where each shape or object is arranged for each category.
[My Library]	My Library.CSV/TXT	Outputs screen numbers and names of the shapes and objects registered for each folder in my library.

## (b) Image file

The following table lists the targets to be output to an image file and those file names.

[Items for Print]	Files to be output	Content to be printed
[Screen Image/Setting] (Base screen)	Base ON-*****.BMP/JPEG	Outputs the image of the ON-state base screen. [****] indicates the screen number.
	Base OFF-*****.BMP/JPEG	Outputs the image of the OFF-state base screen. [****] indicates the screen number.
	Base ON Object ID-*****.BMP/JPEG	Outputs the image of the ON-state base screen with the object IDs visible. [****] indicates the screen number.
	Base OFF Object ID-*****.BMP/JPEG	Outputs the image of the OFF-state base screen with the object IDs visible. [****] indicates the screen number.
	Base ON Device-*****.BMP/JPEG	Outputs the image of the ON-state base screen with the devices visible. [****] indicates the screen number.
	Base OFF Device -*****.BMP/JPEG	Outputs the image of the OFF-state base screen with the devices visible. [****] indicates the screen number.
[Screen Image/Setting] (Window screen)	Window ON-*****.BMP/JPEG	Outputs the image of the ON-state window screen. [****] indicates the screen number.
	Window OFF-*****.BMP/JPEG	Outputs the image of the OFF-state window screen. [****] indicates the screen number.
	Window ON Object ID-*****.BMP/JPEG	Outputs the image of the ON-state window screen with the object IDs visible. [****] indicates the screen number.
	Window OFF Object ID-*****.BMP/JPEG	Outputs the image of the OFF-state window screen with the object IDs visible. [****] indicates the screen number.
	Window ON Device-*****.BMP/JPEG	Outputs the image of the ON-state window screen with the devices visible. [****] indicates the screen number.
	Window OFF Device-*****.BMP/JPEG	Outputs the image of the OFF-state window screen with the devices visible. [****] indicates the screen number.
[Screen Image/Setting] (Report screen)	Report-*****.BMP/JPEG	Outputs the screen images of report screens. [****] indicates the screen number.
	Report Object ID-*****.BMP/JPEG	Outputs the image of a report screen with the object IDs visible. [****] indicates the screen number.
	Report Device-*****.BMP/JPEG	Outputs the image of a report screen with the devices visible. [****] indicates the screen number.

[Items for Print]	Files to be output	Content to be printed
[Screen Image/Setting] (Mobile screen)	Mobile ON-*****.BMP/JPEG	Outputs the image of the ON-state mobile screen. [****] indicates the screen number.
	Mobile OFF-*****.BMP/JPEG	Outputs the image of the OFF-state mobile screen. [****] indicates the screen number.
	Mobile ON Object ID-*****.BMP/JPEG	Outputs the image of the ON-state mobile screen with the object IDs visible. [****] indicates the screen number.
	Mobile OFF Object ID-*****.BMP/JPEG	Outputs the image of the OFF-state mobile screen with the object IDs visible. [****] indicates the screen number.
	Mobile ON Device-*****.BMP/JPEG	Outputs the image of the ON-state mobile screen with the devices visible. [****] indicates the screen number.
	Mobile OFF Device-*****.BMP/JPEG	Outputs the image of the OFF-state mobile screen with the devices visible. [****] indicates the screen number.
[Screen Image/Setting] (Startup logo)	Startup Logo.BMP or JPEG	Outputs the image of the startup logo.
[Parts]	Parts-*****.BMP/JPEG	Outputs the images of the registered parts. [****] indicates the parts number.
[My Library]	My Library-***-***.BMP/JPEG	Outputs the images of the shape and objects registered in my library. [***-***] indicates [the library folder number - the library data number].

## 2.14.2 How to print and output files

### ■1 Setting the page layout or color tone

**Step 1** Select [Project] → [Page Settings] from the menu to display the [Page Settings] dialog.

⇒2.14.4 [Page Settings] dialog

**Step 2** Click the [OK] button after the required settings to complete the setting.

### ■2 Outputting

**Step 1** Select [Project] → [Print] from the menu to display the [Print] dialog.

⇒2.14.6 [Print] dialog

**Step 2** Click the [Print] button after setting output targets in [Items for Print] to display a dialog according to the setting of the output destination.

- For the printer output, the setting dialog to be displayed depends on the printer driver of the OS used.
- For the file output, the [Save Specified Folder] dialog is displayed.

**Step 3** Output the pages by the following operations in the setting dialog.

- For the printer output, click the [OK] button after the required settings.
- For the file output, click the [Save] button after specifying the destination to save the file.

## 2.14.3 Precautions

### ■1 Outputting a project for which the project security is set

The screen for which displaying is prohibited cannot be output.

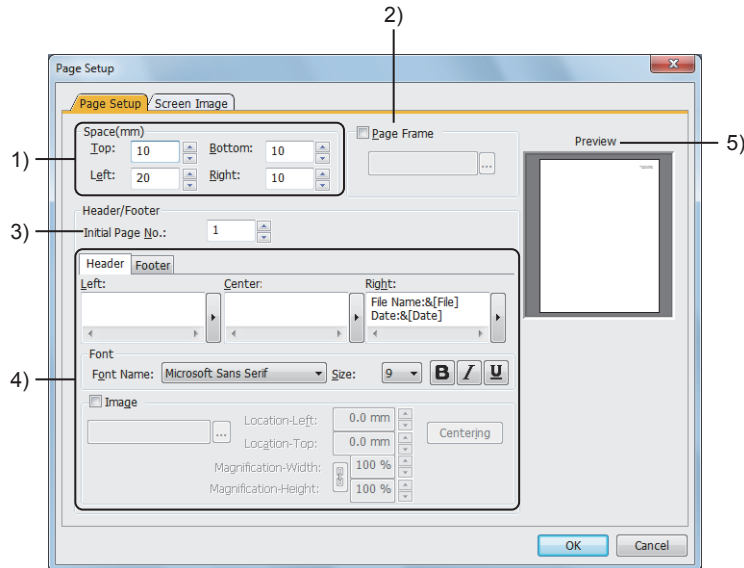

## 2.14.4 [Page Settings] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 [Page Settings] tab
- 2 [Screen Image] tab

### ■ 1 [Page Settings] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

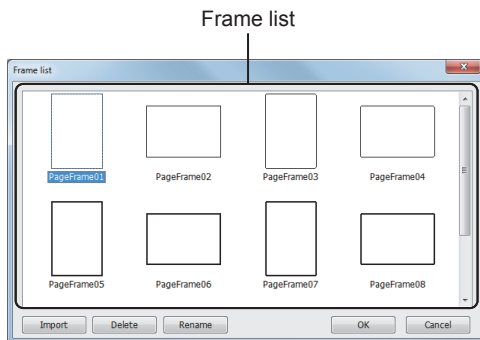

#### 1) [Margin (mm)]

Set page margins for each direction (up/down/left/right).  
The setting range is [0] mm to [100] mm.

#### 2) [Frame]

Select this item to display a frame in the page.  
Click the [...] button to display the [Frame List] dialog.  
Select a frame pattern.

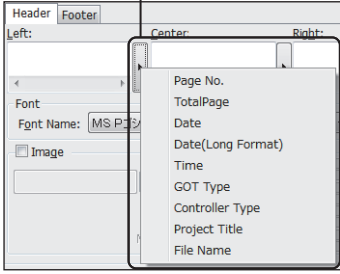

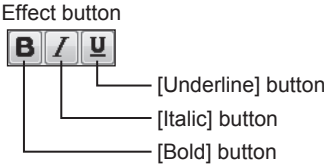

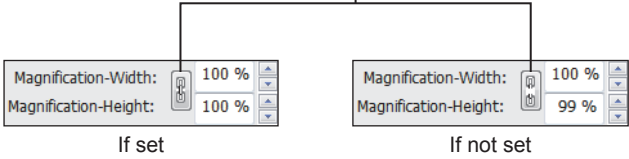

- **Frame list**  
Displays frame images.
- **[Import] button**  
Imports frame images.  
The following shows available file formats for importing frame images.
  - WMF format
  - EMF format
 The imported files are displayed in the frame list.
- **[Delete] button**  
Deletes the selected frame from the frame list.
- **[Replace Name] button**  
Changes the name of the selected frame in the frame list.

#### 3) [Initial Page No.]

Set an initial value of the page number.  
The setting range is [1] to [9999].

#### 4) [Header] tab, [Footer] tab

Switches the target to be set (header or footer).

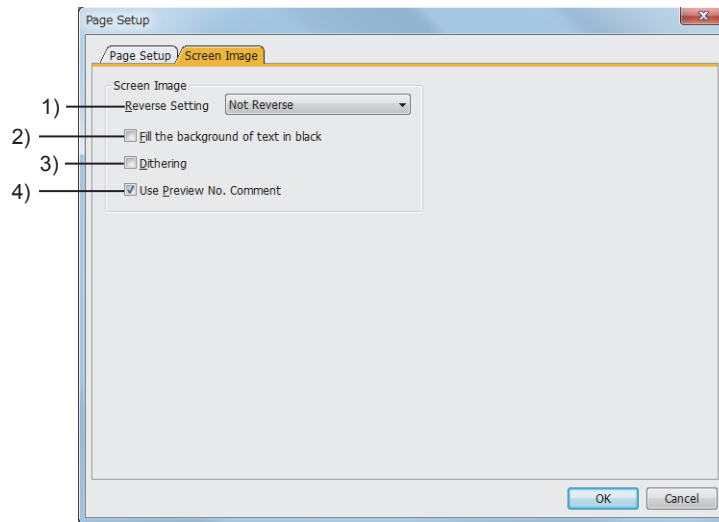

Item	Description
[Left], [Center], [Right]	<p>Set text to be displayed in the left side, center, or right side of the header or footer. Up to 512 characters including two lines can be set. A line feed is counted as two characters. A line feed is counted as two characters. You can also select and input text from the auto-text list.</p> <p>Click the button to display the auto-text list.</p> 
[Font]	<p>Set a font name, text size, and an effect for the text displayed in the header or footer. The same font setting is applied to all the texts in [Left], [Center], and [Right].</p> <ul style="list-style-type: none"> <li>• [Font Name] Select a font.</li> <li>• [Size] Select a text size.</li> <li>• Effect button Set an effect for the text.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Boldifies the text.</li> <li>• <b>[Italic] button</b> Leans the text.</li> <li>• <b>[Underline] button</b> Underlines the text.</li> </ul>
[Image]	<p>Select this item to set an image file to be displayed in the header or footer. The image is displayed behind the text set in [Left], [Center], and [Right]. Click the [...] button to display the [Screen Selection] dialog. The BMP, JPEG, WMF, and EMF file formats can be read.</p> <ul style="list-style-type: none"> <li>• [Position-Left] Set the display position of the image in the horizontal direction with the origin at the left edge of the header area. The setting range is [-999.9mm] to [999.9mm].</li> <li>• [Position-Up] Set the display position of the image in the vertical direction with the origin at the top edge of the header area. The setting range is [-999.9mm] to [999.9mm].</li> <li>• [Magnification-Width], [Magnification-Height] Set the display magnification of the image. The setting range is [0%] to [100%]. You can set whether to set the same value for both [Magnification-Width] and [Magnification-Height] or not.</li> </ul> <p>Switches between setting the same value and accepting individual value.</p>  <ul style="list-style-type: none"> <li>• [Centering] button Sets the display position of the image in the center of the header or footer.</li> </ul>

### 5) [Preview]

Displays a preview of the settings.

## ■ 2 [Screen Image] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Rev Setting]

Select the reverse processing of color tones of the screen image.

The following shows the items to be selected.

- [No Invert]
- [Invert]
- [Tone Invert]

### 2) [Fill the background of text in black]

Sets the text color to white and the background color to black for outputting the screen image.

### 3) [Dithering]

Sets the screen image to monochrome with the neutral color tone for outputting the screen image.

### 4) [Display comments with Preview No.]

Displays the comment of the comment column No. which is set as the preview number for outputting the screen image..

## 2.14.5 [Print Preview] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) **Print button**

Displays the [Print] dialog.  
→ 2.14.6 [Print] dialog

### 2) **[Page Settings] button**

Displays the [Page Settings] dialog.  
→ 2.14.4 [Page Settings] dialog

### 3) **[First Page] button**

Moves to the top page.

### 4) **[Previous Page] button**

Moves to the previous page.

### 5) **[Page specification]**

Displays the page whose preview image is currently displayed.  
Press the [Enter] key after setting the page number to move to the set page.

### 6) **[Next Page] button**

Moves to the next page.

### 7) **[Final Page] button**

Moves to the last page.

### 8) **[Size Specification]**

Select a display size or display method of the pages.  
The following shows the items to be selected.

- [400%]
- [300%]
- [200%]
- [150%]
- [100%]
- [75%]
- [50%]
- [25%]
- [10%]
- [Display All Page]
- [Adjust Width]
- [1Page display]
- [2Page display]
- [4Page display]

- [8Page display]

9) **[Close] button**

Closes the [Print Preview] window.

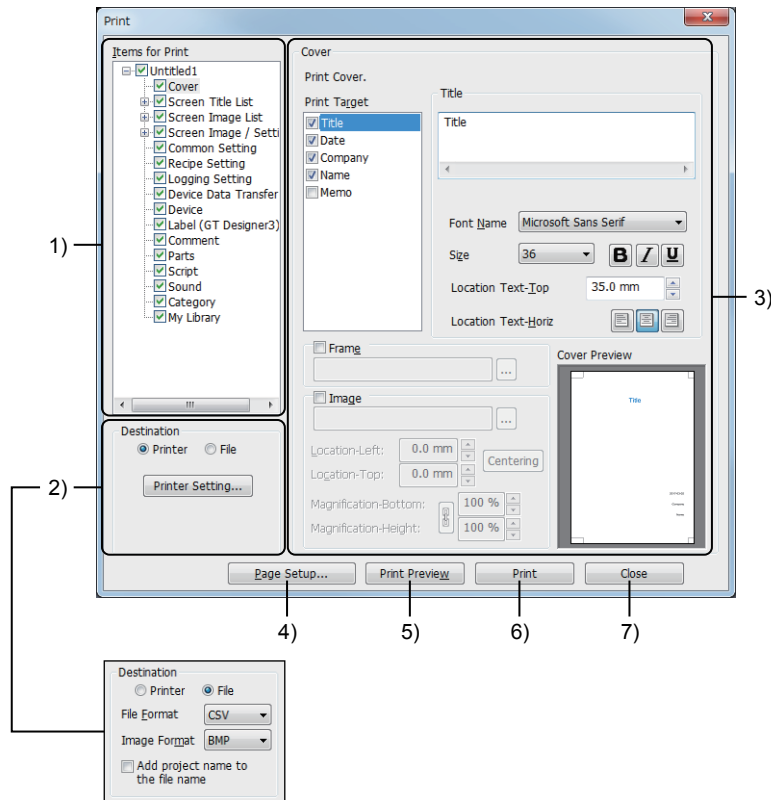

10) **Preview**

A preview of the print image.

11) **Status bar**

Displays the GOT type and channel settings of the project.

## 2.14.6 [Print] dialog

1) **[Items for Print]**

Set targets to be output.

For the details of the contents to be output, refer to the following.

⇒ 2.14.1 Specifications for printing and outputting files

2) **[Destination]**

Select an output destination.

Item	Description
[Printer]	Sets the output destination to the printer. Click the [Printer Settings] button to configure the printer settings. The contents of the printer setting depend on the printer driver of the OS used.
[File]	Sets the output destination to the file. Select an output format of the settings of the project in [File Type]. The following shows the setting range. <ul style="list-style-type: none"> <li>• [CSV]: Outputs the settings in the CSV format.</li> <li>• [TXT]: Outputs the settings in the Unicode text format.</li> </ul> Select an output format of the screen image in [Screen Type]. The following shows the setting range. <ul style="list-style-type: none"> <li>• [BMP]: Outputs the settings in the BMP format.</li> <li>• [JPEG]: Outputs the settings in the JPEG format.</li> </ul>
[Add project name to the file name]	Adds a project file name at the beginning of the file name.

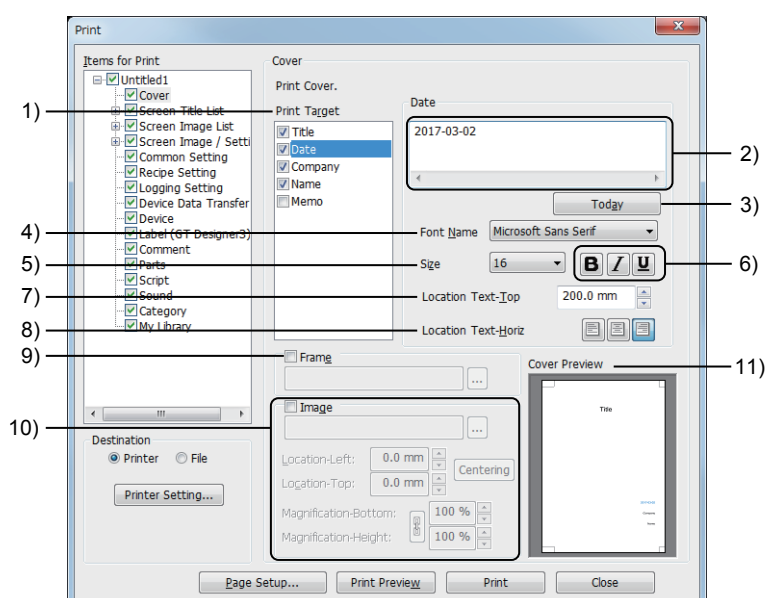

3) **Setting of the print items**

Setting items depend on the setting of [Items for Print].

For details, refer to the following.

- ➔ ■ 1 [Cover]
  - 2 [Base Screen], [Window Screen], [Report Screen], and [Mobile Screen] of [Screen Image List]
  - 3 [Base Screen], [Window Screen], [Report Screen], and [Mobile Screen] of [Screen Image/Setting]
  - 4 [Recipe Setting], [Logging Setting], [Device Data Transfer], [Label (GT Designer3)], [Comment], and [Category]
  - 5 [Device]
- 4) **[Page Settings] button**  
Displays the [Page Settings] dialog.  
➔ 2.14.4 [Page Settings] dialog
- 5) **[Print Preview] button**  
Displays the [Print Preview] window.  
➔ 2.14.5 [Print Preview] window
- 6) **[Print] button**  
Outputs the settings.
- 7) **[Close] button**  
Closes the [Print] dialog.

## ■ 1 [Cover]

- 1) **[Print Target]**  
Set targets to be output.
- 2) **Text**  
Input character strings to be displayed as the item selected in [Print Target].  
Up to 512 characters including three lines can be set. A line feed is counted as two characters.  
A line feed is counted as two characters.
- 3) **[Today's Date] button**  
Displayed when [Date] is selected in [Print Target].  
Input today's date.
- 4) **[Font Name]**  
Select a font of the item selected in [Print Target].
- 5) **[Size]**  
Set a text size of the item selected in [Print Target].
- 6) **Effect button**

Set an effect for the text.

- **[Bold] button**  
Boldifies the text.
- **[Italic] button**  
Leans the text.
- **[Underline] button**  
Underlines the text.

### 7) [Position-Up]

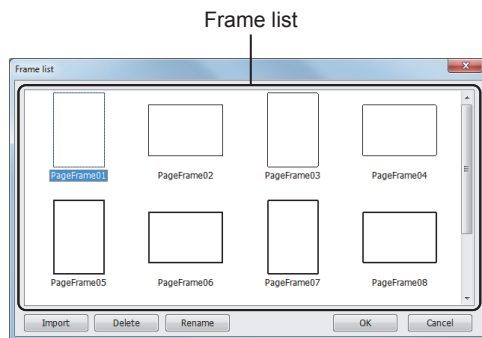

Set the display position of the text in the vertical direction with the origin at the top edge of the print area.  
The setting range is [0.0mm] to [999.9mm].

### 8) [Position-Horizontal]

Set the horizontal position of the text.

### 9) [Frame]

Displays a frame on the cover.  
Click the [...] button to display the [Frame List] dialog.  
Select a frame pattern.

- **Frame list**  
Displays frame images.
- **[Import] button**  
Imports frame images.  
The following shows available file formats for importing frame images.
  - WMF format
  - EMF format
 The imported files are displayed in the frame list.
- **[Delete] button**  
Deletes the selected frame from the frame list.
- **[Replace Name] button**  
Changes the name of the selected frame in the frame list.

### 10) [Image]

Set an image file to be displayed on the cover.  
Click the [...] button to display the [Screen Selection] dialog.  
The BMP, JPEG, WMF, and EMF file formats can be read.

- **[Position-Left]**  
Set the display position of the image in the horizontal direction with the origin at the left edge of the print area.  
The setting range is [-999.9mm] to [999.9mm].
- **[Position-Up]**  
Set the display position of the image in the vertical direction with the origin at the top edge of the print area.  
The setting range is [-999.9mm] to [999.9mm].
- **[Magnification-Width], [Magnification-Height]**  
Set the display magnification of the image.  
The setting range is [0%] to [100%].  
You can set whether to set the same value for both [Magnification-Width] and [Magnification-Height] or not.

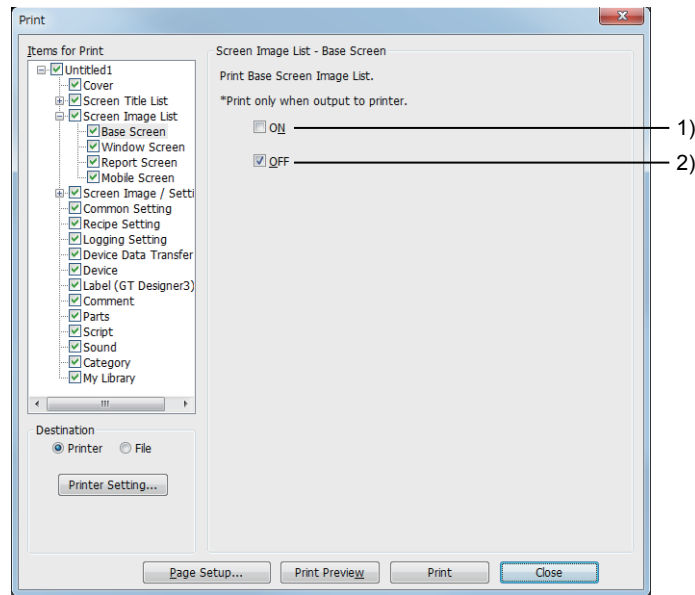

- **[Centering] button**  
Sets the display position of the image in the center of the print area.

### 11) [Cover Preview]

Displays a preview of the settings.

■2 [Base Screen], [Window Screen], [Report Screen], and [Mobile Screen] of [Screen Image List]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

1) [ON]

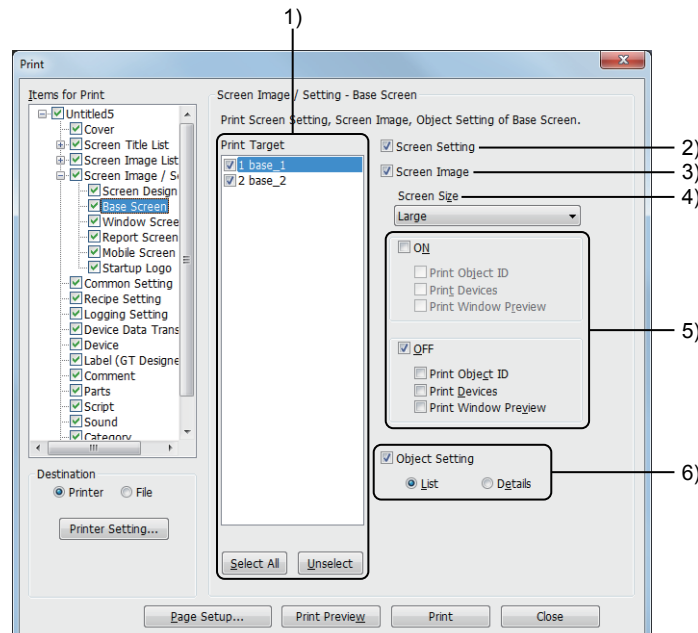

Sets the images of when the devices of each screen are on as the targets to be output. This item can be set only when [Printer] is selected in [Destination].

2) [OFF]

Sets the images of when the devices of each screen are off as the targets to be output. This item can be set only when [Printer] is selected in [Destination].

■3 [Base Screen], [Window Screen], [Report Screen], and [Mobile Screen] of [Screen Image/Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

1) [Print Target]

Set targets to be output.

Item	Description
[Select All] button	Selects all the items in [Print Target].
[Unselect] button	Deselects all the items in [Print Target].

## 2) [Screen Setting]

Select this item to set the screen setting as the target to be output.

## 3) [Screen Image]

Select this item to set the screen image as the target to be output.

## 4) [Screen Size]

Select a size of the screen image to be output.

This item can be selected only when [Printer] is selected in [Destination].

The following shows the items to be selected.

- [Large]
- [Medium]
- [Small]
- [Based Upon Base Screen]:

Outputs the screen image in the same size as that of the setting of [Screen Size] in [Base Screen].

[Based Upon Base Screen] can be set only in [Window Screen] of [Screen Image / Setting].

When [Base Screen] in [Screen Image / Setting] is not selected, the screen image is output in the size of [Large].

## 5) [ON], [OFF]

Select these items to set the settings of when the devices of each screen are on or off as the targets to be output.

Item	Description
[Print Object ID]	Displays object IDs on the screen image.
[Print Devices]	Displays devices on the screen image.
[Print Window Preview]	Displays a preview of the window screen on the screen image. This item can be selected only for base screens.

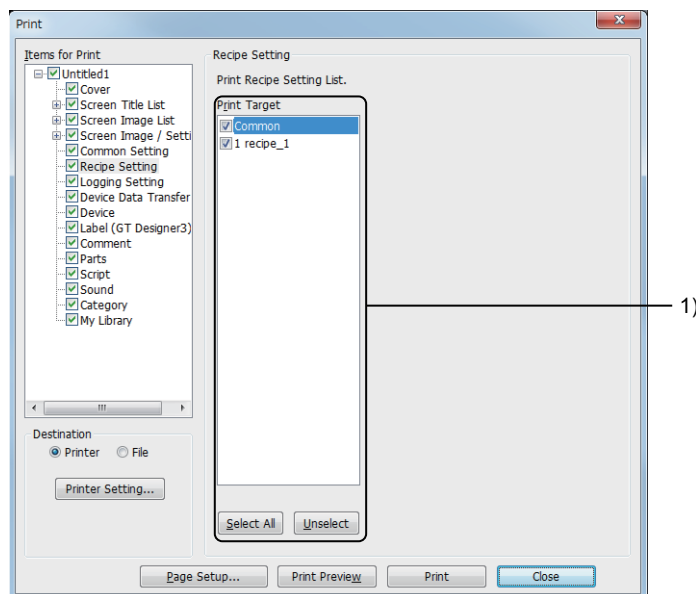

## 6) [Object Setting]

Select this item to set the object setting as the target to be output.

- [List]: Outputs the list of objects arranged on each screen.
- [Detail]: Outputs the detail settings of the objects and the figures (having the device setting) arranged on each screen.

## ■ 4 [Recipe Setting], [Logging Setting], [Device Data Transfer], [Label (GT Designer3)], [Comment], and [Category]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

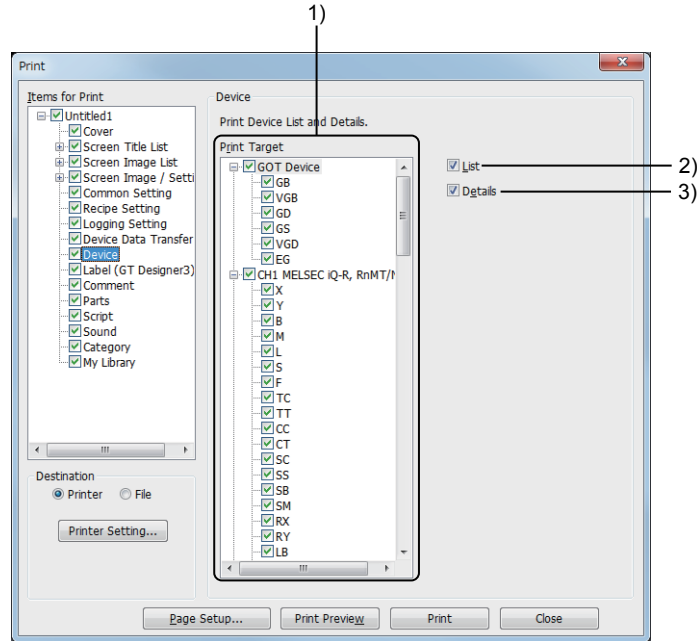

### 1) [Print Target]

Set targets to be output.

Item	Description
[Select All] button	Selects all the items in [Print Target].
[Deselect] button	Deselects all the items in [Print Target].

■ 5 [Device]

1) [Print Target]

Set targets to be output.

2) [List]

Select this item to set the device list as the target to be output.

3) [Detail]

Select this item to set the details of the devices as the targets to be output.

## 2.15 Saving a Project

GT Designer3 saves a project in the following formats.

- Workspace format
- A single file format (\*.GTX, \*.GTXS)
  - ⇒ 2.15.1 Overwriting a project
  - 2.15.2 Saving a project in the workspace or the single file format (\*.GTX)
  - 2.15.3 Saving a project in the single file format (\*.GTXS) with system applications

### 2.15.1 Overwriting a project

Select [Project] → [Save] from the menu to overwrite a project.

However, when the currently edited project is in any of the following conditions, the [Save As Project] dialog is displayed.

- A project which has never been saved
- A single file format (\*.GTXS, \*.G2) project
- A project for the GOT1000 series which opened after converted to a project for the GOT2000 series
  - ⇒ 2.15.2 ■ 1 [Save As Project] dialog (workspace format)
  - 2.15.2 ■ 2 [Save As Project] dialog (single file format)

### 2.15.2 Saving a project in the workspace or the single file format (\*.GTX)

**Step 1** Select [Project] → [Save As] from the menu to display the [Save As Project] dialog.

Switch the screens according to the saving format of the project.

- Workspace format: Save the project in the [Save As Project] dialog (workspace format).
  - ⇒ ■ 1 [Save As Project] dialog (workspace format)
- Single file format : Save the project in the [Save As Project] dialog (single file format).
  - ⇒ ■ 2 [Save As Project] dialog (single file format)

[Save As Project] dialog (workspace format)

Switching to [Save As Project] dialog (single file format)

[Save As Project] dialog (single file format)

Switching to [Save As Project] dialog (workspace format)

**Step 2** Click the [Save] button after the required settings to save the project.

#### Point

##### (1) Manipulation of the setting file for calling the PX Developer function

When you save the project for GT SoftGOT2000 in the single file format (\*.GTX), a setting file (\*.dat) for calling the PX Developer function is created in the same folder.

Do not delete the setting file (\*.dat).

If you copy or move the project to another folder, also copy or move the setting file (\*.dat) to the folder.

## (2) Operating on iQ Works

Save a project with a different name, a project cannot be saved with a different name.

Only overwriting is available.

To save a project with a different name, save the project with the workspace from MELSOFT Navigator.

### ■ 1 [Save As Project] dialog (workspace format)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Save Folder Path]

Set the destination path to save the project.

The path can be set from the [Browse] button.

Do not save the project in the following path.

- <Installation path>\GTD3\_2000\App
- <Installation path>\GTD3

#### 2) [Workspace/Project List]

Displays a workspace and project which exist in the destination path to save the project.

If a workspace is double-clicked, the projects in the workspace are displayed.

#### 3) [Workspace Name]

Set a workspace name to save the project.

When the set workspace does not exist in [Workspace/Project List], a workspace with the set name is created when the project is saved.

#### 4) [Project Name]

Set a project name to be saved.

Up to 200 characters can be used for the total number of the characters of [Save Folder Path], [Workspace Name], and [Project Name].

"\" at the end of the project name is not counted as a character.

Click the [Save] button to save the project with the set project name.

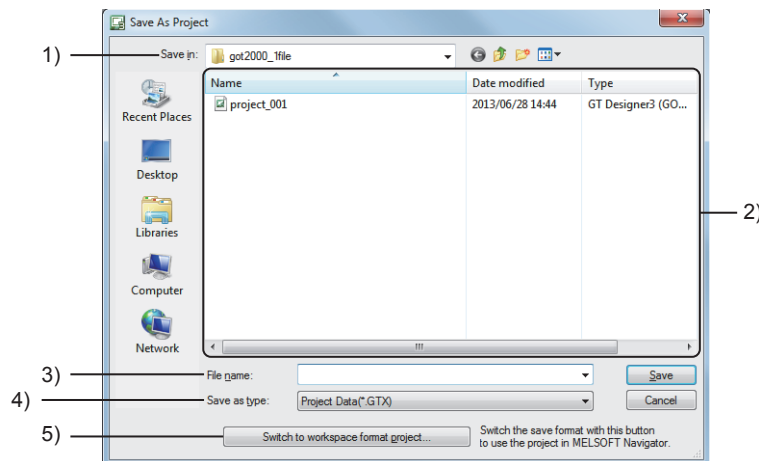

#### 5) [Switch to single file format project] button

Switches the dialog to the [Save As Project] dialog (single file format).

- ➔ ■ 2 [Save As Project] dialog (single file format)

## ■ 2 [Save As Project] dialog (single file format)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Save in]

- Select the destination to save the project.  
Do not save the project in the following path.
- <Installation path>\GTD3\_2000\App
  - <Installation path>\GTD3

### 2) File list

Lists files in the destination to save the project.

### 3) [File name]

- Set a file name of the project to be saved.  
Click the [Save] button to save the project with the set file name.

### 4) [Files of type]

Select a file type of the project to be saved.

- [Project Data (\*.GTX)]  
Saves a file in the single file format (\*.GTX).  
The single file format (\*.GTX) files are displayed in the file list.  
The file is displayed only when the [Save As Project] dialog (single file format) is opened by selecting [Project] → [Save As] from the menu.
- [Package Data (\*.GTXS)]  
Saves a file in the single file format (\*.GTXS).  
The single file format (\*.GTXS) files are displayed in the file list.  
The file is displayed only when the [Save As Project] dialog (single file format) is opened by selecting [Project] → [Save As Single File Format Project (Package Data)] from the menu.

### 5) [Switch to workspace format project] button

Switches the dialog to the [Save As Project] (workspace format) dialog.

→ ■ 1 [Save As Project] dialog (workspace format)

The file is displayed only when the [Save As Project] dialog (workspace format) is opened by selecting [Project] → [Save As] from the menu.

### ■3 Folder and file operations of the workspace format project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

If you operate (migrate, rename, or delete) the folders or files in the workspace by using Windows Explorer or others, the project cannot be opened.

Operate a workspace format project by the following procedures on GT Designer3.

#### (1) Moving a project

- Step 1 Open a project to be moved.
- Step 2 Select [Project] → [Save As] from the menu to save the project in the destination folder.
- Step 3 Delete the original project.

#### (2) Changing a project name

- Step 1 Open the project to change the name.
- Step 2 Select [Project] → [Save As] from the menu to save the project after changing the name.
- Step 3 Delete the original project.

#### (3) Copying a project

- Step 1 Open the project to be copied.
- Step 2 Select [Project] → [Save As] from the menu to save the project after changing the name.

#### (4) Deleting a project

⇒2.3.4 ■ 1 Deleting a workspace format project

## 2.15.3 Saving a project in the single file format (\*.GTXS) with system applications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Project] → [Save Package Data] from the menu to display the [Save As Package] dialog.
- Step 2 Set [File name] and click the [Save] button after the required settings to save the project.

### Point

#### (1) Saving the package data

The project in the single file format (\*.GTXS) is saved as the package data with the system application and communication driver of GT Designer3 in which the project is saved.

When the project which was saved as the package data is edited and saved, the system application and communication driver of the package data are updated with the information of the system application and communication driver of the GT Designer3 which is used to save the project.

The functions which are not compatible with the GT Designer3 which is used to save the project are deleted.

# 3. SIMULATION

---

3.1	Specifications .....	3 - 2
3.2	Connecting .....	3 - 41
3.3	Precautions .....	3 - 59
3.4	Simulation Procedure .....	3 - 64
3.5	Screen Layout of GT Simulator3 .....	3 - 69
3.6	Basic Operations of GT Simulator3 .....	3 - 74
3.7	Useful Functions of GT Simulator3 .....	3 - 87
3.8	Troubleshooting .....	3 - 103

## 3.1 Specifications

---

- ⇒3.1.1 Simulation-supported GOTs
- 3.1.2 Monitoring-supported Controllers
- 3.1.3 Available devices for monitoring
- 3.1.4 Simulation-supported/unsupported functions
- 3.1.5 Destination to save data

For the overview of the simulation function, refer to the following.

- ⇒1.1 ■ 2 Simulation

GT Simulator3 requires the same operating environment as GT Designer3.

For details, refer to the following.

- ⇒1.1.1 Operating environment

### 3.1.1 Simulation-supported GOTs

The following lists the GOTs that are compatible with simulation by GT Simulator3 Version1.

#### Point

##### Display color

The actual display color on the GOT may differ from the display color on GT Simulator3.

Check the actual display color on the GOT by [Preview] in GT Designer3.

→2.9.1 Displaying a preview

#### ■1 GOT2000 series (GT27) simulator

Name	Resolution (dot)	Display color	Memory capacity <sup>*1</sup>
GT27**-X	1024 × 768	65536 colors	57 MB
GT27**-S	800 × 600	65536 colors	57 MB
GT27**-V	640 × 480	65536 colors	57 MB
GT2705-V	640 × 480	65536 colors	32 MB

\*1 Capacity of the GOT user area where package data is stored.

#### ■2 GOT2000 series (GT25) simulator

Name	Resolution (dot)	Display color	Memory capacity <sup>*1</sup>
GT25**-WX	1280 × 800	65536 colors	32 MB
GT25**-W	800 × 480	65536 colors	32 MB
GT25**-S	800 × 600	65536 colors	32 MB
GT25**-V	640 × 480	65536 colors	32 MB
GT2505-V	640 × 480	65536 colors	32 MB

\*1 Capacity of the GOT user area where package data is stored.

#### ■3 GOT2000 series (GT23) simulator

Name	Resolution (dot)	Display color	Memory capacity <sup>*1</sup>
GT23**-V	640 × 480	65536 colors	10 MB

\*1 Capacity of the GOT user area where package data is stored.

#### ■4 GOT2000 series (GT21) simulator

Name	Resolution (dot)	Display color	Memory capacity <sup>*1</sup>
GT2107-W	800 × 480	65536 colors	15 MB
GT2105-Q	320 × 240	65536 colors or 32-level monochrome	9 MB
GT2104-R	480 × 272	65536 colors	9 MB
GT2104-P	384 × 128	32-level monochrome	6 MB
GT2103-P	320 × 128	32-level monochrome	3 MB

\*1 Capacity of the GOT user area where package data is stored.

### 3.1.2 Monitoring-supported Controllers

- ⇒ ■ 1 Controller simulator
  - 2 Mitsubishi Electric products
  - 3 Non-Mitsubishi Electric products

#### ■ 1 Controller simulator

In this section, the controller simulator refers to the following software.

- GX Simulator
- GX Simulator2
- GX Simulator3
- MT Simulator2

GT Simulators3 connecting to the controller simulator enables monitoring the following virtual controllers.

Non-Mitsubishi Electric PLCs are handled as A4UCPU, and their specific devices cannot be monitored.

Non-Mitsubishi Electric PLCs are not supported by GX Simulator2 or GX Simulator3.

- ⇒ (1) Mitsubishi Electric products
- (2) Non-Mitsubishi Electric PLCs

#### Point

For the devices that can be monitored by GT Simulator3, refer to the following.

- ⇒ 3.1.3 Available devices for monitoring

#### (1) Mitsubishi Electric products

- \*1 GX Simulator does not support the CPU.
- \*2 GX Simulator2 does not support the CPU.
- \*3 MT Simulator2 does not support the CPU.
- \*4 Only the PLC CPU area (CPU No.1) can be connected.
- \*5 To perform a simulation using GX Simulator or GX Simulator2, set the CPU as a QCPU. In this case, only the devices of QCPU can be simulated.
- \*6 To perform a simulation using GX Simulator or GX Simulator2, set the CPU as a Q03UDCPU.
- \*7 GX Simulator3 does not support the CPU.
- \*8 To perform a simulation using GX Simulator3, set the CPU as an RCPUR. In this case, only the devices of RCPUR can be simulated.
- \*9 To perform a simulation using GX Simulator or GX Simulator2, set the CPU as an FX3GCPUR.
- \*10 To perform a simulation using GX Simulator, set the controller as a Q4ACPUR.
- \*11 The MELSEC redundant system is configurable by mounting the redundant function module (R6RFM).

\*12 Not available to GT21.

The following shows the versions of the controller simulators or the software applications in which controller simulators are included.

**(a) GX Simulator**

PLC CPU compatible with simulation	Version of GX Simulator
QCPU (A mode), ACPU, motion controller CPU (A series)	Version5.00A or later
QnACPU	Version5.40E or later
FX0 series, FX0N series, FX0S series, FX1 series, FX1N series, FX1NC series, FX1S series, FX2 series, FX2C series, FX2N series, FX2NC series	Version5.40E or later
QCPU (Q mode) (except for Q00J, Q00, and Q01CPU)	Version5.40E or later
Q00JCPU, Q00CPU, Q01CPU	Version6.00A or later
Q02PHCPU, Q06PHCPU	Version7.20W or later
Q12PHCPU, Q25PHCPU	Version6.10L or later
Q12PRHCPU, Q25PRHCPU	Version6.20W or later
FX3U series, FX3UC series	Version7.08J or later
FX3G series	Version7.22Y or later
Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, Q06UDHCPU, Q10UDHCPU, Q13UDHCPU, Q20UDHCPU, Q26UDHCPU, Q03UDECPU, Q04UDEHCPU, Q06UDEHCPU, Q10UDEHCPU, Q13UDEHCPU, Q20UDEHCPU, Q26UDEHCPU	Version7.23Z or later

**(b) GX Simulator2**

PLC CPU compatible with simulation	Version of GX Works2
FX0 series, FX0N series, FX0S series, FX1 series, FX1N series, FX1NC series, FX1S series, FX2 series, FX2C series, FX2N series, FX2NC series	Version1.24A or later
QCPU (Q mode) (except for Q00J, Q00, and Q01CPU)	Version1.12N or later
Q00JCPU, Q00CPU, Q01CPU	Version1.12N or later
QnPHCPU	Version1.87R or later
FX3U , FX3UC, FX3G series	Version1.24A or later
FX3GC series	Version1.77F or later
FX3S series	Version1.492N or later
Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, Q06UDHCPU, Q10UDHCPU, Q13UDHCPU, Q20UDHCPU, Q26UDHCPU, Q03UDECPU, Q04UDEHCPU, Q06UDEHCPU, Q10UDEHCPU, Q13UDEHCPU, Q20UDEHCPU, Q26UDEHCPU	Version1.12N or later
Q03UDVCPU, Q04UDVCPU, Q06UDVCPU, Q13UDVCPU, Q26UDVCPU	Version1.492N or later
L02CPU, L26CPU-BT	Version1.24A or later
L02CPU-P, L26CPU-PBT	Version1.62Q or later
L06CPU	Version1.98C or later
L02SCPU, L26CPU	Version1.98C or later
L02SCPU-P, L06CPU-P, L26CPU-P	Version1.492N or later
Q50UDEHCPU, Q100UDEHCPU	Version1.31H or later

**(c) GX Simulator3**

PLC CPU compatible with simulation	Version of GX Works3
R00CPU, R01CPU, R02CPU	Version1.045X or later
R04CPU, R08CPU, R16CPU, R32CPU, R120CPU	Version1.007H or later <sup>*1</sup>
R08PCPU, R16PCPU, R32PCPU, R120PCPU	Version1.010L or later <sup>*1</sup>
R08SFCPU, R16SFCPU, R32SFCPU, R120SFCPU	Version1.020W or later <sup>*1</sup>
R08PSFCPU, R16PSFCPU, R32PSFCPU, R120PSFCPU	Version1.045X or later
R04ENCPU, R08ENCPU, R16ENCPU, R32ENCPU, R120ENCPU	Version1.020W or later <sup>*1</sup>
FX5U series, FX5UC series	Version1.025B or later

\*1 When global labels are set, use GX Works3 version 1.040S or later.

#### (d) MT Simulator2

Motion controller CPU compatible with simulation	Version of MT Works2
Q172DSCPU, Q173DSCPU	Version1.70Y or later

#### (2) Non-Mitsubishi Electric PLCs

The following lists available PLCs.

- OMRON PLC
- KEYENCE PLC
- KOYO EI PLC\*2
- JTEKT PLC\*2
- SHARP PLC\*2
- TOSHIBA PLC\*2
- TOSHIBA MACHINE PLC
- Panasonic IDS PLC
- HITACHI IES PLC\*2
- HITACHI PLC\*2
- FUJI PLC
- YASKAWA PLC
- YOKOGAWA PLC\*2\*3
- ALLEN-BRADLEY PLC\*1
- GE PLC\*2
- LS IS PLCS
- SICK PLC
- SIEMENS PLC

\*1 When simulated by GX Simulator, bit devices and word devices cannot be monitored.

Only internal devices can be monitored.

\*2 GT21 simulator cannot monitor the devices of the PLC.

\*3 The multiple CPU system cannot be monitored.

#### ■2 Mitsubishi Electric products

The following shows Mitsubishi Electric products that can be monitored by GT Simulator3.

Type	Model			
RCPU	R00CPU	R01CPU	R02CPU	R04CPU
	R08CPU	R16CPU	R32CPU	R120CPU
	R08PCPU *6	R16PCPU *6	R32PCPU *6	R120PCPU *6
	R08SF CPU	R16SF CPU	R32SF CPU	R120SF CPU
	R08PSF CPU *11	R16PSF CPU *11	R32PSF CPU *11	R120PSF CPU *11
	R04ENCPU	R08ENCPU	R16ENCPU	R32ENCPU
	R120ENCPU			
	R12CCPU-V *4

- \*1 Only the PLC CPU area (CPU No.1) can be connected.
- \*2 Only the devices of A2SHCPU can be monitored.
- \*3 Only the devices of A3UCPU can be monitored.
- \*4 Monitor the module via an RCPU in the multiple CPU system.
- \*5 Monitor the module via a QCPU in the multiple CPU system.
- \*6 The MELSEC redundant system is configurable by mounting the redundant function module (R6RFM).
- \*7 Monitor the controller via a motion controller CPU in the multiple CPU system. Use a MELSEC iQ-R series motion controller CPU.
- \*8 Monitor the controller via a MELSEC iQ-R or MELSEC iQ-F series simple motion module.
- \*9 Not available to GT21.
- \*10 For the direct CPU connection, use the serial port of the QCPU in a multiple CPU system.
- \*11 To monitor the module, a SIL2 function module and a redundant function module are required.

**Point**

For the devices that can be monitored by GT Simulator3, refer to the following.  
 ⇒ 3.1.3 Available devices for monitoring

### ■ 3 Non-Mitsubishi Electric products

The following shows the PLC CPUs that can be monitored by GT Simulator3.

⇒ (1) OMRON PLC CPU

#### (1) OMRON PLC CPU

Type	Model			
PLC CPU* <sup>1*2</sup>	CPM2A			
	C200HX	C200HG	C200HE	
	CQM1	CQM1H		
	CS1H	CS1G	CS1D	
	CJ1H	CJ1G	CJ1M	CJ2H
	CJ2M			
	CP1E			
	CV500	CV1000	CV2000	
	CVM1			

- \*1 Simulation is available only when the PLC CPU is directly connected to GT Simulator3.
- \*2 GX Simulator can be used instead of GT Simulator3.  
 However, when GX Simulator is used, the set devices are handled as the ones of A4UCPU, and OMRON original devices are ignored.

To connect the PLC CPU to GT Simulator3, set the PLC CPU as follows.\* 1

Item	Set value
Baud rate	9600 bps
Data length	7 bits
Stop bit	2 bits
Parity	Even number
Communicating condition format	Individual setting

Item	Set value
Host link station No.	00

\*1 For the setting of the PLC CPU, refer to the following.

→ GOT2000 Series Connection Manual (Non-Mitsubishi Electric Products 1) For GT Works3 Version1

### Point

For the devices that can be monitored by GT Simulator3, refer to the following.

→ 3.1.3 Available devices for monitoring

## 3.1.3 Available devices for monitoring

- ■ 1 When connected to the controller simulator
  - 2 Connecting with Mitsubishi Electric products
  - 3 Connecting with non-Mitsubishi Electric products

### ■ 1 When connected to the controller simulator

### Point

#### (1) Devices that are unsupported by the controller simulators

The controller simulators cannot monitor unsupported devices.

For the devices supported by the controller simulators, refer to the following.

- GX Simulator Version □ Operating Manual
  - GX Works2 Version □ Operating Manual (Common)
  - GX Works3 Operating Manual
  - MT Developer2 Help

#### (2) PLC CPU that can be monitored by GT Simulator3

For the PLCs that can be monitored by GT Simulator3, refer to the following.

→ 3.1.2 Monitoring-supported Controllers

#### (1) Mitsubishi Electric products

GT Simulator3 can monitor the devices that are monitored by the GOT.

However, the timer set value (TS) and counter set value (CS) of the MITSUBISHI ELECTRIC PLC cannot be monitored.

For the devices that can be monitored with the GOT, refer to the following.

→ 12.2 Device Range and Settings of Each Controller

#### (2) OMRON PLC (OMRON SYSMAC)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	I/O relay/Internal auxiliary relay (..)	..000000 to ..614315	..000000 to ..008115
	Data link relay (LR)	LR00000 to LR19915	LR00000 to LR08115
	Auxiliary memory relay (AR)	AR00000 to AR95915	-
	Holding relay (HR)	HR00000 to HR51115	HR00000 to HR08115
	Internal auxiliary relay/Work relay (WR)	WR00000 to WR51115	WR00000 to WR08115
	Timer contact (TIM)	TIM0000 to TIM4095	TIM0000 to TIM0255
	Counter contact (CNT)	CNT0000 to CNT4095	CNT0000 to CNT0255
	Bit-specified word device*2	Monitoring available range of each word device	Monitoring available range of each word device

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Word device	I/O relay/Internal auxiliary relay (..)	..0000 to ..6143	..0000 to ..0081
	Data link relay (LR)	LR000 to LR199	LR000 to LR081
	Auxiliary memory relay (AR)	AR000 to AR959	-
	Holding relay (HR)	HR000 to HR511	HR000 to HR081
	Internal auxiliary relay/Work relay (WR)	WR000 to WR511	WR000 to WR081
	Data memory (DM)	DM00000 to DM32767	DM0000 to DM8191
	Timer (current value) (TIM)	TIM0000 to TIM4095	TIM0000 to TIM0255
	Counter (current value) (CNT)	CNT0000 to CNT4095	CNT0000 to CNT0255
	Extended data memory (EM current bank)	EM00000 to EM32767	-
	Extended data memory (EM banks 0 to 13)	E000000 to E032767	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

\*2 Except for the data link relay, auxiliary memory relay, holding relay, and internal auxiliary relay

### (3) OMRON PLC (OMRON SYSMAC CS/CJ)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	I/O relay/Internal auxiliary relay (..)	..000000 to ..614315	..000000 to ..008115
	Data link relay (LR)	LR00000 to LR19915	LR00000 to LR08115
	Auxiliary memory relay (AR)	AR00000 to AR147115 AR1000000 to AR1153515	-
	Holding relay (HR)	HR00000 to HR51115	HR00000 to HR08115
	Internal auxiliary relay/Work relay (WR)	WR00000 to WR51115	WR00000 to WR08115
	Timer contact (TIM)	TIM0000 to TIM4095	TIM0000 to TIM0255
	Counter contact (CNT)	CNT0000 to CNT4095	CNT0000 to CNT0255
	Bit-specified word device*2	Monitoring available range of each word device	Monitoring available range of each word device
Word device	I/O relay/Internal auxiliary relay (..)	..0000 to ..6143	..0000 to ..0081
	Data link relay (LR)	LR000 to LR199	LR000 to LR081
	Auxiliary memory relay (AR)	AR000 to AR959	-
	Holding relay (HR)	HR000 to HR511	HR000 to HR081
	Internal auxiliary relay/Work relay (WR)	WR000 to WR511	WR000 to WR081
	Data memory (DM)	DM00000 to DM32767	DM0000 to DM8191
	Timer (current value) (TIM)	TIM0000 to TIM4095	TIM0000 to TIM0255
	Counter (current value) (CNT)	CNT0000 to CNT4095	CNT0000 to CNT0255
	Extended data memory (EM current bank)	EM00000 to EM32767	-
	Extended data memory (EM banks 0 to 13)	E000000 to E032767	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

\*2 Except for the data link relay, auxiliary memory relay, holding relay, and internal auxiliary relay

#### (4) KEYENCE PLC (KEYENCE KV-700/1000/3000/5000/7000)

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Relay (..)	..00000 to ..99915	..00000 to ..51115
	Internal AUX relay (MR)	MR000000 to MR399915	MR000000 to MR51115
	Latch relay (LR)	LR000000 to LR99915	LR000000 to LR51115
	Control relay (CR)	CR00000 to CR7915	CR00000 to CR1515
	Link relay (B)	B0000 to B7FFF	-
	Work relay (VB)	VB0000 to VBF9FF	-
	Timer (contact) (T)	T0000 to T3999	T0000 to T0255
	Counter (contact) (C)	C0000 to C3999	C0000 to C0255
	High-speed counter comparators (contact) (CTC)	CTC0 to CTC3	-
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Data memory (DM)	DM00000 to DM65534	DM00000 to DM8191
	Extension data memory (EM)	EM000000 to EM65534	-
	Extension data memory 2 (FM)	FM000000 to FM32767	-
	File register (ZF)	ZF000000 to ZF524287	-
	Link register (W)	W0000 to W7FFF	-
	Control memory (CM)	CM000000 to CM11998	-
	Temporary data memory (TM)	TM000 to TM511	-
	Work memory (VM)	VM000000 to VM63999	-
	Index register (Z)	Z01 to Z12	Z01 to Z06
Double word device	Timer (current value) (TC)	TC0000 to TC3999	TC0000 to TC0254
	Timer (set value) (TS)	TS0000 to TS3999	-
	Counter (current value) (CC)	CC0000 to CC3999	CC0000 to CC0254
	Counter (set value) (CS)	CS0000 to CS3999	-
	High-speed counter (current value) (CTH)	CTH0 to CTH1	-
	High-speed counter comparators (set value) (CTC)	CTC0 to CTC3	-
	Index register (DZ)	DZ01 to DZ12	-
	Digital trimmer (TRM)	TRM0 to TRM7	-

\*1 Except for the timer (current value), timer (set value), counter (current value), counter (set value), high-speed counter (current value), high-speed counter comparators (set value), control memory, temporary data memory, index register, and digital trimmer

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (5) KOYO EI PLC (KOYO KOSTAC/DL)

Not available to GT21.

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input (I)	I0 to I1777	I0 to I1777
	Output (Q)	Q0 to Q1777	Q0 to Q1777
	Link relay (GI)	GI0 to GI3777	GI0 to GI3777
	Link output (GQ)	GQ0 to GQ3777	-
	Internal relay (M)	M0 to M3777	M0 to M3777
	Stage (S)	S0 to S1777	-
	Timer (T)	T0 to T377	T0 to T377
	Counter (C)	C0 to C377	C0 to C377
	Special relay (SP)	SP0 to SP777	-
Word device	Timer (current value) (R)	R0 to R377	R0 to R377
	Preparatory register (R)	R400 to R677	R400 to R677
	Special register 1 (R)	R700 to R777	R700 to R777
	Counter (current value) (R)	R1000 to R1377	R1000 to R1377
	Data register 1 (R)	R1400 to R7377	R1400 to R7377
	Special register 2 (R)	R7400 to R7777	R7400 to R7777
	Data register 2 (R)	R10000 to R36777	R10000 to R36777
	Special register 3 (R)	R37000 to R37777	R37000 to R37777
	Link relay (R)	R40000 to R40177	R40000 to R40177
	Link output (R)	R40200 to R40377	R40200 to R40377
	Input (R)	R40400 to R40477	R40400 to R40477
	Output (R)	R40500 to R40577	R40500 to R40577
	Internal relay (R)	R40600 to R40777	R40600 to R40777
	Stage (R)	R41000 to R41077	R41000 to R41077
	Timer (R)	R41100 to R41117	R41100 to R41117
	Counter (R)	R41140 to R41157	R41140 to R41157
	Special relay (R)	R41200 to R41237	R41200 to R41237

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.

→ 12.2 Device Range and Settings of Each Controller

## (6) JTEKT PLC (JTEKT TOYOPUC-PC)

Not available to GT21.

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input (X)	X000 to X7FF	X000 to X7FF
	Output (Y)	Y000 to Y7FF	Y000 to Y7FF
	Link relay (L)	L000 to L7FF	L000 to L7FF
	Internal relay (M)	M000 to M7FF	M000 to M7FF
	Keep relay (K)	K000 to K2FF	-
	Edge detection (P)	P000 to P1FF	-
	Timer (T)	T000 to T1FF	T000 to T1FF
	Counter (C)	C000 to C1FF	C000 to C1FF
	Special relay (V)	V000 to V0FF	-
	Extended input (EX)	EX000 to EX7FF	-
	Extended output (EY)	EY000 to EY7FF	-
	Extended internal relay (EM)	EM0000 to EM1FFF	-
	Extended keep-relay (EK)	EK000 to EKFFF	-
	Extended special relay (EV)	EV000 to EVFFF	-
	Extended timer (ET)	ET000 to ET7FF	-
	Extended counter (EC)	EC000 to EC7FF	-
	Extended link relay (EL)	EL0000 to EL1FFF	-
	Extended edge detection (EP)	EP000 to EPFFF	-
	Extended input 2 (GX)	GX0000 to GXFFFF	-
	Extended output 2 (GY)	GY0000 to GYFFFF	-
Extended internal relay (GM)	GM0000 to GMFFFF	-	
Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device	
Word device	Data register (D)	D0000 to D2FFF	D0000 to D2FFF
	Link register (R)	R0000 to R07FF	R0000 to R07FF
	Setup value register (N)	N0000 to N01FF	N0000 to N01FF
	Special register (S)	S0000 to S03FF	-
	File register (B)	B0000 to B1FFF	B0000 to B1FFF
	Extended present value register (EN)	EN0000 to EN07FF	-
	Extended setup value register (H)	H0000 to H07FF	-
	Extended special register (ES)	ES0000 to ES07FF	-
	Extended data register (U)	U0000 to U7FFF	-
	Extended buffer register (EB)	EB00000 to EB07FFF EB08000 to EB0FFFF EB10000 to EB17FFF EB18000 to EB1FFFF	-
	Setup value register (TCS)	TCS0000 to TCS01FF	-
	Word-specified bit devices	Monitoring available range of each bit device	Monitoring available range of each bit device

\*1 Except for the extended buffer register and setup value register

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (7) SHARP PLC (SHARP JW)

Not available to GT21.

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)	
Bit device	I/O relay	..00000 to ..15777 ..20000 to ..75777	..00000 to ..15777	
	Timer (contact) (T)	T0000 to T1777	T0000 to T0377	
	Counter (contact)	C0000 to C1777	C0000 to C0377	
	Bit-specified word device	Monitoring available range of each word device	Monitoring available range of each word device	
Word device	Timer (present value) (T)	T0000 to T1777	T0000 to T0377	
	Counter (current value) (C)	C0000 to C1777	C0000 to C0377	
	Register (09 to E7)		09000 to 09776	09000 to 09776
			19000 to 19776	19000 to 19776
			29000 to 29776	29000 to 29776
			39000 to 39776	39000 to 39776
			49000 to 49776	49000 to 49776
			59000 to 59776	59000 to 59776
			69000 to 69776	69000 to 69776
			79000 to 79776	79000 to 79776
			89000 to 89776	89000 to 89776
			99000 to 99776	99000 to 99776
			E0000 to E0776	E0000 to E0776
			E1000 to E1776	E1000 to E1776
			E2000 to E2776	E2000 to E2776
			E3000 to E3776	E3000 to E3776
		E4000 to E4776	E4000 to E4776	
		E5000 to E5776	E5000 to E5776	
		E6000 to E6776	-	
		E7000 to E7776	E7450 to E7776	
	File register (1 to 7)	1000000 to 1177776 2000000 to 2177776 3000000 to 3177776 4000000 to 4177776 5000000 to 5177776 6000000 to 6177776 7000000 to 7177776	-	
	Word-specified bit devices *1	Monitoring available range of each bit device	Monitoring available range of each bit device	

\*1 Except for the timer and counter.

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (8) TOSHIBA PLC

Not available to GT21.

(a) TOSHIBA PROSEC T/V

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	External input (X)	X0000 to X511F	X0000 to X511F
	External output (Y)	Y0000 to Y511F	Y0000 to Y511F
	Internal relay (R)	R0000 to R4095F	R0000 to R0511F
	Special relay (S)	S0000 to S511F	-
	Link register relay (Z)	Z0000 to Z999F	Z0000 to Z511F
	Link relay (L)	L0000 to L255F	-
	Timer (contact) (T)	T0 to T999	T0 to T255
	Counter (contact) (C)	C0 to C511	C0 to C255
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	External input (XW)	XW0 to XW511	XW0 to XW511
	External output (YW)	YW0 to YW511	YW0 to YW511
	Internal relay (RW)	RW0 to RW4095	RW0 to RW4095
	Special relay (SW)	SW0 to SW511	-
	Link relay (LW)	LW0 to LW255	-
	Timer (present value) (T)	T0 to T999	T0 to T255
	Counter (current value) (C)	C0 to C511	C0 to C255
	Data register (D)	D0 to D8191	D0 to D8191
	Link register (W)	W0 to W2047	W0 to W2047
	File register (F)	F0 to F32767	-

\*1 Except for the data register (D), link register (W), and file register (F)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

(b) TOSHIBA Unified Controller nv

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	External input (X)	X000000 to X16383F	X0000 to X511F
	External output (Y)	Y000000 to Y16383F	Y0000 to Y511F
	Internal relay (R)	R000000 to R8191F	R0000 to R2047F
	Input variable (I)	I000000 to I16383F	-
	Output variable (Q)	Q000000 to Q16383F	-
	Special relay (S)	S000000 to S1023F	S000000 to S000000FF
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	External input (XW)	XW0 to XW16383	-
	External output (YW)	YW0 to YW16383	-
	Internal relay (RW)	RW0 to RW8191	-
	Special relay (SW)	SW0 to SW1023	SW0 to SW255
	Data register (D)	D0 to D8191	D0 to D8191
	File register (F)	F0 to F32767	F0 to F32767
	Input variable (IW)	IW0 to IW16383	IW0 to IW1
	Output variable (QW)	QW0 to QW16383	-
	User global (UG)	UG0 to UG262143	-

\*1 Except the external input (XW), external output (YW), internal relay (RW), special relay (SW), input variable (IW), and output variable (QW)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (9) TOSHIBA MACHINE PLC (TOSHIBA MACHINE TCmini)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input relay 1 (X)	X0000 to X511F	X0000 to X511F
	Input relay 2 (I)	I000 to IF7F	-
	Output relay 1 (Y)	Y000 to YF7F	Y000 to YF7F
	Output relay 2 (O)	O000 to OF7F	-
	Internal relay (R)	R000 to R77F	R000 to R77F
	Extended internal relay 1 (GR)	GR000 to GRF7F	-
	Extended internal relay 2 (H)	H000 to HF7F	-
	Extended internal relay 3 (J)	J000 to JF7F	-
	Extended internal relay 4 (K)	K000 to KF7F	-
	Timer (contact) (T)	T000 to T77F	T000 to T17F
	Counter (contact) (C)	C000 to C77F	C000 to C17F
	Shift relay (S)	S000 to S07F	-
	Latch relay (L)	L000 to L07F	L000 to L07F
	Edge relay (E)	E000 to E77F	E000 to E77F
	Special aux relay (A)	A000 to A16F	A000 to A16F
Word device	Input register 1 (XW)	XW00 to XWF7	XW00 to XWF7
	Input register 2 (IW)	IW00 to IWF7	-
	Output register 1 (YW)	YW00 to YWF7	YW00 to YWF7
	Output register 2 (OW)	OW00 to OWF7	
	Internal register (RW)	RW00 to RW77	RW00 to RW77
	Extended internal register 1 (GW)	GW00 to GWF7	-
	Extended internal register 2 (HW)	HW00 to HWF7	-
	Extended internal register 3 (JW)	JW00 to JWF7	-
	Extended internal register 4 (KW)	KW00 to KWF7	-
	Timer contact register (TW)	TW00 to TW77	TW00 to TW17
	Counter contact register (CW)	CW00 to CW77	CW00 to CW17
	Shift register (SW)	SW00 to SW07	-
	Latch register (LW)	LW00 to LW07	LW00 to LW07
	Edge register (EW)	EW00 to EW77	EW00 to EW77
	Special aux register (AW)	AW00 to AW16	AW00 to AW16
	Generic register 1 (D)	D000 to DF7F	D000 to DF7F
	Generic register 2 (B)	B000 to BF7F	-
	Generic register 3 (U)	U000 to UF7F	-
	Generic register 4 (M)	M000 to MF7F	-
	Generic register 5 (Q)	Q000 to QF7F	-
Timer/Counter current value (P)	P000 to P77F	P000 to P17F	
Timer/Counter set value (V)	V000 to V77F	-	

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒ 12.2 Device Range and Settings of Each Controller

## (10) PANASONIC PLC (Panasonic MEWNET-FP)

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input relay (X)	X0000 to X511F	X0000 to X511F
	Output relay (Y)	Y0000 to Y511F	Y0000 to Y511F
	Internal relay (R)	R0000 to R886F	R0000 to R511F
	Special relay (R)	R9000 to R911F	R9000 to R910F
	Link relay (L)	L0000 to L639F	L0000 to L511F
	Timer contact (T)	T0 to T3071	T0 to T255
	Counter contact (C)	C0 to C3071	C0 to C255
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Input relay (WX)	WX000 to WX511	WX000 to WX511
	Output relay (WY)	WY000 to WY511	WY000 to WY511
	Internal relay (WR)	WR000 to WR886	WR000 to WR511
	Special relay (WR)	WR900 to WR911	WR900 to WR910
	Link relay (WL)	WL000 to WL639	WL000 to WL511
	Timer/counter (elapsed value) (EV)	EV0 to EV3071	EV0 to EV255
	Counter contact (set value) (SV)	SV0 to SV3071	-
	Data register (DT)	DT0 to DT10239	DT0 to DT8191
	Special data register (DT)	DT90000 to DT90511	-
	Link register (LD)	LD0 to LD8447	LD0 to LD8191
	File register (FL)	FL0 to FL32764	-

\*1 Except for the input relay (WX), output relay (WY), internal relay (WR), special relay (WR), and link relay (WL)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒ 12.2 Device Range and Settings of Each Controller

## (11)HITACHI IES PLC (HITACHI HIDEIC H series)

Not available to GT21.

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	External input (X)	X00000 to X05A95	X00000 to X05A95
	External output (Y)	Y00000 to Y05A95	Y00000 to Y05A95
	Remote external input (X)	X10000 to X49995	-
	Remote external output (Y)	Y10000 to Y49995	-
	First CPU link (L)	L0000 to L3FFF	L0000 to L3FFF
	Second CPU link (L1)	L10000 to L13FFF	-
	Data area (M)	M0000 to M3FFF	M0000 to M1FFF
	On-delay timer (TD)	TD0 to TD255	TD0 to TD255
	Single-shot timer (SS)	SS0 to SS255	-
	Watchdog timer (WDT)	WDT0 to WDT255	-
	Monostable timer (MS)	MS0 to MS255	-
	Retentive timer (TMR)	TMR0 to TMR255	-
	Up counter (CU)	CU0 to CU511	CU0 to CU255
	Ring counter (RCU)	RCU0 to RCU511	-
	Up/down counter (CT)	CT0 to CT511	-
	Bit internal output (R)	R0 to R7BF	-
	Leading edge detection (DIF)	DIF0 to DIF511	-
	Trailing edge detection (DFN)	DFN0 to DFN511	-
	Bit-specified word device*1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	External input (WX)	WX0000 to WX05A7	-
	External output (WY)	WY0000 to WY05A7	-
	Remote external input (WX)	WX1000 to WX4997	-
	Remote external output (WY)	WY1000 to WY4997	-
	First CPU link (WL)	WL000 to WL3FF	WL000 to WL3FF
	Second CPU link (WL1)	WL1000 to WL13FF	-
	Data area (WM)	WM000 to WM3FF	WM000 to WM1FF
	Timer/counter (elapsed value) (TC)	TC0 to TC511	TC0 to TC255
	Word internal output (WR)	WR000 to WR3FF	WR000 to WR3FF

\*1 Only for timer/counter (elapsed value) (TC) and word internal output (WR)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (12)HITACHI PLC (Hitachi S10mini/S10V)

Not available to GT21.

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	External input (X)	X000 to XFFF	X000 to XFFF
	External output (Y)	Y000 to YFFF	Y000 to YFFF
	Internal register (R)	R000 to RFFF	R000 to RFFF
	Keep relay (K)	K000 to KFFF	K000 to KFFF
	Extended internal register (M)	M000 to MFFF	-
	Extended internal register (A)	A000 to AFFF	-
	On-delay timer (T)	T000 to T1FF	T000 to T0FF
	One-shot timer (U)	U000 to U0FF	-
	Up-down counter (C)	C00 to CFF	C00 to CFF
	Global link register (G)	G000 to GFFF	G000 to GFFF
	Event register (E)	E000 to EFFF	E000 to E7FF
	System register (S)	S000 to SBFF	S000 to S0FF
	Transfer register (J)	J000 to JFFF	-
	Receive register (Q)	Q000 to QFFF	-
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device

Device name	GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)	
Word device	External input (XW)	XW000 to XWFF0	XW000 to XWFF0
	External output (YW)	YW000 to YWFF0	YW000 to YWFF0
	Internal register (RW)	RW000 to RWFF0	RW000 to RWFF0
	Extended internal register (MW)	MW000 to MWFF0	-
	Extended internal register (AW)	AW000 to AWFF0	-
	Keep relay (KW)	KW000 to KWFF0	KW000 to KWFF0
	On-delay timer (TW)	TW000 to TW1F0	TW000 to TW0F0
	One-shot timer (UW)	UW000 to UW0F0	-
	Up-down counter (CW)	CW00 to CWF0	CW00 to CWF0
	Global link register (GW)	GW000 to GWFF0	GW000 to GWFF0
	Event register (EW)	EW000 to EWFF0	EW000 to EW7F0
	System register (SW)	SW000 to SWBF0	SW000 to SW0F0
	Transfer register (JW)	JW000 to JWFF0	-
	Receive register (QW)	QW000 to QWFF0	-
	On-delay timer (current value) (TC)	TC000 to TC1FF	TC000 to TC0FF
	On-delay timer (current value) (TS)	TS000 to TS1FF	-
	One-shot timer (current value) (UC)	UC000 to UC0FF	-
	One-shot timer (current value) (US)	US000 to US0FF	-
	Up-down counter (current value) (CC)	CC00 to CCFF	CC00 to CCFF
	Up-down counter (current value) (CS)	CS00 to CSFF	-
	Function data register (DW)	DW000 to DWFFF	DW000 to DWFFF
	Function work register (FW)	FW000 to FWBFF	-
	Extended function work register (LWW)	LWW0000 to LWWFFFF	-
	Backup work register (LXW)	LXW0000 to LXW3FFF	-
	Long-word work register (LLL)	LLL0000 to LLL1FFF	-
	Backup long-word work register (LML)	LML0000 to LML1FFF	-
	Floating-point work register (LF)	LF0000 to LF1FFF	-
	Backup single-precision floating-point work register (LG)	LG0000 to LG1FFF	-

\*1 Except for the external input (XW), external output (YW), internal register (RW), extended internal register (MW), extended internal register (AW), keep relay (KW), on-delay timer (TW), one-shot timer (UW), up-down counter (CW), global link register (GW), event register (EW), system register (SW), transfer register (JW), receive register (QW), long-word work register (LLL), floating-point work register (LF), backup single-precision floating-point work register (LG)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒ 12.2 Device Range and Settings of Each Controller

### (13)FUJI PLC (FUJI MICREX-F series)

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	I/O relay (B)	B0000 to B511F	B0000 to B511F
	Auxiliary relay (M)	M0000 to M511F	M0000 to M511F
	Keep relay (K)	K0000 to K063F	K0000 to K063F
	Special relay (F)	F0000 to F125F	F0000 to F015F
	Annunciator relay (A)	A0000 to A045F	A0000 to A045F
	Differential relay (D)	D0000 to D036F	-
	Link memory (L)	L0000 to L511F	L0000 to L511F
	Timer output (0.01second) (T)	T000 to T511	T000 to T255
	Timer output (0.1second) (T)	T512 to T999	-
	Counter output (C)	C000 to C511	C000 to C255
	Bit-specified word device *1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	I/O relay (WB)	WB000 to WB511	WB000 to WB511
	Auxiliary relay (WM)	WM000 to WM511	WM000 to WM511
	Keep relay (WK)	WK000 to WK063	WK000 to WK063
	Special relay (WF)	WF000 to WF125	WF000 to WF015
	Annunciator relay (WA)	WA000 to WA045	WA000 to WA045
	Differential relay (WD)	WD000 to WD063	-
	Link memory (WL)	WL000 to WL511	WL000 to WL511
	Direct access (W24)	W24: 0000 to W24: 0255	-
	User file (W30) User file (W31) : User file (W108) User file (W109)	W30: 0000 to W30: 4095 W31: 0000 to W31: 4095 W108: 0000 to W108: 4095 W109: 0000 to W109: 4095	-
	Data memory (BD)	BD0 to BD4095	BD0 to BD4095
	Timer set value (0.01second) (TS)	TS0 to TS511	-
	Timer current value (0.01second) (TR)	TR0 to TR511	TR000 to TR254
	Timer current value (0.1second) (W9)	W9: 0000 to W9: 0487	-
	Counter set value (CS)	CS0 to CS511	-
Counter current value (CR)	CR0 to CR511	CR0 to CR254	

\*1 Except for the I/O relay (WB), auxiliary relay (WM), keep relay (WK), special relay (WF), annunciator relay (WA), differential relay (WD), link memory (WL), data memory (BD), timer set value (0.01second) (TS), timer current value (0.01second) (TR), timer current value (0.1second) (W9), counter set value (CS), and counter current value (CR)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

### (14)YASKAWA PLC

#### (a) YASKAWA GL/PROGIC8

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Coil (O)	O1 to O63424	O1 to O8176
	Input relay (I)	I1 to I63424	I1 to I8176
	Link coil (D)	D1 to D2048	D1 to D2048
		D10001 to D12048 D20001 to D22048	-
	Bit-specified word device	Monitoring available range of each word device	Monitoring available range of each word device

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Word device	Input register (Z)	Z1 to Z31840	Z1 to Z8192 Z9000 to Z9256
	Holding register (W)	W1 to W28291	-
		SW1 to SW28291	-
	Link register (R, SR)	R1 to R2048	R1 to R2048
		R10001 to R12048 R20001 to R22048	-
		SR1 to SR2048	-
		SR10001 to SR12048 SR20001 to SR22048	-
Constant register (K)	K1 to K4096	K1 to K6	
Word-specified bit devices*1	Monitoring available range of each bit device	Monitoring available range of each bit device	

\*1 Except for the coil (O) and input relay (I)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

→12.2 Device Range and Settings of Each Controller

### (b) YASKAWA CP-9200SH/MP900 series

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Coil (MB)	MB000000 to MB32767F	MB000000 to MB00511F
	Input relay (IB)	IB0000 to IBFFFF	IB0000 to IB1FFF
	Bit-specified word device*1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Input register (IW)	IW0000 to IW7FFF	IW0000 to IW1FFF
	Holding register (MW)	MW0 to MW32767	-
	Coil (MB)	MB0 to MB32767	MB0 to MB511
	Input relay (IB)	IB000 to IBFFF	IB000 to IBFFF

\*1 Except for the coil (MB) and input relay (IB)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

→12.2 Device Range and Settings of Each Controller

### (c) YASKAWA CP-9200(H)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Coil (OB)	MB000000 to MB32767F	MB000000 to MB00511F
	Input relay (IB)	IB0000 to IBFFFF	IB0000 to IB1FFF
	Bit-specified word device	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Input register (IW)	IW00 to IW7F	-
	Output register (OW)	OW00 to OW7F	-
	Data register (DW, ZD)	DW0 to DW2047	-
		ZD0 to ZD2047	ZD0 to ZD6
	Common register (MW)	MW0 to MW7694	-
	Word-specified bit devices	Monitoring available range of each bit device	Monitoring available range of each bit device

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.

→12.2 Device Range and Settings of Each Controller

(d) YASKAWA CP-9300MS (MC compatible)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Coil (OB)	OB0 to OB1023	OB0 to OB1023
	Input relay (IB)	IB0 to IB1023	IB0 to IB1023
	Bit-specified word device	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Input register (I)	I0 to I63	-
	Data register (M)	M0 to M2047	-
	Output register (O)	O0 to O63	-
	Word-specified bit devices	Monitoring available range of each bit device	Monitoring available range of each bit device

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

(15)YOKOGAWA PLC

Not available to GT21.

(a) FA500/FA-M3

Device name		GOT monitoring available range*3	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input relay (X)	X00201 to X71664	X00201 to X71664
	Output relay (Y)	Y00201 to Y71664	Y00201 to Y71664
	Internal relay (I)	I1 to I65535	-
	Link relay (L)	L1 to L71024	L1 to L71024
	Shared relay (E)	E1 to E4096	-
	Special relay (M)	M1 to M9984	M1 to M256
	Timer (TU)	TU1 to TU3072	TU1 to TU256
	Counter (CU)	CU1 to CU3072	CU1 to CU256
	Bit-specified word device*1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Timer (TP)	TP1 to TP3072	TP1 to TP256
	Timer (TS)	TS1 to TS3072	-
	Counter (CP)	CP1 to CP3072	CP1 to CP256
	Counter (CS)	CS1 to CS3072	-
	File register (B)	B1 to B262144	-
	Data register (D)	D1 to D8192	D1 to D8192
	Shared register (R)	R1 to R4096	-
	Index register (V)	V1 to V256	-
	Link register (W)	W1 to W71024	W1 to W71024
	Special register (Z)	Z1 to Z512	Z1 to Z256
	Word-specified bit devices*2	Monitoring available range of each bit device	Monitoring available range of each bit device

\*1 Except for the timer (TP), timer (TS), counter (CP), and counter (CS)

\*2 Except for the timer (TU) and counter (CU)

\*3 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

(16)ALLEN-BRADLEY PLC

**(a) AB SLC500**

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)

⇒12.2 Device Range and Settings of Each Controller

**(b) AB MicroLogix**

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Bit (B)	B3: 0/0 to B255: 255/15	-
	Timer (timing bit) (T)	T3: 0/14 (TT) to T255: 255/14 (TT)	-
	Counter (completion bit) (C)	T3: 0/13 (DN) to T255: 255/13 (DN)	-
	Counter (up counter) (C)	C3: 0/15 (CU) to C255: 255/15 (CU)	-
	Counter (down counter) (C)	C3: 0/14 (CD) to C255: 255/14 (CD)	-
	Counter (completion bit) (C)	C3: 0/13 (DN) to C255: 255/13 (DN)	-
	Integer (N)	N3: 0/0 to N255: 255/15	-
Word device	Bit (B)S	B3: 0 to B255: 255	-
	Timer (set value) (T)	T3: 0.1 (PRE) to T255: 255.1 (PRE)	-
	Timer (present value) (T)	T3: 0.2 (ACC) to T255: 255.2 (ACC)	-
	Counter (set value) (C)	C3: 0.1 (PRE) to C255: 255.1 (PRE)	-
	Counter (current value) (C)	C3: 0.2 (ACC) to C255: 255.2 (ACC)	-
	Integer (N)	N3: 0 to N255: 255	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

**(c) AB MicroLogix (Extended)**

For the details of the communication drivers, contact our company.

**(d) AB Control/CompactLogix**

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	BOOL	BOOL0[0] to BOOL999[31999]	-

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Word device	INT	INT0[0] to INT999[999]	-
	DINT	DINT0[0] to DINT999[999]	-
	REAL	REAL0[0] to REAL999[999]	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

### (17)GE PLC (GE Series 90)

Not available to GT21.

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	input(I)	I00001 to I12288	I00001 to I08192
	output(Q)	Q00001 to Q12288	Q00001 to Q08192
	internal(M)	M00001 to M12288	M00001 to M08192
	temporary(T)	T001 to T256	-
	system status(S)	S001 to S128	-
	system status(SA)	SA001 to SA128	-
	system status(SB)	SB001 to SB128	-
	system status(SC)	SC001 to SC128	-
	global data(G)	G0001 to G7680	-
Word device	system register(R)	R00001 to R32640	R00001 to R08192
	analog input register(AI)	AI0001 to AI32640	-
	analog output register(AQ)	AQ0001 to AQ32640	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

### (18)LS IS PLC (LS Industrial Systems MASTER-K)

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	I/O relay (P)	P0000 to P063F	P0000 to P063F
	Auxiliary relay (M)	M0000 to M191F	M0000 to M191F
	Keep relay (K)	K0000 to K031F	K0000 to K031F
	Link relay (L)	L0000 to L063F	L0000 to L063F
	Special relay (F)	F0000 to F063F	F0000 to F015F
	Timer contact (T)	T0 to T255	T0 to T255
	Counter contact (C)	C0 to C255	C0 to C255
Word device	I/O relay (P)	P000 to P063	P000 to P063
	Auxiliary relay (M)	M000 to M191	M000 to M191
	Keep relay (K)	K000 to K031	K000 to K031
	Link relay (L)	L000 to L063	L000 to L063
	Special relay (F)	F000 to F063	F000 to F015
	Timer current value (T)	T0 to T255	T0 to T255
	Counter current value (C)	C0 to C255	C0 to C255
	Step controller (S)	S0 to S99	-
	Data register (D)	D0 to D9999	D0 to D8191

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 ⇒12.2 Device Range and Settings of Each Controller

**(19)SICK safety controller (SICK Flexi Soft)**

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input (I)	I1.1 to I12.8	I1.1 to I12.8
	Output (Q)	Q1.1 to Q12.8	Q1.1 to Q12.8
	Logic result (LQ)	LQ0.0 to LQ3.7	LQ0.0 to LQ3.7
	Logic input (LI)	LI0.0 to LI3.7	LQ0.0 to LQ3.7
	Bit-specified word device	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Data (byte) (D)	D0 to D99	D0 to D99
	Data (word) (W)	W0 to W49	W0 to W49
	EFI input (byte) (EI)	EI110 to EI233	EI110 to EI133
	EFI output (byte) (EQ)	EQ10 to EQ22	EQ10 to EQ12
	Logic input (byte) (LD)	LD0 to LD3	-
	Logic input (word) (LW)	LW0 to LW1	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

**(20)SIEMENS PLC****(a) SIEMENS S7-300/400 series**

Device name		GOT monitoring available range*2	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Input relay (I)	I0000 to I5117	I0000 to I5117
	Output relay (Q)	Q0000 to Q5117	Q0000 to Q5117
	Bit memory (M)	M00000 to M20477	M00000 to M10237
	Bit-specified word device*1	Monitoring available range of each word device	Monitoring available range of each word device
Word device	Input relay (IW)	IW0 to IW510	IW0 to IW510
	Output relay (QW)	QW0 to QW510	QW0 to QW510
	Bit memory (MW)	MW0 to MW2046	MW0 to MW1022
	Timer (present value) (T)	T0 to T511	T0 to T255
	Counter (current value) (C)	C0 to C511	C0 to C255
	Data register (DB)	DB1.DBW0 to DB1.DBW65534 DB2.DBW0 to DB2.DBW65534 : DB4094.DBW0 to DB4094.DBW65534 DB4095.DBW0 to DB4095.DBW65534	-

\*1 Except for the input relay (IW), output relay (QW), bit memory (MW), timer (present value) (T), and counter (present value) (C)

\*2 For the precautions for using devices that can be monitored with the GOT, refer to the following.

⇒12.2 Device Range and Settings of Each Controller

## (b) SIEMENS S7-200 series

Device name		GOT monitoring available range*1	GT Simulator3 monitoring available range (operable range on GX Simulator or GX Simulator2)
Bit device	Variable memory (V)	V0 to V51197	-
	Input relay (I)	I00 to I77	I00 to I77
	Output relay (Q)	Q00 to Q77	Q00 to Q77
	Bit memory (M)	M000 to M317	M000 to M317
	Special memory (SM)	SM0000 to SM1947	-
	Timer (T)	T0 to T255	T0 to T255
	Counter (C)	C0 to C255	C0 to C255
	Sequence control relay (S)	S000 to S317	-
Word device	Variable memory (VW)	VW0 to VW5118	VW0 to VW1022
	Input relay (IW)	IW0 to IW6	IW0 to IW6
	Output relay (QW)	QW0 to QW6	QW0 to QW6
	Analog input (AIW)	AIW0 to AIW30	-
	Analog output (AQW)	AQW0 to AQW30	-
	Bit memory (MW)	MW0 to MW30	MW0 to MW30
	Special memory (SMW)	SMW0 to SMW192	-
	Timer (T)	T0 to T255	T0 to T255
	Counter (C)	C0 to C255	C0 to C255
	High speed counter (HC)	HC0 to HC2	-
	Sequence control relay (SW)	SW0 to SW30	-

\*1 For the precautions for using devices that can be monitored with the GOT, refer to the following.  
 →12.2 Device Range and Settings of Each Controller

## ■ 2 Connecting with Mitsubishi Electric products

GT Simulator3 can monitor the devices that are monitored by the GOT.

For the devices that can be monitored with the GOT, refer to the following.

→12.2 Device Range and Settings of Each Controller

For the following controllers, some of their devices cannot be monitored through a motion controller, simple motion module, or PLC.

- MR-J4-GF(-RJ)

Controller to be routed	Monitoring target	Devices that cannot be monitored
Motion controller Simple motion module	MR-J4-GF(-RJ)	PF49 to PF64, PF1049 to PF1064 PC65 to PC80, PC1065 to PC1080 MD11 to MD18 PT1 to PT80, PT1001 to PT1080 PN1 to PN32, PN1001 to PN1032 POS1 to POS255, POS1001 to POS1255 SPD1 to SPD255, SPD1001 to SPD1255 ACT1 to ACT255, ACT1001 to ACT1255 DCT1 to DCT255, DCT1001 to DCT1255 DWL1 to DWL255, DWL1001 to DWL1255 AUX1 to AUX255, AUX1001 to AUX1255

• Inverter

Controller to be routed	Monitoring target	Devices that cannot be monitored
PLC	Inverter	IOST0 to IOST127 CMD0 to CMD47 AL0 to AL899 LPr0 to LPr1500 OP0 to OP4 PV1 to PV143

For the PLC CPUs that can be monitored by GT Simulator3, refer to the following.

→ 3.1.2 Monitoring-supported Controllers

### ■ 3 Connecting with non-Mitsubishi Electric products

GT Simulator3 can monitor the devices that are monitored by the GOT.

For the devices that can be monitored with the GOT, refer to the following.

→ 12.2 Device Range and Settings of Each Controller

For the non-Mitsubishi Electric equipment that can be monitored with GT Simulator3, refer to the following.

→ ■ 3 Non-Mitsubishi Electric products

### 3.1.4 Simulation-supported/unsupported functions

The following shows the functions that are compatible and incompatible with simulation by GT Simulator3 Version1.

#### ■ 1 GT27

##### (1) Common function

○ : Supported, - : Unsupported

Function	Supported/Unsupported	Function	Supported/Unsupported
System font display	○	Multi-channel connection	-
Option font display	○	Vertical display	○
Superimposition of objects	○	Touch panel and touch key	○
Base screen display	○	Numerical display/input	○
Overlap window display	○	Text display/input	○
Superimpose window display	○	Historical data list display	○
Key window display	○	Clock display	○
Set overlay screen	○	Comment display	○
Screen Switching	○	Alarm display	○
Station No. Switching	○	Alarm popup display	○
Buffer Memory Unit No. Switching	○	Recipe display (record list)	○
Language Switching	○	Graphical meter	○
System information	○	Panel meter display	○
Security authentication	○	Historical trend graph	○
Status observation	○	Line graph	○
Time action	○	Bar graph	○
Hard copy function	○	Scatter graph	○
Comment	○	Statistics graph	○
Figure	○	Level display	○
Internal device	○	Touch switch	○
Cursor movement	○	Slider	○
Operation Log	○	Video/RGB display object	-
Logging	○	Script parts	○
Recipe	○	Mobile screen display	-
Script	○	Hyperlink	-

## (2) Utility function

○ : Supported, - : Unsupported

Category	Function	Supported/ Unsupport ed	Function	Supported/ Unsupport ed
[GOT basic set]	[Display]	○	[Time]	-

### 3.1.5 Destination to save data

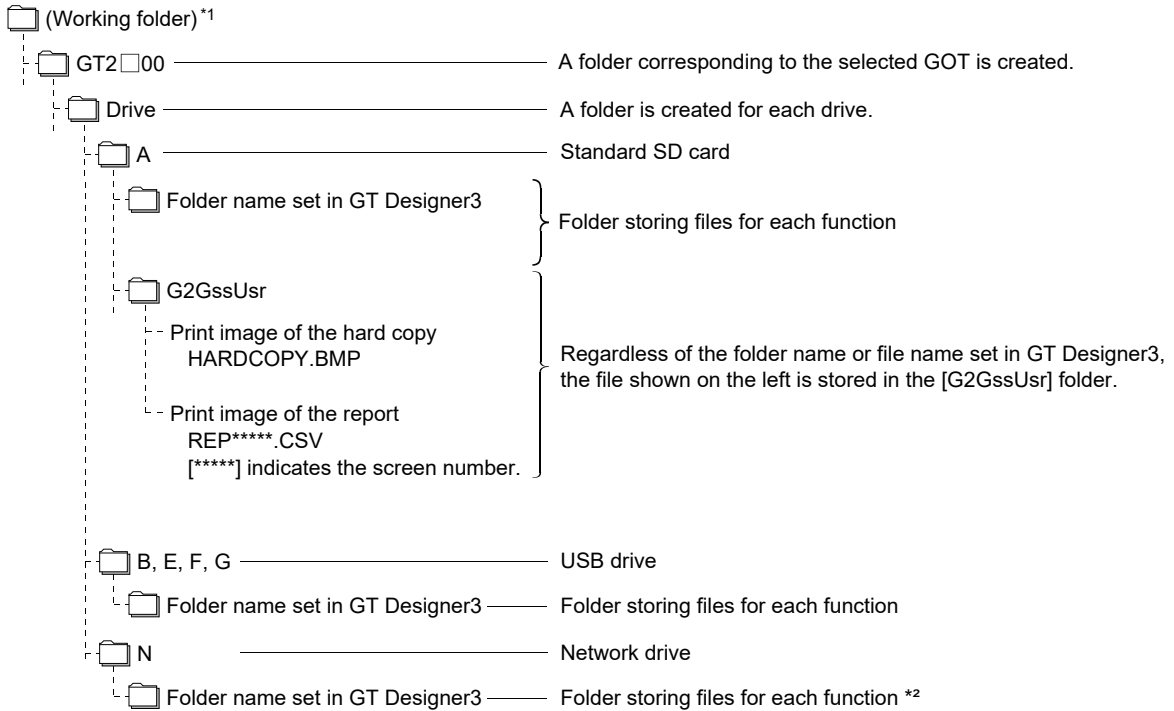

GT Simulator3 uses the folders on the hard drive of the personal computer as virtual drives.

#### ■1 For functions saving data into a data storage or file server

When a data storage or file server is specified to save the files for functions including object functions and extended functions, data is saved onto the hard drive of the personal computer.

The files for each function are saved into the folders as shown below.

The drive unavailable to the simulation target GOT is not usable.

\*1 For the working folder, refer to the following.

⇒ ■ 3 Working folder

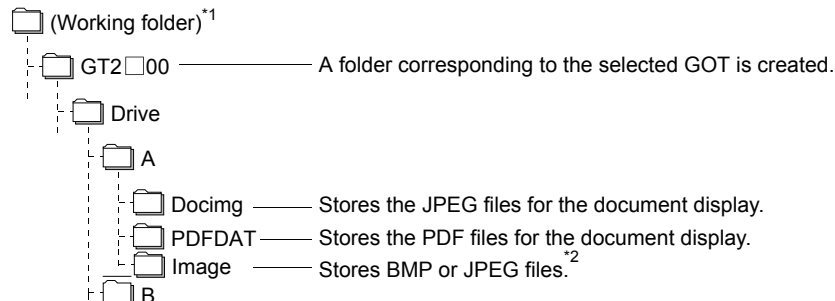

\*2 In the simulation, files can be saved into virtual drives only.

#### ■2 For functions requiring the user to save data into a data storage

When registering BMP files or JPEG files used as parts or data for document display, save them in the hard disk of the personal computer.

Store each data in the following (user-created) folders.

(The drive to be used depends on the specifications of the object or setting.)

\*1 For the working folder, refer to the following.

⇒ ■ 3 Working folder

\*2 You can change the file name.

For how to use BMP files or JPEG files, refer to the following.

⇒ 5.9.3 How to use parts ([Parts])

### ■3 Working folder

The working folder differs depending on the OS of the personal computer in which GT Simulator3 is installed. The following lists the working folder for each OS.

- Windows 10, Windows 8.1, Windows 8, Windows 7, and Windows Vista: Users\\AppData\Local\MITSUBISHI\GSS3
- Windows XP: Document and Settings\\Local Settings\Application Data\MITSUBISHI\GSS3

## 3.2 Connecting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 3.2.1 Connecting with the controller simulators
- 3.2.2 Connecting with Mitsubishi Electric products
- 3.2.3 Connecting with non-Mitsubishi Electric products

### 3.2.1 Connecting with the controller simulators

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Install a controller simulator to be connected.

#### ■ 1 When connecting with GX Simulator

- GX Developer
- GX Simulator

For how to install GX Developer or GX Simulator, refer to the following.

⇒ GX Developer Version □ Operating Manual (Startup)

#### ■ 2 When connecting with GX Simulator2

- GX Works2

For how to install GX Works2, refer to the following.

⇒ GX Works2 Installation Procedure Manual

#### ■ 3 When connecting with GX Simulator3

- GX Works3

For how to install GX Works3, refer to the following.

⇒ GX Works3 Installation Instructions

#### ■ 4 When connecting with MT Simulator2

- MT Developer2

For how to install MT Developer2, refer to the following.

⇒ MELSOFT MT Works2 Installation Instructions

### 3.2.2 Connecting with Mitsubishi Electric products

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Connecting with RCPU or motion controller CPU (MELSEC iQ-R series)
- 2 Connecting with QCPU or Q series motion controller CPU
- 3 Connecting with LCPU
- 4 Connecting with QnACPU, ACPU, motion controller CPU (A series), or FXCPU
- 5 Connecting with MELSEC iQ-F
- 6 Connecting with the MELSECNET/H remote I/O station
- 7 Connecting with CC-Link IE Field Network head unit
- 8 Connecting with MELDAS C6/C64

#### ■ 1 Connecting with RCPU or motion controller CPU (MELSEC iQ-R series)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

\*1 For how to install GX Works3, refer to the following.

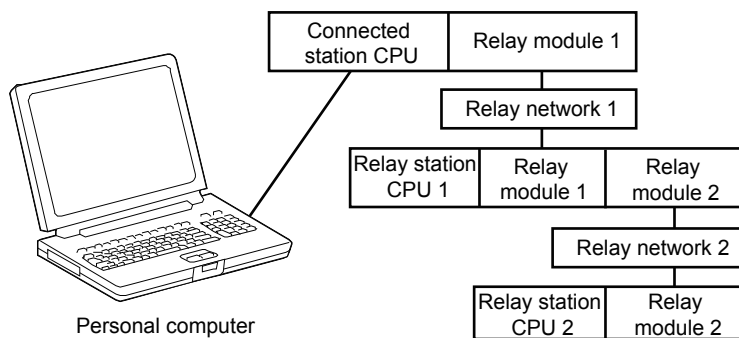

➔ GX Works3 Installation Instructions

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

➔ 3.1.2 Monitoring-supported Controllers

#### (1) Access range

The following shows the access range for the CPU direct connection in the following configuration.

**(a) Single network**

○ : Accessible, - : Inaccessible

Connected station	Relay station								
	Relay network 1	Relay module							
		RCPU	LCPU	QnCPU	QSCPU*1	QCPU (A mode)	QnACPU	ACPU	FX5CPU
○	Mnet/10(H)	-	-	-	-	-	-	-	-
	Ethernet	○	○	○	○	-	-	-	-
	CC IE Cont	○	-	○	○	-	-	-	-
	CC IE Field	○	○	○	○	-	-	-	○*2

\*1 The routing parameter cannot be set for a QSCPU, and therefore the GOT cannot access the networks on which the CPU is not located.

\*2 Use an intelligent function module (FX5-CCLIEF) as an intelligent device station to connect to the CC-Link IE Field Network.

**(b) Multiple networks**

○ : Accessible, - : Inaccessible

Connected station	Relay station									
	Relay network 1	Relay network 2	Relay module							
			RCPU	LCPU	QnCPU	QSCPU*1	QCPU (A mode)	QnACPU	ACPU	FX5CPU
○	Mnet/10(H)	Mnet/10(H)	-	-	-	-	-	-	-	-
		Ethernet	-	-	-	-	-	-	-	-
		CC IE Cont	-	-	-	-	-	-	-	-
		CC IE Field	-	-	-	-	-	-	-	-
○	Ethernet	Mnet/10(H)*3	-	-	○	○	-	-	-	-
		Ethernet	○	○	○	○	-	-	-	-
		CC IE Cont*4	○	-	○	○	-	-	-	-
		CC IE Field	○	○	○*2	○	-	-	-	-
○	CC IE Cont	Mnet/10(H)*3	-	-	○	○	-	-	-	-
		Ethernet	○	○	○	○	-	-	-	-
		CC IE Cont*4	○	-	○	○	-	-	-	-
		CC IE Field	○	○	○*2	○	-	-	-	-
○	CC IE Field*1	Mnet/10(H)*3*5	-	-	○	○	-	-	-	-
		Ethernet*5	○	○	○	○	-	-	-	-
		CC IE Cont*4*5	○	-	○	○	-	-	-	-
		CC IE Field*5	○	○	○*2	○	-	-	-	-

\*1 The routing parameter cannot be set for a QSCPU, and therefore the GOT cannot access the networks on which the CPU is not located.

\*2 Only the universal model is applicable.

\*3 This network is inaccessible when an RCPU or LCPU is used in relay station No. 1.

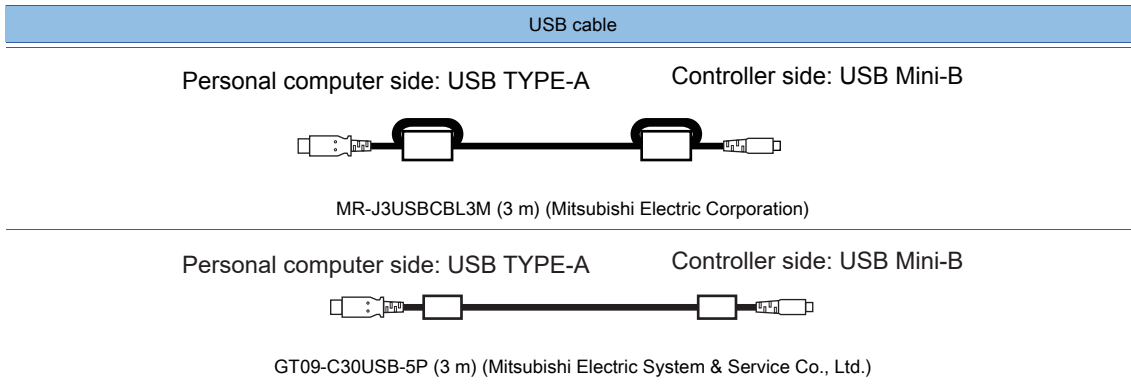

\*4 This network is inaccessible when an LCPU is used in relay station No. 1.

\*5 This network is inaccessible when an FX5CPU is used in relay station No. 1.

**(2) Connection cable**

The following shows the converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

**(a) When using a USB cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.**

**(b) When using a USB cable manufactured by BUFFALO KOKUYO SUPPLY INC.**

**(c) When using a USB cable manufactured by SANWA SUPPLY INC.**

**■ 2 Connecting with QCPU or Q series motion controller CPU**

\*1 For how to install GX Developer or GX Works2, refer to the following.

⇒ GX Developer Version □ Operating Manual (Startup)  
 ⇒ GX Works2 Installation Procedure Manual

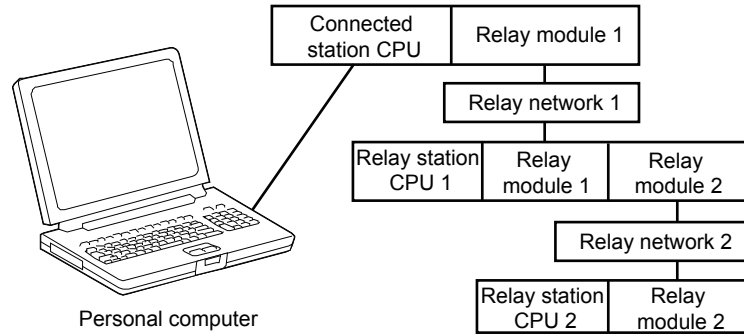

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

⇒ 3.1.2 Monitoring-supported Controllers

**(1) Access range**

The following shows the access range for the CPU direct connection in the following configuration.

**(a) Single network**

○ : Accessible, - : Inaccessible, ▲ : Accessible when the connected CPU is the control station

Connected station	Relay station								
	Relay network 1	Relay module							
		RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU <sup>*2</sup>	ACPU <sup>*4</sup>	FX5CPU
○	Mnet/10(H)	-	-	○	○	○	○	○	-
	Ethernet	-	○	○	○	-	○	-	-
	CC IE Cont	-	-	○	○	-	-	-	-
	CC IE Field*1	-	○	○*1	○	-	-	-	-

- \*1 Only the universal model is applicable.
- \*2 MELDAS C6\* is not applicable.
- \*3 When QSCPU is connected by USB, access to other stations or other PLCs is unavailable.
- \*4 Depending on the CPU type, the access range is different. Refer to the following table.

Connected station	Relay network 1		Relay network 2	
	AnA(AnN)CPU	AnUCPU	AnA(AnN)CPU	AnUCPU
QnCPU	▲	○	-	○

**(b) Multiple networks**

○ : Accessible, - : Inaccessible, ▲ : Accessible when the connected CPU is the control station

Connected station	Relay station										
	Relay network 1	Relay network 2	Relay module								
			RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU <sup>*2</sup>	ACPU <sup>*4</sup>	FX5CPU	
○	Mnet/10(H)	Mnet/10(H)	-	-	○	○	○	○	○	○	-
		Ethernet	-	○	○	○	-	○	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-	-
		CC IE Field	-	○	○	○	-	-	-	-	-
○	Ethernet	Mnet/10(H)	-	-	○	○	-	○	-	-	-
		Ethernet	-	○	○	○	-	○	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-	-
		CC IE Field	-	○	○	○	-	-	-	-	-
○	CC IE Cont	Mnet/10(H)	-	-	○	○	-	-	-	-	-
		Ethernet	-	○	○	○	-	-	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-	-
		CC IE Field	-	○	○	○	-	-	-	-	-

Connected station	Relay station									
	Relay network 1	Relay network 2	Relay module							
QCPU, QSCPU <sup>*3</sup>			RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU <sup>*2</sup>	ACPU <sup>*4</sup>	FX5CPU
○	CC IE Field <sup>*1</sup>	Mnet/10(H)	-	-	○	○	-	-	-	-
		Ethernet	-	○	○	○	-	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-
		CC IE Field	-	○	○ <sup>*1</sup>	○	-	-	-	-

\*1 Only the universal model is applicable.

\*2 MELDAS C6\* is not applicable.

\*3 When QSCPU is connected by USB, access to other stations or other PLCs is unavailable.

\*4 Depending on the CPU type, the access range is different.

Refer to the following table.

Connected station	Relay network 1		Relay network 2	
	AnA(AnN)CPU	AnUCPU	AnA(AnN)CPU	AnUCPU
QnCPU	▲	○	-	○

## (2) Connection cable

The following shows the converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

### (a) When using an RS-232 cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.

\*1 Only the PLC CPU area (CPU No. 1) of Q170MCP, Q170MSCPU, and Q170MSCPU-S1 (motion controller CPU (Q series)) can be connected.

### (b) When using a USB cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.

- When using a Universal model QCPU

### (c) When using a USB cable manufactured by ELECOM CO., LTD.

- When using a Universal model QCPU

USB cable/USB conversion adapter

Personal computer side: USB TYPE-A

Controller side: USB Mini-B

USB2-30 (3 m) + AD-USBBFTM5M

- When using a Basic model QCPU, High Performance model QCPU, Process CPU, or Redundant CPU

USB cable

Personal computer side: USB TYPE-A

Controller side: USB Mini-B

USB2-30 (3 m)

(d) When using a USB cable manufactured by BUFFALO KOKUYO SUPPLY INC.

- When using a Universal model QCPU

USB cable/USB conversion adapter

Personal computer side: USB TYPE-A

Controller side: USB Mini-B

AU2-30 (3 m) + AUXUBM5

- When using a Basic model QCPU, High Performance model QCPU, Process CPU, or Redundant CPU

USB cable

Personal computer side: USB TYPE-A

Controller side: USB Mini-B

USB2-30 (3 m)

(e) When using a LOAS USB cable

- When using a Universal model QCPU

USB cable

Personal computer side: USB TYPE-A

Controller side: USB Mini-B

ZUM-430 (3 m)

3 Connecting with LCP

GT27 GT25 GT23 GT21 SoftGOT2000 GS

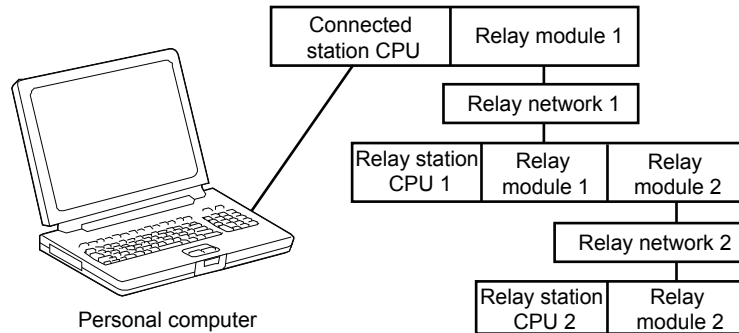

\*1 For how to install GX Developer, GX Simulator, or GX Simulator2, refer to the following.

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

⇒3.1.2 ■ 2 Mitsubishi Electric products

### (1) Access range

The following shows the access range for the CPU direct connection in the following configuration.

#### (a) Single network

○ : Accessible, - : Inaccessible

Connected station	Relay station								
	Relay network 1	Relay module							
LCPU		RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU	ACPU	FX5CPU
○	Ethernet	-	○	○	○	-	-	-	-
○	CC IE Field	-	○	○*1	○	-	-	-	-

\*1 Only the universal model is applicable.

#### (b) Multiple networks

○ : Accessible, - : Inaccessible

Connected station	Relay station									
	Relay network 1	Relay network 2	Relay module							
LCPU			RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU	ACPU	FX5CPU
○	Ethernet	Mnet/10(H)	-	-	○	○	-	-	-	-
		Ethernet	-	○	○	○	-	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-
		CC IE Field	-	○	○*1	-	-	-	-	-
○	CC IE Field*1	Mnet/10(H)	-	-	○	○	-	-	-	-
		Ethernet	-	○	○	○	-	-	-	-
		CC IE Cont	-	-	○	○	-	-	-	-
		CC IE Field	-	○	○*1	-	-	-	-	-

\*1 Only the universal model is applicable.

**(2) Connection cable**

The following shows the converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

**(a) When using an RS-232 cable manufactured by Mitsubishi Electric System & Service Co., Ltd.**

\*1 The adapter L6ADP-R2 (manufactured by Mitsubishi Electric Corporation) is required for the direct CPU connection.

**(b) When using a USB cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.**

- When using a Universal model QCPU

**(c) When using a USB cable manufactured by ELECOM CO., LTD.**

**(d) When using a LOAS USB cable**

#### 4 Connecting with QnACPU, ACP, motion controller CPU (A series), or FXCPU

GT27 GT25 GT23 GT21 SoftGOT2000 GS

\*1 For how to install GX Developer, GX Simulator, or GX Simulator2, refer to the following.

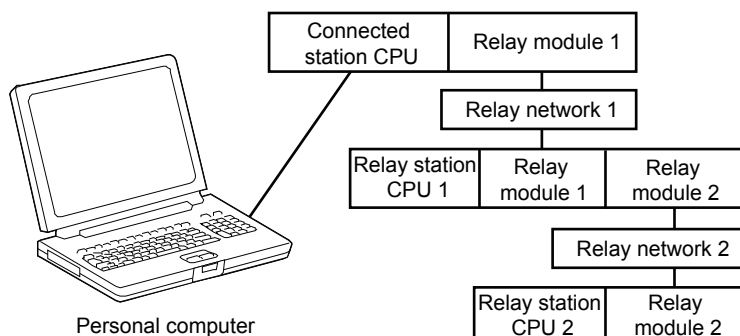

- ⇒ GX Developer Version  Operating Manual (Startup)
- ⇒ GX Works2 Installation Procedure Manual

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

- ⇒ 3.1.2 ■ 2 Mitsubishi Electric products

#### (1) Access range

The following shows the access range for the CPU direct connection in the following configuration.

#### (a) Single network (connection with QnACPU)

○ : Accessible, - : Inaccessible

Connected station	Relay station									
	QnACPU, MELDAS C6*	Relay network 1	Relay module							ACPU
RCPU			LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU, MELDAS C6*			
○	Mnet/10(H)	-	-	-	-	-	-	○	-	-
	Mnet(II)*1*2	-	-	-	-	-	-	○*2	-	-
	Ethernet	-	-	-	-	-	-	○	-	-

\*1 Only the link relay device or link register device assigned by the link parameter can be monitored.

Depending on the type of the connected station, the access range is different.

- Master station: Local stations can be monitored.
- Local station: Only the master station can be monitored.
- Master station on the third hierarchy: The master station on the second hierarchy and local stations on the third hierarchy can be monitored.

\*2 MELDAS C6\* is inaccessible.

### (b) Multiple networks (connection with QnACPU)

○ : Accessible, - : Inaccessible

Connected station	Relay station									
	QnACPU, MELDAS C6*	Relay network 1	Relay network 2	Relay module						
				RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU, MELDAS C6*	ACPU
○	Mnet/10(H)	Mnet/10(H)	-	-	-	-	-	○	-	-
		Ethernet	-	-	-	-	-	○	-	-
○	Ethernet	Mnet/10(H)	-	-	-	-	-	○	-	-
		Ethernet	-	-	-	-	-	○	-	-

\*1 Only the link relay device or link register device assigned by the link parameter can be monitored. Depending on the type of the connected station, the access range is different.

- Master station: Local stations can be monitored.
- Local station: Only the master station can be monitored.
- Master station on the third hierarchy: The master station on the second hierarchy and local stations on the third hierarchy can be monitored.

\*2 MELDAS C6\* is inaccessible.

### (c) Single network (connection with ACPU or motion controller CPU (A series))

○ : Accessible, - : Inaccessible, ▲ : Accessible when the connected CPU is the control station, △ : Accessible when the access destination CPU is the control station

Connected station	Relay station								
	ACPU, QPU (A mode)	Relay network 1	Relay module						
			RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU, MELDAS C6*	ACPU
○	Mnet/10(H)*1	-	-	-	-	○	-	○	-
	Mnet(II)*2	-	-	-	-	○	○*3	○	-

\*1 Depending on the CPU type, the access range is different. Refer to the following table.

Connected station	Relay network 1		Relay network 2	
	AnA(AnN)CPU	AnUCPU	AnA(AnN)CPU	AnUCPU
AnA(AnN)CPU	-	△	-	-
AnUCPU	▲	○	-	○

\*2 Only the link relay device or link register device assigned by the link parameter can be monitored. Depending on the type of the connected station, the access range is different.

- Master station: Local stations can be monitored.
- Local station: Only the master station can be monitored.
- Master station on the third hierarchy: The master station on the second hierarchy and local stations on the third hierarchy can be monitored.

\*3 MELDAS C6\* is inaccessible.

### (d) Multiple networks (connection with ACPU or motion controller CPU (A series))

○ : Accessible, - : Inaccessible, ▲ : Accessible when the connected CPU is the control station, △ : Accessible when the access destination CPU is the control station

Connected station	Relay station									
	QnACPU, MELDAS C6*	Relay network 1	Relay network 2	Relay module						
				RCPU	LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU, MELDAS C6*	ACPU
○	Mnet/10(H)	Mnet/10(H)	-	-	-	-	○	-	○	-

\*1 Depending on the CPU type, the access range is different.

Refer to the following table.

Connected station	Relay network 1		Relay network 2	
	AnA(AnN)CPU	AnUCPU	AnA(AnN)CPU	AnUCPU
AnA(AnN)CPU	-	△	-	-
AnUCPU	▲	○	-	○

\*2 Only the link relay device or link register device assigned by the link parameter can be monitored.

Depending on the type of the connected station, the access range is different.

- Master station: Local stations can be monitored.
- Local station: Only the master station can be monitored.
- Master station on the third hierarchy: The master station on the second hierarchy and local stations on the third hierarchy can be monitored.

\*3 MELDAS C6\* is inaccessible.

**(e) Single network (connection with FXCPU)**

For the direct CPU connection, the CPUs on relay network 1 are inaccessible.

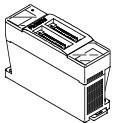

**(f) Multiple networks (connection with FXCPU)**

For the direct CPU connection, the CPUs on relay network 1 and relay network 2 are inaccessible.

**(2) Connection cable**

The following shows the converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

**(a) When using an RS-232 cable or RS-422 cable manufactured by Mitsubishi Electric Corporation**

For personal computer (RS-232 cable)	RS-232/RS-422 converter*3	For PLC CPU (RS-422 cable)
 F2-232CAB (Mitsubishi Electric Corporation) *1*2 (For the 25-pin D-sub connector of the personal computer)	 FX-232AW (Mitsubishi Electric Corporation)	 FX-422CAB (0.3 m) (Mitsubishi Electric Corporation) FX-422CAB-150 (1.5 m) (Mitsubishi Electric Corporation) (for connection with QnACPU, ACPU, motion controller CPU (A series), or FX1/FX2/FX2CCPU)
 F2-232CAB-1 (Mitsubishi Electric Corporation) *2 (For the 9-pin D-sub connector of the personal computer)	 FX-232AWC (Mitsubishi Electric Corporation)	 FX-422CAB0 (1.5 m) (Mitsubishi Electric Corporation) (for connection with FX0/FX0S/FX0N/FX1S/FX1N/FX2N/FX1NC/FX2NC/FX3G/FX3GC/FX3GE/FX3U/FX3UC/FX3SCPU/AC30N2A)
 AC30N2A (Mitsubishi Electric Corporation) *1 (For the 25-pin D-sub connector of the personal computer)	 FX-232AWC-H (Mitsubishi Electric Corporation) (FX series only)(Mitsubishi)	

\*1 When using this cable for a DOS/V personal computer, a straight cable for conversion between 9-pin D-sub and 25-pin D-sub is required separately.

\*2 To check whether the cable is compatible with QnACPU or ACPU or not, check the model name label on the cable. (The incompatible product cannot be used.)

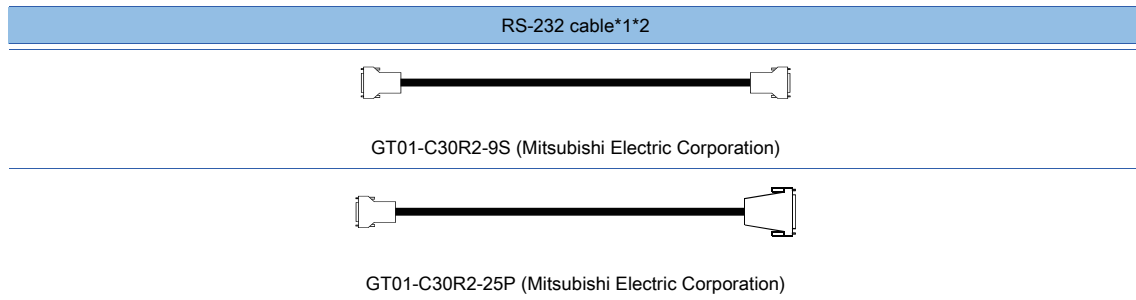

\*3 When FX3UC or FX3UCPU is connected to FX-232AWC-H, the transmission speeds of 9600, 19200, 38400, 57600, and 115200 bps are available.

When FX-232AWC or FX-232AW is connected, the transmission speeds of 9600 and 19200 bps are available.

### (b) When using an RS-232 cable manufactured by Mitsubishi Electric Corporation

The following cables are usable to connect the function extension board or special adapter of FXCPU.

\*1 The following shows connection types that can be used with GT01-C30R2-9S.

Model	Function extension board	Special adapter	Connector for personal computer
FX3U series, FX3UC series (FX3UC-□□-LT)	FX3U-232-BD	-	9-pin D-sub
	FX3U-232-BD, FX3U-485-BD, FX3U-422-BD, FX3U-USB-BD, FX3U-CNV-BD	FX3U-232ADP	
FX3UC series (FX3UC-□□/D, FX3UC-□□/ DSS)	-	FX3U-232ADP	9-pin D-sub
FX3S series	FX3G-232-BD	-	9-pin D-sub
	-	FX3S-CNV-ADP + FX3U-232ADP	
FX3G series	FX3G-232-BD	-	9-pin D-sub
	FX3G-CNV-BD	FX3U-232ADP	
FX3GC series	-	FX3U-232ADP	9-pin D-sub
FX3GE series	FX3G-232-BD	FX3U-232ADP	9-pin D-sub
FX2N series	FX2N-232-BD	-	9-pin D-sub
	FX2N-CNV-BD	FX2NC-232ADP	
FX1NC, FX2NC series	-	FX2NC-232ADP	9-pin D-sub
FX1S, FX1N series	FX1N-232-BD	-	9-pin D-sub
	FX1N-CNV-BD	FX2NC-232ADP	

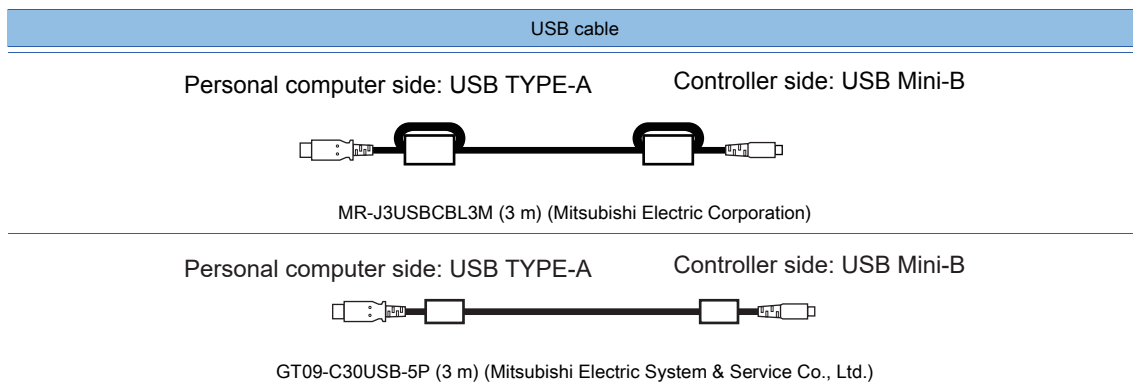

\*2 The following shows connection types that can be used with GT01-C30R2-25P.

Model	Function extension board	Special adapter	Connector for the personal computer
FX3U series, FX3UC series (FX3UC-□□-LT)	FX3U-232-BD	-	25-pin D-sub
	FX3U-232-BD, FX3U-485-BD, FX3U-422-BD, FX3U-USB-BD, FX3U-CNV-BD	FX3U-232ADP	
FX3UC series (FX3UC-□□/D, FX3UC-□□/ DSS)	-	FX3U-232ADP	25-pin D-sub

Model	Function extension board	Special adapter	Connector for the personal computer
FX3S series	FX3G-232-BD	-	25-pin D-sub
	-	FX3S-CNV-ADP + FX3U-232ADP	
FX3G series	FX3G-232-BD	-	25-pin D-sub
	FX3G-CNV-BD	FX3U-232ADP	
FX3GC series	-	FX3U-232ADP	25-pin D-sub
FX3GE series	FX3G-232-BD	FX3U-232ADP	25-pin D-sub
FX2N series	FX2N-CNV-BD	FX0N-232ADP	9-pin D-sub
	FX2N-232-BD	-	25-pin D-sub
	FX2N-CNV-BD	FX2NC-232ADP	
FX1NC, FX2NC series	-	FX0N-232ADP	9-pin D-sub
	-	FX2NC-232ADP	25-pin D-sub
FX1S, FX1N series	FX1N-CNV-BD	FX0N-232ADP	9-pin D-sub
	FX1N-232-BD	-	25-pin D-sub
	FX1N-CNV-BD	FX2NC-232ADP	

**(c) When using a USB cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.**

The following cables can be used when the built-in USB port of the FX3G or FX3GC or FX3GE or FX3S series is used for connection.

For other USB cables that can be used with FXCPU, refer to the following.

→FX3U SERIES HARDWARE MANUAL

For the precautions on converters and cables, refer to the following.

→3.3.3 ■ 2 When connecting GT Simulator3 with a PLC CPU

**■ 5 Connecting with MELSEC iQ-F**

\*1 For how to install GX Works3, refer to the following.

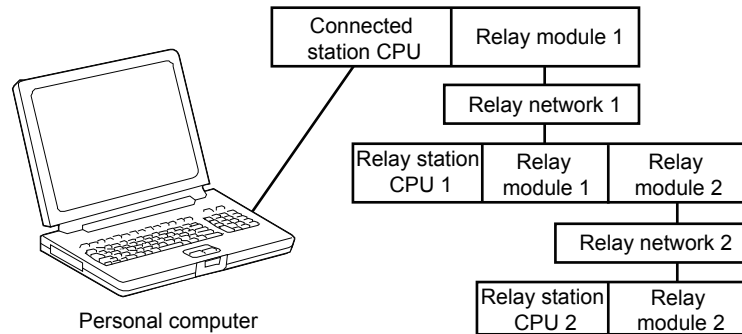

⇒ GX Works3 Installation Instructions

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

⇒ 3.1.2 Monitoring-supported Controllers

### (1) Access range

The following shows the access range for the CPU direct connection in the following configuration.

### (2) Single network (connection with MELSEC iQ-F)

○ : Accessible, - : Inaccessible

Connected station	Relay station								
	FX5CPU	Relay network 1	Relay module						
RCPU			LCPU	QnCPU	QSCPU	QCPU (A mode)	QnACPU, MELDAS C6*	ACPU	
○	CC IE Field	-	-	-	-	-	-	-	○*1

\*1 Use an intelligent function module (FX5-CCLIEF) as an intelligent device station to connect to the CC-Link IE Field Network.

### (3) Multiple networks (connection with MELSEC iQ-F)

For the direct CPU connection, the CPUs on relay network 2 are inaccessible.

### (4) Connection cable

The following shows the converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

### (5) When using an RS-232 cable manufactured by Mitsubishi Electric Corporation

The following cable is usable to connect the function extension board or special adapter of MELSEC iQ-F.

\*1 The following shows connection types that can be used with GT01-C30R2-9S.

Model	Function extension board	Special adapter	Connector for personal computer
FX5U	FX5-232-BD	-	9-pin D-sub
FX5U FX5UC	-	FX5-232ADP	9-pin D-sub

For the precautions on converters and cables, refer to the following.

⇒ 3.3.3 ■ 2 When connecting GT Simulator3 with a PLC CPU

## ■ 6 Connecting with the MELSECNET/H remote I/O station

GT27 GT25 GT23 GT21 SoftGOT2000 GS

\*1 For how to install GX Developer, GX Simulator, or GX Simulator2, refer to the following.

⇒ GX Developer Version  Operating Manual (Startup)  
GX Works2 Installation Procedure Manual

\*2 For the PLCs that can be monitored by GT Simulator3, refer to the following.

⇒ 3.1.2 ■ 2 Mitsubishi Electric products

### (1) Connection cable

The following shows converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

#### (a) When using an RS-232 cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.

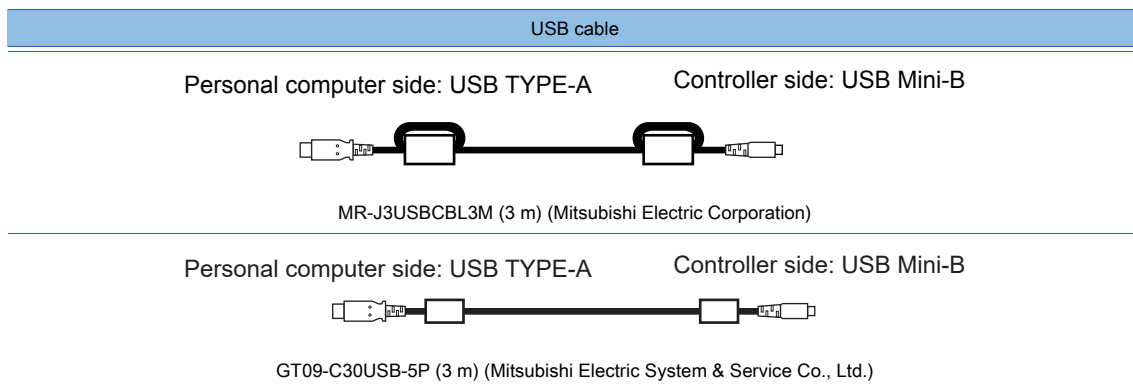

## ■ 7 Connecting with CC-Link IE Field Network head unit

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Connection cable

The following shows converters and cables whose operations have been validated by Mitsubishi Electric Corporation.

#### (a) When using a USB cable manufactured by Mitsubishi Electric Corporation or Mitsubishi Electric System & Service Co., Ltd.

**(b) When using a USB cable manufactured by ELECOM CO., LTD.**

**(c) When using a USB cable manufactured by LOAS CO., LTD.**

**8 Connecting with MELDAS C6/C64**

The conversion cable to connect GT Simulator3 and MELDAS C6/C64 must be configured by the user. The following shows the connection diagram and specifications of the connector.

**(1) Connection diagram**

Personal computer (GT Simulator3) side	Cable connection and signal direction	MELDAS C6/C64 (TERMINAL) side	
		Pin No.	Signal name
GND	←→	1	GND
RD (RXD)	←→	-	-
SD (TXD)	←→	-	-
GND	←→	-	-
DR (DSR)	←→	6	SD (TXD)
CS (CTS)	←→	-	-
	←→	11	GND
	←→	16	RD (RXD)
	←→	18	ER (DTR)

**(2) Specifications of the connector**

**(a) Connector for the personal computer**

Use a connector applicable to the personal computer.

**(b) Connector for MELDAS C6/C64**

Use a connector applicable to MELDAS C6/C64.

For details, refer to the following manuals.

⇒ Manual of MELDAS C6/C64

**(c) Precautions for configuring a cable**

The length of the conversion cable must be 15 m or shorter.

### 3.2.3 Connecting with non-Mitsubishi Electric products

#### 1 Connecting with OMRON PLCs

(1) When using an RS-232 cable manufactured by Mitsubishi Electric System & Service Co., Ltd.

(2) When configuring an RS-232 cable

The following shows the connection diagram and specifications of the connector.

(a) Connection diagram

Personal computer (GT Simulator3) side	Cable connection and signal direction	OMRON-PLC side	
		Pin No.	Signal name
Signal name			
CD		1	FG
RD (RXD)		2	SD
SD (TXD)		3	RD
ER (DTR)		4	RS
SG		5	CS
DR (DSR)		6	-
RS (RTS)		7	FR
CS (CTS)		8	ER
-		9	SG

(b) Specifications of the connector

- Connector for the personal computer  
Use a connector applicable to the personal computer.
- Connector for OMRON PLC  
Use a connector applicable to the OMRON PLC.  
For details, refer to the following manuals.  
⇒Manual of the OMRON PLC

(c) Precautions for configuring a cable

The length of the RS-232 cable must be 15 m or shorter.

## 3.3 Precautions

- 3.3.1 Precautions for using GT Simulator3
- 3.3.2 Precautions for connecting with the controller simulators
- 3.3.3 Precautions for connecting with PLC CPU
- 3.3.4 Version of the project data to be simulated

### 3.3.1 Precautions for using GT Simulator3

#### ■1 Display of GT Simulator3 and the GOT

The display of GT Simulator3 may differ from the display of the GOT.  
Check the actual display of the GOT.

#### ■2 Numerical display

If an invalid numerical value is stored when [Real] is selected for [Display Format] of [Numerical Display], the invalid numerical value is displayed in GT Simulator3. ([non] is displayed on the GOT.)

#### ■3 Clock display

The clock display at simulation by GT Simulator3 depends on the clock data of the personal computer. (The GOT reads the clock data of the PLC CPU to use it.)

The setting [Automatically adjust clock for daylight saving changes] in the personal computer is not applicable. Do not enable [Automatically adjust clock for daylight saving changes].

#### ■4 Hard copy function

The settings of [Invert], [Writing Notification Device], and [Writing Error Notification Device] of the hard copy function cannot be simulated.

The system information about the hard copy function cannot be simulated.

#### ■5 Printer output

##### (1) Printer output

The data cannot be output directly by the report function or hard copy function.

Data will be output to a file (TXT, CSV, or BMP format) on the hard disk of the personal computer.

Output the file to a printer.

- ■ 1 For functions saving data into a data storage or file server

##### (2) When creating a table with the report function

Create a table as shown in example 1.

If a table is created as shown in example 2, the table will appear incorrectly in the output CSV file.

Example 1) Table created with GT Designer3

	A	B
X	1	2
Y	3	4

CSV file table

	A	B
X	1	2
Y	3	4

Example 2) Table created with GT Designer3

	A	B
X	1	2
Y	3	4

CSV file table

A	B	
X	1	2
Y	3	4

##### (3) When outputting the characters specified with a text print object by using the report function

Store characters in the specified devices according to the setting of [Display in order of High -> Low].

If the characters are not stored in the specified byte order, the characters are displayed incorrectly in the output CSV file.

- 8.32.5 [Text Print] dialog

#### (4) When using a project where the output trigger is set to turn on frequently

Make sure that your personal computer has enough free hard disk space, and delete the output files as necessary. The output files will not be deleted automatically even upon exit from GT Simulator3.

#### (5) When opening an output file on the personal computer

If you open an output TXT file by using a text editor such as WordPad or Notepad, character spacing may be misaligned on display.

If the character spacing is misaligned, adjust the character font or font size.

#### (6) System alarm when the hard copy is executed

GT21 does not support the system alarm function.

The system alarm is not displayed when the hard copy is executed.

For the troubleshooting for the hard copy, refer to the following.

→3.8.2 Troubleshooting for saving files

### ■6 Sound output

#### (1) Inapplicable simulator

The GT21 simulator does not support the sound output function.

#### (2) Personal computer conditions

The sound output function is executed with the sound function (sound card) or speaker of the personal computer.

If the personal computer to be used cannot output sound, the sound output function is unavailable.

#### (3) Unmuting of GT Simulator3 at its startup (Windows Vista or later)

If you mute GT Simulator3 in Windows sound settings, GT Simulator3 is automatically unmuted at its startup.

However, if you mute all sounds on Windows, GT Simulator3 remains mute.

#### (4) Restrictions when using Windows XP

When GT Simulator3 runs on Windows XP, the Mute Sound signal (GS518.b2) cannot be simulated.

To simulate the Mute Sound signal (GS518.b2), use Windows Vista or later.

### ■7 Connecting with FXCPU

When setting an odd value of [Counter (current value)(C)] (16 bits) for the start device in the recipe function, use C199 or earlier.

### ■8 When the project data has multi-channel

Only channel 1 can be simulated.

The other channels are ignored.

To monitor a device of other than channel 1, select [Search/Replace] → [Batch Edit] → [CHNo.] from the menu and set channel 1 for the debug target channel in GT Designer3.

Example) When channel 1 and 2 are used and channel 2 is to be simulated

**Step 1** Change channel 1 to channel 3 in a batch.

**Step 2** Change channel 2 to channel 1 in a batch.

For the batch edit of the channels, refer to the following.

→11.8.4 Changing the set values in a batch (Batch Edit)

### ■9 Showing hidden folders

The following folders are hidden folders.

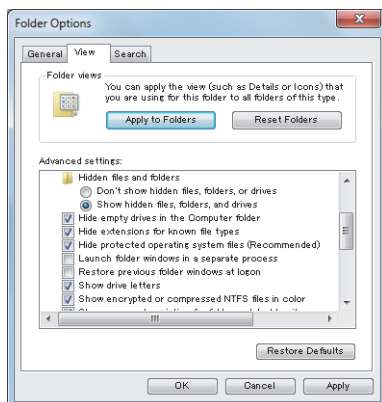

- For Windows 10, Windows 8.1, Windows 8, Windows 7, and Windows Vista  
[Users\\AppData\Local] folder
- For Windows XP

[Document and Settings\\Local Settings] folder

To display the hidden folders, configure the setting in Windows.

Example) Windows 7

## ■ 10 Recipe information

Not available to GT21.

Clicking a special function switch to which [Recipe Information] is set displays the recipe operation window, regardless of the setting of [Enable recipe file operation on the monitor] in the [Recipe Common Setting] dialog.

To display the recipe information, click the [Recipe Information] button in the simulation utility.

### 3.3.2 Precautions for connecting with the controller simulators

#### ■ 1 When starting GX Simulator from GT Simulator3

While GT Simulator3 is monitoring GX Simulator, GX Simulator cannot be started from GX Developer.

After exiting GT Simulator3, start GX Simulator from GX Developer again.

#### ■ 2 When starting the controller simulator from GX Developer or others

##### (1) Using the activated controller simulator

When a controller simulator has been started from GX Developer or others, GT Simulator3 connects to the activated controller simulator.

##### (2) Starting the controller simulator in advance

GX Simulator2 is not started automatically at the simulation of GT Simulator3.

Start GX Simulator2 from GX Works2 in advance.

GX Simulator and MT Simulator2 are started automatically at the simulation of GT Simulator3.

Starting them from GX Developer or MT Developer2 in advance is not required.

##### (3) Exiting GX Simulator

After exiting GT Simulator3, exit GX Simulator.

If you exit GX Simulator before GT Simulator3, a communication error occurs in GT Simulator3.

#### ■ 3 When using MT Simulator2

GT Simulator3 monitors MT Simulator2 as one of the PLC CPUs of GX Simulator2.

To monitor MT Simulator2, also start GX Simulator2.

#### ■ 4 When simulating the project data that has the setting of a non-Mitsubishi Electric PLC

##### (1) When simulating project data using [Default] in [GX Simulator setting]

When the CPU type in [Option] is set to [MELSEC-A] in GT Simulator3, the data can be simulated in the device range of A4UCPU.

⇒ 3.6.1 Setting options

For the device range in which the data can be simulated, refer to the following.

⇒ 3.1.3 Available devices for monitoring

##### (2) When simulating project data using [Specify a GX Developer project] in [GX Simulator setting]

Specify a GX Developer project whose PLC series is [ACPU].

When the CPU type in [Option] is set to [MELSEC-A] in GT Simulator3, the data can be simulated in the device range of ACPU (specified PLC type).

⇒ 3.6.1 Setting options

For the device range in which the data can be simulated, refer to the following.

⇒ 3.1.3 Available devices for monitoring

### ■5 When simulating project data whose PLC type is [LCPU] in GX Simulator

When the CPU type in [Option] is set to [MELSEC-Q] in GT Simulator3, the data can be simulated in the device range of Q26UDHCPU.

→3.6.1 Setting options

For the device range in which the data can be simulated, refer to the following.

→3.1.3 Available devices for monitoring

### ■6 When simulating project data whose PLC type is [FX3UC]

When [GX Simulator setting] is [Option] in GT Simulator3 is set to [Specify a GX Developer project], the GX Developer project whose PLC type is [FX3UC] cannot be simulated.

Set [GX Simulator setting] in [Option] in GT Simulator3 to [Default], and simulate the project in the device range of the FX2N series.

→3.6.1 Setting options

### ■7 When simulating the buffer memory

The buffer memory can be simulated by setting [GX Simulator setting] in [Option] to [Specify a GX Developer project] in GT Simulator3 and specifying the GX Developer project to which I/O has been assigned.

→3.6.1 Setting options

If [GX Simulator setting] in [Option] in GT Simulator3 is set to [Default], the buffer memory cannot be simulated because I/O has not been assigned.

### ■8 When simulating a project having the MELSEC redundant setting

GX Simulator does not support the simulation of the project having the MELSEC redundant setting.

To simulate such a project, establish a physical connection with a target CPU in the redundant system instead of GX Simulator.

Otherwise, system alarm occurs and the project is simulated incorrectly.

### ■9 When accessing a servo amplifier simultaneously with a GOT or software application

Do not monitor or write a device value to a servo amplifier simultaneously from a GOT, GT Simulator3, GT SoftGOT2000, and other MELSOFT applications (such as MR Configurator2).

Doing so may cause the incorrect display of parameters and others on the GOT and software applications, or a servo amplifier malfunction.

### 3.3.3 Precautions for connecting with PLC CPU

#### ■1 When connecting GT Simulator3 with the function extension board of FXCPU

When connecting GT Simulator3 with the function extension board of FXCPU, configure the setting in GX Developer as follows.

- Step 1** Disable [Operate communication setting] in the [PLC system(2)] tab of [PLC parameter].
- Step 2** Set 0 in the special register (D8120) of FXCPU.

#### ■2 When connecting GT Simulator3 with a PLC CPU

When connecting GT Simulator3 with a PLC CPU, note the following.

##### (1) Specifications and precautions for converters and cables

For the specifications and precautions for converters and cables, refer to the following.

→Manual of each product

##### (2) When connecting or disconnecting the converter or cable that receives a 5 V DC power

Turn off the power on the PLC side, and then connect or disconnect the converter or cable that receives a 5 V DC power from the PLC side.

##### (3) When connecting or disconnecting the converter or cable that does not receive a 5 V DC power

Use the following procedure to connect or disconnect the converter or cable that receives an external power instead of the 5 V DC power from the PLC side.

- Step 1** Touch an earth band or grounded metal to discharge static electricity of the cable and human body before operation.
- Step 2** Turn off the personal computer.
- Step 3** Turn off the converter.  
Ground the FG terminal if provided.
- Step 4** Connect or disconnect the converter or cable between the personal computer and the PLC.
- Step 5** Turn on the converter.
- Step 6** Turn on the personal computer.
- Step 7** Start the software package.

### 3.3.4 Version of the project data to be simulated

Use GT Simulator3 of the same version as that of GT Designer3.

When using project data created in GT Designer3 of the version earlier than that of GT Simulator3, open the project data in GT Designer3 of the version same as that of GT Simulator3, and then save the data.

## 3.4 Simulation Procedure

---

- ⇒ 3.4.1 Simulating the project being edited
- 3.4.2 Simulating a saved project

### 3.4.1 Simulating the project being edited

---

Simulate the project data being edited in GT Designer3.

- ⇒ ■ 1 Connecting the controller simulator with GT Simulator3
- 2 Connecting a PLC CPU with GT Simulator3

#### Point

#### Using the GOT2000 series simulator with the GOT1000/GOT-A900 series simulator

Using the GOT2000 series simulator with the GOT1000/GOT-A900 series simulator is available.

By doing so, you can simulate the project while comparing the behavior between the GOT2000 series and the GOT1000/GOT-A900 series.

#### ■ 1 Connecting the controller simulator with GT Simulator3

**Step 1** Start the controller simulator by the following operations.

- When using GX Simulator  
GX Simulator is started automatically at the simulation of GT Simulator3.  
Starting GX Simulator in advance is not required.  
GT Simulator3 connects to GX Simulator which has been started from GX Developer.  
For the details of GX Simulator, refer to the following.  
⇒ GX Developer Version □ Operating Manual (Startup)
- When using GX Simulator2  
Open project data on GX Works2, and start GX Simulator2.  
For the details of GX Simulator2, refer to the following.  
⇒ GX Works2 Version □ Operating Manual (Common)
- When using GX Simulator3  
Open project data on GX Works3, and start GX Simulator3.  
For the details of GX Simulator3, refer to the following.  
⇒ GX Works3 Operating Manual
- When using MT Simulator2  
Start GX Simulator2 in advance.  
Open project data on GX Works2, and start GX Simulator2.  
MT Simulator2 is started automatically at the simulation of GT Simulator3.  
Starting MT Simulator2 in advance is not required.  
For the details of MT Simulator2, refer to the following.  
⇒ MT Developer2 Help

3.3.2 Precautions for connecting with the controller simulators

**Step 2** Select [Tools] → [Simulator] → [Set] from the menu in GT Designer3.

The [Option] dialog appears in GT Simulator3.

Configure the option settings in GT Simulator3.\*1

Some items cannot be set by this operation.

⇒ 3.6.1 Setting options

\*1 To simulate the project data that was simulated last time, select [Simulate] → [Start] from the menu.

For details, refer to the following.

⇒ 3.6.3 Starting or exiting simulation

**Step 3** Select [Tools] → [Simulator] → [Activate] from the menu in GT Designer3.

The simulation in GT Simulator3 starts.

When GT Simulator3 is in operation, simulation cannot be started in GT Designer3.

**Step 4** Debug the project in GT Simulator3.

⇒ 3.6.5 Operations of the screen for simulation

- Step 5** Update the project data in GT Designer3, and then check the update in GT Simulator3.  
Check the update in GT Simulator3.  
    ⇒3.6.4 Updating the project to be simulated
- Step 6** Select [Tools] → [Simulator] → [Exit] from the menu in GT Designer3.  
GT Simulator3 exits.  
    ⇒3.6.6 Exiting GT Simulator3

## ■2 Connecting a PLC CPU with GT Simulator3

- Step 1** Connect a PLC CPU with the personal computer.  
    ⇒3.1.2 Monitoring-supported Controllers
- Step 2** Set the option of GT Simulator3\*1.  
Select [Tools] → [Simulator] → [Set] from the menu in GT Designer3.  
The [Option] dialog appears in GT Simulator3.  
Configure the option settings in GT Simulator3. \*1  
Some items cannot be set by this operation.  
    ⇒3.6.1 Setting options  
    \*1 To simulate the project data that was simulated last time, select [Simulate] → [Start] from the menu.  
    For details, refer to the following.  
    ⇒3.6.3 Starting or exiting simulation
- Step 3** Power on the PLC CPU.
- Step 4** Select [Tools] → [Simulator] → [Activate] from the menu in GT Designer3.  
The simulation in GT Simulator3 starts.  
When GT Simulator3 is in operation, simulation cannot be started in GT Designer3.
- Step 5** Debug the project in GT Simulator3.  
    ⇒3.6.5 Operations of the screen for simulation
- Step 6** Update the project data in GT Designer3, and then check the update in GT Simulator3.  
    ⇒3.6.4 Updating the project to be simulated
- Step 7** Select [Tools] → [Simulator] → [Exit] from the menu in GT Designer3.  
GT Simulator3 exits.  
    ⇒3.6.6 Exiting GT Simulator3

### Point

- (1) **When [Connection] is set to [CPU Direct Connection (RS232)] or [CPU Direct Connection (USB)]**  
The setting of [Connection] is not retained after GT Designer3 is exited.  
When you newly start GT Designer3, set [Connection] according to the connection type.
- (2) **When the controller setting is changed on GT Designer3**  
The setting of [Connection] is automatically switched to the default one that corresponds to the new controller setting.  
Change the setting of [Connection] according to the connection type as necessary.

## 3.4.2 Simulating a saved project

Simulate the saved project data.

- ➔ ■ 1 Connecting the controller simulator with GT Simulator3
- 2 Connecting a PLC CPU with GT Simulator3

### Point

#### Using the GOT2000 series simulator with the GOT1000/GOT-A900 series simulator

Using the GOT2000 series simulator with the GOT1000/GOT-A900 series simulator is available.

By doing so, you can simulate the project while comparing the behavior between the GOT2000 series and the GOT1000/GOT-A900 series.

### ■ 1 Connecting the controller simulator with GT Simulator3

**Step 1** Start the controller simulator by the following operations.

- When using GX Simulator
    - GX Simulator is started automatically at the simulation of GT Simulator3.
    - Starting GX Simulator in advance is not required.
    - GT Simulator3 connects to GX Simulator which has been started from GX Developer.
    - For the details of GX Simulator, refer to the following.
      - ➔GX Developer Version □ Operating Manual (Startup)
  - When using GX Simulator2
    - Open project data on GX Works2, and start GX Simulator2.
    - For the details of GX Simulator2, refer to the following.
      - ➔GX Works2 Version □ Operating Manual (Common)
  - When using GX Simulator3
    - Open project data on GX Works3, and start GX Simulator3.
    - For the details of GX Simulator3, refer to the following.
      - ➔GX Works3 Operating Manual
  - When using MT Simulator2
    - Start GX Simulator2 in advance.
    - Open project data on GX Works2, and start GX Simulator2.
    - MT Simulator2 is started automatically at the simulation of GT Simulator3.
    - Starting MT Simulator2 in advance is not required.
    - For the details of MT Simulator2, refer to the following.
      - ➔MT Developer2 Help
- 3.3.2 Precautions for connecting with the controller simulators

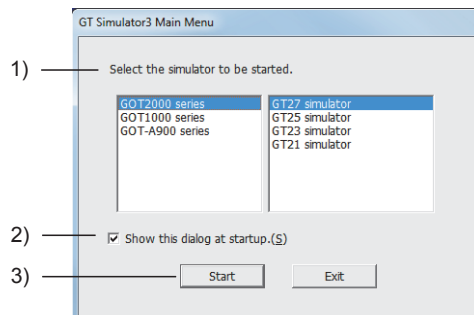

**Step 2** From the Windows start menu \*1, select [MELSOFT]\*2 → [GT Works3] → [GT Simulator3] to start GT Simulator3.

\*1 Select [All Programs] on the [Start] screen, or select [Start] → [All Programs].

\*2 [MELSOFT Application] appears for a version of GT Works3 earlier than 1.136S.

**Step 3** The [GT Simulator3 Main Menu] dialog appears.

Configure the following settings, and click the [Activate] button.

#### 1) [Select the simulator to be started]

Select the simulator to be started.

The following shows the items to be selected.

- When [GOT2000 series] is selected
    - [GT27 Simulator]
    - [GT25 Simulator]
    - [GT23 Simulator]
    - [GT21 Simulator]
  - When [GOT1000 series] is selected
    - [GT16 Simulator]
    - [GT15 Simulator]
    - [GT14 Simulator]
    - [GT12 Simulator]
    - [GT11 Simulator]
    - [GT10 Simulator]
  - When [GOT-A900 series] is selected
    - [A900 Simulator]
- When [GOT1000 series] or [GOT-A900 series] is selected for simulating the project data, refer to the following.
- ⇒GT Simulator3 Version1 Operating Manual for GT Works3

## 2) [Show this dialog at startup]

Select whether to display [GT Simulator3 Main Menu] dialog at next startup.

This setting can be configured from the option as well.

⇒3.6.1 ■ 3 [Environmental Setting] tab

## 3) [Activate] button

Activates GT Simulator3.

**Step 4** Configure the option settings in GT Simulator3. \*1

⇒3.6.1 Setting options

\*1 To simulate the project data that was simulated last time, select [Simulate] → [Start] from the menu.

For details, refer to the following.

⇒3.6.3 Starting or exiting simulation

**Step 5** Open the project data, and start a simulation.

⇒3.6.2 Opening a project

3.6.3 Starting or exiting simulation

**Step 6** Exit GT Simulator3 after the simulation.

⇒3.6.6 Exiting GT Simulator3

## ■2 Connecting a PLC CPU with GT Simulator3

**Step 1** Connect a PLC CPU with the personal computer.

⇒3.1.2 Monitoring-supported Controllers

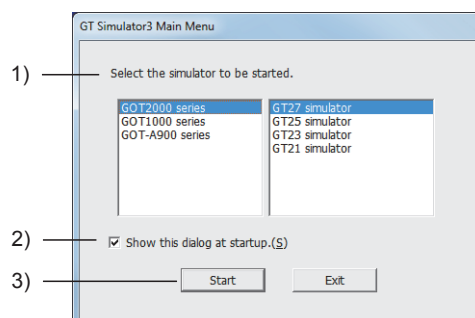

**Step 2** From the Windows start menu \*1, select [MELSOFT] \*2 → [GT Works3] → [GT Simulator3] to start GT Simulator3.

\*1 Select [All Programs] on the [Start] screen, or select [Start] → [All Programs].

\*2 [MELSOFT Application] appears for a version of GT Works3 earlier than 1.136S.

**Step 3** The [GT Simulator3 Main Menu] dialog appears.

Configure the following settings, and click the [Activate] button.

## 1) [Select the simulator to be started]

Select the simulator to be started.

The following shows the items to be selected.

- When [GOT2000 series] is selected

[GT27 Simulator]

[GT25 Simulator]

[GT23 Simulator]

[GT21 Simulator]

- When [GOT1000 series] is selected

[GT16 Simulator]

[GT15 Simulator]

[GT14 Simulator]

[GT12 Simulator]

[GT11 Simulator]

[GT10 Simulator]

- When [GOT-A900 series] is selected

[A900 Simulator]

When [GOT1000 series] or [GOT-A900 series] is selected for simulating the project data, refer to the following.

⇒ GT Simulator3 Version1 Operating Manual for GT Works3

## 2) [Show this dialog at startup]

Select whether to display [GT Simulator3 Main Menu] dialog at next startup.

This setting can be configured from the option as well.

⇒ 3.6.1 ■ 3 [Environmental Setting] tab

## 3) [Activate] button

Activates GT Simulator3.

**Step 4** Configure the option settings in GT Simulator3. \*1

⇒ 3.6.1 Setting options

\*1 To simulate the project data that was simulated last time, select [Simulate] → [Start] from the menu.

For details, refer to the following.

⇒ 3.6.3 Starting or exiting simulation

**Step 5** Power on the PLC CPU.

**Step 6** Open the project data, and start a simulation.

⇒ 3.6.2 Opening a project

3.6.3 Starting or exiting simulation

**Step 7** Exit GT Simulator3 after the simulation.

⇒ 3.6.6 Exiting GT Simulator3

## Point

**When [Connection] is set to [CPU Direct Connection (RS232)] or [CPU Direct Connection (USB)]**

When you newly start GT Designer3, [Connection] is set to [GX Simulator2] automatically.

Change the setting of [Connection] according to the connection type as necessary.

## 3.5 Screen Layout of GT Simulator3

This section describes the screen layout of GT Simulator3.

### 1) Title bar

Displays the software name and the project name.

### 2) Menu bar

GT Simulator3 can be operated from pull-down menus.

⇒3.5.1 Menus

### 3) Toolbar

GT Simulator3 can be operated by buttons.

⇒3.5.2 Toolbar

### 4) Screen for simulation

The simulation contents are displayed on this screen.

### 5) Status bar

The GT Simulator3 status is displayed.

⇒3.5.4 Status bar

## 3.5.1 Menus

The following shows the configurations of the menu bar.

- ■ 1 [Project]
- 2 [Display]
- 3 [Set]
- 4 [Simulate]
- 5 [Tools]
- 6 [Help]

### ■ 1 [Project]

Menu		Description	Shortcut key
[Open]	[Project]	Reads workspace format projects. →3.4.2 Simulating a saved project	Ctrl + O
	[File]	Reads single file format projects. →3.4.2 Simulating a saved project	Ctrl + E
[Snap Shot]	Saves a screen as a file. (BMP format and JPEG format) →3.7.1 Taking snap shots	Ctrl + H	
[Printer Settings]	Set a printer. →3.7.2 ■ 4 Configuring the printer setting	-	
[Page Settings]	Adjusts the page layout for printing. →3.7.2 ■ 3 Page setting	-	
[Print Preview]	Displays a print preview. →3.7.2 ■ 2 Previewing print image	-	
[Print]	Outputs the contents of the settings of the project into a file. →3.7.2 ■ 1 Printing	Ctrl + P	
[Property]	Displays the project information.	-	
[End]	Exits GT Simulator3.	Alt + F4	

### ■ 2 [Display]

Menu	Description	Shortcut key
[Scroll Bar]	Switches display or non-display of a scroll bar. →3.7.9 Displaying scroll bars	-
[Full Screen Mode]	Sets and cancels the full screen mode. →3.7.10 Displaying the simulation screen in full screen mode	Alt + F9

### ■ 3 [Set]

Menu	Description	Shortcut key
[Keyboard]	Not applicable to GT21 Enables or disables the keyboard input. →3.7.4 Operating the numerical input or text input with a keyboard	-

### ■ 4 [Simulate]

Menu	Description	Shortcut key
[Start]	Starts a simulation.	F3
[End]	Exits a simulation.	Alt + F3
[Option]	Displays the [Option] dialog. →3.6.1 Setting options	-

### ■ 5 [Tools]

Menu	Description	Shortcut key
[Start of Device Monitor], [End of Device Monitor]	Starts or ends the device monitor. →3.7.5 Using the device monitor	-
[Resource Data]	Refer to resource data. →3.7.6 Referring to resource data	Ctrl + R

Menu	Description	Shortcut key
[Script Error]	Not applicable to GT21 Displays the script error information. →3.7.7 Displaying a script error	-
[Object Script Error]	Displays the object script information. →3.7.8 Displaying an object script error	-

## ■6 [Help]

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help. →0 How to Use Help	F1
[Manual List]	Lists the manuals.	-
[Connection to MITSUBISHI ELECTRIC FA Global Website]	Connects to the MITSUBISHI ELECTRIC FA Global Website.	-
[About GT Simulator3]	Check the version of GT Simulator3. →2.2.1 ■ 13 (1) [About GT Designer3] dialog	-

## 3.5.2 Toolbar

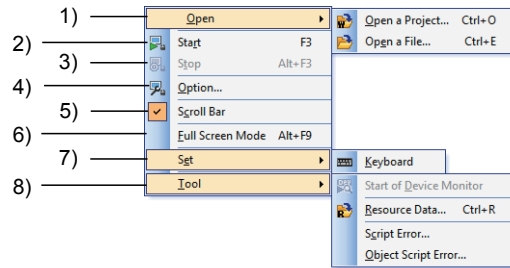

- 1) **[Opening a project] button**  
Reads workspace format projects.
- 2) **[Opening a file] button**  
Reads single file format projects.
- 3) **[Starting simulation] button**  
Starts a simulation.
- 4) **[Exit simulation] button**  
Exits a simulation.
- 5) **[Device Monitor] button**  
Starts or ends the device monitor.
- 6) **[Resource Data] button**  
Refer to resource data.
- 7) **[Option setting] button**  
Displays the [Option] dialog.
- 8) **[Keyboard] button**  
Enables or disables the keyboard input.

### 3.5.3 Screen for simulation

Right-click the simulate screen to display the following popup menu.

- 1) **[Open]**
  - [Project]  
Reads workspace format projects.
  - [File]  
Reads single file format projects.
- 2) **[Start]**  
Starts a simulation.
- 3) **[End]**  
Exits a simulation.
- 4) **[Option]**  
Displays the [Option] dialog.
- 5) **[Scroll Bar]**  
Switches display or non-display of a scroll bar.
- 6) **[Full Screen Mode]**  
Not available to GT21.  
Sets and cancels the full screen mode.
- 7) **[Set]**  
Not available to GT21.
  - [Keyboard]  
Enables or disables the keyboard input.
- 8) **[Tools]**
  - [Start of Device Monitor], [End of Device Monitor]  
Starts or ends the device monitor.
  - [Resource Data]  
Refer to resource data.
  - [Script Error]  
Displays the script error information.
  - [Object Script Error]  
Not applicable to GT21  
Displays the object script information.

### 3.5.4 Status bar

- 1) **Operation explanations**  
Displays the operation explanation.
- 2) **How to connect the communication setting**  
Displays how to connect the communication setting.
- 3) **Communication port of the communication setting**  
Displays the communication port or the communication setting.  
This item is displayed only for the direct CPU connection.
- 4) **Baud rate of the communication setting**  
Displays the baud rate or the communication setting.  
This item is displayed only for the direct CPU connection.

## 3.6 Basic Operations of GT Simulator3

---

- ⇒ 3.6.1 Setting options
- 3.6.2 Opening a project
- 3.6.3 Starting or exiting simulation
- 3.6.4 Updating the project to be simulated
- 3.6.5 Operations of the screen for simulation
- 3.6.6 Exiting GT Simulator3

### 3.6.1 Setting options

GT27 GT25 GT23 GT21 SoftGOT2000 GS

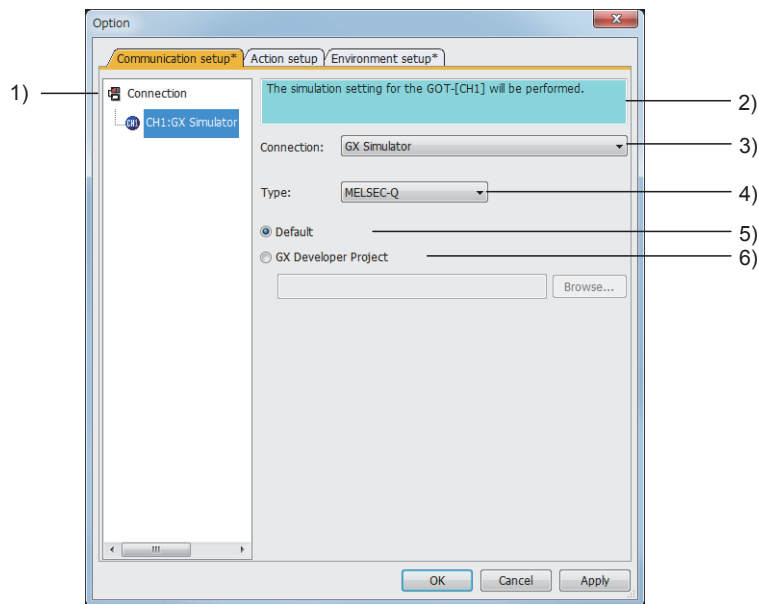

- ■ 1 [Communication settings] tab
- 2 [Action Setup] tab
- 3 [Environmental Setting] tab

#### ■ 1 [Communication settings] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- (1) When [GX Simulator] is selected for [Connection]
- (2) When [GX Simulator2] is selected for [Connection]
- (3) When [GX Simulator2/MT Simulator2] is selected for [Connection]
- (4) When [GX Simulator3] is selected for [Connection]
- (5) When [CPU Direct Connection (RS232)] is selected for [Connection]
- (6) When [CPU Direct Connection (USB)] is selected for [Connection]

#### (1) When [GX Simulator] is selected for [Connection]

#### 1) Connection configuration tree

Displays connection methods and connection settings for each channel of the GOT.

#### 2) Description

Displays a controller name to be connected to each channel of the GOT.

#### 3) [Connection]

Select a connection method for each channel of the GOT.

#### 4) [Controller Type]

Select a controller type to be connected.

The following shows the items to be selected.

- [MELSEC-A]
- [MELSEC-QnA]
- [MELSEC-Q]
- [MELSEC-Q(A-Mode)]
- [MELSEC-FX]

#### 5) [Default]

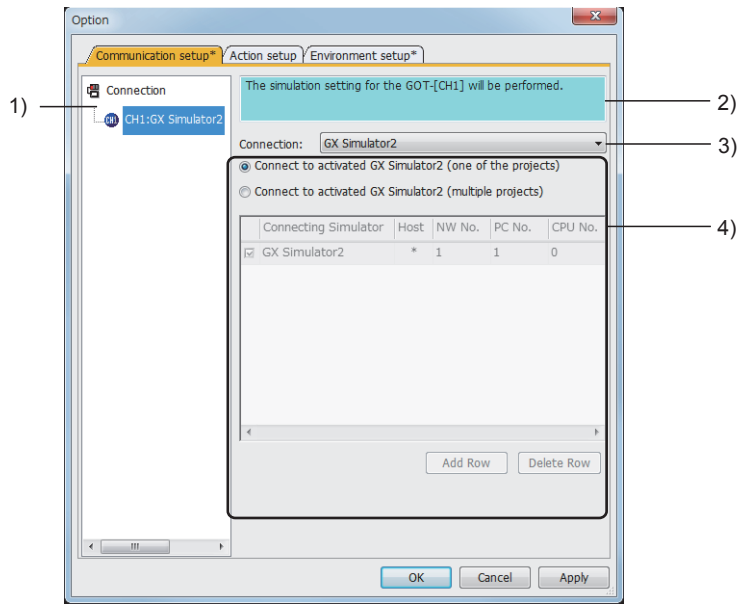

Executes a simulation with a sequence program with the END instruction only.

#### 6) [Specify a GX Developer project]

Select this item to execute a simulation with any sequence program.

To specify a sequence program, click the [Browse] button to select a GX Developer project.

**(2) When [GX Simulator2] is selected for [Connection]**

**1) Connection configuration tree**

Displays connection methods and connection settings for each channel of the GOT.

**2) Description**

Displays a controller name to be connected to each channel of the GOT.

**3) [Connection]**

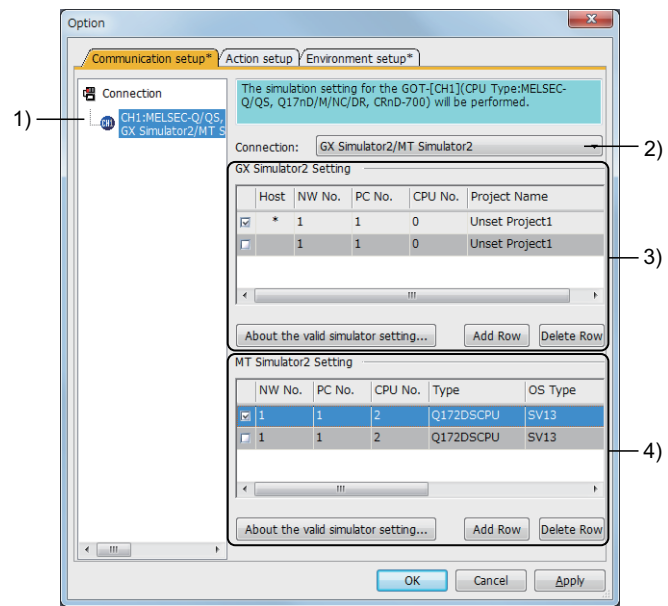

Select a connection method for each channel of the GOT.

**4) Connection setting**

Item	Description																												
[Connect to activated GX Simulator2 (one of the projects)]	Enables connecting to one module of GX Simulator2.																												
[Connect to activated GX Simulator2 (multiple projects)]	Enables connecting to multiple modules of GX Simulator2.																												
Detail setting table	<p>When you select [Connect to activated GX Simulator2 (multiple projects)], configure the following settings.</p> <table border="1"> <thead> <tr> <th>Connecting Simulator</th> <th>Host</th> <th>NW No.</th> <th>PC No.</th> <th>CPU No.</th> <th>Type</th> <th>Project Name</th> </tr> </thead> <tbody> <tr> <td><input checked="" type="checkbox"/> GX Simulator2</td> <td></td> <td>1</td> <td>1</td> <td>0</td> <td>MELSEC</td> <td>Unset Project1</td> </tr> <tr> <td><input checked="" type="checkbox"/> GX Simulator2</td> <td></td> <td>1</td> <td>1</td> <td>0</td> <td>MELSEC</td> <td>Unset Project1</td> </tr> <tr> <td><input checked="" type="checkbox"/> GX Simulator2</td> <td>*</td> <td>1</td> <td>3</td> <td>0</td> <td>MELSEC</td> <td>Unset Project1</td> </tr> </tbody> </table> <ul style="list-style-type: none"> <li>• Checkbox Select corresponding checkbox to enable the setting.</li> <li>• [Connecting simulator] Select a simulator to be connected.</li> <li>• [Host] Select a simulator to be set as a host.</li> <li>• [NW No.] Set the network number. The setting range is [0] to [4].</li> <li>• <b>[Connecting Simulator No.]</b> Set a system number and a CPU number appearing in GX Simulator3. Enter a system number, a period (.), and a CPU number in that order. The setting range of the system number is [1] to [64]. The setting range of the CPU number is [1] to [4].</li> </ul>	Host	NW No.	PC No.	CPU No.	Connecting Simulator No.	<input checked="" type="checkbox"/>	*	1	1	0	1.1
Host	NW No.	PC No.	CPU No.	Connecting Simulator No.								
<input checked="" type="checkbox"/>	*	1	1	0	1.1							
[About the valid simulator setting] button	Displays the description dialog of the valid simulator setting.											
[Add Row]	Adds a detail setting row in the detail setting table. Up to 32 rows can be added.											
[Delete Row]	Deletes a detail setting row selected in the detail setting table.											

**(5) When [CPU Direct Connection (RS232)] is selected for [Connection]**

- 1) **Connection configuration tree**  
Displays connection methods and connection settings for each channel of the GOT.
- 2) **Description**  
Displays a controller name to be connected to each channel of the GOT.
- 3) **[Connection]**  
Select a connection method for each channel of the GOT.
- 4) **[Controller Type]**  
Select a PLC type to be connected.  
The following shows the items to be selected.
  - [MELSEC iQ-F]
  - [MELSEC-A]
  - [MELSEC-QnA]
  - [MELSEC-Q]
  - [MELSEC-Q(A-Mode)]

- [MELSEC-L]
- [MELSEC-FX]
- [MELDAS C6\*]
- [OMRON SYSMAC]

#### 5) [Communication port]

Select a communication port.

The setting range is [COM1] to [COM63].

#### 6) [Baud rate]

Select a communication baud rate.

The following shows the items to be selected.

PLC type	Baud rate	
	In the normal mode	In the high-speed mode
[MELSEC iQ-F]	[9.6Kbps]	[9.6Kbps] [19.2Kbps] [38.4Kbps] [57.6Kbps] [115.2Kbps]
[MELSEC-Q]		
[MELSEC-Q(A-Mode)]		
[MELSEC-L]		
[MELSEC-FX]		
[MELSEC-A]	[9.6Kbps]	[9.6Kbps]
[MELSEC-QnA]	[9.6Kbps]	[9.6Kbps] [19.2Kbps] [38.4Kbps]
[MELDAS C6*]	[19.2Kbps]	[19.2Kbps]
[OMRON SYSMAC]	[9.6Kbps]	[9.6Kbps] [19.2Kbps] [38.4Kbps] [57.6Kbps] [115.2Kbps]

#### 7) [High-speed mode]

Select this item to use the high-speed mode.

In the high-speed mode, the continuous simulation time is two hours.

When you select [MELSEC-A] or [MELDAS C6\*] in the [Controller Type], this item is not be displayed.

#### 8) [Servo axis switching GD device first No.]

Set this item when selecting [MELSEC iQ-F] for [Type].

Set the start device number of the GOT data registers (GD) to specify an axis number.

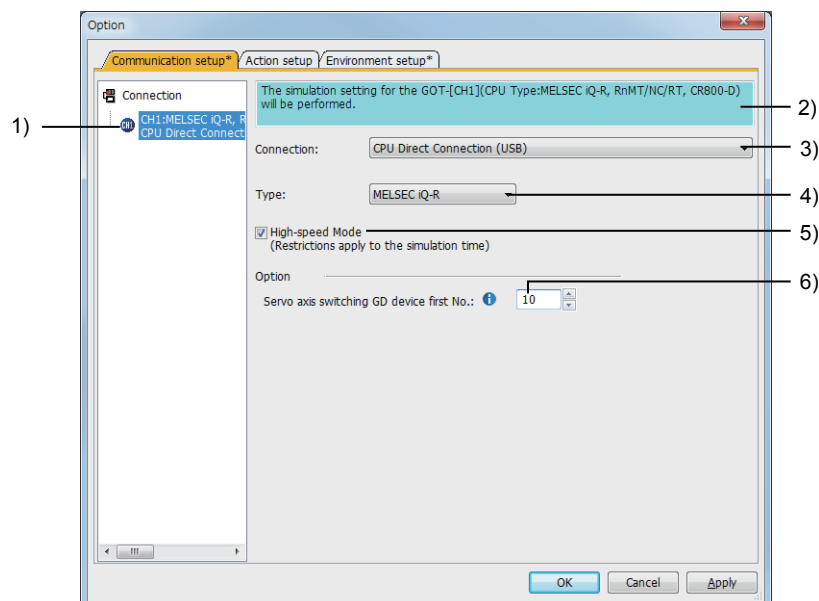

Specify the same value for [Servo axis switching GD device first No.] on GT Simulator3 and GT Designer3 ([Controller Setting] window).

The number set on GT Designer3 is invalid for simulation.

If you set a different number on GT Simulator3, the simulation is not performed properly.

- GT27, GT25, and GT23: [0] to [65520]
- GT21: [0] to [2032]

### (6) When [CPU Direct Connection (USB)] is selected for [Connection]

### 1) Connection configuration tree

Displays connection methods and connection settings for each channel of the GOT.

### 2) Description

Displays a controller name to be connected to each channel of the GOT.

### 3) [Connection]

Select a connection method for each channel of the GOT.

### 4) [Controller Type]

Select a PLC type to be connected.

The following shows the items to be selected.

- [MELSEC iQ-R]
- [MELSEC-Q]
- [MELSEC-L]
- [MELSEC-FX]

### 5) [High-speed mode]

Select this item to use the high-speed mode.

In the high-speed mode, the continuous simulation time is two hours.

When you select [MELSEC-A] or [MELDAS C6\*] in the [Controller Type], this item is not be displayed.

### 6) [Servo axis switching GD device first No.]

Set this item when selecting [MELSEC iQ-R] for [Type].

Set the start device number of the GOT data registers (GD) to specify an axis number.

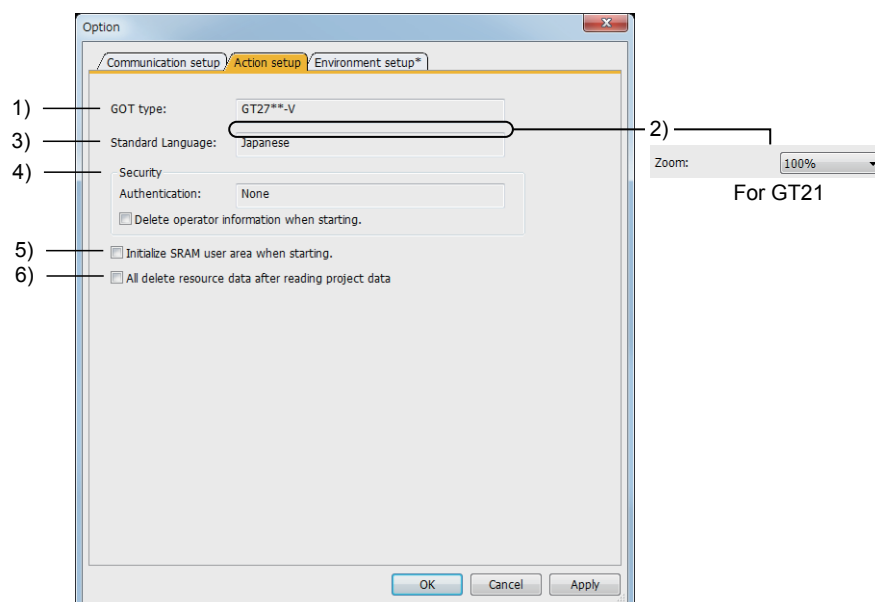

Specify the same value for [Servo axis switching GD device first No.] on GT Simulator3 and GT Designer3 ([Controller Setting] window).

The number set on GT Designer3 is invalid for simulation.

If you set a different number on GT Simulator3, the simulation is not performed properly.

- GT27, GT25, and GT23: [0] to [65520]
- GT21: [0] to [2032]

## ■ 2 [Action Setup] tab

### 1) [GOT Type]

Displays the GOT model to be simulated.

### 2) [Zoom]

Select the display magnification of the simulation screen.

Only available to GT21.

### 3) [Standard Language]

Displays the standard language.

#### 4) [Security]

Item	Description
[Authentication Method]	Displays the authentication method.
[Delete operator information when starting]	Select this item to delete the operation information when starting the simulation first.

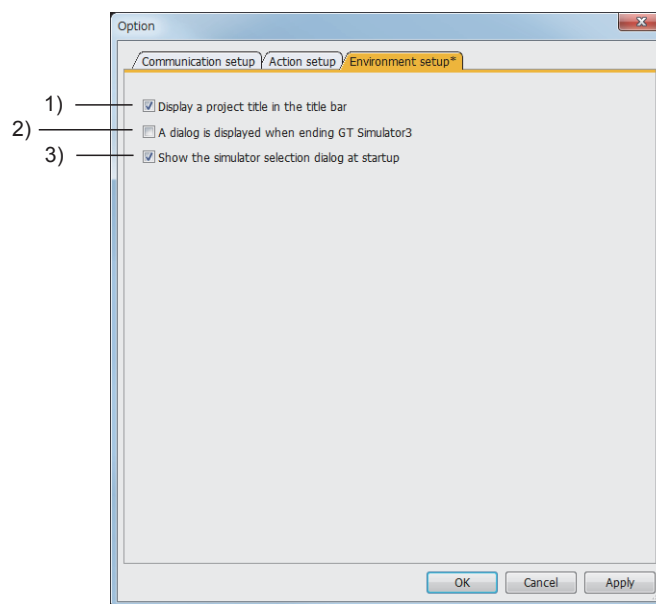

#### 5) [Initialize SRAM user area when starting]

Select this item to initialize the SRAM user area when starting the simulation first.  
Not available to GT21.

#### 6) [Delete all resource data after reading project data]

Select this item to delete all user data in the following folders when starting the simulation first.  
Folder A, B, E, F, G or lower hierarchies in the working folders  
For the working folder, refer to the following.  
→3.1.5 ■ 3 Working folder

### ■ 3 [Environmental Setting] tab

#### 1) [Display a project title in the title bar]

Displays the project name in the title bar.

#### 2) [A dialog is displayed when ending GT Simulator3]

Displays a dialog when GT Simulator3 exits.

#### 3) [Show the simulator selection dialog at startup]

Displays the [GT Simulator3 Main Menu] dialog at GT Simulator3 startup.

## 3.6.2 Opening a project

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Opening a workspace format project
- 2 Opening a single file format project

### ■ 1 Opening a workspace format project

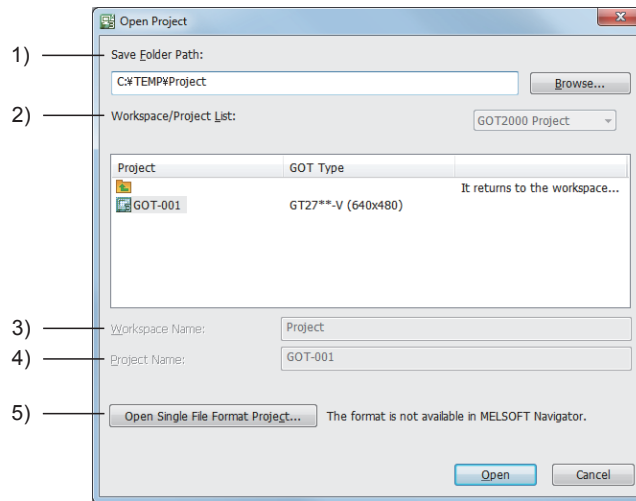

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Perform one of the following operations.

- Click the [Open Project] button on the toolbar.
- Select [Project] → [Open] → [Project] from the menu.
- Right-click the mouse and select [Open] → [Project] from the menu.

**Step 2** The [Open Project] dialog (workspace format) appears.

Configure the following settings and click the [Open] button.

#### 1) [Save Folder Path]

Select a location where the project data has been saved.

#### 2) [Workspace/Project List]

Workspaces or projects which are saved are displayed.

If a workspace is double-clicked, the projects in the workspace are displayed.

Select a project to be opened.

#### 3) [Workspace Name]

The selected workspace name is displayed.

#### 4) [Project Name]

The selected project name is displayed.

#### 5) [Open a Single File Format Project]

Click this button to switch the screen to the one for selecting a single file format project.

**Step 3** The confirmation dialog is displayed.

Confirm the display and click the [Yes] button or the [OK] button,

**Step 4** The simulation starts.

## ■ 2 Opening a single file format project

- Step 1** Perform one of the following operations.
- Click the [Open a File] button on the toolbar.
  - Select [Project] → [Open] → [File] from the menu.
  - Right-click the mouse and select [Open] → [File] from the menu.
- Step 2** The [Open Project] dialog (single file format) appears.  
Configure the following settings and click the [Open] button.

- 1) **[Look in]**  
Select a location where the project data has been saved.
- 2) **[File name]**  
Set a name for the project data to be simulated.
- 3) **[Files of type]**  
Select a file format of the project data. GTX format or GTXS format)
- 4) **[Open workspace format project]**  
Switches the dialog to the one for selecting a workspace format project.
- Step 3** The confirmation dialog is displayed.  
Confirm the display and click the [Yes] button or the [OK] button,
- Step 4** The simulation starts.

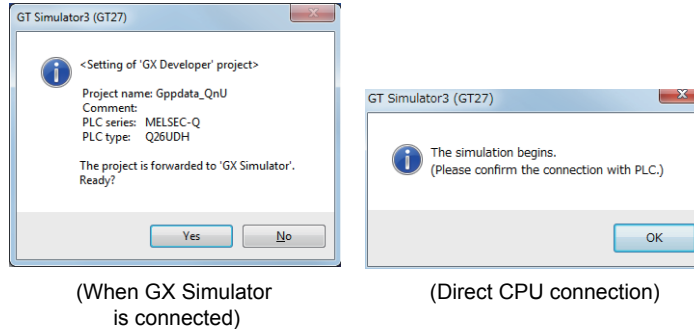

### 3.6.3 Starting or exiting simulation

#### 1 Starting simulation

- Step 1** Perform one of the following operations.
- Click the [Start] button on the toolbar.
  - Select the [Simulate] → [Start] from the menu.
  - Right-click the mouse and select [Start] from the menu.

- Step 2** The confirmation dialog is displayed.  
Confirm the display and click the [Yes] button or the [OK] button,

- Step 3** The simulation starts.

#### 2 Exiting simulation

- Step 1** Perform one of the following operations.
- Click the [END] button on the toolbar.
  - Select [Project] → [END] from the menu.
  - Select the [Simulate] → [END] from the menu.
  - Right-click the mouse and select [END] from the menu.
  - Click the [Close] button on the title bar.

- Step 2** Simulation exits.

#### 3 Switching the display language of GT Simulator3

The display language of GT Simulator3 is switched according to that of GT Designer3.  
The following shows how to switch the display language.

- Step 1** Exit GT Simulator3.
- Step 2** Switch the display language of GT Designer3.  
For how to switch the display language of GT Designer3 and precautions, refer to the following.  
→ 2.1.3 Switching the display language of GT Designer3
- Step 3** Start GT Simulator3 again to switch the display language.

In the following cases, the display language of GT Simulator3 is not switched.

- GT Simulator3 is not exited before the display language of GT Designer3 is switched.
- After the display language of GT Designer3 is switched, GT Simulator3 is started before GT Designer3 is exited.

### 3.6.4 Updating the project to be simulated

---

When you start GT Simulator3 from GT Designer3, you can confirm the contents edited with GT Designer3 with GT Simulator3 without starting GT Designer3 again.

- Step 1** Select [Tools] → [Simulator] → [Activate] from the menu in GT Designer3.
- Step 2** Edit a project data with GT Designer3.
- Step 3** Select [Tools] → [Simulator] → [Update] from the menu in GT Designer3.
- Step 4** The project data of GT Simulator3 is updated.

#### Point

##### Starting GT Simulator3 associating with GT Designer3

Updating the program to be updated can be available only when GT Simulator3 is started from GT Designer3. When you start GT Simulator3 alone, updating the project is unavailable.

### 3.6.5 Operations of the screen for simulation

---

In GT Simulator3, use the mouse instead of touching the screen.  
The input range is narrower than that of the GOT. Check the input by buzzer.

### 3.6.6 Exiting GT Simulator3

---

- Step 1** Perform one of the following operations.
  - Click the [END] button on the toolbar.
  - Select [Project] → [END] from the menu.
  - Select the [Simulate] → [END] from the menu.
  - Right-click the mouse and select [END] from the menu.
  - Click the [Close] button on the title bar.
- Step 2** GT Simulator3 exits.

## 3.7 Useful Functions of GT Simulator3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 3.7.1 Taking snap shots
- 3.7.2 Printing the screen being simulated
- 3.7.3 Displaying the information of the project being simulated
- 3.7.4 Operating the numerical input or text input with a keyboard
- 3.7.5 Using the device monitor
- 3.7.6 Referring to resource data
- 3.7.7 Displaying a script error
- 3.7.8 Displaying an object script error
- 3.7.9 Displaying scroll bars
- 3.7.10 Displaying the simulation screen in full screen mode

### 3.7.1 Taking snap shots

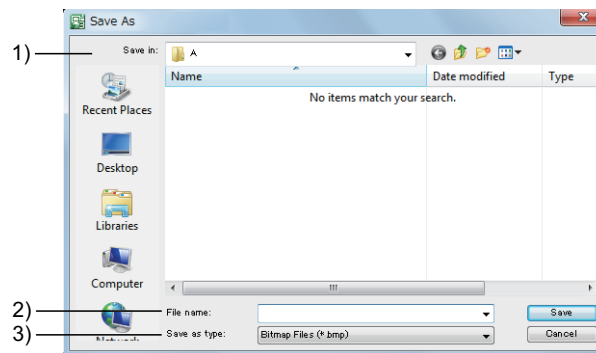

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Save a screen image of the simulation as a BMP format file or a JPEG format file.

**Step 1** Select [Project] → [Snap Shot] from the menu.

**Step 2** The [Save As] dialog appears.

Configure the following settings and click the [Save] button.

**1) [Save in]**

Select a location for saving a file.

**2) [File name]**

Set a file name of the screen image to be saved.

**3) [Files of type]**

Select the BMP format or the JPEG format.

## 3.7.2 Printing the screen being simulated

Output a screen image of the simulation to a printer.

- ■ 1 Printing
  - 2 Previewing print image
  - 3 Page setting
  - 4 Configuring the printer setting

### ■ 1 Printing

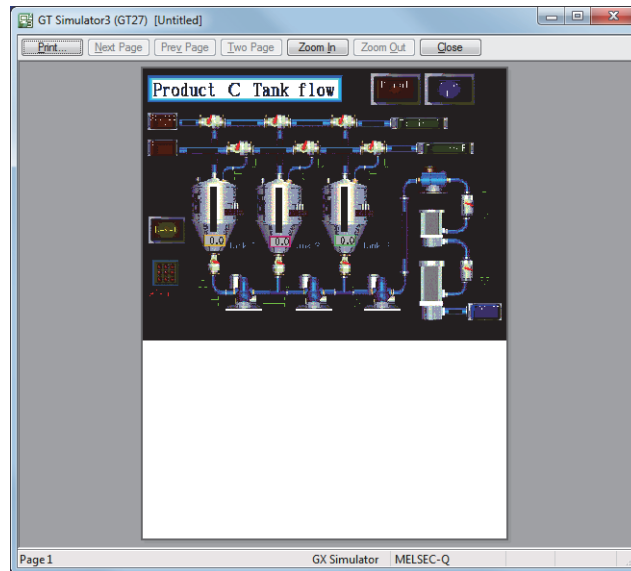

- Step 1** Select [Project] → [Print] from the menu.
- Step 2** The [Print] dialog of Windows is displayed.  
Click the [OK] button to start printing.

### ■ 2 Previewing print image

- Step 1** Select [Project] → [Print Preview] from the menu.
- Step 2** The print preview is displayed.

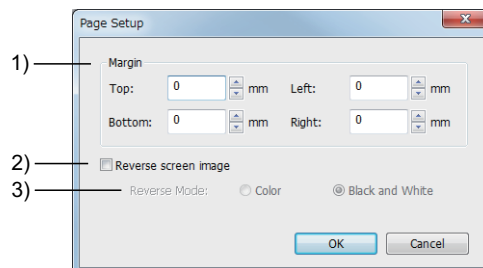

### ■ 3 Page setting

- Step 1** Select [Project] → [Page Settings] from the menu.
- Step 2** The [Page Settings] dialog is displayed.

Configure the following settings and click the [OK] button.

#### 1) [Margin]

Set margins for the page to be printed.

2) **[Reverse screen image]**

Select this item to reverse colors of the screen image at printing.

3) **[Reverse Mode]**

Set a reverse method for the screen image.

The following shows the items to be selected.

- [Color]: Reverses whole colors of the screen image to be printed.
- [Black and White]: Reverses white to black of the screen image to be printed.

■ 4 **Configuring the printer setting**

**Step 1** Select [Project] → [Printer Settings] from the menu.

**Step 2** The [Print] dialog of Windows is displayed.  
Configure the settings for the printer (selecting a printer, paper size, direction of printing).

**Point**

(1) **Precautions for the printer used**

GT Simulator3 retains the print settings by GOT model.

However, when you perform one of the following operations, the printer selected for [Set as default printer] in Windows is specified.

- Deleting the selected printer
- Selecting a printer whose name contains 31 characters or more

(2) **Precautions for the print settings**

Depending on the printer used, some print settings are not retained.

3.7.3 **Displaying the information of the project being simulated**

The project title, project ID, and the data size of the project data that is being simulated are displayed.

**Step 1** Select [Project] → [Properties] from the menu.

**Step 2** The [Properties] dialog appears.

1) **[Project Title]**

Displays the title for the project.

2) **[Project ID]**

Displays the project ID.

3) **[Data Size]**

Displays the data size of the project data.

**Point**

**When the properties dialog box is displayed before executing the simulation**

When the [Properties] dialog is displayed before executing the simulation, the project title, the project ID, and the data size of the previous simulation are displayed.

When the project data is not read, the project title, the project ID, and the data size are not displayed.

### 3.7.4 Operating the numerical input or text input with a keyboard

Operate the numerical input or text input with the keyboard of a personal computer.

Perform one of the following operations to enable or disable the keyboard input.

- Select [Set] → [Keyboard] from the menu.
- Click the [Keyboard] button on the toolbar.
- Select [Set] → [Keyboard] from the right-click context menu.

The following shows how to operate the numerical input or text input with a keyboard.

Keyboard operation	GOT key code	Operation on the numerical input	Operation on the text input
[Back space]	0008h	Delete the character on the cursor.	
[Enter] <sup>*1</sup>	000Dh	Write the entry to a specified device, display the cursor on the target object, move the cursor to a different object, or close the key window.	
[Esc]	001Bh	Cancel the entry.	
[~] (Hyphen)	002Dh	Reverse the sign of the value.	-
[.] (Period)	002Eh	Enter a decimal point.	-
[0] to [9]	0030h to 0039h	Enter a numeric character.	
[A] to [Z], [a] to [z]	0041h to 005Ah, 0061h to 007Ah	Enter a numeric character in hexadecimal ([A] to [F], [a] to [f]).	Enter a character. (ASCII or Unicode 2.1-compatible)
Symbol keys	Character codes (ASCII)	-	
Enter text (such as hiragana or kanji characters).	Character codes (Unicode)	-	Enter text. (Unicode 2.1-compatible)
[→], [←], [↑], [↓]	0080h, 0081h, 0082h, 0083h	Move the cursor to a different object.	
[Home]	0084h	-	Convert the entry to kanji characters.
[Page Up]	0085h	-	Select the previous candidate.
[Page Down]	0086h	-	Select the next candidate.
[End]	0087h	-	Confirm the entry, or select the next group of hiragana characters to be converted to kanji characters.
[Delete]	0088h	Delete all the entered characters.	
[Ctrl] + [→], [Ctrl] + [←]	0090h, 0091h	Move the cursor on the target object.	
[Ctrl] + [↑], [Ctrl] + [↓]	FFFAh, FFFBh	Increment or decrement the value.	-

\*1 The operation on the target object varies depending on the setting in the [Environmental Setting] window ([Key Windows]).  
For the details, refer to the following.

→5.2.4 ■ 4 [Key Window]

## 3.7.5 Using the device monitor

The device monitor function monitors the devices of a controller connected to GT Simulator3. You can change the current values of devices, checking the project operations efficiently.

### ■ 1 Specifications of the device monitor

#### (1) Starting the device monitor

When connection is established between GT Simulator3 and a controller simulator or Mitsubishi Electric equipment, you can start the device monitor during simulation only.

If connection is established between GT Simulator3 and non-Mitsubishi Electric equipment by using the direct CPU connection, you cannot start the device monitor.

#### (2) Devices that can be monitored

The device monitor function monitors GOT internal devices and controller devices.

For the devices that can be monitored by GT Simulator3, refer to the following.

→ 3.1.3 Available devices for monitoring

#### (3) Specifications of the free registration list

A created free registration list is retained after GT Simulator3 exits.

Up to 32 free registration lists can be created.

Up to 32 characters are available for a free registration list name.

The following characters cannot be used in a free registration list name.

\ / : ; \* ? " < > | .

Up to 6 free registration windows can be open simultaneously.

Up to 256 devices are registrable in one free registration list.

### ■ 2 How to use the device monitor

- (1) Starting or ending the device monitor
- (2) Creating or editing a free registration list
- (5) Deleting a free registration list

#### (1) Starting or ending the device monitor

##### (a) Starting the device monitor

While GT Simulator3 is performing a simulation, perform one of the following operations to start the device monitor.

- Select [Tool] → [Start of Device Monitor] from the menu.
- Click the [Device Monitor] button on the toolbar.
- Select [Tool] → [Start of Device Monitor] from the right-click context menu.

##### (b) Ending the device monitor

Perform one of the following operations to end the device monitor.

- Select [Tool] → [End of Device Monitor] from the menu of GT Simulator3.
- Select [File] → [Exit] from the menu of the device monitor.
- Click the [Close] button on the title bar of the device monitor.
- On the GT Simulator3 screen, select [Tool] → [End of Device Monitor] from the right-click context menu.
- Exit GT Simulator3.

#### (2) Creating or editing a free registration list

Register a device in a free registration list to test the device for correct operation.

After changing the device value, you can check the project operations.

### (a) Creating or editing a free registration list

The following shows the procedure for creating or editing a free registration list.

**Step 1** Perform one of the following operations to display a free registration window.

- Select [Window] → [New Free Registration List] from the menu.
- Double-click [New] under [Free Reg] in the [Project] window.
- Double-click a target free registration list under [Free Reg] in the [Project] window.

For information on how to import a free registration list and add it as a new list, refer to the following.

→3.7.5 ■ 2 (3) Importing a free registration list

**Step 2** Register, edit or delete a device in the free registration window.

→3.7.5 ■ 4 (3) Free registration window

### (b) Changing the name of a free registration list

Select a free registration list, and click it again or press the [F2] key on the keyboard to edit its name.

### (c) Deleting a device

Select a device and press the [Delete] key on the keyboard to delete the device.

## (3) Importing a free registration list

Import a free registration list file in the CSV or Unicode text format.

The following shows the procedure for importing a free registration list.

**Step 1** Perform one of the following operations in the [Project] window according to the import method.

- To import a free registration list and add it as a new list, select [New].
- To overwrite an existing free registration list with an imported list, select the target existing free registration list.
- To import multiple free registration lists, select [Free Reg] at the top of the tree.

**Step 2** Perform one of the following operations to display the [Open] dialog.

- Select [File] → [Import Free Registration List] from the menu.
- In the [Project] window, click the [Im] button.
- Right-click the item selected in step 1, and select [Import] from the menu.

**Step 3** Select a free registration list file and click the [Open] button to import the file.

When importing multiple files, you can import CSV files and Unicode text files together.

For the precautions for using Unicode text files, refer to the following.

→12.5 Precautions for Using Unicode Text File

## (4) Exporting a free registration list

Export a free registration list to a CSV or Unicode text file.

You can export one free registration list, or export all free registration lists collectively.

The following shows the procedure for exporting one free registration list.

**Step 1** In the [Project] window, select a free registration list to be exported.

**Step 2** Perform one of the following operations to display the [Save As] dialog.

- Select [File] → [Export Free Registration List] from the menu.
- In the [Project] window, click the [Ex] button.
- Right-click the free registration list to be exported, and select [Export] from the menu.

**Step 3** Set [File name] and [Save as type], and click the [Save] button to export the free registration list.

The following shows the procedure for exporting all free registration lists collectively.

**Step 1** In the [Project] window, select [Free Reg] at the top of the tree.

**Step 2** Perform one of the following operations to display a dialog where you can select a file format.

- Select [File] → [Export Free Registration List] from the menu.
- In the [Project] window, click the [Ex] button.
- Right-click [Free Reg] at the top of the tree, and select [Export] from the menu.

**Step 3** Select a file format and click the [OK] button to display the [Browse For Folder] dialog.

**Step 4** Select an export destination and click the [OK] button to export the free registration lists.

The exported free registration lists are editable with spreadsheet software or others. The following shows the layout of an exported free registration list.

1)	{DEV_MONT_VERSION}	1			
2)	{LIST_TYPE}	0			
3)	{LIST_NAME}	Free Reg1			
4)	{DEVICE_NUM}	6			
5)	{NO}	{DEVICE}	{DEV_TYPE}	{DISP_TYPE}	{DEV_COMMENT}
	0	X0000	BIT	BIN	
	1	X0001	BIT	BIN	
	2	X0002	BIT	BIN	
	3	D1000	BIN16	DEC	
	4	D1001	BIN16	DEC	
	5	D1002	BIN16	DEC	
		6)	7)	8)	9)

**1) Version**

Version of the free registration list.

**2) List type**

Type of a list.

- 0: Free registration list

**3) List name**

Name of the free registration list.

For the name specifications, refer to the following.

⇒ 3.7.5 ■ 1 (3) Specifications of the free registration list

**4) Number of devices**

Number of the registered devices.

Up to 256 devices are registrable in one free registration list.

**5) No.**

Registered device number.

**6) Device**

Registered device.

**7) Data type**

Data type of a device

- BIT: [Bit]
- BIN16: [Word [Signed]]
- BIN16\_Unsigned: [Word [Unsigned]/Bit String [16-bit]]
- BIN32: [Double Word [Signed]]
- BIN32\_Unsigned: [Double Word [Unsigned]/Bit String [32-bit]]

**8) Display format**

Display format of a device.

- BIN: [Binary]
- OCT: [Octal]
- DEC: [Decimal]
- HEX: [Hexadecimal]

**9) Comment**

Comment set for a device.

Up to 255 characters can be set for one comment.

**(5) Deleting a free registration list**

The following shows the procedure for deleting a free registration list.

**Step 1** In the [Project] window, select a free registration list to be deleted.

**Step 2** Perform one of the following operations to display a confirmation dialog.

- Press the [Delete] key on the keyboard.
- Right-click the free registration list to be deleted, and select [Delete] from the menu.

**Step 3** Click the [Yes] button to delete the list.

### ■ 3 Precautions

#### (1) Monitoring performance of GT Simulator3

An increase in the number of monitored devices causes monitoring performance degradation in GT Simulator3.

#### (2) Precautions for exporting a free registration list

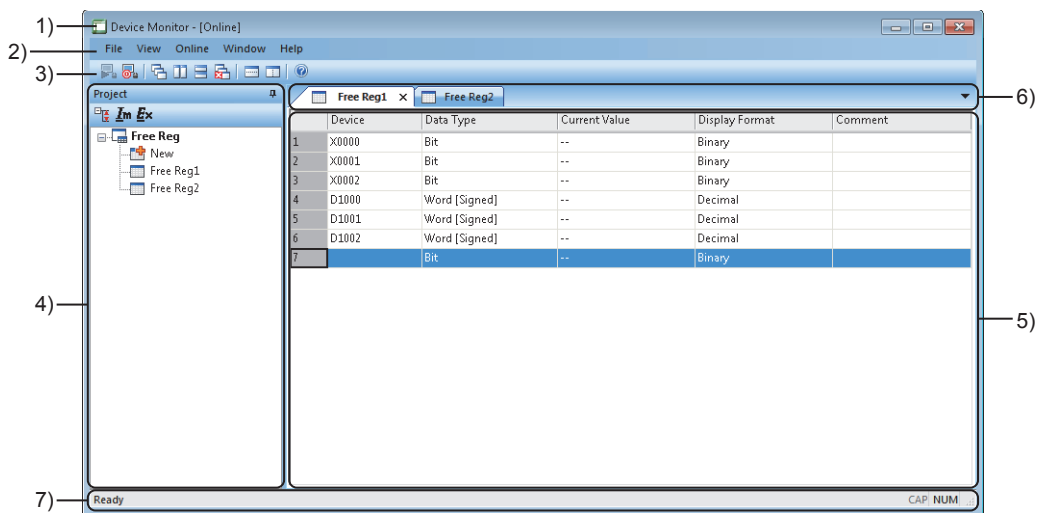

When a free registration list contains characters that cannot be represented in ASCII or Shift JIS code, export the list to a Unicode text file.

If you export the list to a CSV file, such characters are not output properly.

For the precautions for using Unicode text files, refer to the following.

→ 12.5 Precautions for Using Unicode Text File

### ■ 4 [Device Monitor] window

#### 1) Title bar

Displays the device monitor operation status.

#### 2) Menu bar

Displays the operation menus of the device monitor.

→ (1) Menus

#### 3) Toolbar

Displays the operation buttons of the device monitor.

→ (2) Toolbar

#### 4) [Project] window

Expand all button, collapse all button

- Expand all button, collapse all button  
Expands or collapses all items in the tree.
- [Im] button  
Imports a free registration list file in the CSV or Unicode text format.  
For the procedure for importing a free registration list, refer to the following.  
→ 3.7.5 ■ 2 (3) Importing a free registration list
- [Ex] button  
Exports a free registration list to a CSV or Unicode text file.  
For the procedure for exporting a free registration list, refer to the following.  
→ 3.7.5 ■ 2 (4) Exporting a free registration list
- [Free Reg]  
Displays created free registration list names.
- [New]  
Creates a free registration list.

#### 5) Work window

An area in which free registration windows appear

→(3) Free registration window

**6) Editor tab**

Displays the tabs corresponding to the windows opened in the work window.  
To bring an open window to the foreground in the work window, select its tab.

• **Pull-down menu button**

Lists the open windows in the work window.  
To bring an open window to the foreground in the work window, select it from the pull-down menu.

**7) Status bar**

Displays the description of a selected menu.

**(1) Menus**

**(a) [File]**

Menu	Description	Shortcut key
[Import Free Registration List]	Import a free registration list file in the CSV or Unicode text format. For the procedure for importing a free registration list, refer to the following. →3.7.5 ■ 2 (3) Importing a free registration list	Alt + I
[Export Free Registration List]	Export a free registration list to a CSV or Unicode text file. For the procedure for exporting a free registration list, refer to the following. →3.7.5 ■ 2 (4) Exporting a free registration list	Alt + E
[Exit]	Ends the device monitor.	-

**(b) [View]**

Menu	Description	Shortcut key
[Toolbar]	Displays or hides the toolbar.	-
[Status Bar]	Displays or hides the status bar.	-

**(c) [Online]**

Menu	Description	Shortcut key
[Start]	Starts the device monitor.	F3
[Stop]	Stops the device monitor.	Alt+F3

**(d) [Window]**

Menu	Description	Shortcut key
[New Free Registration List]	Create a free registration list.	-
[Cascade]	Displays open windows in a stack in the work window.	-
[Arrange Sideways]	Tiles open windows side by side in the work window.	-
[Arrange Lengthways]	Tiles open windows horizontally in the work window.	-
[Close Inactive Windows]	Closes all open windows except the selected one in the work window.	-
[New Horizontal Tab Group]	Splits the work window into panes horizontally. Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane. Tabs are movable between the editor tabs of panes.	-
[New Vertical Tab Group]	Splits the work window into panes vertically. Puts the free registration window corresponding to a selected tab in the immediately right pane. Tabs are movable between the editor tabs of panes.	-

**(e) [Help]**

Menu	Description	Shortcut key
[GT Designer3 Help]	Displays GT Designer3 Help.	F1

## (2) Toolbar

- 1) **[Start]**  
Starts the device monitor.
- 2) **[Stop]**  
Stops the device monitor.
- 3) **[Cascade]**  
Displays open windows in a stack in the work window.
- 4) **[Arrange Sideways]**  
Tiles open windows side by side in the work window.
- 5) **[Arrange Lengthways]**  
Tiles open windows horizontally in the work window.
- 6) **[Close Inactive Windows]**  
Closes all open windows except the selected one in the work window.
- 7) **[New Horizontal Tab Group]**  
Splits the work window into panes horizontally.  
Puts the free registration window corresponding to a selected tab in a pane immediately underneath the current pane.  
Tabs are movable between the editor tabs of panes.
- 8) **[New Vertical Tab Group]**  
Splits the work window into panes vertically.  
Puts the free registration window corresponding to a selected tab in the immediately right pane.  
Tabs are movable between the editor tabs of panes.
- 9) **[GT Designer3 Help]**  
Displays GT Designer3 Help.

## (3) Free registration window

	Device	Data Type	Current Value	Display Format	Comment
1	M0	Bit	0	Binary	
2	M1	Bit	0	Binary	
3	D100	Word [Signed]	0	Decimal	
4	D200	Word [Signed]	0	Decimal	
5		Bit	--	Binary	

- 1) **[Device]**  
Set a device to be monitored.  
→6.1.1 How to set devices
- 2) **[Data Type]**  
Select the data type of a device.  
The following shows the items to be selected.
  - [Bit]
  - [Word [Unsigned]/Bit String [16-bit]]
  - [Double Word [Unsigned]/Bit String [32-bit]]
  - [Word [Signed]]
  - [Double Word [Signed]]
- 3) **[Current Value]**  
Displays the current value of a device.  
The set value is changeable.  
If a communication error occurs, [--] is displayed.  
The setting range of [Current Value] depends on the device.

#### 4) [Display Format]

Select the display format of a device.

The following shows the items to be selected.

- [Binary]
- [Octal]
- [Decimal]
- [Hexadecimal]

#### 5) [Comment]

Set a comment for a device.

Up to 255 characters can be set for one comment.

### 3.7.6 Referring to resource data

Refer to alarm log files, recipe files, data log files, operation log files, and image files (such as hard copies) saved in a personal computer.

**Step 1** Perform one of the following operations to display the [Refer To Resource Data] dialog.

- Select [Tools] → [Resource Data] from the menu.
- Click the [Resource Data] button on the toolbar.
- Select [Tools] → [Resource Data] from the right-click context menu.

**Step 2** Configure the following settings and click the [Open] button to display the resource data.

#### 1) [Look in]

Select the storage location of resource data.

#### 2) [File name]

Select resource data to be referred to.

#### 3) [Files of type]

Select the file type of resource data.

- CSV Files (\*.csv): CSV format
- Unicode Text Files (\*.txt): Unicode text format
- Bitmap Files (\*.bmp): BMP format
- JPEG Files (\*.jpg): JPEG format

### 3.7.7 Displaying a script error

Displays the script error information.

For the script function, refer to the following.

⇒9.9 Project Script, Screen Script, and Script Part

**Step 1** Perform one of the following operations.

- Select [Tool] → [Script Error] from the menu.
- Select [Tool] → [Script Error] from the right-click context menu.

**Step 2** The [Script Error] dialog is displayed.

**1) [Script No.]**

The script No. of the script in which an error occurs is displayed.

**2) [Error No.]**

The error code of the error is displayed.

**3) [Error message]**

Displays the error contents.

**4) [Retry] button**

Retries the script.

**5) [Clear] button**

Clears the displayed error message.

When the error has not been cleared, the error message is displayed again.

### 3.7.8 Displaying an object script error

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Displays the object script information.

For the object script function, refer to the following.

→9.10 Object Script

**Step 1** Perform one of the following operations.

- Select [Tool] → [Object Script Error] from the menu.
- Select [Tool] → [Object Script Error] from the right-click context menu.

**Step 2** The [Object Script Error] dialog is displayed.

**1) [Script User ID]**

The user ID of the script in which an error occurs is displayed.

**2) [Error No.]**

The error code of the error is displayed.

**3) [Error message]**

Displays the error contents.

**4) [Retry] button**

Retries the object script.

**5) [Clear] button**

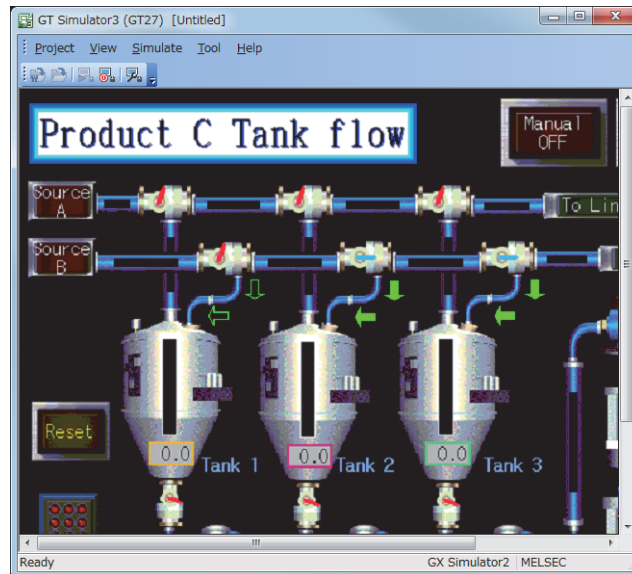

Clears the displayed error message.

When the error has not been cleared, the error message is displayed again.

### 3.7.9 Displaying scroll bars

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Perform one of the following operations.
- Select [Display] → [Scroll bar] from the menu.
  - Right-click the mouse and select [Scroll bar] from the menu.
- Step 2** A scroll bar appears.

#### Point

**(1) Displaying the scroll bar**

When resolutions of the GOT model to be simulated are lower than the window size, the scroll bar is not displayed.

**(2) Scrolling the screen**

When GT Simulator3 is activated, the screen can be scrolled by a wheel of a mouse.

The vertical scroll is prioritized.

Scrolling with the [PageUp] key and the [PageDown] key is unavailable.

### 3.7.10 Displaying the simulation screen in full screen mode

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The simulation screen can be displayed on the personal computer in a full screen.

- ➔ ■ 1 Executing the full screen display
- 2 Canceling the full screen display

#### ■ 1 Executing the full screen display

**Step 1** Perform one of the following operations.

- Press the [Alt] key and the [F9] key.
- Select the [Display] → [Full-screen display] from the menu.
- Right-click the mouse and select [Full-screen display] from the menu.

**Step 2** The confirmation dialog for switching the full screen display appears.

Click the [OK] button, and then GT Simulator3 is displayed in a full screen.

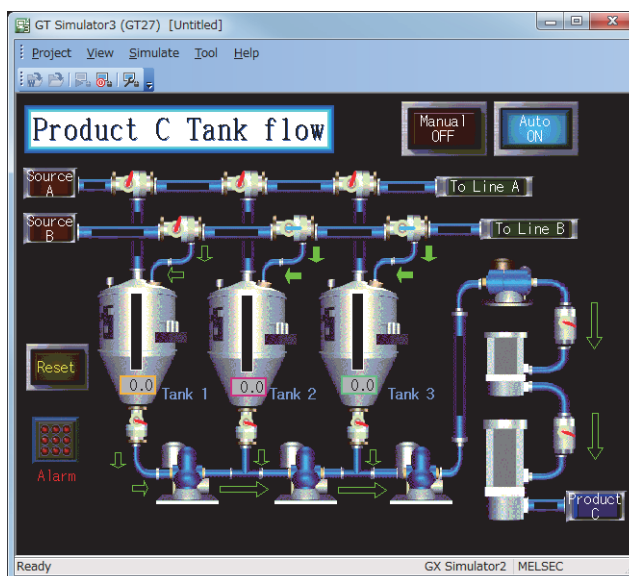

#### ■ 2 Canceling the full screen display

**Step 1** Perform one of the following operations.

- Press the [Alt] key and the [F9] key.
- Right-click the mouse and select [Full-screen display] from the menu.

**Step 2** The confirmation dialog for switching the full screen display appears.

Click the [OK] button, and a full screen display is canceled.

**(1) Operation during the full screen display**

During the full screen display, operations for [Open], [Start], [END], and [Option] are available.  
To execute an operation other than above, cancel the full screen display.

**(2) Display during the full screen display**

If a screen is switched to a full screen when resolutions of a personal computer are different from that of the project data, the display of GT Simulator3 is fixed to the upper left of the display of the personal computer.  
The screen cannot be moved.

## 3.8 Troubleshooting

- ⇒ 3.8.1 Error messages (GOT2000 Series simulator)
- 3.8.2 Troubleshooting for saving files

### 3.8.1 Error messages (GOT2000 Series simulator)

The following shows error messages displayed when using GOT2000 Series simulator, details of error, error causes and corrective actions.

Error message	Details of error and cause	Corrective action
The Adobe Reader is not installed properly. Install the Adobe Reader.	<ul style="list-style-type: none"> <li>• The Adobe Reader is not installed.</li> <li>• The Adobe Reader is not installed properly.</li> </ul>	Uninstall the Adobe Reader and install again.
The manual file does not exist. Install the manual.	<ul style="list-style-type: none"> <li>• The GT Manual is not installed.</li> <li>• The GT Manual is not installed properly.</li> </ul>	Uninstall the GT Manual and install again.
GT Simulator3 is not installed properly.	The product registry for GT Simulator3 does not exist.	Uninstall GT Simulator3 and install again.
The project file cannot be accessed.	The specified project data cannot be accessed.	Check the access privileges of the project data.
The project file does not exist.	The project data does not exist in the location with specified path.	Specify the path for a location where project data exists.
The PLC type of the project differs from the GT Simulator3 setting.	The PLC type of the read project differs from the GT Simulator3 setting.	Set the same PLC type for the project data created with GT Designer3 and GT Simulator3.
The GOT type of the project differs from the GT Simulator3 setting.	The GOT type of the read project differs from the GT Simulator3 setting.	Set the same GOT type for the project data created with GT Designer3 and GT Simulator3.
Reading has failed. Check the followings and retry. <ul style="list-style-type: none"> <li>• Data size of screen and number of data points</li> <li>• Available space of the disk</li> <li>• Access privilege for the project file</li> <li>• The project file is incorrect or damaged&lt;CODE: %d-%d&gt;</li> </ul>	The size of the screen data is too large.	Check the data size of the screen. ⇒ 3.1.1 Simulation-supported GOTs
	Hard disk space is insufficient.	Prepare 200MB or more for the hard disk space.
	The project data cannot be accessed.	Check the access privileges of the project data.
	The project settings are incorrect.	Check the settings with GT Designer3.
Reading preparation has failed. Check the followings and retry. <ul style="list-style-type: none"> <li>• Dialog display</li> <li>• Waiting for offline mode</li> </ul>	A message such as [This function is unavailable.] is displayed on the screen and reading is unavailable.	Select the [OK] button on the dialog to delete the message, then retry reading.
	Internal processing other than the above is waited to be completed.	Retry reading after a while.
Configuring the operating environment has failed. Check the followings and retry. <ul style="list-style-type: none"> <li>• Available space of the disk</li> <li>• Access privilege for a file</li> </ul>	Hard disk space is insufficient.	Prepare 200MB or more for the hard disk space.
	Files required for the GT Simulator3 operations cannot be accessed.	Check that GT Simulator3 already has been activated.
	GT Simulator3 may not be installed properly.	Uninstall GT Simulator3 and install again.
Failed to delete the user data. <ul style="list-style-type: none"> <li>• Close the opened user data.</li> <li>• Check the access privilege for a file.</li> </ul>	Deleting the user data after reading the screen data has failed.	<ul style="list-style-type: none"> <li>• When the user data is opened by other software, close the file.</li> <li>• Check the access privilege for a file.</li> </ul>
	Specified project is incorrect or is not a readable format. Specify the project again.	<ul style="list-style-type: none"> <li>• The GT Designer2 project is not in the workspace.</li> <li>• The project is not saved in GT Designer2 (the project is not registered in the [*.GTE] format).</li> </ul>
The simulation cannot be closed. Close the simulate screen and retry.	A message such as [This function is unavailable.] is displayed on the screen and GT Simulator3 cannot be closed normally.	Select the [OK] button on the dialog to delete the message, then close GT Simulator3 again.
	Problems occur internally and GT Simulator3 cannot be closed.	Select the [OK] button on the dialog and close GT Simulator3 after a while.
GT Simulator3 cannot be closed. Close all dialogs and print previews that are being displayed.	<ul style="list-style-type: none"> <li>• Dialogs or print previews are displayed.</li> <li>• Waiting for completion of internal process.</li> </ul>	Close all dialogs and print previews that are being displayed.
Log off or shut down Windows after closing GT Simulator3.	Log-off or shut-off processing was executed before closing GT Simulator3.	Log off or shut-off processing after closing GT Simulator3.

Error message	Details of error and cause	Corrective action
This function is unavailable.	A function that is unusable in GT Simulator3 has been selected.	Click the [OK] button.
Taking snap shots has failed.	<ul style="list-style-type: none"> <li>GT Simulator3 was closed in an incorrect status previously.</li> <li>Incorrect processing is activated.</li> </ul>	<ul style="list-style-type: none"> <li>Restart GT Simulator3.</li> <li>Restart the personal computer and restart GT Simulator3.</li> </ul>
The GX Developer project file is not correct.	The project specified in [GX Developer Project] of the [Option] dialog does not exist.	Check that the specified GX Developer project exists.
The path name is too long.	The GX Developer project saved in a folder of deep hierarchy is set.	Set the GX Developer project again in the [Option] dialog.
A communication error has occurred. <ul style="list-style-type: none"> <li>Retry: Retries the communication.</li> <li>Cancel: All the future communications are not executed.</li> </ul> To execute the simulation, restart GT Simulator3 (GT**). <ES:xxxxxxx>	<ul style="list-style-type: none"> <li>A cable is disconnected.</li> <li>A cable is broken.</li> </ul> The transmission speed (baud rate) is incorrect.  The PLC type of the destination PLC CPU differs from that of the project.	Check the causes on the left and select the corresponding button on the dialog box. [Retry] Retries the communication. [Cancel] All the future communications are not executed. To execute the simulation, restart GT Simulator3.
This version of Easysocket is incorrect!	GT Simulator3 may not be installed properly.	Uninstall GT Simulator3 and install again.

# 4.1 Data Transfer

- ⇒4.1.1 Route for the data transfer
- 4.1.2 Types of the data to be transferred to the GOT

The data transfer function writes, reads, or verifies various data, such as package data, special data, and resource data, between the GOT and the personal computer (GT Designer3).

- Write  
Package data or resource data is written or BootOS is installed to the GOT from the personal computer.

You can write package data from a personal computer to multiple GOTs on the same Ethernet network in one go. This enables you to update the project in each GOT efficiently. Since data is written to multiple GOTs simultaneously, the processing time becomes shorter.

- Read  
Project data, package data, resource data, or drive information is read to the personal computer from the GOT.

- Verification  
The running project data in GT Designer3 and the project data in the GOT are verified. The data is verified based on the data or the modified date.

## 4.1.1 Route for the data transfer

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Direct communication with the GOT and the personal computer (GT Designer3)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Data is transferred by the direct communication of the GOT and the personal computer.  
The communication has the following routes.

#### (1) Communication using USB cable

The GOT and the personal computer are connected with a USB cable to communicate directly.

#### (2) Communication by Ethernet

The personal computer communicates directly with the GOT on the Ethernet network.

Using the wireless LAN communication unit allows wireless communication through a wireless LAN access point.

### 2 Communication via a PLC

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The personal computer communicates with the GOT via a PLC that is connected to the same Ethernet network or CC-Link IE Field Network as the GOT.

GT25-W, GT2505-V, GT25HS-V, and GT23 do not support the CC-Link IE Field Network connection.

The personal computer can communicate with the GOT over multiple networks through multiple PLCs as well.

Up to eight networks can be routed.

To communicate with the GOT over multiple networks, the routing parameters must be set for the routed PLCs.

For the details of PLCs and networks to be routed, refer to the following.

⇒ 4.4 Transferring the Data between the Personal Computer and the GOT via PLC CPU

For the connecting method of the GOT and a PLC, refer to the following.

⇒ GOT2000 Series Connection Manual (Mitsubishi Electric Products) For GT Works3 Version 1

- Example of communication via a PLC

• Example of communication via the network

The following shows the communication route via a PLC.

**(1) Connection using RS-232 cable**

Connect the personal computer and a PLC with an RS-232 cable to communicate with the GOT via the PLC.

**(2) Connection using USB cable**

Connect the personal computer and a PLC with a USB cable to communicate with the GOT via the PLC.

**(3) Connection using Ethernet cable**

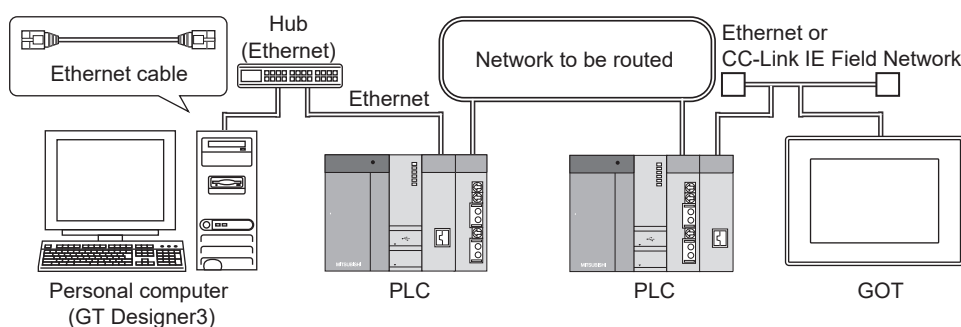

**(a) Connecting directly to the Ethernet port**

Connect the personal computer and a PLC with an Ethernet cable to communicate with the GOT via the PLC.

**(b) Connecting by a hub**

Connect the personal computer and a PLC with an Ethernet cable through a hub to communicate with the GOT via the PLC.

To connect a PLC and a hub, use an Ethernet interface module (RJ71EN71, QJ71E71 series, or LJ71E71 series).

**3 Using the data storage**

The package data, BootOS, or CoreOS is transferred by using the data storage such as a USB memory and SD card.

## 4.1.2 Types of the data to be transferred to the GOT

The following shows the types of data to be transferred between GT Designer3 and the GOT.

### ■ 1 Data to be written to the GOT

The following shows data to be written to the GOT.

Data	Description	Communication route
BootOS	For the BootOS, refer to the following. ⇒1.2.1 BootOS, CoreOS and package data	<ul style="list-style-type: none"> <li>• Direct connection using a USB cable ⇒4.1.1 ■ 1 (1) Communication using USB cable</li> <li>• Writing using the data storage ⇒4.1.1 ■ 3 Using the data storage</li> </ul>
CoreOS	For the CoreOS, refer to the following. ⇒1.2.1 BootOS, CoreOS and package data	<ul style="list-style-type: none"> <li>• Writing using the data storage ⇒4.1.1 ■ 3 Using the data storage</li> </ul>
Package data	For the package data, refer to the following. ⇒1.2.1 BootOS, CoreOS and package data	The data is writable to the GOT through any communication route. ⇒4.1.1 Route for the data transfer
Resource data	Data to be used for GOT functions, including data collected by the recipe function and image files stored by the hard copy function For the target resource data, refer to the following. ⇒4.1.2 ■ 3 Transferable resource data Files of 0 MB or more than 256 MB cannot be written to the GOT.	The data is writable to the GOT through any communication route. ⇒4.1.1 Route for the data transfer

For the size of each data and the storage destination in the GOT, refer to the following.

⇒12.6 Data Transferred to the GOT and Storage Destination

### ■ 2 Data to be read from the GOT

The following shows data to be read from the GOT.

Data	Description	Communication route
Project data	For the project data, refer to the following. ⇒1.2.2 Project	The data is readable from the GOT through any communication route. ⇒4.1.1 Route for the data transfer
Package data	For the package data, refer to the following. ⇒1.2.1 BootOS, CoreOS and package data	The data is readable from the GOT through any communication route. ⇒4.1.1 Route for the data transfer
Resource data	Data to be used for GOT functions, including data collected by the recipe function and image files stored by the hard copy function For the target resource data, refer to the following. ⇒4.1.2 ■ 3 Transferable resource data	The data is readable from the GOT through any communication route. ⇒4.1.1 Route for the data transfer
Drive information	Use status of each drive in the GOT	The data is readable from the GOT through any communication route. ⇒4.1.1 Route for the data transfer

For the size of each data and the storage destination in the GOT, refer to the following.

⇒12.6 Data Transferred to the GOT and Storage Destination

### 3 Transferable resource data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the resource data that can be transferred between GT Designer3 and the GOT.

○ : Available, ×: Not available

File name*1	Write	Read	Description	Supported models
AAMxxxx.csv	○	○	Alarm log file. The file is used for the user alarm observation or the system alarm observation.	GT27 GT25 GT23 GT21 GS SoftGOT2000
AAMxxxx.txt	○	○		
AAMxxxx.G2A	×	○

\*1 The file name is set by default.  
 The name can be changed by the user.  
 "xxxxx" indicates the serial number of a file.

## 4.2 Setting a System Application to be Written to the GOT

⇒4.2.1 Specifications of the application setting

4.2.2 How to use the application setting

At the data transfer, GT Designer3 selects the required system application, communication driver, and special data automatically from the project setting and adds them to the package data.

However, the system application of the function which is not set in the project is not added to the package data.

Also, the user is required to add the writing data according to the function to use or the method of creating a project.

In the following cases, add the writing data using the application setting.

- When using the intelligent module monitor, the motion monitor, or the servo amplifier monitor  
The special data (intelligent module monitor data, the motion monitor data, or the servo amplifier monitor data) are required to be added by the user.
- When using system applications (extended functions) for the sequence program monitors and others  
You can configure and start the monitor functions, such as the sequence program monitors, in the utility without setting a special function switch or the GOT setup in the project.  
However, unless you configure the functions in the project, necessary system applications are not incorporated into the package data.

Add necessary system applications to the package data in the application selection setting.

For the size of the system applications (extended functions) and the special data, refer to the following.

⇒12.6.2 Transferred data size list

### 4.2.1 Specifications of the application setting

#### ■ 1 Writing data the user can select

In the application setting, the following transfer data can be selected.

- System applications (extended functions)
- Communication driver
- Special data

For the details of each data, refer to the following.

⇒12.6 Data Transferred to the GOT and Storage Destination

#### ■ 2 Method to hold the data when the project is saved

The transfer data which the user has selected manually are held in the project when the project is saved.

The method to hold the transfer data depends on the saving format.

Saving format of project data	Method to hold transfer data	
	User selected item	System application, special data
A single file format project (GTXS, G2)	The selected item is held.	The data is saved to the package data with the project data.
A single file format project (GTX) Workspace format project	The selected item is held.	The data is not saved to the package data.

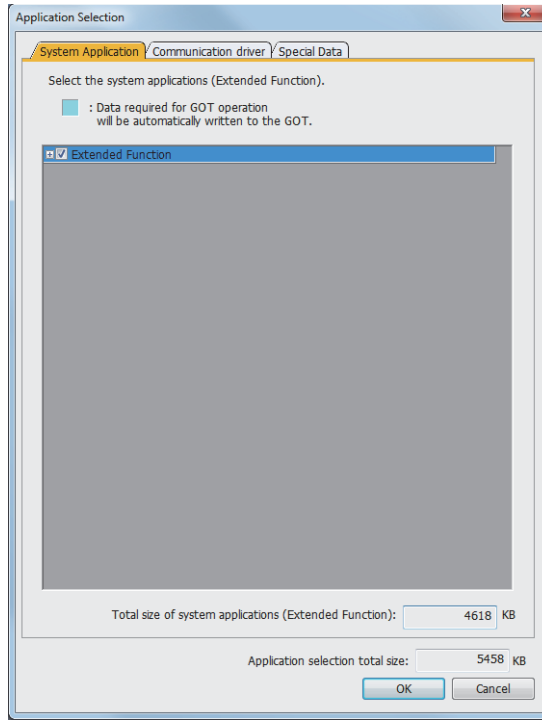

## 4.2.2 How to use the application setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■ 1 Setting in the [Application Selection] dialog

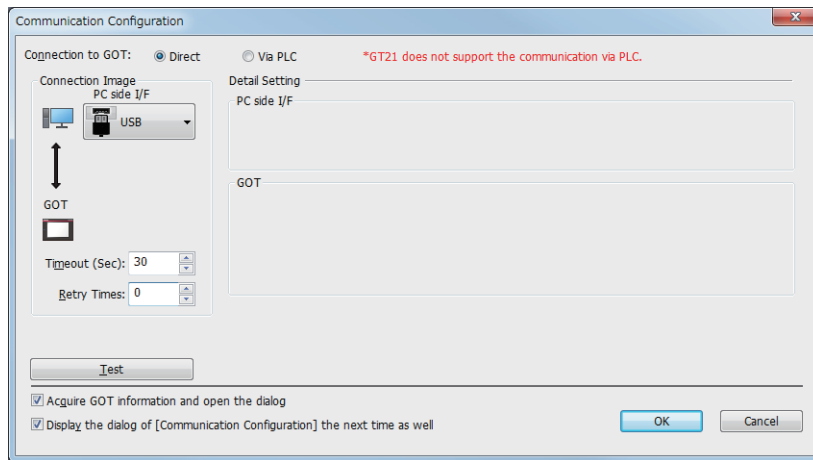

The following shows an example of writing package data to GT27.

- Step 1 Select [Common] → [Application Selection] from the menu.
- Step 2 The [Application Selection] dialog appears.  
Set the data to transfer to the GOT.  
⇒ 4.8.4 [Application Selection] dialog

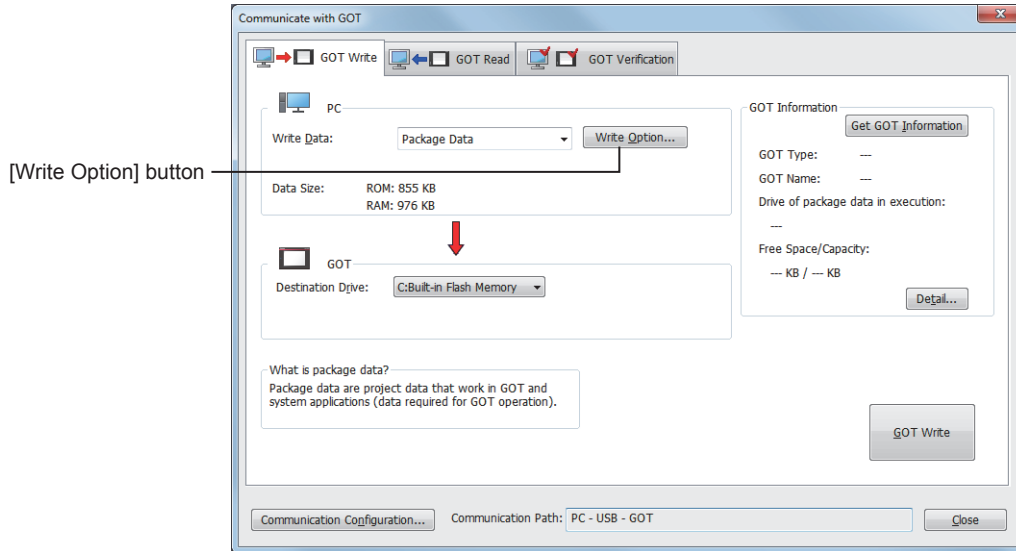

### ■ 2 Setting when the data is written to the GOT

- Step 1 Select [Communication] → [Write to GOT] from the menu.
- Step 2 The [Communication Configuration] dialog appears.  
Set the communication method with the GOT and click the [OK] button.  
⇒ 4.8.8 [Communication Configuration] dialog

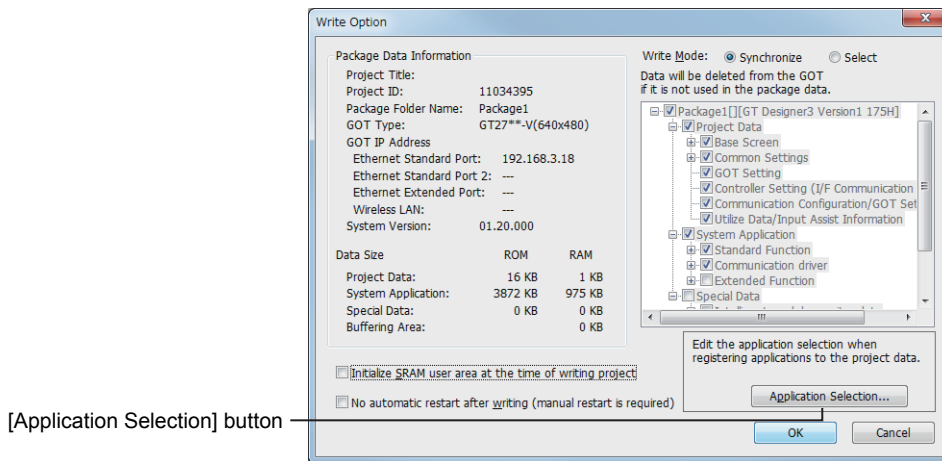

- Step 3 The [GOT Write] tab of the [Communicate with GOT] dialog appears.  
Click the [Write Option] button.  
⇒ 4.8.2 ■ 1 [GOT Write] tab

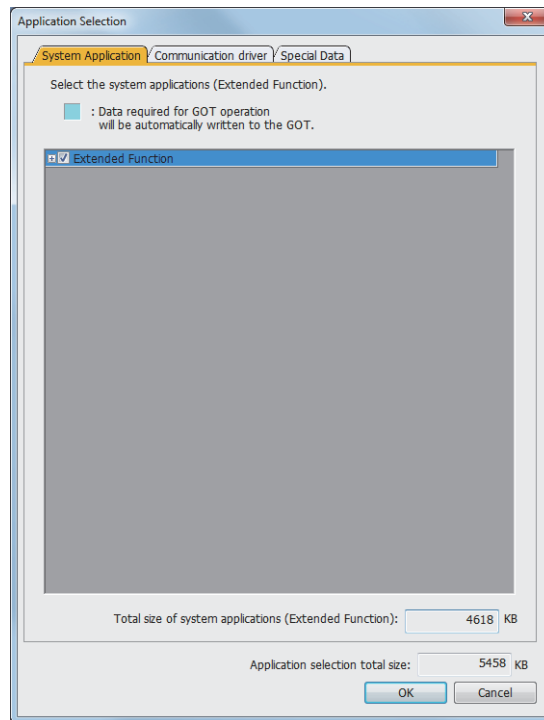

Step 4 The [Write Option] dialog appears.

Click the [Application Selection] button.

⇒4.8.3 [Write Option] dialog (for writing data to one GOT)

- Step 5** The [Application Selection] dialog appears.  
Set the data to transfer to the GOT.  
→4.8.4 [Application Selection] dialog

## 4.3 Transferring the Data between the Personal Computer and the GOT

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 4.3.1 Connecting the personal computer to the GOT
- 4.3.2 Transferring data

Directly connect the personal computer and the GOT with a cable for the communication.  
For the details of the data which can be transferred, refer to the following.

- ⇒ 4.1.2 Types of the data to be transferred to the GOT

### 4.3.1 Connecting the personal computer to the GOT

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ ■ 1 Connection using USB cable
- 2 Connection using Ethernet cable
- 3 Connection using Wireless LAN

A personal computer and GOT are connectable via USB, Ethernet, or wireless LAN.

To write package data to multiple GOTs in one go, connect a personal computer and the GOTs via Ethernet or wireless LAN.

- ⇒ ■ 2 Connection using Ethernet cable
- 3 Connection using Wireless LAN

The following shows each connection method.

#### ■ 1 Connection using USB cable

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (1) Connecting a personal computer to the GOT

Use the following cable to connect a personal computer to the GOT.

Cable type	Connector
USB cable	A-mini B type

- Step 1** Connect the A-type connector of a USB cable to the USB port of the personal computer, and the mini B type connector of the cable to the USB interface (Device) of the GOT.

For the location of the USB interface (Device) on the GOT, refer to the following.

- ⇒ GOT2000 Series User's Manual (Hardware)

- Step 2** Power on the GOT.

- Step 3** Only at the first connection, the USB driver is installed to the personal computer automatically.  
(For Windows XP, install the USB driver manually.)

##### (2) Configuring the communication settings

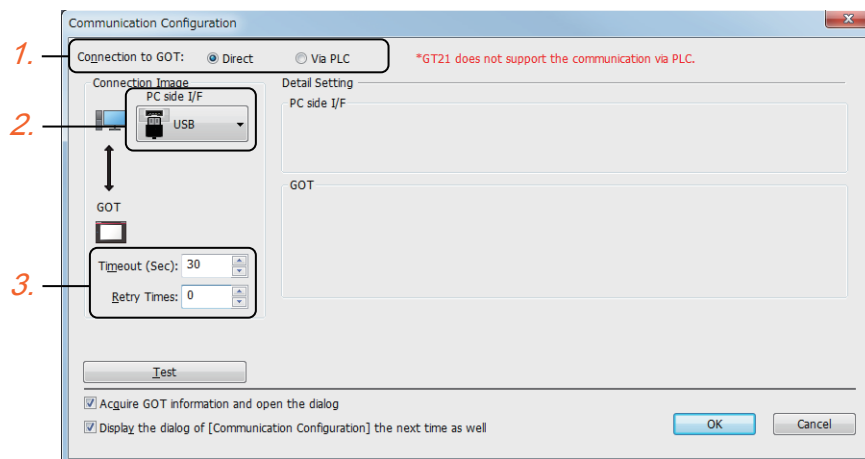

Perform one of the following operations according to your purpose.

- To write data, select [Communication] → [Write to GOT] from the menu.
- To read data, select [Communication] → [Read from GOT] from the menu.
- To verify data, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

This dialog is displayable by selecting [Communication] → [Communication Configuration] from the menu as well.

⇒4.8.8 ■ 1 Writing the data into the GOT directly  
 Configure the settings as shown below, and click the [OK] button.

- Step 1 Select [Direct] for [Connection to GOT].
- Step 2 Select [USB] for [PC side I/F].
- Step 3 Set [Timeout (Sec)] and [Retry Times].
- Step 4 Click the [OK] button to display the [Communicate with GOT] dialog.

For the operations of the [Communicate with GOT] dialog, refer to the following.

⇒4.3.2 Transferring data

## ■ 2 Connection using Ethernet cable

Not available to GT2105-Q.

### (1) Connecting a personal computer to the GOT

To connect by Ethernet, connect the personal computer and the GOT to the same network.

Use the following Ethernet cables.

Cable type	Description
Ethernet cable	<ul style="list-style-type: none"> <li>• 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5</li> <li>• 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e</li> </ul>

- Step 1 Connect the Ethernet port of the personal computer and the Ethernet interface of the GOT using an Ethernet cable.  
 For the position of the Ethernet interface of the GOT, refer to the following.  
 ⇒GOT2000 Series User's Manual (Hardware)
- Step 2 Power on the GOT.

To transfer data to one GOT, set the communication method in the [Communication Configuration] dialog.

⇒(2) Configuring the communication settings

To write package data to multiple GOTs in one go, perform the operation in the [Batch Write to multiple GOTs] dialog.

## (2) Configuring the communication settings

Perform one of the following operations according to your purpose.

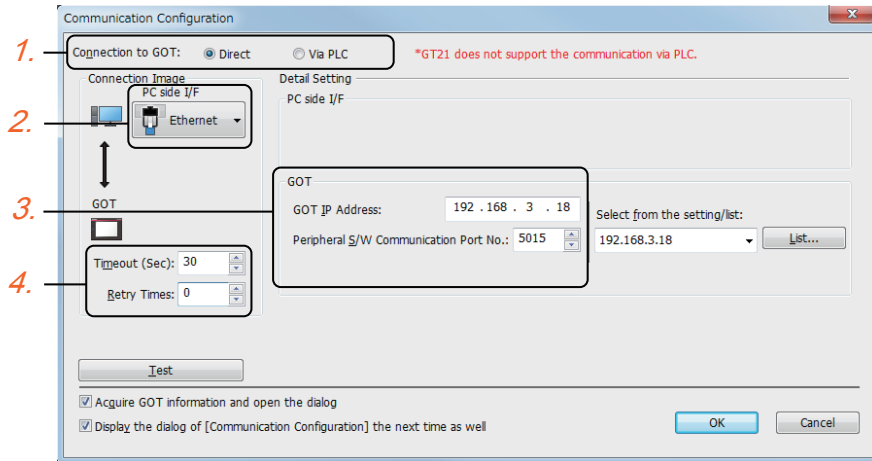

- To write data, select [Communication] → [Write to GOT] from the menu.
- To read data, select [Communication] → [Read from GOT] from the menu.
- To verify data, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

This dialog is displayable by selecting [Communication] → [Communication Configuration] from the menu as well.

⇒ ■ 1 Writing the data into the GOT directly

Configure the settings as shown below, and click the [OK] button.

- Step 1 Select [Direct] for [Connection to GOT].
- Step 2 Select [Ethernet] for [PC side I/F].
- Step 3 Set [GOT IP Address] and [Peripheral S/W Communication Port No.].
- Step 4 Set [Timeout (Sec)] and [Retry Times].
- Step 5 Click the [OK] button to display the [Communicate with GOT] dialog.

For the operations of the [Communicate with GOT] dialog, refer to the following.

⇒4.3.2 Transferring data

## ■ 3 Connection using Wireless LAN

Wireless LAN connection is available for use only in Japan.

### (1) Connection using the GOT as a station

Set the GOT as a station to communicate with a personal computer via a wireless LAN access point.

To establish connection with the GOT, a wireless LAN access point (commercial product) is required.

For usable wireless LAN access points, refer to the following Technical News.

⇒List of Valid Devices Applicable for GOT2000 Series (GOT-A-0064)

Before establishing connection, check the SSID, security authentication method, and WEP key or passphrase of the wireless LAN access point to be used.

For the check method, refer to the following.

⇒Manual of the wireless LAN access point used

- Step 1 Connect the personal computer and a wireless LAN access point on an Ethernet network.

For information on how to connect the wireless LAN access point, refer to the following.

⇒Manual of the wireless LAN access point used

**Step 2** Power on the GOT.

**Step 3** Configure the following settings, and write the package data to the GOT.

- Wireless LAN setting ([GOT Setup])
  - ⇒5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])
- IP address setting for the wireless LAN interface
  - ⇒5.4.1 ■ 3 (3) [Wireless LAN] tab

To transfer data to one GOT, set the communication method in the [Communication Configuration] dialog.

⇒4.3.1 ■ 2 (2) Configuring the communication settings

To write package data to multiple GOTs in one go, perform the operation in the [Batch Write to multiple GOTs] dialog.

⇒4.3.2 ■ 2 Writing package data to multiple GOTs in one go

**(2) Connection using the GOT as a wireless LAN access point**

Set the GOT as a wireless LAN access point to communicate with a personal computer.

**Step 1** Power on the GOT.

**Step 2** Configure the following settings, and write the package data to the GOT.

- Wireless LAN setting ([GOT Setup])
  - ⇒5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])
- IP address setting for the wireless LAN interface
  - ⇒5.4.1 ■ 3 (3) [Wireless LAN] tab

To transfer data to one GOT, set the communication method in the [Communication Configuration] dialog.

⇒4.3.1 ■ 2 (2) Configuring the communication settings

To write package data to multiple GOTs in one go, perform the operation in the [Batch Write to multiple GOTs] dialog.

⇒4.3.2 ■ 2 Writing package data to multiple GOTs in one go

## 4.3.2 Transferring data

- ⇒ ■ 1 Writing data to one GOT
  - 2 Writing package data to multiple GOTs in one go
  - 3 Reading the data from the GOT
  - 4 Verifying projects between the GOT and GT Designer3

### ■ 1 Writing data to one GOT

For writing package data to multiple GOTs in one go, refer to the following.

- ⇒ ■ 2 Writing package data to multiple GOTs in one go

The transfer data is written in the [Communicate with GOT] dialog.

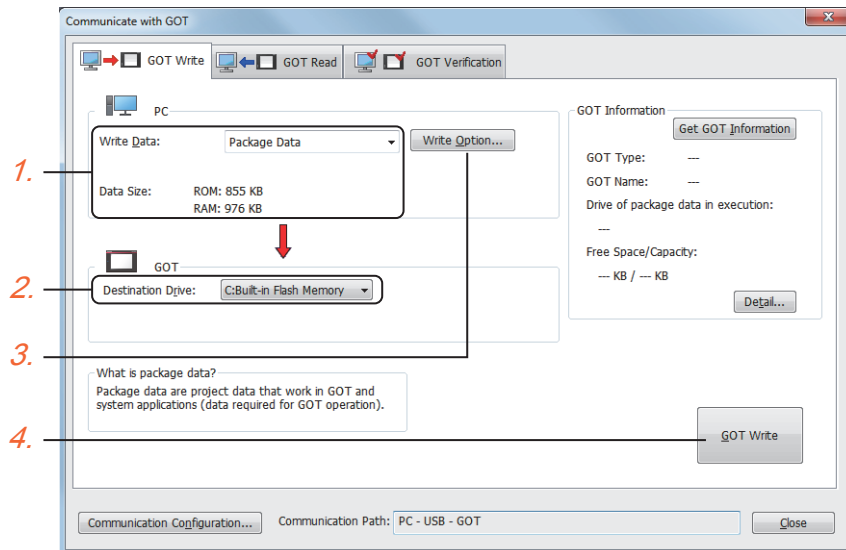

For the procedure of displaying this dialog, refer to the following.

- ⇒ 4.3.1 ■ 1 (2) Configuring the communication settings
- 4.3.1 ■ 2 (2) Configuring the communication settings

For the details of the settings, refer to the following.

- ⇒ 4.8.2 ■ 1 [GOT Write] tab

### (1) Writing the package data

**Step 1** Select [Package Data] for [Write Data].

The capacity of the transfer data is displayed in [Data Size]. Check that the destination drive has the sufficient available space.

For the capacity and the storage destination of the data, refer to the following.

- ⇒ 12.6 Data Transferred to the GOT and Storage Destination

**Step 2** Select [Destination Drive].

**Step 3** When the system application or the special data is required to be added to the package data or deleted, click the [Write Option] button and configure the setting in the [Write Option] dialog.

- ⇒ 4.8.3 [Write Option] dialog (for writing data to one GOT)

**Step 4** Click the [GOT Write] button.

**Step 5** If data transfer security has been set for the target GOT, the dialog for entering the data transfer password is displayed.

Input the data transfer password.

**Step 6** The package data is written to the GOT.

### Point

#### (1) Execution of parameter verification (iQ Works only)

Before writing a project data to the GOT, execute [Verification of System Configuration Information and Parameters] by MELSOFT Navigator to check whether the system configuration diagram and the GT Designer3 controller setting are matched.

When the system configuration diagram does not match the GT Designer3 controller setting, the GOT may not monitor a controller correctly.

For MELSOFT Navigator operation, refer to the following.

→ Help for MELSOFT Navigator

#### (2) Precautions when selecting write data (iQ Works only)

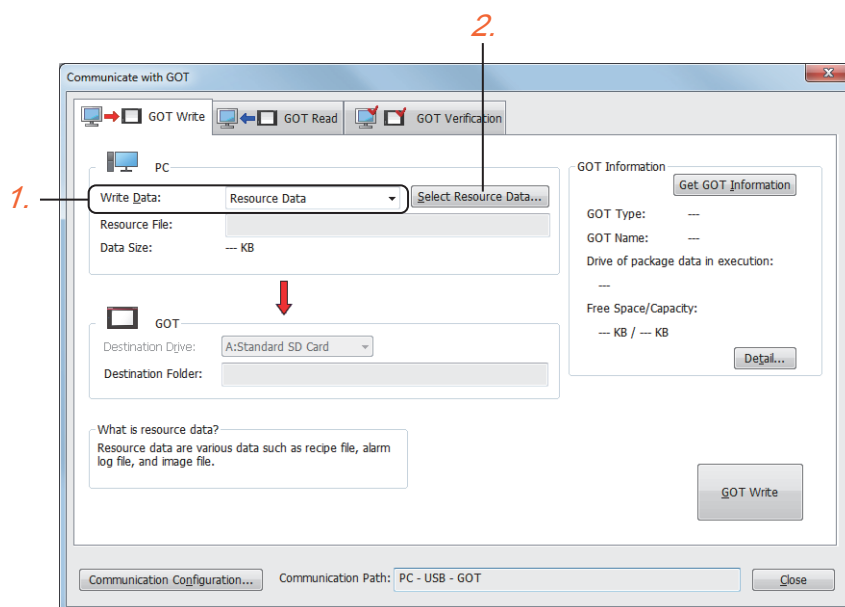

When system labels are written and [System Label] is cleared for target data, system labels are deleted from a target project, and the labels are changed to devices.

The system labels changed to devices cannot be restored.

To hold the system label settings, do not clear [System Label] for the write target data.

When clearing [System Label] for the write target data, check the device setting.

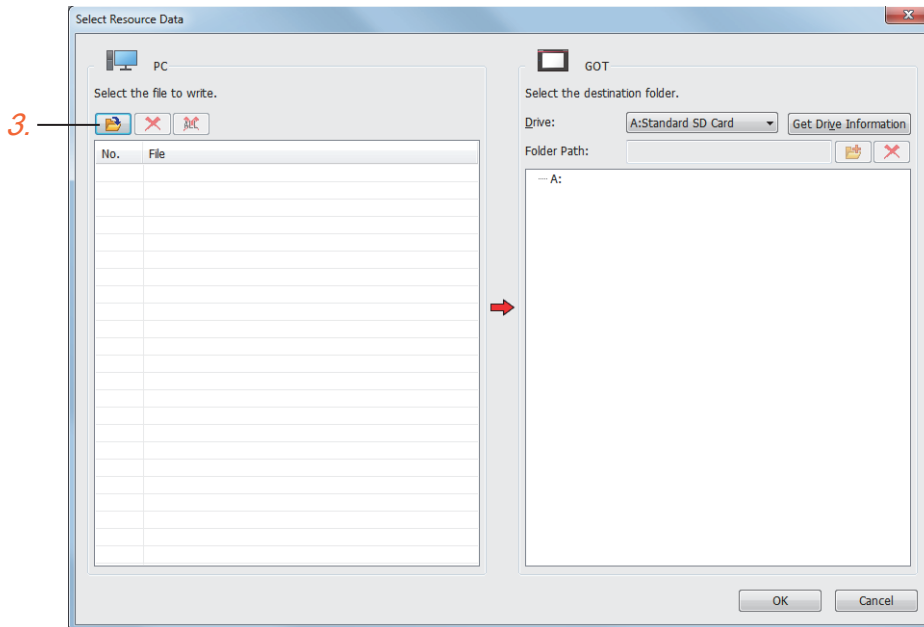

#### (2) Writing the resource data

**Step 1** Select [Resource Data] for [Write Data].

**Step 2** Click the [Select Resource Data] button to display the [Select Resource Data] dialog.

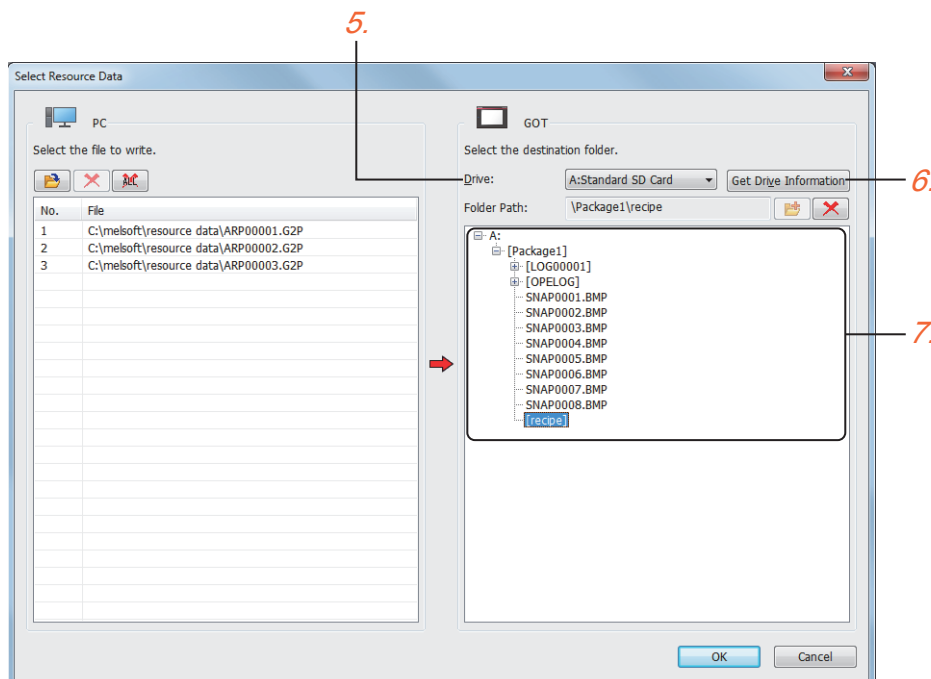

→ 4.8.5 [Select Resource Data] dialog

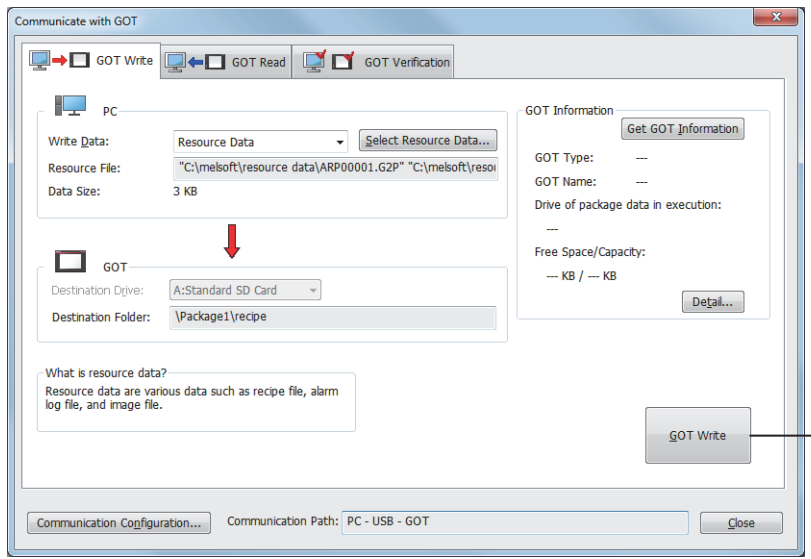

**Step 3** Click the [Add File] button in [PC] to display the [Open] dialog.

**Step 4** Select a target file and click the [Open] button to display the file in the [Select Resource Data] dialog.

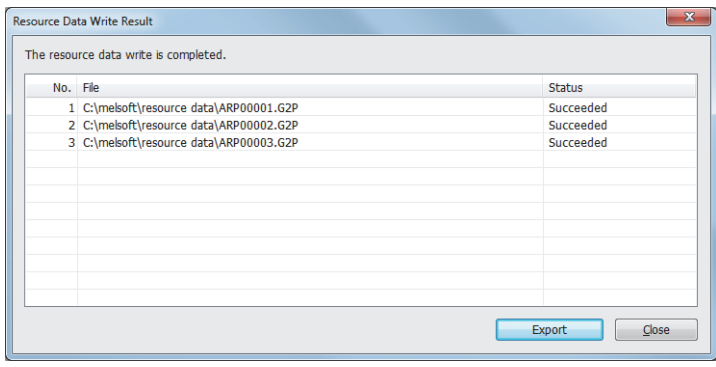

- Step 5 Select the write destination drive of the GOT for [Drive] in [GOT].
- Step 6 Click the [Get Drive Information] button to list the contents of the selected drive in the tree.
- Step 7 In the tree, select a write destination folder and click the [OK] button to reflect the settings to the display of the [Communicate with GOT] dialog ([GOT Write] tab).  
Check that the write destination drive has enough free space to store the target file according to the file size displayed in [Data Size].

- Step 8 Click the [GOT Write] button in the [GOT Write] tab.  
Upon completion of writing, the [Resource Data Write Result] dialog appears.  
Check the write result.

→ 4.8.6 [Resource Data Write Result] dialog

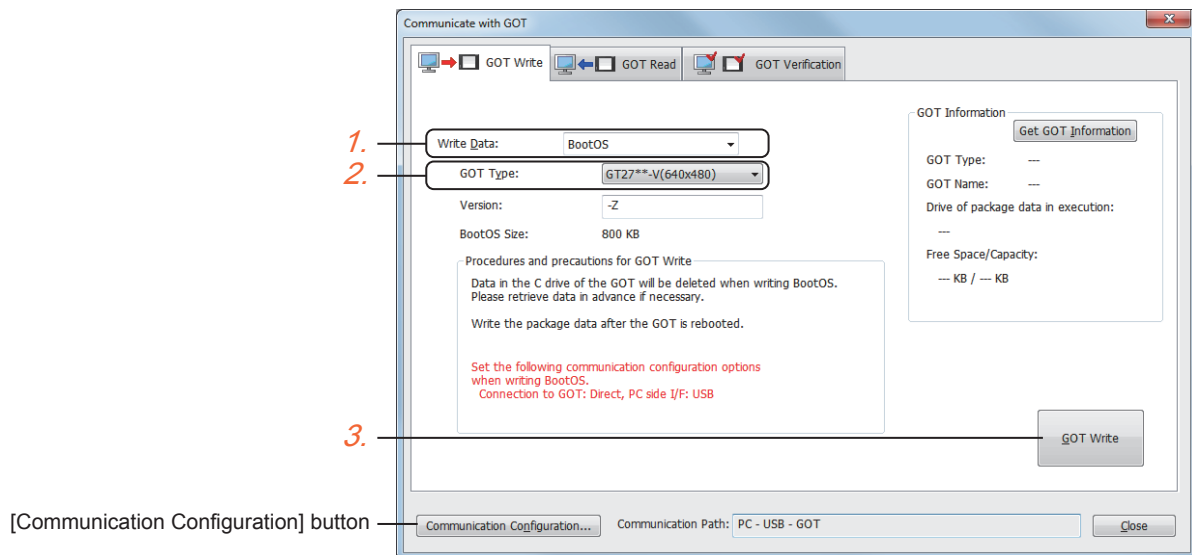

**(3) Installing the BootOS**

When the BootOS is installed, all the data in the GOT are deleted.  
When the data in the GOT is required, read the data in advance.  
Also, the BootOS can be installed only by the following method.

- Direct connection using a USB cable
- Data transfer using the data storage

When the personal computer and the GOT are connected by the method other than the direct connection using a USB cable, click the [Communication Configuration] button and change the setting, so that the direct connection using a USB cable is available.

- Step 1 Select [BootOS] for [Write Data].
- Step 2 Select [GOT Type] of the destination GOT for writing.
- Step 3 Click the [GOT Write] button to install the BootOS to the GOT.

## ■2 Writing package data to multiple GOTs in one go

Not available to GT2105-Q.

In the [Batch Write to multiple GOTs] dialog, write package data to multiple GOTs in one go.

Select [Communication] → [Batch Write to multiple GOTs] from the menu to display the [Batch Write to multiple GOTs] dialog.

For the setting details, refer to the following.

⇒4.8.9 [Batch Write to multiple GOTs] dialog

Connect a personal computer and multiple GOTs by Ethernet.

The package data cannot be written to the GOT whose type is different from the one set in the project of the package data.

The following settings cannot be written to multiple GOTs in one go.

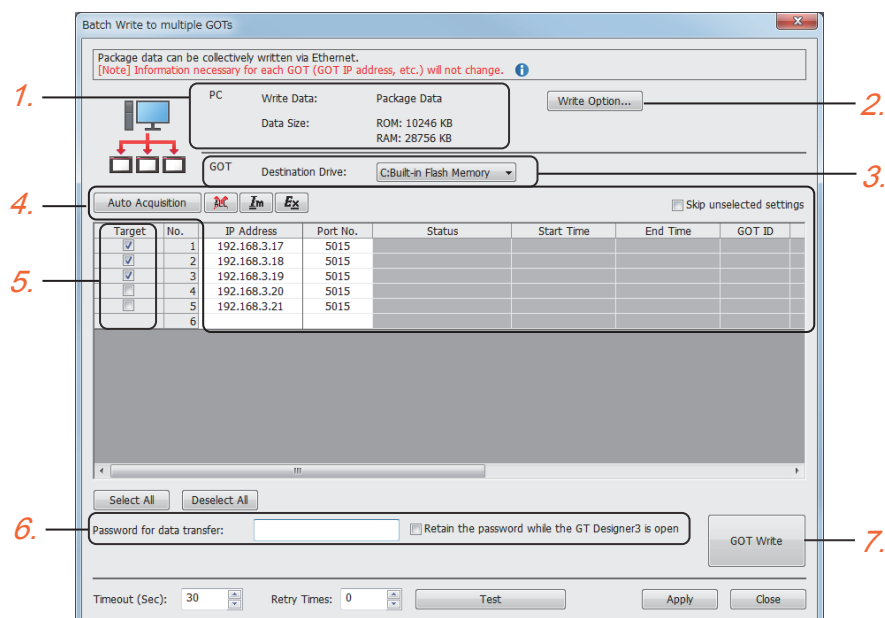

- [GOT ID No.] in the [GOT Setup] window
  - ⇒5.3.2 ■4 [GOT ID No.]
- [I/F Communication Setting] dialog
  - ⇒5.7.3 [I/F Communication Setting] dialog
- [I/F] and [Driver] set for each channel in the [Controller Setting] window
  - ⇒5.5.1 ■4 [Controller Setting]
- [GOT Ethernet Setting] window
  - ⇒5.4 Setting the GOT Ethernet Interface ([GOT Ethernet Setting])

After writing package data to multiple GOTs in one go, if you verify the current project against the project stored in each GOT, inconsistencies in the above settings may be detected.

In the [Write Option] dialog, set whether to write the following settings to the target GOTs.

⇒4.8.10 [Write Option] dialog (for writing data to multiple GOTs in one go)

- [Screen Switching/Windows] in the [Environmental Setting] window
- [System Information] in the [Environmental Setting] window
- [Station No. Switching] in the [Controller Setting] window
- [Ethernet Controller Setting] in the [Controller Setting] window

- Step 1** Check the package data size with [Data Size], and make sure that the destination drive has enough free space for storing the data.
- ⇒ 12.6 Data Transferred to the GOT and Storage Destination
- Step 2** To add or delete a system application or special data to/from the package data, click the [Write Option] button to display the [Write Option] dialog and configure the setting.
- ⇒ 4.8.3 [Write Option] dialog (for writing data to one GOT)
- Step 3** Set [Destination Drive].
- Step 4** Set [IP Address] and [Port No.] of target GOTs by one of the following methods.
- Automatic acquisition  
Not available to GT21.  
Click the [Auto Acquisition] button to acquire the information of the GOTs on the same network. The information existing in the list is deleted.
  - Data entry  
Enter [IP Address] and [Port No.].  
You can copy data from a spreadsheet file or others as well.
  - File import  
Click the Import button to import the information of the GOTs.  
A CSV file or Unicode text file can be imported.
- Step 5** Select a checkbox in the [Target] column for the GOT to which the package data is written.
- Step 6** If the data transfer security has been set for the project in the target GOT, enter the data transfer password.
- ⇒ 4.7 Precautions  
    5.2.10 Configuring the security setting for transferring data ([Data Transfer Security])
- Step 7** Click the [GOT Write] button.
- The [Communication Status] dialog appears, starting the writing of the package data.
- ⇒ 4.8.11 [Communication Status] dialog
- After the writing is complete, check the result in the [Communication Status] dialog.

### ■ 3 Reading the data from the GOT

GT27 GT25 GT23 GT21 SoftGOT2000 GS

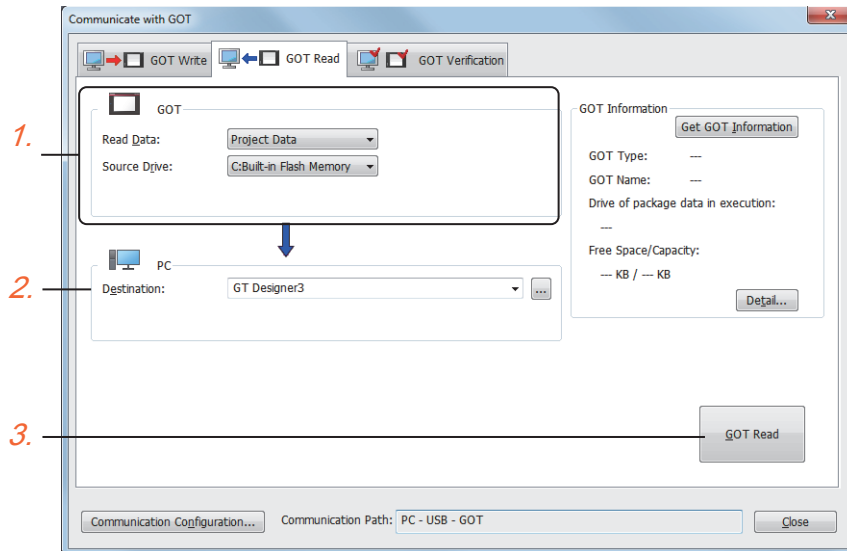

The transfer data is read in the [Communicate with GOT] dialog.  
For the procedure of displaying this dialog, refer to the following.

- ⇒ 4.3.1 ■ 1 (2) Configuring the communication settings  
    4.3.1 ■ 2 (2) Configuring the communication settings

For the details of the setting procedure, refer to the following.

- ⇒ 4.8.2 ■ 2 [GOT Read] tab

## (1) Reading the project data or the package data

**Step 1** Set [GOT Side] as follows.

- Select [Project Data] or [Package Data] for [Read Data].
- Select the drive where the project data or the package data is stored for [Source Drive].

**Step 2** Set [PC Side].

Set the reading destination of the project for [Destination].

To read the project data to GT Designer3, select [GT Designer3].

(When [Read Data] is [Package Data], the project data cannot be read to GT Designer3.)

To read the project data as a file, click the [...] button to set the saving format and the saving destination of the file.

**Step 3** Click the [GOT Read] button.

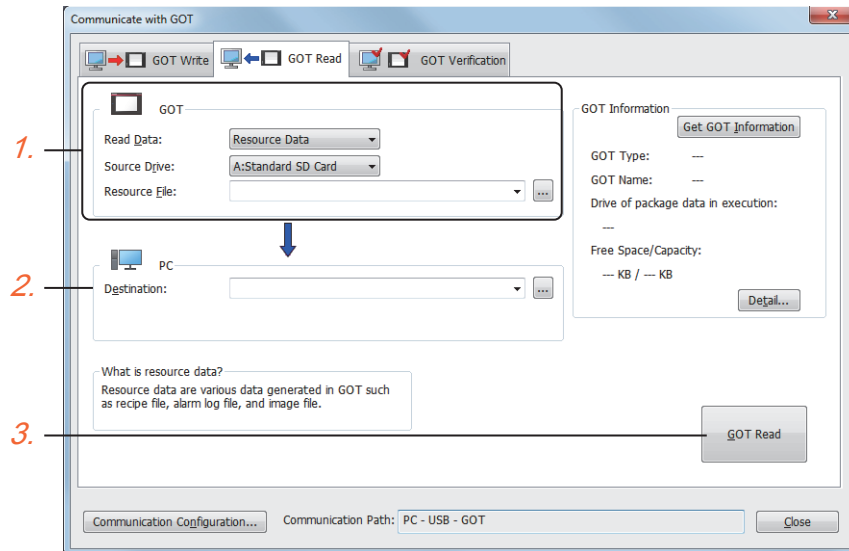

**Step 4** If data transfer security has been set for the target GOT, the dialog for entering the data transfer password is displayed.

Input the data transfer password.

**Step 5** The project is read.

## (2) Reading the resource data

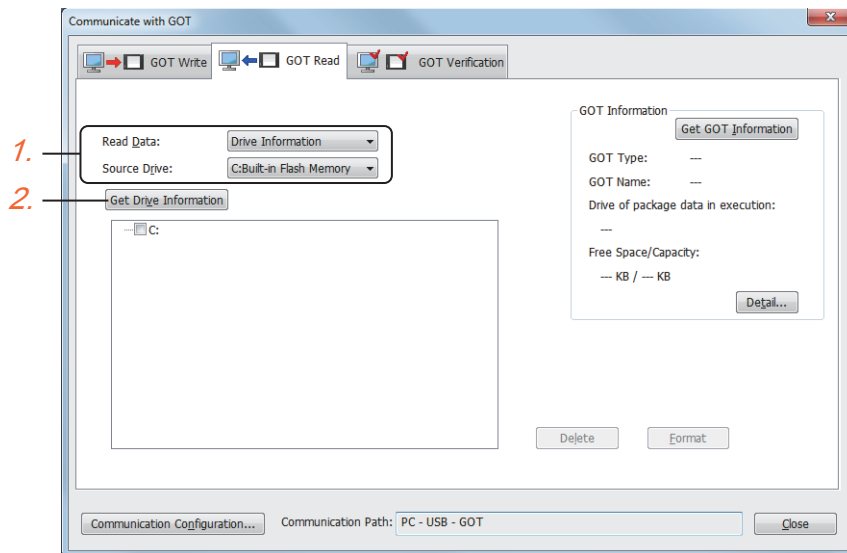

- Step 1** Set [GOT Side] as follows.
- Select [Resource Data] for [Read Data].
  - Select the drive where the resource data is stored for [Source Drive].
  - Set a resource file to be read for [Resource File].
- Click the [...] button to set a resource file to be read in the [Path Specification] dialog.
- Step 2** Set [PC Side].
- Set the reading destination of the resource data for [Destination].
- Click the [...] button to set the saving destination of the file to be read in the [Browse For Folder] dialog.
- Step 3** Click the [GOT Read] button.
- Step 4** If data transfer security has been set for the target GOT, the dialog for entering the data transfer password is displayed.
- Input the data transfer password.

- Step 5** The resource data is read.

### (3) Reading the drive information

- Step 1** Set [GOT Side] as follows.
- Select [Drive Information] for [Read Data].
  - Select the read target drive for [Source Drive].
- Step 2** Click the [Importing Drive Information] button.
- Step 3** The folders in the specified drive appear in the tree.

### ■ 4 Verifying projects between the GOT and GT Designer3

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The project is verified in the [Communicate with GOT] dialog.

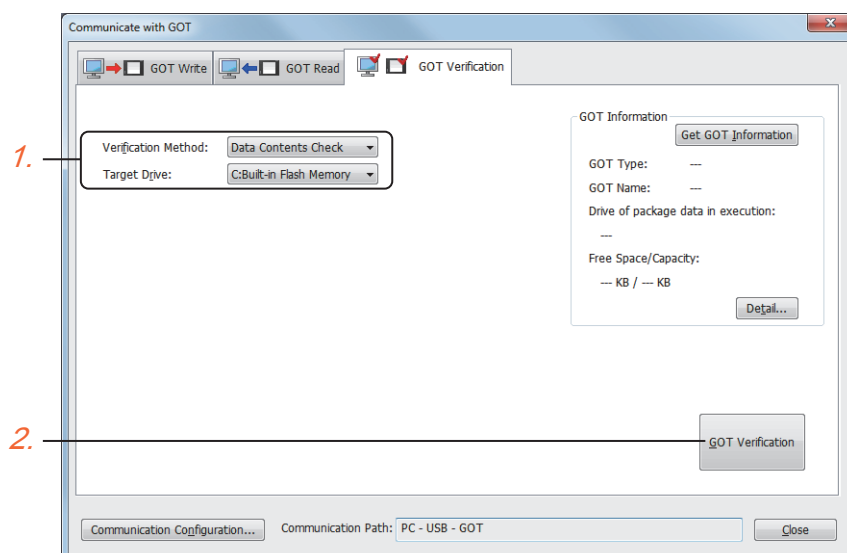

For the procedure of displaying this dialog, refer to the following.

⇒4.3.1 ■ 2 (2) Configuring the communication settings

4.3.1 ■ 2 (2) Configuring the communication settings

For the details of the setting procedure, refer to the following.

⇒4.8.2 ■ 3 [GOT Verification] tab

- Step 1** Configure the setting as follows.
- Select the verification method in [Verification Method].  
[Data Contents Check]: The descriptions of the data such as setting item are compared.  
[Time Stamp Check]: The time stamps of the files are compared.
  - Select the drive where the project data is stored in [Target Drive].

**Step 2** Click the [GOT Verification] button.

**Step 3** If data transfer security has been set for the target GOT, the dialog for entering the data transfer password is displayed.

Input the data transfer password.

**Step 4** The [Verify Result] dialog displays the verification results.

→ 11.5.6 [Verify Result] dialog

## 4.4 Transferring the Data between the Personal Computer and the GOT via PLC CPU

GT27 GT25 GT23 GT21 SoftGOT2000 GS

⇒4.4.1 Connecting the personal computer and PLC CPU

4.4.2 Transferring data

The personal computer communicates with the GOT via a PLC that is connected to the same Ethernet network or CC-Link IE Field Network as the GOT.

GT25-W, GT2505-V, GT25HS-V, and GT23 do not support the CC-Link IE Field Network connection.

The personal computer can communicate with the GOT over multiple networks through multiple PLCs as well.

For the details of the data which can be transferred, refer to the following.

⇒4.1.2 Types of the data to be transferred to the GOT

For the connecting method of the GOT and a PLC, refer to the following.

⇒GOT2000 Series Connection Manual (Mitsubishi Electric Products) For GT Works3 Version1

- Example of communication via a PLC

- Example of communication via the network

## 1 PLCs and networks to be routed

### (1) Connection type between the GOT and a PLC

The following shows the applicable PLCs and the connection type between the GOT and the PLC.

○ : Available, × : Not available

Applicable PLC		Connection type between the GOT and a PLC		
		Ethernet connection		CC-Link IE Field Network connection
		PLC side: Ethernet module	PLC side: Built-in Ethernet port	
RCPU	R00CPU, R01CPU, R02CPU, R04CPU, R08CPU, R16CPU, R32CPU, R120CPU	○	○ *6	○
	R08PCPU, R16PCPU, R32PCPU, R120PCPU	○	×	○
	R08SFPCPU, R16SFPCPU, R32SFPCPU, R120SFPCPU	○	×	○
	R04ENCPU, R08ENCPU, R16ENCPU, R32ENCPU, R120ENCPU	○	○ *1*6	○
	R12CCPU-V	○ *2	×	○
Motion controller CPU (MELSEC iQ-R series)	R16MTCPU, R32MTCPU	○	×	○
QCPU	Q00JCPU, Q00CPU, Q01CPU, Q02CPU	○	×	×
	Q02HCPU, Q06HCPU, Q12HCPU, Q25HCPU	○	×	×
	Q02PHCPU, Q06PHCPU, Q12PHCPU, Q25PHCPU	○	×	×
	Q12PRHCPU (Main base unit), Q25PRHCPU (Main base unit), Q12PRHCPU (Remote extension base unit), Q25PRHCPU (Remote extension base unit), Q12PRHCPU (Extension base unit), Q25PRHCPU (Extension base unit)	×	×	×
	Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, Q06UDHCPU, Q10UDHCPU, Q13UDHCPU, Q20UDHCPU, Q26UDHCPU	○	×	○
	Q03UDECPU, Q04UDEHCPU, Q06UDEHCPU, Q10UDEHCPU, Q13UDEHCPU, Q20UDEHCPU, Q26UDEHCPU, Q50UDEHCPU, Q100UDEHCPU	○	×	○
	Q03UDVCPU, Q04UDVCPU, Q06UDVCPU, Q13UDVCPU, Q26UDVCPU, Q04UDPVCPU, Q06UDPVCPU, Q13UDPVCPU, Q26UDPVCPU	○	○ *3	○
	Q12DCCPU-V, Q24DHCCPU-V, Q24DHCCPU-LS, Q24DHCCPU-VG, Q26DHCCPU-LS	○	×	○ *4
LCPU	L02CPU, L06CPU, L26CPU-BT, L02CPU-P, L06CPU-P, L26CPU-P, L26CPU-PBT	○	×	○ *5
	L02SCPU-P	○	×	○ *5

Applicable PLC		Connection type between the GOT and a PLC		
		Ethernet connection		CC-Link IE Field Network connection
		PLC side: Ethernet module	PLC side: Built-in Ethernet port	
CC-Link IE Field Network remote head module	RJ72GF15-T2	×	×	○
	LJ72GF15-T2	×	×	○
CC-Link IE Field Network Ethernet adapter module	NZ2GF-ETB	×	×	○

\*1 Use port P1 of the network part. (The port must be enabled for Ethernet connection.)

\*2 Use the Ethernet module in the multiple CPU system.

\*3 For the conditions and settings to establish connection through the Ethernet port built in the QnUD(P)VCPU, refer to the following.

⇒4.4.1 ■ 3 (3) Settings required for connection through the built-in Ethernet port of the QnUD(P)VCPU

\*4 For Q12DCCPU-V (Basic mode), the serial number must start with 12042 or later.

For Q12DCCPU-V (Extended mode), the serial number must start with 15102 or later.

\*5 Use a PLC CPU having a serial number starting with 13012 or later in the first 5 digits.

Use GT Works2 with version 1.50C or later.

\*6 Use a PLC CPU with firmware version 39 or later.

Use GT Works3 version 1.050C or later.

## (2) Connection type between the personal computer and a PLC

The following shows the applicable PLCs and the connection type between the personal computer and the PLC.

○ : Available, × : Not available

Available PLC		Connection type between the personal computer and a PLC		
		Connection using an Ethernet cable	Connection using a USB cable	Connection using an RS-232 cable
RCPU	R00CPU, R01CPU, R02CPU, R04CPU, R08CPU, R16CPU, R32CPU, R120CPU	○	○	×
	R08PCPU, R16PCPU, R32PCPU, R120PCPU	○	○	×
	R08SF CPU, R16SF CPU, R32SF CPU, R120SF CPU	○	○	×
	R04ENCPU, R08ENCPU, R16ENCPU, R32ENCPU, R120ENCPU	○	○	×
	R12CCPU-V	○	×	×
Motion controller CPU (MELSEC iQ-R series)	R16MTCPU, R32MTCPU	○	○	×

Available PLC		Connection type between the personal computer and a PLC		
		Connection using an Ethernet cable	Connection using a USB cable	Connection using an RS-232 cable
QCPU	Q00JCPU, Q00CPU, Q01CPU, Q02CPU	○*1	×	○
	Q02HCPU, Q06HCPU, Q12HCPU, Q25HCPU	○*1	○	○
	Q02PHCPU, Q06PHCPU, Q12PHCPU, Q25PHCPU	○*1	○	○
	Q12PRHCPU (Main base unit), Q25PRHCPU (Main base unit), Q12PRHCPU (Remote extension base unit), Q25PRHCPU (Remote extension base unit), Q12PRHCPU (Extension base unit), Q25PRHCPU (Extension base unit)	○*1	○	○
	Q00UCPU, Q00JCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, Q06UDHCPU, Q10UDHCPU, Q13UDHCPU, Q20UDHCPU, Q26UDHCPU	○*1	○	○
	Q03UDECPU, Q04UDEHCPU, Q06UDEHCPU, Q10UDEHCPU, Q13UDEHCPU, Q20UDEHCPU, Q26UDEHCPU, Q50UDEHCPU, Q100UDEHCPU	○	○	○*2
	Q03UDVCPU, Q04UDVCPU, Q06UDVCPU, Q13UDVCPU, Q26UDVCPU, Q04UDPVCPU, Q06UDPVCPU, Q13UDPVCPU, Q26UDPVCPU	○	○	○*2
	Q12DCCPU-V, Q24DHCCPU-V, Q24DHCCPU-LS, Q24DHCCPU-VG, Q26DHCCPU-LS	○	○	○*2
LCPU	L02CPU, L06CPU, L26CPU-BT, L02CPU-P, L06CPU-P, L26CPU-P, L26CPU-PBT	○	○	○*3
	L02SCPU-P	○*1	○	○
CC-Link IE Field Network head module	RJ72GF15-T2	×	○	×
	LJ72GF15-T2	×	○	×

\*1 Since the CPU has no Ethernet port, it cannot be connected with an Ethernet cable.

Use an Ethernet module and a hub to connect the CPU.

\*2 Connect the CPU via a QCPU in the multiple CPU system.

\*3 An adapter (L6ADP-R2 or L6ADP-R4) is required.

### (3) Network through which data can pass

The data can be transferred via the following network.

- MELSECNET/10
- MELSECNET/H
- CC-Link IE Controller Network
- CC-Link IE Field Network
- Ethernet

## 4.4.1 Connecting the personal computer and PLC CPU

- ⇒ ■ 1 Connection using RS-232 cable
  - 2 Connection using USB cable
  - 3 Connection to the Ethernet port built in the PLC using an Ethernet cable
  - 4 Connection to the Ethernet port built in the PLC via a hub
  - 5 Connection to the Ethernet interface module via a hub

### ■ 1 Connection using RS-232 cable

#### (1) Connecting the personal computer and a PLC

Use the following cable to connect with a PLC.

PLC to be routed	Cable type	Cable model
QCPU	RS-232 cable	GT01-C30R2-6P (3m)
LCPU		

For the PLCs connectable to the personal computer, refer to the following.

⇒4.3.2 ■ 1 (2) Connection type between the personal computer and a PLC

**Step 1** Check the connection type between the PLC to be routed and the GOT.

For the PLCs connectable to the GOT, refer to the following.

⇒4.3.2 ■ 1 (1) Connection type between the GOT and a PLC

**Step 2** Connect the RS232 ports of the personal computer and the PLC using an RS-232 cable.

For the position of the RS232 port of the PLC, refer to the following.

⇒User's Manual of the PLC used

**Step 3** Power on the PLC and the GOT.

#### (2) Configuring the communication settings

Perform one of the following operations according to your purpose.

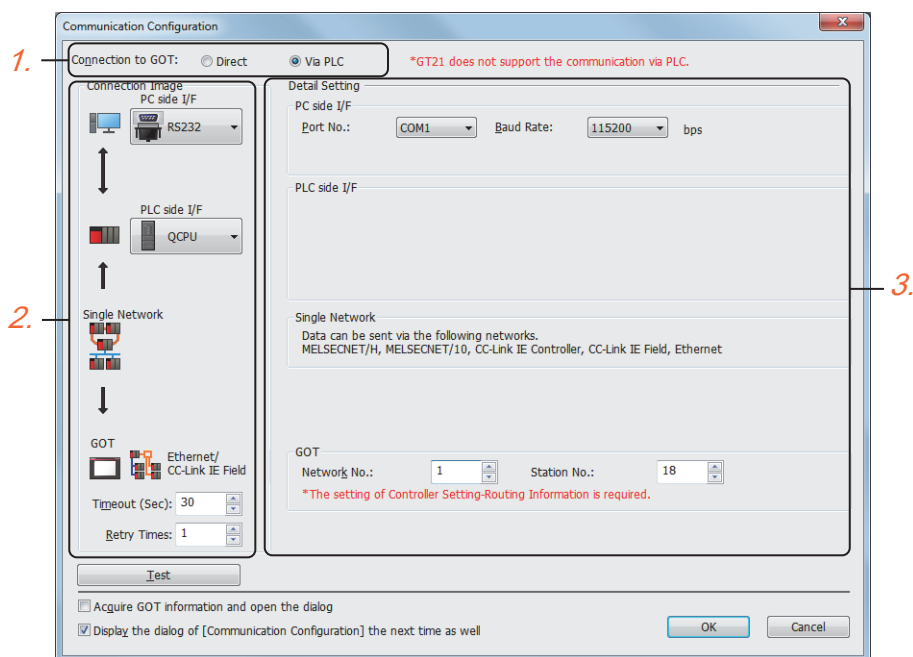

- To write data, select [Communication] → [Write to GOT] from the menu.
- To read data, select [Communication] → [Read from GOT] from the menu.
- To verify data, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

This dialog is displayable by selecting [Communication] → [Communication Configuration] from the menu as well.

⇒4.8.8 ■ 2 ■ 2 Writing the data via PLC CPU

Configure the settings as shown below, and click the [OK] button.

- Step 1** Select [Via PLC] for [Connection to GOT].
- Step 2** Set [Connection Image].  
 Select [RS232] for [PC side I/F].  
 Select the type of the PLC to be routed for [PLC side I/F].  
 Set [Timeout (Sec)] and [Retry Times].
- Step 3** Set [Detail Setting].  
 Set the RS232 port and the transmission speed of the personal computer in [PC side I/F].  
 Set the network No. and the station number of the destination GOT in [GOT].
- Step 4** Click the [OK] button to display the [Communicate with GOT] dialog.  
 For the operations of the [Communicate with GOT] dialog, refer to the following.  
 ⇒4.3.2 Transferring data

## ■2 Connection using USB cable

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Connecting the personal computer and a PLC

Use the following cable to connect with a PLC.

PLC to be routed		Cable type	Connector
RCPU		USB cable	A-mini B type
QCPU	High Performance model QCPU	USB cable	A-B type
	Universal model QCPU	USB cable	A-mini B type
LCPU		USB cable	A-mini B type

For the PLCs connectable to the personal computer, refer to the following.

⇒4.3.2 ■ 1 (2) Connection type between the personal computer and a PLC

- Step 1** Check the connection type between the PLC to be routed and the GOT.  
 For the PLCs connectable to the GOT, refer to the following.  
 ⇒4.3.2 ■ 1 (1) Connection type between the GOT and a PLC
- Step 2** Connect the A type connector of a USB cable to the USB port of the personal computer and the B type connector or the mini B type connector to the USB port of the PLC.  
 For the position of the USB port of the PLC, refer to the following.  
 ⇒User's Manual of the PLC used

**Step 3** Power on the PLC and the GOT.

## (2) Configuring the communication settings

Perform one of the following operations according to your purpose.

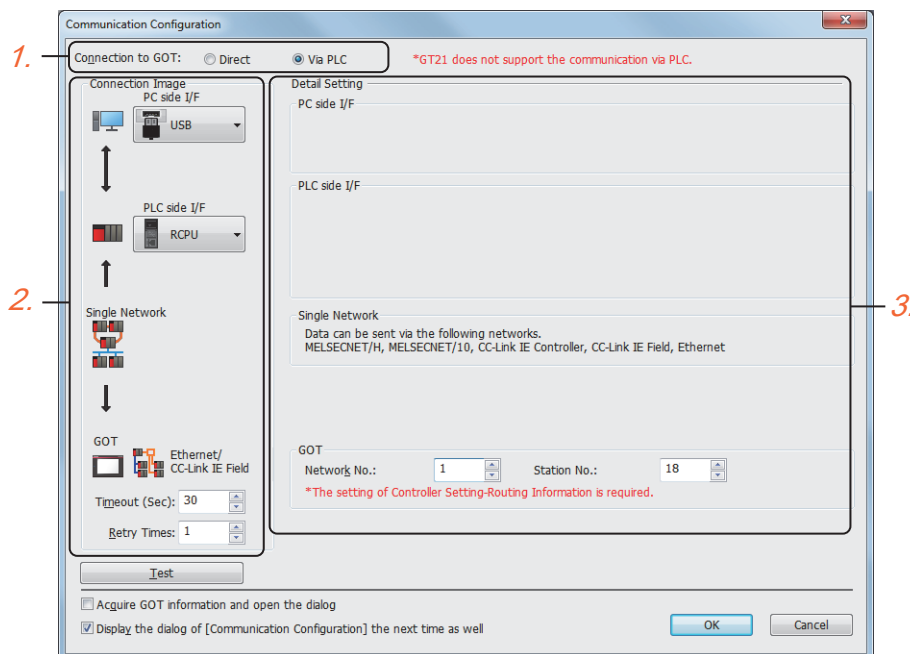

- To write data, select [Communication] → [Write to GOT] from the menu.
- To read data, select [Communication] → [Read from GOT] from the menu.
- To verify data, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

This dialog is displayable by selecting [Communication] → [Communication Configuration] from the menu as well.

⇒4.8.8 ■ 2 ■ 2 Writing the data via PLC CPU

Configure the settings as shown below, and click the [OK] button.

**Step 1** Select [Via PLC] for [Connection to GOT].

**Step 2** Set [Connection Image].

Select [USB] for [PC side I/F].

Select the type of the PLC to be routed for [PLC side I/F].

Set [Timeout (Sec)] and [Retry Times].

**Step 3** Set [Detail Setting].

Set the network No. and the station number of the destination GOT in [GOT].

**Step 4** Click the [OK] button to display the [Communicate with GOT] dialog.

For the operations of the [Communicate with GOT] dialog, refer to the following.

⇒4.3.2 Transferring data

### ■ 3 Connection to the Ethernet port built in the PLC using an Ethernet cable

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Use the following cable to connect the personal computer and the PLC.

Cable type	Description
Ethernet cable	<ul style="list-style-type: none"> <li>• 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5</li> <li>• 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e</li> </ul>

For the PLCs connectable to the personal computer, refer to the following.

⇒4.3.2 ■ 1 (2) Connection type between the personal computer and a PLC

To establish connection through the Ethernet port built in the QnUD(P)VCPU, configure the MELSOFT connection extended setting.

⇒4.4.1 ■ 3 (3) Settings required for connection through the built-in Ethernet port of the QnUD(P)VCPU

#### (1) Connecting the personal computer and a PLC

**Step 1** Check the connection type between the PLC to be routed and the GOT.

For the PLCs connectable to the GOT, refer to the following.

⇒4.3.2 ■ 1 (1) Connection type between the GOT and a PLC

**Step 2** Connect the Ethernet port of the personal computer and the Ethernet port of the PLC to be routed using an Ethernet cable.

For the position of the Ethernet port of the PLC, refer to the following.

⇒User's Manual of the PLC to be used

**Step 3** Power on the PLC and the GOT.

#### (2) Configuring the communication settings

Perform one of the following operations according to your purpose.

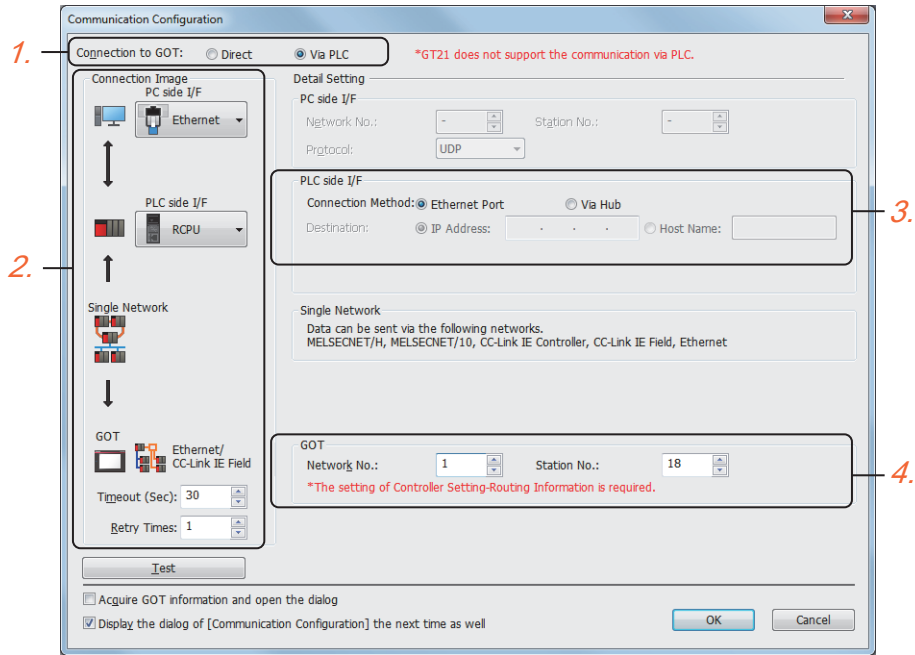

- To write data, select [Communication] → [Write to GOT] from the menu.
- To read data, select [Communication] → [Read from GOT] from the menu.
- To verify data, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

This dialog is displayable by selecting [Communication] → [Communication Configuration] from the menu as well.

⇒4.8.8 ■ 2 ■ 2 Writing the data via PLC CPU

Configure the settings as shown below, and click the [OK] button.

- Step 1** Select [Via PLC] for [Connection to GOT].
- Step 2** Set [Connection Image].  
Select [Ethernet] for [PC side I/F].  
Select the type of the routed PLC ([RCPU], [QCPU], or [LCPU]) for [PLC side I/F].  
Set [Timeout (Sec)] and [Retry Times].
- Step 3** Set [PLC side I/F] in [Detail Setting].  
Select [Connecting directly to the Ethernet port] for [Connection].
- Step 4** Set [GOT] in [Detail Setting].  
Set the network No. and the station number of the destination GOT.
- Step 5** Click the [OK] button to display the [Communicate with GOT] dialog.  
For the operations of the [Communicate with GOT] dialog, refer to the following.  
⇒4.3.2 Transferring data

### (3) Settings required for connection through the built-in Ethernet port of the QnUD(P)VCPU

Configure the settings on the PLC and GOT sides as shown below.

Required setting	Setting contents	Requirements
PLC side setting	On GX Works2, configure the MELSOFT connection extended setting and write the parameter to the PLC. For the MELSOFT connection extended setting, refer to the following. ⇒QnUCPU User's Manual (Communication via Built-in Ethernet Port)	Use the QnUD(P)VCPU and GX Works2 that satisfy the following requirements. • QnUD(P)VCPU: The serial number contains 17052 or later in the first 5 digits. • GX Works2: Version 1.535H or later
GOT side setting	On GT Designer3, register the QnUD(P)VCPU in the Ethernet setting and write the package data to the GOT. Set [Network No.], [Station No.], and [Port No.] as shown below. • [Network No.]: [Network No.] set in the MELSOFT connection extended setting on GX Works2 • [Station No.]: [Station No.] set in the MELSOFT connection extended setting on GX Works2 • [Port No.]: 5001 For the Ethernet setting, refer to the following. ⇒5.5.1 ■ 4 [Controller Setting]	-

## 4 Connection to the Ethernet port built in the PLC via a hub

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Use the following cable to connect the personal computer and the PLC.

Cable type	Description
Ethernet cable	<ul style="list-style-type: none"> <li>• 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5</li> <li>• 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e</li> </ul>

For the PLCs connectable to the GOT, refer to the following.

→ 4.3.2 ■ 1 (2) Connection type between the personal computer and a PLC

To establish connection through the Ethernet port built in the QnUD(P)VCPU, configure the MELSOFT connection extended setting.

→ 4.4.1 ■ 3 (3) Settings required for connection through the built-in Ethernet port of the QnUD(P)VCPU

### (1) Connecting the personal computer and a PLC

**Step 1** Use a hub to connect the personal computer and the PLC on the same Ethernet network.

Connect the hub and the Ethernet port of the PLC with an Ethernet cable.

For the position of the Ethernet port of the PLC, refer to the following.

→ User's Manual of the PLC or the Ethernet interface module to be used

**Step 2** Power on the PLC and the GOT.

### (2) Configuring the communication method

According to the purpose, perform either of the following operations.

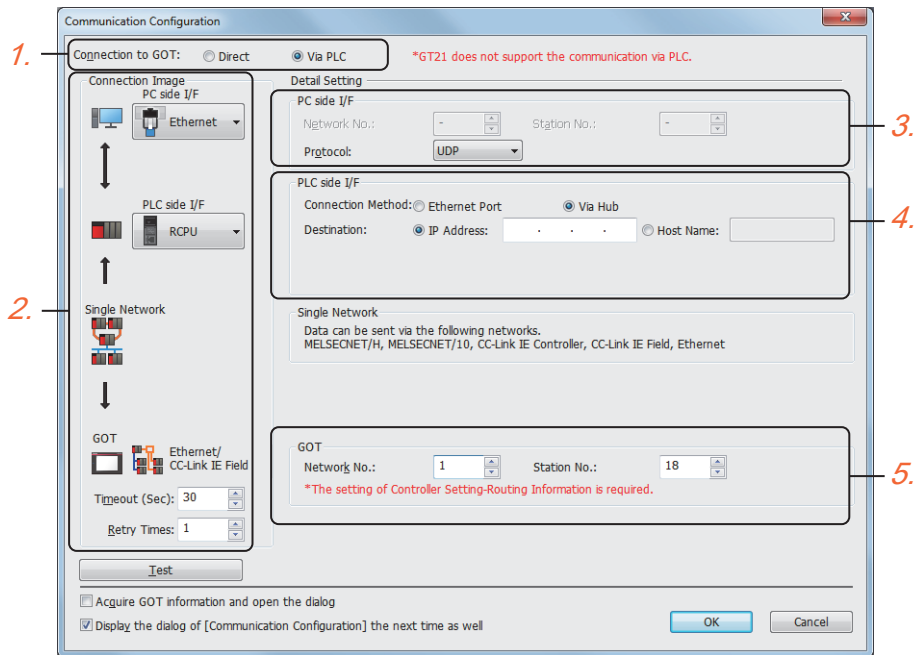

- For writing, select [Communication] → [Write to GOT] from the menu.
- For reading, select [Communication] → [Read from GOT] from the menu.
- For verifying, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

Select [Communication] → [Communication Configuration] from the menu to display this dialog.

→ 4.8.8 ■ 2 (1) Connection using RS-232 cable and USB cable

Set the communication method as follows and click the [OK] button.

**Step 1** Select [Via PLC] for [Connection to GOT].

**Step 2** Set [Connection Image].

Select [Ethernet] for [PC side I/F].

Select the type of the routed PLC ([RCPU], [QCPU], or [LCPU]) for [PLC side I/F].

Set [Timeout (Sec)] and [Retry Times].

**Step 3** Set [PC side I/F] in [Detail Setting].

Select the communication protocol to be used ([UDP] or [TCP]) in [Protocol].

**Step 4** Set [PLC side I/F] in [Detail Setting].

Set [Connecting by the hub] for [Connection].

After selecting, set [IP Address] or [Host Name] of the PLC to be routed in [Destination].

**Step 5** Set [GOT] in [Detail Setting].

Set the network No. and the station number of the destination GOT.

**Step 6** Click the [OK] button to display the [Communicate with GOT] dialog.

For the operations of the [Communicate with GOT] dialog, refer to the following.

→4.3.2 Transferring data

## 5 Connection to the Ethernet interface module via a hub

Use the following cable to connect the personal computer and the PLC.

Cable type	Description
Ethernet cable	<ul style="list-style-type: none"> <li>10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5</li> <li>100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e</li> </ul>

For the PLCs connectable to the GOT, refer to the following.

→4.3.2 ■ 1 (2) Connection type between the personal computer and a PLC

### (1) Connecting the personal computer and a PLC

**Step 1** Use a hub to connect the personal computer and the PLC on the same Ethernet network.

Connect the hub and the Ethernet interface module with an Ethernet cable.

**Step 2** Power on the PLC and the GOT.

## (2) Configuring the communication method

According to the purpose, perform either of the following operations.

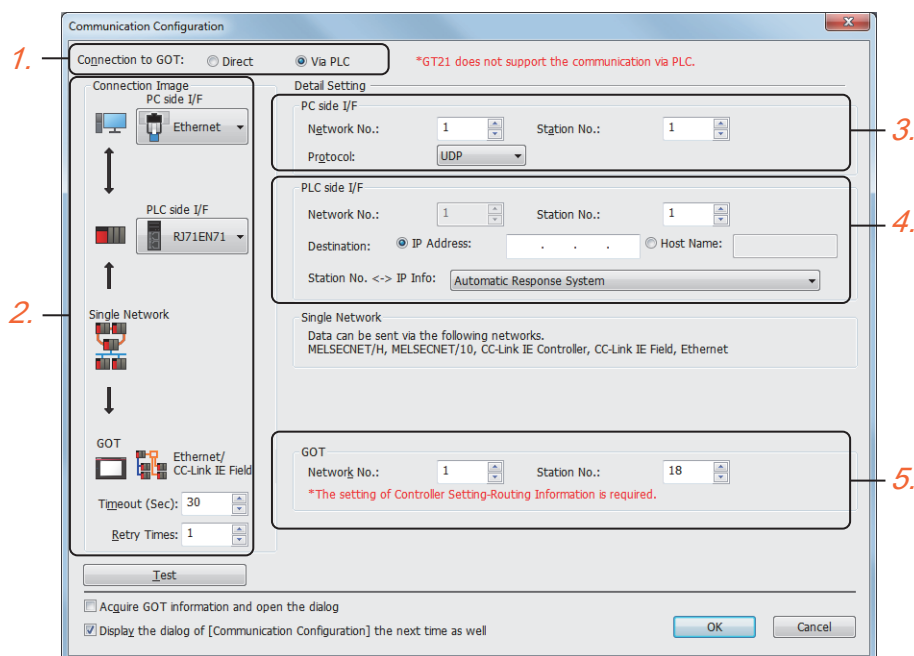

- For writing, select [Communication] → [Write to GOT] from the menu.
- For reading, select [Communication] → [Read from GOT] from the menu.
- For verifying, select [Communication] → [Verify GOT] from the menu.

The [Communication Configuration] dialog appears.

Select [Communication] → [Communication Configuration] from the menu to display this dialog.

→ 4.8.8 ■ 2 (1) Connection using RS-232 cable and USB cable

Set the communication method as follows and click the [OK] button.

**Step 1** Select [Via PLC] for [Connection to GOT].

**Step 2** Set [Connection Image].

Select [Ethernet] for [PC side I/F].

Select the type of the Ethernet interface module to be routed ([RJ71EN71], [QJ71E71] or [LJ71E71]) for [PLC side I/F].

Set [Timeout (Sec)] and [Retry Times].

**Step 3** Set [PC side I/F] in [Detail Setting].

Set [Network No.] and [Station No.].

Select the communication protocol to be used ([UDP] or [TCP]) in [Protocol].

**Step 4** Set [PLC side I/F] in [Detail Setting].

Set [Station No.] of the PLC to be routed.

Set [IP Address] or [Host Name] of the PLC to be routed in [Destination].

Select the response method of the PLC in [Station No.<->IP information].

**Step 5** Set [GOT] in [Detail Setting].

Set the network No. and the station number of the destination GOT.

**Step 6** Click the [OK] button to display the [Communicate with GOT] dialog.

For the operations of the [Communicate with GOT] dialog, refer to the following.

⇒4.3.2 Transferring data

## 4.4.2 Transferring data

---

To transfer data to the GOT via a PLC, use the same method as when the personal computer and the GOT are connected directly.

You cannot write package data to multiple GOTs in one go via a PLC.

For the transfer method, refer to the following.

⇒4.3.2 Transferring data

However, the data transfer via a PLC differs in the following points.

- Transfer of the BootOS or the CoreOS

The BootOS and the CoreOS cannot be transferred by the data transfer via a PLC.

To install the BootOS to the GOT, connect the personal computer and the GOT using a USB cable or use the data storage.

⇒4.3.1 ■ 1 Connection using USB cable

4.5.3 Installing the BootOS or the CoreOS to the GOT

To install the CoreOS to the GOT, use the data storage.

⇒4.5.3 Installing the BootOS or the CoreOS to the GOT

- Remote password of the PLC to be routed

When the remote password is set for the PLC to be routed, the setting must be canceled at the communication with the GOT.

When the following dialog appears, input the remote password of the PLC to be routed.

## 4.5 Transferring the Data with Data Storage

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒4.5.1 Writing a package data into the GOT
- 4.5.2 Starting up the package data from data storage
- 4.5.3 Installing the BootOS or the CoreOS to the GOT

Use the data storage such as SD card to transfer the data.

For the details of the data which can be transferred by this method, refer to the following.

- ⇒4.1.2 Types of the data to be transferred to the GOT

For the details of the available data storage, refer to the following.

- ⇒Technical News

### 4.5.1 Writing a package data into the GOT

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Use the data storage to write the package data to the GOT.

#### Point

##### Capacity check of the package data and the destination drive

Before writing the package data, check the data size of the package data to be transferred and the available space of the destination drive.

For how to check the available space of the destination drive, refer to the following.

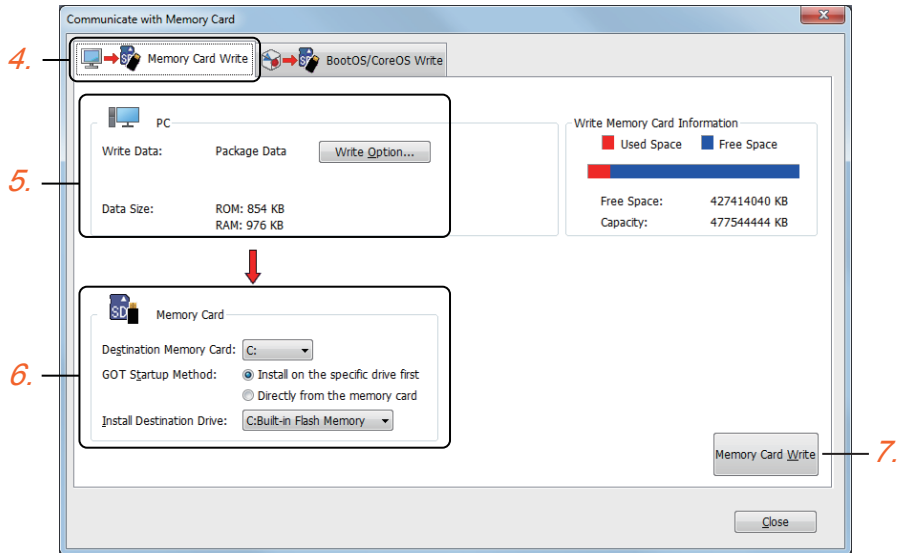

- ⇒GOT2000 Series User's Manual (Utility)

The following shows the procedure to write the package data.

- Step 1** Connect the data storage to the personal computer.
- Step 2** Open the project to be written in GT Designer3.
- Step 3** Select [Communication] → [Write to Memory card] from the menu.

The [Transfer to Memory Card] dialog appears.

- ⇒4.8.12 [Communicate with Memory Card] dialog

**Step 4** Select the [Memory Card Write] tab.

**Step 5** Set [PC Side].

The capacity of the transfer data is displayed in [Data Size]. Check that the destination drive has the sufficient available space.

When the system application or the special data is required to be added to the package data or deleted, click the [Write Option] button and configure the setting in the [Write Option] dialog.

→4.8.3 [Write Option] dialog (for writing data to one GOT)

**Step 6** Set [Memory Card].

Set the drive name of the data storage for [Destination Memory Card].

Select [Startup after installing data to specified drive] for [Startup Operation].

Select the write destination drive of the GOT for [Destination Drive].

**Step 7** Click the [Memory Card Write] button.

**Step 8** After the writing to the data storage is completed, remove the data storage from the personal computer.

**Step 9** Install the data storage that has been removed from the personal computer to the GOT.

For how to install each data storage, refer to the following.

→GOT2000 Series User's Manual (Hardware)

**Step 10** Write the package data according to the GOT model.

- For GT27, GT25 (excluding GT2505-V), and GT23  
While pressing the S.MODE switch, power on the GOT.  
When the GOT is powered on, the package data is written to the GOT.
- For GT2505-V and GT21  
While touching the GOT screen lower-right corner, power on the GOT.  
When the GOT is powered on, the package data is written to the GOT.

**Step 11** After the writing of the package data is completed, touch the screen to restart the GOT.

## 4.5.2 Starting up the package data from data storage

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Start the GOT using the package data stored in the data storage.

### Point

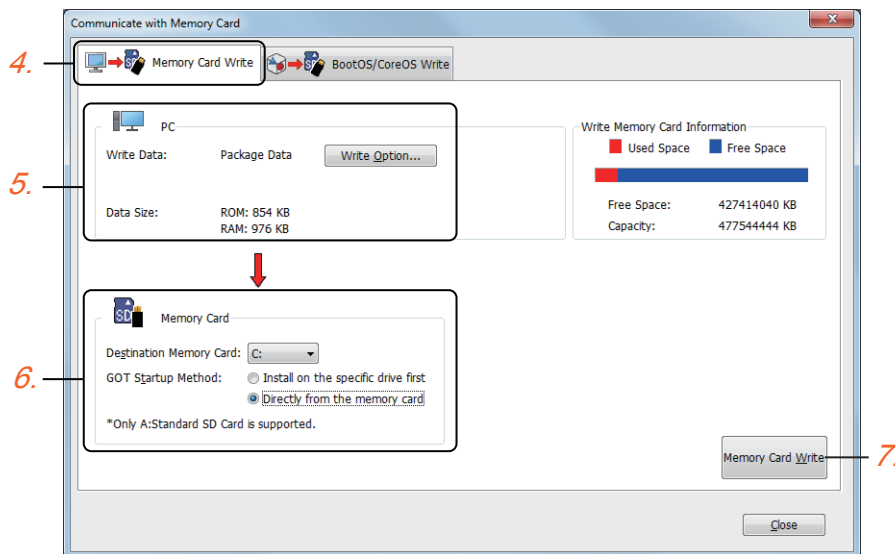

#### Capacity check of the package data and the destination drive

Before writing the package data, check the data size of the package data to be transferred and the available space of the data storage.

- Step 1 Connect the data storage to the personal computer.
- Step 2 Open the project to be written in GT Designer3.
- Step 3 Select [Communication] → [Write to Memory card] from the menu.

The [Transfer to Memory Card] dialog appears.

→ 4.8.12 [Communicate with Memory Card] dialog

Step 4 Select the [Memory Card Write] tab.

Step 5 Set [PC Side].

The capacity of the transfer data is displayed in [Data Size]. Check that the data storage has the sufficient available space.

When the system application or the special data is required to be added to the package data or deleted, click the [Write Option] button and configure the setting in the [Write Option] dialog.

→ 4.8.3 [Write Option] dialog (for writing data to one GOT)

Step 6 Set [Memory Card].

Set the drive name of the data storage for [Destination Memory Card].

Select [Direct startup from memory card] for [Startup Operation].

Step 7 Click the [Memory Card Write] button.

- Step 8** After the writing to the data storage is completed, remove the data storage from the personal computer.
- Step 9** Install the data storage that has been removed from the personal computer to the GOT.  
For how to install each data storage, refer to the following.  
→GOT2000 Series User's Manual (Hardware)
- Step 10** Power on the GOT.

### 4.5.3 Installing the BootOS or the CoreOS to the GOT

Use the data storage to install the BootOS or the CoreOS to the GOT.  
For the version of the BootOS or the CoreOS supported by each version of GT Designer3, refer to the following.  
→12.12 Upgraded Additional Function List

#### Point

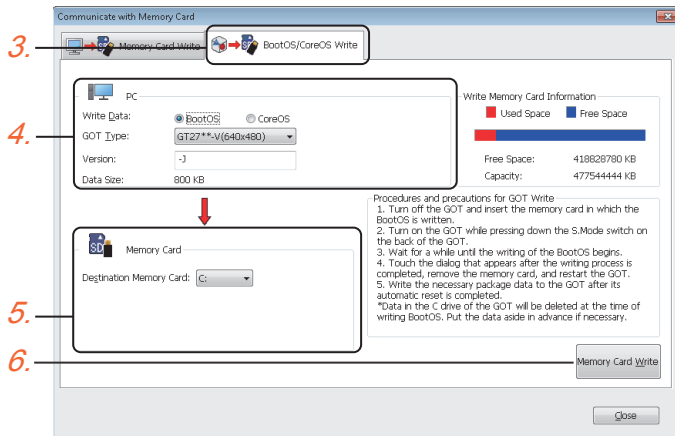

- (1) **Capacity check for the BootOS/CoreOS and the destination drive**  
Before installing the BootOS or the CoreOS, check the data size of the Boot OS or the CoreOS and the available space of the data storage.
- (2) **Data in the GOT**  
When the BootOS or the CoreOS is installed, all the data in the GOT are deleted.  
When the data in the GOT is required, read the data in advance.
- (3) **Installing the CoreOS and the BootOS simultaneously**  
The BootOS is installed simultaneously at the installation of the CoreOS.  
Reinstalling the BootOS is not required.
- (4) **Data storage for installing the CoreOS**  
The CoreOS is installed in drive A (standard SD card) only.

## ■ 1 Writing the BootOS or the CoreOS to the data storage

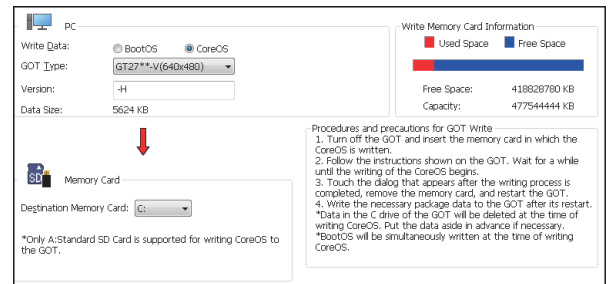

- Step 1** To install the BootOS, connect a data storage to the personal computer, and start GT Designer3.  
To install the CoreOS, connect an SD card to the personal computer, and start GT Designer3.
- Step 2** Select [Communication] → [Write to Memory card] from the menu.

The [Transfer to Memory Card] dialog appears.

⇒ 4.8.12 [Communicate with Memory Card] dialog

When [BootOS] is selected for [Write Data]

When [CoreOS] is selected for [Write Data]

- Step 3** Select the [BootOS/CoreOS Write] tab.
- Step 4** Set [PC Side].  
Select the type of the destination GOT for [GOT Type].  
The capacity of the transfer data is displayed in [Data Size]. Check that the data storage has the sufficient available space.
- Step 5** Set [Memory Card].  
Set the drive name of the data storage for [Destination Memory Card].
- Step 6** Click the [Memory Card Write] button.
- Step 7** After the writing to the data storage is completed, remove the data storage from the personal computer.
- Step 8** Refer to the following to install the BootOS or the CoreOS to the GOT.
- Installing the BootOS
    - ⇒ 4.5.3 ■ 2 (1) Installing the BootOS
  - Installing the CoreOS
    - ⇒ 4.5.3 ■ 2 (2) Installing the CoreOS

## ■2 Installing the BootOS or the CoreOS to the GOT from the data storage

### (1) Installing the BootOS

- Step 1** Install the data storage that has been removed from the personal computer to the GOT.  
For how to install each data storage, refer to the following.  
    ➡GOT2000 Series User's Manual (Hardware)
- Step 2** The procedure for installing the BootOS to the GOT depends on the GOT models.
- For GT27, GT25 (excluding GT2505-V), and GT23  
While pressing the S.MODE switch, power on the GOT.  
When the GOT is powered on, the BootOS is installed to the GOT.
  - For GT2505-V and GT21  
While touching the GOT screen lower-right corner, power on the GOT.  
When the GOT is powered on, the BootOS is installed to the GOT.
- Step 3** After the installation of the BootOS is completed, power off the GOT.
- Step 4** Remove the data storage from the GOT.
- Step 5** Power on the GOT again.
- Step 6** After powering on the GOT, write the required package data to the GOT.

### (2) Installing the CoreOS

- Step 1** Insert the SD card removed from the personal computer to the GOT.  
For how to insert an SD card, refer to the following.  
    ➡GOT2000 Series User's Manual (Hardware)
- Step 2** Power on the GOT.
- Step 3** The confirmation message for installing the CoreOS appears.  
To install the CoreOS, touch the screen for two seconds or longer.  
To abort the installation of the CoreOS, power off the GOT.
- Step 4** When the installation of the CoreOS is completed, the completion message appears.  
Touch the screen to restart the GOT.
- Step 5** Write the required package data to the restarted GOT.

## 4.6 Transferring Data between the Personal Computer and GT01-RS4-M

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Directly connect the personal computer with GT01-RS4-M using a USB cable for communication.

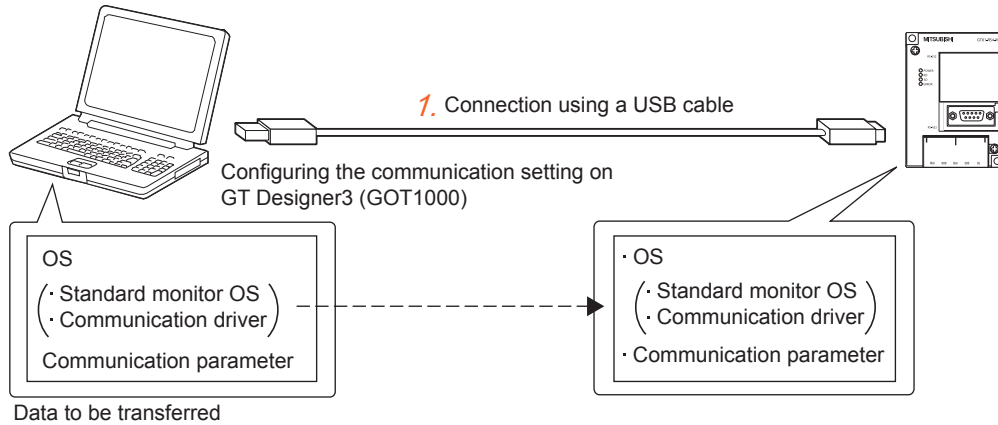

### ■ 1 Transferring data between the personal computer and GT01-RS4-M

The following shows the data transfer procedure.

To transfer data, GT Designer3 (GOT1000) must be installed on the personal computer in advance.

For the details of the connection method and settings on GT Designer3 (GOT1000), refer to the following.

→ GT Designer3 Version1 Screen Design Manual (Fundamentals)

**Step 1** Connect the personal computer with GT01-RS4-M using a USB cable.

**Step 2** On GT Designer3 (GOT2000), select [Communication] → [Communicate with GT01-RS4-M] from the menu to start GT Designer3 (GOT1000) and display the [Communicate with GT01-RS4-M] dialog.

Perform the rest of the procedure on GT Designer3 (GOT1000).

→ GT Designer3 Version1 Screen Design Manual (Fundamentals)

## 4.7 Precautions

---

GT27

GT25

GT23

GT21

SoftGOT2000

GS

### ■1 Precautions for writing to the GOT

#### (1) Canceling writing the package data

When writing the package data is canceled during the process, the data in the GOT may be corrupt.  
When writing the package data has been canceled during the process, write the package data again.

#### (2) Data in the GOT before the BootOS or the CoreOS is installed

When the BootOS or the CoreOS is installed, all the data in the GOT are deleted.  
When the data in the GOT is required, read the data in advance.

#### (3) Precautions for the utilize data and the input assist information

When [Utilize data/Input assist information] is excluded from the package data at writing, the project read from the GOT operates as follows.

- The accumulated input assist information return to the initial status.
- The project data is not searched for when a new project is to be created using another project.

#### (4) Precautions for writing a project in the single file format (\*.GTXS)

When the existing package data in the GOT contains the following setting, you cannot write even a later version of package data from GT designer3 whose version is earlier than 1.122C.

[Restrict write from GT Designer3 of the older versions] is selected in [GOT ID No.] in the GOT setup.

Install the latest version of GT Designer3, and then rewrite the package data.

For the settings of the GOT setup ([GOT ID No.]), refer to the following.

⇒5.3.2 ■4 [GOT ID No.]

#### (5) Message at startup of the GOT that uses an earlier version of the BootOS

If the following message appears on the GOT that uses version S or earlier of the BootOS, update the BootOS to version T or later.

[The number of system applications installed exceeds the limitation. Please reduce the number of system applications to install.]

#### (6) Password for writing data to multiple GOTs in one go

In the [Batch Write to multiple GOTs] dialog, you can enter one data transfer password only.

If the entered password differs from the one set on a destination GOT, data cannot be written to the GOT.

In this case, enter the password which is set on the destination GOT and perform the writing again.

### ■2 Precautions for reading from the GOT

#### (1) Precautions for the utilize data

When the project data is saved to the personal computer directly at the reading from the GOT, the project data is not the target to search for the utilize data.

When the utilize data is used, open the project in GT Designer3 and save the project again after reading.

### ■3 Common precautions for reading and writing

#### (1) When the data storage stores a large number of folders or files

A large number of folders or files in the data storage may decrease file access performance, resulting in a much longer communication time than usual or a communication timeout.

Reduce the number of folders or files in the data storage as necessary.

#### (2) Precautions for the data transfer by Ethernet

##### (a) Advance preparation for the data transfer

For the data transfer by Ethernet, configure the following settings to the GOT in advance to enable the communication by Ethernet.

- Writing of the system application (basic function and communication driver)
- Communication settings

For how to check the setting, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

##### (b) Advance notification for the writing of the package data

When the package data is written by Ethernet, set a rule in advance, such as notifying the operator of the change of the

package data.

When the package data is changed without a notice, the operation of the GOT may be affected.

**(c) Securing a recovering method**

Changing the communication settings when the project data is written may disable the communication with GT Designer3.

Save the data for recovering to the data storage or perform other methods, so that the GOT can recover.

**(3) Power saving function of the personal computer**

To transfer the data by connecting with the GOT, disable the power saving function of the personal computer and Windows.

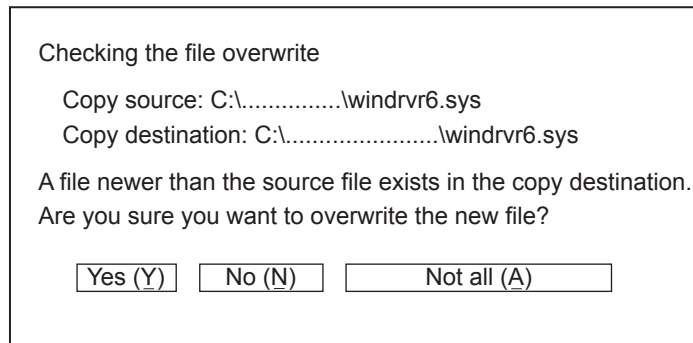

For the details of the power saving function setting, refer to the manual of the personal computer or Windows Help.

**(4) USB driver of other products**

When the USB driver of other products is installed, the confirmation message for overwriting the USB driver file (windrvr6.sys) may appear.

If a new file already exists, click the [No] button and do not overwrite the file.

When the file is overwritten, the USB communication of GT Designer3 and the GOT may not be properly executed.

**(5) Precautions for using a USB cable**

To transfer the data by connecting the personal computer and the GOT using a USB cable, do not set the resume function, the suspending function, the power saving function, or the standby mode of the personal computer.

For the details of the resume function, the suspending function, the power saving function, or the standby mode, refer to the manual of the personal computer or the Help of Windows.

If the USB cable is removed or the GOT is reset or powered off/on, the communication may not be recovered from an error.

In this case, perform either of the following operations.

- Checking if the personal computer recognizes a USB

Check that [MITSUBISHI GOT2000 USB Controller] is displayed in [USB(Universal Serial Bus) Controller] in the device manager.

- Restart the GOT.

Remove the USB cable from the GOT and power off the GOT.

After the GOT is powered off, restart the GOT and connect a cable to communicate again.

#### **(6) Communication error when the PLC is not connected**

If the GOT is not connected to a PLC with the connection setting to the PLC, the GOT fails to communicate with the PLC and retries the communication.

When the following operations are performed in GT Designer3 with this status, a communication error (error No. 8011000a) may occur.

- Writing the package data
- Deleting the system application, the advanced application, the project data, and the resource data
- Drive format

For the corrective actions, refer to the following.

⇒4.9 Troubleshooting

#### **(7) Communication error by the firewall**

The setting of the communication port of the personal computer may cause a communication error, such as timeout error.

When the port for the Ethernet communication is blocked by the firewall, a communication error occurs.

Disable the firewall or set the port to be opened.

For the details of the checking and the setting of the communication port, refer to the Help of Windows.

#### **(8) Precautions for transferring data to the GOT via a PLC**

For transferring data to the GOT via an RCP and RJ71EN71, the GOT is connectable to Ethernet ports (P1 and P2) of the RJ71EN71.

If you set the same network number for both Ethernet ports (P1 and P2) of the RJ71EN71, connect the GOT to Ethernet port P1.

An error occurs if all the following conditions are satisfied.

- Both Ethernet ports (P1 and P2) of the RJ71EN71 are in use.
- The same network number is set for both Ethernet ports (P1 and P2).
- The GOT (data transfer destination) is connected to Ethernet port P2 of the RJ71EN71.

#### **(9) Transferring data while the FA transparent function is used**

While the controller programming software communicates with a controller by using the FA transparent function, transferring data may not be available.

To transfer data, make sure that the FA transparent function is not in use.

## 4.8 Data Transfer Setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

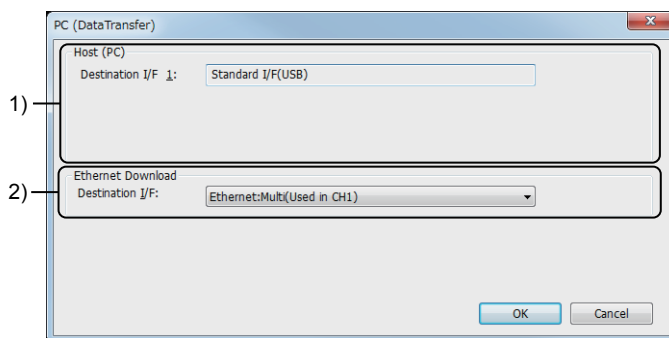

- 4.8.1 [PC (Data Transfer)] dialog
- 4.8.2 [Communicate with GOT] dialog
- 4.8.3 [Write Option] dialog (for writing data to one GOT)
- 4.8.4 [Application Selection] dialog
- 4.8.5 [Select Resource Data] dialog
- 4.8.6 [Resource Data Write Result] dialog
- 4.8.7 [GOT Information - Detail] dialog
- 4.8.8 [Communication Configuration] dialog
- 4.8.9 [Batch Write to multiple GOTs] dialog
- 4.8.10 [Write Option] dialog (for writing data to multiple GOTs in one go)
- 4.8.11 [Communication Status] dialog
- 4.8.12 [Communicate with Memory Card] dialog

### 4.8.1 [PC (Data Transfer)] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [PC (Data Transfer)] dialog, set the communication interface to be used for the data transfer between the personal computer and the GOT.

Select [Common] → [Peripheral Setting] → [PC (Data Transfer)] from the menu to display this dialog.

#### 1) [Host (PC)]

Set the destination interface for the direct connection using a USB cable.

#### 2) [Ethernet Download]

Set the destination interface for the connection by Ethernet.

Item	Description
[Destination I/F]	Set the destination interface to be used for Ethernet download. The following shows the setting range. <ul style="list-style-type: none"><li>• [Ethernet:Multi] Connects to an Ethernet interface of the GOT.</li><li>• [Not connected] Does not use an Ethernet interface of the GOT.</li></ul>

## 4.8.2 [Communicate with GOT] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [Communicate with GOT] dialog, the data is transferred and verified between the personal computer and the GOT. This dialog can be displayed in the following method.

- Step 1** According to the purpose, perform either of the following operations.
- For writing, select [Communication] → [Write to GOT] from the menu.
  - For reading, select [Communication] → [Read from GOT] from the menu.
  - For verifying, select [Communication] → [Verify GOT] from the menu.
- Step 2** The [Communication Configuration] dialog appears.  
Configure the communication setting between the personal computer and the GOT.  
→ 4.8.8 [Communication Configuration] dialog
- Step 3** The [Communicate with GOT] dialog appears.  
Click each tab to switch the display as required.

For the settings in each tab, refer to the following.

- 4.8.2 ■ 1 [GOT Write] tab
- 4.8.2 ■ 2 [GOT Read] tab
- 4.8.2 ■ 3 [GOT Verification] tab

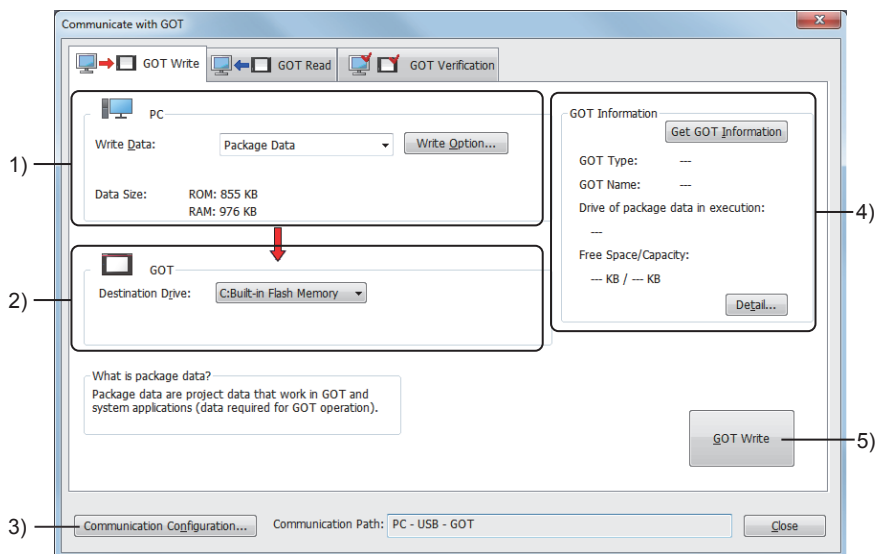

### ■ 1 [GOT Write] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- (1) Writing the package data
- (2) Writing the resource data
- (3) Installing the BootOS

#### (1) Writing the package data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [PC]

Set the data to be written to the GOT.

Item	Description
[Write Data]	Select [Package Data].
[Write Option] button	Set the details of the package data to be written to the GOT. →4.8.3 [Write Option] dialog (for writing data to one GOT)
[Data Size]	Data size of the package data to be written to the GOT.

## 2) [GOT]

Set the destination to transfer the package data.

Item	Description
[Destination Drive]	Select the destination drive to which the data is written. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer

## 3) [Communication Configuration] button

Displays the [Communication Configuration] dialog.  
 →4.8.8 [Communication Configuration] dialog

## 4) [GOT Information]

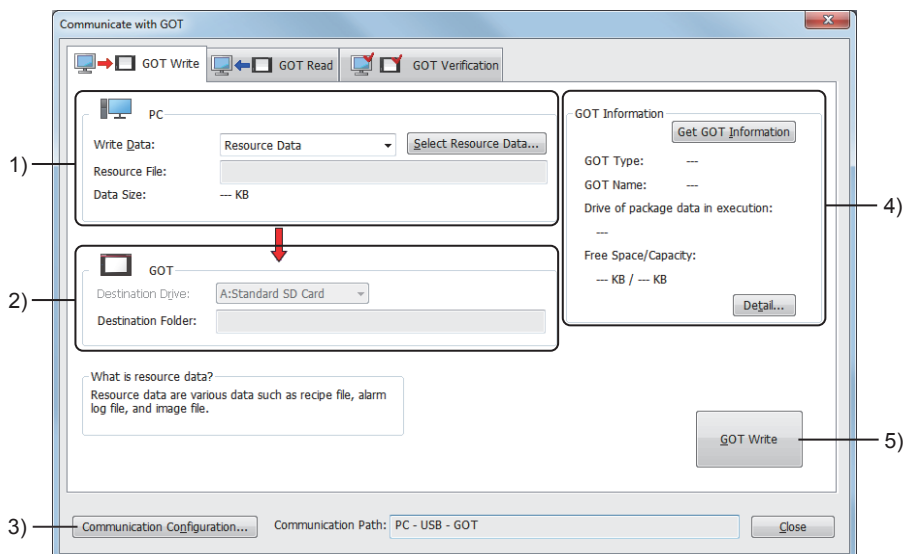

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	Type of the target GOT
[GOT Name]	Name of the target GOT
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Destination Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. →4.8.7 [GOT Information - Detail] dialog

## 5) [GOT Write] button

Starts the data writing to the GOT.

### (2) Writing the resource data

### 1) [PC]

Set the data to be written to the GOT.

Item	Description
[Write Data]	Select [Resource Data].
[Select Resource Data] button	Select the resource data to be written to the GOT. →4.8.5 [Select Resource Data] dialog
[Resource File]	Resource data file to be written to the GOT
[Data Size]	Size of the resource data file to be written to the GOT

### 2) [GOT]

Transfer destination for the resource data.

Configure the setting in the [Select Resource Data] dialog.

→4.8.5 [Select Resource Data] dialog

Item	Description
[Destination Drive]	Write destination drive for the resource data
[Destination Folder]	Write destination folder for the resource data

### 3) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

→4.8.8 [Communication Configuration] dialog

### 4) [GOT Information]

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	Type of the target GOT
[GOT Name]	Name of the target GOT
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Destination Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. →4.8.7 [GOT Information - Detail] dialog

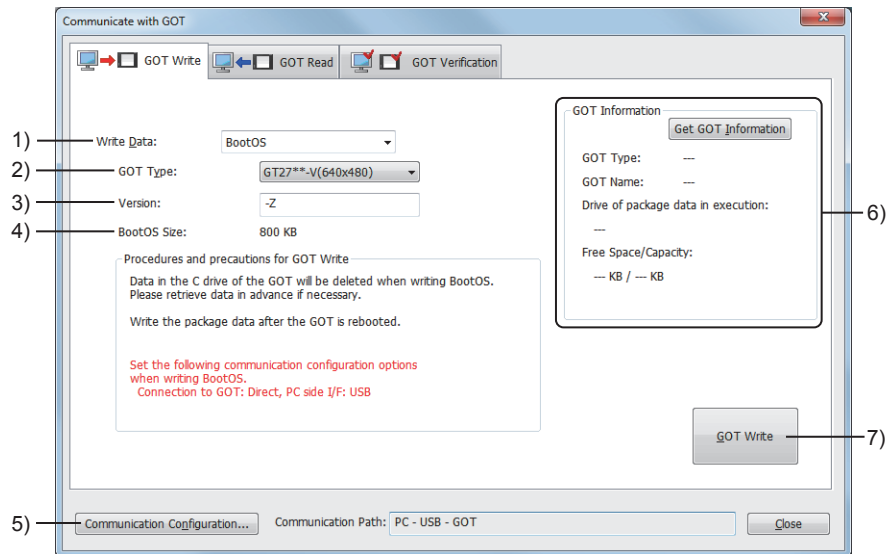

### 5) [GOT Write] button

Starts the data writing to the GOT.

Upon completion of writing, the [Resource Data Write Result] dialog appears.

→4.8.6 [Resource Data Write Result] dialog

### (3) Installing the BootOS

- 1) **[Write Data]**  
Select [BootOS].
- 2) **[GOT Type]**  
Type of the target GOT
- 3) **[Version]**  
Version of the BootOS to be installed to the GOT.
- 4) **[BootOS Size]**  
Data size of the BootOS to be installed to the GOT.
- 5) **[Communication Configuration] button**  
Displays the [Communication Configuration] dialog.  
→ 4.8.8 [Communication Configuration] dialog
- 6) **[GOT Information]**  
The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

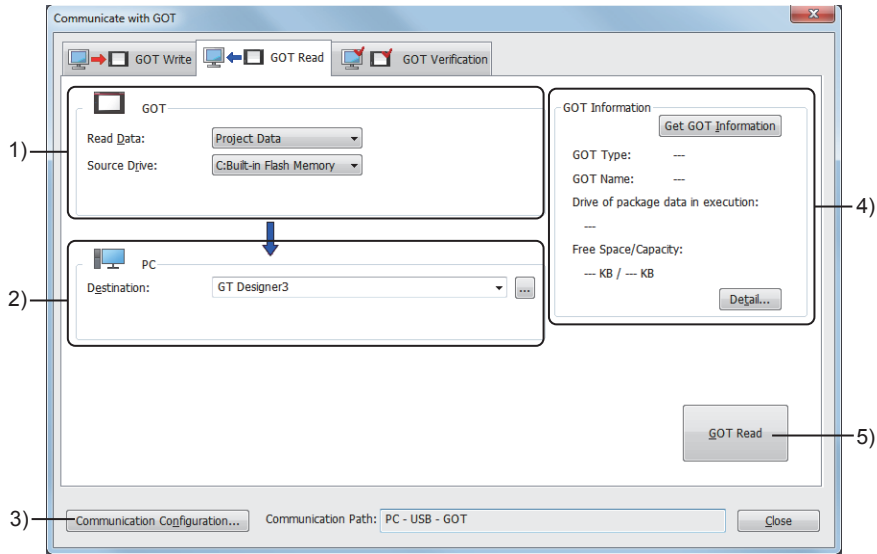

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	Type of the target GOT
[GOT Name]	Name of the target GOT
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Destination Drive]

- 7) **[GOT Write] button**  
Starts the data writing to the GOT.

## ■ 2 [GOT Read] tab

### (1) Reading the project data or the package data

#### 1) [GOT]

Set the type of the data to be read from the GOT, and select the source drive.

Item	Description
[Read Data]	Select [Project Data] or [Package Data]. When GT Designer3 is started from MELSOFT Navigator, [Package Data] cannot be selected.
[Source Drive]	Select the source drive from which the data is read. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer

#### 2) [PC]

Set the destination of the project read from the GOT.

Item	Description
[Destination]	Set the destination of the read project or package data. When GT Designer3 is started from MELSOFT Navigator, the reading destination is fixed to [GT Designer3] if [Package Data] is selected for [Read Data]. <ul style="list-style-type: none"> <li>• When [GT Designer3] is selected                The read project is opened in GT Designer3.                The project cannot be selected when the package data is read.</li> <li>• When the path of the save destination folder is input                The project or the package data are read as a file in the specified folder.                Click the [...] button to display the [Save As Project] dialog.                The save destination folder and the saving format of the read project can be set in the displayed dialog.</li> </ul>

#### 3) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

→4.8.8 [Communication Configuration] dialog

#### 4) [GOT Information]

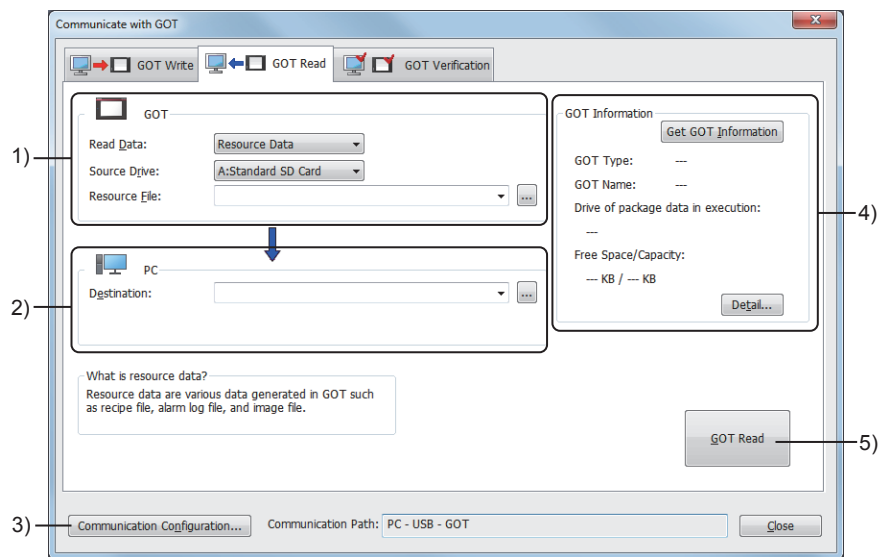

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	GOT type of the reading source GOT.
[GOT Name]	Name of the reading source GOT.
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Source Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. →4.8.7 [GOT Information - Detail] dialog

### 5) [GOT Read] button

Starts the data reading from the GOT.

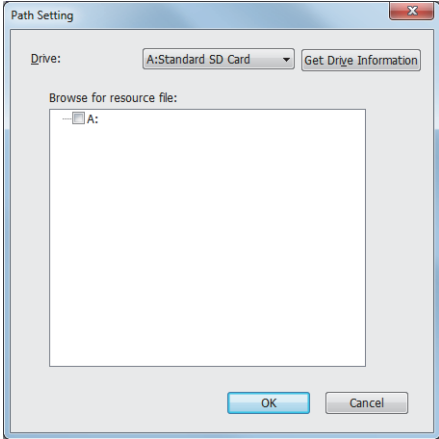

### (2) Reading the resource data

### 1) [GOT]

Set the type of the data to be read from the GOT, the read source drive, and the resource file name.

Item	Description
[Read Data]	Select [Resource Data].
[Source Drive]	Select the source drive from which the data is read. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [D:Built-in SRAM]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer

Item	Description
[Resource File]	<p>Set the saving path and the file name of the resource data. Click the [...] button to display the [Path Setting] dialog. The read source drive and the resource file can be set by selecting the one in the displayed dialog.</p>  <ul style="list-style-type: none"> <li>• [Drive] Select the read source drive.</li> <li>• [Get Drive Information] button Acquires the drive information of the read source drive.</li> <li>• [Browse for resource file] The file configuration of the read source drive is displayed in the tree. The resource file to be read can be selected from the tree.</li> </ul>

## 2) [PC]

Set the destination of the resource data read from the GOT.

Item	Description
[Destination]	<p>Set the path for the destination of the resource data read from the GOT. Click the [...] button to display the [Browse For Folder] dialog. You can specify the destination folder to save the read resource data in the displayed dialog as well.</p>

## 3) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

→4.8.8 [Communication Configuration] dialog

## 4) [GOT Information]

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

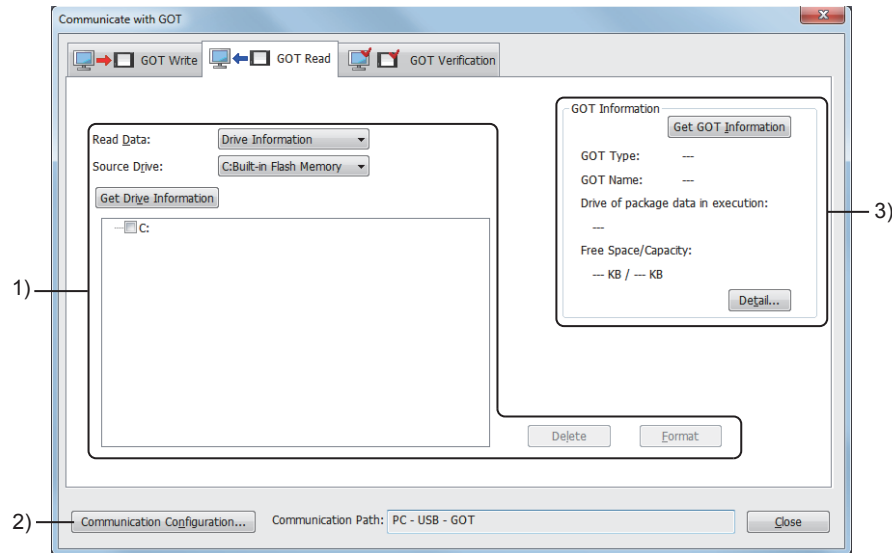

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	GOT type of the reading source GOT.
[GOT Name]	Name of the reading source GOT.
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Source Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. →4.8.7 [GOT Information - Detail] dialog

## 5) [GOT Read] button

Starts the data reading from the GOT.

### (3) Reading the drive information

#### 1) GOT-side setting

Set the type of the data to be read from the GOT, and select the source drive.

Item	Description
[Read Data]	Select [Drive Information].
[Source Drive]	Select the source drive from which the data is read. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [D:Built-in SRAM]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. ⇒1.2.7 Drive configuration of the target GOT for data transfer
[Get Drive Information] button	Acquires the drive information of the drive selected in [Source Drive].
Drive information tree	The file configuration of the read source drive is displayed in the tree. <ul style="list-style-type: none"> <li>• [Delete] button Collectively deletes folders and files selected in the tree. Individually deleting the folder or file is not available.</li> <li>• [Format] button Formats the drive selected in [Source Drive].</li> </ul>

#### 2) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

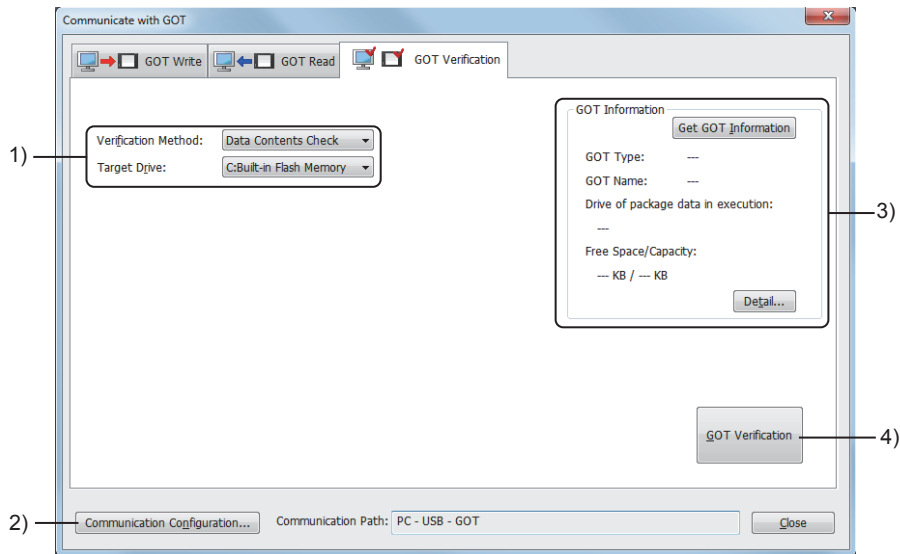

⇒4.8.8 [Communication Configuration] dialog

#### 3) [GOT Information]

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	GOT type of the reading source GOT.
[GOT Name]	Name of the reading source GOT.
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Source Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. ⇒4.8.7 [GOT Information - Detail] dialog

### ■ 3 [GOT Verification] tab

#### 1) GOT-side setting

Specify the verification method and the GOT drive in which the project to be verified is stored.

Item	Description
[Verification Method]	<p>Select the method to verify the project.</p> <ul style="list-style-type: none"> <li>• [Data Contents Check] The verification is performed according to the description of the project.</li> <li>• [Time Stamp Check] The verification is performed according to the time stamp of the project data.</li> </ul>
[Target Drive]	<p>Select the drive which stores the project data to be verified.</p> <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> <p>For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer</p>

#### 2) [Communication Configuration] button

Displays the [Communication Configuration] dialog.

→4.8.8 [Communication Configuration] dialog

#### 3) [GOT Information]

The information on the target GOT, including the GOT type and the capacity of the specified drive, is displayed.

Item	Description
[Get GOT information] button	Acquires the information from the target GOT, including the GOT type and the free space of the specified drive.
[GOT Type]	Type of the target GOT
[GOT Name]	Name of the target GOT
[Drive of package data in execution]	Drive that stores the package data being used in the target GOT
[Free Space/Capacity]	Free space and capacity of the drive selected for [Target Drive]
[Detail] button	Displays the [GOT Information - Detail] dialog. →4.8.7 [GOT Information - Detail] dialog

#### 4) [GOT Verification] button

Starts the verification with the GOT.

### 4.8.3 [Write Option] dialog (for writing data to one GOT)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [Write Option] dialog, set the details of the package data to be written to one GOT. The method for displaying the dialog differs depending on the writing destination.

#### ■1 Displaying the dialog when writing data into the GOT

Display the dialog in the following method when writing data into the GOT.

- Step 1 Select [Communication] → [Write to GOT] from the menu.
- Step 2 The [Communication Configuration] dialog appears.  
Configure the communication setting between the personal computer and the GOT.  
→4.8.8 [Communication Configuration] dialog
- Step 3 The [Communicate with GOT] dialog appears.  
Select [Package Data] for [Write Data] and click the [Write Option] button.  
→4.8.2 ■ 1 [GOT Write] tab

Select [Package Data] and click the [Write Option] button.

#### ■2 Displaying the dialog when writing data into data storage

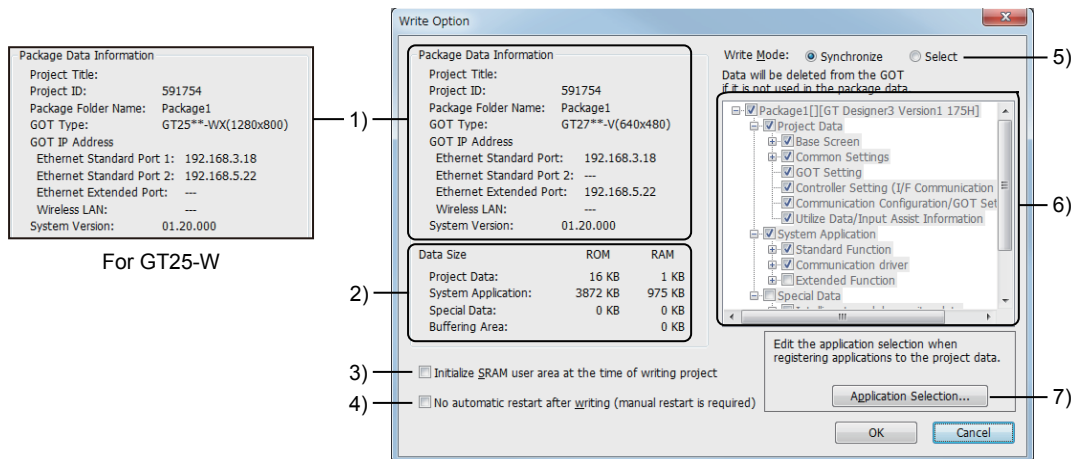

Display the dialog in the following method when writing data into data storage.

- Step 1 Select [Communication] → [Write to Memory card] from the menu.
- Step 2 The [Communicate with Memory Card] dialog appears.  
Click the [Write Option] button.  
→4.8.12 ■ 1 [Memory Card Write] tab

Click the [Write Option] button.

### 3 [Write Option] dialog

#### 1) [Package Data Information]

Item	Description	
[Project Title]	Title of the project	
[Project ID]	ID number of the project	
[Package Folder Name]	Name of the folder that stores the package data	
[GOT Type]	GOT type of the project	
[GOT IP Address]	[Ethernet Standard Port]	This item is not displayed for GT25-W. GOT IP address set for the Ethernet standard port.
	[Ethernet Standard Port1]	This item is displayed only for GT25-W. GOT IP address set for Ethernet standard port 1.
	[Ethernet Standard Port2]	GOT IP address set for Ethernet standard port 2.
	[Ethernet Extended Port]	GOT IP address set for the Ethernet extended port.
	[Wireless LAN]	GOT IP address set for the wireless LAN interface.
[System Version]	System application version in the package data	

#### 2) [Data Size]

Item	Description
[Project Data]	Project data size (ROM and RAM)
[System Application]	Size of the system applications included in the package data (ROM and RAM)
[Special Data]	Size of the special data included in the package data (ROM and RAM)
[Buffering Area]	Size of the buffering area in the SRAM user area

#### 3) [Initialize SRAM user area when writing project data/OS]

GT21 does not support this item.

Initialize the SRAM user area when the package data is written to the GOT.

#### 4) [Not restart automatically after writing (required to restart manually)]

The GOT does not restart automatically after the package data is written to the GOT.

When this item is selected, the GOT is required to be restarted manually after writing.

#### 5) [Write Mode]

Select the write mode of the package data.

- [Synchronize]

Only the required data is written according to the difference with the package data which has already been written to the GOT.

The data which is not related to the package in the GOT is deleted.

- [Selection]

Only the data selected in the package data tree is written.

The write mode is fixed to [Synchronize] in the following cases.

- The [Write Option] dialog is displayed from the [Communicate with Memory Card] dialog.
- Package data is written to the GOT without opening a single file format project (\*.GTXS).
- System labels Ver.2, global labels, OMRON NJ/NX tags, or AB native tags are set in the common settings or object settings.
- The project contains a label group.
- The project is protected with a security key.
- The project contains a mobile screen.
- [Use GOT Mobile function] is selected in [Basic Setting] in the [GOT Mobile Setting] window.

**6) Package data tree**

The data included in the package data is displayed in the tree.  
 When [Selection] is selected for [Write Mode], the data can be added or deleted.

**7) [Application Selection] button**

This button is displayed only when [Synchronize] is selected for [Write Mode].  
 Clicking this button displays the [Application Selection] dialog.

→ 4.8.4 [Application Selection] dialog

**4.8.4 [Application Selection] dialog**

In the [Application Selection] dialog, system applications (extended functions), communication drivers, and special data are selectable, and the selected items are held in the project data.

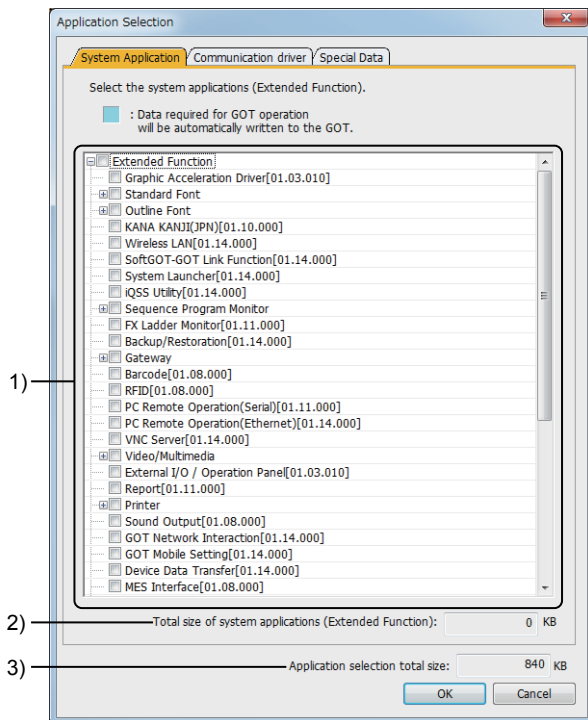

Select [Common] → [Application Selection] from the menu to display this dialog.

Configure the settings by switching the tabs according to the target data.

- ■ 1 [System Application] tab
- 2 [Communication Driver] tab
- 3 [Special Data] tab

**■ 1 [System Application] tab**

### 1) [Extended Function] tree

Lists the system applications (Extended Function) which can be installed to the GOT in a tree view.  
The application selected in the tree is written to the GOT regardless of whether to use or not use the function.  
The application required for the GOT operation is displayed in light-blue.  
The selection of the application displayed in light-blue cannot be canceled.

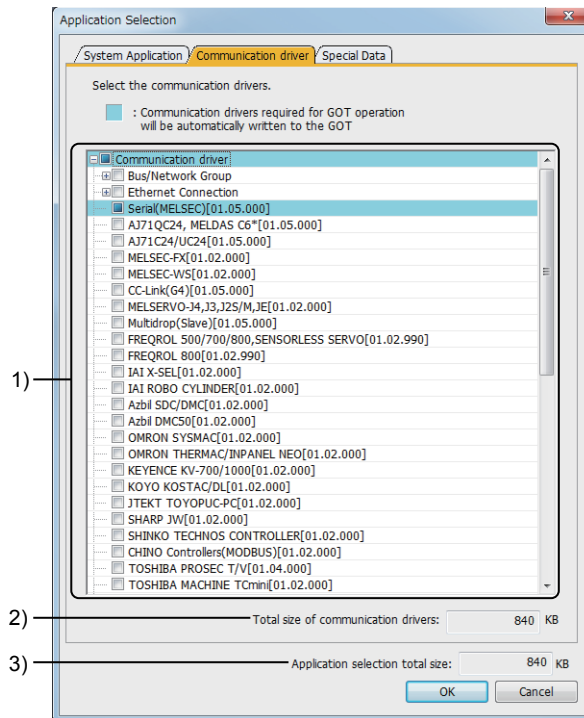

### 2) [Total size of system applications (Extended Function)]

Displays the total size of the system applications (Extended Function) selected in the tree.

### 3) [Total size of selected applications]

Displays the total size of all the items selected in the [System Application] tab, the [Communication driver] tab, and the [Special Data] tab.

## ■ 2 [Communication Driver] tab

### 1) [Communication driver] tree

Lists the system applications (Extended Function) which can be installed to the GOT in a tree view.  
The communication driver selected in the tree is installed to the GOT regardless of whether to use or not use the function.  
The communication driver required for the GOT operation is displayed in light-blue.  
The selection of the communication driver displayed in light-blue cannot be canceled.

### 2) [Total size of system applications (Extended Function)]

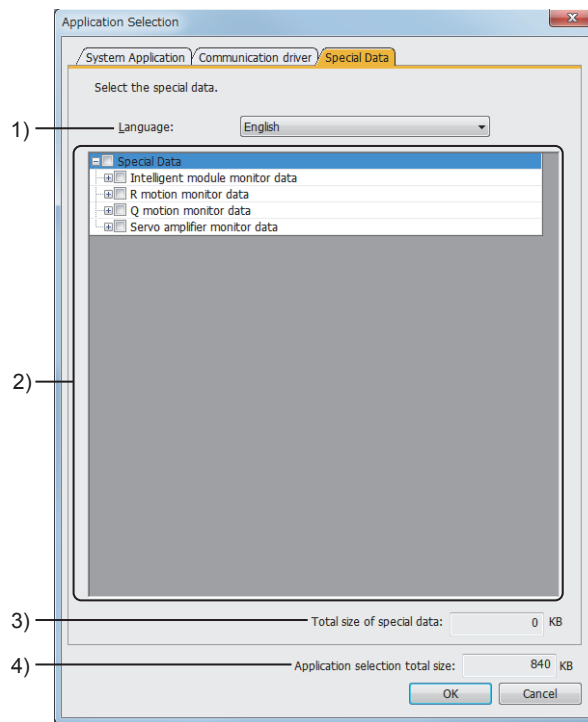

Displays the total size of the system applications (Extended Function) selected in the tree.

### 3) [Total size of selected applications]

Displays the total size of all the items selected in the [System Application] tab, the [Communication driver] tab, and the [Special Data] tab.

### ■ 3 [Special Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Language]

Select the language of the special data.

- [Japanese]
- [English]

#### 2) [Special Data] tree

The list of the special data which can be written to the GOT is displayed in the tree.

The special data selected in the tree is written to the GOT regardless of whether to use or not use the function.

#### 3) [Total size of special data]

The total size of the special data selected in the tree is displayed.

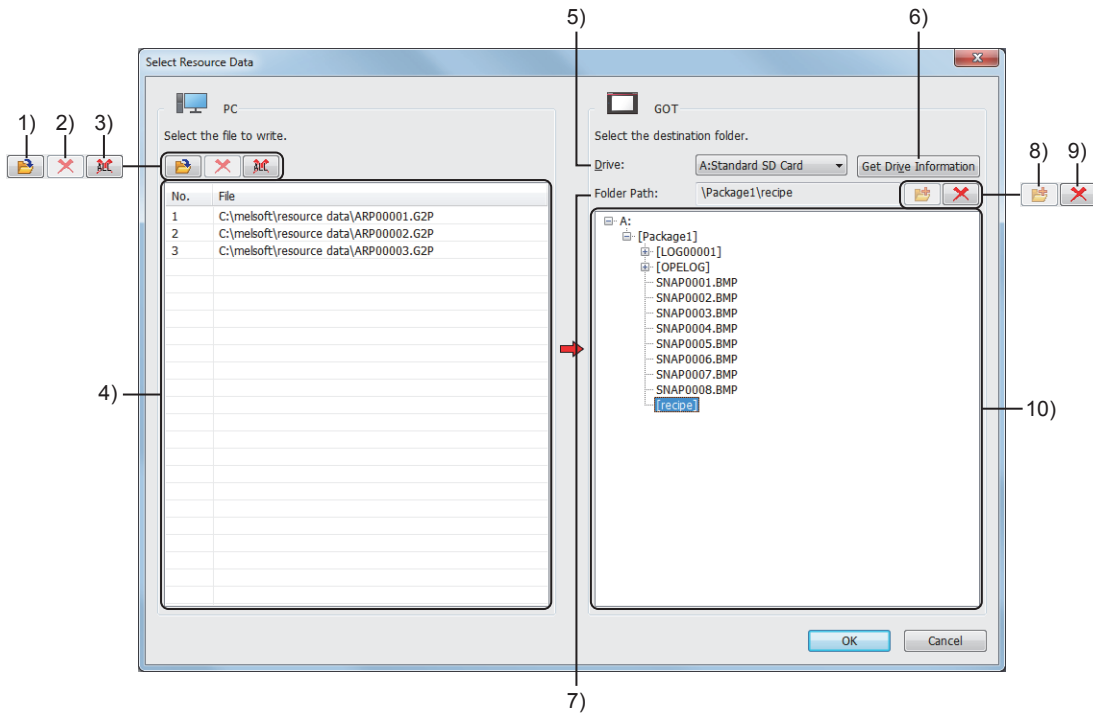

#### 4) [Total size of selected applications]

Displays the total size of all the items selected in the [System Application] tab, the [Communication driver] tab, and the [Special Data] tab.

## 4.8.5 [Select Resource Data] dialog

In the [Select Resource Data] dialog, set the resource data to be written to the GOT, and set the write destination. To display this dialog, click the [Select Resource Data] button on the [GOT Write] tab in the [Communicate with GOT] dialog.

### 1) [Add File] button

Displays the [Open] dialog.  
Select a resource data file to be written to the GOT.

### 2) [Delete] button

Deletes a selected resource data file from the write target list.

### 3) [Delete All] button

Deletes all resource data files from the write target list.

### 4) [Write target list]

Lists the resource data files to be written to the GOT.

### 5) [Drive]

Select the destination drive to which the resource data is written.  
The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]

For the available drives by GOT model, refer to the following.

⇒ 1.2.7 Drive configuration of the target GOT for data transfer

### 6) [Get Drive Information] button

Reads the contents of a specified drive from the GOT.  
The read data is displayed in the drive information tree.

### 7) [Folder Path]

Path to the write destination folder for the resource data  
The path to the folder selected in the drive information tree is displayed.

### 8) [New Folder] button

Adds a new folder under the drive or folder selected in the drive information tree.  
The new folder name is displayed in red.

The new folder is created upon completion of resource data writing.

9) **[Delete] button**

Deletes a newly-added folder that is selected in the drive information tree.

10) **Drive information tree**

Displays the folders and files in the drive that is selected for [Drive] in the tree view.

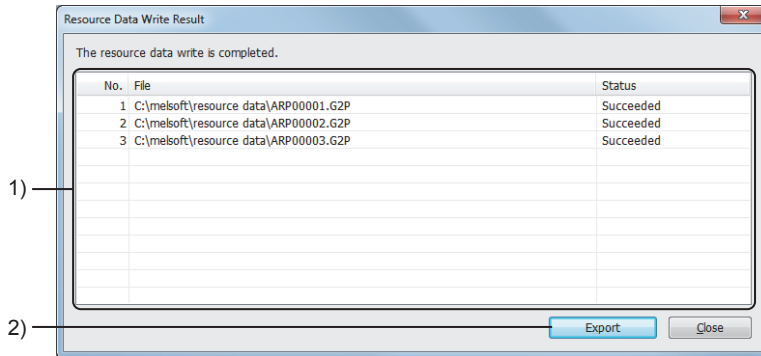

The folder selected in the tree is set as the write destination folder.

### 4.8.6 [Resource Data Write Result] dialog

The [Resource Data Write Result] dialog displays the result of resource data writing.

This dialog appears only after resource data writing is performed on the [GOT Write] tab in the [Communicate with GOT] dialog.

1) **Write result list**

Result of resource data writing

Item	Description
[No.]	File number
[File]	Resource data file
[Status]	Write result • [Succeeded] • [Failed]

2) **[Export] button**

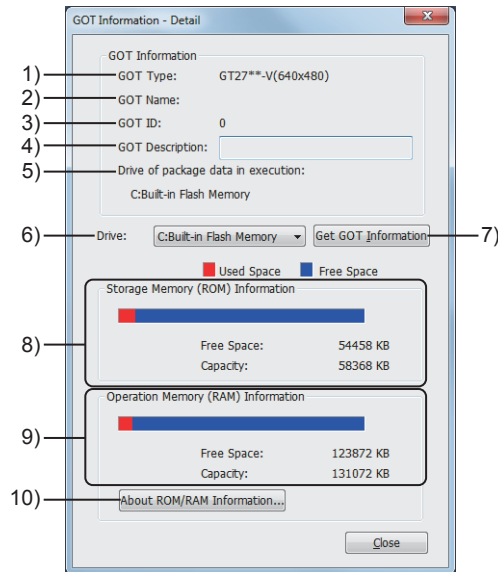

Displays the [Save As] dialog.

Save the write result to a file.

## 4.8.7 [GOT Information - Detail] dialog

In the [GOT Information - Detail] dialog, data is written or read and the detailed information on the verification target GOT is displayed.

- 1) **[GOT Type]**  
GOT type.
- 2) **[GOT Name]**  
Name to identify the GOT.
- 3) **[GOT ID]**  
ID number to identify the GOT
- 4) **[GOT Description]**  
Detailed description for the GOT.
- 5) **[Drive of package data in execution]**  
Drive that stores the package data being used in the GOT
- 6) **[Drive]**  
Select the GOT drive whose detailed information is to be displayed.
- 7) **[Get GOT information] button**  
Acquires the information from the GOT, including the GOT type and the free space of the specified drive.
- 8) **[Storage Memory (ROM) Information]**  
Free space and capacity of the GOT storage memory (ROM)
- 9) **[Operation Memory (RAM) Information]**  
Free space and capacity of the GOT operation memory (RAM)
- 10) **[About ROM/RAM Information] button**  
Displays explanations of ROM and RAM in the GOT.

### Point

#### ROM and RAM in the GOT

The system applications and project data in the storage memory (ROM) are expanded to the operation memory (RAM) to run the GOT.

If the expanded data size exceeds the capacity of the operation memory (RAM), reduce the data size by deleting unnecessary project data or system applications, or other methods.

## 4.8.8 [Communication Configuration] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [Communication Configuration] dialog, the communication with the GOT is set.

Select [Communication] → [Communication Configuration] from the menu to display this dialog.

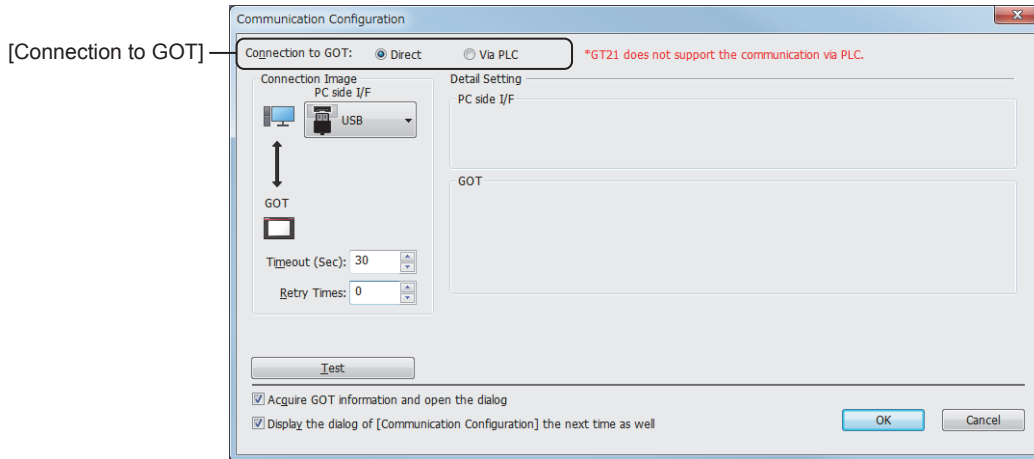

The settings differ according to the connection method of the personal computer and the GOT.

When the personal computer and the GOT are connected directly, select [Direct] for the [Connection to GOT].

→ ■ 1 Writing the data into the GOT directly

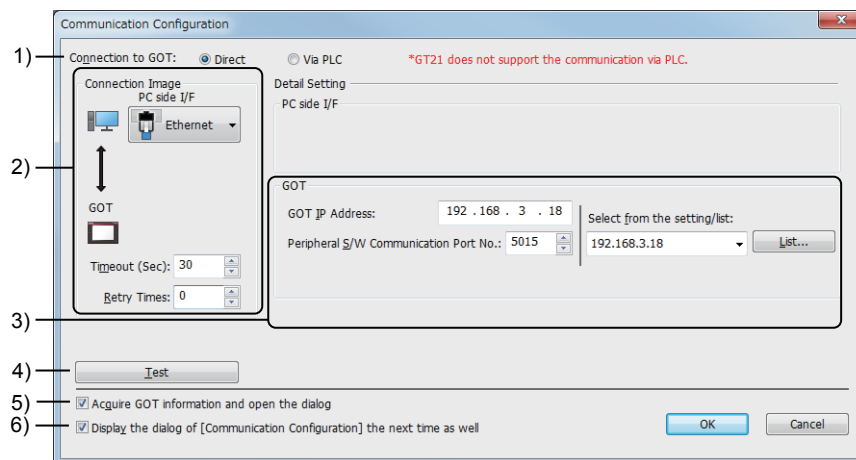

When the personal computer and the GOT are connected via a PLC, select [Via PLC] for the [Connection to GOT].

→ ■ 2 Writing the data via PLC CPU

### ■ 1 Writing the data into the GOT directly

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Connection to the GOT]

Select the connection method of the personal computer and the GOT.

- [GOT directly]
  - Connect the personal computer and the GOT directly using a cable.
- [Via PLC]
  - Connect the personal computer and the GOT via a PLC.

#### 2) [Connection Image]

Set the interface to be used or the device to be routed for the connection of the personal computer and the GOT.

Item	Description
[PC side I/F]	Select the type of the interface of the personal computer. <ul style="list-style-type: none"> <li>• [USB]</li> <li>• [Ethernet]</li> </ul>

Item	Description
[Timeout (Sec)]	Set the time period for the communication between the personal computer and the GOT to time out. The setting range is [1] to [9999] seconds. If you set a time less than 30 seconds, a communication error may occur. Set 30 seconds or more.
[Retry Times]	Set the number of retries to be performed when a communication error occurs. The setting range is [0] time to [5] times.

### 3) [GOT]

Set the details of the interface of the GOT.

The details are set only when the GOT is connected by Ethernet.

Item	Description
[GOT IP Address]	Set the IP address of the GOT. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
[Peripheral S/W Communication Port No.]	Set the port No. used for the communication with GT Designer3. The setting range is [1024] to [65534].
[Select from setting/list]	Select the interface setting of the GOT from the GOT identification information registered in the project.
[List] button	Displays the [GOT Setting List] dialog. The interface setting of the GOT can be selected from the list. →5.3.2 ■ 5 [GOT Setting List] dialog

### 4) [Communication Test] button

Performs the communication test of the personal computer and the GOT.

### 5) [Acquire GOT information and open the dialog]

Acquires the GOT identification information from a target GOT, and then displays the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

For the details of the GOT identification information, refer to the following.

→5.3.2 ■ 1 Specifications

### 6) [Display the dialog of [Communication Configuration] the next time as well]

Displays the [Communication Configuration] dialog before displaying the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

If this item is deselected, the [Communication Configuration] dialog and this item do not appear from the next time.

To display the [Communication Configuration] dialog again, select [Display the dialog of Communication Setting before displaying the dialog of Communicate with GOT/GOT Diagnostics] in the [Operation] tab in the [Options] dialog.

→11.10.3 ■ 1 [Option] dialog ([Operation] tab)

## Point

### Settings of [Timeout (Sec)] and [Retry Times]

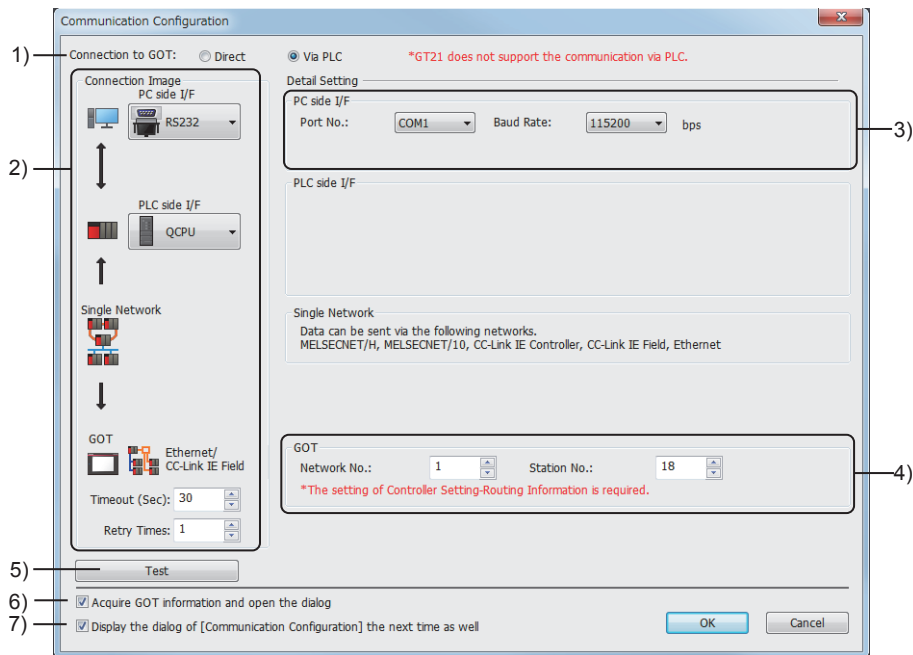

After setting [Timeout (Sec)] and [Retry Times] in a project on GT Designer3 version 1.122C or later, if you open the project on GT Designer3 whose version is earlier than 1.122C, the setting items do not appear.

Upon the writing of the project, the GOT operates using the values of [Timeout (Sec)] and [Retry Times] set on GT Designer3 version 1.122C or later.

## 2 Writing the data via PLC CPU

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Connection using RS-232 cable and USB cable

#### 1) [Connection to GOT]

Select the connection method of the personal computer and the GOT.

- [Direct]  
Connect the personal computer and the GOT directly using a cable.
- [Via PLC]  
Connect the personal computer and the GOT via a PLC.

#### 2) [Connection Image]

Set the interface to be used or the device to be routed for the connection of the personal computer and the GOT.

Item	Description
[PC side I/F]	Select the type of the interface of the personal computer. • [RS232] • [USB] • [Ethernet]
[PLC side I/F]	Select a PLC type to be routed. • [RCPU] (This item is not selectable when [RS232] is selected for [PC side I/F].) • [QCPU] • [LCPU]
[Ethernet/CC-Link IE Field]	Network to be routed which the GOT is connected.
[Timeout (Sec)]	Set the time period for the communication between the personal computer and the GOT to time out. The setting range is [1] to [9999] seconds. If you set a time less than 30 seconds, a communication error may occur. Set 30 seconds or more.
[Retry Times]	Set the number of retries to be performed when a communication error occurs. The setting range is [0] time to [5] times.

#### 3) [PC side I/F]

Set the details of the interface of the personal computer.

The details are set only when the GOT is connected using RS-232 cable.

Item	Description
[Communication port]	Select the RS232 communication port of the personal computer. The setting range depends on the personal computer to be used.

Item	Description
[Baud Rate]	Select the transmission speed of the communication between the personal computer and the PLC. <ul style="list-style-type: none"> <li>• [115200] bps</li> <li>• [57600] bps</li> <li>• [38400] bps</li> <li>• [19200] bps</li> <li>• [9600] bps</li> </ul>

#### 4) [GOT]

Set the details of the interface of the GOT.

Item	Description
[Network No.]	Set the network No. of the network to which the GOT is connected. The setting range is [1] to [239].
[Station No.]	Set the GOT's station number. The setting range is [1] to [64].

#### 5) [Test] button

Performs the communication test of the personal computer and the GOT.

#### 6) [Acquire GOT information and open the dialog]

Acquires the GOT identification information from a target GOT, and then displays the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

For the details of the GOT identification information, refer to the following.

→5.3.2 ■ 1 Specifications

#### 7) [Display the dialog of [Communication Configuration] the next time as well]

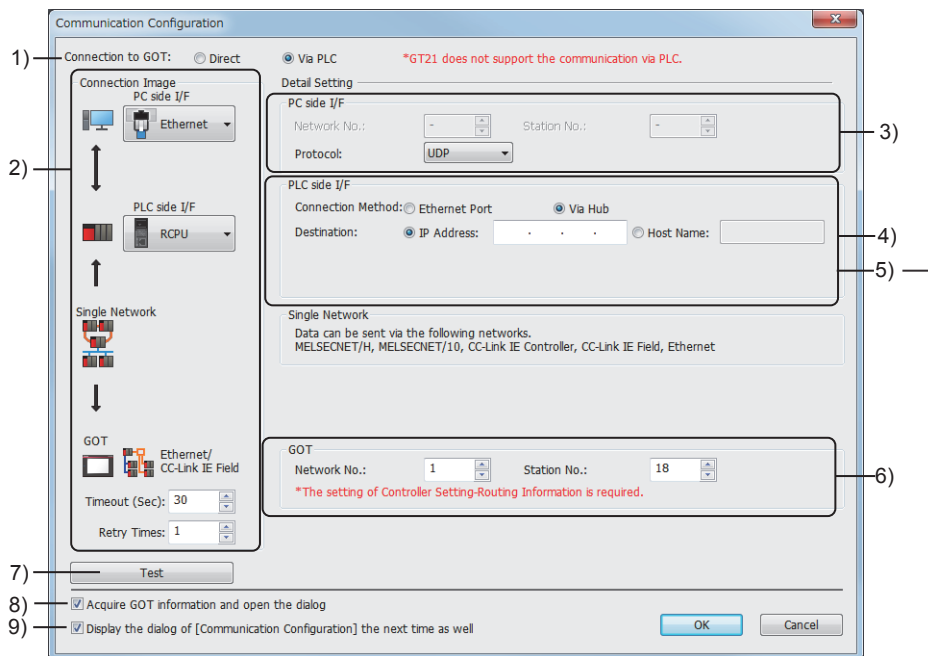

Displays the [Communication Configuration] dialog before displaying the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

If this item is deselected, the [Communication Configuration] dialog and this item do not appear from the next time.

To display the [Communication Configuration] dialog again, select [Display the dialog of Communication Setting before displaying the dialog of Communicate with GOT/GOT Diagnostics] in the [Operation] tab in the [Options] dialog.

→11.10.3 ■ 1 [Option] dialog ([Operation] tab)

## (2) Connecting by Ethernet

When connecting with a PLC

When connecting with the Ethernet interface module

### 1) [Connection to the GOT]

Select the connection method of the personal computer and the GOT.

- [GOT directly]  
Connect the personal computer and the GOT directly using a cable.
- [Via PLC]  
Connect the personal computer and the GOT via a PLC.

### 2) [Connection Image]

Set the interface to be used or the device to be routed for the connection of the personal computer and the GOT.

Item	Description
[PC side I/F]	Select the type of the interface of the personal computer. <ul style="list-style-type: none"> <li>• [RS232]</li> <li>• [USB]</li> <li>• [Ethernet]</li> </ul>
[PLC side I/F]	Select the type of the PLC or the Ethernet interface module to be routed. <ul style="list-style-type: none"> <li>• [RCPU]</li> <li>• [RJ71EN71]</li> <li>• [QCPU]</li> <li>• [QJ71E71]</li> <li>• [LCPU]</li> <li>• [LJ71E71]</li> </ul> To use port CPU P1 of the RnENCPU, select [RCPU]. To use port P1 of the RnENCPU, select [RJ71EN71]. (Port P2 does not support the Ethernet connection.)
[Ethernet/CC-Link IE Field]	Network to be routed which the GOT is connected.
[Timeout (Sec)]	Set the time period for the communication between the personal computer and the GOT to time out. The setting range is [1] to [9999] seconds. If you set a time less than 30 seconds, a communication error may occur. Set 30 seconds or more.
[Retry Times]	Set the number of retries to be performed when a communication error occurs. The setting range is [0] time to [5] times.

### 3) [PC side I/F]

Set the details of the interface of the personal computer.

Item	Description
[Network No.]	Set the network No. of the Ethernet network to which the personal computer is connected. The setting range is [1] to [239]. The network No. is set only when the Ethernet interface module is connected.
[Station No.]	Set the station number of the personal computer. To connect the personal computer with the Ethernet interface module, set the station number which does not overlap with other station numbers in the same network. The following shows the setting range. <ul style="list-style-type: none"> <li>• When [PLC side I/F] is set to [QJ71E71] or [LJ71E71]: [1] to [64]</li> <li>• When [PLC side I/F] is set to [RJ71EN71]: [1] to [120]</li> </ul>
[Protocol]	Select the communication protocol to be used for the communication between the personal computer and the PLC. <ul style="list-style-type: none"> <li>• [TCP]</li> <li>• [UDP]</li> </ul>

### 4) [PLC side I/F] (when the destination is the PLC)

Configure the interface setting on the PLC side when the PLC (RCPU, QCPU, or LCPU) is connected.

Item	Description
[Connection]	Select the connecting method of the personal computer and the PLC. <ul style="list-style-type: none"> <li>• [Connecting directly to the Ethernet port]</li> <li>• [Connecting by the hub]</li> </ul>
[Destination]	When [Connecting by the hub] is selected in [Connection], set the IP address or the host name of the destination PLC. <ul style="list-style-type: none"> <li>• [IP Address] Specify the destination PLC by the IP address. After selecting, set the IP address of the destination PLC. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].</li> <li>• [Host Name] Specify the host name by the destination PLC. Up to 64 characters can be set for the host name. A one-byte character is counted as one character, and a two-byte character is counted as two characters.</li> </ul>

### 5) [PLC side I/F] (when the destination is the Ethernet interface module)

Configure the interface setting on the PLC side when the Ethernet interface module (RJ71EN71, QJ71E71, or LJ71E71) is connected.

Item	Description
[Network No.]	Network No. of the Ethernet network to which the PLC is connected. The setting range is [1] to [239].
[Station No.]	Set the station number of the PLC. The following shows the setting range. <ul style="list-style-type: none"><li>• When [PLC side I/F] is set to [QJ71E71] or [LJ71E71]: [1] to [64]</li><li>• When [PLC side I/F] is set to [RJ71EN71]: [1] to [120]</li></ul>
[Destination]	When [Connecting by the hub] is selected in [Connection], set the IP address or the host name of the destination PLC. <ul style="list-style-type: none"><li>• [IP Address] Specify the destination PLC by the IP address. After selecting, set the IP address of the destination PLC. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].</li><li>• [Host Name] Specify the host name by the destination PLC. Up to 64 characters can be set for the host name. A one-byte character is counted as one character, and a two-byte character is counted as two characters.</li></ul>
[Station No.<->IP information]	When the PLC connected to the GOT communicates with a PLC of another station, select the method to acquire the network No., the station number, and the IP address of the PLC of another station. Select the item according to the network parameter of the destination PLC. <ul style="list-style-type: none"><li>• [Automatic Response Method]</li><li>• [IP Address Calculation Method/Table Convert Method/Combination Method]</li></ul>

### 6) [GOT]

Set the details of the interface of the GOT.

Item	Description
[Network No.]	Set the network No. of the network to which the GOT is connected. The setting range is [1] to [239].
[Station No.]	Set the GOT's station number. The setting range is [1] to [64].

### 7) [Communication Test] button

Performs the communication test of the personal computer and the GOT.

### 8) [Acquire GOT information and open the dialog]

Acquires the GOT identification information from a target GOT, and then displays the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

For the details of the GOT identification information, refer to the following.

⇒5.3.2 ■ 1 Specifications

### 9) [Display the dialog of [Communication Configuration] the next time as well]

Displays the [Communication Configuration] dialog before displaying the [Communicate with GOT] dialog or the [GOT Diagnostics] dialog.

If this item is deselected, the [Communication Configuration] dialog and this item do not appear from the next time.

To display the [Communication Configuration] dialog again, select [Display the dialog of Communication Setting] before displaying the dialog of Communicate with GOT/GOT Diagnostics] in the [Operation] tab in the [Options] dialog.

⇒11.10.3 ■ 1 [Option] dialog ([Operation] tab)

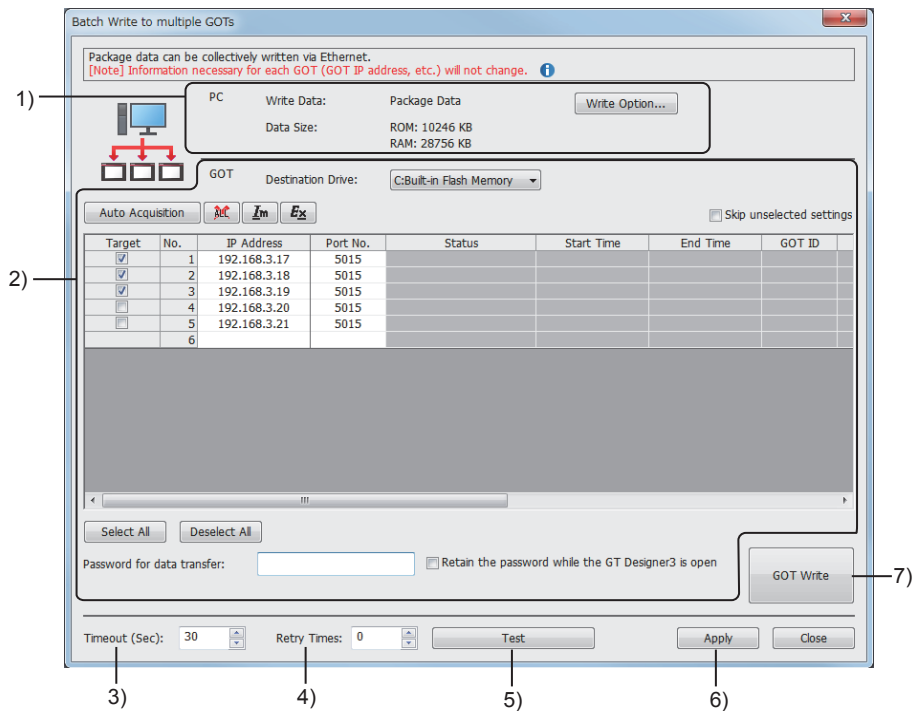

## 4.8.9 [Batch Write to multiple GOTs] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

In the [Batch Write to multiple GOTs] dialog, set the details of the data to be written, the write destination, and others. To display this dialog, select [Communication] → [Batch Write to multiple GOTs] from the menu.

### 1) [PC]

View or set the details of the package data to be written to target GOTs.

Item	Description
[Write Data]	Type of the data to be written. ([Package Data])
[Data Size]	Data size of the package data.
[Write Option] button	Displays the dialog to set the details of the package data. →4.8.3 [Write Option] dialog (for writing data to one GOT)

### 2) [GOT]

View or set the details of the destination to which the package data is written.

Item	Description
[Destination Drive]	Set the drive to which the data is written. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer
[Auto Acquisition] button	Automatically acquires the GOT identification information, including the GOT IP address.
Delete All button	Deletes all rows.
Import button	Imports the communication target setting, IP address, port number, and other GOT settings. The following shows the available file formats. <ul style="list-style-type: none"> <li>• CSV format</li> <li>• Unicode text format</li> </ul>

Item	Description
Export button	Exports the communication target setting, GOT settings, and communication result to a file. The following shows the available file formats. • CSV format • Unicode text format
[Skip unselected settings]	Only displays the rows marked with a checkmark in the [Target] column.
[Select All] button	Selects all GOTs in the list as the communication target.
[Deselect All] button	Deselects all the GOTs selected as the communication target.
[Target]	Select a target GOT. This item is not settable for the GOT whose type is different from the one set in the project of the package data to be written.
[No.]	Number for each GOT in the list. The number ranges from [1] to [256].
[IP Address]	Set the IP address of each GOT. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
[Port No.]	Set the port number of each GOT. The setting range is [1024] to [65534].
[Status]	Displays the communication result.
[Start Time]	Displays the start time of a communication test or data write.
[End Time]	Displays the end time of a communication test or data write.
[GOT ID]	Displays the ID number to identify each GOT.
[GOT Name]	Displays the name to identify each GOT.
[GOT Type]	Displays the type of each GOT.
[I/F]	Displays the interface type for each GOT IP address.
[Password for data transfer]	If the data transfer security has been set for the project in the target GOT, enter the data transfer password. →4.7 Precautions

### 3) [Timeout (Sec)]

Set the timeout period for communication between the personal computer and each GOT.

The setting range is [1] second to [9999] seconds.

If you set a time less than 30 seconds, a communication error may occur.

Set 30 seconds or more.

### 4) [Retry Times]

Set the number of retries to be performed when a timeout occurs.

The setting range is [0] to [5].

### 5) [Test] button

Executes a communication test between the personal computer and each GOT.

### 6) [Apply] button

Confirms the new settings, and saves them in the current project.

This item is displayed only when this dialog has been brought up from the [Communication] menu.

The following shows the settings to be saved.

- [Destination Drive]
- [Skip unselected settings]
- [Target]
- [No.]
- [IP Address]
- [Port No.]
- [GOT ID]
- [GOT Name]
- [GOT Type]
- [I/F]
- [Timeout (Sec)]
- [Retry Times]

### 7) [GOT Write] button

Writes the data to the target GOT.

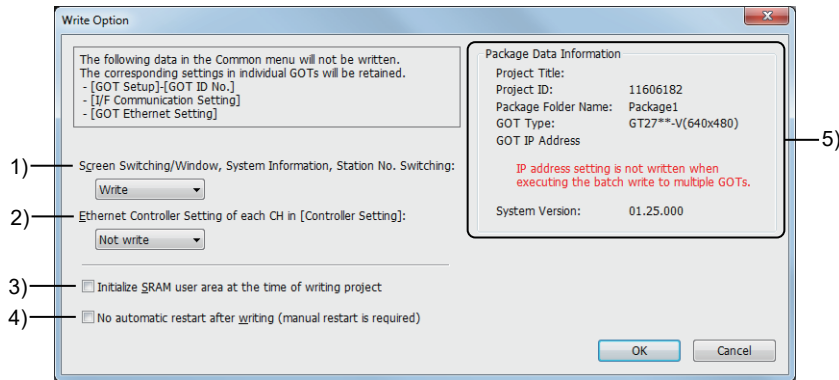

## 4.8.10 [Write Option] dialog (for writing data to multiple GOTs in one go)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

In the [Write Option] dialog, set the details of the package data to be written to multiple GOTs in one go.

To display this dialog, click the [Write Option] button in the [Batch Write to multiple GOTs] dialog.

### 1) [Screen Switching/Window, System Information, Station No. Switching]

Set whether to write the following settings to the target GOTs.

- [Screen Switching/Windows] in the [Environmental Setting] window
- [System Information] in the [Environmental Setting] window
- [Station No. Switching] in the [Controller Setting] window

The following shows selectable items.

- [Write]
- [Not write]

If [Not write] is selected, the above settings in each target GOT will remain unchanged.

### 2) [Ethernet Controller Setting of each CH in [Controller Setting]]

Set whether to write the settings of [Ethernet Controller Setting] in the [Controller Setting] window to the target GOTs.

The following shows selectable items.

- [Write]
- [Not write]

If [Not write] is selected, the above settings in each target GOT will remain unchanged.

### 3) [Initialize SRAM user area when writing project data/OS]

GT21 does not support this item.

Initialize the SRAM user area when the package data is written to the GOT.

### 4) [Not restart automatically after writing (required to restart manually)]

The GOT does not restart automatically after the package data is written to the GOT.

When this item is selected, the GOT is required to be restarted manually after writing.

### 5) [Package Data Information]

Item	Description
[Project Title]	Title of the project
[Project ID]	ID number of the project
[Package Folder Name]	Name of the folder that stores the package data
[GOT Type]	GOT type of the project
[System Version]	System application version in the package data

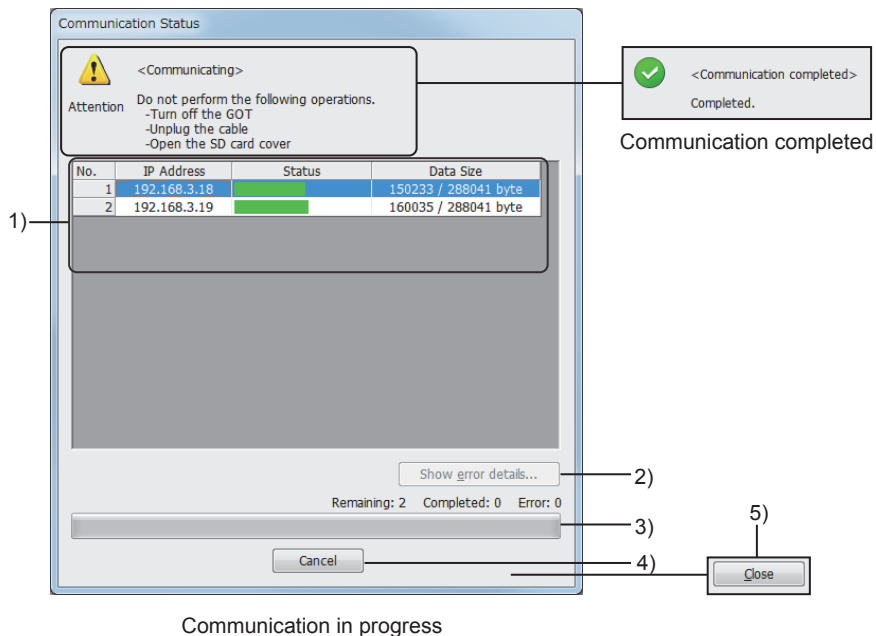

## 4.8.11 [Communication Status] dialog

Not available to GT2105-Q.

The [Communication Status] dialog displays the communication status or result of a simultaneous write or a communication test.

To display this dialog, click the [Test] button or the [GOT Write] button in the [Batch Write to multiple GOTs] dialog.

### 1) Communication status list

Lists the IP addresses and communication status of target GOTs.

Item	Description
[No.]	Displays the number for each GOT.
[IP Address]	Displays the IP address of each GOT.
[Status]	Displays the communication status or result.
[Data Size]	Displays the transferred data size and/or the total data size. The data size is displayed according to [Status] shown below. <ul style="list-style-type: none"> <li>• Writing in progress: Transferred data size and total data size</li> <li>• [Completed]: Total data size</li> <li>• [Waiting]: -</li> <li>• [Error]: -</li> </ul> For communication tests, the data size is not displayed.

### 2) [Show error details] button

Displays the details of an error in the GOT selected in the communication status list.

### 3) Progress bar

Shows the overall communication progress.

### 4) [Cancel] button

Cancels communication with the GOTs being in the waiting status.

The communication in progress cannot be canceled.

The data in the GOTs in the completion status cannot be reset to the state before the data write.

### 5) [Close] button

This item is displayed upon completion of communication.

Closes the [Communication Status] dialog, and updates [Start Time], [End Time], and [Status] in the [Batch Write to multiple GOTs] dialog.

## 4.8.12 [Communicate with Memory Card] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [Communicate with Memory Card] dialog, the information to be written to the data storage or the destination to write the data is set.

Select [Communication] → [Write to Memory Card] from the menu to display this dialog.

Configure the settings by switching the tabs according to the target data.

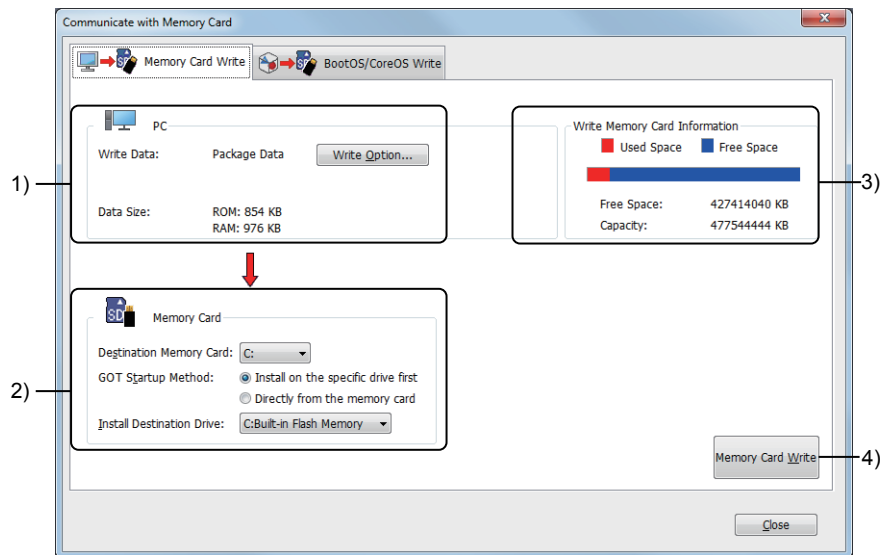

→4.8.12 ■ 1 [Memory Card Write] tab

4.8.12 ■ 2 [BootOS/CoreOS Write] tab

### ■ 1 [Memory Card Write] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [PC Side]

The information related to the package data which is written to the data storage is displayed and set.

Item	Description
[Write Data]	Type of the writing data. ([Package Data])
[Data Size]	Data size of the package data.
[Writing Option] button	Set the details of the package data. →4.8.3 [Write Option] dialog (for writing data to one GOT)

#### 2) [Memory Card Side]

Set the information related to the destination data storage of the package data.

Item	Description
[Destination Memory Card]	Select the drive of the destination data storage. The drive which is displayed in [Hard Disk Drive] or [Device with Removable Storage] of Windows can be used in [My Computer]. (The available drive depends on the personal computer.)
[Startup Operation]	Set the startup operation of the GOT of when the package data in the data storage is written to the GOT. • [Startup after installing data to specified drive] • [Direct startup from memory card]

Item	Description
[Destination Drive]	Set the destination drive of when the package data is written to the GOT. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer

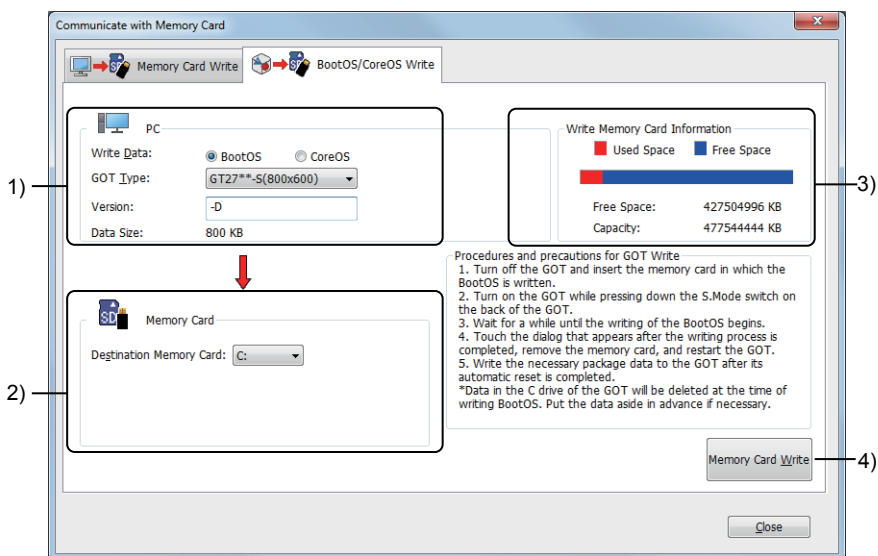

### 3) [Write Memory Card Information]

Information of destination data storage capacity.

### 4) [Memory Card Write] button

Writes the package data to the data storage.

## ■ 2 [BootOS/CoreOS Write] tab

### 1) [PC Side]

Set the information related to the BootOS or CoreOS to be stored in a data storage.

Item	Description
[Write Data]	Select the type of the writing data. <ul style="list-style-type: none"> <li>• [BootOS]</li> <li>• [CoreOS]</li> </ul>
[GOT Type]	Select the GOT type for the BootOS or the CoreOS. When [CoreOS] is selected for [Write Data], GT21 models are not selectable. <ul style="list-style-type: none"> <li>• [GT27**-X(1024x768)]</li> <li>• [GT27**-S(800x600)]</li> <li>• [GT27**-V(640x480)]</li> <li>• [GT2705-V(640x480)]</li> <li>• [GT25**-WX(1280x800)]</li> <li>• [GT25**-W(800x480)]</li> <li>• [GT25**-S(800x600)]</li> <li>• [GT25**-V(640x480)]</li> <li>• [GT2505-V(640x480)]</li> <li>• [GT23**-V(640x480)]</li> <li>• [GT2107-W(800x480)]</li> <li>• [GT2105-Q(320x240)]</li> <li>• [GT2104-R(480x272)]</li> <li>• [GT2104-P(384x128)]</li> <li>• [GT2103-P(320x128)]</li> </ul> For the correspondence between the GOT types and GOT models, refer to the following. →1.1.2 Supported models
[Version]	Version of the BootOS or the CoreOS

Item	Description
[Data Size]	Data size of the Boot OS or the CoreOS

## 2) [Memory Card Side]

Set the information related to the data storage in which the BootOS or CoreOS is stored.

Item	Description
[Destination Memory Card]	Select the drive of the destination data storage. The drive which is displayed in [Hard Disk Drive] or [Device with Removable Storage] of Windows can be used in [My Computer]. (The available drive depends on the personal computer.)

## 3) [Write Memory Card Information]

Information of destination data storage capacity.

## 4) [Memory Card Write] button

Writes the BootOS or the CoreOS to the data storage.

## 4.9 Troubleshooting

When an error occurs during the data transfer, check the following items.

If an error occurs after the following actions are taken or an error which is not described in the following list occurs, consult a service representative.

Error code	Error message	Description	Corrective action
80100005	An error occurred. The file in the p.c. cannot be written.	Failed to write to the file in the personal computer.	Check that the drive to which the file is written can be written or has enough available space in the disk capacity.
80110003	An error occurred. Please check Port No..	The set port No. is out of the range.	Check the port No.
80110004	An error occurred. Time out error	Communication time error	Check the communication cable and the power of the device.
80110006	An error occurred. The GOT is being accessed by another application.	The GOT is being accessed by another application.	Wait until another application ends.
80110007	An error occurred. Quality of communication signal error. Please check communication settings.	Error by the quality of the communication line	Decrease the baud rate and perform the communication.
80110008	An error occurred. Please check Baud rate.	The controller does not support the set baud rate.	Check the baud rate which the controller supports.
801fa303	An error occurred. GOT restricts the communication with Ethernet. Unable to communicate with GOT via Ethernet.	Communication via an Ethernet network is not allowed.	Disable the Ethernet Access Control (GS454) and the Processing Security Control via Wireless LAN (GS1840).
80112401	An error occurred. Unable to communicate with GOT via Ethernet. The possible causes are shown below. (1) Basic system application is not written in the GOT (2) The GOT is not turned on (3) Communication Settings are not properly set (4) GOT IP address is not properly set (5) Incorrect wiring	The GOT does not exist on the network.	Check the followings. <ul style="list-style-type: none"> <li>• The basic system application is written to the GOT.</li> <li>• The GOT is powered on.</li> <li>• The communication settings are set correctly.</li> <li>• [GOT IP Address] is set correctly in the [Communication Configuration] dialog.</li> <li>• The wiring is correct.</li> </ul>
80112402	An error occurred. Unable to communicate with GOT via Ethernet. The possible causes are shown below. (1) The GOT is communicating with another computer (2) GOT IP address is not properly set (3) GOT Port No. is not properly set	Socket line open error (Failed to generate a socket.)	Check the followings. <ul style="list-style-type: none"> <li>• The GOT is not communicating with another computer.</li> <li>• The communication target is not the network device excluding the GOT.</li> <li>• [Peripheral S/W Communication Port No.] in the [Communication Configuration] dialog matches with the port No. set to the GOT.</li> </ul>
80112405	An error occurred. Please check if both GOT and PC are properly connected together via Ethernet cabling.	Network error	Check the GOT is connected to the network correctly.
80112406	An error occurred. Unable to communicate with GOT via Ethernet. The possible causes are shown below. (1) The GOT is communicating via USB/RS232 (2) The GOT is not turned on	The connecting socket is disconnected forcibly.	Check the followings. <ul style="list-style-type: none"> <li>• The GOT is not communicating using the USB or RS232.</li> <li>• The GOT is powered on.</li> </ul>
801fa000	An error occurred. Routing parameter is insufficient in the GOT of the relay station. Please set routing parameter for the GOT.	The routing parameter set for the relay station (GOT) is incorrect.	Check the routing parameter setting of the relay station.

Error code	Error message	Description	Corrective action
801fa080	An error occurred. Information is insufficient in the GOT of the relay station Ethernet setting. Please set the Ethernet setting of the GOT.	The Ethernet setting configured for the relay station (GOT) is incorrect.	Check the routing parameter and the IP address.
801fa200	An error occurred. Communication driver is not booted in the GOT of the relay station. Please check the GOT setting.	One of the following is the cause. • No communication driver is installed on the GOT. • The package data is corrupt. • The communication driver does not support the relay function.	Install the package data on the GOT again.
801fa304	An error occurred. The basic system application to be written is not valid for the H/W version of the GOT. Please prepare the new drawing software.	The hardware versions of the BootOS and the GOT do not match.	Install the BootOS from the appropriate version of GT Designer3.
801fa305	An error occurred. SD card cannot be accessed. The possible causes are shown below. • SD card cover of the GOT is open. • SD card access switch of the GOT is turned off.	The possible causes are as follows. • The SD card cover is open. • The SD card access switch is turned off.	Close the SD card cover of the GOT. Turn on the SD card access switch of the GOT.
801fa306	An error occurred. Project data, system application, and resource data cannot be written/deleted since the write-protect switch is activated. Please deactivate the write-protect switch.	The write protection switch of the data storage is on.	Cancel the write protection switch of the data storage.
801fa309	An error occurred. The package data/resource data cannot be written due to the shortage of free space on the drive.	The available space of the drive is not sufficient.	Acquire the free space by deleting unnecessary files or others. Or, reduce the size of the package data or resource data to be written.
801fa30c	An error occurred. The following drive is not mounted. X: XXXXXXXXX Check the drive.	The data storage is not connected to the specified drive.	Check the data storage is connected correctly to the specified drive.
801fa311	An error occurred. The specified file cannot be found. Update the information. (Click on the "Get Drive Information" button.)	The specified file does not exist.	Check if the specified file name is correct.
801fa315	An error occurred. The specified drive cannot be formatted.	The drive is used for the GOT direct startup and therefore cannot be formatted.	Select a drive that is not used for the GOT direct startup.
801fa317	An error occurred. The cable is disconnected/unconnected or the GOT is in communication with another application. The possible causes are shown below. • GOT write is in process • GOT read is in process • GOT verification is in process • GOT information acquisition is in process • GOT diagnostics is in process	The possible causes are as follows. • The communication cable is broken or disconnected. • The GOT is in communication with another application.	• Check that the communication cable is connected correctly. • Check that the GOT is not in communication with another application.
801fa31f	An error occurred. The password is wrong.	The input password is incorrect.	Input the correct password.
801fa326	An error occurred. The package data cannot be written due to the shortage of free space on the buffering area.	The free space in the buffering area is insufficient.	Reduce the size of the package data by decreasing the number of incorporated functions and others.
801fa327	An error occurred. The package data cannot be written due to the shortage of free space on the project data area.	The free space in the project data area is insufficient.	Reduce the size of the package data by decreasing the number of incorporated functions and others.
801fa328	An error occurred. The security key of the GOT is deleted. Update the information. (Click on the "Get GOT Information" button.)	The GOT is requested to delete a security key that has already been deleted.	Click the [Get GOT Information] button on the [GOT] tab in the [Security Key Setting] dialog to update the GOT information.

Error code	Error message	Description	Corrective action
801fa32a	An error occurred. This function cannot be executed since the GOT does not support security key function. The possible causes are shown below. • Version of the BootOS in the GOT does not support security key function.	The following operations are performed to the GOT whose BootOS does not support the security key function. • Writing a security key to the GOT • Deleting a security key from the GOT • Acquiring the GOT information	Install the latest version of GT Designer3 on the personal computer, and then install the latest BootOS on the GOT.
801fa32b	An error occurred. The security key is set for the GOT. Please delete the security key and then write again.	Writing of the security key is performed to the GOT that already has a security key.	Delete the current security key from the GOT, and then write a new one to the GOT.
801fa32f	An Error occurred This function cannot be executed since the GOT does not support data write of the selected resource data. The possible causes are shown below. • The resource data that the destination GOT does not support is selected. • Version of the basic system application in the GOT does not support data write of the selected resource data.	The write destination GOT does not support the file format of the selected resource data. Or, the target GOT has an older version of the standard system application, and therefore the resource data file cannot be written.	Delete the unsupported resource data file from the write target list. Or, install the latest version of GT Designer3, and then write the package data to the GOT.
801fa330	An Error occurred Failed to access the file. Perform the following operations. • Reduce the number of files in the destination. • Check if the selected file in the GOT exists. • Check if the selected file in the GOT can be overwritten.	The number of files and folders has exceeded the storage limit for the root directory of the FAT16 formatted data storage on the write destination drive.	Reduce the number of the files and folders in the data storage on the write destination drive.
		The selected file is nonexistent or write-protected in the GOT.	Check the following. • The selected file exists. • The selected file is not write-protected.
801fa332	An Error occurred Communication with the GOT is disconnected during monitoring. Check the state of the GOT and retry.	Communication with the GOT has been lost due to a setting change in the utility or other causes.	Wait for some time, and then execute the GOT diagnostics again.
801fc202	An error occurred. Please confirm whether a remote password is set in the relay station.	When the GOT accesses another station, the remote password authentication fails.	Do not set a remote password in the relay station and other stations, or exclude the GOT from the remote password authentication.
801fc205	It is not possible to establish communication when a remote password is set in the relay station.		
80110009	An error occurred. Communication error The possible causes are shown below. • The communication port settings are incorrect. • The cable is disconnected or broken. • The GOT is turned off. • The communication setting of each controller or routing parameter setting is incorrect. • Dialog window is displayed in the GOT. • Remote password is set for unsupported PLC/unit. • It is not connected with GOT2000. • The time set for "Timeout (Sec)" is short.	Packet send error	Check the line is connected.
8011000a		Communication time error	Check the GOT operates normally and perform the communication again.
80112208		USB line error (Cable is disconnected halfway.)	Check the USB cable connected to the GOT.
80112403		Socket line close error	Perform the communication again.
80112501		Easysocket generate error	Check the followings. • Easysocket is installed. • The GOT is in communication process of another connection type. • The GOT is connected correctly.
801fa302		The GOT is processing data and no interrupt is available.	After the GOT completes the current process, perform the operation again.
801fa307		The specified file is read-only.	Check the destination data storage.
801fa30f		The specified path does not exist.	Check the specified path is correct.
801fa310		The specified path is incorrect.	Check the input path. • The reserved word is not used. • A dot is not used at the top. • A dot is not used at the end. • The path and the file name are not too long.
801fa32c		Writing data from GT Designer3 whose version is earlier than version 1.122C is restricted in the GOT.	Install the latest version of GT Designer3, and then perform the operation again.
801fa331	The GOT diagnostics cannot be executed due to IP address duplication, security key authentication failure, or other causes.	Check that the relevant settings are configured properly, and then execute the GOT diagnostics again.	

Error code	Error message	Description	Corrective action
a	An error occurred. The software installation file is damaged or incomplete. Please reinstall.	Failed to generate the object of EZSocket.	Reinstall GT Designer3.
c9	Memory Card error Failed to create the folder. Check if the destination memory card exists.	Folder creating error	Check the destination data storage.
ca	Memory Card error Failed to delete the folder.	Folder deleting error	Check either of the following operations. • The specified folder exists. • The specified folder is not read-only.
cc	Memory Card error Failed to copy the file. The capacity of the destination memory card is full. Reduce the capacity. *The specified drive may be write protected.	File copy error	Check the followings. • Capacity of the data storage • Access privilege of the destination drive When the user account control is valid, set a destination drive other than drive C.
dc	Memory Card error Failed to delete the file.	File deleting error	Check either of the following operations. • The specified file exists. • The specified file is not read-only.
132	An error occurred. The BootOS cannot be written if its version is older than the one of the BootOS written in the GOT. Version of the BootOS in the GOT: BB Version of the BootOS to be written: AA	A later version of the BootOS is already installed on the GOT.	Install the BootOS version that is newer than the one installed to the GOT to the GOT.
133	An error occurred. The GOT type is different or unsupported.	The GOT type acquired from the GOT and the one of the package data do not match. Or, the type of the GOT to communicate with is not supported.	Check the GOT type of the project and the destination GOT.
134	An error occurred. Package data is not written. Write the package data.	The BootOS was started when the following processing is performed. • Installing the BootOS • Writing the package data • Writing or acquiring the GOT identification information • Performing the processing other than writing or acquiring of the security	Write the package data again.
13a	An error occurred. Functions to be written and already written functions conflict with each other. Selected function: %s Written function: %s *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	Since the function which is written and the one which is already written are competing, the system application cannot be written.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
13d (GT27, GT25 and GT23)	An error occurred. There are more than 4 communication drivers that are already written in the GOT and those to be written. (Up to 4 communication drivers can be written in GOT.) Delete the already written communication drivers and write the items again. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	Four communication drivers have already been installed on the GOT. Therefore, the communication driver cannot be installed.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]

Error code	Error message	Description	Corrective action
13d (GT21 only)	An error occurred. There are more than 2 communication drivers that are already written in the GOT and those to be written. (Up to 2 communication drivers can be written in GOT.) Delete the already written communication drivers and write the items again. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	Two communication drivers have already been installed on the GOT. Therefore, the communication driver cannot be installed.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
190	An error occurred. The package data in the memory card is directly started. The following operations cannot be performed. • Deleting directly-started package data • Formatting the drive of package data in execution • Writing another package data to the drive of package data in execution • Writing package data to the destination other than the drive of package data in execution *Take out the memory card from the GOT to perform these operations.	When the package data is started from the data storage directly, the following operations cannot be performed. • Deleting the package data during the direct startup • Formatting the startup drive • Writing another package data to the startup drive • Writing package data to a drive other than the startup drive	Do not perform the following operations. • Deleting the package data during the direct startup • Formatting the startup drive • Writing another package data to the startup drive • Writing package data to a drive other than the startup drive
191	An error occurred. Failed to create the file.	Failed to create a file when the resource data is read.	Check the destination folder is not read only.
192	An error occurred. Failed to create the folder.	Failed to create a folder when the resource data is read.	Check the destination folder is not read only.
193	An error occurred. The processing is not properly completed since the data may be broken.	The data is broken.	The processing may recover if the processing is redone after GT Designer3 is installed again. However, the processing cannot recover when the data in the saving file is broken.
194	An error occurred. The processing is not properly completed since the file may be broken.		
195	An error occurred. The package data to be written is insufficient. Change the write mode to "Synchronize" and retry.	The basic system application is not included in the package data.	Add the basic system application and the project data in the package data.
196	An error occurred. The system major version of the package data in the GOT is different from the one of the package data to be written. The project data and special data will be deleted since they do not work properly if the major versions are different. Package data without project data and basic system application cannot be written.	This error occurs when the package data is written without selecting the project data in the [Write Option] dialog, the same package data exists in the GOT, and the system application of the different major version is written.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
197	An error occurred. Multiple package data are written in the drive. In the current software, data cannot be written to the drive where multiple package data exist. Please update the software version.	Multiple package data exist in the destination drive of the package data.	Write the package data from GT Designer3 of the latest version or write the package data to other drives.
198	An error occurred. There is no package data in the specified drive.	The package data does not exist in the specified drive.	Specify the drive in which the package data is stored.
199	An error occurred. The package data cannot be written with the write mode "Select" since project security is set for the project. Change the write mode to "Synchronize" and retry.	The package data with the project security is written to the GOT. Therefore, the data cannot be written by setting [Write Mode] to [Selection] in the [Write Option] dialog.	Write the data by setting [Write Mode] to [Synchronize] in the [Write Option] dialog.

Error code	Error message	Description	Corrective action
19a	An error occurred. Unsupported GOT security is set. Please update the software version.	The GOT does not support the security setting to be written.	Install the latest version of GT Designer3, and then write the package data to the GOT.
19b	An error occurred. Soft security key is set for the project in the GOT. This function cannot be executed since the current GT Designer3 does not support the soft security key function. Update the application and retry.	The project in the GOT is protected with a security key. Therefore, the following operations are not available. • Verify GOT • Read from GOT	Install the latest version of GT Designer3, and then perform the operation again.
19d	An error occurred. It is necessary to update the BootOS written in the GOT to make the current package data work in the GOT. Update the BootOS and write the package data again. *Please check "Procedures and precautions for GOT Write" before updating the BootOS.	The package data containing the following items cannot be written to the GOT because the BootOS on the GOT does not support the items. • [Wireless LAN] • [MES Interface] • [Printer(ESC/P-R)] • [Network Drive]	Install the latest version of GT Designer3 on the personal computer, install the latest BootOS on the GOT, and then rewrite the package data to the GOT.
19e	An error occurred. The write processing cannot be executed since the setting to restrict write from GT Designer3 of the older versions is in effect. Check the version of GT Designer3 in which the editing is executed.	The setting, which restricts writing data from earlier versions of GT Designer3, is enabled on the GOT. The GT Designer3 version is old.	Install the latest version of GT Designer3, and then perform the operation again.
1a0	An error occurred. The package data cannot be written with the write mode "Select" since security key is set for the project. Change the write mode to "Synchronize" and retry.	The package data to be written to the GOT contains a project protected with a security key. Therefore, the data cannot be written when [Write Mode] is set to [Select] in the [Write Option] dialog.	Select [Synchronize] for [Write Mode] in the [Write Option] dialog.
1a1	An error occurred. This function cannot be executed since the GOT does not support security key function. The possible causes are shown below. • Version of the basic system application in the GOT does not support security key function. • Version of the BootOS in the GOT does not support security key function.	The following operations are performed to the GOT that does not support the security key function. • Writing a security key to the GOT • Deleting a security key from the GOT • Acquiring the GOT information	Install the latest version of GT Designer3 on the personal computer, install the latest BootOS on the GOT, and then rewrite the package data to the GOT.
1a2	An error occurred. This function cannot be executed since the GOT does not support GOT diagnostics function. The possible cause is shown below. • Version of the basic system application in the GOT does not support GOT diagnostics function.	The GOT diagnostics function that monitors occurring errors is not supported.	Install the latest version of GT Designer3, and then write the package data to the GOT.
1a5	An error occurred. Functions to be written and already written functions conflict with each other. Either GB2312 or GBK of Chinese (simplified) outline font can be written. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	The system application cannot be written because the application conflicts with the existing one in the GOT.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
1a6	An error occurred. FA transparent function is used in other MELSOFT applications for the GOT. Terminate the function and retry.	Another MELSOFT application is using the FA transparent function, and therefore the following processes cannot be executed. • Writing package data • Installing the BootOS • Deleting package data • Formatting a drive • Starting the GOT internal device monitor of the GOT diagnostics function	Wait 30 seconds after the application ends the FA transparent function, and then execute the process again.

Error code	Error message	Description	Corrective action
1a7	An error occurred. Functions to be written and already written functions conflict with each other. Either high-quality version (with antialiasing) or normal version (without antialiasing) of outline font can be written. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	The system application cannot be written because the application conflicts with the existing one in the GOT.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
1a8	An Error occurred This function cannot be executed since the GOT does not support resource file write. The possible cause is shown below.  • Version of the basic system application in the GOT does not support resource file write.	The target GOT has an older version of the standard system application, and therefore the resource data file cannot be written.	Install the latest version of GT Designer3, and then write the package data to the GOT.
1a9	An Error occurred The resource file that does not exist is specified. Check the file to be written.	The selected resource data file is nonexistent.	Check that the file exists.
1b0	An Error occurred The resource file that cannot be read is specified. Check the file to be written.	Another software application is using the selected resource data file, and therefore the file cannot be opened.	Check that the file is not being used by the other software applications.
1b1	An Error occurred Memory capacity in the PC is insufficient. Check the size of the resource file to be written.	The personal computer does not have enough memory, and therefore the selected resource data file cannot be opened.	Perform the following operations on the personal computer to free up the hard disk space and memory, and then write the resource data file. • Exit unnecessary applications. • Delete unnecessary files.
1b2	An error occurred. There are more than 2 kanji regions of the outline font that is already written in the GOT and the outline font to be written. (Up to 2 kanji regions can be written in GOT.)Delete the kanji regions of the already written outline font and write the font again. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	The GOT has the outline font and two KANJI regions of data. Therefore, different KANJI region data cannot be written additionally.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
1b3	An error occurred. The style of the outline font that is already written in the GOT is different from the one of the outline font to be written. (Only 1 style can be written in GOT.) Delete the style of the already written outline font and write the font again. *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	The typeface data of the outline font to be written differs from the one in the GOT. Therefore, the typeface data cannot be written.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]
1b4	An Error occurred The following function to be written conflicts with the function that is already written in the GOT. • Key Window Design Information *Select "Synchronize" for Write Mode in the dialog of Write Option or delete the package data from the drive information in the [GOT Read] tab, and then write the package data.	Since the function which is written and the one which is already written are competing, the system application cannot be written.	Write the package data after performing either of the following operations. • Selecting [Synchronize] in [Write Mode] of [Write Option] • Deleting the package data in [Drive Information] of [GOT Read]

Error code	Error message	Description	Corrective action
1b5	<p>An error occurred.</p> <p>The package data cannot be written since the communication via Ethernet will be disabled if it is written in the following cases.</p> <p>Write the package data from [Communication] -&gt; [Write to GOT].</p> <ul style="list-style-type: none"> <li>• Package data does not exist in the destination</li> <li>• The package folder is different from the one of the package data in the destination drive</li> <li>• The project ID is different from the one of the package data in the destination drive</li> <li>• The major version of the package data in the destination drive is different from the one of the system application</li> <li>• Security key is set for the write target package data</li> <li>• Security key is set for the package data in the destination</li> <li>• Free space of the destination drive is insufficient</li> </ul>	<p>As the individual identification information and the communication interface setting data are not written to multiple GOTs in one go, the following result will occur under the conditions shown left.</p> <p>Ethernet communications become unavailable and the package data cannot be written accordingly.</p>	<p>Write the package data to each GOT individually by selecting [Communication] → [Write to GOT] or [Write to Memory Card] from the menu.</p>
1b6	<p>An error occurred.</p> <p>The package data cannot be written since the data in the GOT contains the following settings.</p> <ul style="list-style-type: none"> <li>• System Label Ver.2</li> <li>• Global Label</li> <li>• Label (GT Designer3)</li> <li>• OMRON NJ/NX Tag</li> <li>• AB Native Tag</li> </ul> <p>*Change the setting of "Screen Switching/Windows, System Information, Station No. Switching" to "Write" in the dialog of Write Option, and then write the package data.</p>	<p>When [Not write] is selected for [Screen Switching/Window, System Information, Station No. Switching] in the [Write Option] dialog, you cannot write package data to multiple GOTs in one go if any of the GOTs has the setting of labels or tags.</p>	<p>Perform one of the following operations.</p> <ul style="list-style-type: none"> <li>• Select [Write] for [Screen Switching/Window, System Information, Station No. Switching] in the [Write Option] dialog, and then rewrite the package data.</li> <li>• Select [Communication] → [Write to GOT] or [Write to Memory Card] from the menu to write the package data to the target GOTs separately.</li> </ul>

# 5. COMMON SETTING

---

5.1	Changing the GOT Type of the Project ([GOT Type Setting]) . . . . .	5 - 2
5.2	Setting the GOT Basic Operations ([GOT Environmental Setting]) .	5 - 20
5.3	Setting the Utility Function ([GOT Setup]) . . . . .	5 - 170
5.4	Setting the GOT Ethernet Interface ([GOT Ethernet Setting]) . . . .	5 - 221
5.5	Configuring the Communication Method between the GOT and the Controller ([Controller Setting]) . . . . .	5 - 231
5.6	Setting the Interaction Function for Equipment on Ethernet ([GOT Network Interaction]) . . . . .	5 - 252
5.7	Checking the Interface Settings of the GOT ([I/F Communication Setting]) . . . . .	5 - 261
5.8	Comment Setting ([Comment]) . . . . .	5 - 265
5.9	Registering Parts ([Parts]) . . . . .	5 - 294

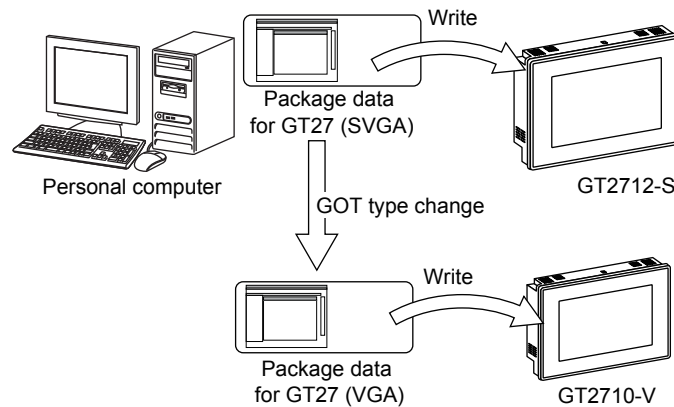

## 5.1 Changing the GOT Type of the Project ([GOT Type Setting])

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

- ⇒5.1.1 Specifications of the GOT type change
- 5.1.2 Graphics mode ([Graphics Setting])
- 5.1.3 Precautions
- 5.1.4 [Type Setting] dialog
- 5.1.5 [Output] window

The available functions depend on the GOT model.  
Thus, set the GOT type of the project according to the GOT model.

## 5.1.1 Specifications of the GOT type change

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Changing the GOT type and language of the standard font deletes or changes the setting or changes the setting of shapes or shape frames depending on the function.

The following shows settings to be changed when the setting of the GOT type is changed.

### ■ 1 Setting to be held when the GOT type is changed

The setting of the changed GOT that is available in the newly set GOT is held after the GOT type change.

#### (1) Screen size

When the resolution is the same after the GOT type change, the screen size is not changed.

The size of the figures and objects placed on the screen is held after the change as well.

#### (2) Channel No. setting

When the GOT type after the change has the same channel No. and interface as those of the GOT type before the change, the channel No. is assigned to the same interface before the change.

#### (3) Library

The user-created library is not changed.

The parts and templates in the library can be used in the newly set GOT.

However, the library data containing figures or objects incompatible with the new GOT is not displayed on the library image list.

### ■ 2 Setting to be deleted when the GOT type is changed

Functions, settings, or screens that the newly set GOT does not have are deleted.

### ■ 3 Setting to be changed when the GOT type is changed

The settings that the changed GOT does not have are set to the default values according to the related settings of the newly set GOT.

Setting may be changed depending on the changed GOT type and the newly set GOT type.

#### (1) Screen size

When the resolutions of the GOT are not the same after the GOT type change, the size of the base screen is changed according to the newly set GOT.

You can select whether to change the size of the window screen.

#### (2) Channel No. setting

When the newly set GOT does not have the channel No. that the changed GOT has, the default value is set in the channel No.

When a channel No. with the default value is already used in another interface, the channel No. is set to 0.

When the newly set GOT does not have the communication driver set for the channels of the changed GOT, the default communication driver is set.

#### (3) Device settings

The incompatible device range with the newly set GOT is shown as [??] in GT Designer3.

In this case, set the device again.

The devices with device types (BCD, real number) that the newly set GOT does not support are deleted.

#### (4) Project security

When the project security is set, the following user cannot change the GOT type.

- Users who are restricted to edit the project by the project security
- Users who are restricted to display or edit a screen

⇒ 2.13 Protecting a Project by Registering Users

#### (5) Channel No. setting of the special function switch

When the GOT type is changed, if the channel No. set for the special function switch does not exist, the channel No. is automatically changed.

When either of the following functions is set for the special function switch, check the channel No. of the special function switch.

- Sequence program monitor (ladder)
- Sequence program monitor (SFC)
- Motion SFC monitor

## (6) Image data (BMP)

### (a) Changing 16-tone monochrome to 256 or 65536 colors

When the GOT type is changed, the number of bits per pixel of 16-tone monochrome image data cannot be held. The image data is converted to the image data with either 8 bits or 16 bits. Thus, the data size of the image data is increased.

### (b) Restriction due to the arrangement method

When using image data of BMP files (256 colors), use the same method to display all the image data. The color of the image data of BMP files (256 colors) may be changed depending on the arrangement method at the GOT type change.

- Importing the BMP file by selecting [Figure] → [Import Image Data] from the menu  
The image data is displayed in 8-bit color.
- Copying the BMP file to the clipboard and pasting it on the screen  
The image data is displayed in 16-bit color.

## (7) Startup logo setting

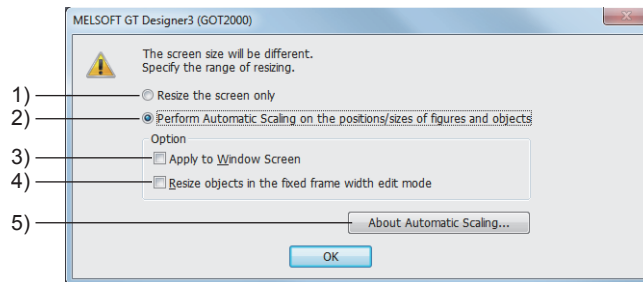

When the screen size of the newly set GOT does not correspond to that of the changed GOT, the size of the startup logo may be changed.

When the screen size has been changed, set the startup logo again.

## ■ 4 Scaling figures and objects

When the screen size of the GOT has been changed, the size of the figures and objects placed on the screen is automatically changed according to the screen size.

If the screen size of the newly set GOT does not correspond to that of the changed GOT, the following dialog appears. Check the description in the screen, and specify the size change range.

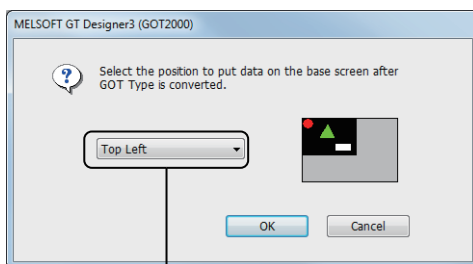

### 1) [Resize the screen only]

Rescales the screen only without repositioning and rescaling the figures and objects.

When the screen size has been reduced after the GOT type change, some figures or objects may extend to the temporary area.

In this case, place the figures or objects in the screen display area.

When the screen size is to be enlarged, the following dialog appears.

Screen position

#### • Screen position

Set a position where to place the base screen.

The setting areas are [Top Left], [Top Right], [Center], [Bottom Left], [Bottom Right], [Top], [Bottom], [Left], and [Right].

### 2) [Perform Automatic Scaling on the positions/sizes of figures and objects]

Automatically repositions and rescales the figures and objects according to the new screen size.

The setting of [Resize objects in the fixed frame width edit mode] determines whether to fix the object shape frame widths after the GOT type change.

The rescaling specifications vary depending on the figure or object.

⇒(1) Rescaling specifications of figures and objects

### 3) [Apply to Window Screen]

Select this item to automatically scale the figures or objects on the window screen as well.

#### 4) [Resize objects in the fixed frame width edit mode]

Resizes the applicable objects with their shape frame widths fixed. The objects must satisfy the frame width fixing conditions.

For the frame width fixing conditions, refer to the following.

→6.6.13 [Edit Objects with Fixed Frame Width]

When this item is selected, the shape frame widths are fixed after the GOT type change.

When this item is deselected, the shape frame widths are not fixed after the GOT type change.

#### 5) [About Automatic Scaling] button

Displays precautions for the automatic scaling.

### (1) Rescaling specifications of figures and objects

The coordinates and sizes of the figures and objects are changed based on the screen size ratio before and after the GOT type change.

The rescaling specifications vary depending on the figure or object.

○ : Changed, × : Not changed

Function	Rescaling specifications	
	Size	Other than size
Figure	○	For the text and the logo text, the setting of [Size] is changed. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard].
Touch Switch	○	The setting of [Text Size] is changed. When [Adjust Text Size] is selected, the setting of [Minimum Size] is also changed. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard].
Lamp	○	The setting of [Text Size] is changed. When [Adjust Text Size] of the bit lamp or word lamp is selected, the setting of [Minimum Size] is also changed. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard].
Numerical Display/Input	○	The setting of [Number Size] is changed according to the object size. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard]. When [Font] is set to [6x8dot], the object size is not changed.
Text Display/Input	○	The setting of [Text Size] is changed according to the object size. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard]. When [Font] is set to [6x8dot], the object size is not changed.
Date/Time Display	○	The setting of [Number Size] is changed according to the object size. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard]. When [Font] is set to [6x8dot], the object size is not changed.
Comment Display	○	The setting of [Text Size] is changed.
Parts Display	○	-
Parts Movement	○	When [Move Way] is set to any other than [Line], the object size is not changed.
Historical Data List Display	○	The setting of [Text Size] is changed.
Alarm Display	○	The setting of [Text Size] is changed. When [Font] is set to [6x8dot], the following items are not changed. • Object size • Setting of [Space] of the alarm display (user) or the alarm display (system)
Recipe Display (Record List)	○	The setting of [Text Size] and the scroll bar width are changed. When [Font] is set to [6x8dot], the following items are not changed. • Object size • [Space]
Graph	○	The setting of [Number Size] is not changed.

Function	Rescaling specifications	
	Size	Other than size
Graphical Meter	○	The setting of [Text Size] is changed. When [Adjust Text Size] is selected, the setting of [Minimum Size] is also changed. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard]. The setting of [Numerical Size] is not changed.
Meter	○	For the panel meter, the setting of [Text Size] is changed. The setting of [Font] is changed as shown below. • [12dot Standard] is changed to [16dot Standard Gothic] ([16dot Standard] for GT21). • [16dot Standard Gothic] ([16dot Standard] for GT21) is changed to [12dot Standard]. The setting of [Number Size] is not changed.
Slider	○	The setting of [Number Size] is not changed.
Document Display	○	-
Script parts	×	-
Video/RGB display object	○	-
Window Position	×	-
Key Window Object	○	The setting of [Text Size] is changed according to the object size. When [Font] is set to [6x8dot], the object size is not changed.

## ■ 5 Project data for GOT1000 series

When project data for GOT1000 series is opened, the data is converted for GOT2000 series.

For the compatibility between project data for GOT1000 series and project data for GOT2000 series, refer to the following.

⇒ 12.9 Compatibility with Conventional Products

## 5.1.2 Graphics mode ([Graphics Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

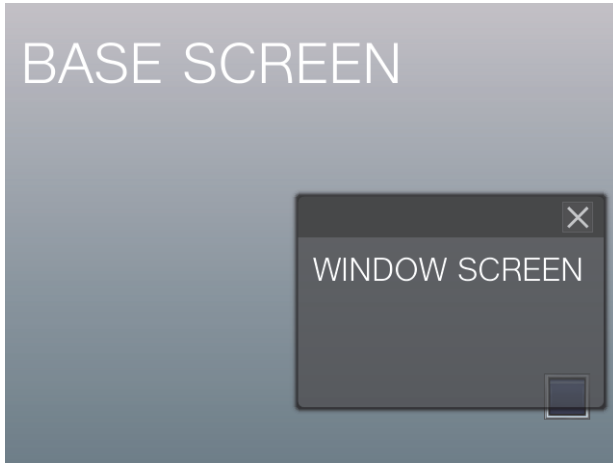

The following shows the graphics modes of the GOT.

- GOT Graphic Ver.2
- GOT Graphic Ver.1

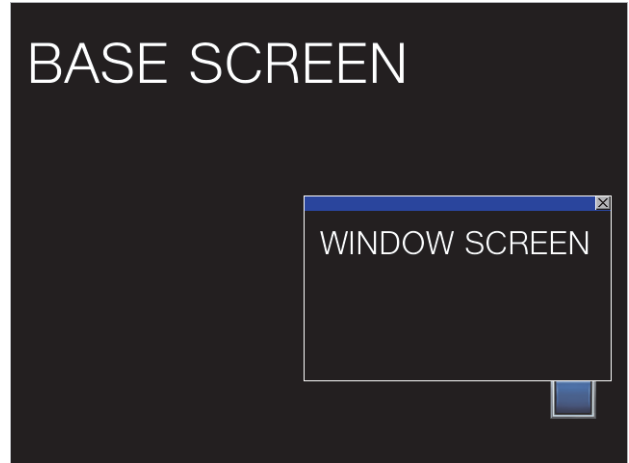

For GT23, only GOT Graphic Ver.1 is available.

GOT Graphic Ver.2 is optimized for the GOT2000 series, and it supports the following graphics.

- Screen background color gradient
- Semitransparent window screen
- Selectable contours of the window screen

GOT Graphic Ver.2

GOT Graphic Ver.1

### 1 Specifications of the graphics modes

The following shows the specifications of GOT Graphic Ver.2 and GOT Graphic Ver.1.  
(Some items may not be available depending on the GOT type.)

#### (1) Screen

Item	Graphics mode		
	GOT Graphic Ver.2	GOT Graphic Ver.1	
Base screen	Screen background color gradient	Available	Not available
	Screen background pattern	The specified pattern is cut off at the edges of the relevant screen.	The relevant screen is outlined in the pattern color.
	Transparent color setting for the front layer	Not available	Available

Item		Graphics mode	
		GOT Graphic Ver.2	GOT Graphic Ver.1
Window screen	Screen background color gradient	Available	Not available
	Screen background pattern	The specified pattern is cut off at the edges of the relevant screen.	The relevant screen is outlined in the pattern color.
	Transparent color setting for the front layer	Not available	Available
	Changing the title bar design of the overlap window	Available	Not available
	Changing the standard key window design	Available	Not available
	Changing the title bar design of the user-created key window	Available	Not available
	Setting the transparency of the window screen	Available	Not available
	Setting the contours of the window screen	[Rectangle] or [Rounded] is selectable. When [Rounded] is selected, [Radius] can be set.	[Rectangle] (fixed)
	Display of a moving window	The window becomes semitransparent.	The color of the title bar changes.
	Cursor on the key window	A semitransparent rectangle cursor appears.	A white rectangle cursor appears.
Mobile screen	Display of a user-created dialog window	All screens are refreshed. The screens other than the dialog window appear dark.	The screens other than the dialog window are not refreshed.
	Behavior when a dialog window is displayed	Available	Not available
	Screen background pattern	The specified pattern is cut off at the edges of the relevant screen.	The relevant screen is outlined in the pattern color.

## (2) Common setting

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Graphics accelerator	Not available	Available

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Antialiasing	<p>Always enabled.</p> <p>The following shows the targets to which antialiasing is applied.</p> <ul style="list-style-type: none"> <li>• Outline font</li> <li>• Basic figure in the library</li> <li>• Line</li> <li>• Freeform line</li> <li>• Rectangle</li> <li>• Polygon</li> <li>• Circle</li> <li>• Arc</li> <li>• Sector</li> <li>• Piping</li> <li>• Lines plotted on a line graph</li> <li>• Points plotted on a trend graph (excluding the plotted straight lines)</li> <li>• Outline and demarcation lines of a statistics pie graph</li> <li>• Points plotted on a scatter graph</li> <li>• Points plotted on a historical trend graph (excluding the plotted straight lines)</li> <li>• Needle (whose shape is not set to [Straight Line]), meter frame, meter panel, core of a panel meter</li> <li>• Figure drawn with a free figure drawing function (other than the d_line, d_textout, and d_commentout functions)</li> </ul> <p>Antialiasing is applied when the above targets are displayed on the GOT.</p> <p>Antialiasing is not applied when the above targets are displayed on GT Designer3.</p>	<p>Enabled or disabled by the user</p> <p>Antialiasing is applied to outline fonts.</p>
Object stacking order adjustment	Always enabled.	Enabled or disabled by the user

### (3) Figure

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Paint	Not available	Available

### (4) Object

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Inverting the colors in the touch switch area ([Shape]: [None])	Not available	Available
Lamp area	Not available	Available
Display mode of the numerical display and the numerical input	[Transparent] (fixed)	[Transparent] or [XOR] is selectable.
Cursor on the numerical input or the text input	A semitransparent rectangle cursor blinks.	A white rectangle cursor blinks.
Display mode of the comment display	[Transparent] (fixed)	[Transparent] or [XOR] is selectable.
Display mode of the parts display (bit, word, or fixed parts)	[Replace] (fixed for all types of parts)	[Replace], [XOR], or [Overwrite] is selectable.
Display mode of the parts movement (bit, word, or fixed parts)	[Movement] (fixed)	[Movement] or [Locus] is selectable.
Scatter graph ([Graph Type]: [Sample], [Store Memory]: Deselected)	Available	Available
Scatter graph ([Graph Type]: [Batch], [Display Mode]: [Locus], [Store Memory]: Deselected)	If the number of the plotted points or lines exceeds 1000, the oldest point or line is deleted and a new one is plotted.	
Level object	Available [Boundary Color] cannot be set.	Available
Display order when an object is superimposed on a level object (Object stacking order adjustment: enabled)	The display order conforms to the object stacking order.	The level object is displayed behind the other object regardless of the object stacking order.

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Video/RGB display object	Available If a semitransparent window is displayed directly in front of the video/RGB display object, the screen background color becomes visible through the object.	Available

### (5) Function running in the background on the GOT

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Color of the text selected on the alarm display (user or system)	[Reverse] (fixed)	[Reverse] or [XOR] is selectable.
Alarm popup display	A semitransparent popup window appears.	An opaque popup window appears.
Free figure drawing function of the object script	The maximum number of the text figures drawn with the d_textout or d_commentout function differs depending on the number of lines in the text figure. Example) • One-line text: 1280 figures • Two-line text: 640 figures	Up to 1280 figures can be drawn.

### (6) Function using peripheral devices

Item	Graphics mode	
	GOT Graphic Ver.2	GOT Graphic Ver.1
Remote personal computer operation (Ethernet)	Not available	Available
Displaying the video images of the multimedia function on a user-created screen	Available If a semitransparent window is displayed directly in front of the video window, the background color of the user-created screen becomes visible through the video window.	Available

## 5.1.3 Precautions

### ■ 1 Settings before the GOT type change

The settings that have been changed through the GOT type change cannot be restored.  
The operation history of [Undo] is deleted at the GOT type change.  
Saving the project before the GOT type change is recommended.

### ■ 2 Exiting GT Simulator3

Check that GT Simulator3 is not started before the GOT type change.  
If the GOT type or the language of the standard font has been changed, the running GT Simulator3 is terminated.

### ■ 3 Operation when the GOT is installed vertically

When you install the GOT vertically, the GOT operates as follows.

Item	Operation at GOT vertical installation
Utility	The contents appear horizontally.
Monitor screen, data screen, or other screens called up from the utility	The screen appears horizontally. However, the following screens appear vertically. • Recipe operation window
User-created screen	The screen created according to the vertical installation is displayed. The key window and dialog window on the user-created screen are also displayed according to the vertical installation.
Startup logo	The startup logo appears according to the vertical installation.
Utility call key	The key is positioned according to the vertical installation. When the key is set to the upper left corner, the key is positioned on the upper left corner according to the vertical installation.
Remote Personal Computer Operation (Ethernet)	The remote personal computer operation function (Ethernet) cannot be used.
Remote Personal Computer Operation (Serial)	The touched position on the GOT is notified by using the upper left corner as the origin (0, 0) of coordinates according to the vertical installation.
VNC Server	The contents appear on the VNC client according to the vertical installation.
SoftGOT-GOT link function	The contents appear on GT SoftGOT2000 according to the vertical installation.
Video Display	The images taken with a video camera do not rotate, and appear horizontally. For the video window, the width and height of the display size and clip area are specified according to the horizontal installation. The video window display position is specified with the coordinates of the window upper left corner. The origin (0, 0) is on the GOT upper left corner according to the vertical installation.
RGB Display	The images of a personal computer are displayed in the resolution according to the vertical installation. For the RGB screen, the width and height of the display size and clip area are specified according to the horizontal installation. The RGB screen display position is specified with the coordinates of the screen upper left corner. The origin (0, 0) is on the GOT upper left corner according to the vertical installation.
Video output function	The screens displayed on the GOT are output regardless of the GOT installation orientation.
Multimedia	The images taken with a video camera do not rotate, and appear horizontally. The multimedia screen of the utility appears horizontally.
Popup window	The popup window appears according to the vertical installation. However, the popup window does not support the scrolling display. When text extends off the screen, you cannot check the portions of text lying offscreen.
Hard Copy	Capturing images is performed according to the vertical installation.
USB mouse	The mouse pointer is displayed according to the vertical installation.
Touch status external notification (X-coordinate)(GS654), Touch status external notification (Y-coordinate)(GS655)	The coordinates are notified by using the upper left corner as the origin (0, 0) according to the vertical installation.

### ■ 4 Renaming the package folder

If you change the setting of [Package Folder Name] in the [Type Setting] dialog, the path to the public folder of the GOT Mobile function is automatically changed accordingly.

With the change of the package folder name, if the path to a file in the public folder contains more than 78 characters, the file becomes inaccessible.

For the details of the public folder in the GOT Mobile function, refer to the following.

⇒ 10.18.2 ■ 7 Public folder

## ■ 5 Precautions for the object stacking order adjustment setting

### GOT Graphic Ver.2

The object stacking order adjustment is always enabled.

### GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in [Option Setting] of the [Type Setting] dialog.

The following shows the functions to which the object stacking order adjustment is not applied.

### (1) Objects for which the set stacking order is invalid

The following objects always appear in the front on a layer under specific conditions.

The object stacking order may not match between GT Designer3 and the GOT accordingly.

### GOT Graphic Ver.2

Object	Condition
Scatter graph (Points on the graph only)	[Graph Type] is set to [Sample] on the [Data] tab, and [Store Memory] is not selected on the [Extended] tab.
	[Graph Type] is set to [Batch], and [Display Mode] is set to [Locus] on the [Data] tab. [Store Memory] is not selected on the [Extended] tab.

### GOT Graphic Ver.1

Object	Condition
Scatter graph (Points on the graph only)	[Graph Type] is set to [Sample] on the [Data] tab, and [Store Memory] is not selected on the [Extended] tab.
	[Graph Type] is set to [Batch], and [Display Mode] is set to [Locus] on the [Data] tab. [Store Memory] is not selected on the [Extended] tab.
Parts display	[Display Mode] is set to [Overwrite].
Parts movement	[Display Mode] is set to [Locus].
Alarm display (user)	The scrolling display setting is made.
Alarm display (system)	The scrolling display setting is made.

### (2) Free figure drawing function of the object script

### GOT Graphic Ver.2

The figure drawn by the free figure drawing function of the object script is designed to appear in the front on a layer. Even if the blink is set for the object using the free figure drawing function, the figure drawn by the function does not blink.

### GOT Graphic Ver.1

The figure drawn by the free figure drawing function of the object script is designed to appear in the front on a layer. Therefore, the object stacking order may not match between GT Designer3 and the GOT under the following conditions.

- The figure drawn by the function overlaps an object for which the set stacking order is invalid.
- The figure drawn by the function overlaps stacked objects on a layer.

Even if the blink is set for the object using the free figure drawing function, the figure drawn by the function does not blink.

### (3) Object display color

### GOT Graphic Ver.1

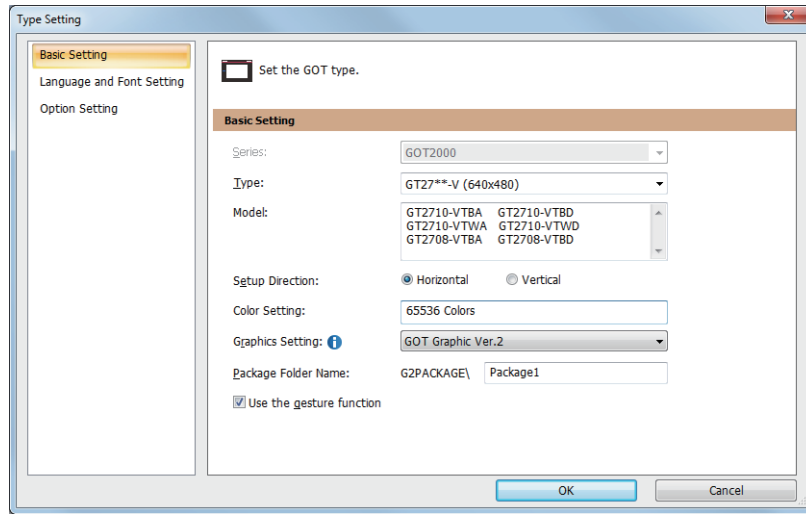

If you set the screen transparent color ([Screen Property]) for an object for which the set stacking order is invalid, the object is invisible because of the transparent processing. (Regardless of the layer on which the object is placed)

When you select [Adjust object display order in GOT to the one in GT Designer3], specify a color different from the screen transparent color for such an object.

## 5.1.4 [Type Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

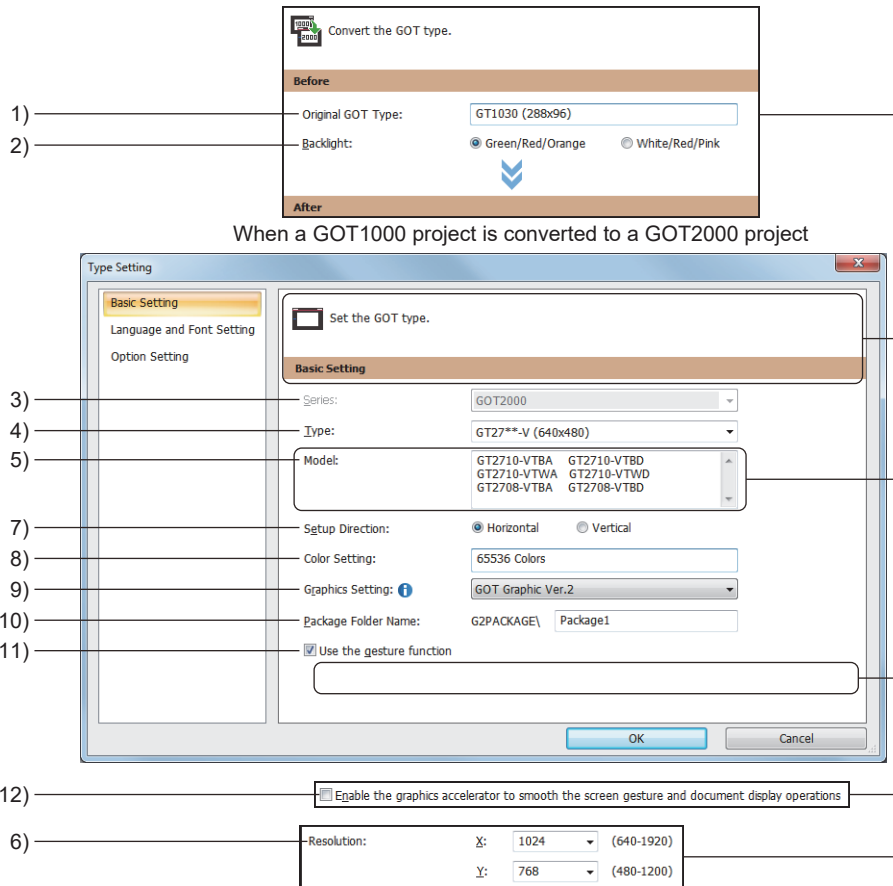

In the [Type Setting] dialog, set the model of the GOT to be used and the standard font. Select [Common] → [GOT Type Setting] from the menu to display this dialog.

- ■ 1 [Basic Setting]
- 2 [Language and Font Setting]
- 3 [Option Setting]

### ■ 1 [Basic Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For GT SoftGOT2000

### 1) [Original GOT Type]

Displays the GOT type before the type is changed.

This item is active only when the project for GOT1000 series is to be converted for GOT2000 series.

### 2) [Backlight]

This item appears only when the GOT type is converted from GT1030 or GT1020 to GOT2000 series.

Select the display color of the backlight for the GOT type before the change.

The following shows the items to be selected.

- [Green/Red/Orange]
- [White/Red/Pink]

### 3) [Series]

Displays the series name of the GOT type selected in [Type].

### 4) [Type]

Set the GOT type.

The following shows the items to be selected.

- [GT27\*\*-X(1024x768)]
- [GT27\*\*-S (800x600)]
- [GT27\*\*-V (640x480)]
- [GT2705-V (640x480)]
- [GT25\*\*-WX (1280x800)]
- [GT25\*\*-W (800x480)]
- [GT25\*\*-S (800x600)]
- [GT25\*\*-V (640x480)]
- [GT2505-V(640x480)]
- [GT23\*\*-V (640x480)]
- [GT2107-W (800x480)]
- [GT2105-Q (320x240)]
- [GT2104-R (480x272)]
- [GT2104-P (384x128)]
- [GT2103-P (320x128)]
- [GT SoftGOT2000]

When this item has been changed, the confirmation dialog for the change appears.

→5.1.1 ■ 4 Scaling figures and objects

### 5) [Model]

Displays the models of the GOT type selected in [Type].

### 6) [Resolution]

Only available to GT SoftGOT2000.

Set the resolution of GT SoftGOT2000.

The following shows the setting range.

- [X]: [640] dots to [1920] dots
- [Y]: [480] dots to [1200] dots

### 7) [Setup Direction]

Not available to GT SoftGOT2000.

Set the installation orientation of the GOT.

- [Horizontal]
- [Vertical]

Some operations of the GOT differ according to the GOT installation orientation.

→5.1.3 ■ 3 Operation when the GOT is installed vertically

### 8) [Color Setting]

Displays the number of display colors of the GOT type selected in [Type].

When [GT2105-Q (320x240)] is selected for [Type], select the number of display colors.

The following shows the items to be selected.

- [65536 Colors]
- [32(Grayscale)]

### 9) [Graphics Setting]

Not available to GT23 because the setting is fixed to [GOT Graphic Ver.1].

Select a graphics mode.

The following shows the items to be selected.

- [GOT Graphic Ver.2]
- [GOT Graphic Ver.1]

For the details of the graphics modes, refer to the following.

→5.1.2 Graphics mode ([Graphics Setting])

#### 10) [Package Folder Name]

Set the name of the folder that stores the package data.

Use up to 32 alphanumeric characters and symbols for the folder name.

For the character strings available and unavailable for folder names, refer to the following.

→12.4 Restrictions for Folder Names and File Names used in GOT

This item is required for project creation. Always set this item.

#### 11) [Use the gesture function]

Only available to GT27.

Enables the GOT operation by gesture.

→11.12 Zooming and Scrolling the Monitor Screen of the GOT (Screen Gesture Function)

11.13 Operating Objects by the Gesture (Object Gesture Function)

#### 12) [Enable the graphics accelerator to smooth the screen gesture and document display operations]

Only available to GT27.

##### **GOT Graphic Ver.1**

Enables the graphics accelerator for the screen gesture function and the document display.

When the graphics accelerator is enabled, the operations of the screen gesture function and the document display become smooth.

Note that the GOT startup time becomes long.

→11.12 Zooming and Scrolling the Monitor Screen of the GOT (Screen Gesture Function)

8.26.3 How to use the document display (for Document Converter output files)

To use the graphics accelerator, install the CoreOS version E or later to the GOT.

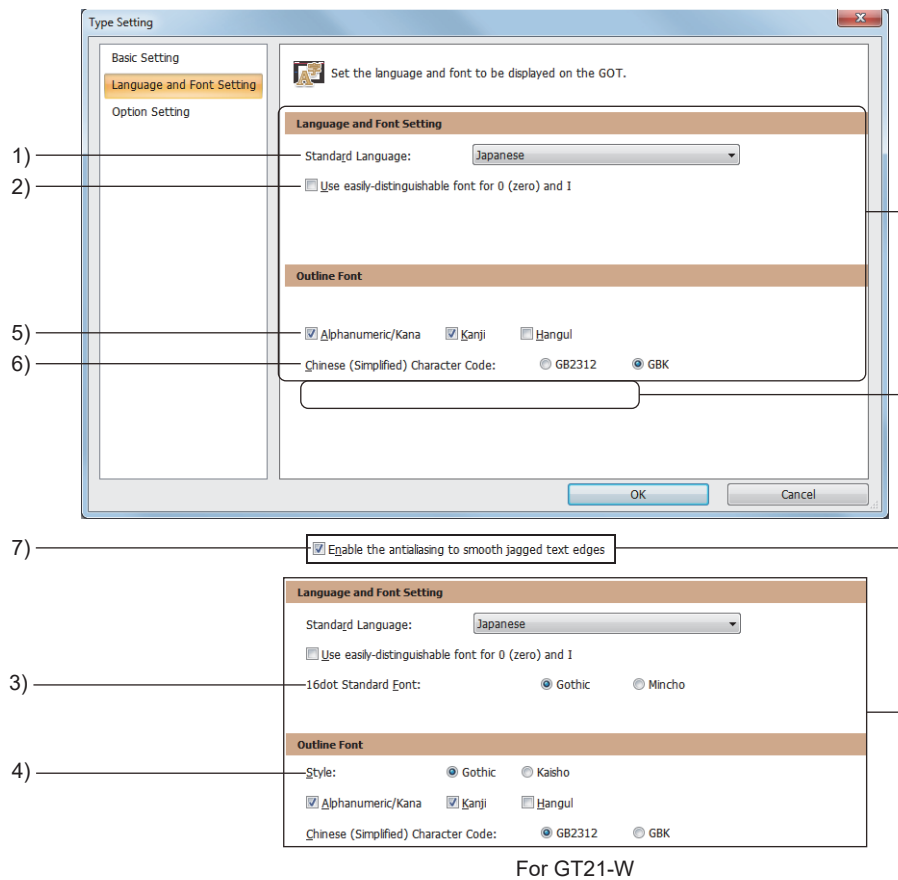

→4.5.3 Installing the BootOS or the CoreOS to the GOT

For how to check the CoreOS version, refer to the following.

→GOT2000 Series User's Manual (Utility)

## ■ 2 [Language and Font Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Standard Language]

Select the language used in the whole project.

The following shows the items to be selected for GT27, GT25, GT23, and GT SoftGOT2000.

- [Japanese]
- [English]
- [Chinese (Simplified)]
- [Chinese (Traditional)]
- [Korean (Hangul)]

The following shows the items to be selected for GT21.

- [Japanese]
- [English]
- [Chinese (Simplified)]

### 2) [Use easily-distinguishable font for 0 (zero) and 1]

Use a font having the slashed zero and the crossbar 1.

→ 1.2.5 ■ 1 Detailed font specifications

### 3) [16dot Standard Font]

Only available to GT23 and GT21.

Select a font of [16dot Standard].

The following shows the items to be selected.

- [Gothic]
- [Mincho]

### 4) [Style]

Only available to GT2107-W.

Select a typeface for the outline font.

The following shows the items to be selected.

- [Gothic]

- [Kaisho]

### 5) Outline font type

Not available to GT2105-Q, GT2104-R, GT2104-P, and GT2103-P.

Select the type of an outline font to be used.

The following shows the items to be selected.

- [Alphanumeric/Kana]
- [Kanji]
- [Hangul]

### 6) [Chinese (Simplified) Character Code]

Not available to GT2105-Q, GT2104-R, GT2104-P, and GT2103-P.

Select a character code used for Chinese (simplified) in the outline font.

The following shows the items to be selected.

- [GB2312]
- [GBK] (fixed for GT SoftGOT2000)

### 7) [Enable the antialiasing to smooth jagged text edges]

Not available to GT23, GT2105-Q, GT2104-R, GT2104-P, and GT2103-P.

Enables antialiasing for outline fonts.

Antialiasing smooths out the jagged text on the screen.

#### GOT Graphic Ver.2

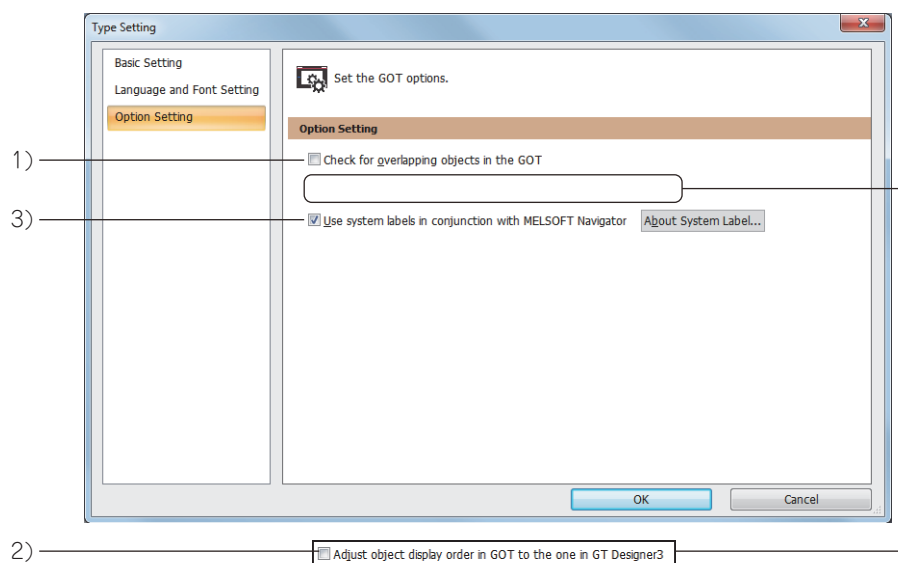

As antialiasing is always enabled, no additional setting is required accordingly.

#### GOT Graphic Ver.1

To enable antialiasing, select this item.

## 3 [Option Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Check for overlapping objects in the GOT]

GT21 does not support this item.

If objects are overlapped each other, the GOT displays a message.

If [Adjust object display order in GOT to the one in GT Designer3] is selected, this setting is unavailable.

### 2) [Adjust object display order in GOT to the one in GT Designer3]

GT21 does not support this item.

Select this item to adjust the display order of the overlapped objects on the GOT to the one in GT Designer3.

If [Check for overlapping objects in the GOT] is selected, this setting is unavailable.

This setting is available for the following screens: base screen, overlap window 1 to 5, superimpose window 1 to 2, dialog window, and key window.

Example) Displaying the objects overlapped on the same layer with GT Designer3 on the GOT

### Display on GT Designer3

- ③ Third placed object (Top)
- ② Second placed object (Middle)
- ① First placed object (Bottom)

- When the display order of the objects is adjusted to the one in GT Designer3

① : The object is updated.

The objects are redrawn.  
The display order of the overlapped objects on the GOT is adjusted to that of the overlapped objects on GT Designer3.

- When the display order of the objects is not adjusted to the one in GT Designer3

① : The object is updated.

Only the updated object is redrawn and displayed at the top.  
(The display order of the overlapped objects on the GOT differs from that of the overlapped objects on GT Designer3.)

Even if this item is selected, the setting becomes invalid for some objects.

For such objects, refer to the following.

⇒5.1.3 ■ 5 Precautions for the object stacking order adjustment setting

For the details of superimposition of objects or figures, refer to the following.

⇒6.5.4 Common setting for figures

### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select this item.

#### 3) [Use system labels in conjunction with MELSOFT Navigator]

Not available to GT2505-V and GT SoftGOT2000.

System labels can be used according to device settings of GT Designer3.

For the system label setting, refer to the following.

⇒6.1.2 How to set system labels

Clear this item when a system label is not used.

When this item is cleared, the system label update/check is executed.

When no error occurs, a system label is converted to a device name to which the system label is assigned.

When any error occurs, a system label is not converted to a device name to which the system label is assigned.

Therefore, this item is not cleared.

Check or modify the system label setting, and clear this item again.

## 5.1.5 [Output] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This window displays operation histories that significantly affect the project in a list.

This window appears at the GOT type change.

To display this window manually, select [View] → [Docking Window] → [Output] from the menu.

### 1) [Option] button

Displays the option operations for the history list.

Item	Description
Export	Exports the history list as a CSV file or Unicode text file. After clicking the item, specify the storage folder, file name, and file type.

### 2) [Refinement]

Use this field to refine the messages displayed on the history list by keywords.

### 3) History list

Displays the history of operations that significantly affect the project, such as the GOT type change or import of other projects, in a list.

→ 12.9.2 Specifications of the project conversion from GOT1000 to GOT2000

## 5.2 Setting the GOT Basic Operations ([GOT Environmental Setting])

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

- ⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])
- 5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])
- 5.2.3 Setting dialog windows ([Dialog Window])
- 5.2.4 Setting key windows ([Key Window])
- 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])
- 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
- 5.2.7 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Operator authentication))
- 5.2.8 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Level authentication))
- 5.2.9 Configuring the security settings for operating the utility and the monitor functions ([Functional Operation Security])
- 5.2.10 Configuring the security setting for transferring data ([Data Transfer Security])
- 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])
- 5.2.12 Configuring the settings for converting the text to Kanji character on the GOT ([KANJI KANJI Conversion])
- 5.2.13 Setting a screen to be displayed on the GOT at startup ([Startup Logo])

## 5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the screen switching
- 2 How to use the screen switching
- 3 Moving an overlap window
- 4 Precautions
- 5 [Screen Switching/Window]

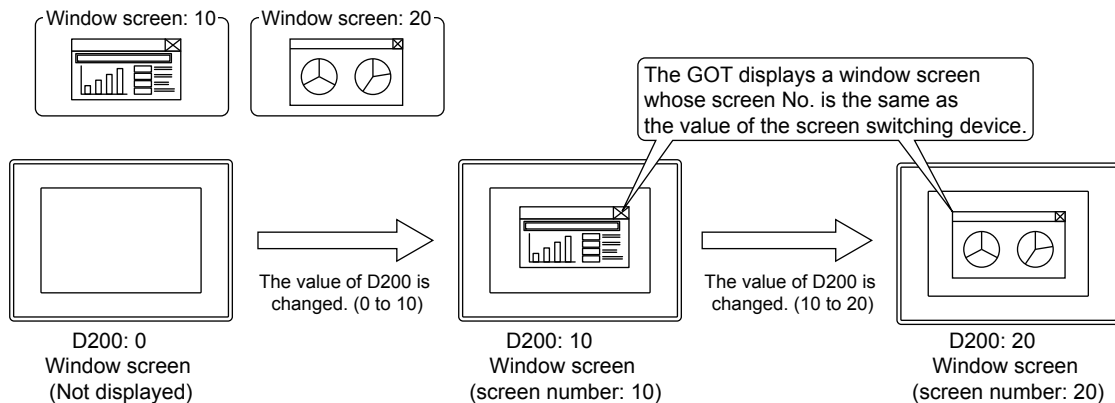

The GOT displays or switches the screens with screen switching devices.

The screens to be displayed on the GOT are switched by changing a value (screen number) of the screen switching device.

Example 1) Setting D100 for the screen switching device of a base screen

Example 2) Setting D200 for the screen switching device of the overlap window 1

### ■ 1 Specifications of the screen switching

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Target screens of the screen switching device

Set a screen switching device for each of the following screens.

- Base screen
- Overlap window 1 to 5  
(For GT23 and GT21, overlap window 1 and 2)
- Superimpose window 1, 2
- Dialog window
- Mobile screen (GT27 and GT25)

For switching mobile screens, refer to the following.

- ➔ 10.18 Monitoring a Controller from Tablets or Other Clients (GOT Mobile Function)

#### (2) Screen switching of base screens

The GOT displays a base screen whose screen No. is the same as the value of the screen switching device.

Example) Storing 20 in the screen switching device (D100) while displaying the base screen whose screen No. is 10

If the value of the screen switching device is 0, the GOT displays a base screen whose screen No. is the minimum.  
 Example) Storing 0 in the screen switching device (D100) if the minimum screen No. is 1

If the screen number which does not exist is stored in the screen switching device, the system alarm is displayed.  
 In that case, the screen is not switched.

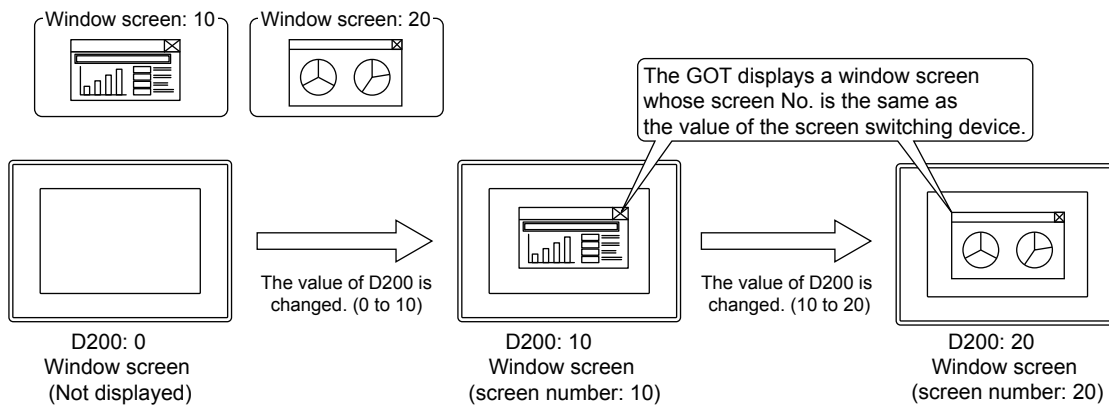

Example) Storing the screen No.50 of the base screen which does not exist in the screen switching device (D100)

### (3) Screen switching of overlap windows and superimpose windows

The GOT displays the window screen whose screen No. is the same as the value of the screen switching device as an overlap window or a superimpose window.

Example 1) Setting D100 for the screen switching device of an overlap window

When the screen switching device stores the value set to [Screen No. of the window screen to be hidden] in [Environment Setting] dialog, the GOT closes the target overlap window or superimpose window.

➡ ■ 5 [Screen Switching/Window]

Example)

Storing 0 in the screen switch device (D200) while displaying the overlap window 1 ([Screen No. of the window screen to be hidden]: 0)

If the screen number which does not exist is stored in the screen switching device, the system alarm is displayed. In that case, the screen is not switched and the window which has been displayed remains displayed.

Example)

Storing the screen No.50 of the window screen which does not exist in the screen switching device (D200)

#### (4) Screen switching of dialog windows

For the details of dialog windows, refer to the following.

⇒5.2.3 Setting dialog windows ([Dialog Window])

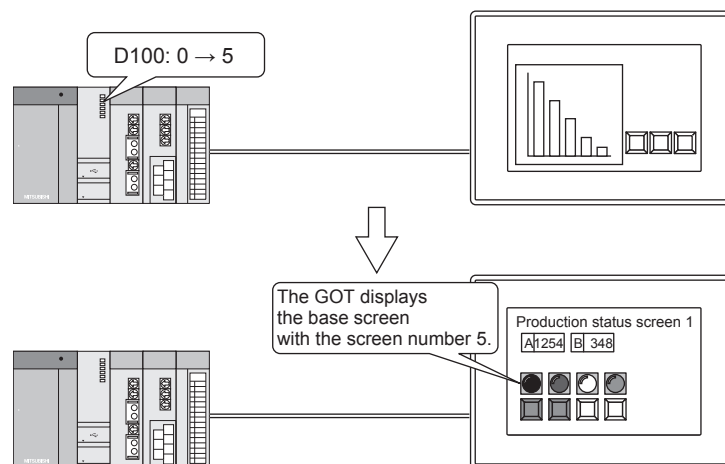

### ■2 How to use the screen switching

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Switching screens with the screen switching device

When a screen number is stored in the screen switching device, the corresponding screen is displayed on the GOT.

Example) Storing 5 in the screen switching device (D100)

Set the screen switching device in the [Screen Switching/Window] dialog.

⇒5.2.1 ■5 [Screen Switching/Window]

#### (2) Switching screens with touch switches (Go To Screen switch)

The screen is switched to another screen when you touch the Go To Screen switch placed on the screen.

The destination screen depends on the setting of the touch switch.

For how to set the Go To Screen switch, refer to the following.

⇒8.2.7 [Go To Screen Switch] dialog

### (a) Switching screens by specifying a screen number

The screen can be switched to the base screen or the window screen which is set for the touch switch.

### (b) Switching screens according to the hierarchy or history of the screens

The screens can be switched according to the operation (hierarchy mode/history mode) which is set for the touch switch.

#### • Hierarchy mode

This mode is for returning to a screen in the upper hierarchy according to the screen hierarchy based on the relation of a source screen and a destination screen.

#### • History mode

This mode is for returning to the previously displayed screen according to the history of the screen switching.

### (3) Selecting a screen switching device

To select a device used as the screen switching device, refer to the following depending on the method of screen switching.

#### (a) GOT internal device

Recommended for performing the screen switching by touch switches.

To control the screen switching by a controller, you need to use scripts or the device data transfer.

#### (b) Controller device

Recommended for controlling the screen switching by a controller.

You can also switch the screens with touch switches.

### (4) Display position of an overlap window or a superimpose window

You can specify the display position of an overlap window or a superimpose window by setting [Window Position] on a base screen.

However, when you switch a base screen on which a window screen is being displayed, note the following: Even if you configure different [Window Position] settings on the destination base screen, the window screen remains in the same position after the base screen switching.

On the base screen having no [Window Position] setting, the display position of a window screen is as follows.

- A window screen initially appears in the center of the GOT screen.
- When a window screen has been displayed before, the window screen appears at the previously displayed position.

For how to set [Window Position], refer to the following.

⇒8.30 Specifying the Display Position of a Window Screen

### (5) Using an overlap window as the system window

System window includes test windows, remote screens of the remote personal computer operation (Ethernet), and window screens which are used for system applications.

Use the system window by assigning any overlap window.

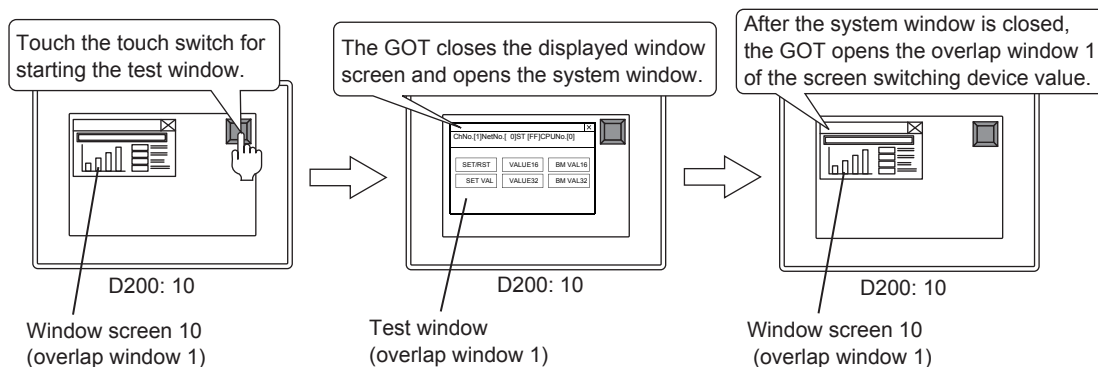

You can also display the window screen with an overlap window for which the system window is assigned when the system window is not used.

If the system window is called while a window screen is displayed with the overlap window, the GOT closes that window screen and opens that system window.

After the system window is closed, the window screen whose screen No. is the same as the value of the screen switching device is displayed again.

Example) Switching between a system window and a window screen

(Overlap window 1 is used as the system window and D200 is set for the screen switching device.)

Assign system windows in the [Screen Switching/Window] dialog.

⇒ 5.2.1 ■ 5 [Screen Switching/Window]

### (6) Displaying an overlap window off-screen

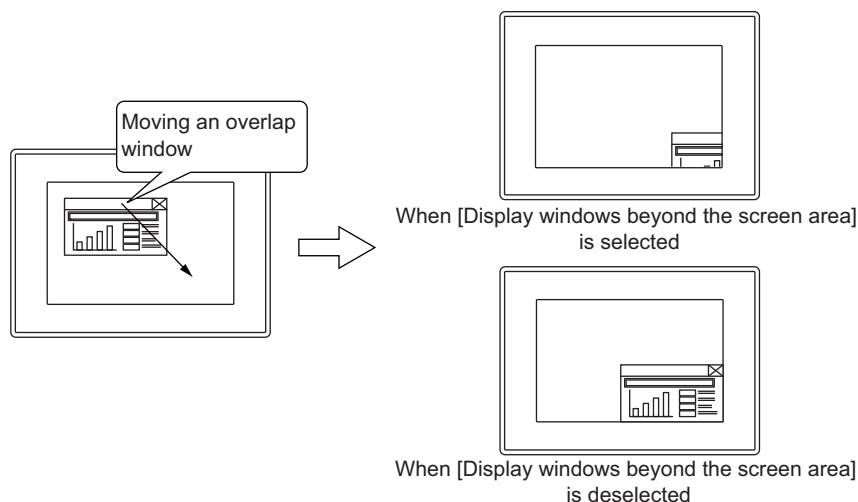

Not available to GT21.

To display an overlap window off the GOT screen, select [Display windows beyond the screen area] in the [Screen Switching/Window] dialog.

Note that dialog windows cannot be displayed off the GOT screen.

The overlap window can be displayed off the right side or the bottom of the screen.

⇒ 5.2.1 ■ 5 [Screen Switching/Window]

This setting also allows the following system windows to be displayed off the GOT screen.

- Recipe operation window\*<sup>1</sup>
- Comment window
- Device test window (Device monitor)\*<sup>1</sup>
- Windows used for the system launcher\*<sup>1</sup>
- Windows used for the iQSS utility\*<sup>1</sup>

\*<sup>1</sup> If no user-created screen exists, the window cannot be displayed off the GOT screen.

## (7) Specifying the stacking order of overlap windows

Not available to GT21.

To specify the stacking order of overlap windows, set [Specify the display order] in the detail setting for each overlap window.

The detail setting for the overlap window is configurable in the [Environmental Setting] window ([Screen Switching/Windows]).

→ ■ 5 [Screen Switching/Window]

The stacking order number for an overlap window is settable ranging from 1 (Front) to 5 (Back).

The same stacking order number is settable for multiple overlap windows.

When an overlap window is set to be used as a system window, the user-specified stacking order number is invalid.

When you specify the stacking order number for some overlap windows, all overlap windows are classified into groups below.

- User-specified stacking order group (Overlap windows having a user-specified stacking order number)
- Non-user-specified stacking order group (Overlap windows having no user-specified stacking order number)
- Group of overlap windows used as system windows

Within the user-specified stacking order group, the overlap windows always appear in the specified stacking order.

Within the other groups, the stacking order of the overlap windows varies with the user operation or GOT behavior.

The following shows examples where the overlap windows in the multiple groups are displayed.

- Example 1) When touching an overlap window having a user-specified stacking order number

- Example 2) When touching an overlap window having no user-specified stacking order number

## (8) Disabling the touch operation on the screens that are behind an overlap window

Not available to GT21.

To disable the touch operation on the screens that are behind an overlap window, select [Disable the touch operation of a screen on the back] in the detail setting for the overlap window. The overlap window appears in the front, regardless of the stacking order number setting.

While this overlap window is being displayed, the touch operation is disabled in the area outside the window.

- Example) When disabling the touch operation on the screens that are behind overlap window 1

The detail setting for the overlap window is configurable in the [Environmental Setting] window ([Screen Switching/Windows]).

→ ■ 5 [Screen Switching/Window]

A bit device is usable to enable or disable the touch operation.

When this bit device control is used, the touch operation is disabled while the relevant bit device is on.

## ■ 3 Moving an overlap window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to move an overlap window which is displayed on the GOT.

### (1) Moving the window with touch operations

Touch the title bar of an overlap window, and then touch the position to move the window to within three seconds.

To enable this operation, the setting for displaying title bars must be configured.

### (2) Moving the window with a slide operation

While touching the title bar of an overlap window, slide the window to its destination.

To enable this operation, the setting for displaying title bars must be configured.

### (3) Moving the window with devices

Set the coordinates of a position to move the window for the display position specification device (X and Y).  
To enable this operation, the setting of the display position specification device must be configured.

→ ■ 5 [Screen Switching/Window]

Screen switching device : GD100 = 1  
Display position specification device (X) : GD101 = 10  
Display position specification device (Y) : GD102 = 15

## ■ 4 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Applications of the device which is set for the screen switching device

Use the device which is set for the screen switching device carefully.  
A careless installing to the device may cause unexpected screen switching.

### (2) Number of overlap windows used as system windows

The GOT can use the following overlap windows as system windows.

- Overlap window for which no screen switching device is set
- Overlap window for which [Use also as a system window] is set

The number of system windows cannot exceed that of these overlap windows.  
Set as many such overlap windows as the number of system windows to be used.

### (3) Displaying an overlap window off-screen with display position specification devices

When selecting [Display windows beyond the screen area] in the [Screen Switching/Window] dialog, you can move an overlap window off-screen by specifying the window coordinates outside the GOT screen area with display position specification devices.

The off-screen window is not movable by the touch operation.

To move the window back into view, specify the window coordinates within the screen area with display position specification devices.

### (4) Detail setting for the overlap window

In the detail setting for an overlap window, if you select [Disable the touch operation of a screen on the back] and deselect [Display the title bar], make sure to place a touch switch for closing the overlap window.

→ 8.2.7 [Go To Screen Switch] dialog

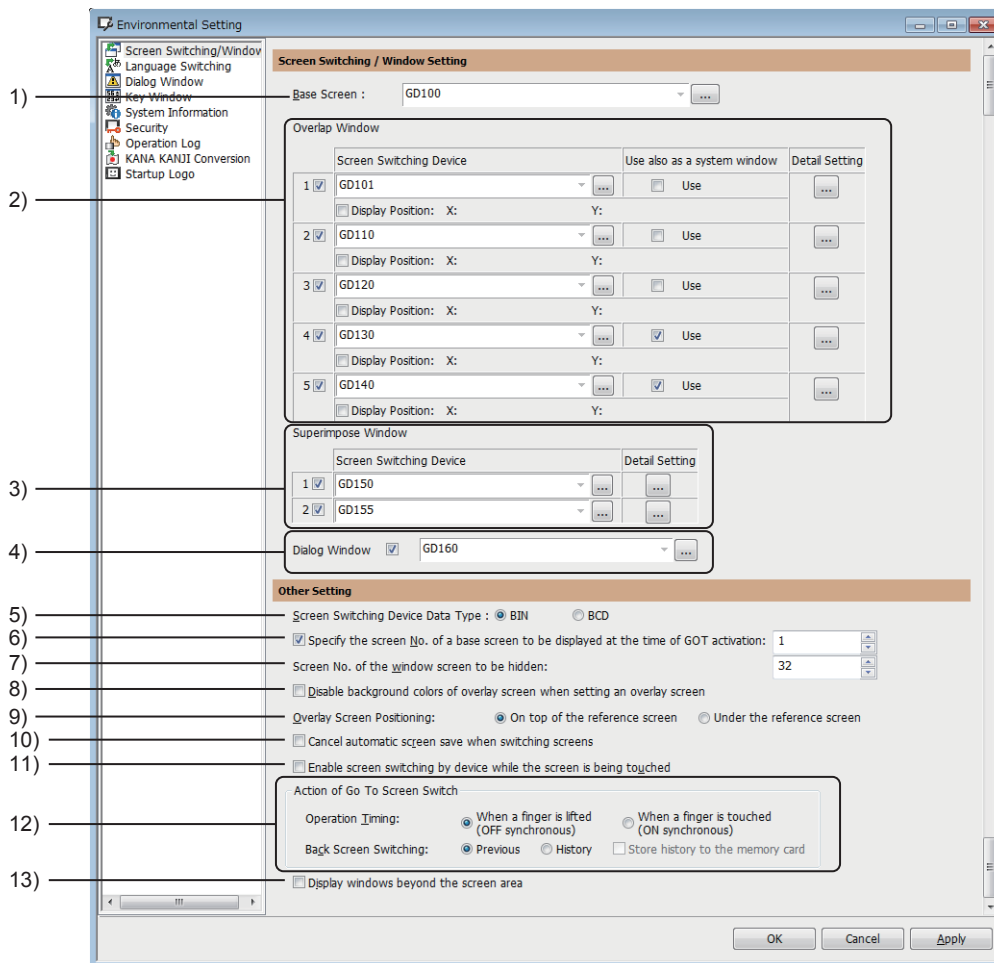

Otherwise, you cannot close the overlap window.

## 5 [Screen Switching/Window]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the screen switching and the display method of window screens.

Select [Common] → [GOT Environmental Setting] → [Screen Switching/Window] from the menu to display this dialog.

### 1) Screen switching device for a base screen

Set a screen switching device for a base screen.

Only a word device can be used for the screen switching device.

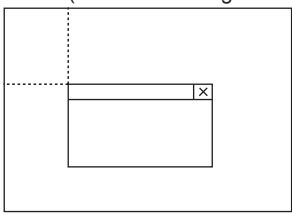

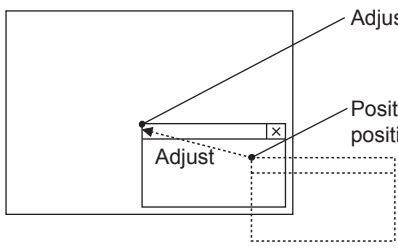

⇒6.1.1 How to set devices

### 2) Settings of overlap window 1 to 5

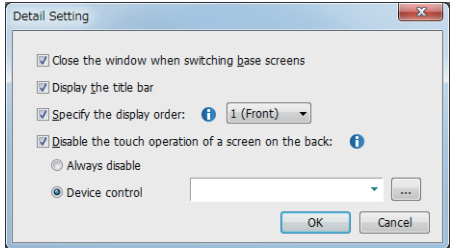

Set whether to use overlap window 1 to 5, the screen switching devices, and the display method of those windows.

The overlap window which you selected becomes available.

Item	Description
[Screen Switching Device]	Set screen switching devices for overlap window 1 to 5. Only a word device can be used for the screen switching device. ⇒6.1.1 How to set devices

Item	Description
[Display Position]	<p>Specify the display positions of overlap window 1 to 5 with devices. A display position specification device is automatically assigned to each overlap window when you select this item. The device numbers of the display position specification devices for the X and Y coordinates are specified as follows: The horizontal coordinate (X coordinate) is the screen switching device + 1, and the vertical coordinate (Y coordinate) is the screen switching device + 2. Specify the display positions of overlap window 1 to 5 as follows.</p> <div style="text-align: right; margin-right: 100px;">Display position specification device (X coordinate) (screen switching device + 1)</div> <div style="text-align: center;">  </div> <p style="text-align: center;">Display position specification device (Y coordinate) (screen switching device + 2)</p> <p>If a value which cannot be displayed on the GOT is stored to the display position specification device, the display position is adjusted automatically. The adjusted display position is not reflected to the device value.</p> <div style="text-align: center;">  </div>

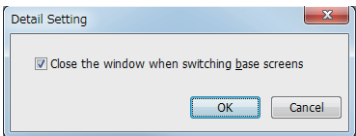

[Use also as a system window]	<p>Allows to use an overlap window as the system window. →5.2.1 ■ 2 How to use the screen switching</p>
-------------------------------	---

[Detail Setting]	<p>Displays the [Detail Setting] dialog.</p> <div style="text-align: center;">  </div> <ul style="list-style-type: none"> <li>• <b>[Close the window when switching base screens]</b> Closes the overlap window when the base screen is switched.</li> <li>• <b>[Display the title bar]</b> Displays a title bar on the overlap window.</li> <li>• <b>[Specify the display order]</b> Select a stacking order number for the overlap window. The setting range is [1 (Front)] to [5 (Back)]. For the details of the stacking order, refer to the following. →5.2.1 ■ 2 (7) Specifying the stacking order of overlap windows</li> <li>• <b>[Disable the touch operation of a screen on the back]</b> Displays the overlap window in the front regardless of the setting of [Specify the display order], and disables the touch operation on the screens behind the overlap window. Select this item, and then select a condition for disabling the touch operation. <ul style="list-style-type: none"> <li>· [Always disable]: Always disables the touch operation.</li> <li>· [Device control]: Uses a specified bit device to enable or disable the touch operation. For the details, refer to the following. →5.2.1 ■ 2 (8) Disabling the touch operation on the screens that are behind an overlap window</li> </ul> </li> </ul>
------------------	---

### 3) Setting of superimpose window 1 and 2

Set whether to use superimpose window 1 and 2 and the screen switching device.  
The superimpose window which you selected becomes available.

Item	Description
[Screen Switching Device]	<p>Set screen switching devices for superimpose window 1 and 2. Only a word device can be used for the screen switching device. →6.1.1 How to set devices</p>

Item	Description
[Detail Setting]	<p>Displays the [Detail Setting] dialog.</p>  <p>• <b>[Close the window when switching base screens]</b> Closes the superimpose window when the base screen is switched.</p>

#### 4) Setting a dialog window

Set whether to use the dialog window and the screen switching device.

The dialog window which you selected becomes available.

Item	Description
Screen switching device	Set a screen switching device for a dialog window. Only a word device can be used for the screen switching device.

#### 5) [Screen Switching Device Data Type]

Set the data type of the screen switching device.

- [BIN]: Signed 16-bit binary or unsigned 16-bit binary
- [BCD]: 16-bit binary coded decimal

#### 6) [Specify the screen No. of a base screen to be displayed at the time of GOT activation]

Set a screen number of the base screen to be displayed on the GOT at startup.

#### 7) [Screen No. of the window screen to be hidden]

Set a screen number for closing a displayed overlap window or superimpose window.

#### 8) [Disable background colors of overlay screen when setting an overlay screen]

Disables the background color of the called screen.

#### 9) [Overlay Screen Positioning]

Select the position of the called screen.

#### 10) [Cancel automatic screen save when switching screens]

Cancels the screen save mode when the screen is switched.

#### 11) [Enable screen switching by device while the screen is being touched]

Not available to GT21.

Enables screen switching by using the screen switching devices while the screen is being touched.

#### 12) [Screen switching operation]

Set the operation of the Go To Screen switch.

Item	Description
[Operation Timing]	<p>GT27, GT25, GT23, and GT SoftGOT2000 Set the timing to operate the Go To Screen switch. Select [When a finger is lifted (OFF synchronous)] to switch screens at the timing when you release your finger from the switch. Select [When a finger is touched (ON synchronous)] to switch screens when you touch the switch.</p> <p>GT21 The screen is switched when you touch the switch.</p>
[Back Screen Switching]	<p>Set the operation for when [Back (Previous/History)] is selected for [Next Screen] in the setting of the Go To Screen switch. Select [Previous] to perform the screen switching in the hierarchy mode. Select [History] to perform the screen switching in the history mode. →5.2.1 ■ 2 (2) (b) Switching screens according to the hierarchy or history of the screens</p>
[Store history to the memory card]	<p>Stores the history of the screen switching in the data storage. This item can be selected if [History] is selected for [Back Screen Switching].</p>

#### 13) [Display windows beyond the screen area]

Enables overlap windows and key windows to be displayed off the GOT screen.

- 5.2.1 ■ 2 (6) Displaying an overlap window off-screen
- 5.2.4 ■ 2 (3) Displaying a key window off-screen

## 5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

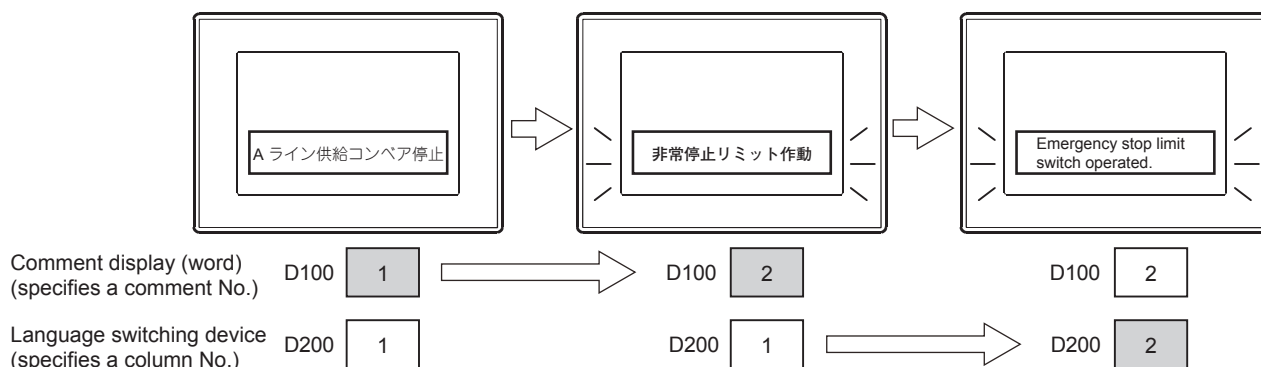

- ⇒ ■ 1 Specifications of the language switching
- 2 How to use the language switching
- 3 Precautions
- 4 [Language Switching]

The GOT switches comments displayed on the object according to a value (column No. of the comment group) in the language switching device.

If messages of Japanese, English, Chinese, and other languages are registered in each column of the comment group, the language of the comment displayed can be switched.

For how to register comments, refer to the following.

⇒5.8.2 How to use comment

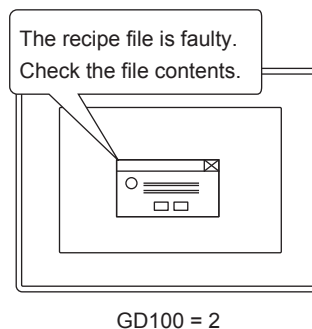

Column No.	Japan	Japan	China(GB)-Mincho
Comment No.	1 Japanese	2 English	3 Chinese
1	Aライン供給コンベア停止	A-line supply conveyer stopped.	A生产线的补给输送带停止
2	非常停止リミット作動	Emergency stop limit switch operated.	紧急停止装置启动
3	加工品リミット油圧低下	Product limit switch does not operated.	加工启动装置不工作
4	加工機-1の油圧低下	Hydraulic pressure of finishing machine 1 is low.	加工机-1的油压下降

On the other hand, the system language used in the utility screen and others is switched by the system language switching device.

The system language can be switched to the language compatible with the language ID according to the value stored to the system language switching device (language ID).

System language switching device: GD100  
Language ID = 1: Japanese, 2: English

## ■ 1 Specifications of the language switching

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Language switching device

The language switching device is used to switch the comment column of the comment group.

A language switching device can be set per project.

A word device whose data type is signed BIN 16 is available.

Store the column No. of the comment group to the language switching device to switch the comment column to be displayed.

For the setting of comments, refer to the following.

→ 5.8 Comment Setting ([Comment])

For the setting of the language switching device, refer to the following.

→ 5.2.2 ■ 4 [Language Switching]

### (2) System language switching device

The system language switching device is used to switch the system language used for the utility, system alarm, and others.

A system language switching device can be set per project.

A word device whose data type is signed BIN 16 is available.

Language IDs are allocated to each language.

Store the language ID to the system language switching device to switch the system language.

By default, language IDs are allocated as shown below.

Language ID	Compatible language
1	Japanese
2	English
3	Chinese (Simplified)
4	Chinese (Traditional) Not available to GT21.
5	Korean Not available to GT21.
6 to 10	Not set

When a value other than the one above is stored to the system language switching device, the system language set in the utility is set.

For the setting of system language switching, refer to the following.

→ 5.2.2 ■ 4 [Language Switching]

### (3) Area setting

The formats of a sorting order of the date, decimal marker, and others which differ depending on areas can be switched associating with language switching.

This setting is applied to all the objects on the user screen.

However, this setting is not applied to the system screens, such as the utility screen and the system application screen.

#### (a) Date

Select [yy/mm/dd], [mm/dd/yy], or [dd/mm/yy] for a sorting order of the date.

#### (b) Decimal marker

Select [, (comma)] or [. (period)] for a decimal marker.

## ■ 2 How to use the language switching

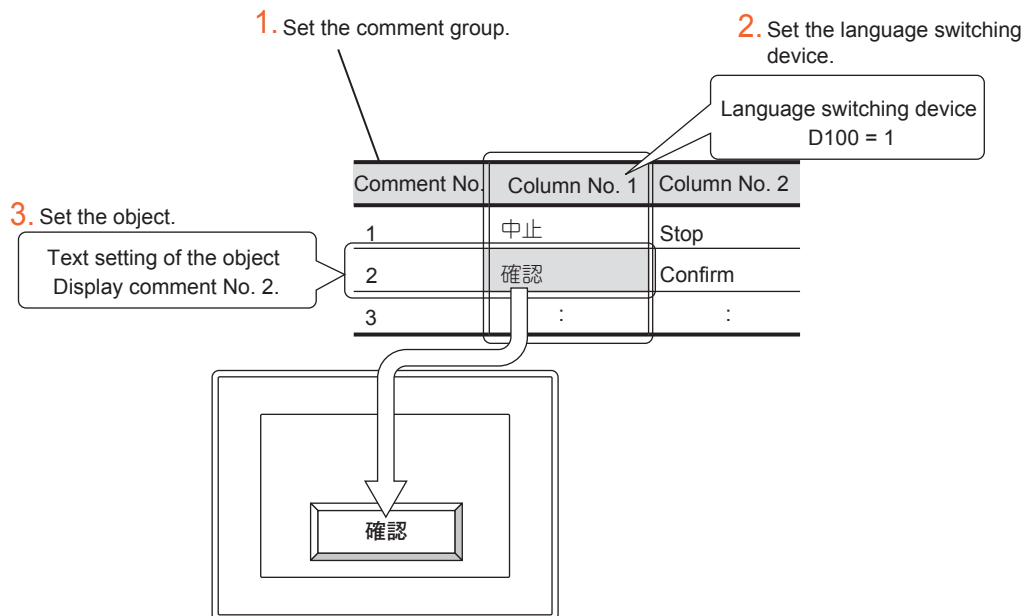

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Switching the language of the comment to be displayed on the object (switching the comment column)

Switch the comment column to switch the language of the comment to be displayed on the object.

Store the column No. to the language switching device to switch the comment column.

#### (a) Setting procedure

**Step 1** Set the comment group.

Set multiple comment columns in the comment group.

⇒5.8.2 How to use comment

**Step 2** Set the language switching device.

⇒5.2.2 ■ 4 [Language Switching]

**Step 3** Configure the setting of each object on the screen for displaying character strings set as a comment text.

⇒8.2 Placing a Touch Switch

8.3 Placing a Lamp

8.7 Placing a Comment Display

8.10 Placing a Historical Data List Display

8.11 Placing an Alarm Display

8.12 Placing a Simple Alarm Display

**(b) Operation on the GOT**

Store the value of the column No. to the language switching device by a touch switch or a numerical input.

Storing the value switches the language of the comment to be displayed on the object.

When the value of the language switching device is out of the range (0, 31 or larger) or the column No. which does not exist is specified, a comment is not displayed.

However, when [Alternative Display (when the language switching device value is out of the range (1-30) or comment column No. does not exist)] is set, the column No. set previously is displayed.

**(2) Switching the system language on the user-created screen**

The system language is used on the screen other than the user-created screen, such as the utility screen and system alarm.

To change the system language on the user-created screen, use the system language switching device.

Store the value of the language ID to the system language switching device to switch the system language.

You can also change the system language on the utility screen of the GOT.

For how to change the system language on the utility screen, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

**(a) Setting procedure**

**Step 1** Enable language switching to set the system language switching device.

⇒5.2.2 ■ 4 [Language Switching]

**Step 2** Set the language ID to be allocated to the system language when required.

⇒5.3.1 ■ 2 [Display Setting/Language Setting]

**Step 3** Place an object such as a numerical input or a word switch for storing the language ID to the system language device.

**(b) Operation on the GOT**

Input the value of the language ID to the language switching device by a touch switch or a numerical input.

Inputting the value switches the system language to the language which is compatible with the language ID.  
For the specifications of the language ID, refer to the following.

⇒5.2.2 ■ 1 (2) System language switching device

The system language can be switched by the system language switching device only on the user-created screen.  
The system language of the system window, the utility screen, the extended function screen, or other screens cannot be switched by the system language switching device while the screen is displayed.  
Switch the system language by the device after closing all the screens above.

### ■ 3 Precautions

#### (1) Effect of language switching or system language switching on objects

Language switching or system language switching switches screens.

Therefore, the operations of the following objects are affected at language switching.

##### (a) Scatter graph

When settings such as memory storage are not configured, the previously collected data of the occurrence time or others is deleted.

To store the previously collected data at language switching, set each object to store the memory.

⇒8.20.4 ■ 4 [Extended] tab

##### (b) Parts movement

When a locus is displayed, the locus is deleted.

##### (c) Display trigger of objects

When the display trigger condition of objects is not satisfied before language switching, the description displayed on objects is deleted.

##### (d) Alarm display, Simple alarm display

When the display is scrolled, the display returns to the top after language switching.

##### (e) Input object

When the data is being input to objects, the cursor is deleted and the input is canceled.

#### (2) Restrictions at system language switching

##### (a) System language switching while a dialog window is displayed

When the system language is switched while a dialog window is displayed, the system language is switched after the dialog window is closed and the screen returns to the user-created screen.

##### (b) System language switching when the SFC monitor or the ladder editor is used

If the SFC monitor or the ladder editor is finished with a user-created screen displayed and GT Designer3 is started again with the system language different from the one of the previous run, the program displayed before the system language switching may not be acquired.

In that case, a system alarm occurs.

However, if only alphanumeric characters are used for the file name of the project to eliminate the difference between the text codes of the file names before and after the system language switching, the system alarm does not occur.

##### (c) System language switching in an operation log

When all the following settings are applied and an operation log file is converted, the operation log file is converted in the system language set in the utility.

(The file is not converted in the language specified by the system language switching device.)

- Set [System Language Switching Interlock] for [File Conversion Language].
- Use a file convert trigger or the auto conversion at log file switching.

For the operation log settings, refer to the following.

⇒5.2.11 ■ 4 (3) [File Conversion] tab

##### (d) Language switching at alarm log file conversion

When the file conversion language is set to [System Language Switching Interlock] and an alarm log file is converted by the file convert trigger, the file is converted in the system language set in the utility.

(The file is not converted in the language specified by the system language switching device.)

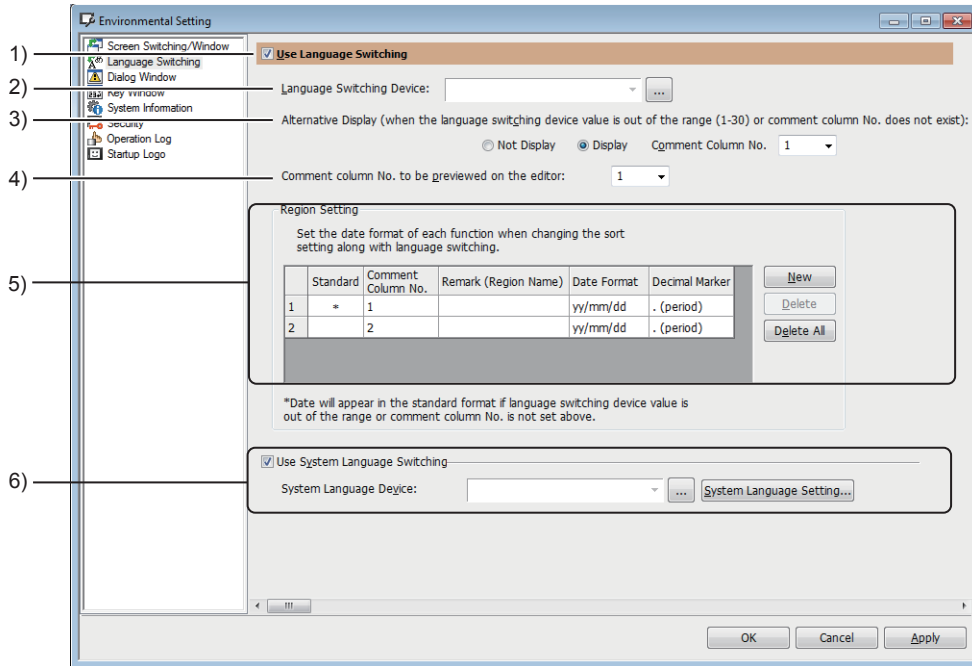

For the setting of the alarm log file conversion, refer to the following.

⇒9.1.2 ■ 5 [Alarm Common Setting] dialog

## ■ 4 [Language Switching]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Language Switching], the language switching device and the system language switching device are set. Select [Common] → [GOT Environmental Setting] → [Language Switching] from the menu to display this window.

### 1) [Use Language Switching]

Select this item to enable language switching.  
Set language switching.

### 2) [Language Switching Device]

Set the language switching device.  
A word device whose data type is signed BIN 16 can be set.

### 3) [Alternative Display (when the language switching device value is out of the range (1-30) or comment column No. does not exist)]

When the comment column No. which matches with the value of the language switching device does not exist in the comment group, select whether to display a comment.  
The following shows the items to be selected.

- [Not display]  
Comments are not displayed.
- [Display]  
A comment is displayed.

After selecting this item, set the comment column No. to be displayed to [Comment Column No.].  
When the comment column No. which does not exist is set at this time, a comment is not displayed.

Item	Description
[Comment Column No.]	The setting range is [1] to [30].

### 4) [Comment column No. to be previewed on the editor]

Set the comment column No. to be used for a preview display on the screen editor.

### 5) [Region Setting]

Set the formats of a sorting order of the date, decimal marker, and others which differ depending on areas.

Item	Description
[Standard]	Set the row with [*] as the default value of the area setting.
[Comment Column No.]	Set the comment column No. which the area setting is applied to. The setting range is [1] to [30].
[Remark (Region Name)]	Set the remarks such as the area setting name. Up to 32 characters can be set.

Item	Description
[Date Format]	Select a sorting order of the date. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [yy/mm/dd]</li> <li>• [mm/dd/yy]</li> <li>• [dd/mm/yy]</li> </ul>
[Decimal Marker]	Select a symbol to be used as a decimal marker. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [, (comma)]</li> <li>• [. (period)]</li> </ul>
[New] button	Adds a new area setting.
[Delete] button	Deletes a selected area setting.
[Delete All] button	Deletes all the area settings.

#### 6) [Use System Language Switching]

Select this item to enable system language switching.

Set the system language switching device.

When the language ID setting is required, click the [System Language Setting] button to set the language ID.

Item	Description
[System Language Device]	Set the system language switching device. A word device whose data type is signed BIN 16 can be set.
[System Language Setting] button	Displays the settings of the language ID to be used for system language switching. The system language setting can be displayed only when [Language Setting] is set in the GOT setup. →5.3.1 ■ 2 [Display Setting/Language Setting]

## 5.2.3 Setting dialog windows ([Dialog Window])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

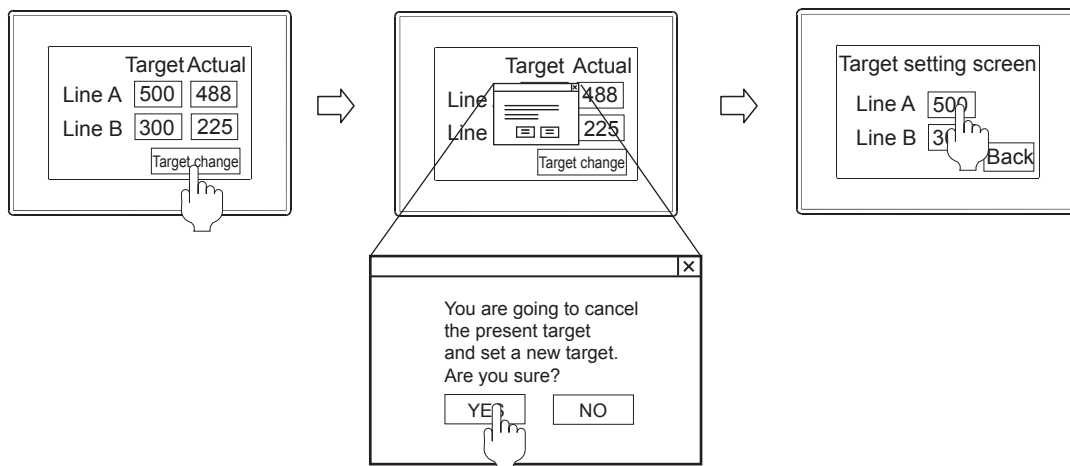

- ➔ ■ 1 Specifications of dialog windows
- 2 How to use dialog windows
- 3 Precautions
- 4 [Dialog Window...]

You can create and replace system messages displayed on the GOT using the created dialog windows.

Example 1) Displaying a created dialog window as a new message

By creating a dialog window for an error or warning as a system, the GOT can display the dialog window as a system message.

You can set a window that does not display the next screen without an answer to the message or a window that is for confirmation for the information.

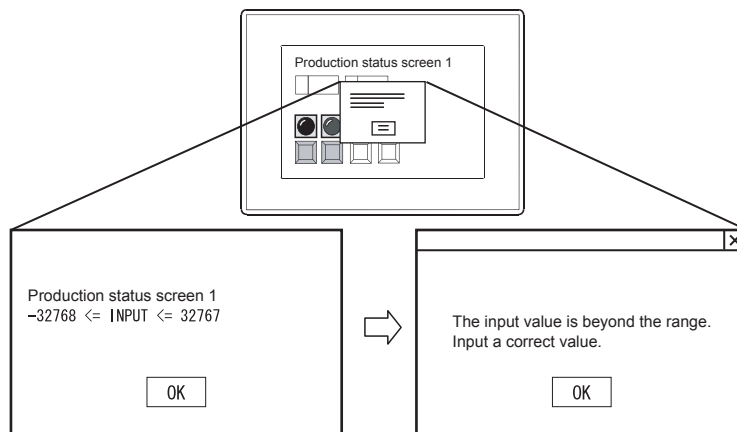

A dialog window such as guiding a user to confirm the operation can be displayed.

Example 2) Displaying a created dialog window instead of the system message of the GOT

You can replace the system message displayed by the GOT with the created dialog window.

The GOT can display more specific and system-matched messages.

System message displayed on the GOT      Changed to the dialog window created by a user

### ■ 1 Specifications of dialog windows

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Available screen size and number of screens

For the specifications of dialog windows as window screens, refer to the following.

- ➔ 1.2.3 ■ 2 Screen specifications

## (2) Available figures and objects

You can place all the figures and objects placeable on the window screen.

Some restrictions are placed on the use of the following objects.

Object	Restriction
Numerical input, text input	The input operation is not available.
Recipe display (record list)	The object is not displayed.
Key window object	<p>The key window object is displayed only on the dialog window that appears instead of any of the following system messages.</p> <ul style="list-style-type: none"> <li>• [Input data error, too many integer places]</li> <li>• [Input data error, too many decimal places]</li> <li>• [Input data error, number too large/small]</li> <li>• [Input data error, out of range]</li> <li>• [Do you want to change?]</li> </ul> <p>For the system message replacement display, refer to the following.  →5.2.3 ■ 2 (2) Displaying a created dialog window instead of the system message of the GOT</p>

## (3) Superimposition of objects

The superimposition of objects is not available.

## (4) Layer setting

The front layer and the back layer are combined on the GOT.

The set object stacking order may be invalid.

## (5) Screen script and trigger action

The screen scripts and trigger actions set in the dialog window do not run.

## (6) Screen switching while a dialog window is displayed

### **GOT Graphic Ver.2**

Screen switching is available while a dialog window is displayed.

### **GOT Graphic Ver.1**

The screen is not switched while a dialog window is displayed.

If you have attempted to switch the screen, the screen switching is valid after the dialog window is closed.

## (7) Priority between the displayed dialog window and a newly generated system message

A system message and a dialog window cannot be displayed together.

If you have attempted to display a dialog window together with a system message, the system message has the priority.

### (a) When a user-created system message is generated while a dialog window is displayed

The displayed dialog window remains.

The newly generated system message is not displayed.

### (b) When a system message of the GOT is generated

The displayed dialog window is closed, and 0 is stored in the screen switching device for the dialog window.

Then, the newly generated system message is displayed.

If a button is arranged on the displayed dialog window, the following processing is executed before the window is closed.

- For the dialog window with only a [OK] button, the processing is the same as when the [OK] button is pressed.
- For the dialog window with a cancel button, the processing is the same as when the [Cancel] button is pressed.

## (8) Dialog window replacement setting on superimpose windows or called screens

On the screen as a superimpose window or called screen of the set overlay screen, screen-based dialog window replacement setting is invalid.

The dialog window replacement setting of the displayed base screen is valid.

## ■2 How to use dialog windows

To use a dialog window, set a screen switching device for the dialog window.

For how to set the screen switching devices, refer to the following.

→5.2.1 ■ 5 [Screen Switching/Window]

### (1) Displaying a created dialog window as a new message

Storing the screen number of the created dialog window to the screen switching device enables the display of the dialog window.

Storing 0 to the screen switching device closes the displayed dialog window.

Example)

Storing the screen number of the window screen 20 to the screen switching device (D300) for the dialog window

### (2) Displaying a created dialog window instead of the system message of the GOT

A created dialog window can be displayed instead of the system message of the GOT.

This is called the system message replacement display.

Storing 0 to the screen switching device closes the displayed dialog window.

Example)

Displaying the window screen with the screen number 20 instead of the system message at an error operation (Screen switching device (dialog window): D300)

The following table lists the system messages available for the replacement display.

System message to be replaced	Setting item of the [Environmental Setting] window	Setting unit
[Communication error. Refer to System Alarm in Utility Menu.]	[Communication Circuit Check Demand]	Project
[Input data error, too many integer places]*1	[Input Digits Overflow (Integer Part)]	Project Screen
[Input data error, too many decimal places]*1	[Input Digits Overflow (Decimal Part)]	Project Screen
[Interlock not]	[Input Condition Failure]	Project Screen
[Input data error, number too large/small]	[Input Digits Overflow]	Project Screen
[Input data error, out of range]	[Out of Input Range]	Project Screen
[Do you want to change?]	[Input Confirmation]	Project Screen
[Coordinates error]	[Overlap of Objects]	Project
[Barcode/RFID data is invalid.]	[Invalid Bar Code/RFID Data]	Project Screen

\*1 Available only when the data type of the monitor device is real number.

For how to set the [Environmental Setting] window, refer to the following.

⇒5.2.3 ■ 4 [Dialog Window...]

### (3) Setting procedure

**Step 1** Set a screen switching device.

⇒5.2.1 ■ 5 [Screen Switching/Window]

**Step 2** Create a dialog window using the dialog window wizard.

For the creation procedure, refer to the following.

⇒ 2.5.1 ■ 4 Creating a window screen for a dialog window

**Step 3** Configure the setting of the dialog window in the [Environmental Setting] window when replacing a system message with the window.

For the setting procedure, refer to the following.

⇒ 5.2.3 ■ 4 [Dialog Window...]

### ■ 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Setting for closing the dialog window

Configure the setting for closing the dialog window.

If the dialog window is not closed, monitor screens or utility screens cannot be displayed.

The setting includes: arranging a touch switch for closing the window, script that writes 0 to the screen switching device, and a sequence program.

#### (2) Communication between the GOT and GT Designer3 while a dialog window is displayed

While a dialog window is displayed, communication between the GOT and GT Designer3 may not be established.

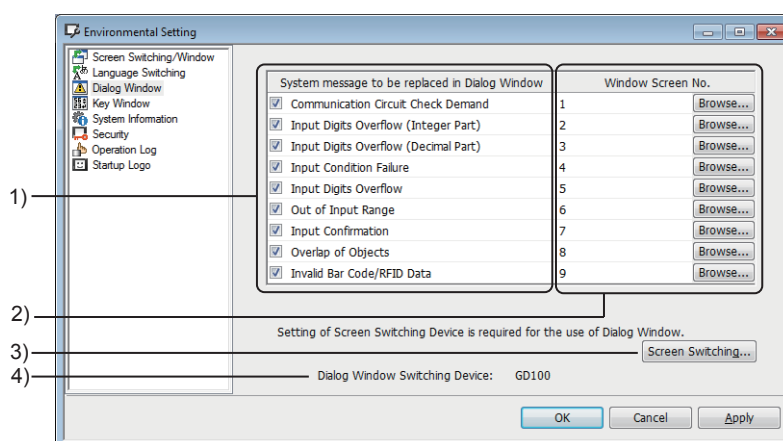

If communication between the GOT and GT Designer3 is not established, close the dialog window.

### ■ 4 [Dialog Window...]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Dialog Window...], set the display method of the dialog window.

Select [Common] → [GOT Environmental Setting] → [Dialog Window...] from the menu to display this window.

#### 1) [System message to be replaced in Dialog Window]

Select a system message to be replaced by the dialog window.

The selected system message is replaced with the window screen set in [Window Screen No.].

The following shows the items to be selected.

GT27, GT25, GT23, and GT SoftGOT2000

- [Communication Circuit Check Demand]
- [Input Digits Overflow (Integer Part)]
- [Input Digits Overflow (Decimal Part)]
- [Input Condition Failure]
- [Input Digits Overflow]
- [Out of Input Range]
- [Input Confirmation]
- [Overlap of Objects]
- [Invalid Bar Code/RFID Data]

GT21

- [Communication Circuit Check Demand]
- [Out of Input Range]
- [Input Confirmation]

For the system messages of each item, refer to the following.

⇒ 5.2.3 ■ 2 (2) Displaying a created dialog window instead of the system message of the GOT

## 2) [Window Screen No.]

Set a screen number of the window screen to be displayed instead of the system message.

The setting range is [0] to [32767].

When [0] is set, either system message or dialog window is not displayed.

## 3) [Screen Switching] button

Displays the setting screen for the screen switching devices.

⇒5.2.1 ■ 5 [Screen Switching/Window]

## 4) [Dialog Window Switching Device:]

Displays the currently set screen switching device.

## 5.2.4 Setting key windows ([Key Window])

⇒ ■ 1 Specifications of key windows

■ 2 How to use key windows

■ 3 Precautions

■ 4 [Key Window]

■ 5 Relevant settings

The key window is a window for inputting numerical values and characters which are used for objects including numerical input and text input.

The key window has two types: GOT default key window (standard key window) and key window created by the user (user-created key window).

### ■ 1 Specifications of key windows

#### (1) Specifications of the standard key window

The standard key window is a GOT default window for inputting numerical values and characters.

The standard key window automatically appears according to the input area format (hexadecimal, decimal, octal, binary, or text).

The design of the standard key window varies depending on the design selected in the [Screen Design] dialog.

(Not available to GT23 and GT21.)

⇒2.4.3 [Screen Design] dialog

#### (2) Key window for inputting numeric values (GT27, GT25, GT23, and GT SoftGOT2000)

Item	Description
Hexadecimal input	The key window for inputting hexadecimal values is displayed.
Decimal input	The key window for inputting decimal values is displayed.
Octal input	While GS450.b7 is on, the key window for inputting octal values is displayed. While GS450.b7 is off, the key window for inputting hexadecimal values is displayed. After the key window is displayed, turning on or off GS450.b7 does not change the key window type.
Binary input	While GS450.b6 is on, the key window for inputting binary values is displayed. While GS450.b6 is off, the key window for inputting hexadecimal values is displayed. After the key window is displayed, turning on or off GS450.b6 does not change the key window type.

Example) Key window for inputting numeric values on GT27-S

When the design is set to [Basic-Black]

Key window for inputting hexadecimal values

Key window for inputting decimal values

Key window for inputting octal values

Key window for inputting binary values

**1) Input value display**

Displays the input value.

**2) Current value display**

Displays the current value of the device.

**3) Input range display**

Displays the valid input range.

The displayed input range depends on the number of displayed digits which is set for the numerical input.

The following shows the meaning of displayed symbols.

- [INPUT]: Value to be input
- [<]: The left side of the symbol is less than the right side.
- [<=]: The left side of the symbols is less than or equal to the right side.
- [=]: The left side of the symbols is equal to the right side.
- [!]=]: The left side of the symbols differs from the right side.

**4) Numeric keys**

Input a numeric value.

**5) [+/-] key**

Switches the input value between + and -.

**6) [.] key**

Inputs a decimal point.

**7) [Enter] key (Enter key)**

Writes the input value to the device.

**8) [AC] key**

Deletes the input value.

**9) [Del] key**

Deletes the least significant digit in the character string.

**10) Keys to move the cursor within a screen**

Moves the input cursor in the screen.

**11) Keys to move the cursor within an input object**

Moves the cursor in the currently input object.

### (3) Key window for inputting numeric values (GT21)

Item	Description
Hexadecimal input	The key window for inputting hexadecimal values is displayed.
Decimal input	The key window for inputting decimal values is displayed.
Octal input	The key window for inputting octal values is displayed.
Binary input	The key window for inputting binary values is displayed.

Example) Key window for inputting numeric values on GT21  
When the design is set to [Basic-Black]

GT2107-W, GT2105-Q

Large key window for inputting hexadecimal, octal, and binary values

Small key window for inputting hexadecimal, octal, and binary values

Large key window for inputting decimal values

Small key window for inputting decimal values

GT2104-R

Key window for inputting hexadecimal, octal, and binary values

Key window for inputting decimal values

GT2104-P

Key window for inputting hexadecimal, octal, and binary values

Key window for inputting decimal values

GT2103-P

Key window for inputting hexadecimal, octal, and binary values (Numeric mode)

Key window for inputting hexadecimal, octal, and binary values (Alphabetic mode)

Key window for inputting decimal values

#### 1) Input value display

- Displays the input value.
- 2) **Numeric keys**  
Input a numeric value.  
Moves the cursor in the currently input object.
  - 3) **[AC] key**  
Deletes the input value.
  - 4) **[Del] key**  
Deletes the least significant digit in the character string.
  - 5) **[Enter] key (Enter key)**  
Writes the input value to the device.
  - 6) **Keys to move the cursor within a screen**  
Moves the input cursor in the screen.
  - 7) **Keys to move the cursor within an input object**  
Not available to GT21.
  - 8) **[.] key**  
Inputs a decimal point.
  - 9) **[+/-] key**  
Switches the input value between + and -.
  - 10) **[ESC] key (GT2104-P and GT2103-P only)**  
Closes the key window.
  - 11) **Display switching keys (GT2103-P only)**  
Switch between numeric mode and alphabetic mode.  
To switch to alphabetic mode, touch the [A-F] key.  
.To switch to numeric mode, touch the [0-9] key.

### Point

#### (1) Displaying the vertically-oriented key window for inputting hexadecimal values (GT2104-P and GT2103-P only)

The vertically-oriented key window cannot display all the alphanumeric characters for input at once. Touch the [A-F] key or the [0-9] key to display alphabetic characters or numerics for input.

GT2104-P,GT2103-P

Key window for inputting hexadecimal values (Numeric mode)

Key window for inputting hexadecimal values (Alphabetic mode)

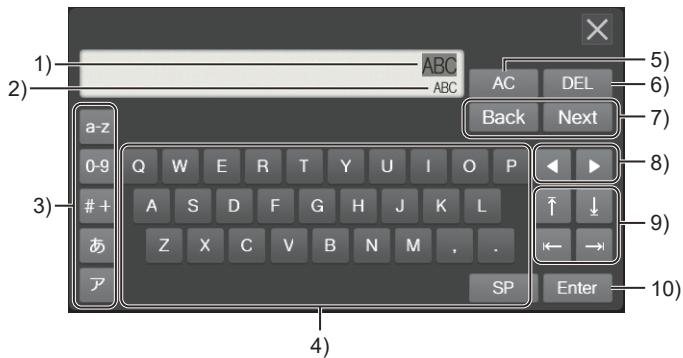

#### (4) Key window for inputting characters (Alphabet or kana mode) (GT27, GT25, GT23, and GT SoftGOT2000)

You can switch the input mode sequentially or to any mode directly with applicable keys.

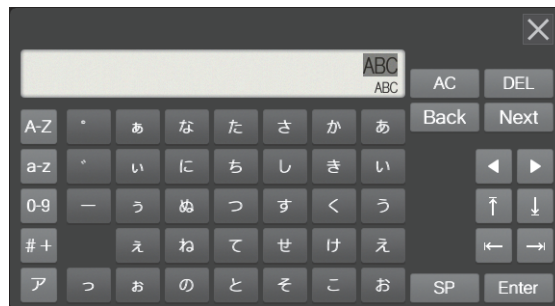

In the input area of an object, characters are displayed in a character code specified in the setting dialog of the object.

Example) Key window for inputting characters on GT27-S

When the design is set to [Basic-Black]

Key window in alphabet mode

Key window in kana mode

### 1) Input value display

Displays the input value.

### 2) Current value display

Displays the current value of the device.

### 3) Keys for switching character types directly

Switches the character types of the key window directly.

The keys for switching to hiragana or katakana appear only when the system language is Japanese.

A-Z	Displays the keyboard for capital letters.
a-z	Displays the keyboard for small letters.
0-9	Displays the keyboard for numeric characters.
# +	Displays the keyboard for symbols.
あ	Displays the keyboard for hiragana.
ア	Displays the keyboard for katakana.

### 4) Character keys

Use the keys to input characters to objects.

The displayed keys depend on the character types of the key window.

### 5) [AC] key

Deletes the input character string.

### 6) [DEL] key

Deletes a character to the right of the cursor.

### 7) Keys for switching character types sequentially

Switches the character types of the key window sequentially one by one.

Since all hiragana characters or katakana characters are too many to be displayed on one key window, the characters are separately listed in two windows (first half and latter half).

Use the keys for switching character types sequentially to switch the display between the first half and latter half.

Keys for switching character types sequentially

### 8) Keys to move the cursor within an input object

Moves the cursor in the currently input object.

### 9) Cursor keys (screen)

Moves the input cursor in the screen.

## 10) [Enter] key (Enter key)

Writes the input characters to the device.

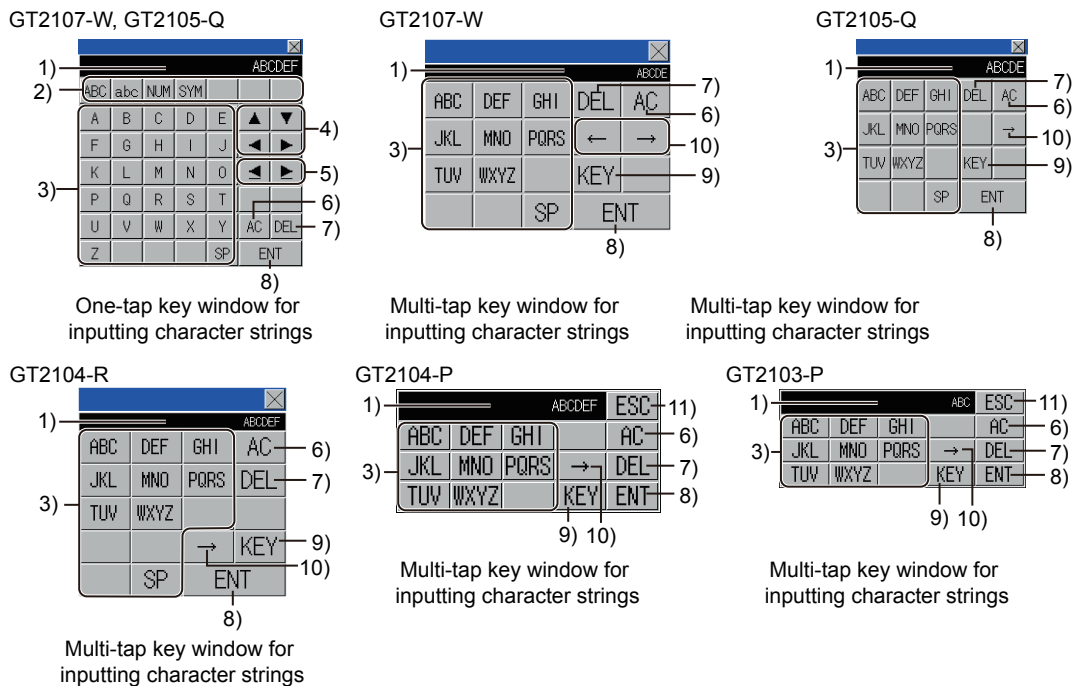

## (5) Key window for inputting characters (Alphabet or kana mode) (GT21)

You can switch the input mode sequentially or to any mode directly with applicable keys.

In the input area of an object, characters are displayed in a character code specified in the setting dialog of the object.

Example) Key window for inputting characters on GT21

When the design is set to [Basic-Black]

### 1) Input value display

Displays the input value.

### 2) Character type switching keys (One-tap type only)

Switches the character types of the key window directly.

### 3) Character keys

Use the keys to input characters to objects.

The displayed keys depend on the character types of the key window.

### 4) Keys to move the cursor within a screen (One-tap type only)

Move the input cursor to a different input object on the screen.

### 5) Keys to move the cursor within an input object (One-tap type only)

Not available to GT21.

### 6) [AC] key

Deletes the input character string.

### 7) [DEL] key

Deletes a character to the right of the cursor.

### 8) [Enter] key (Enter key)

Writes the input characters to the device.

### 9) Keys for switching character types sequentially

Switches the character types of the key window sequentially one by one.

### 10) Arrow key (Multi-tap type only)

In the multi-tap key window, each character key bears multiple letters.

Repeatedly touching the same character key cycles through the letters on the key.

To enter the letters on a character key in succession, use an arrow key.

Example) when entering "TU"

Touch the [TUV] key once, touch the [→] key once, and then touch the [TUV] key twice.

### 11) [ESC] key (GT2104-P and GT2103-P only)

Closes the key window.

## (6) Specifications of the user-created key window

The user-created key window is a window for inputting numerical values and characters which is created by the user. Assign the window screen created by the user as a key window.

### (a) Available screen size and number of screens

For the specifications of the user-created key window, refer to the following.

⇒ 1.2.3 ■ 2 Screen specifications

### (b) Key window types

The available key window types are the key window for decimal numbers, key window for hexadecimal numbers, and key window for character strings (ASCII, S-JIS).

GOT	Displayed key window
GT27, GT25, GT23	Key window for inputting hexadecimal values While GS450.b6 is on, the key window for inputting binary values is displayed. While GS450.b7 is on, the key window for inputting octal values is displayed.
GT21	For binary input on the numerical input: Key window for inputting binary values For octal input on the numerical input: Key window for inputting octal values

### (c) Available figures and objects

You can place all the figures and objects placeable on the window screen.

Some restrictions are placed on the use of the following objects.

Object	Restriction
Numerical input, text input	The input operation is not available. The following shows applicable fonts. <ul style="list-style-type: none"><li>• 16-dot Standard (Gothic)</li><li>• 16-dot Standard (Mincho)</li></ul> The font size can be specified by selecting an integral multiple (1 or 2) for width and height each.
Key Window Object	One object can be placed on one screen. The following shows applicable fonts. <ul style="list-style-type: none"><li>• 16dot Standard Gothic]</li><li>• 16dot Standard Mincho]</li></ul> The font size can be specified by selecting an integral multiple (1 or 2) for width and height each.

### (d) Superimposition of objects and layer setting

The superimposition of objects is available on the key window

The layer setting is also available.

### (e) Setting of the screen script and trigger action

The screen scripts and trigger actions set for key windows are not executed.

### (f) Placing key window objects

For the settings of the key window object, refer to the following.

- ⇒ 8.31.4 [Input Value Area Setting] dialog
- 8.31.5 [Input Range Area Setting] dialog
- 8.31.6 [Input Maximum Value Area Setting] dialog
- 8.31.7 [Input Minimum Value Area Setting] dialog
- 8.31.8 [Previous Value Area Setting] dialog

## (7) Common specifications of the standard key window and user-created key window

### (a) Display position of the key window

The key window is displayed on the bottom right of the input object by default.

For how to set the window position, refer to the following.

⇒ 8.30.2 How to use the window position

### (b) Key window action

You can set the following key window actions for each project or screen.

- Actions of the cursor and key window when the operating condition is satisfied, the operating condition is not satisfied, and the screen is switched
- Display method of the cursor input area
- Display method and clear method of the key window

For how to configure the setting for each project, refer to the following.

⇒ 5.2.4 ■ 4 (2) [Advanced Setting] tab

For how to configure the setting for each screen, refer to the following.

⇒ 2.7.1 ■ 3 [Key Window Advanced Setting] tab

## 2 How to use key windows

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) How to display key windows

The key window appears when you touch an object such as numerical input and text input, which requires data input. The input area format determines the key window type.

The key window for inputting binary or octal values is controllable with GS450. (Not applicable to GT21)

→ 5.2.4 ■ 1 (1) Specifications of the standard key window

5.2.4 ■ 1 (6) Specifications of the user-created key window

You can change the type of the key window to be displayed for each project or screen.

Create multiple key windows and set an appropriate key window for each screen.

For the settings of the key window displayed for each project, refer to the following.

→ 5.2.4 ■ 4 (2) [Advanced Setting] tab

For the settings of the key window displayed for each screen, refer to the following.

→ 2.7.1 ■ 3 [Key Window Advanced Setting] tab

### (2) How to operate key windows

The following shows the basic operations.

**Step 1** Touch an object to which data is to be input.

**Step 2** The key window appears. Input a numerical value or character string.

Then, touch the [Enter] button to write the numerical value or character string to the device.

**Step 3** The input data is applied to the object and the key window closes.

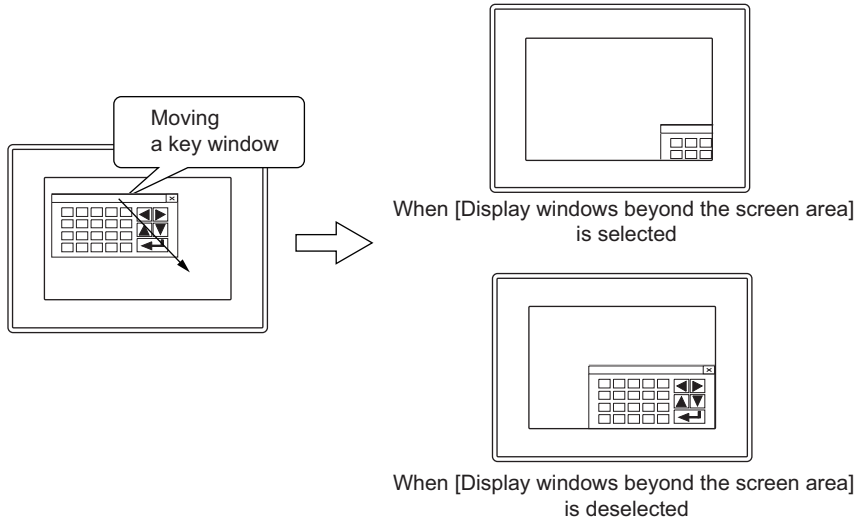

**(3) Displaying a key window off-screen**

Not available to GT21.

To display a key window off the GOT screen, select [Display windows beyond the screen area] in the [Screen Switching/Window] dialog.

The key window can be displayed off the right side or the bottom of the screen.

→5.2.1 ■ 5 [Screen Switching/Window]

**(4) How to move key windows**

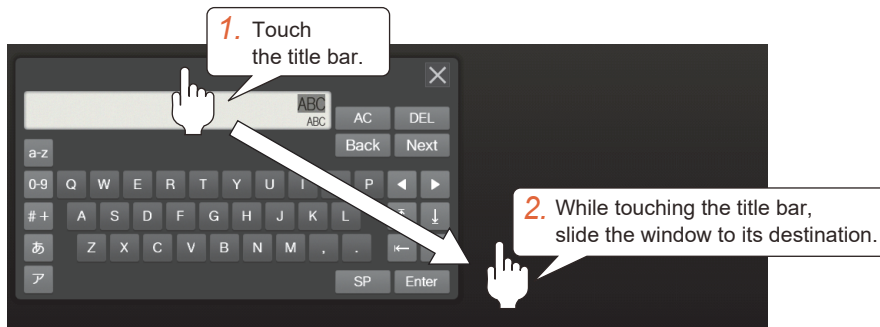

**(a) Moving the window with touch operations**

Touch the title bar of a key window, and then touch the position to move the window to within three seconds.

**(b) Moving the window with a slide operation**

While touching the title bar of a key window, slide the window to its destination.

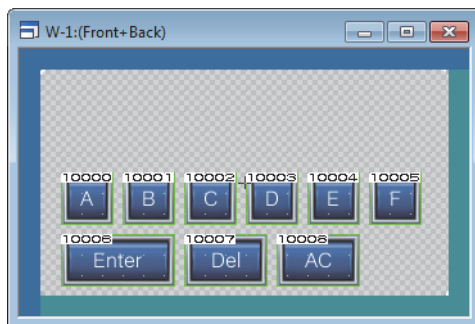

**(5) How to create a user-created key window**

**(a) Outline procedure of creation**

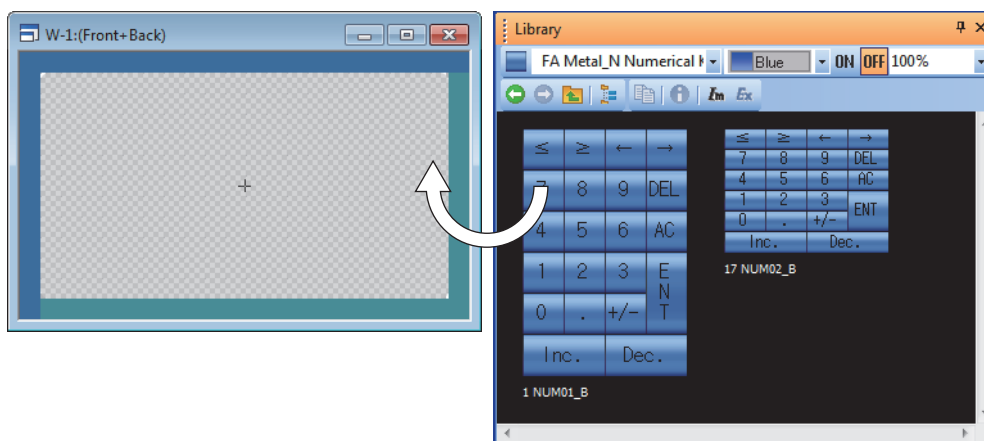

**Step 1** Select [Screen] → [New] → [Window Screen...] from the menu to create a window screen.

→2.5.1 ■ 2 Creating a window screen

**Step 2** According to the application of the key window, place key code switches to which key codes are set, key window objects, and other objects and figures.

You can create a key window easily by using the buttons for numerical input and text input which are registered in the library.

Various types of touch switches are registered in the library.

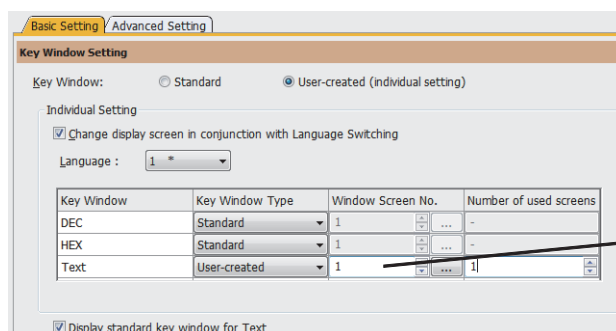

For how to use the library, refer to the following.

→ 8.1.2 How to use the library

**Step 3** Configure the setting to use the created window screen as a key window.

As appropriate, set also how to display the key window and the action of the cursor.

→ 5.2.4 ■ 4 [Key Window]

Select a window screen used as a key window.

**Step 4** To display the input value and input range, configure the settings such as the display format and display position.

→ 8.31 Placing an Object to Display the Input Information

**Step 5** Check the display image on GT Designer3.

⇒2.9.1 Displaying a preview

### (b) Buzzer setting

You can set whether to sound the buzzer when moving the window on GT Designer3 or in the GOT utility.

For the setting on GT Designer3, refer to the following.

⇒5.3.3 ■ 2 [Operation Setting/Utility Call Key]

For the setting on the GOT utility, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

## ■ 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) When no cursor is displayed at an input target object

To input a value using key windows, a cursor must be displayed at the input target object.

If no cursor is displayed at the input target object when a key window is displayed, note the following precautions.

- Input values, valid input range, and previous values are not displayed on the displayed key window.
- Even if the operating condition which has been satisfied goes to be unsatisfied while a key window is displayed, the key window being displayed is not switched to another key window.

Even if the operating conditions of all the input objects go to be not satisfied, the key window remains displayed.

### (2) Setting to close the key window whose title bar is hidden

When [Display the title bar on the user-created key window] is deselected in the [Display Detail Setting] dialog, you cannot close the key window with the [X] button because the button is hidden.

Configure one of the following settings to close the key window.

- Place a key code switch for which [key Code Type] is set to [Numerical/Text Input] and [Action] is set to [Cancel].
- Select [Clear the key window and the cursor] for [Defined key action] in the [Environmental Setting] window ([Advanced Setting] tab).

## ■ 4 [Key Window]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

On this window, set how to display the key window for each project.

Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display this window.

⇒5.2.4 ■ 4 (1) [Basic] tab

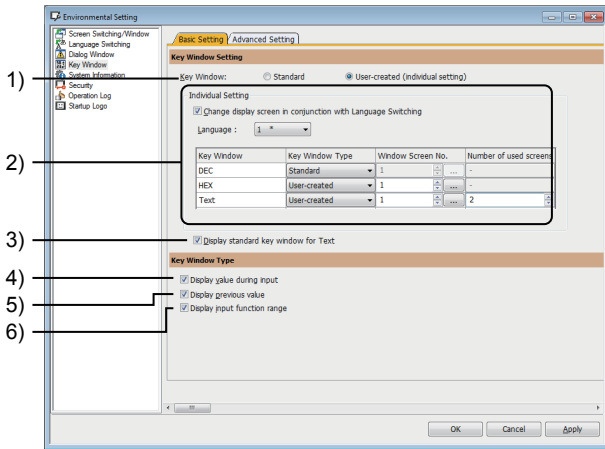

5.2.4 ■ 4 (2) [Advanced Setting] tab

For how to display the key window for each screen, refer to the following.

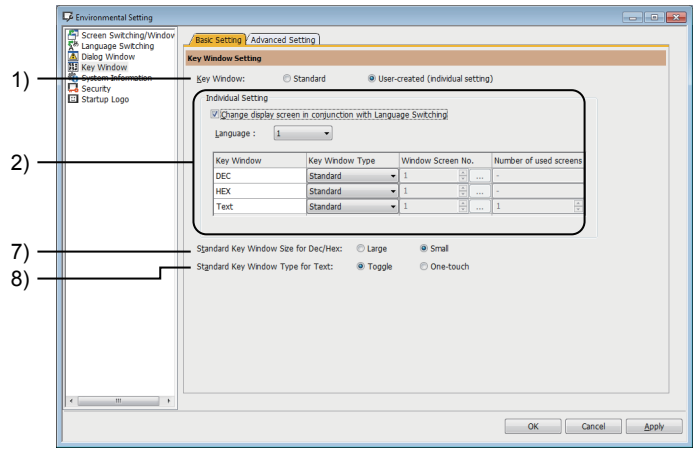

- 2.7.1 Property of base screens
- 2.7.2 Properties of window screens

(1) [Basic] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For GT27, GT25, GT23, GT21  
(excluding GT2105-Q), and GT SoftGOT2000

For GT2105-Q

1) [Key Window]

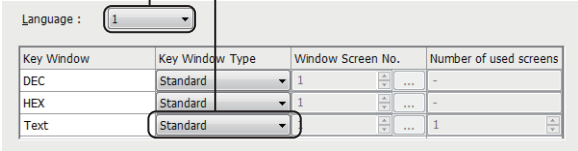

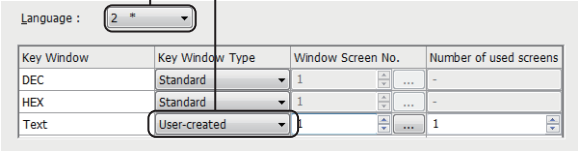

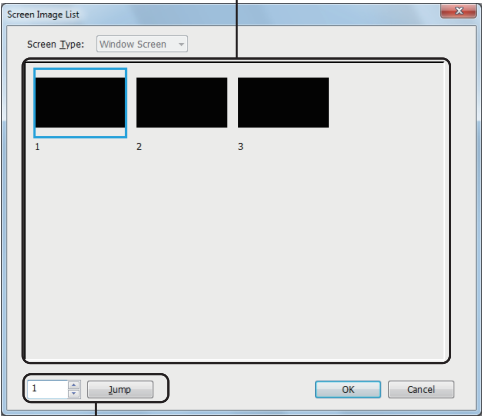

Select the type of a key window to be used.  
The following shows the items to be selected.

- [Standard]  
Uses the standard key window pre-installed in the GOT.
- [User-created (individual setting)]  
Uses the standard key window or the user-created key window.  
Set the key window to be used in [Individual Setting].

2) [Individual Setting]

Set the key window to be used for each input target.

Item	Description
[Change display screen in conjunction with Language Switching]	Changes the key windows to be used in conjunction with the value of the language switching device.

Item	Description
[Language]	<p>Select the value of the language switching device. The setting range is [1] to [30].            →5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])            For each value of the language switching device, you can set a key window to be used. If you select [User-created] in [Key window type], [*] is added to the value of the selected range. Example)</p> <ul style="list-style-type: none"> <li>• If the value of the language switching device is 1, the standard key window is used for text input.</li> <li>• If the value of the language switching device is 2, the user-created key window is used for text input.</li> </ul> <p>Select [1] for [Language] and select [Standard] for [Key Window Type] in [Text].</p>  <p>Select [2] for [Language] and select [User-created] for [Key Window Type] in [Text].</p> 
[Key Window...]	The use of each key window
[Key Window Type]	<p>Select the type of key windows according to their uses. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Standard] Uses the standard key window.</li> <li>• [User-created] Uses the created window screen as a key window. Set the window screen to be used in [Window Screen No.].</li> </ul>
[Window Screen No.]	<p>If you select [User-created] in [Key Window Type], set the window screen number to be displayed as a key window. The setting range is [1] to [32767]. Click the [...] button to display the [Screen Image List] dialog. You can check the image on the screen when selecting a window screen.</p> <p style="text-align: center;">Screen image list</p>  <p style="text-align: center;">Jump</p> <ul style="list-style-type: none"> <li>• <b>[Screen Name]</b> Displays the screen type.</li> <li>• <b>Screen image list</b> Displays screen images.</li> <li>• <b>Jump</b> Specify a screen number and click the [Jump] button to select the screen in the screen image list.</li> </ul>

Item	Description
[Number of used screens]	<p>This can be set only to [Text]. Set the number of key windows used for text input. With the window screen set in [Window Screen No.] as the first on the list, window screens are used for the set number as key windows. To switch key windows, arrange key code switches to which the following operations are set.</p> <ul style="list-style-type: none"> <li>• [Switch window screens for ASCII (to the next)]</li> <li>• [Switch window screens for ASCII (to the previous)]</li> <li>• [Switch window screens for ASCII (screen no. specification)]</li> </ul> <p>→8.2.11 [Key Code Switch] dialog</p>

### 3) [Display standard key window for Text]

Not available to GT21.

Uses the standard key window for text input.

### 4) [Display value during input]

Not available to GT21.

Displays the value being input in the key window.

To display the value in the user-created key window, arrange the input value area setting on the window screen.

→8.31 Placing an Object to Display the Input Information

### 5) [Display previous value]

Not available to GT21.

Displays the previous value in the key window.

To display the previous value in the user-created key window, arrange the previous value area setting on the window screen.

→8.31 Placing an Object to Display the Input Information

### 6) [Display input function range]

Not available to GT21.

Displays the valid input range in the key window.

To display the valid input range in the user-created key window, arrange the input range area setting on the window screen.

→8.31 Placing an Object to Display the Input Information

### 7) [Standard Key Window Size for Dec/Hex]

Only available to GT2105-Q.

Select the size of the key window.

The following shows the setting range.

- [Large]
- [Small]

### 8) [Standard Key Window Type for Text]

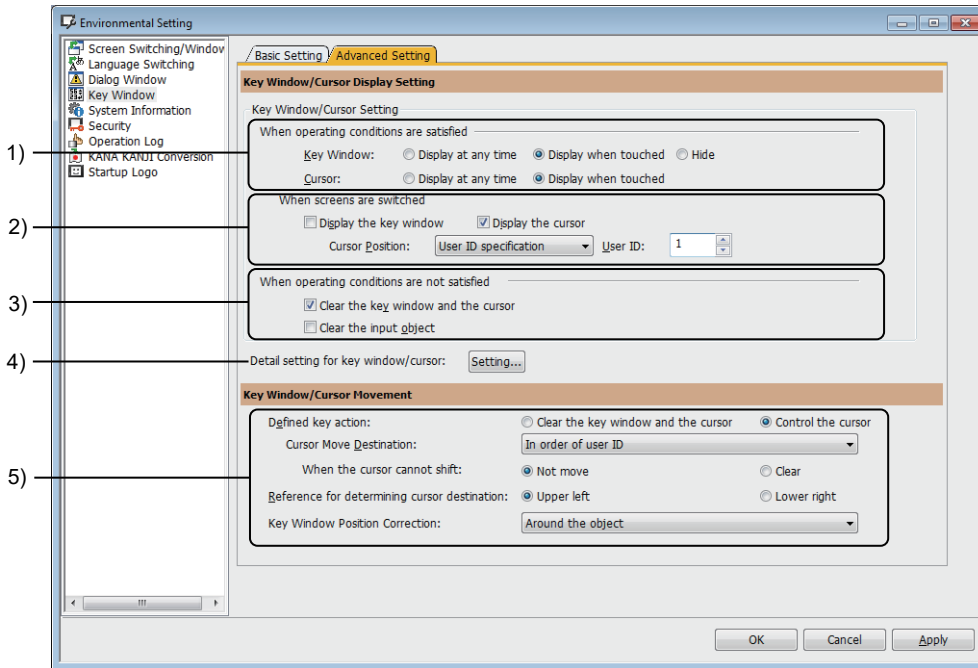

Only available to GT2105-Q.

Select the type of the key window.

The following shows the setting range.

- [Toggle]
- [One-touch]

(2) [Advanced Setting] tab

1) [When operating conditions are satisfied]

Configure the display settings of the key window and cursor for when the operating conditions of the objects for input are satisfied.

Item	Description
[Key Window]	Configure the display settings of the key window for when the operating conditions of the objects for input are satisfied. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Display at any time] (Not available to GT21.)</li> <li>• [Display when touched]</li> <li>• [Hide]</li> </ul>
[Cursor] (Not available to GT21.)	Configure the display settings of the cursor for when the operating conditions of the object for input are satisfied. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Display at any time]</li> <li>• [Display when touched]</li> </ul>

2) [When screens are switched]

Configure the display settings of the key window and cursor to switch screens for when the operating conditions of the object for input are satisfied.

Item	Description
[Display the key window]	Displays a key window when the screen is switched.
[Display the cursor]	Displays a cursor when the screen is switched. Set the position to display the cursor in [Cursor Position].
[Cursor Position]	Select the position to display the cursor when the screen is switched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left] Displays the cursor at the object nearest to the upper left corner of the screen.</li> <li>• [User ID minimum] Displays the cursor at the object with the smallest user ID.</li> <li>• [User ID specification] Displays the cursor at the object with the specified user ID. Set the user ID of the object on which the cursor is displayed in [User ID].</li> </ul>
[User ID]	Sets the user ID of the object on which the cursor is displayed. The setting range is [1] to [65535].

3) [When operating conditions are not satisfied]

Not available to GT21.

Configure the display settings of the key window and cursor for when the operating conditions of the objects for

input are not satisfied.

Item	Description
[Clear the key window and the cursor]	Deletes the key window and cursor when the operating conditions of the objects for input are not satisfied.
[Clear the input object]	Deletes the key window, the cursor, and the objects for input when the operating conditions of the objects for input are not satisfied.

#### 4) [Detail setting for key window/cursor]

Click the [Setting] button to display the [Display Detail Setting] dialog.

##### • [Cursor Type]

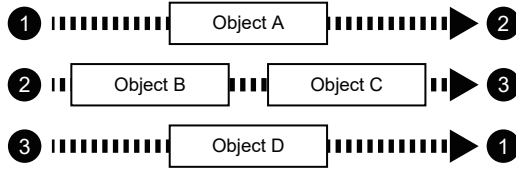

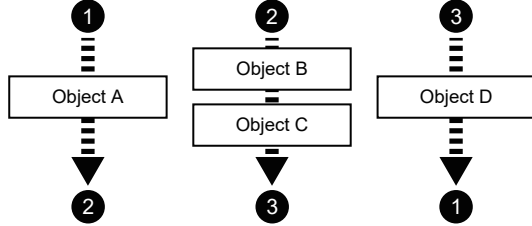

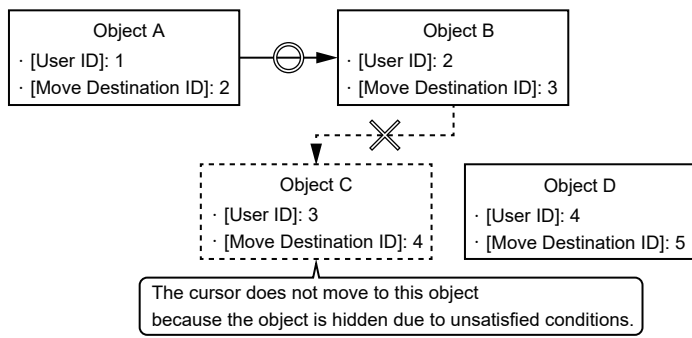

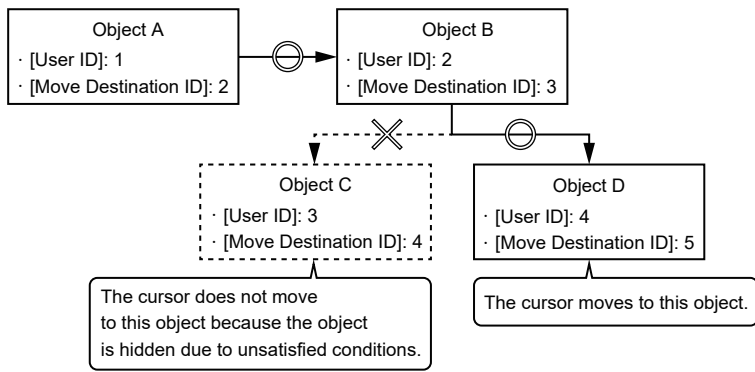

Select the action of the cursor to be displayed at the input area.

- [1-character blink]
  - Blinks the area for one character in the input area.
- [Highlight all + 1-character blink]
  - Highlights the characters displayed in the input area, and blinks the area for one character.
- [Display the cursor with a touch on the Enter/arrow key when the cursor is hidden]
  - Not available to GT21.
  - Displays the cursor when the enter key or an arrow key is touched while the cursor is hidden.
- [Display the valid input range when an invalid value is input in Numerical Input]
  - Not available to GT21.
  - Displays the dialog indicating the valid input range when an invalid value is input in numerical input.
- [Display the input confirmation dialog when setting the function of Numerical/ASCII Input]
  - Displays the confirmation dialog when numerical values or text are input.
- [Check the input range while entering numerical values]
  - Not available to GT21.
  - Checks the range while numerical values are input.
- [Display the title bar on the user-created key window]
  - Not available to GT2104-P and GT2103-P.
  - Displays the title bar of a user-created key window.
  - For the precautions on hiding the title bar, refer to the following.
    - 5.2.4 ■ 3 (2) Setting to close the key window whose title bar is hidden

#### 5) [Key Window/Cursor Movement]

Set the action of the key window and cursor.

Item	Description
[Defined key action]	<p>Select the action of the key window and cursor when the enter key is touched. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Clear the key window and the cursor]               <ul style="list-style-type: none"> <li>Deletes the key window and cursor.</li> </ul> </li> <li>• [Control the cursor]               <ul style="list-style-type: none"> <li>Moves the cursor to the specified position.</li> <li>Select a position to move the cursor in [Cursor Move Destination].</li> </ul> </li> </ul>

Item	Description
	<p>Select a position to move the cursor.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Same operation as the right arrow key]            Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [Same operation as the down arrow key]            Moves the cursor using the specified coordinate point of the active object as a reference. Specify the reference coordinate point with [Reference for determining cursor destination]. The cursor moves as shown below.</li> </ul>  <ul style="list-style-type: none"> <li>• [In order of user ID]            Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor does not move. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul>  <ul style="list-style-type: none"> <li>• [Subsequently valid user ID] (Not available to GT21)            Moves the cursor to the object that has the same user ID number as the move destination ID number of the active object. If the destination object is hidden due to unsatisfied conditions, the cursor moves to the object specified with [Move Destination ID] of the hidden destination object. To control the cursor movement, set [User ID] and [Move Destination ID] of the relevant objects.</li> </ul>  <ul style="list-style-type: none"> <li>• [Not move]            Does not move the cursor even after the entry is confirmed.</li> </ul>

[Cursor Move Destination]

Item	Description
[When the cursor cannot shift]	This item is displayed when [Cursor Move Destination] is set to [In order of user ID] or [Subsequently valid user ID]. Select how the cursor moves when no destination object exists. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move]</li> <li>• [Clear]</li> </ul>
[Reference for determining cursor destination]	Select the standard to determine a position to move the cursor. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Upper left]</li> <li>• [Lower right]</li> </ul>
[Key Window Position Correction]	Select an action of the key window when it overlaps the input target object. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Not move] Keeps the key window displayed even if it overlaps the input target object.</li> <li>• [To the four corners of the screen] Displays the key window at one of the four corners so that it does not overlap the input target object. Displays the key window on the lower right of the screen if it overlaps the input target object wherever it is.</li> <li>• [Around the object] Displays the key window according to the position of the input target object.</li> </ul>

## ■ 5 Relevant settings

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the relevant settings other than the specific settings for the key window as required.

The following shows the functions that are available by the relevant settings.

### (1) GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information...] from the menu to display the [Environmental Setting] window.

⇒ 5.2.5 ■ 1 Specifications of the system information

5.2.5 ■ 4 [System Information]

Function	Setting item
Disabling the key input. (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]
Notifying that the input is determined. (Write device: System signal 2-1.b4)	[System Signal 2-1]
Notifying that a key window is displayed. (Write device: System signal 2-1.b11)	[System Signal 2-1]
Notifying the user ID of the numerical input to which an input is determined. (Write device)	[Numeric Value Input Number]
Notifies the key code which is set for the touched key. (Write device)	Not available to GT21. [Key Code Input]
Notifies the value before the change (32 bits). (Write device)	[Previous Numeric Value Input(32bit)]
Notifies the fixed input value (32 bits). (Write device)	[Current Numeric Value Input(32bit)]

### (2) Internal device

⇒ 12.1.3 GOT special register (GS)

Function	Setting item
Displaying the dialog for confirming the input contents when an input is fixed for numerical input and text input.	Not available to GT21. GS450.b0
Displaying the dialog for notifying that an input value is outside the range when the value is input for numerical input.	Not available to GT21. GS450.b1
Forcibly closing a key window when the input condition (the trigger condition or security level for the object) is not satisfied during a value or text input	Not available to GT21. GS450.b5
Displaying the key window for inputting binary values when the format of the numerical input is binary	Not available to GT21. GS450.b6
Displaying the key window for inputting octal values when the format of the numerical input is octal	Not available to GT21. GS450.b7

## 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

- ➔ ■ 1 Specifications of the system information
- 2 How to use the system information
- 3 Precautions
- 4 [System Information]
- 5 [Selection/Sort Setting] dialog
- 6 Relevant settings

By setting devices that store the system information, you can control the GOT operations (closing a screen, disabling key input) from a controller and notify the GOT status to a controller.

The two types of devices that store system information are shown below.

### • Read device

This device controls the GOT operations by writing values from a controller to the read device for controlling the GOT operations.

The read device is monitored at the monitoring cycle of the GOT.

The read device value needs to be held for the interval of GOT monitoring cycle or longer.

Example) Turning the GOT to screen saver mode forcibly by a controller

### • Write device

By writing a value to the write device for notifying the GOT status, the GOT notifies the GOT status itself to a controller.

The write device is updated when the GOT operation status has changed.

Example) Notifying the base screen number currently displayed on the GOT to a controller

## ■ 1 Specifications of the system information

The system information is stored in devices assigned to each system information.

### • Read device

- ➔ (1) System signal 1-1
- (2) System signal 1-2
- (3) External I/O output function/output function

### • Write device

- ➔ (4) System signal 2-1
- (5) System signal 2-2
- (6) System signal 2-3

- (7) Numeric value input number
- (8) Previous numeric value input
- (9) Current numeric value input
- (10) GOT error code
- (11) GOT error code 2
- (12) Printing report screen number
- (13) Extended drive information
- (14) Drive Empty Capacity Information
- (15) On-screen base screen number
- (16) On-screen window 1 to 5 screen number
- (17) Current cursor display object ID
- (18) Previous cursor display object ID
- (19) Current cursor display user ID
- (20) Previous cursor display user ID
- (21) Key code input
- (22) External I/O function/input information 1
- (23) External I/O function/input information 2

### (1) System signal 1-1

This signal controls the GOT from a controller.

The following shows the control details of each bit.

Bit number	Signal name	Description	Supported models
b0	Automatic Screen Saver Disable signal	Turning on this signal disables the screen saver function.	GT27 GT25 GT23
b1	Forced Screen Saver Enable signal	Turning on this signal forcibly turns the GOT into the screen saver mode. Turning off this signal displays the screen again.	GT21 GS SoftGOT2000
b2	Forced Screen Saver Touch-Cancel signal	Turning on this signal cancels the screen saver when the screen is touched even during forced screen saving. The operation condition of the Forced Screen Saver Enable signal (System signal 1-1.b1) varies according to on or off of this signal. <ul style="list-style-type: none"> <li>• ON: Operates at the rising.</li> <li>• OFF: Operates during on.</li> </ul>	
b3	Key Code Read Complete signal	Turning on this signal notifies that the reading of input key code has completed to the GOT. Turning on this signal turns off the Key Input signal (System signal 2-1.b3). →(4) System signal 2-1	
b4	Numeric Value Input Read Complete signal	Turning on this signal notifies the GOT that reading the input value of a numerical input object has completed. Turning on this signal turns off the Numeric Value Input signal (System signal 2-1.b4). To use this signal for a text input object, configure one of the following settings. <ul style="list-style-type: none"> <li>• Selecting [Output object ID of Text Input to the system information device] for the [Environmental Setting] window ([System Information])</li> <li>• Turning on GS450.b2</li> </ul> →(4) System signal 2-1 5.2.5 ■ 4 [System Information] 12.1.3 GOT special register (GS)	GT27 GT25 GT23 GT21 GS SoftGOT2000
		Turning on this signal notifies that the reading of input values for the numerical input and text input has completed to the GOT. Turning on this signal turns off the Numeric Value Input signal (System signal 2-1.b4).	GT27 GT25 GT23 GT21 GS SoftGOT2000
b5	Barcode Input Disable signal (CH8)	Turning on this signal disables the barcode function for the channel No. 8.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b6	External Device I/O Complete signal (CH8)	Turning on this signal notifies the GOT that reading data from the device, which the barcode or the RFID input data is stored in, is completed. Turning on this signal turns off the External Device I/O signal (CH8) (System signal 2-1.b6). →(4) System signal 2-1	GT27 GT25 GT23 GT21 GS SoftGOT2000

Bit number	Signal name	Description	Supported models
b7	Use prohibited	-	GT27 GT25 GT23 GT21 GS SoftGOT2000
b8	Buzzer Three-shot Output signal	Turning on this signal sounds the buzzer three times. Set the buzzer length in the utility. The buzzer is sounded even when [Buzzer] is set to [None] in the [GOT Setup] window ([Operation Setting/Utility Call Key]). →5.3.1 ■ 2 [Display Setting/Language Setting]	GT27 GT25 GT23 GT21 GS SoftGOT2000
b9	Key-in Disable signal	Turning on this signal disables all key-input.	SoftGOT2000
b10	Hard Copy Setting Validate signal	Turning on this signal enables the hard copy output.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b11	-	Use prohibited	GT27 GT25 GT23 GT21 GS SoftGOT2000
b12	Hard Copy White/Black Reverse signal	Turning on this signal reverses black and white of the monitor screen. Reversing black and white is enabled only when the output destination is a printer.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b13	GOT Error Reset signal	Turning on this signal processes the followings. • Storing 0 to the GOT error code (Write device) • Turning off the GOT Error Detection signal (System signal 2-1.b13) • Clearing system alarm messages →(4) System signal 2-1 (10) GOT error code	GT27 GT25 GT23 GT21 GS SoftGOT2000
b14	Buzzer Output signal	While turning on this signal, the buzzer is sounded. Set the buzzer length in the utility. The buzzer is sounded even when [Buzzer] is set to [None] in the [GOT Setup] window ([Operation Setting/Utility Call Key]). →(4) System signal 2-1	GT27 GT25 GT23 GT21 GS SoftGOT2000
b15	Buzzer One-shot Output signal	Turning on this signal sounds the buzzer once. Set the buzzer length in the utility. The buzzer is sounded even when [Buzzer] is set to [None] in the [GOT Setup] window ([Operation Setting/Utility Call Key]).	SoftGOT2000

### (a) Screen control at the screen saver mode

The following shows the priority for the screen control at the screen saver mode.

Priority	System information and function	System information condition	Screen saving status
High  Low	Forced Screen Saver Touch-Cancel signal (System signal 1-1.b2)	ON	Screen saver disabled
	Forced Screen Saver Enable signal (System signal 1-1.b1)	ON	Screen saver enabled
	Automatic Screen Saver Disable signal (System signal 1-1.b0)	ON	Screen saver disabled
	Screen saver function by the utility setting	-	Screen saver enabled
	Displaying user-created screens or the utility screen	-	Screen saver disabled

### (b) Relation between screen saver function and Key-in Disable signal

The relation between the screen saver function and Key-in Disable signal is as follows.

Forced Screen Saver Touch-Cancel signal (System signal 1-1.b2)	Forced Screen Saver Enable signal (System signal 1-1.b1)	Key-in Disable signal (System signal 1-1.b9)	Screen saver function by the utility setting	Screen status
ON	ON	ON	ON, OFF	The GOT enters the screen saver mode. Touching the screen cancels the screen saver mode. The screen does not respond to a touch operation even after the screen saver mode has been canceled.
		OFF		The GOT enters the screen saver mode. Touching the screen cancels the screen saver mode. The screen responds to a touch operation after the screen saver mode has been canceled.
		ON, OFF		The GOT enters the screen saver mode. Touching the screen does not cancel the screen saver mode.
OFF	OFF	ON	ON	The GOT does not enter the screen saver mode. The screen does not respond to a touch operation.
		OFF	OFF	The GOT enters the screen saver mode. Touching the screen cancels the screen saver mode. The screen responds to a touch operation after the screen saver mode has been canceled.
			OFF	The GOT does not enter the screen saver mode. The screen responds to a touch operation.

## (2) System signal 1-2

This signal controls the GOT from a controller.

The following shows the control details of each bit.

Bit number	Signal name	Description	Supported models
b0	File Access Error Reset signal	Turning on this signal resets all the File Access Error signals (System signal 2-2.b7 to b9 and extended drive information.b2, b5, and b8) in the drive A, B, D, E, F, and G. While this signal is on, the File Access Error Reset signal does not turn on. →(5) System signal 2-2 (13) Extended drive information	GT27 GT25 GT23 GT21 GS SoftGOT2000
b1	RFID Request signal (CH8)	By turning on this signal, the GOT requests to read the data with the channel No. 8.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b2	Barcode Input Disable signal (CH5)	Turning on this signal disables the barcode function and the RFID function for the channel No. 5.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b3	External Device I/O Complete signal (CH5)	Turning on this signal turns off the External Device I/O signal (CH5) (System signal 2-3.b0). →(6) System signal 2-3	GT27 GT25 GT23 GT21 GS SoftGOT2000
b4	RFID Request signal (CH5)	By turning on this signal, the GOT requests to read the data with the channel No. 5.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b5	Barcode Input Disable signal (CH6)	Turning on this signal disables the barcode function for the channel No. 6.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b6	External Device I/O Complete signal (CH6)	Turning on this signal turns off the External Device I/O signal (CH6) (System signal 2-3.b1). →(6) System signal 2-3	GT27 GT25 GT23 GT21 GS SoftGOT2000
b7	RFID Request signal (CH6)	By turning on this signal, the GOT requests to read the data with the channel No. 6.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b8	Barcode Input Disable signal (CH7)	Turning on this signal disables the barcode function for the channel No. 7.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b9	External Device I/O Complete signal (CH7)	Turning on this signal turns off the External Device I/O signal (CH7) (System signal 2-3.b2). →(6) System signal 2-3	GT27 GT25 GT23 GT21 GS SoftGOT2000
b10	RFID Request signal (CH7)	By turning on this signal, the GOT requests to read the data with the channel No. 7.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Bit number	Signal name	Description	Supported models
b11	Enable Serial RFID Control During External Authentication signal	When this bit is turned on, the operator authentication data read by an RFID controller (serial connection) can be saved into devices.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b12 to b14	-	Use prohibited	GT27 GT25 GT23 GT21 GS SoftGOT2000
b15	Print Abort signal	<p>Turning on this signal aborts printing when this signal rises. In response to the abort of printing, the GOT turns off the Print Output signal (System signal 2-2.b15). The user must turn off this signal after confirming that the Print Output signal (System signal 2-2.b15) is turned off.</p> <p>→(5) System signal 2-2</p>	GT27 GT25 GT23 GT21 GS SoftGOT2000

### (3) External I/O output function/output function

Functions for each signal differ depending on the GOT used.

#### (a) GT27, GT25-S, and GT25-V

GT2505-V is excluded.

Use the external I/O output function for the external output.

The following shows the control details of each bit.

Bit number	Signal name	Description
b0 to b15	Output signal Y0 to YF	Write the information for outputting to the external device, such as a lamp or relay. These signals are enabled only when an external I/O unit (extension unit) is used.

#### (b) GT25HS-V

Bit number	Signal name	Description
b0 to b5	Control Operation Switch LED signal	<p>Not available to GT2505HS-V.</p> <p>Turning on each bit turns on the operation switch LED corresponding to the bit.</p> <p>The following shows the correspondences between the bits and the operation switch LEDs.</p> <ul style="list-style-type: none"> <li>• b0: SW1 LED</li> <li>• b1: SW2 LED</li> <li>• b2: SW3 LED</li> <li>• b3: SW4 LED</li> <li>• b4: SW5 LED</li> <li>• b5: SW6 LED</li> </ul>
b6	Control Grip Switch LED signal	Turning on this signal turns on the grip switch LED.

#### (c) GT21-P

Use the external I/O output function for the external output.

The following shows the control details of each bit.

Bit number	Signal name	Description
b0 to b6	-	Use prohibited
b7	Control Backlight (5 Colors) signal	Turning on this signal enables the Specify Backlight Color (5 Colors) signal and the Control Backlight Blink signal.

Bit number	Signal name	Description																																				
b8 to b10	Specify Backlight Color (5 Colors) signal	<p>Controls the backlight color (5 colors).</p> <table border="1"> <thead> <tr> <th>b8</th> <th>b9</th> <th>b10</th> <th>Backlight color</th> </tr> </thead> <tbody> <tr> <td>OFF</td> <td>OFF</td> <td>OFF</td> <td>-(Not lit)</td> </tr> <tr> <td>ON</td> <td>OFF</td> <td>OFF</td> <td>White</td> </tr> <tr> <td>OFF</td> <td>ON</td> <td>OFF</td> <td>Green</td> </tr> <tr> <td>ON</td> <td>ON</td> <td>OFF</td> <td>Use prohibited</td> </tr> <tr> <td>OFF</td> <td>OFF</td> <td>ON</td> <td>Red</td> </tr> <tr> <td>ON</td> <td>OFF</td> <td>ON</td> <td>Pink</td> </tr> <tr> <td>OFF</td> <td>ON</td> <td>ON</td> <td>Orange</td> </tr> <tr> <td>ON</td> <td>ON</td> <td>ON</td> <td>Use prohibited</td> </tr> </tbody> </table>	b8	b9	b10	Backlight color	OFF	OFF	OFF	-(Not lit)	ON	OFF	OFF	White	OFF	ON	OFF	Green	ON	ON	OFF	Use prohibited	OFF	OFF	ON	Red	ON	OFF	ON	Pink	OFF	ON	ON	Orange	ON	ON	ON	Use prohibited
b8	b9	b10	Backlight color																																			
OFF	OFF	OFF	-(Not lit)

ON	OFF	White	Green																																			
OFF	ON	Red	Red																																			
ON	ON	Pink	Orange																																			

#### (4) System signal 2-1

This signal notifies various notifications from the GOT to a controller or the user.

The following shows the notification details of each bit.

Bit number	Signal name	Description	Supported models
b0	Screen Saving signal	Turns on while the GOT is in screen saver mode.	
b1	GOT Ready signal	<p>Shows the GOT status when the GOT is powered on.</p> <ul style="list-style-type: none"> <li>• ON: Normal</li> <li>• OFF: Abnormal</li> </ul> <p>If this signal does not turn on by resetting the GOT, the hardware error may occur in the GOT. Consult your local Mitsubishi service center or representative.</p>	GT27 GT25 GT23 GT21 GS SoftGOT2000
b2	-	Use prohibited	
b3	Key Input signal	<p>Shows whether the key is input or not.</p> <ul style="list-style-type: none"> <li>• ON: The key is input.</li> <li>• OFF: The key is not input.</li> </ul>	

Bit number	Signal name	Description	Supported models
b4	Numeric Value Input signal	Turns on when a value is input in the numerical input, and the value is completed. Turning on the Numeric Value Input Read Complete signal (System signal 1-1.b4) turns off this signal. →(1) System signal 1-1 To use this signal for the text input, configure any of the following settings. • Selecting [Output object ID of Text Input to the system information device] for the [Environmental Setting] window ([System Information]) • Turning on GS450.b2 This signal does not function when a value is input to the numerical input for which a user ID is not set.	GT27 GT25 GT23 GT21 GS SoftGOT2000
		Turns on when the data input to a numerical input object or a text input object is confirmed. Turning on the Numeric Value Input Read Complete signal (System signal 1-1.b4) turns off this signal. →(1) System signal 1-1 This signal functions even when data is input to the numerical input object or the text input object without a user ID number.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b5	Human Sensor Detection signal	Turns on when the human sensor detects human motion. This signal turns on for approx. 60 seconds after GOT startup due to the sensor's characteristic. Available to GT27-X and GT27-S.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b6	External Device I/O signal (CH8)	Available when the channel No. 8 is used for the barcode function. Turns on when the data read by the barcode reader is stored in the specified device.	GT27 GT25 GT23 GT21 GS SoftGOT2000
		Available when the channel No. 8 is used for the RFID function. Turns on when the data read by the RFID reader/writer is stored in the specified device when the dedicated protocol is used. Turns on when the data transfer to the RFID controller is completed when the nonprocedural protocol is used. Turns off when the External Device I/O Complete signal (CH8) (System signal 1-1.b6) turns on.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b7	Hard Copy Output signal	Turns on during an output by the hard copy function.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b8	Report Output signal	Turns on during printing by the report function.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b9	-	Use prohibited	GT27 GT25 GT23 GT21 GS SoftGOT2000
b10	Recipe Processing Signal	Turns on during recipe process (Write/Read operation).	GT27 GT25 GT23 GT21 GS SoftGOT2000
b11	Key Window Output signal	Turns on during displaying the key window.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b12	Hardcopy Sub-signal	Enabled when [Delete the file with the smallest number and create another file when the capacity of the destination is exceeded] is selected in the [Hard Copy] dialog. →9.7.6 [Hard Copy] dialog Turns on when the number of screen data files (file number) stored in a memory card by using the hard copy function is 9900 to 9999.	GT27 GT25 GT23 GT21 GS SoftGOT2000
b13	GOT Error Detection signal	Turns on when an error occurs in the GOT. When this signal is turned on, check the GOT error code and eliminate the cause. After eliminating the cause, turn on the GOT Error Reset signal (System signal 1-1.b13). →(1) System signal 1-1 (10) GOT error code (11) GOT error code 2	GT27 GT25 GT23 GT21 GS SoftGOT2000
b14	Numeric Value Error Detection signal	Turns on when the value exceeding the input range is stored in the write target device of the numerical input. (This signal is checked when screens are switched.) When no input range formula is preset to the numerical input, detection is not performed.	GT27 GT25 GT23 GT21 GS SoftGOT2000

Bit number	Signal name	Description	Supported models
b15	Printer error detection signal	Turns on when a printer error occurs during printing, such as printer power-off, cable disconnection, no paper, or paper jam.	

### (5) System signal 2-2

This signal notifies various notifications from the GOT to a controller or the user.  
The following shows the notification details of each bit.

Bit number	Signal name	Description	Supported models
b0	Drive A File Accessing signal	Turns on while a file in the drive A is open or while a folder or file is operated.	
b1	Drive B File Accessing signal	Not available to GT2505-V and GT25HS-V. Turns on while a file in drive B is open or a folder or file in drive B is manipulated.	
b2	Drive C File Accessing signal	Turns on while a file in drive C is open or a folder or file in drive C is manipulated.	
b3	-	Use prohibited	
b4	Drive A Full signal	Turns on when the available space of the drive A is less than 1k byte.	
b5	Drive B Full signal	Not available to GT2505-V and GT25HS-V. Turns on when the available space of the drive B is less than 1k byte.	
b6	-	Use prohibited	
b7	Drive A File Access Error signal	Turns on while an access error with a file in the drive A occurs.	
b8	Drive B File Access Error signal	Not available to GT2505-V and GT25HS-V. Turns on while an access error with a file in the drive B occurs.	
b9 to b10	-	Use prohibited	
b11	Cursor Displaying signal	Turns on during displaying the numerical input or text input cursor.	

Bit number	Signal name	Description	Supported models
b12	Built-in Battery Voltage Drop signal	Turns on when a voltage drop of the GOT built-in battery is detected. If a power failure occurs after this bit turns on, the battery backup data is held within the data retention period. Replace the battery immediately.	 (Except GT2103-P)
b13	-	Use prohibited	
b14	Backlight Shutoff Detection signal	Turns on when a blown backlight bulb of the GOT is detected. (Not available to GT2104-R, GT2104-P, and GT2103-P.)	
b15	Print Output signal	Turns on when the printing (printing for the hard copy function or the report function) starts. Turns off at the following timing. <ul style="list-style-type: none"> <li>• When any device that notifies printing is in progress is turned off (PictBridge-compatible printer or serial printer)</li> <li>• When the GOT receives a notification that printing is complete (Ethernet printer)</li> <li>• When the Print Abort signal (System signal 1-2.b15) is turned on</li> <li>• When the abort trigger of the report function is turned on</li> <li>• When the abort trigger of the hard copy function is turned on</li> <li>• When communication with a printer is disconnected (Ethernet printer)</li> </ul>	

## (6) System signal 2-3

This signal notifies various notifications from the GOT to a controller or the user.

The following shows the notification details of each bit.

Bit number	Signal name	Description	Supported models
b0	External Device I/O signal (CH5)	Available when the channel No. 5 is used for the barcode function. Turns on when the data read by the barcode reader is stored in the specified device.	
		Available when the channel No. 5 is used for the RFID function. Turns on when the data read by the RFID reader/writer is stored in the specified device when the dedicated protocol is used. Turns on when the data transfer to the RFID controller is completed when the nonprocedural protocol is used. Turns off when the External Device I/O Complete signal (CH6) (System signal 1-2.b3) turns on. →(2) System signal 1-2	
b1	External Device I/O signal (CH6)	Available when the channel No. 6 is used for the barcode function. Turns on when the data read by the barcode reader is stored in the specified device.	
		Available when the channel No. 6 is used for the RFID function. Turns on when the data read by the RFID reader/writer is stored in the specified device when the dedicated protocol is used. Turns on when the data transfer to the RFID controller is completed when the nonprocedural protocol is used. Turns off when the External Device I/O Complete signal (CH6) (System signal 1-2.b6) turns on. →(2) System signal 1-2	
b2	External Device I/O signal (CH7)	Available when the channel No. 7 is used for the barcode function. Turns on when the data read by the barcode reader is stored in the specified device.	
		Available when the channel No. 7 is used for the RFID function. Turns on when the data read by the RFID reader/writer is stored in the specified device when the dedicated protocol is used. Turns on when the data transfer to the RFID controller is completed when the nonprocedural protocol is used. Turns off when the External Device I/O Complete signal (CH7) (System signal 1-2.b9) turns on. →(2) System signal 1-2	
b3 to b15	b0	Use prohibited	

**(7) Numeric value input number**

GT27, GT25, GT23, and GT SoftGOT2000

This signal stores the user ID number of a numerical input object when a value input to the object is confirmed.

To use this signal for a text input object, configure one of the following settings.

- Selecting [Output object ID of Text Input to the system information device] for the [Environmental Setting] window ([System Information])
  - ➔5.2.5 ■ 4 [System Information]
- Turning on GS450.b2
  - ➔12.1.3 GOT special register (GS)

GT21

This signal stores the user ID number of a numerical input object or a text input object when the data input to the object is confirmed.

**(8) Previous numeric value input**

When a value is input in the numerical input, the value before the change (32 bits) is stored.

Only the numerical input to which the user ID is set is effective.

**(9) Current numeric value input**

The input value (32 bits) determined in the numerical input.

Only the numerical input to which the user ID is set is effective.

**(10)GOT error code**

Not available to GT21.

The error code of errors occurred in the GOT is stored.

For details of errors, refer to the following.

➔GOT2000 Series User's Manual (Utility)

**(11)GOT error code 2**

Not available to GT21.

The classification code of errors occurred in the GOT is stored.

The upper 8 bits store ASCII code G (identification code indicating a GOT error).

The lower 8 bits store values indicating a classification code.

Example) For the GOT error (G01) related to the communication and controllers, 4701h is stored.

For details of errors, refer to the following.

➔GOT2000 Series User's Manual (Utility)

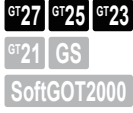

**(12)Printing report screen number**

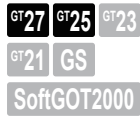

The screen number being printed is stored.

**(13)Extended drive information**

This signal notifies the usage status of the extended drive information.

The following shows the notification details of each bit.

Bit number	Signal name	Description	Description
b0	Drive E File Accessing signal	Turns on while a folder or a file in drive E is manipulated.	
b1	Drive E Full signal	Turns on when the free space of drive E is less than 1 kilobyte.	
b2	Drive E File Access Error signal	Turns on while an access error with a file in the drive E occurs.	(Only available to GT2107-W of GT21 models)
b3	Drive F File Accessing signal	Turns on while a folder or a file in drive F is manipulated.	
b4	Drive F Full signal	Turns on when the free space of drive F is less than 1 kilobyte.	
b5	Drive F File Access Error signal	Turns on while an access error with a file in the drive F occurs.	
b6	Drive G File Accessing signal	Turns on while a folder or a file in drive G is manipulated.	
b7	Drive G Full signal	Turns on when the free space of drive G is less than 1 kilobyte.	
b8	Drive G File Access Error signal	Turns on while an access error with a file in the drive G occurs.	

Bit number	Signal name	Description	Description
b9	Drive N File Accessing signal	Turns on while a folder or a file in drive N is manipulated.	
b10	Drive N Full signal	Turns on when the free space of drive N is less than 1 kilobyte.	
b11	Drive N File Access Error signal	Turns on when an error occurs while a file in drive N is being accessed.	
b12 to b15	-	Use prohibited	

#### (14) Drive Empty Capacity Information

The free space information of each drive is stored.

For GT2107-W, drives A and E are available.

For GT2105-Q, GT2104-R, GT2104-P, and GT2103-P, drive A is available only.

The value is stored in two word devices.

The unit of the stored value can be specified by using the Unit of Drive Free Space device (GS466).

→ 12.1.3 GOT special register (GS)

For the available drives by GOT model, refer to the following.

→ 1.2.7 Drive configuration of the target GOT for data transfer

#### (15) On-screen base screen number

The base screen number being displayed is stored.

The following shows the screen number to be stored.

Display status	Base screen No. 0	Data format of the screen switching device	
		BIN	BCD
Displaying other than user-created screens (such as the utility)	Not existent	-1	Stores the number of the user-created base screen previously displayed
	Existent	-2	
Screen switching	Not existent	0 <sup>*1</sup>	0 <sup>*1</sup>
	Existent	-1 <sup>*1</sup>	9999 <sup>*1*2</sup>
Displaying base screen	Not existent	1 to 32767	1 to 9999
	Existent	0 to 32767	0 to 9999

\*1 When you select [Retain the screen number of on-screen] in the [Environmental Setting] window, the screen number of the screen displayed before the screen switching is stored.

→ ■ 4 [System Information]

\*2 If the base screen number is also 9999, the GOT cannot distinguish base screen No. 9999 from the device value (9999) during screen switching.

#### (16) On-screen window 1 to 5 screen number

The screen number of the window screen being displayed is stored.

For GT21, only the screen number of window screen 1 or 2 is stored.

The following shows the screen number to be stored.

Display status	Data format of the screen switching device	
	BIN	BCD
Not displayed or during screen switching	When you select [Retain the screen number of on-screen] in the [Environmental Setting] window, the screen number of the screen displayed before the screen switching is stored. → 5.2.5 ■ 4 [System Information] For other than the above, the value set to [Screen No. of the window screen to be hidden] in the [Environmental Setting] window is stored. → 5.2.1 ■ 5 [Screen Switching/Window]	
Displaying base screen	0 to 32767	1 to 9999

#### (17) Current cursor display object ID

The object ID of the object on which the numerical input or text input is currently displayed is stored.

By setting any of the followings, 0 is stored.

- No object that requires the cursor is displayed on the displayed screen.
- A cursor is not displayed when the screen is switched.

To store 0 when the cursor is deleted, set any of the followings.

- Selecting [Clear the cursor information when deleting the cursor] in the [Environmental Setting] window ([System

Information])

- ➔5.2.5 ■ 4 [System Information]
- Turning on GS450.b3
  - ➔12.1.3 GOT special register (GS)

### (18)Previous cursor display object ID

The object ID of the object on which the numerical input or text input is previously displayed is stored.

By setting any of the followings, 0 is stored.

- No object that requires the cursor is displayed on the displayed screen.
- A cursor is not displayed when the screen is switched.

To store 0 when the cursor is deleted, set any of the followings.

- Selecting [Clear the cursor information when deleting the cursor] in the [Environmental Setting] window ([System Information])
  - ➔5.2.5 ■ 4 [System Information]
- Turning on GS450.b3
  - ➔12.1.3 GOT special register (GS)

### (19)Current cursor display user ID

GT27, GT25, GT23, and GT SoftGOT2000

This signal stores the user ID number of a numerical input object with the cursor being displayed.

To use this signal for a text input object, configure one of the following settings.

- Selecting [Output object ID of Text Input to the system information device] for the [Environmental Setting] window ([System Information])
- Turning on GS450.b2

GT21

This signal stores the user ID number of a numerical input object or a text input object with the cursor being displayed.

To store 0 when the cursor is deleted, set any of the followings.

- Selecting [Clear the cursor information when deleting the cursor] in the [Environmental Setting] window ([System Information])
  - ➔5.2.5 ■ 4 [System Information]
- Turning on GS450.b3
  - ➔12.1.3 GOT special register (GS)

### (20)Previous cursor display user ID

GT27, GT25, GT23, and GT SoftGOT2000

This signal stores the user ID number of a numerical input object with the cursor displayed previously.

To use this signal for a text input object, configure one of the following settings.

- Selecting [Output object ID of Text Input to the system information device] for the [Environmental Setting] window ([System Information])
- Turning on GS450.b2

GT21

The user ID of the object on which the numerical input or text input is previously displayed is stored.

To store 0 when the cursor is deleted, set any of the followings.

- Selecting [Clear the cursor information when deleting the cursor] in the [Environmental Setting] window ([System Information])
  - ➔5.2.5 ■ 4 [System Information]
- Turning on GS450.b3
  - ➔12.1.3 GOT special register (GS)

### (21)Key code input

When inputting values with the input key (touch switch, numerical input, or text input), the specified key code is stored.

Not available to GT21.

When a key code is stored, the Key Input signal (System signal 2-1.b3) is turned on.

- ➔(4) System signal 2-1

**(22) External I/O function/input information 1**

Use the external I/O output function for the external input.  
 Not available to GT2505-V, GT25HS-V, GT23, and GT21.  
 The following shows the notification details of each bit.

Bit number	Signal name	Description	Description
b0 to b7	Input signal X0 to X7	Input data are written. An external input can take up to three seconds to write data. For avoiding the delay time, use GOT internal devices (GB10 to GB25, GB30 to GB37, GB50 to GB57). →12.1.3 GOT special register (GS)	GT27 GT25 GT23 GT21 GS SoftGOT2000
b8	Power supply signal	Turns on when the power is not supplied to an external I/O device.	
b9 to b15	-	Use prohibited	GT27 GT25 GT23 GT21 GS SoftGOT2000

**(23) External I/O function/input information 2**

Use the external I/O output function for the external input.  
 Not available to GT2505-V, GT25HS-V, GT23, and GT21.  
 The following shows the notification details of each bit.

Bit number	Signal name	Description	Description
b0 to b7	Input signal X8 to XF	Input data are written. An external input can take up to three seconds to write data. For avoiding the delay time, use GOT internal devices (GB10 to GB25, GB30 to GB37, GB50 to GB57). →12.1.3 GOT special register (GS)	GT27 GT25 GT23 GT21 GS SoftGOT2000
b8 to b15	-	Use prohibited	GT27 GT25 GT23 GT21 GS SoftGOT2000

**2 How to use the system information**

Use the system information by assigning word devices to each signal.  
 Setting the read device and write device is required.  
 For how to set the devices, refer to the following.

→5.2.5 ■ 4 [System Information]

The following shows application examples of the system information.

**(1) Confirm the error occurred in GOT**

Not available to GT21.  
 The error code of errors occurred in the GOT can be confirmed.  
 The error codes of error code 300 to 699 are displayed.  
 For details of the error codes, refer to the following.

→GOT2000 Series User's Manual (Utility)

\*1 When multiple errors occur simultaneously, the latest error code is stored.  
 \*2 The GOT error code (write device) is not cleared automatically even if the error cause is removed.  
 Clear the error code by using the GOT Error Reset signal (System signal 1-1.b13).  
 \*3 Check that the GOT Error Detection signal (System signal 2-1.b13) turns off, then turn off the GOT Error Reset signal

(System signal 1-1.b13).

If the GOT Error Reset signal (System signal 1-1.b13) remains on, the GOT error code (write device) is reset in the next error occurrence.

## (2) Confirm the input key code by input key

Not available to GT21.

The input key code can be confirmed by input key (touch switch, numerical input, or text input).

\*1 When key input is completed, the stored key code is held.

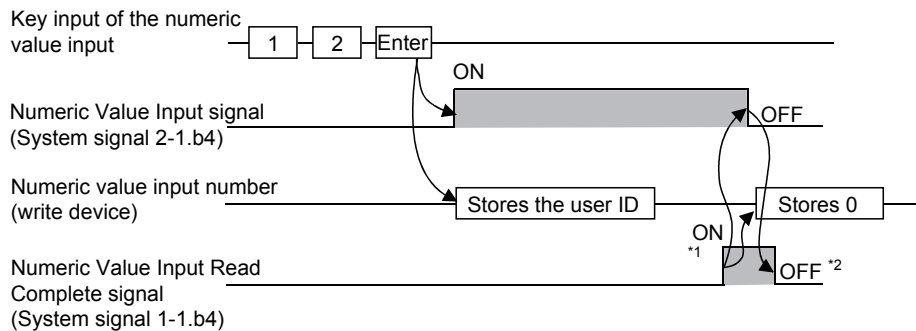

When the Key Code Read Complete signal (System signal 1-1.b3) turns on, the Input key signal (System signal 2-1.b3) turns off.

\*2 Check that the Input key signal (System signal 2-1.b3) turns off, then turn off the Key Code Read Complete signal (System signal 1-1.b3).

If the Key Code Read Complete signal (System signal 1-1.b3) remains on, the stored key code is reset at the next key input.

## (3) Confirm the numerical input determination timing

The timing of which the input value was determined can be confirmed with the user ID written in the numerical input number.

\*1 After the numeric value input determination, the stored user ID is held.

The Numeric Value Input signal is cleared when the Numeric Value Input Read Complete signal (System signal 1-1.b4) turns on.

\*2 Check that the Numeric Value Input signal (write device) turns off, then turn off the Numeric Value Input Read Complete signal (System signal 1-1.b4).

If the Numeric Value Input Read Complete signal (System signal 1-1.b4) remains on, the user ID cannot be stored or the Numeric Value Input signal cannot be turned on at the next value input and determination.

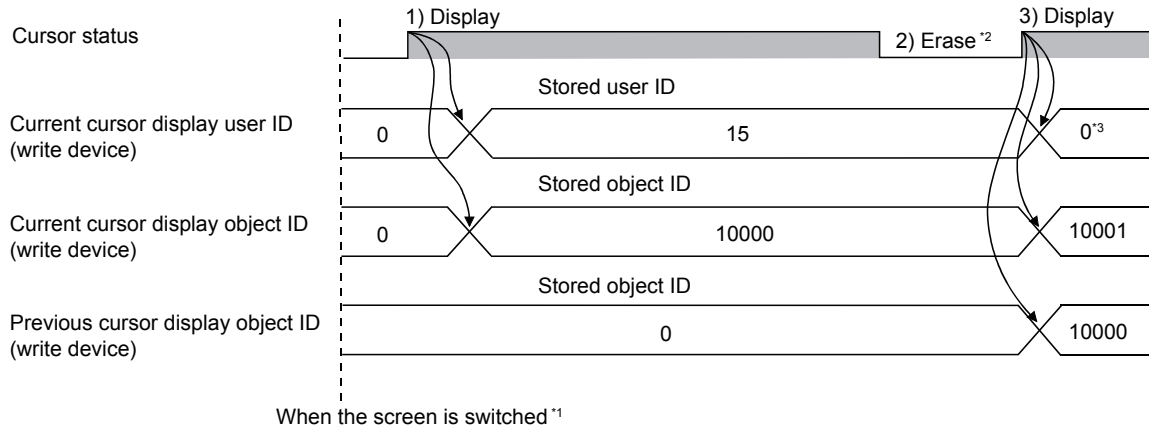

## (4) Confirm cursor's display position

The cursor's display position can be confirmed by writing the information of the object (numerical input and text input) in which a cursor is displayed to the device.

The following shows the object information types to be written.

- User ID Set any ID for an object. Set the user ID on setting dialog of each object.
- Object ID The ID is set automatically when an object is set with GT Designer3.

Example) Operation example of cursor display

\*1 If a cursor is not displayed when the screen is switched, 0 is stored.

\*2 The stored user ID and object ID are held even when a cursor is erased.

\*3 If a cursor is displayed at the object (numeric input, text input) for which a user ID is not set, the cursor position numeric value input is 0.

\*4 The current cursor display user ID and previous cursor display user ID operates with the text input when the GOT internal device GS450.b2 turns on.

### (5) Delete the stored user ID and object ID when a cursor is deleted

To store 0 when the cursor is deleted, set any of the followings.

- Selecting [Clear the cursor information when deleting the cursor] in the [Environmental Setting] window ([System Information])
  - ⇒5.2.5 ■ 4 [System Information]
- Turning on GS450.b3
  - ⇒12.1.3 GOT special register (GS)

### (6) Control screens

#### (a) Disable the screen saver function

The screen saver function, which is set with the GOT utility, is designed to turn off the screen display if the GOT is not touched within a specified time. This function prevents the screen performance from deteriorating over its operable life. By turning on the Automatic Screen Saver Disable signal in the system information, the system information function set with the utility (setup) can be disabled.

Example 1) Displaying the monitor screen erased by automatic screen saver function

Example 2) Interrupting the screen saver function from starting after the time set elapses

### (b) Erase screens

By turning on the Forced Screen Saver Enable signal, the monitor screen can be erased. While this bit is on, the monitor screen is not displayed even when the GOT screen is touched. Example) Erasing the displayed monitor screen

In addition, the monitor screen can be displayed by turning on the Forced Screen Saver Touch-Cancel signal and touching the screen to cancel the forced screen saver function started with the Forced Screen Saver Enable signal. Example) Displaying the monitor screen that is forcibly erased

### (c) Display control by human sensor

The human sensor is a function that cancels the screen saver mode without the touch operation to the GOT. By approaching the GOT, the screen saver mode can be canceled.

When no operator is not around the GOT for the time set in the human sensor OFF delay, the Human Sensor Detection signal (System signal 2-1.b5) turns off.

When the time set for the screen saving time elapses after the Human Sensor Detection signal turns off, the GOT turns to the screen saver mode.

Configure the human sensor settings (including the human sensor detection sensitivity and the human sensor OFF delay) with the GOT utility.

For the details of the utility setting, refer to the following manual.

→GOT2000 Series User's Manual (Utility)

**(d) Cancel the screen saver mode only when human movement is detected**

By disabling the GOT to cancel the screen saver mode with the touch or external operation, the GOT cancel the screen saver mode only when human movement is detected.

To control the screen saver mode, use a sequence program to link the Human Sensor Detection signal with the Automatic Screen Saver Disable signal.

With this setting, the GOT turns the screen saver mode after the human sensor OFF delay time elapses, regardless of the screen saving time.

**■ 3 Precautions**

**(1) Using a special register of the PLC**

Do not use a special register of the PLC as a read device or write device of the system information.

The special register is an internal register whose specification is defined in the PLC.

If the special register is used, the PLC or the GOT may not operate correctly.

**(2) Writing data to the system information device (write device)**

Do not write data to a device set as a write device for the system information.

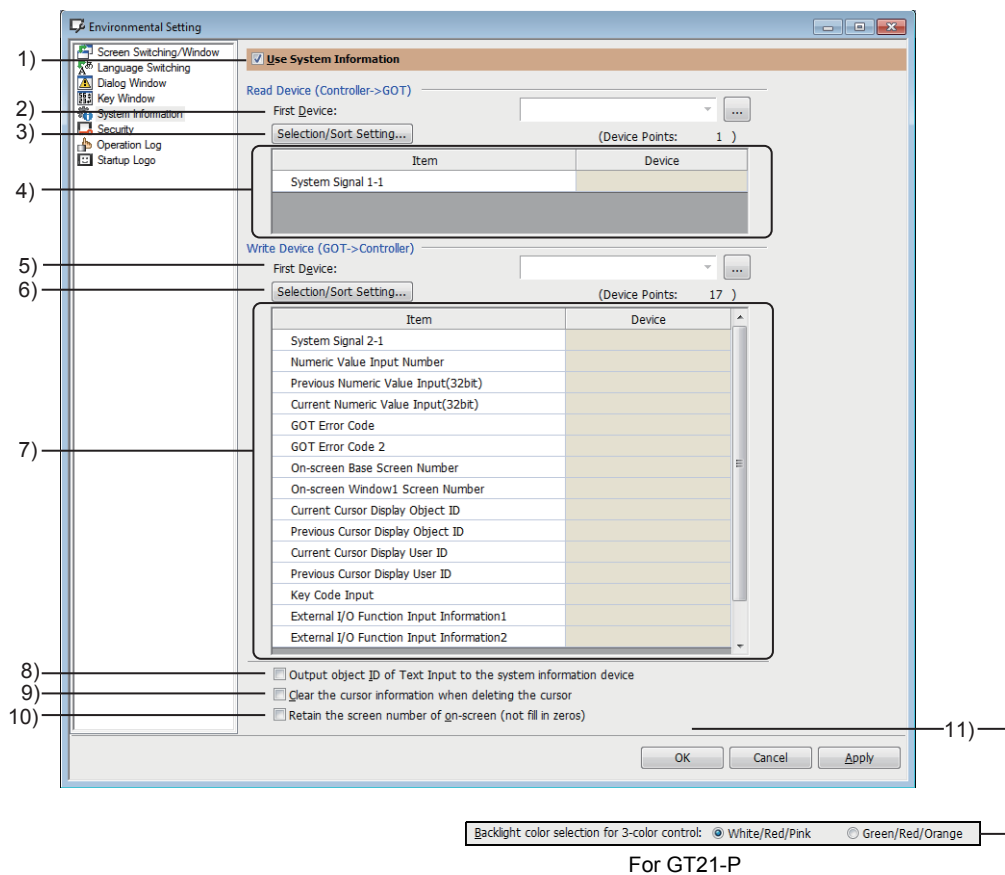

Depending on the operation on the GOT and the GOT internal status, the value of a write device may be overwritten with data retained in the GOT.

## 4 [System Information]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

With [System Information], set the validity for each system information.

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display this window.

### 1) [Use System Information]

Select this item to enable the system information.

### 2) [First Device] (Read)

Set a read device where the system information (read) is stored.

The word device is available.

Up to contiguous 3 points of devices from the set device are used for the read device.

### 3) [Select/Sort] button

Displays the [Selection/Sort Setting] dialog.

Set the system information and order of the read device to be enabled.

⇒ 5.2.5 ■ 5 [Selection/Sort Setting] dialog

### 4) Selected item list (read device)

Displays the enabled system information and the read device assigned to each system information in a list.

### 5) [First Device] (Write)

Set a write device where the system information (write) is stored.

The word device is available.

Up to contiguous 39 points of devices from the set device are used for the write device.

### 6) [Select/Sort] button

Displays the [Selection/Sort Setting] dialog.

Set the system information and order of the read device to be enabled.

⇒ 5.2.5 ■ 5 [Selection/Sort Setting] dialog

### 7) Selected item list (write device)

Displays the enabled system information and the write device assigned to each system information in a list.

### 8) [Output object ID of Text Input to the system information device]

Outputs the object ID number of a text input object to the following system information devices when data is input

to the object.

- Numeric Value Input Read Complete signal (System signal 1-1.b4)
- Numeric Value Input signal (System signal 2-1.b4)
- Numeric value input number
- Current cursor display user ID
- Previous cursor display user ID

GT27, GT25, GT23, and GT SoftGOT2000

Selecting this item outputs the object ID number of a text input object to the system information devices when data is input to the object.

GT21

Regardless of whether this item is selected, the object ID number of a numerical input object or a text input object is output to the system information devices when data is input to the object.

#### 9) [Clear the cursor information when deleting the cursor]

Stores 0 in the following devices when the cursor is deleted.

- Current cursor display object ID
- Previous cursor display object ID
- Current cursor display user ID
- Previous cursor display user ID

#### 10) [Retain the screen number of on-screen (not fill in zeros)]

Holds the following device values while the screens are switched. (0 is not stored.)

- On-screen base screen number
- On-screen window 1 screen number
- On-screen window 2 screen number
- On-screen window 3 screen number
- On-screen window 4 screen number
- On-screen window 5 screen number

#### 11) [Backlight color selection for 3-color control]

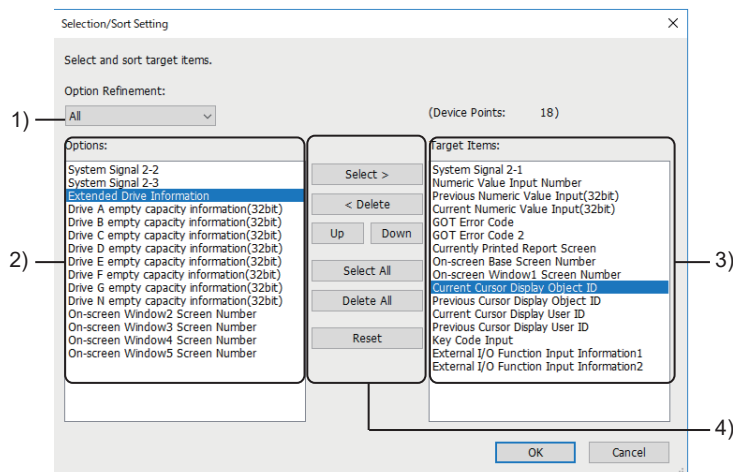

Select the backlight color of GT21-P.

- [White/Red/Pink]
- [Green/Red/Orange]

### 5 [Selection/Sort Setting] dialog

In the [Selection/Sort Setting] dialog, set targets to be enabled and the order of devices. Display this window from the [Environmental Setting] window ([System Information]).

#### 1) [Option Refinement]

Narrows down the items displayed in [Options].

This item is displayed only when a write device is set.

The following shows the items to be selected.

- [All]: Displays all items.
- [Basic Setting]: Displays only items related to the basic setting.

- [Drive Setting]: Displays the items only related to the free space of the drives.
- [Screen Setting]: Displays only items related to the base screen and the window screen.

## 2) [Options]

Items to be disabled with the system information are displayed in a list.  
Click the buttons on the window to move the item to [Target Items].

## 3) [Target Items]

Items to be enabled with the system information are displayed in a list.  
Contiguous devices are assigned to the items in the list from the top.  
By clicking the buttons on the window, items can be moved to [Options] or the order of the display can be changed.  
The position of [Drive N empty capacity information(32bit)] is fixed in the list.

## 4) Buttons

Selects, deletes, or changes the order of the display.

Item	Description
[Select] button	Moves an item selected in [Options] to [Target Items].
[Delete] button	Moves an item selected in [Target Items] to [Options].
[Up] button	Moves up an item selected in the target items.
[Down] button	Moves down an item selected in the target items.
[Select All] button	Moves all items displayed in [Options] to [Target Items].
[Delete All] button	Moves all items displayed in [Target Items] to [Options]. However, the System signal 1-1 (read device) and the System signal 2-1 (write device) are not moved.
[Reset] button	Resets [Options] and [Target Items] to the initial status.

## 6 Relevant settings

Set the relevant settings other than the specific settings for the system information as required.  
The following shows the functions that are available by the relevant settings.

### (1) Internal device

→ 12.1.3 GOT special register (GS)

Function	Setting item
Specifying the unit of the drive free space	GS466

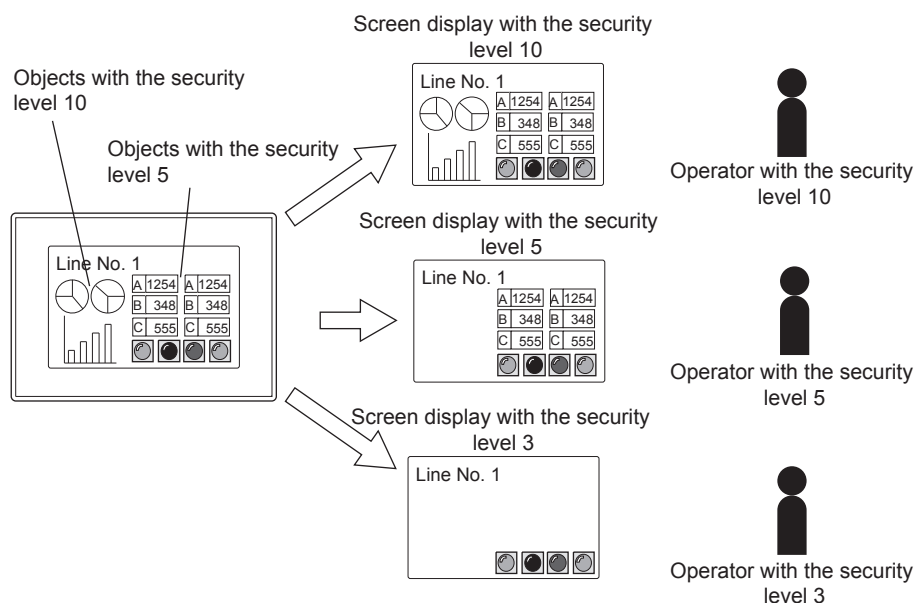

## 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

- ➔ ■ 1 Specifications of the screen security
- 2 Precautions
- 3 [Security] ([Screen Security] tab)

With the settings of the security level per object and screen, change the screen display according to the user's security level.

Select the authentication type from the level authentication and the operator authentication.

### ■ 1 Specifications of the screen security

#### (1) Operations restricted by the screen security

The screen security restricts the following operations.

- Displaying screen data and operating objects on the GOT

To restrict operations other than the above, use the following security functions.

Using multiple security functions in combination further strengthens the security.

#### (a) Function restricting project operations

Function	Description
Security key authentication	Restricts a project to be viewed on GT Designer3 or executed on the GOT by protecting the project with a security key. ➔2.12 Protecting a Project with a Security Key
Project security	Restricts unregistered users to view or edit a project by registering users with the project. Also restricts operations by screen according to the access level of each user. ➔2.13 Protecting a Project by Registering Users

#### (b) Function restricting communication with the GOT

Function	Description
Data transfer security	Restricts data transfer between the personal computer (GT Designer3) and the GOT with a password. ➔5.2.10 Configuring the security setting for transferring data ([Data Transfer Security])
IP filter	Restricts access to the GOT by Ethernet by registering IP addresses with the filtering list. ➔5.4.3 Setting the IP filter

### (c) Function restricting the GOT operations

Function	Description
Functional operation security	Restricts the display of the utility, and operations of some monitor functions. →5.2.9 Configuring the security settings for operating the utility and the monitor functions ([Functional Operation Security])

### (2) Authentication method

The following two authentication methods are available: operator authentication and level authentication. The operator authentication is performed based on the operator management information corresponding to each operator.

For the details, refer to the following.

→5.2.7 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Operator authentication))

The level authentication is performed using user-specified passwords corresponding to each security level.

For the details, refer to the following.

→5.2.8 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Level authentication))

### ■2 Precautions

When designing screens, do not set security to the initial screen appearing upon startup of the GOT. You can use the screen switching function or others to switch the initial screen to a screen with security.

### ■3 [Security] ([Screen Security] tab)

Set the security for the GOT in [Security].

Select [Common] → [GOT Environmental Setting] → [Security] from the menu to display this window.

Display the [Screen Security] tab and select the authentication method used in [Authentication Method].

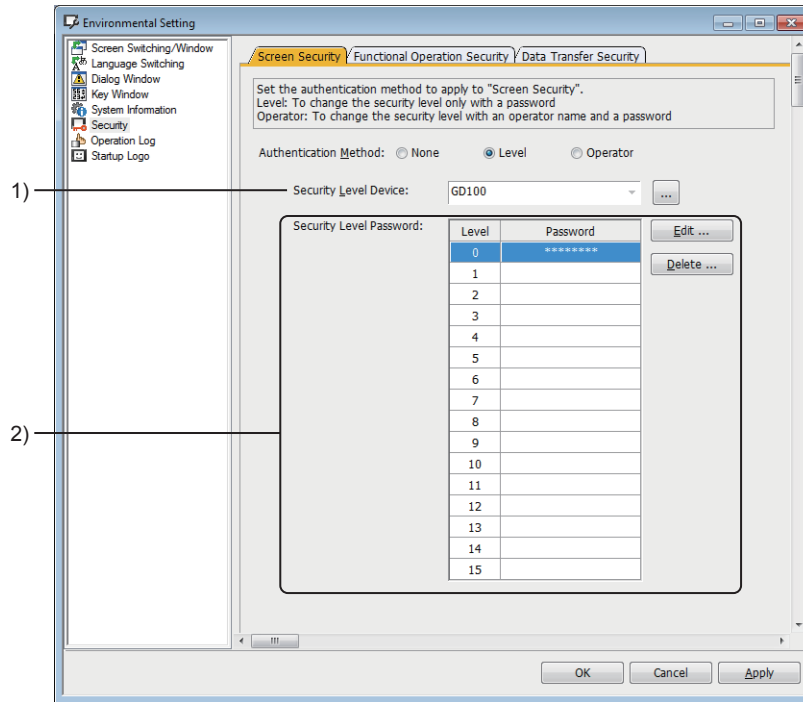

#### 1) [Authentication Method]

Select the authentication method for the screen security.

The following shows selectable items.

- [None]  
The screen security is not used.
- [Level]  
The level authentication is an authentication method with a password set for each security level.  
→ ■ 4 Level authentication
- [Operator]  
The operator authentication is an authentication method with the operator management information set for each operator.  
→ ■ 5 Operator authentication

## 4 Level authentication

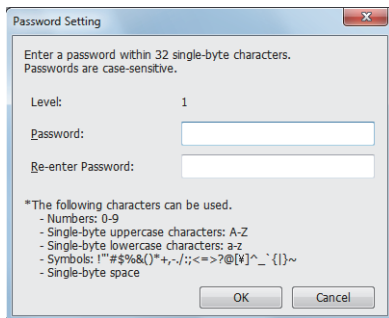

### 1) [Security Level Device]

Set the device to which the security level value of the screen displayed on the GOT is stored.  
Set the device to set a password for each security level in [Security Level Password].  
To change the security level, change the level device value from a controller.

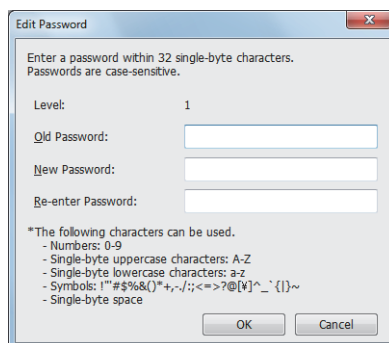

### 2) [Security Level Password]

The authentication password for each security level is displayed in a list.  
The password is displayed in [\*\*\*\*\*].  
Select the security level and click the [Edit] button. The password of the selected security level can be edited.  
When registering a new password, the [Password Setting] dialog appears.

- **[Level]**  
Displays the security level for the password.
- **[Password]**  
Set a password.
- **[Re-enter Password]**  
Input the password set in [Password] for the confirmation.

When changing the password, the [Editing password] dialog appears.

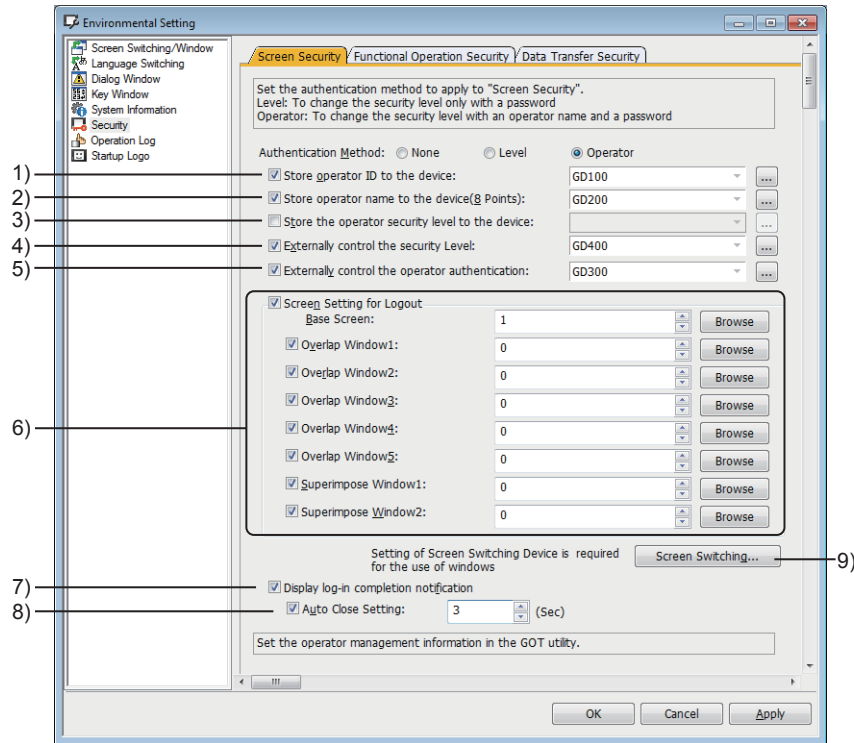

- **[Level]**  
Displays the security level for the password.
- **[Old Password]**  
Set the password currently set for the project.
- **[New Password]**  
Set a new password.
- **[Re-enter Password]**  
Input the password set in [New Password] for the confirmation.

Select the security level and click the [Delete] button. The password of the selected security level can be deleted.

When deleting the password, inputting the current password is not required.

## 5 Operator authentication

### 1) [Store operator ID to the device]

Set a device to store the operator ID of a login operator (operator ID external notification device).  
The word device and bit device specified as a word device are available.

### 2) [Store operator name to the device (8 points)]

Set a device to store the operator name of a login operator (operator name external notification device).  
The word device and bit device specified as a word device are available.  
Setting the device reserves 8 points of the word device or 128 points of the bit device.

### 3) [Store the operator security level to the device]

Set a device to store the security level of a login operator (operator level external notification device).  
The word device and bit device specified as a word device are available.

### 4) [Externally control the security level]

Set a device to change the security level of the login operator externally (security level external control device).  
The word device and bit device specified as a word device are available.  
⇒5.2.7 ■ 1 (7) Security level control from an external device

### 5) [Externally control the operator authentication]

Set a device to control the operator authentication externally (operator authentication external control device).  
The word device and bit device specified as a word device are available.  
⇒5.2.6 ■ 5 (1) (1) Operator authentication external control device

### 6) [Screen Setting for Logout]

Set a screen displayed when logging out of the GOT.  
Select each window screen to set a window screen displayed when logging out of the GOT.  
To set a window screen, set the screen switching device.  
Timing to display the set screen differs according to operation when logging out of the GOT.

- Logging out of the GOT by a touch switch (special function switch) or the automatic logout function  
After logging out of the GOT, the set screen appears.
- Logging out of the GOT by the utility  
After logging out of the GOT, the utility screen appears.  
After changing the utility screen to a user-created screen, the set screen appears.

### 7) [Display log-in completion notification]

Not available to GT21.  
Displays the login completion notification dialog when logging in the GOT.

### 8) [Auto Close Setting]

Not available to GT21.

Closes the login completion notification dialog automatically.

Set the time period between displaying the login completion notification dialog and closing the dialog.

The setting range is [1] to [60] second(s).

#### 9) [Screen Switching] button

Displays the [Screen Switching/Window] of the [Environmental Setting] window.

→5.2.1 ■ 5 [Screen Switching/Window]

### (1) Operator authentication external control device

Bit number	Signal name	Description
.b0	Forced Logout signal	Turning on this signal forcibly logs out an operator currently logging in. The Forced Logout signal operates at the signal rising. Therefore, this signal does not operate even if it is always turned on. Also, without the user login, this signal does not operate even if it is turned on.
.b1 to .b15	-	Use prohibited

#### Point

#### Forced Logout signal

##### (1) Timing to turn off the Forced Logout signal

Confirm the completion of logout before turning off the Forced logout signal (.b0).

To confirm the completion of logout, check the value of the operator ID external notification device.

When the device value is 0, logout is completed.

##### (2) Security level after the forced logout

When an operator security level becomes lower than the one set for the currently-displaying screen after the forced logout, each screen operates as follows.

- Base screen  
The login screen is displayed.
- Window screen  
The window screens (overlap windows and superimposed windows) are deleted.

## 5.2.7 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Operator authentication))

GT27 GT25 GT23 GT21 SoftGOT2000 GS

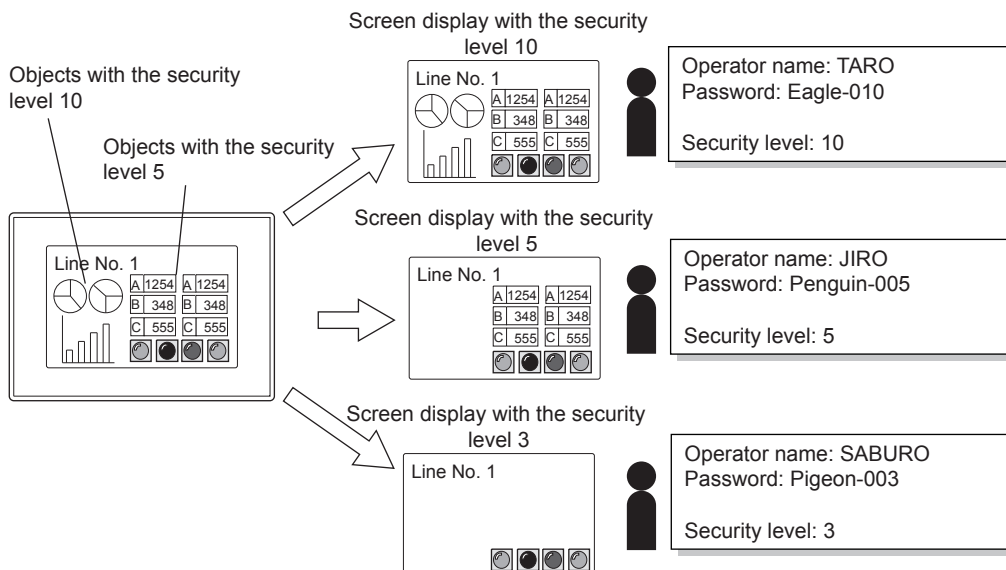

### ■ 1 Specifications of the operator authentication

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The operator authentication is performed based on the operator management information corresponding to each operator.

To record the operator login information, use the operation log function in combination.

To strengthen the security, set the automatic logout and the password expiration date.

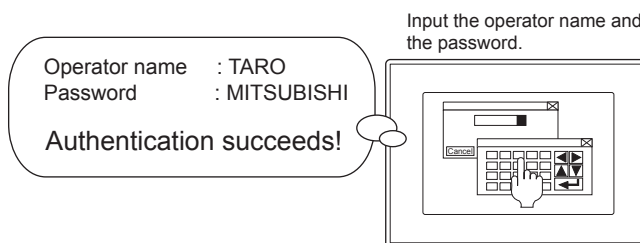

**(1) Authentication type**

The operator authentication includes the following authentication types.

**(a) Authentication with a password**

The operator is authenticated with an operator name and password that are input by the operator.

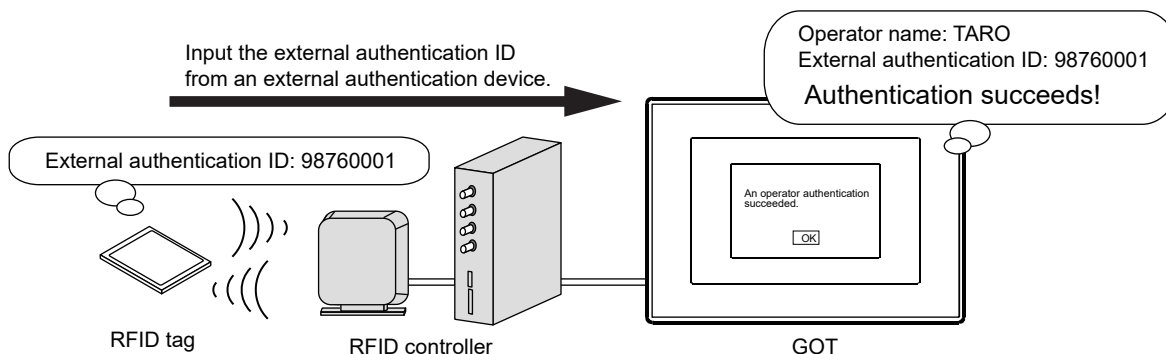

**(b) Authentication with an external authentication device**

The operator is authenticated with the external authentication ID that is input using an external authentication device. For the usable external authentication devices, refer to the following Technical News.

→List of Valid Devices Applicable for GOT2000 Series (GOT-D-0064)

Example) When using an RFID controller as an external authentication device

**(2) Operator management information**

The operator management information is the information to determine and authenticate the login operator, which includes the operator name and the password.

The following shows the number of pieces of operator management information registrable for one project.

- GT27, GT25, and GT SoftGOT2000: 1000 pieces
- GT23 and GT21: 255 pieces

Input the operator management information with the [Operator information management] screen of the utility or a personal computer.

For inputting the operator management information from the GOT utility, refer to the following.

For editing the operator management information on a personal computer, refer to the following.

⇒ ■ 4 Editing the operator management information on a personal computer

The following shows the detailed operator management information.

Item	Description
Operator name	Name to identify an operator. Up to 16 uppercase and lowercase alphabetic characters, numbers, one-byte spaces, and the symbols below are usable for an operator name. !"#\$%&'()*+,-./:;<=>@[\\]^_`{ }~ (The administrator name is fixed to [Administrator].)
Operator ID	ID number assigned to an operator. The setting range is 1 to 32766. (The administrator ID number is fixed to [-].) The maximum number of registrations depends on the GOT model. • GT27, GT25: 1000 • GT23, GT21: 255
Password	Password for the operator to log in the GOT. Up to 32 uppercase and lowercase alphabetic characters, numbers, one-byte spaces, and the symbols below are usable for a password. !"#\$%&'()*+,-./:;<=>@[\\]^_`{ }~ You are recommended to set an unpredictable password consisting of uppercase and lowercase alphabetic characters, numbers, and symbols.
External authentication ID	ID number to be input from an external authentication device when an operator is authenticated with the device. This item cannot be set for the administrator account. The setting range is 4 to 32 digits (up to 8 words) in hexadecimal. If you do not use an external authentication device, this setting is unnecessary.
Security level	Security level set for an operator. This item cannot be set for the administrator account. The setting range is [0] to [15].
Password expiration date setting	Set whether to enable or disable the password expiration date. This item cannot be set for the administrator account.
Disabling an operator account	Not available to GT21. Set whether to disable an operator account. The disabled operator account is not usable for login. (The administrator account or a sub administrator account can be disabled.)
Changing a password at the next login	Not available to GT21. Set whether to display a message prompting for a password change at the next login. The message does not appear after the password change. This setting prompts each operator to change the initial password set by the administrator.
Administrator privileges	Not available to GT21. Set whether to grant administrator privileges to an operator. An operator with administrator privileges becomes a sub administrator.

You can export the set operator management information to the data storage and import to other GOTs. By using the operation log function together at the operator authentication setting, you can store the operator's information (operator name and operator ID) as a history.

**(3) Administrator and sub administrator**

Administrator refers to the account preset in the GOT for management use only.

(Operator name: Administrator, operator ID number: -)

The administrator can register, edit, or delete the operator management information on each operator.

The administrator can also change the function setting for the operator authentication in the utility.

However, the administrator cannot log in as an operator to perform operations on the GOT.

Sub administrator refers to an operator with administrator privileges.

GT21 does not support the use of sub administrators.

The sub administrator can register, edit, or delete the operator management information on an operator having a lower security level.

The sub administrator can also change the function setting for the operator authentication in the utility.

To enable the use of sub administrators, configure the relevant setting in [Function setting] in the utility.

For the setting, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

To grant administrator privileges to an operator, set the operator management information on the operator. For the details of the operator management information, refer to the following.

⇒(2) Operator management information

To change the operator management information, function setting, or other settings with administrator privileges, the administrator password authentication is required.

This authentication is required even when a logged-in sub administrator tries to change the above settings.

The following shows the utility settings changeable by the administrator or sub administrators.

(○ : Available, ×: Not available)

Settings in the utility		Administrator	Sub administrator		
			When [Allow function setting] is selected	When [Allow function setting] is deselected	
Operator management	Registering, editing, or deleting the operator management information	○	○ *1	○ *1	
	Editing the operator management information on the administrator	○	○ *2	×	
Function setting	Settings other than the administrator setting	○	○ *3	×	
	Administrator setting	Enabling the use of sub administrators	○	×	×
		Displaying uneditable operator information	○	○ *2	×
		Allowing the function setting to be changed	○	×	×
		Security level required to change the function setting	○	○ *2	×

\*1 A sub administrator can manipulate the operator management information on an operator having a lower security level.

\*2 To set this item, a sub administrator must have security level 15.

\*3 A sub administrator having a security level lower than the level specified in [Allow function setting] cannot configure the settings.

#### (4) Password expiration date

You can set an expiration date for a password.

Set the password expiration date in [Function setting] (Operator authentication) in the utility.

For how to set the expiration date for the password, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

You can enable or disable the set password expiration date for each operator by using the setting of the operator management information.

For the details of the operator management information, refer to the following.

⇒(2) Operator management information

#### (5) Password expiration prenotification

Not available to GT21.

You can display a dialog prenotifying the password expiration date at login.

Set the password expiration prenotification in [Function setting] (Operator authentication) in the utility.

For setting the password expiration prenotification, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

#### (6) Automatic logout

You can set operator accounts to automatically log out after a certain period of inactivity.

Set the automatic logout in [Function setting] (Operator authentication) in the utility.

For how to set the automatic logout, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

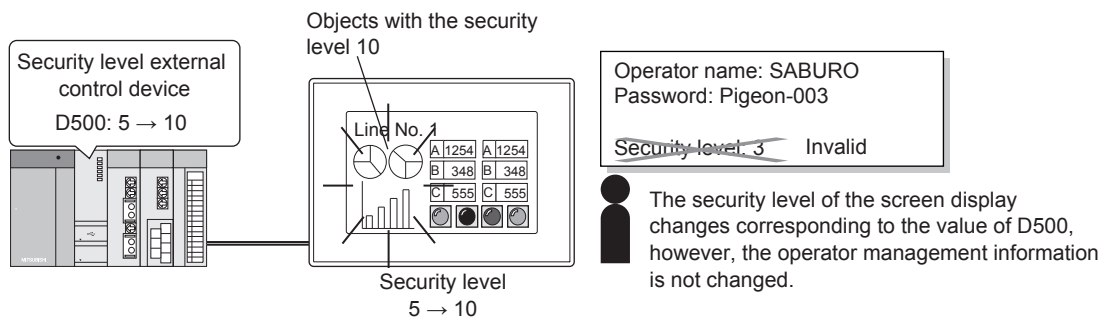

#### (7) Security level control from an external device

You can control the security level of the targets that can be displayed by the operator who is logged in the GOT from an external device.

Store the security level value to the security level external control device to change the security level of the operator.

In this case, the new security level is not reflected to the relevant operator management information.

When this setting is enabled, the security level specified in the operator management information becomes invalid.

To enable the security level control from an external device, select [Externally control the security Level] in the [Screen Security] tab in [Security] of the [Environmental Setting] window.

Then, set the security level external control device.

→5.2.6 ■ 5 ■ 5 Operator authentication

### (8) Forced logout

When the operator authentication external control device is set, operators can be forcibly logged out by turning on the Forced Logout signal (.b0).

For how to set the operator authentication external control device, refer to the following.

→5.2.6 ■ 5 Operator authentication

### (9) Auxiliary authentication

For the operator authentication with an external authentication device, the operator authentication may not be properly executed due to an error such as a device failure.

Enable the auxiliary authentication beforehand so that the authentication is executed by switching to the operator authentication with a password.

For how to set the auxiliary authentication, refer to the following.

→GOT2000 Series User's Manual (Utility)

### (10)Block of login due to incorrect login attempts

Not available to GT21.

When login attempts fail consecutively more than the specified number of failed login times ([Invalid login count]) within five minutes, the GOT recognizes an incorrect login.

In such a case, all operators cannot log in to the GOT until the login block time elapses.

To unblock the login before the lapse of the block time, perform the administrator password authentication with the administrator account or a sub administrator account.

Set the invalid login count and the login block time in [Function setting] (operator authentication) in the utility.

For the setting, refer to the following.

→GOT2000 Series User's Manual (Utility)

You can check whether the login is blocked due to incorrect login attempts with a GOT special register (GS).

When the login is blocked within the login block time period, GS242.b0 (Incorrect Login signal) is on.

For the details of GS242 (Incorrect Login signal), refer to the following.

→12.1.3 ■ 2 (43) Incorrect Login (GS242)

### (11)Lock of an operator account due to incorrect login attempts

Not available to GT21.

If an operator consecutively fails to log in more than the specified number of failed login times ([Operator lock count]), the operator account is locked.

The locked operator account is not usable for logins until the administrator or a sub administrator unlocks this account.

Set the operator lock count in [Function setting] (operator authentication) in the utility.

Unlock an operator account in [Operator information management] (operator authentication) in the GOT utility.

For the setting, refer to the following.

→GOT2000 Series User's Manual (Utility)

You can check whether an operator account is locked with a GOT special register (GS).

When an operator account is locked, GS242.b1 (Operator Locked signal) is on.

For the details of GS242 (Incorrect Login signal), refer to the following.

→12.1.3 ■ 2 (43) Incorrect Login (GS242)

### (12)Password requirements

Not available to GT21.

You can set the minimum number of characters and the character types as password requirements.

For setting the password requirements, refer to the following.

## ■2 Operator authentication setting

To perform the operator authentication, configure the relevant settings in the project and the utility.

### (1) Setting on GT Designer3

- Step 1** Configure the setting in the project on GT Designer3.
- Open the [Security] setting screen of the [Environmental Setting] window. Select [Operator] for [Authentication Method] of the [Screen Security] tab.  
Configure other settings and set various devices as necessary.
- ⇒ ■ 3 [Security] ([Screen Security] tab)
  - 5.2.7 ■ 6 Relevant settings
- Step 2** To use an external authentication device, configure the settings as shown below.
- When using a serial barcode reader, set the barcode reader for channel No. 8 and select [Use Serial Bar Code] in the [Bar Code] dialog.
    - ⇒10.1.5 [Bar Code] dialog
  - When using an RFID controller, set the RFID controller for channel No. 8 and select [Use RFID] in the [RFID] dialog.
    - ⇒10.2.5 [RFID] dialog
  - When using a USB device, select [Use USB Bar Code] in the [Bar Code] dialog and turn on b1 of [Control Device].  
GT SoftGOT2000 does not support authentication with a USB device.
    - ⇒10.1.5 ■ 2 [USB] tab
- Step 3** Set the security level for each screen and objects on the screens.
- ⇒2.7.1 Property of base screens
  - 2.7.2 Properties of window screens
  - 8. OBJECT FUNCTION
- Step 4** Install the package data on the GOT.
- For GT SoftGOT2000, start up GT SoftGOT2000 and select [Operator] for [Authentication Method] in the [Environmental Setting] dialog (the [Operation setting] tab).  
After the setting, open the created project data.

### (2) Setting on the GOT

- Step 1** At the first startup, set the administrator password.
- In the [Operator information management] screen, set a password for the administrator.
- Step 2** Configure the function setting for the operator authentication.
- Select [GOT basic set] → [Operator Authentication] → [Function setting] from the utility main menu, and configure the setting in the [Function setting] screen as shown below.
- For the operator authentication with a password
- [Auth method]: [Operator name + password]
- For the operator authentication with an external authentication device
- [Authentication Method]  
Select [External auth (serial)] or [External auth (USB)].
  - [Front position]  
Set the starting position of the external authentication ID in the data read from the external authentication device.
  - [Available bite number]  
Set the number of bytes for the external authentication ID.  
⇒GOT2000 Series User's Manual (Utility)
- Step 3** Display the [Operator information management] screen from the [Operator setting menu] screen, and register the operator management information.
- The following shows the items to set.
- Operator name
  - Operator ID
  - Password

- Security level

For the details of the operator management information, refer to the following.

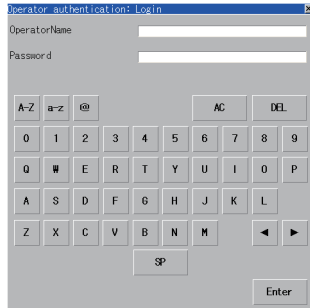

→5.2.7 ■ 1 (2) Operator management information

### ■ 3 How to use the operator authentication

#### (1) Login for the operator authentication with a password

**Step 1** Display the login screen.

Login screen for the operator authentication with a password

Login screen for the operator authentication with an external authentication device

Display the login screen by the following methods.

- Touch the special function switch to which [Log-in/Log-out (Operator Authentication)] is set.
- Display the utility and touch the [Login/Logout] button.

When the security level is inadequate for input, if you touch a special function switch for which [Switch Action] is set to the utility or any monitor function screen, the login screen appears.

(The touch switch does not function if its operating condition is unsatisfied.)

**Step 2** The operation differs depending on the authentication type.

- Operator authentication with a password  
Input the user name and a password then touch the [ENT] button.
- Operator authentication with an external authentication device  
Input the external authentication ID by using the external authentication device such as an RFID.

**Step 3** For the operator authentication with a password, you can log in when the correct user name and password are input.

For the operator authentication with an external authentication device, you can log in when the correct external authentication ID is input.

#### (2) Logout

**Step 1** Display the [Confirm] dialog for logging out.

Display the [Confirm] dialog for logging out by the following methods.

- Touch the special function switch to which [Log-in/Log-out (Operator Authentication)] is set.
- Display the utility and touch the [Login/Logout] button.

**Step 2** The [Operator switching/log out selection] dialog appears.

Touch the [Logout] button to log out.

To display the login screen, touch the [Switch] button.

(The current operator account is still in the logged-in state.)

To cancel the logout, touch the [Cancel] button.

[Confirm] dialog

### (3) Forced logout

You can force the operator to log out by turning on the Forced Logout signal (.b0) of the operator authentication external control device.

Do not leave this signal on because the forced logout is triggered with each turn-on of this signal.

For the details of the operator authentication external control device, refer to the following.

→5.2.6 ■ 5 (1) Operator authentication external control device

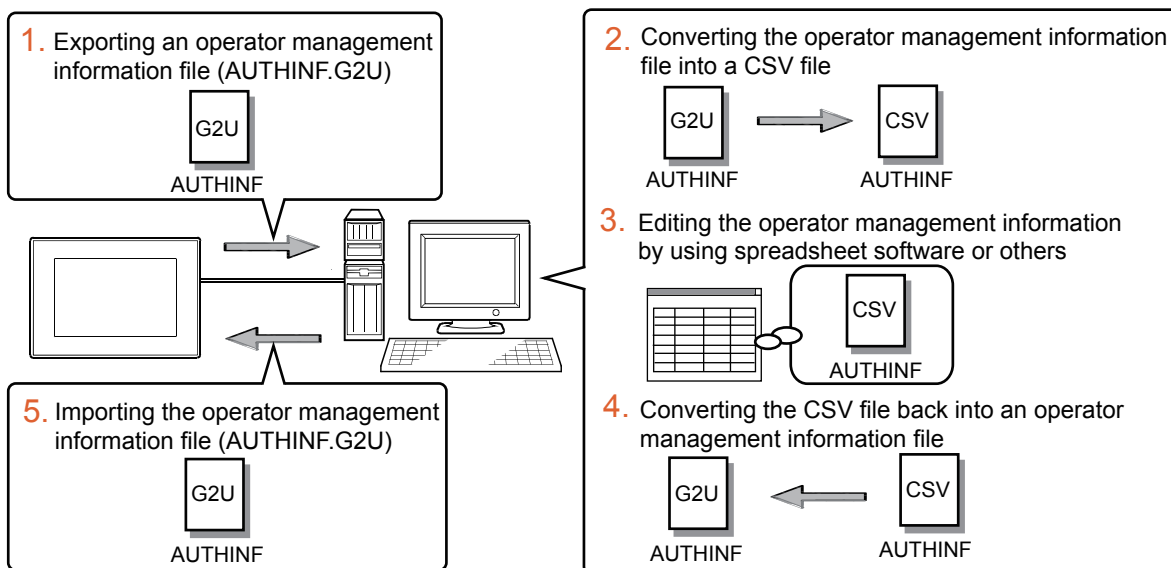

## ■4 Editing the operator management information on a personal computer

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

With GOT Operator Management Information Conversion Tool, you can convert the operator management information file (AUTHINF.G2U) exported from the GOT into a CSV file.

After editing the CSV file on a personal computer, you can convert the CSV file back into AUTHINF.G2U.

Thus, you can import AUTHINF.G2U to the GOT to reflect the results of the registration, change, and deletion of operator management information.

- Step 1** Export an operator management information file (AUTHINF.G2U) from the GOT to the data storage.  
Display the [Operator information management] screen from the [Security setting] screen of the utility to export the operator management information.  
→GOT2000 Series User's Manual (Utility)
- Step 2** Convert the operator management information file into a CSV file on a personal computer where this tool is installed.  
→(4) How to convert AUTHINF.G2U into a CSV file
- Step 3** Edit the operator management information by using spreadsheet software or others.  
→(8) CSV file (AUTHINF.CSV) configuration
- Step 4** Convert the edited CSV file back into an operator management information file.  
→(5) How to convert a CSV file into AUTHINF.G2U  
Store the operator management information file in a data storage.
- Step 5** Import the operator management information file (AUTHINF.G2U) from the data storage to the GOT.  
Display the [Operator information management] screen from the [Security setting] screen of the utility to import the operator management information.  
→GOT2000 Series User's Manual (Utility)

### (1) How to obtain the GOT Operator Management Information Conversion Tool

Obtain the GOT Operator Management Information Conversion Tool by one of the following methods.

- Disk5 folder in the DVD-ROM of GT Works3
- Contact your local distributor.

## (2) Operating environment

The following shows the operating environment for the GOT Operator Management Information Conversion Tool.

Item	Description
Model	Personal computer that Windows runs on.
OS(English version)	<ul style="list-style-type: none"> <li>• Microsoft Windows 10 Enterprise (32 bit, 64 bit)<sup>*1*3*5</sup></li> <li>• Microsoft Windows 10 Pro (32 bit, 64 bit)<sup>*1*3*5</sup></li> <li>• Microsoft Windows 10 Home (32 bit, 64 bit)<sup>*1*3</sup></li> <li>• Microsoft Windows 8.1 Enterprise (32 bit, 64 bit)<sup>*1*3*4*5</sup></li> <li>• Microsoft Windows 8.1 Pro (32 bit, 64 bit)<sup>*1*3*4*5</sup></li> <li>• Microsoft Windows 8.1 (32 bit, 64 bit)<sup>*1*3*4</sup></li> <li>• Microsoft Windows 8 Enterprise (32 bit, 64 bit)<sup>*1*3*4*5</sup></li> <li>• Microsoft Windows 8 Pro (32 bit, 64 bit)<sup>*1*3*4*5</sup></li> <li>• Microsoft Windows 8 (32 bit, 64 bit)<sup>*1*3*4</sup></li> <li>• Microsoft Windows 7 Ultimate (32 bit, 64 bit)<sup>*1*2*3</sup></li> <li>• Microsoft Windows 7 Enterprise (32 bit, 64 bit)<sup>*1*2*3</sup></li> <li>• Microsoft Windows 7 Professional (32 bit, 64 bit)<sup>*1*2*3</sup></li> <li>• Microsoft Windows 7 Home Premium (32 bit, 64 bit)<sup>*1*3</sup></li> <li>• Microsoft Windows 7 Starter (32 bit)<sup>*1</sup></li> <li>• Microsoft Windows Vista Ultimate (32 bit) Service Pack1 or later<sup>*1</sup></li> <li>• Microsoft Windows Vista Enterprise (32 bit) Service Pack1 or later<sup>*1</sup></li> <li>• Microsoft Windows Vista Business (32 bit) Service Pack1 or later<sup>*1</sup></li> <li>• Microsoft Windows Vista Home Premium (32 bit) Service Pack1 or later<sup>*1</sup></li> <li>• Microsoft Windows Vista Home Basic (32 bit) Service Pack1 or later<sup>*1</sup></li> <li>• Microsoft Windows XP Professional (32 bit) Service Pack2 or later<sup>*1</sup></li> <li>• Microsoft Windows XP Home Edition (32 bit) Service Pack2 or later<sup>*1</sup></li> <li>• Microsoft Windows 2000 Professional Service Pack4 or later</li> </ul>
CPU	The system requirements for the above OSs must be met. <sup>*6</sup>
Memory	The system requirements for the above OSs must be met. <sup>*6</sup>
Display	Resolution: SVGA (800 × 600 dots) or higher
Hard disk space	500 KB or more
Display color	High Color (16 bits) or higher
Other hardware	Use a mouse and a keyboard compatible with the above OSs.

\*1 The following functions are not supported.

- Application start in Windows compatibility mode
- Fast user switching
- Changing your desktop themes (fonts)
- Remote desktop
- DPI setting other than the normal size (For Windows XP and Windows Vista)
- Setting the size of text and illustrations on the screen to any size other than [Small-100%] (For Windows 10, Windows 8.1, Windows 8, and Windows 7)

\*2 Windows XP Mode is not supported.

\*3 The touch feature is not supported.

\*4 Modern UI Style is not supported.

\*5 Hyper-V is not supported.

\*6 For the system requirements for the OSs, refer to the following.

⇒Microsoft official website

## (3) How to start GOT operator management information conversion tool

Installing GOT operator management information conversion tool is not required.

Copy the execution file (GTOperatorInfoConv.exe) in a folder, and then execute the file in the folder.

## (4) How to convert AUTHINF.G2U into a CSV file

**Step 1** Start GOT Operator Management Information Conversion Tool to display the following dialog.

Enter the full path of the operator management information file (AUTHINF.G2U) in [Source file], and select [Convert operator management information file into CSV file].

Click the [Convert] button.

**Step 2** The authentication type varies with the function setting of the conversion source file.

- When the use of sub administrators is disabled in the function setting  
In the [Administrator password entry] dialog, enter the administrator password and click the [OK] button.

When the use of sub administrators is disabled

- When the use of sub administrators is enabled in the function setting  
In the [Administrator authentication] dialog, enter the operator name and password of the administrator or sub administrator, and click the [OK] button.  
After authentication succeeds, a CSV file (AUTHINF.CSV) is created in the folder where the conversion source file is stored.

When the use of sub administrators is enabled

**Step 3** When the use of sub administrators is disabled in the function setting, re-enter the administrator password and click the [OK] button in the [Administrator password re-entry] dialog.

After authentication succeeds, a CSV file (AUTHINF.CSV) is created in the folder where the conversion source file is stored.

## (5) How to convert a CSV file into AUTHINF.G2U

If a sub administrator performs the file conversion, the conversion source file and the exported operator management information file (AUTHINF.G2U) must be stored in the same folder before the conversion.

Otherwise, the file conversion cannot be performed.

**Step 1** Start GOT Operator Management Information Conversion Tool to display the following dialog.

Enter the full path of a CSV file (AUTHINF.CSV) in [Source file], and select [Generate operator management information file from CSV file].

Click the [Convert] button.

**Step 2** The authentication type varies with the configuration of the CSV file specified in [Source file].

- When [SUB\_ADMIN\_FORMAT] is nonexistent in the header part of the CSV file  
In the [Administrator password entry] dialog, enter the administrator password and click the [OK] button.

When [SUB\_ADMIN\_FORMAT] is nonexistent

- When [SUB\_ADMIN\_FORMAT] is existent in the header part of the CSV file  
In the [Administrator authentication] dialog, enter the operator name and password of the administrator or sub administrator, and click the [OK] button.  
The contents of the CSV file are imported to the operator management information file (AUTHINF.G2U) stored in the same folder.

When [SUB\_ADMIN\_FORMAT] is existent

**Step 3** When [SUB\_ADMIN\_FORMAT] is nonexistent in the header part of the CSV file, re-enter the administrator password and click the [OK] button in the [Administrator password re-entry] dialog.  
An operator management information file (AUTHINF.G2U) is created in the same folder.

## (6) Setting items of GOT Operator Management Information Conversion Tool

### 1) [Generate operator management information file from CSV file]

Converts a CSV file into an operator management information file.

Clicking the [Convert] button performs the operation according to the contents of the CSV file.

- When [SUB\_ADMIN\_FORMAT] is nonexistent in the header part of the CSV file  
The CSV file specified in [Source file] is converted into an operator management information file.

- When [SUB\_ADMIN\_FORMAT] is existent in the header part of the CSV file  
The contents of the CSV file specified in [Source file] are imported to the exported operator management information file.

Before the conversion, make sure to store the CSV file and the exported operator management information file in the same folder.

After the conversion, a log file is output.

### 2) [Convert operator management information file into CSV file]

Converts an operator management information file into a CSV file.

Select this item and click the [Convert] button to convert the operator management information file specified in [Source file] into a CSV file.

After the conversion, the CSV file and the conversion source file are stored in the same folder.

### 3) [Source of Conversion]

Specify a path of the conversion source file.

By clicking the [Browse] button, the path of the conversion source file can be specified in the [Open CSV file] dialog.

### 4) [Convert] button

Executes the file conversion.

## (7) Operation with a command line

You can operate GOT Operator Management Information Conversion Tool with Command Prompt.

Perform one of the following operations to start Command Prompt. (Example of the procedure on Windows 7)

- Select [start] → [All programs] → [Accessories] → [Command Prompt] from the menu.
- Select [start] → [Run] from the menu, and input cmd in [Open] to execute a program.

Describe a command line in the following formats.

GTOperatorInfoConv.exe filename [password] [/f] [/l] [/-c] [/s operator name] [/help] [/?]

(The options in square brackets are omissible.)

Type	Format	Description
Command	GTOperatorInfoConv.exe	<p>The file conversion is performed as shown below.</p> <ul style="list-style-type: none"> <li>• Converting AUTHINF.G2U into a CSV file The conversion source file and the CSV file are stored in the same folder.</li> <li>• Converting a CSV file (without [SUB_ADMIN_FORMAT]) into AUTHINF.G2U An operator management information file (AUTHINF.G2U) is created in the folder where the conversion source file is stored.</li> <li>• Converting a CSV file (with [SUB_ADMIN_FORMAT]) into AUTHINF.G2U The contents of the CSV file are imported to the operator management information file (AUTHINF.G2U) stored in the same folder.</li> </ul> <p>After the conversion, another command prompt window appears, displaying the conversion result.</p>
Option	filename	Specifies the operator management information file to be converted (CSV or G2U) with the absolute path. If the path contains spaces, enclose the path in double quotation marks (" ").
	password	Specifies the administrator password.
	/f	<p>If the conversion destination folder already has a file with the same name, the file is overwritten.</p> <p>When the contents of a CSV file is imported to the exported operator management information file (AUTHINF.G2U), this option is invalid.</p>
	/l	<p>Outputs the conversion result to an operator management information conversion log file.</p> <p>The operator management information conversion log file is output to the folder where the conversion source file is stored.</p> <p>If the folder already has a file with the same name as that of the operator management information conversion log file, the file is overwritten.</p>
	/-c	Does not start the command prompt to display the conversion result.
	/s operator name	<p>Specifies a sub administrator to execute the file conversion.</p> <p>After "/s", enter the operator name of the sub administrator.</p>
	/help	Displays how to use options on the command prompt.
	/?	If these options are specified, the other options are ignored and the conversion is not executed.

## (8) CSV file (AUTHINF.CSV) configuration

A CSV file consists of the header part and the data part.

Set each setting item without changing the order of the items.

→ (9) Header part

(10) Data part

When a sub administrator converts a CSV file into AUTHINF.G2U, the items uneditable by the sub administrator are not output.

In the following cases, the data format is invalid and a CSV file is not converted into an operator management information file.

- A necessary setting item is deleted.
- The order of the setting items is changed.
- Any of the settings is incorrect.
- An unnecessary item exists.

## (9) Header part

In the header part, configure the common setting for each operator information.  
Items to be output vary with the settings, such as administrator privileges.

1)	GOT_OPERATOR_AUTHENTICATION_INFO		
2)	DATA_VERSION		4
3)	SUB_ADMIN_FORMAT	USER:Username	15
4)	AUTH_TYPE	EXT_AUTH	
5)	PASS_TYPE	ENCRYPTED	
6)	AUTO_LOGOUT_TIME		0
7)	PASS_EXP_DATE		0
8)	EXT_AUTH_ID_TOP		0
9)	EXT_AUTH_ID_LEN		5
10)	EXT_UNIT_CH		8
11)	LOGIN_LOCK_NUM		4
12)	LOGIN_LOCK_CANCEL_TIME		10
13)	LOGIN_LOCK_TIME		5
14)	OPE_LOCK_NUM		0
15)	OPE_LOCK_TIME		5
16)	PASS_REQ_FLG		1
17)	PASS_REQ_MIN_LENGTH		8
18)	PASS_REQ_STR_TYPE		2
19)	PASS_EXP_NOTICE		10
20)	SUB_ADMIN_FLG		1
21)	OUTPUT_ALL_OPE		1
22)	IS_FUNC_SET		1
23)	FUNC_SET_LEVEL		15

### 1) [GOT\_OPERATOR\_AUTHENTICATION\_INFO]

Keyword to declare that the file is an operator management information file

### 2) [DATA\_VERSION]

Data structure version of the CSV file.

The data structure version varies with the version of the GOT Operator Management Information Conversion Tool used.

When a GOT1000 operator management information file is utilized, [0] is set for this item.

Change the set value to [3].

### 3) [SUB\_ADMIN\_FORMAT]

Keyword to indicate the information on a sub administrator.

After the keyword, the operator name and security level of the sub administrator who has performed the file conversion are output.

The operator name is output in the following format: [USER:Username].

The security level is output in the range from [0] to [15].

When the administrator converts AUTHINF.G2U into a CSV file, this item is not output.

### 4) [AUTH\_TYPE]

Set the authentication type of the operator authentication.

Set either of the following.

- [ID\_PASS]: Performs the operator authentication with a password.
- [EXT\_AUTH]: Performs the operator authentication with a serial device.
- [EXT\_AUTH+P]: Performs both the operator authentication with a serial device and the auxiliary authentication.
- [EXT\_AUTHUSB]: Performs the operator authentication with a USB device.
- [EXT\_AUTHUSB+P]: Performs both the operator authentication with a USB device and the auxiliary authentication.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

### 5) [PASS\_TYPE]

Set the password type.

Set either of the following.

- [ENCRYPTED]  
Set this item to specify an encrypted password.  
An unencrypted password is encrypted when AUTHINF.G2U is converted into a CSV file.
- [PLAIN]  
Set this item to specify an unencrypted password.

### 6) [AUTO\_LOGOUT\_TIME]

Set the automatic logout time.

The setting range is [0] (Invalid) minutes to [60] minutes.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

7) **[PASS\_EXP\_DATE]**

Set the password expiration date.

The setting range is [0] (Invalid) days to [1000] days.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

8) **[EXT\_AUTH\_ID\_TOP]**

Set the starting position of the external authentication ID.

The setting range is [0] to [1998] bytes.

When a CSV file is converted into an operator management information file, [0] is set in the following case.

- When nothing or invalid value is set

The total set value of [EXT\_AUTH\_ID\_TOP] and [EXT\_AUTH\_ID\_LEN] must be 2000 or less.

If the total set value exceeds 2000, the file cannot be converted correctly.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

9) **[EXT\_AUTH\_ID\_LEN]**

Set the number of bytes for the external authentication ID.

The setting range is [2] to [16] bytes.

When a CSV file is converted into an operator management information file, the set value varies depending on the case as shown below.

- When nothing or invalid value is set: 4

The total set value of [EXT\_AUTH\_ID\_TOP] and [EXT\_AUTH\_ID\_LEN] must be 2000 or less.

If the total set value exceeds 2000, the file cannot be converted correctly.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

10) **[EXT\_UNIT\_CH]**

Set the channel for connecting an external authentication device.

The setting range is [8].

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

11) **[LOGIN\_LOCK\_NUM]**

Set the number of consecutive failed login attempts for the GOT to recognize an incorrect login.

The setting range is [0] (Invalid), or [3] times to [10] times.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

12) **[LOGIN\_LOCK\_CANCEL\_TIME]**

Set the time period in which all operator accounts except the administrator one are locked upon an incorrect login.

The setting range is [1] (second) to [3600] (seconds).

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

13) **[LOGIN\_LOCK\_TIME]**

Set the time period in which consecutive failed login attempts increment the failed login count.

The settable value is [5] minutes. (Fixed)

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

14) **[OPE\_LOCK\_NUM]**

Set the number of consecutive failed login attempts to an operator account for the GOT to recognize an incorrect login.

The setting range is [0] (Invalid), or [3] times to [10] times.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

15) **[OPE\_LOCK\_TIME]**

Set the time period in which consecutive failed login attempts to an operator account increment the failed login count.

The settable value is [5] minutes. (Fixed)

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

## 16) [PASS\_REQ\_FLG]

Set whether to enable the password requirement setting.

- [0]: Disabled
- [1]: Enabled

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

## 17) [PASS\_REQ\_MIN\_LENGTH]

Set the minimum number of characters of a password.

The setting range is [1] character to [32] characters.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

## 18) [PASS\_REQ\_STR\_TYPE]

Set the character types of a password.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

Set value	Description
[0]	Does not check the character types.
[1]	Checks if a password contains the following two types of characters. <ul style="list-style-type: none"><li>• Alphabet (A to Z and a to z)</li><li>• Numbers, symbols, and one-byte spaces</li></ul>
[2]	Checks if a password contains the following three types of characters. <ul style="list-style-type: none"><li>• Alphabet (A to Z and a to z)</li><li>• Numbers</li><li>• Symbols and one-byte spaces</li></ul>
[3]	Checks if a password contains the following four types of characters. <ul style="list-style-type: none"><li>• Uppercase alphabet (A to Z)</li><li>• Lowercase alphabet (a to z)</li><li>• Numbers</li><li>• Symbols and one-byte spaces</li></ul>

## 19) [PASS\_EXP\_NOTICE]

Set the number of days before password expiration to start notifying the password expiration date.

When the number of remaining days is equal to or less than the set number of days, a message prompting for a password change appears at login.

The setting range is [0] days (Invalid), or [1] day to [30] days.

When a sub administrator converts AUTHINF.G2U into a CSV file, if [Allow function setting] is deselected in the function setting, this item is not output.

## 20) [SUB\_ADMIN\_FLG]

Set whether to enable the use of sub administrators.

- [0]: Disabled
- [1]: Enabled

When a sub administrator performs the file conversion, this item is not output.

## 21) [OUTPUT\_ALL\_OPE]

If a sub administrator converts AUTHINF.G2U into a CSV file, set whether to output the operator information uneditable by the sub administrator to the data part of the CSV file.

- [0]: Not output
- [1]: Output

When one of the following operators converts AUTHINF.G2U into a CSV file, this item is output.

- Administrator
- Sub administrator in security level 15 (when [Allow function setting] is selected)

## 22) [IS\_FUNC\_SET]

Set whether to allow sub administrators to set the function setting.

- [0]: Not allowed
- [1]: Allowed

When a sub administrator converts AUTHINF.G2U into a CSV file, this item is not output.

## 23) [FUNC\_SET\_LEVEL]

Set the security level of the sub administrator that can edit the function setting.

The setting range is [0] to [15].

When one of the following operators converts AUTHINF.G2U into a CSV file, this item is output.

- Administrator

- Sub administrator in security level 15 (when [Allow function setting] is selected)

## (10)Data part

In the data part, set the individual operator information.

1)	2)	3)	4)	5)	6)	7)	8)	9)
OPE_ID	OPE_NAME	LEVEL	GROUP	PASSWD	IS_PASSWD_EXP	IS_EXT_AUTH	EXT_AUTH_ID	OPE_EXP
1	USER:USER001	1		PASS:PA64DF68CA9	1	0		
2	USER:USER002	5		PASS:PA64DE68CB9	1	0		
3	USER:USER003	15		PASS:PAD4DED8C26	1	0		

10)	11)	12)
OPE_UNAVAILABLE_STATE	PASSWD_CHANGE_FLG	IS_ADMIN_AUTH
0	0	0
0	0	1
0	0	1

### 1) [OPE\_ID]

Set the operator ID.

The setting range is [1] to [32766].

### 2) [OPE\_NAME]

Set the operator name.

Up to 16 one-byte alphanumeric characters (a to z, A to Z, 0 to 9) and symbols as shown below can be used. (Alphabets are case sensitive.)

- !"#\$%&'()\*+,-./:;<=>@[\\]^\_`{|}~

- One-byte space (However, a one-byte space used at the end of the operator name is invalid.)

When editing a CSV file directly, add [USER:] to the start of data.

Otherwise, an error occurs when the CSV file is converted to an operator management information file (AUTHINF.G2U).

### 3) [LEVEL]

Set the security level for an operator.

The setting range is [0] to [15].

When a sub administrator converts AUTHINF.G2U into a CSV file, a security level lower than that of the sub administrator can be set for an operator.

### 4) [GROUP]

Not used.

Leave the area blank.

### 5) [PASSWD]

Set the password for the operator.

Up to 32 one-byte alphanumeric characters (a to z, A to Z, 0 to 9) and symbols as shown below can be used. (Alphabets are case sensitive.)

- !"#\$%&'()\*+,-./:;<=>@[\\]^\_`{|}~

- One-byte space (However, a one-byte space used at the end of the operator name is invalid.)

When you set a password in a CSV file, prepend the string "PASS:" to the password.

Otherwise, an error occurs when the CSV file is converted to an operator management information file (AUTHINF.G2U).

The password in the CSV file is visible.

Handle the CSV file with extreme caution accordingly.

To prevent the password in the CSV file from showing up, perform one of the following operations.

- Do not set any password in the CSV file. (Set passwords on the GOT.)
- Convert the CSV file into AUTHINF.G2U, and then convert AUTHINF.G2U back into the CSV file to encrypt the password in the file.

For the password encryption by the above method, refer to the following.

⇒(14) Encrypting a password

### 6) [IS\_PASSWD\_EXP]

Set whether to set the password expiration date.

The following shows the setting range.

- [0]: Without expiration
- [1]: With expiration

### 7) [IS\_EXT\_AUTH]

Set whether to set the external authentication ID.

The following shows the setting range.

- [0]: Without setting
- [1]: With setting

#### 8) [EXT\_AUTH\_ID]

Set the external authentication ID.

The number of bytes for the external authentication ID is the value set for [EXT\_AUTH\_ID\_LEN] (number of bytes for the external authentication ID).

The setting method varies depending on the setting for [AUTH\_TYPE].

- [ID\_PASS]

The external authentication ID setting is not required.

When an operator management information file exported from the GOT is converted into a CSV file, the external authentication ID is displayed with ASCII characters. However, the ID is not recognized.

- [EXT\_AUTH] and [EXT\_AUTH+P]

Set the external authentication ID with hexadecimal numbers.

When editing a CSV file directly, add [BIN:] to the start of data.

Otherwise, an error occurs when the CSV file is converted to an operator management information file (AUTHINF.G2U).

#### 9) [OPE\_EXP]

Not used.

Leave the area blank.

#### 10) [OPE\_UNAVAILABLE\_STATE]

Set whether to disable an operator account.

The following shows the setting range.

- [0]: Enables the operator account.
- [1]: Disables the operator account.

#### 11) [PASSWD\_CHANGE\_FLG]

Set whether to display a message prompting for a password change at the next login.

The following shows the setting range.

- [0]: Does not display the message.
- [1]: Displays the message.

#### 12) [IS\_ADMIN\_AUTH]

Set whether to grant administrator privileges to an operator.

The following shows the setting range.

- [0]: Not granted
- [1]: Granted

### (11) Operator management information conversion log file (GTOperatorInfoConvResult.txt) configuration

The operator management information conversion log file is output when the conversion is executed with a command line.

The file is output to the folder where the conversion source file is stored.

0	1)
DayTime=2011/05/19/18:28:36	2)
ExeCmd=C:\AUTHINF.CSV ***** /f /l	3)
Results=success	4)
Cmnt=Conversion process is completed.	5)

#### 1) Conversion result code

The conversion result code is output in the following formats.

- 0: Normal end
- 1: Abnormal end

#### 2) Conversion date

The conversion date is output in the following format.

- Year/Month/Day/Hour:Minute:Second

#### 3) Executed command

The executed command is output.

#### 4) Conversion result

The conversion result is output in the following formats.

- success: Normal end

- failure: Abnormal end

## 5) Message

The message at the conversion completion is output.

### (12)Error log file (GTOperatorInfoConv.log) configuration

Checking the error location (line) in the CSV file and the error cause (error code) is available.

The file is output when a CSV file is converted into a G2U file only.

With no error, the file is not output.

The file is output to the folder where the conversion source file is stored.

If the folder already has a file with the same name, the file is overwritten.

#### 1) Header part

The header part of the error file. (The character strings are fixed.)

#### 2) Error code

The error line numbers and the error codes are displayed. (Line number: Error code)

⇒(13) Error code list

### (13)Error code list

The following shows the errors and the corrective actions corresponding to the error codes output to the error log file and others.

Error code	Description	Corrective action
1000	The configuration of the CSV file is invalid. (An error other than the errors corresponding to error codes 1001 to 1024)	Check if the specified CSV file is correct.
1001	The header data of the CSV file is invalid.	Check that the order of the keywords, the character strings, and the set values in the header part are correct. Correct them as necessary.
1010	The specified operator ID number is invalid.	Check that each operator ID number in the data part is within the setting range and does not contain invalid characters. Correct the operator ID number as necessary.
1011	The operator name is invalid.	Check that each operator name in the data part is within the setting range and does not contain invalid characters. Correct the operator name as necessary.
1012	The specified security level is invalid.	Check that each security level in the data part is within the setting range and does not contain invalid characters. Correct the security level as necessary.
1013	The specified password is invalid.	Check that each password in the data part is within the setting range and does not contain invalid characters. For an encrypted password, check that all characters of the password can be represented in hexadecimal. Correct the password as necessary.
1014	The set value of the setting whether to set the password expiration date is invalid.	Check that the set value is valid. Correct the value as necessary.
1015	The set value of the setting whether to set the external authentication ID is invalid.	Check that the set value is valid. Correct the value as necessary.
1016	The specified external authentication ID number is invalid.	Check that each external authentication ID number is valid. Correct the ID number as necessary. Check that the authentication type set in the header part requires the setting of external authentication ID numbers.
1017	The set value of the function setting is invalid.	The conversion source file contains setting items uneditable by the authenticated sub administrator. Perform the file conversion with the administrator account or the sub administrator account in a security level that can edit all items in the conversion source file.
1018	The specified security level is invalid.	The specified security level is higher than that of the authenticated sub administrator. Perform the file conversion with the administrator account or the sub administrator account in a security level that can edit all items in the conversion source file.

Error code	Description	Corrective action
1019	The specified operator name has already existed.	Register a different operator name.
1020	The specified operator ID number has already existed.	Register a different operator ID number.
1021	The specified external authentication ID number has already existed.	Register a different external authentication ID number.
1022	The number of operator accounts has exceeded the registration limit.	Delete some operator accounts to make the number of the accounts within the registration limit. <ul style="list-style-type: none"> <li>• For GT27, GT25, and GT SoftGOT2000: 1000 accounts or less</li> <li>• For GT23 and GT21: 255 accounts or less</li> </ul>
1023	The operator management information on the administrator is invalid.	For the operator management information on the administrator (operator name: Administrator), you can only change the password or disable the administrator account. Set [-] for the other items.
1024	The specified item of the function setting is invalid.	Perform the file conversion with the administrator account or the sub administrator account in a security level that can edit all items in the conversion source file.
2000	The file format of AUTHINF.G2U is invalid.	Check that the specified file (AUTHINF.G2U) is correct.

## (14) Encrypting a password

When you edit a CSV file on a personal computer, encrypt the password ([PASSWORD]) in the file by using the following procedure.

- Step 1** In the header part of the CSV file, set [ENCRYPTED] for [PASS\_TYPE].
- Step 2** Convert the CSV file into an operator management information file by using GOT Operator Management Information Conversion Tool.
- Step 3** Convert the operator management information file back into the CSV file.  
The password is encrypted at the conversion.

## 5 Precautions

### (1) Precautions on drawing (operator authentication)

Set the security level of 0 for the screen displayed when logging out of the GOT.

When a security level (1 or more) is set for the screen displayed when logging out of the GOT, the screen for login is displayed after logging out of the GOT.

### (2) Prohibiting sharing the external authentication ID

Do not use the external authentication ID among multiple operators.

When the external authentication ID is used among multiple operators, the authentication cannot be executed correctly because the operators cannot be specified by the external authentication ID.

### (3) Password management

Delete the operator management information of the operator who has stopped using the GOT.

Leaving the operator management information increases the risk of invalid operations.

The administrator password cannot be checked later. Therefore, always make a note of the password. When the administrator password is forgotten, the operator management information cannot be registered, edited, and deleted.

### (4) Solutions when forgetting the password or external authentication ID

Situation	Solution
When forgetting the password of an operator	Delete the operator information with the forgotten password, and register the operator information again.
When forgetting the external authentication ID	Check the operator information on the operator information management screen, and then set the external authentication ID for the external authentication device again.
When forgetting the administrator password	Delete the operator management information file (AUTHINF.G2U) and register all operator management information again. The operator management information file is deleted after the BootOS is installed. For GT SoftGOT2000, use GT SoftGOT2000 of another module. To use GT SoftGOT2000 with the forgotten password, install it again.

**(5) Corrective action when the login is blocked due to incorrect login attempts**

If login attempts fail consecutively more than the specified number of times within five minutes, all operator accounts except the administrator one are locked until the login block time elapses.

To log in during the block time, perform one of the following operations.

- Log in with the administrator account, and unlock operator accounts in [Function setting] (Operator authentication).
- Restart the GOT.

For information on how to cancel the login block, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

**(6) Corrective action when an operator ID is locked due to incorrect login attempts**

If an operator consecutively fails to log in more than the specified number of times, the operator ID is locked even after the login block time elapses.

Log in with the administrator account and unlock the target operator ID in the operator information edit screen.

For information on how to unlock an operator ID, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

**(7) Target of password requirements**

When you set a password on the GOT, the password is checked for password requirements.

The passwords set before the requirements are specified, and the passwords set in the operator management information file (\*.CSV) are not checked.

**(8) Handling of the password in a CSV file**

When you set a password ([PASSWORD]) in a CSV file converted with GOT Operator Management Information Conversion Tool, the password in the CSV file is visible.

Handle the CSV file with extreme caution accordingly.

To prevent the password in the CSV file from showing up, perform one of the following operations.

- Do not set any password in the CSV file. (Set passwords on the GOT.)
- Convert the CSV file into AUTHINF.G2U, and then convert AUTHINF.G2U back into the CSV file to encrypt the password in the file.

For the password encryption by the above method, refer to the following.

⇒5.2.7 ■ 4 (14) Encrypting a password

**(9) How to input a value beginning with zeros**

When editing a CSV file by using spreadsheet software, the leading zeros of a value beginning with zeros may be removed.

To input a value beginning with zeros, add @ to the beginning or end of the value.

@ is not recognized as a value during conversion.

**(10) Automatic addition of @**

When an operator management information file is converted into a CSV file, @ may automatically be added to the set values of some setting items to not to remove zeros by spreadsheet software.

When the CSV file is converted into an operator management information file, @ is not recognized as a value. Therefore, deleting @ is not required.

**■ 6 Relevant settings**

Set the relevant settings other than the specific settings for the security function as required.

The following shows the functions that are available by the relevant settings.

**(1) Internal device**

⇒12.1.3 GOT special register (GS)

Function	Setting item
Notifying that the authentication by the external authentication device succeeds.	GS240.b0
Notifying that the authentication by the external authentication device fails.	GS240.b1
Notifying that the login screen or operator re-authentication screen is being displayed regardless of authentication method.	GS240.b13
Notifying that the login screen for the authentication by the external authentication device is displayed.	GS240.b14
Notifying that the external authentication ID input key window is displayed.	GS240.b15

Function	Setting item
Notifying the screen that cannot be displayed because of the insufficient security level.	GS241.b1 to b4, b8 to b12 GS1241.b0 to b2, b8 to b10
Notifying that the login is blocked due to incorrect login attempts	GS242.b0
Notifying that an operator ID is locked due to incorrect login attempts	GS242.b1

## 5.2.8 Configuring the security settings for displaying screen data on the GOT ([Screen Security] (Level authentication))

### 1 Specifications of the level authentication

The level authentication is performed using user-specified passwords corresponding to each security level. Use the level authentication to configure a system which allows the operators in upper hierarchies to control all the operations which can be made by the operators in lower hierarchies.

### 2 Settings for the level authentication

The following shows the procedure for configuring the level authentication settings.

**Step 1** Configure the setting for the project with GT Designer3.

Display [Security] of the [Environmental Setting] window and configure the following settings in the [Screen Security] tab.

- [Authentication Method]  
Select [Level].
- [Security Level Device]  
Set any word device or bit device specified as a word device.
- [Security Level Password]  
Set a password for each security level.  
The password must be set for each security level.  
(The password must not be overlapped.)  
⇒5.2.6 ■ 4 Level authentication

**Step 2** Set the security level for each screen and objects on the screens.

- ⇒2.7 Changing Screen Property
- 8. OBJECT FUNCTION

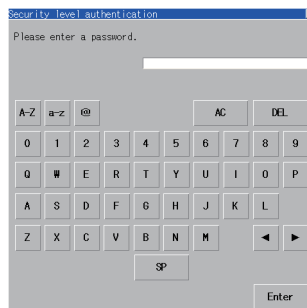

### ■3 How to change the security level

Change the security level in the level authentication by either of the following methods.

#### (1) Input the password for each security level in the [Security level authentication] dialog.

Display the [Security level authentication] dialog by touching the special function switch to which [Password (Security Level)] is set.

The [Security level authentication] dialog can also be displayed by displaying the utility and touching the [Security level authentication] button.

[Security level authentication] dialog

When the security level is inadequate for input, if you touch a special function switch for which [Switch Action] is set to the utility or any monitor function screen, the [Security level authentication] dialog appears.

(The touch switch does not function if its operating condition is unsatisfied.)

#### (2) Store the security level value to the security level device.

The security level device is a device to notify and change the current security level.

Store the security level value to change the security level.

The display is changed according to the changed security level.

### ■4 Precautions

#### (1) Password management

The level authentication increases the risk of invalid operations because all operators can know the password for each security level.

When using the level authentication, manage the password strictly by changing the password frequently.

The registered password cannot be checked later. Therefore, always make a note of the password.

When the password is forgotten, security levels cannot be changed.

#### (2) Solutions when forgetting the password

Delete the password with GT Designer3 and set a new password.

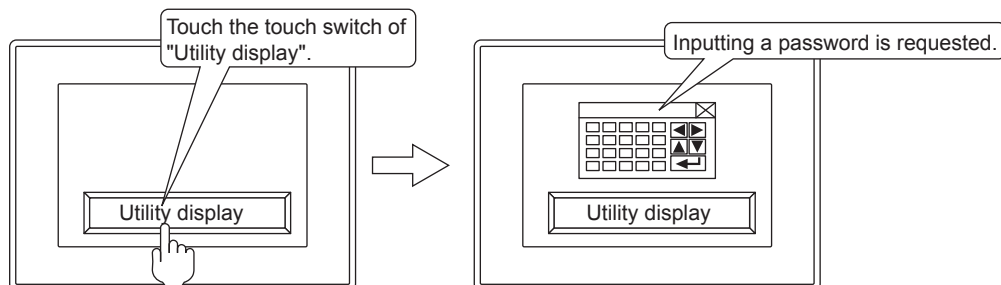

After setting, write the project to the GOT again.

## 5.2.9 Configuring the security settings for operating the utility and the monitor functions ([Functional Operation Security])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Specifications of the functional operation security

The functional operation security restricts displaying the utility and parameter setting screens.

#### (1) Operations restricted by the functional operation security

The functional operation security restricts the following operations.

- Displaying the utility and operating some monitor functions

To restrict operations other than the above, use the following security functions. Using multiple security functions in combination further strengthens the security.

#### (a) Function restricting project operations

Function	Description
Security key authentication	Restricts a project to be viewed on GT Designer3 or executed on the GOT by protecting the project with a security key. →2.12 Protecting a Project with a Security Key
Project security	Restricts unregistered users to view or edit a project by registering users with the project. Also restricts operations by screen according to the access level of each user. →2.13 Protecting a Project by Registering Users

#### (b) Function restricting communication with the GOT

Function	Description
Data transfer security	Restricts data transfer between the personal computer (GT Designer3) and the GOT with a password. →5.2.10 Configuring the security setting for transferring data ([Data Transfer Security])
IP filter	Restricts access to the GOT by Ethernet by registering IP addresses with the filtering list. →5.4.3 Setting the IP filter

#### (c) Function restricting the GOT operations

Function	Description
Screen security	Restricts the display of screens and objects on the GOT by registering users with the GOT. →5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### (2) Restricting starting up the utility

GT27 GT25 GT23 GT21 SoftGOT2000 GS

To start the utility, the security authentication is required.

Restricting the start of the utility avoids unnecessary operations to the utility.

**(3) Restricting displaying the servo amplifier or motion parameters**

GT27 GT25 GT23 GT21 SoftGOT2000 GS

To display the parameter setting screen with the servo amplifier monitor or the motion monitor, the password authentication is required.

Restricting the display avoids unwanted change of the parameter setting.

**(4) Restricting displaying the ladder editor screen and the device test operation**

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The security authentication can restrict unnecessary ladder editor operations and device test operations. Displaying the ladder editor screen and the device test operation can be restricted.

The ladder editor operations and device test operations can be restricted by the authentication with a device, authentication with a password, or authentication with a device and password combined.

Select the authentication type according to the purpose.

**(d) Authentication with an authorization device**

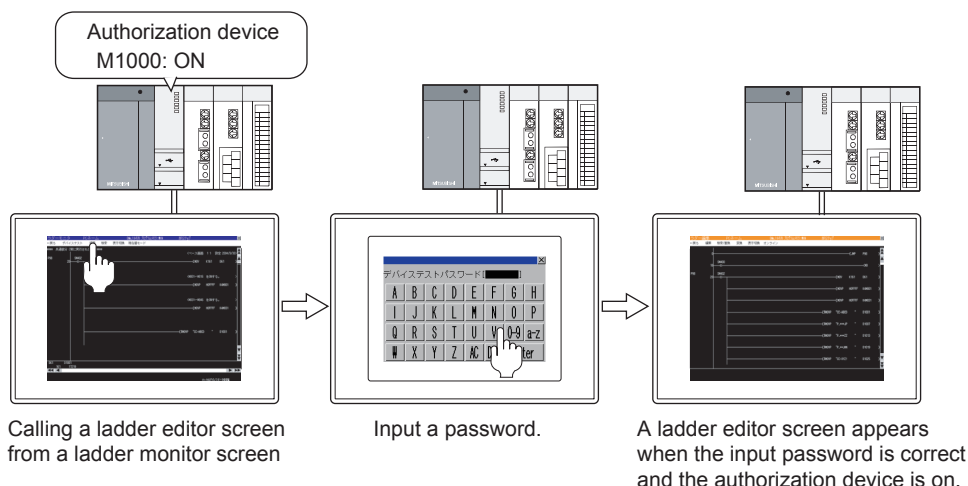

While an authorization device turns on, the operation is allowed.

**(e) Authentication with a password**

When the input password matches the set password, the operation is allowed.

**(f) Authentication with an authorization device and password combined**

When the input password matches the set password and an authorization device turns on, the operation is allowed.

## ■ 2 Settings for the functional operation security

The following shows the procedure for setting the functional operation security.

**Step 1** Configure the setting in the project on GT Designer3.

Select [Common] → [GOT Environmental Setting] → [Security] from the menu to display the [Environmental Setting] window ([Security]).

**Step 2** In the [Functional Operation Security] tab, set the password for a target item.

→ ■ 4 [Security] ([Functional Operation Security] tab)

## ■ 3 Precautions

### (1) Password management

The registered password cannot be checked later. Therefore, always make a note of the password. When the password is forgotten, the following operations may be disabled.

- Displaying the utility
- Displaying the parameter setting screen of the servo amplifier and the motion controller
- Displaying the device test screen and the ladder editor screen

### (2) Solutions when forgetting the password

Use [Utilize Project] to create a new project.

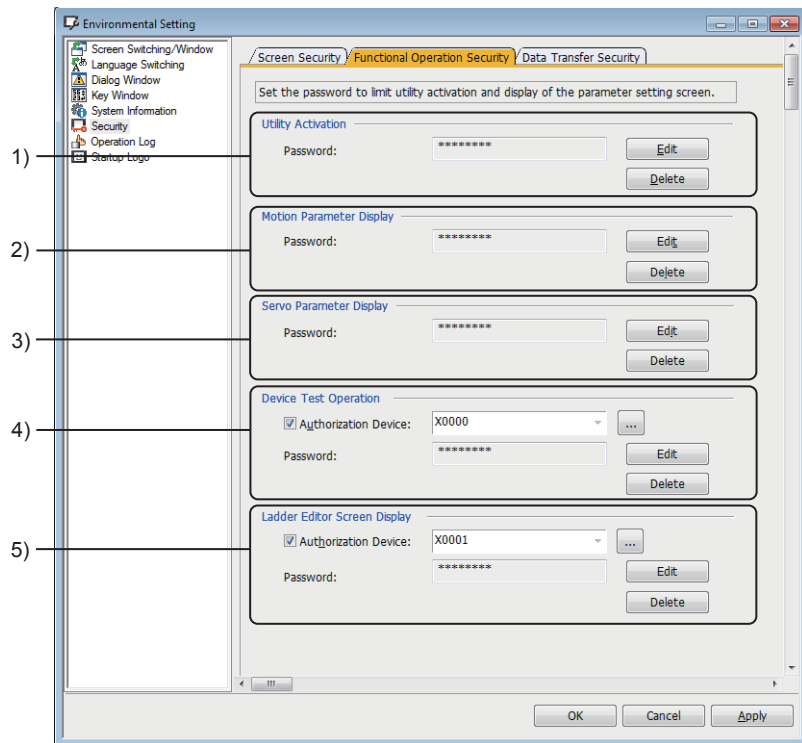

Deselect [GOT Environmental Setting/GOT Setup] from items to be utilized to initialize all the settings for the GOT environmental settings and the GOT setup.

At this time, the password is deleted.

After configuring the settings for the GOT environmental settings and the GOT setup, write the created project to the GOT.

#### ■ 4 [Security] ([Functional Operation Security] tab)

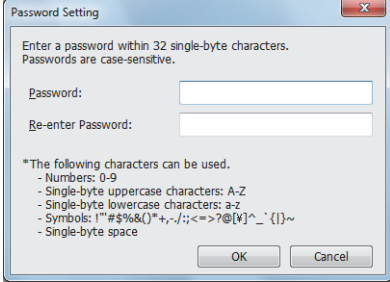

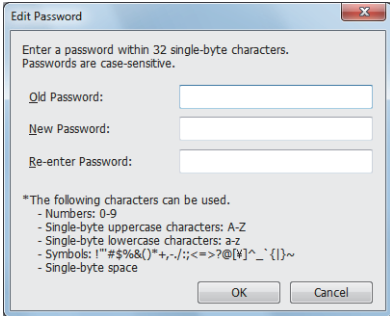

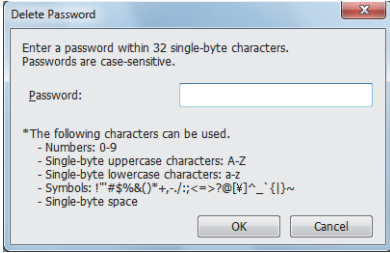

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### 1) [Utility Activation]

Set a password to restrict starting up the utility.

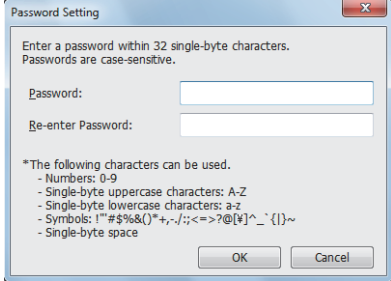

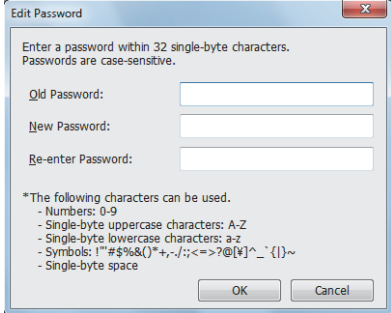

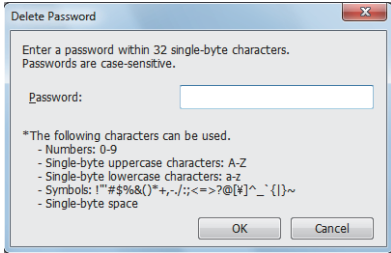

Item	Description
Password	When the password is set, [*****] is displayed. Up to 32 characters are available.

Item	Description
<p>[Edit] button</p>	<p>Edit the password. When registering a new password, the [Password Setting] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation.</li> </ul> <p>When changing the password, the [Editing password] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
<p>[Delete] button</p>	<p>Displays the [Delete Password] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set the password currently set for the project.</li> </ul>

## 2) [Motion Parameter Display]

Not available to GT21 and GT SoftGOT2000.

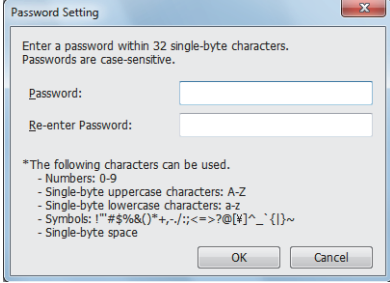

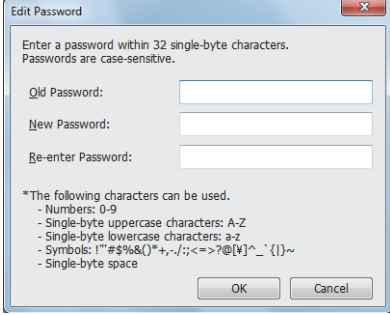

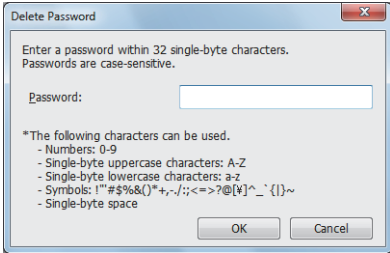

Set the password to restrict displaying the parameters for the R motion monitor or Q motion monitor.

Item	Description
<p>Password</p> <p>[Edit] button</p>	<p>When the password is set, [*****] is displayed. Up to 32 characters are available.</p> <p>Edit the password. When registering a new password, the [Password Setting] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation.</li> </ul> <p>When changing the password, the [Editing password] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
<p>[Delete] button</p>	<p>Displays the [Delete Password] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set the password currently set for the project.</li> </ul>

### 3) [Servo Parameter Display]

Not available to GT21 and GT SoftGOT2000.

Set the password to restrict displaying the parameters for the servo amplifier monitor.

Item	Description
Password	When the password is set, [*****] is displayed. Up to 32 characters are available.
[Edit] button	<p>Edit the password. When registering a new password, the [Password Setting] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation.</li> </ul> <p>When changing the password, the [Editing password] dialog appears.</p>  <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
[Delete] button	<p>Displays the [Delete Password] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set the password currently set for the project.</li> </ul>

#### 4) [Device Test Operation]

Not available to GT21 and GT SoftGOT2000.

Set a device and a password to restrict the device test operation.

Item	Description
Authorization device	Set an authorization device for the device test. A bit device can be set for the authorization device. <ul style="list-style-type: none"> <li>• ON: Device test operation permitted</li> <li>• OFF: Device test operation prohibited</li> </ul>
Password	When the password is set, [*****] is displayed. Up to 32 characters are available.
[Edit] button	Edit the password. When registering a new password, the [Password Setting] dialog appears. <div data-bbox="820 495 1209 808" style="border: 1px solid gray; padding: 5px; margin: 10px 0;"> </div> <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation.</li> </ul> When changing the password, the [Editing password] dialog appears. <div data-bbox="820 981 1209 1267" style="border: 1px solid gray; padding: 5px; margin: 10px 0;"> </div> <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
[Delete] button	Displays the [Delete Password] dialog. <div data-bbox="820 1509 1209 1760" style="border: 1px solid gray; padding: 5px; margin: 10px 0;"> </div> <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set the password currently set for the project.</li> </ul>

## 5) [Ladder Editor Screen Display]

Not available to GT21 and GT SoftGOT2000.

Set a device and a password to restrict displaying the ladder editor screen.

Item	Description
Authorization device	<p>Set the authorization device for the ladder editor screen display. A bit device can be set for the authorization device.</p> <ul style="list-style-type: none"> <li>• ON: Display of ladder editor screen permitted</li> <li>• OFF: Display of ladder editor screen prohibited</li> </ul>
Password	<p>When the password is set, [*****] is displayed. Up to 32 characters are available.</p>
[Edit] button	<p>Edit the password. When registering a new password, the [Password Setting] dialog appears.</p> <div data-bbox="778 495 1171 775" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation.</li> </ul> <p>When changing the password, the [Editing password] dialog appears.</p> <div data-bbox="778 949 1171 1263" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
[Delete] button	<p>Displays the [Delete Password] dialog.</p> <div data-bbox="778 1509 1171 1756" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set the password currently set for the project.</li> </ul>

## 5.2.10 Configuring the security setting for transferring data ([Data Transfer Security])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Specifications of the data transfer security

The data transfer security prevents unauthorized reading and writing of a project and resource data by password-based authentication.

For information on how to set the data transfer security, refer to the following.

→ ■ 4 [Security] ([Data Transfer Security] tab)

#### (1) Operations restricted by the data transfer security

The data transfer security restricts the following operations.

- Transferring data between a personal computer (GT Designer3) and GOT

To restrict operations other than the above, use the following security functions.

Using multiple security functions in combination further strengthens the security.

##### (a) Function restricting project operations

Function	Description
Security key authentication	Restricts a project to be viewed on GT Designer3 or executed on the GOT by protecting the project with a security key. →2.12 Protecting a Project with a Security Key
Project security	Restricts unregistered users to view or edit a project by registering users with the project. Also restricts operations by screen according to the access level of each user. →2.13 Protecting a Project by Registering Users

##### (b) Function restricting communication with the GOT

Function	Description
IP filter	Restricts access to the GOT by Ethernet by registering IP addresses with the filtering list. →5.4.3 Setting the IP filter

##### (c) Function restricting the GOT operations

Function	Description
Screen security	Restricts the display of screens and objects on the GOT by registering users with the GOT. →5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])
Functional operation security	Restricts the display of the utility, and operations of some monitor functions. →5.2.9 Configuring the security settings for operating the utility and the monitor functions ([Functional Operation Security])

#### (2) Restricting reading the project and the resource data

After the data transfer security is set for the project, an authentication with a password is required for reading the project or the resource data.

### (3) Protecting the project written to the GOT

For the project which the data transfer security is set to, an authentication with a password is required for overwriting.

When all the following conditions are satisfied, inputting a password is not required because the authentication is performed automatically.

- The project IDs or package folder names match each other between the project contained in package data to be written and the existing project in the GOT.
- The set data transfer passwords match each other between the project contained in package data to be written and the existing project in the GOT.
- At the first writing of package data, [Retain the password while the GT Designer3 is open] was selected in the dialog for inputting the data transfer password.

You can check and change the project ID in the [Project Information] dialog.

⇒ 2.3.5 Giving a title to a project

## ■ 2 Settings for the data transfer security

The following shows the procedure for setting the data transfer security.

**Step 1** Configure the setting in the project on GT Designer3.

Select [Common] → [GOT Environmental Setting] → [Security] from the menu to display the [Environmental Setting] window ([Security]).

**Step 2** In the [Data Transfer Security] tab, set the password.

⇒ ■ 4 [Security] ([Data Transfer Security] tab)

## ■ 3 Precautions

### (1) Password management

The registered password cannot be checked later. Therefore, always make a note of the password.

When the password is forgotten, the following operations may be disabled.

- Writing the package data to the GOT
- Reading the project and the resource data from the GOT

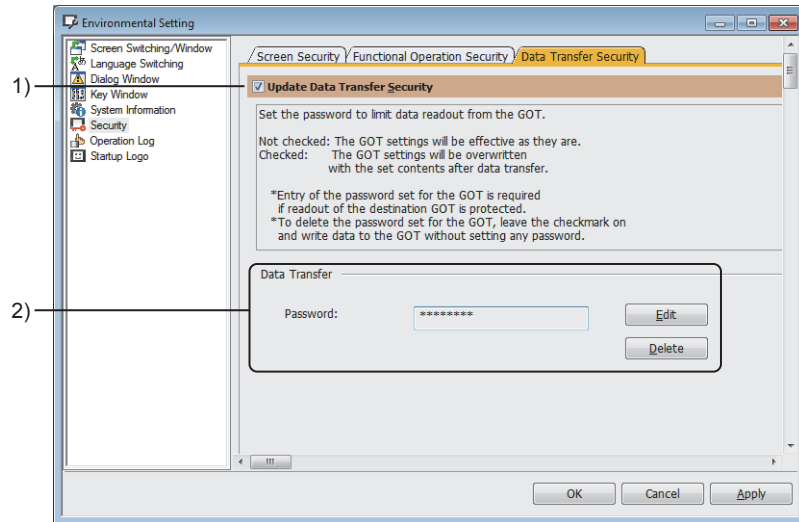

### (2) Solutions when forgetting the password

Install the BootOS again.

Installing the BootOS again deletes all data in the GOT, such as the project and the resource data.

## ■ 4 [Security] ([Data Transfer Security] tab)

### 1) [Update Data Transfer Security]

Overwrites the data transfer security set with GT Designer3 to the GOT when the package data is written. Select this item to set [Data Transfer] items.

### 2) [Data Transfer]

Set or delete the data transfer security.

Item	Description
[Password]	When the data transfer password is set, [*****] is displayed.
[Edit] button	<p>Edit the data transfer password. When the data transfer password is not set, the [Password Setting] dialog appears.</p> <ul style="list-style-type: none"> <li>• <b>[Password]</b> Set a data transfer password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [Password] for the confirmation. When the data transfer password is set, the [Editing password] dialog appears.</li> </ul> <ul style="list-style-type: none"> <li>• <b>[Old Password]</b> Set the password currently set for the project.</li> <li>• <b>[New Password]</b> Set a new data transfer password.</li> <li>• <b>[Re-enter Password]</b> Input the password set in [New Password] for the confirmation.</li> </ul>
[Delete] button	Deletes the set password.

## 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

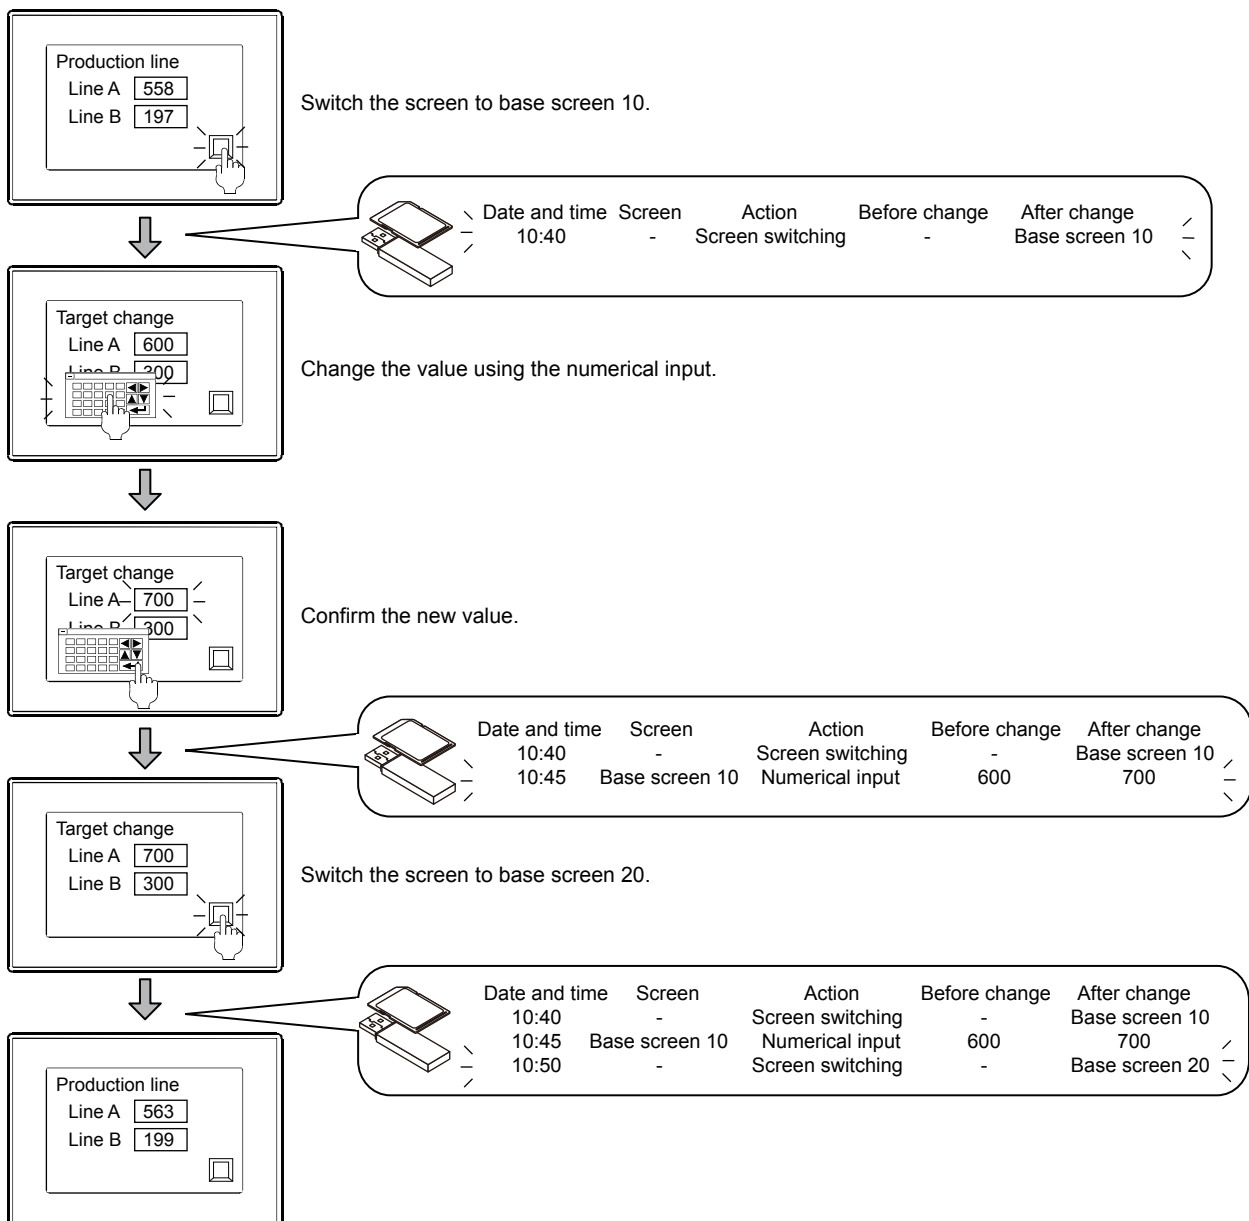

- ➔ ■ 1 Specifications of the operation log
- 2 How to use the operation log
- 3 Precautions
- 4 [Operation Log...]
- 5 [Operation Log File Conversion] dialog
- 6 Relevant settings

The history of operations performed on the GOT can be saved to data storage.

Operation histories can be used to specify the cause of troubles occurring at the production site.

A saved history can be checked by the following methods.

- Displaying by using a GOT's utility
- Saving in a CSV file or Unicode text file then displaying on a personal computer

## 1 Specifications of the operation log

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Target operations for recording operation logs

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The operation logs of the following operations can be recorded.

There are items that need a setting on GT Designer3 to get their operation logs recorded and those that do not need any setting.

Some items are not recorded depending on the GOT model.

The operation logs of those that do not need any setting are always recorded while the logs are valid.

For the setting procedure, refer to the following.

⇒5.2.11 ■ 4 (2) [Log Target] tab

Item	Timing of operation log being recorded	Setting on GT Designer3	Supported models
GOT startup	When the GOT is powered on or restarted ⇒(a) GOT startup	Not needed	GT27 GT25 GT23 GT21 GS SoftGOT2000
GOT termination	When the processing of the GOT is terminated by utilities ⇒(b) GOT termination		
GOT restart	<ul style="list-style-type: none"> <li>When simply restarted</li> <li>When restarted by resets</li> </ul> ⇒(c) GOT restart		
GOT offline mode transition	When transitioning to the offline mode (monitor stop mode) due to package data writing or while monitor screens are displayed ⇒(d) GOT offline mode transition		
GOT background processing stop, restart	When background processing of functions such as the backup/restore and logging functions stop or restart ⇒(e) GOT background processing stop, restart		
Log corruption information	When logs cannot be recorded in the file ⇒(f) Log corruption information		
Unknown logs	When unknown information is contained in collected operation logs ⇒(g) Unknown logs		
Application switching	<ul style="list-style-type: none"> <li>When monitor screens are displayed</li> <li>When utilities are launched</li> <li>When a screen is displayed from the utility</li> <li>When the setting screen for the operator authentication is displayed</li> <li>When various monitors such as the sequence program monitor are started</li> <li>When the backup/restore function is performed</li> <li>When package data are written to the GOT</li> </ul> ⇒(h) Application switching	[Application Switching]	GT27 GT25 GT23 GT21 GS SoftGOT2000
Application startup, exit	When the functions that use window screens, such as the remote personal computer operation (Ethernet) and the device monitor, are started or terminated. ⇒(i) Application startup, exit		
Time zone setting	When the GOT is started (only when the local time is used) ⇒(j) Time zone setting		
Clock setting	<ul style="list-style-type: none"> <li>When the clock is set by time notifications from external devices</li> <li>When the clock is set in time synchronization with the SNTP server</li> <li>When the time is changed by using the GOT special register (GS)</li> </ul> ⇒(k) Clock setting, time change	[Time Change (Clock Setting and GS Change)]	GT27 GT25 GT23 GT21 GS SoftGOT2000
Time change by using utilities	When the time is changed by using utilities ⇒(k) Clock setting, time change	[Time Change (Change from Utilities)]	GT27 GT25 GT23 GT21 GS SoftGOT2000
System language switching	<ul style="list-style-type: none"> <li>When the system language is changed by using utilities</li> <li>When the system language is changed by using the system language devices</li> </ul> ⇒(l) System language switching	[System Language Switching]	GT27 GT25 GT23 GT21 GS SoftGOT2000
Displayed system language	When the system language is changed by using the system language devices ⇒(m) Displayed system language		

Item	Timing of operation log being recorded	Setting on GT Designer3	Supported models
GOT No. switching	When the GOT is switched →(n) GOT No. switching	[GOT No. Switching]	
Screen switching	When screen switching is complete (base screen, overlap window, superimpose window, dialog window) →(o) Screen switching	[Screen Switching]	
Station No. switching	When station No. switching is complete (common station number, base screen station number, overlap window station number, superimpose window station number, dialog window station number) →(p) Station No. Switching	[Station No. Switching]	
Buffer memory unit No. switching	When the buffer memory unit No. switching is complete →(q) Buffer memory unit No. switching	[Buffer Memory Unit No. Switching]	
Language switching	When language switching is complete →(r) Language switching	[Language Switching]	
Object script	When object scripts are executed →(s) Object script The logs are recorded only when all the following settings are made. • [Operation Log Target] is valid in the object setting. • The trigger type of an object script is set to [Key Code Input], [Input Fixation], or [Device Writing].	[Object Script]	

Item	Timing of operation log being recorded	Setting on GT Designer3	Supported models
Touch switch	<p>When the following actions are executed by using touch switches</p> <ul style="list-style-type: none"> <li>• Bit set</li> <li>• Bit reset</li> <li>• Bit momentary</li> <li>• Bit alternate</li> <li>• Storing values in word devices</li> <li>• Activating various extended functions</li> <li>• Screen switching</li> <li>• Station No. switching</li> <li>• Starting or exiting the auto repeat</li> <li>• Switching to the screen gesture mode</li> </ul> <p>⇒(t) Touch switch Because multiple actions can be set for a touch switch, the operation logs are recorded by action.</p>	[Object]	
Numerical input	<p>When the following operations are executed by using numerical inputs</p> <ul style="list-style-type: none"> <li>• Storing input values in the target devices</li> <li>• Storing input values in the target devices for writing</li> <li>• Turning on the write completion devices</li> </ul> <p>⇒(u) Numerical input The operation logs of numerical inputs are recorded in the operation log file every time the input values are written to devices.</p>		
Text input	<p>When the following actions are executed by using text inputs</p> <ul style="list-style-type: none"> <li>• Storing input values in the target devices</li> <li>• Turning on the write completion devices</li> </ul> <p>⇒(v) Text input The actions of text inputs are recorded in the operation log file every time the input data is written to devices.</p>		
Alarm operation (deletion)	<p>When each (or all) alarm is deleted by using alarm displays (user) or alarm displays (system)</p> <p>⇒(w) Alarm display (alarm deletion) This log is recorded only when each (or all) alarm that has been occurred is deleted. No operation log of the delete operations is recorded when the delete operations are performed in the situation that the alarms from which the system was recovered are selected, or no alarm is selected.</p>		
Device reset (user alarm, system alarm)	<p>When device resetting is executed by using alarm displays (user) or alarm displays (system)</p> <p>⇒(x) Alarm display (device reset) This log is recorded only when device resetting is executed only for alarms that have been occurred. No operation log of the delete operations is recorded when the delete operations are performed in the situation that the alarms from which the system was recovered are selected, or no alarm is selected. Reset operations at a higher level or middle level in the hierarchy also do not record operation logs.</p>		
Slider	<p>When the following operations are executed by using sliders</p> <ul style="list-style-type: none"> <li>• Touching the knob or the bar</li> <li>• Releasing the finger from the knob or the bar</li> </ul> <p>⇒(y) Slider</p>		
Recipe display (record list)	<p>When the following operations are executed by using the recipe display (record list)</p> <ul style="list-style-type: none"> <li>• Renaming a record</li> <li>• Reading a record</li> <li>• Writing a record</li> <li>• Deleting a record</li> </ul> <p>⇒(z) Recipe display (record list)</p>		
Level authentication (password entry)	<p>When passwords are confirmed or otherwise by the level authentication</p> <p>⇒(aa) Level authentication (password entry)</p>	[Password Authentication (Password Entry)]	
Level authentication (level device change)	<p>When security levels are changed by using the security level devices</p> <p>⇒(ab) Level authentication (level device change)</p>	[Password Authentication (Level Device Change)]	

Item	Timing of operation log being recorded	Setting on GT Designer3	Supported models
Operator authentication (login, login failure)	When operators succeed in logging in or fail to log in. →(ac) Operator authentication (login)	[Operator Authentication]	GT27 GT25 GT23 GT21 GS SoftGOT2000
Operator authentication (logout)	<ul style="list-style-type: none"> <li>When operators log out</li> <li>When operators are automatically logged out</li> <li>When operators are forcibly logged out</li> </ul> →(ad) Operator authentication (logout)		
Operator authentication (operator switching)	When operator switching is successful or results in failure →(ae) Operator authentication (operator switching)		
Operator authentication (password change)	When a password change succeeds or fails →(af) Operator authentication (password change)		
Operator authentication (operator account lock)	When an operator account becomes locked due to an operator authentication failure →(ag) Operator authentication (operator lock)		
Operator management (start, end)	When the operator management screen or the function setting screen is displayed, fails to load, or is closed in the utility →(ah) Operator management (start, end)	[Operator Management]	GT27 GT25 GT23 GT21 GS SoftGOT2000
Operator management (save, undo)	When the changes of the operator management information are saved or canceled →(ai) Operator authentication (save, undo)		
Operator management (import, export)	When the operator management information file is imported or exported →(aj) Operator management (import, export)		
Operator management (function settings)	When the function setting screen is closed in the utility (The changed function settings are output only.) →(ak) Operator management (function setting)		
Operator management (operator management information)	When the operator management screen is closed in the utility (The added, edited, or deleted operator information is output only.) →(al) Operator management (operator management information)		
Operator management (new file creation at startup)	When the operator management information file cannot be read and a new file is created at GOT startup →(am) Operator management (new file creation at startup)		
Operator management (file corruption at startup)	When the operator management information file fails to be read at GOT startup due to file corruption →(an) Operator management (file corruption at startup)		
Operator management (corrupted file restoration)	When a corrupted operator management information file is restored from the backup file →(ao) Operator management (corrupted file restoration at startup)		
Operator management (abnormal end)	When the GOT is restarted after the GOT was accidentally powered off while displaying the operator management screen or the function setting screen in the utility →(ap) Operator management (illegal end)		
Functional operation security	When succeeding in being confirmed by the functional operation security authentication or resulting in failure →(aq) Functional operation security authentication		[Functional Operation Security Authentication]
SoftGOT-GOT link (start, end)	When SoftGOT-GOT linking starts or ends →(ar) SoftGOT-GOT link (start, end)	[SoftGOT-GOT Link]	GT27 GT25 GT23 GT21 GS SoftGOT2000
SoftGOT-GOT (authorization transfer)	Via a SoftGOT-GOT link, when the authorization is transferred →(as) SoftGOT-GOT (authorization transfer)		
VNC server (connection, disconnection)	When connected to/disconnected from the VNC server (GOT) →(at) VNC server (connection, disconnection)	[VNC Server]	GT27 GT25 GT23 GT21 GS SoftGOT2000
VNC server (authorization transfer)	When the VNC server (GOT) obtains or releases the authorization →(au) VNC server (authorization transfer)		
GOT network interaction function (master GOT)	When the authorization of the GOT network interaction function is transferred (Logging on the master GOT) →(av) GOT network interaction function (master GOT)	[GOT Network Interaction]	GT27 GT25 GT23 GT21 GS SoftGOT2000
GOT network interaction function (equipment except the master GOT)	When the authorization of the GOT network interaction function is transferred (Logging on the equipment except the master GOT) →(aw) GOT network interaction function (equipment except the master GOT)		

Item	Timing of operation log being recorded	Setting on GT Designer3	Supported models
GOT Mobile function (successful authentication)	When the client becomes authenticated to the server (GOT) →(ax) GOT Mobile function (successful authentication)	[GOT Mobile]	
GOT Mobile function (authentication failed)	When the client fails to be authenticated to the server (GOT) →(ay) GOT Mobile function (authentication failed)		
GOT Mobile function (disconnection)	When the client becomes disconnected from the server (GOT) →(az) GOT Mobile function (disconnection)		
GOT Mobile function (GOT Mobile device assignment)	When the client becomes authenticated to the server (GOT) →(ba) GOT Mobile function (GOT Mobile device assignment) The operation events are recorded for VGB and VGD respectively.		
Screen gesture	When the screen gesture mode and the normal operation mode is switched →(bb) Screen gesture	Not needed	
File print (start)	When printing a file starts →(bd) File print (start)	[File Print]	
File print (end)	When printing a file ends →(be) File print (end)		
Network drive (connection)	When the network drive is connected →(bc) Network drive (connection)	[Network Drive]	

## (2) Output items of operation logs

The following lists the items to be output into the operation log files.

For the timing of each log being recorded, refer to the following.

→5.2.11 ■ 1 (1) Target operations for recording operation logs

### (a) GOT startup

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT being started or restarted.* 1
ACT_ABBR	Function abbreviation	Records [Start].
ACTION	Function name	Records [Start GOT].
OPNAME	Operation name	Records the projects' names.
USER_ID	User ID	Records the project ID numbers of initiated project data.
CHG_VALUE	Change value	Records the GOT model numbers. Example) Model No.1: GOT_No-1

\*1 When no battery has been installed in the GOT, the clock is initialized on startup. Hence the date and time in initial state are recorded.

When time synchronization is performed after the initialization, operation logs that were collected before the synchronization may be lost.

If the startup time needs correct recording, install a battery in the GOT.

### (b) GOT termination

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT being terminated.
ACT_ABBR	Function abbreviation	Records [End].
ACTION	Function name	Records [Terminate GOT].

### (c) GOT restart

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT being restarted.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records events as shown below. • When simply restarted: [ReStart] • When restarted by resets: [ReStartR]
ACTION	Function name	Records events as shown below. • When simply restarted: [Simple restart of GOT] • When restarted by resets: [Reset & Restart GOT]

#### (d) GOT offline mode transition

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT transitioning to the offline mode.
ACT_ABBR	Function abbreviation	Records [Offline].
ACTION	Function name	Records [Shift to GOT offline mode].

#### (e) GOT background processing stop, restart

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of background processing stopping or restarting.
ACT_ABBR	Function abbreviation	Records events as shown below. • When background processing stops: [BGStop] • When background processing restarts: [BGRStart]
ACTION	Function name	Records events as shown below. • When background processing stops: [Stop GOT background process] • When background processing restarts: [Resume GOT background process]

#### (f) Log corruption information

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT abandoning operation logs.
ACT_ABBR	Function abbreviation	Records [LostLog].
ACTION	Function name	Records [LostLog].
CHG_VALUE	Change value	Records the number of the logs that were abandoned.

#### (g) Unknown logs

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of unknown operation logs being collected.
ACT_ABBR	Function abbreviation	Records [Unknown].
ACTION	Function name	Records [Unknown].

#### (h) Application switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of applications being switched.
ACT_ABBR	Function abbreviation	Records [AppChng].
ACTION	Function name	Records [Switch applications].

Output item	Name	Description
CHG_VALUE	Change value	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When monitor screens are displayed: [Monitor]</li> <li>• When utilities are launched: [Utility]</li> <li>• When the device monitor is started: [Device monitor]</li> <li>• When the logging is initiated: [Logging]</li> <li>• When recipes are initiated: [Recipe]</li> <li>• When operation logs are initiated: [Operation log]</li> <li>• When the sequence program monitor (iQ-R ladder) is started: [Sequence Program Monitor (iQ-R Ladder)]</li> <li>• When the sequence monitor is started: [Seq program monitor]</li> <li>• When the FX list editor is launched: [List editor for FX]</li> <li>• When the FX list monitor is started: [Ladder monitor for FX]</li> <li>• When the intelligent module monitor is started: [Intelligent unit monitor]</li> <li>• When the network monitor is started: [Network monitor]</li> <li>• When the Q motion monitor is started: [Q motion monitor]</li> <li>• When the R motion monitor is started: [R motion monitor]</li> <li>• When the servo amplifier monitor is started: [Servo amp monitor]</li> <li>• When the CNC monitor is started: [CNC monitor]</li> <li>• When the CNC data I/O is started: [CNC data I/O function]</li> <li>• When the CNC machining program is edited: [CNC program editor]</li> <li>• When the multimedia screen is activated: [Multimedia screen]</li> <li>• When the setting screen for the backup/restore function is displayed: [Backup/restoration]</li> <li>• When the setting screen for the operator authentication is displayed: [Operator authentication]</li> <li>• When the list screen for the operator management information is displayed: [Operator information mng. (List)]</li> <li>• When the log viewer is launched: [Log viewer]</li> <li>• When the motion SFC monitor is started: [Motion SFC monitor]</li> <li>• When the motion program editor is started: [Motion program editor]</li> <li>• When the motion program I/O is started: [Motion program I/O]</li> <li>• When the iQSS utility is started: [iQSS utility]</li> <li>• When the system launcher is started: [System launcher]</li> <li>• When the CNC monitor 2 is started: [CNC monitor 2]</li> <li>• When the file manager is started: [File management]</li> <li>• When the drive recorder is started: [Drive recorder]</li> <li>• When the CC-Link IE Field Network diagnostics is started: [CC-Link IE Field Network diagnostics]</li> <li>• When the servo amplifier graph function is started: [Servo amplifier graph]</li> <li>• When the file print function is started: [File print]</li> <li>• When unknown applications are launched: [Unknown]*1</li> </ul>

\*1 If [Unknown] is displayed, update the BootOS to the latest version.

The BootOS version may be earlier than that of the GOT which created the operation log file.

#### (i) Application startup, exit

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of applications being launched or exited.
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When applications are launched: [AppStart]</li> <li>• When applications are exited: [AppEnd]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When applications are launched: [Start application]</li> <li>• When applications are exited: [End application]</li> </ul>
CHG_VALUE	Change value	<p>Records the names of the applications that are launched or exited.</p> <ul style="list-style-type: none"> <li>• When the remote personal computer operation (Ethernet) is performed: [PC Remote Operation (Ethernet)]</li> <li>• When the device monitor is used: [Device monitor]</li> <li>• When the recipe operation is used: [Recipe operation]</li> <li>• When the drive recorder is used: [Drive recorder]</li> <li>• When the document display (search and bookmark functions for PDF files) is used: [PDF search, bookmark function]</li> <li>• When the servo amplifier graph is used: [Servo amplifier graph]</li> <li>• When unknown applications are used: [Unknown]</li> </ul>
PREV_VALUE	Previous value	<p>Records the window screens that applications use.</p> <ul style="list-style-type: none"> <li>• Overlap window 1 to 5: [OVA1] to [OVA5]</li> <li>• Superimpose window 1 to 2: [SPI1] to [SPI2]</li> </ul>

### (j) Time zone setting

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the time zone being changed.
ACT_ABBR	Function abbreviation	Records [TimeZone].
ACTION	Function name	Records [Set time zone].
CHG_VALUE	Change value	Records the time zone setting. The following takes the time zone (Japan) of Greenwich Mean Time + 9 hours as an example. • [GMT+9:00]

### (k) Clock setting, time change

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	When the clock is changed, records the dates and time of the clock being changed using the previous clock.
ACT_ABBR	Function abbreviation	Records events as shown below. • When notified from external devices: [GetTime] • When synchronized with SNTP: [GetTimeS] • When changed by using the GOT special register (GS): [SetTime] • When changed by using utilities: [ChngTime]
ACTION	Function name	Records events as shown below. • When notified from external devices: [Adjust (External device)] • When synchronized with SNTP: [Set time (SNTP)] • When changed by using the GOT special register (GS): [Adjust (GS)] • When changed by using utilities: [Change clock]
CHG_VALUE	Change value	When the time is changed, records the new time.
PREV_VALUE	Previous value	When the time is changed, records the previous time.

### (l) System language switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the system language being changed by using utilities.* 1
ACT_ABBR	Function abbreviation	Records [SysLang].
ACTION	Function name	Records [Switch system languages].
OPERATOR	Operator name	When operator authentication is performed, records the name of the operator who has been logging in. If operations are performed by VNC clients, the logs are prefixed with asterisk (*).
OPE_ID	Operator ID	When operator authentication is performed, records the ID No. of the operator who has been logging in.
CHG_VALUE	Change value	When the system language is changed, records the new system language.

\*1 If the system language switching devices have been enabled, system language switching by using utilities is disabled.

In this case, if you try to change the system language with utilities, the corresponding operation log is output; however, the system languages are not switched.

You can check if the system languages have been switched by checking the operation log of [Display system language] that is output after system language switching.

### (m) Displayed system language

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of system language switching being performed.
ACT_ABBR	Function abbreviation	Records [DspSysLg].
ACTION	Function name	Records [Display system language].

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> </ul> <p>The operator name is not recorded when the operator is not logged in.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
CHG_VALUE	Change value	When the system language is changed, records the new system language.

## (n) GOT No. switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of GOT No. switching being performed.
ACT_ABBR	Function abbreviation	Records [ChgGOTNo].
ACTION	Function name	Records [Display system language].
OPERATOR	Operator name	When operator authentication is performed, records the name of the operator who has been logging in. If operations are performed by VNC clients, the logs are prefixed with asterisk (*).
OPE_ID	Operator ID	When operator authentication is performed, records the ID No. of the operator who has been logging in.
CHG_VALUE	Change value	When the GOT model No. is changed, records the new No. Example) Model No.1: GOT_No-1

## (o) Screen switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of screen switching being performed.
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When base screens are switched: [BASE]</li> <li>When overlap windows 1 to 5 are switched: [OVL1] to [OVL5]</li> <li>When superimpose windows 1 to 2 are switched: [SP11] to [SP12]</li> <li>When dialog windows are switched: [DLG]</li> <li>When the key windows that a user created are switched: [KEY]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When base screens are switched: [Screen switching: Base]</li> <li>When overlap windows 1 to 5 are switched: [Screen switching: Overlap 1] to [Station No. switching: Overlap 5]</li> <li>When superimpose windows 1 to 2 are switched: [Screen switching: Superimpose 1] to [Screen switching: Superimpose 2]</li> <li>When dialog windows are switched: [Screen switching: Dialog]</li> <li>When the key windows that a user created are switched: [Screen switching: Key]</li> </ul>
OPNAME	Operation name	Records the titles of the screens that appear after screen switching.

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> </ul> <p>The operator name is not recorded when the operator is not logged in.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
CHG_VALUE	Change value	Records the numbers of the screens that appear after screen switching. Example) Screen No.100 (base screen): [BASE_100]

#### (p) Station No. Switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of station No. switching being performed.
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When the common station numbers are switched: [CmnST]</li> <li>When base screen station numbers are switched: [BaseST]</li> <li>When the station numbers of overlap windows 1 to 5 are switched: [Ovl1ST] ~ [Ovl5ST]</li> <li>When the station numbers of superimpose windows 1 to 2 are switched: [Spi1ST] to [Spi2ST]</li> <li>When the station numbers of dialog windows are switched: [DlgST]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When the common station numbers are switched: [Station No. switching: Common]</li> <li>When base screen station numbers are switched: [Station No. switching: base]</li> <li>When the station numbers of overlap windows 1 to 5 are switched: [Station No. switching: Overlap 1] to [Station No. switching: Overlap 5]</li> <li>When the station numbers of superimpose windows 1 to 2 are switched: [Station No. switching: Superimpose 1] to [Station No. switching: Superimpose 2]</li> <li>When the station numbers of dialog windows are switched: [Station No. switching: Dialog]</li> </ul>
CHG_VALUE	Change value	<p>When station numbers are changed, records the new numbers in the following form.</p> <ul style="list-style-type: none"> <li>ST_network No.-PC station No. Example) Network No.1, PC station number 2: [ST_1-2]</li> </ul>

#### (q) Buffer memory unit No. switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time of the buffer memory unit No. switching.
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When the common buffer memory unit number is switched in the project: [CmnBM]</li> <li>When the buffer memory unit number is switched in a base screen: [BaseBM]</li> <li>When the buffer memory unit number is switched in overlap windows 1 to 5: [Ovl1BM] to [Ovl5BM]</li> <li>When the buffer memory unit number is switched in superimpose windows 1 to 2: [Spi1BM] to [Spi2BM]</li> <li>When the buffer memory unit number is switched in a dialog window: [DlgBM]</li> </ul>

Output item	Name	Description
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When the common buffer memory unit number is switched in the project: [BM unit switching: Common]</li> <li>When the buffer memory unit number is switched in a base screen: [BM unit switching: Base]</li> <li>When the buffer memory unit number is switched in overlap windows 1 to 5: [BM unit switching: Overlap 1] to [BM unit switching: Overlap 5]</li> <li>When the buffer memory unit number is switched in superimpose windows 1 to 2: [BM unit switching: Superimpose 1] to [BM unit switching: Superimpose 2]</li> <li>When the buffer memory unit number is switched in a dialog window: [BM unit switching: Dialog]</li> </ul>
CHG_VALUE	Change value	Records the destination module number specified after the buffer memory unit No. switching. Example) Module No. 10: [U10]

### (r) Language switching

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of language switching being performed.
ACT_ABBR	Function abbreviation	Records [DispLang].
ACTION	Function name	Records [Switch languages].
OPERATOR	Operator name	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded. For [None], the security level is 0. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window. When [Operator] is selected for [Authentication Method], the following contents are recorded. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> </ul> The operator name is not recorded when the operator is not logged in. <ul style="list-style-type: none"> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
CHG_VALUE	Change value	When the comment column numbers are changed, records the new numbers.

### (s) Object script

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of object scripts being initiated.
SCRN_NO	Screen No.	Records the screen numbers of the screens on which the objects have been placed. The following takes screen No.10 as an example of a display. <ul style="list-style-type: none"> <li>Base screens: [BASE_10]</li> <li>Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>Dialog windows: [DLG_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records [ObScr].
ACTION	Function name	Records [Object Script].

Output item	Name	Description
OPNAME	Operation name	Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog. →5.2.11 ■ 4 (2) [Log Target] tab
OPERATOR	Operator name	When operator authentication is performed, records the name of the operator who has been logging in. If operations are performed by VNC clients, the logs are prefixed with asterisk (*).
OPE_ID	Operator ID	When operator authentication is performed, records the ID No. of the operator who has been logging in.
USER_ID	User ID	Records the ID numbers of the objects for which the object scripts have been set.
DATA_TYPE	Data type	Records the data types of the trigger devices.
DEV_NAME	Device name	Records the names of the trigger devices.
CHG_VALUE	Change value	Records the operation results of the object scripts.* 1
CHG_VALUE_CONT	Change value (operation)	Records the values input into the objects by operators.

\*1 If internal devices are used as the target devices for writing operation results, the results are not output to the operation log file.

When needing the logs of the operation results, use devices of external devices as the target devices.

#### (t) Touch switch

Because multiple actions can be set for a touch switch, the operation logs are recorded by action.

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of touch switches being operated.
SCRN_NO	Screen No.	Records the screen numbers of the screens on which the touch switches have been placed. The following takes screen No.10 as an example of each screen. <ul style="list-style-type: none"> <li>• Base screens: [BASE_10]</li> <li>• Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>• Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>• Dialog windows: [DLG_10]</li> <li>• Key windows: [KEY_10]</li> <li>• Mobile screens: [MBL-BASE_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records the following logs for each action that has been set for the touch switches. <ul style="list-style-type: none"> <li>• Bit set: [TSW_SET]</li> <li>• Bit reset: [TSW_RST]</li> <li>• Bit alternate: [TSW_ALT]</li> <li>• Bit momentary: [TSW_MMT]</li> <li>• Word set: [TSW_DAT]</li> <li>• Special function: [TSW_APP]</li> <li>• Special function (Recipe file operation) When importing a file: [TSW_RCIN] When exporting a file: [TSW_RCEX]</li> <li>• Screen Switching: [TSW_SCRN]</li> <li>• Station No. switching: [TSW_ST]</li> <li>• Screen gesture: [TSR_GES]</li> </ul> If the auto repeat has been set for the touch switches, the following logs are recorded. <ul style="list-style-type: none"> <li>• When the auto repeat starts: [TSW_REPB]</li> <li>• When the auto repeat ends: [TSW_REPE]</li> </ul>
ACTION	Function name	Records the following logs for each action that has been set for the touch switches. <ul style="list-style-type: none"> <li>• Bit set: [Touch switch: Bit SET]</li> <li>• Bit reset: [Touch switch: Bit RST]</li> <li>• Bit alternate: [Touch switch: Bit ALT]</li> <li>• Bit momentary: [Touch switch: Bit Momentary]</li> <li>• Word set: [Touch switch: Word write]</li> <li>• Extended functions: [Touch switch: Application switching]</li> <li>• Special function (Recipe file operation) When importing a file: [Touch switch: Recipe operation import] When exporting a file: [Touch switch: Recipe operation export]</li> <li>• Screen switching: [Touch switch: Screen switching]</li> <li>• Station No. switching: [Touch switch: Station No. switching]</li> <li>• Screen gesture: [Touch switch: Screen gesture]</li> </ul> If the auto repeat has been set for the touch switches, the following logs are recorded. <ul style="list-style-type: none"> <li>• When the auto repeat starts: [Touch switch: Start auto repeat]</li> <li>• When the auto repeat ends: [Touch switch: End auto repeat]</li> </ul>

Output item	Name	Description
OPNAME	Operation name	<p>Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog.</p> <p>→5.2.11 ■ 4 (2) [Log Target] tab</p> <p>The text displayed on a touch switch immediately before the first operation of the switch is recorded regardless of the settings of [Operation Timing] and [Press Twice].</p> <p>If text is set for each display position (up, down, right, left, or center), only the centered text will be recorded.</p> <p>When [Text Type] is set to [Text], text is recorded under the following constraints.</p> <ul style="list-style-type: none"> <li>• The characters completely extending off the object area are not recorded.</li> <li>• Multiple-line text is recorded by merging the lines into one.</li> </ul>
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window.</p> <p>When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>• When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>• When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>• When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>• When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window.</p> <p>Records the security level when [None] or [Level] is selected for [Authentication Method].</p> <p>For [None], the security level is 0.</p> <p>Records the operator ID number when [Operator] is selected for [Authentication Method].</p> <p>If no operator is logged in, the operator ID number is 0.</p>
USER_ID	User ID	Records the user ID numbers of the touch switches. If no user ID number has been set, [-] is recorded.
SUB_NO	Action No.	Records the action numbers of the actions which have been set for the touch switches. The action numbers are recorded by action.
DATA_TYPE	Data type	<p>Records the data types of the devices that have been set for the touch switches.</p> <ul style="list-style-type: none"> <li>• Bit: [BIT]</li> <li>• Signed 16-bit binary data: [BIN16]</li> <li>• Unsigned 16-bit binary data: [BIN16_Unsigned]</li> <li>• Signed 32-bit binary data: [BIN32]</li> <li>• Unsigned 32-bit binary data: [BIN32_Unsigned]</li> <li>• BCD16: [BCD16]</li> <li>• BCD32: [BCD32]</li> <li>• Real numbers: [REAL]</li> </ul>
DEV_NAME	Device name	Records the devices that have been set for the touch switches.

Output item	Name	Description
CHG_VALUE	Change value	<p>Records the following logs for each action that has been set for the touch switches.</p> <ul style="list-style-type: none"> <li>• [Bit Set], [Bit Reset], [Bit Momentary], [Bit Alternate], [Word Set]: As a result of the actions, the values stored in the devices are output.</li> <li>• [Screen Switching]: Records the screen numbers of the screens that appear after screen switching.</li> <li>• [Station No. Switching]: When station numbers are switched, records the type of the switching and the new station number. Example) In common station No. switching, when switching to network No.1 and PC station No.2.: [CmnST_1-2]</li> <li>• [SP Function] ([Recipe File Operation]): Records the recipe number of the import destination or export source.</li> </ul> <p>If the auto repeat has been set for the touch switches, the following logs are recorded.</p> <ul style="list-style-type: none"> <li>• When the auto repeat ends: The number of the repeats</li> </ul>
CHG_VALUE_CONT	Change value (operation)	Records the values input by touch switches. When [Switch Action] is set to [Recipe File Operation], the full path to the import source file or export destination file is recorded.
PREV_VALUE	Previous value	When device values are changed, records the previous device values. To log the values, select [Collect previous device values at the time of touch switch operation] in the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
PREV_VALUE_DISP	Previous value (display)	When device values are changed, records the previous device values that have been displayed on the objects. To log the values, select [Collect previous device values at the time of touch switch operation] in the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.

#### (u) Numerical input

The operation logs of numerical inputs are recorded in the operation log file every time the input values are written to devices.

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of numerical inputs being operated.
SCRN_NO	Screen No.	<p>Records the screen numbers of the screens on which the numerical inputs have been placed. The following takes screen No.10 as a record example of each screen.</p> <ul style="list-style-type: none"> <li>• Base screens: [BASE_10]</li> <li>• Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>• Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>• Dialog windows: [DLG_10]</li> <li>• Key windows: [KEY_10]</li> <li>• Mobile screens: [MBL-BASE_10]</li> </ul>
ACT_ABBR	Function abbreviation	<p>Records the following logs of each target device for writing.</p> <ul style="list-style-type: none"> <li>• Monitor devices: [NUM_VAL]</li> <li>• Write devices: [NUM_WDEV]</li> <li>• Write completion devices: [NUM_WCHK]</li> </ul>
ACTION	Function name	<p>Records the following logs of each target device for writing.</p> <ul style="list-style-type: none"> <li>• Monitor devices: [Numerical Input]</li> <li>• Write devices: [Numerical Input (Write device)]</li> <li>• Write completion devices: [Numerical Input (Write check)]</li> </ul>
OPNAME	Operation name	<p>Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog.</p> <p>→5.2.11 ■ 4 (2) [Log Target] tab</p>

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0.</p> <p>Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.</p>
USER_ID	User ID	<p>Records the user ID numbers of the numerical inputs. If no user ID number has been set, [-] is recorded.</p>
SUB_NO	Action No.	<p>Records the number corresponding to an action.</p> <ul style="list-style-type: none"> <li>Writing data to the monitor device: [1]</li> <li>Writing data to the write device: [2]</li> <li>Turning on the write completion device: [3]</li> </ul>
DATA_TYPE	Data type	<p>Records the data types of the devices that have been set for the numerical inputs.</p> <ul style="list-style-type: none"> <li>Signed 16-bit binary data: [BIN16]</li> <li>Unsigned 16-bit binary data: [BIN16_Unsigned]</li> <li>Signed 32-bit binary data: [BIN32]</li> <li>Unsigned 32-bit binary data: [BIN32_Unsigned]</li> <li>BCD16: [BCD16]</li> <li>BCD32: [BCD32]</li> <li>Real numbers: [REAL]</li> </ul>
DEV_NAME	Device name	<p>Records the names of the target devices for writing from the numerical inputs. If the offset function has been set, records device numbers to which offset device values were added.</p>
CHG_VALUE	Change value	<p>When device values are changed, records the new device values. The execution results of data operations and scripts are also reflected to the device values.</p>
CHG_VALUE_CONT	Change value (operation)	<p>Records the values input into numerical inputs.</p>
PREV_VALUE	Previous value <sup>*1</sup>	<p>When device values are changed, records the previous device values.</p>
PREV_VALUE_DISP	Previous value (display) <sup>*1</sup>	<p>Records the previous device value that is displayed on the numerical input object before a key code is entered.</p>

\*1 While a key code is being entered, the corresponding device value is not reflected to the display on the numerical input object until the entry is confirmed.

If the device value is changed before the entry is confirmed, inconsistencies occur in the data of PREV\_VALUE and PREV\_VALUE\_DISP.

(v) Text input

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of text inputs being operated.
SCRN_NO	Screen No.	Records the screen numbers of the screens on which the text inputs have been placed. The following takes screen No.10 as a record example of each screen. <ul style="list-style-type: none"> <li>• Base screens: [BASE_10]</li> <li>• Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>• Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>• Dialog windows: [DLG_10]</li> <li>• Key windows: [KEY_10]</li> <li>• Mobile screens: [MBL-BASE_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records the function abbreviation corresponding to an action. <ul style="list-style-type: none"> <li>• Writing data to the monitor device: [STR_VAL]</li> <li>• Turning on the write completion device: [STR_WCHK]</li> </ul>
ACTION	Function name	Records the function name corresponding to an action. <ul style="list-style-type: none"> <li>• Writing data to the monitor device: [Input text]</li> <li>• Turning on the write completion device: [Input text (Write check)]</li> </ul>
OPNAME	Operation name	Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog. →5.2.11 ■ 4 (2) [Log Target] tab
OPERATOR	Operator name	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded. For [None], the security level is 0. <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>• When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>• When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window. When [Operator] is selected for [Authentication Method], the following contents are recorded. <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>• When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>• When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
OPE_ID	Operator ID	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0. Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.
USER_ID	User ID	Records the user ID numbers of the text inputs. If no user ID number has been set, [-] is recorded.
SUB_NO	Action No.	Records the number corresponding to an action. <ul style="list-style-type: none"> <li>• Writing data to the monitor device: [1]</li> <li>• Turning on the write completion device: [2]</li> </ul>

Output item	Name	Description
DATA_TYPE	Data type	Records the character code of the monitor device to which data is written. <ul style="list-style-type: none"> <li>• Alphanumeric characters (ASCII): [ASCII]</li> <li>• Alphanumeric characters (Unicode): [Unicode]</li> <li>• Japanese (SJIS): [SJIS]</li> <li>• Chinese (Simplified) (GB): [GB]</li> <li>• Korean (KS): [KS]</li> <li>• Chinese (Traditional) (Big5): [Big5]</li> </ul> Records the data type of the write completion device that is on. <ul style="list-style-type: none"> <li>• Bit: [BIT]</li> </ul>
DEV_NAME	Device name	Records the names of the target devices for writing from the text inputs.
CHG_VALUE	Change value	Records the new device value when data is written to the monitor device. The execution results of scripts are also reflected to the device values. Records [1] when the write completion device is on.
CHG_VALUE_CONT	Change value (operation)	Records the input data of the text input when data is written to the monitor device. Records [1] when the write completion device is on.
PREV_VALUE	Previous value	Records the previous device value when data is written to the monitor device.*1 Records nothing when the write completion device is on.
PREV_VALUE_DISP	Previous value (display)	Records the previous device value displayed on the text input when data is written to the monitor device. Records nothing when the write completion device is on.

\*1 When the previous values are displayed, the new text codes are used.

If the text codes are changed after the values are changed, the previous values may not be displayed normally.

#### (w) Alarm display (alarm deletion)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of alarm data being deleted.
SCRN_NO	Screen No.	Records the screen numbers of the screens on which the alarm displays have been placed. The following takes screen No.10 as a record example of each screen. <ul style="list-style-type: none"> <li>• Base screens: [BASE_10]</li> <li>• Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>• Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>• Dialog windows: [DLG_10]</li> <li>• Key windows: [KEY_10]</li> <li>• Mobile screens: [MBL-BASE_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When user alarms are deleted: [UALM_DEL]</li> <li>• When system alarms are deleted: [SALM_DEL]</li> <li>• When all user alarms are deleted: [UALM_DEA]</li> <li>• When all system alarms are deleted: [SALM_DEA]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When user alarms are deleted: [User alarm: Delete]</li> <li>• When system alarms are deleted: [System alarm: Delete]</li> <li>• When all user alarms are deleted: [User alarm: Delete all]</li> <li>• When all system alarms are deleted: [System alarm: Delete all]</li> </ul>
OPNAME	Operation name	Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog. →5.2.11 ■ 4 (2) [Log Target] tab

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0.</p> <p>Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.</p>
USER_ID	User ID	Records the user ID numbers of the alarm displays. If no user ID number has been set, [-] is recorded.
SUB_NO	Alarm ID	Records the alarm ID numbers of the user alarms. For system alarms, [-] is recorded.

### (x) Alarm display (device reset)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of devices being reset using alarm displays.
SCRN_NO	Screen No.	<p>Records the screen numbers of the screens on which the alarm displays have been placed. The following takes screen No.10 as a record example of each screen.</p> <ul style="list-style-type: none"> <li>Base screens: [BASE_10]</li> <li>Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>Dialog windows: [DLG_10]</li> <li>Key windows: [KEY_10]</li> <li>Mobile screens: [MBL-BASE_10]</li> </ul>
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When user alarms are used: [UALM_RST]</li> <li>When system alarm are used: [SALM_RST]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When user alarms are used: [User alarm: Reset]</li> <li>When system alarms are used: [System alarm: Reset]</li> </ul>
OPNAME	Operation name	<p>Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog.</p> <p>→5.2.11 ■ 4 (2) [Log Target] tab</p>

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0.</p> <p>Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.</p>
USER_ID	User ID	Records the user ID numbers of the alarm displays. If no user ID number has been set, [-] is recorded.
SUB_NO	Alarm ID	Records the alarm ID numbers of the user alarms. For system alarms, [-] is recorded.
DATA_TYPE	Data type	For user alarms, [BIT] is recorded. (data types of the devices that are reset) For system alarms, nothing is recorded.
DEV_NAME	Device name	For user alarms, records the names of the devices that are reset. For system alarms, nothing is recorded.
CHG_VALUE	Change value	For user alarms, when device values are changed, records the new device values. For system alarms, nothing is recorded.
PREV_VALUE	Previous value	For user alarms, when device values are changed, records the previous device values. For system alarms, nothing is recorded.

## (y) Slider

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the slider being operated.
SCRN_NO	Screen No.	<p>Records the screen number of the screen on which the slider has been arranged. The following takes screen No.10 as a record example of each screen.</p> <ul style="list-style-type: none"> <li>Base screens: [BASE_10]</li> <li>Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>Dialog windows: [DLG_10]</li> <li>Key windows: [KEY_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records [SLR_OPE].
ACTION	Function name	Records [Slider Control].
OPNAME	Operation name	Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog. ⇒5.2.11 ■ 4 (2) [Log Target] tab

Output item	Name	Description
OPERATOR	Operator name	When operator authentication is performed, records the name of the operator who has been logging in. If operations are performed by VNC clients, the logs are prefixed with asterisk (*).
OPE_ID	Operator ID	When operator authentication is performed, records the ID No. of the operator who has been logging in.
USER_ID	User ID	Records the user ID of the slider. If no user ID number has been set, [-] is recorded.
DATA_TYPE	Data type	Records the data type of the device that has been set for the slider. <ul style="list-style-type: none"> <li>• Signed 16-bit binary data: [BIN16]</li> <li>• Unsigned 16-bit binary data: [BIN16_Unsigned]</li> <li>• Signed 32-bit binary data: [BIN32]</li> <li>• Unsigned 32-bit binary data: [BIN32_Unsigned]</li> <li>• BCD16: [BCD16]</li> <li>• BCD32: [BCD32]</li> <li>• Real numbers: [REAL]</li> </ul>
DEV_NAME	Device name	Records the name of the device where data is written from the slider. For system alarms, nothing is recorded. If the offset function has been set, records device numbers to which offset device values were added.
CHG_VALUE	Change value	When device values are changed, records the new device values. The execution results of data operations and scripts are also reflected to the device values.
CHG_VALUE_CONT	Change value (operation)	Records the position of the knob.
PREV_VALUE	Previous value	When device values are changed, records the previous device values.
PREV_VALUE_DISP	Previous value (display)	Records the previous position of the knob when the position of the knob is changed.

### (z) Recipe display (record list)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which a record is manipulated by using the recipe display (record list).
SCRN_NO	Screen No.	Records the screen number of the screen on which the recipe display (record list) has been placed. The following takes screen No.10 as a record example of each screen. <ul style="list-style-type: none"> <li>• Base screens: [BASE_10]</li> <li>• Overlap windows 1 to 5: [OVL1_10] to [OVL5_10]</li> <li>• Superimpose windows 1 to 2: [SPI1_10] to [SPI2_10]</li> <li>• Dialog windows: [DLG_10]</li> </ul>
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When renaming a record: [RVW_RN]</li> <li>• When reading a record: [RVW_RD]</li> <li>• When writing a record: [RVW_WT]</li> <li>• When deleting a record: [RVW_DEL]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When renaming a record: [Recipe (record list): Change record name]</li> <li>• When reading a record: [Recipe (record list): Read]</li> <li>• When writing a record: [Recipe (record list): Write]</li> <li>• When deleting a record: [Recipe (record list): Delete record]</li> </ul>
OPNAME	Operation name	Records the object operation name specified on the [Log Target] tab of [Operation Log] in the [Environmental Setting] dialog. →5.2.11 ■ 4 (2) [Log Target] tab

Output item	Name	Description
OPERATOR	Operator name	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> </ul> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> </ul> <p>The operator name is not recorded when the operator is not logged in.</p>
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0.</p> <p>Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.</p>
USER_ID	User ID	Records the user ID for the recipe display (record list). If no user ID number has been set, [-] is recorded.
SUB_NO	Recipe No.	Records the recipe number for the records displayed on the recipe display (record list).
CHG_VALUE	Change value	Records the record number targeted for manipulation.
CHG_VALUE_CONT	Change value (operation)	Records the record name targeted for manipulation. When the record is renamed, a new record name is recorded.
PREV_VALUE_DISP	Previous value (display)	Records the old record name when the record is renamed. When any other manipulation is performed, [-] is recorded.

#### (aa) Level authentication (password entry)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of passwords being entered for level authentication.
ACT_ABBR	Function abbreviation	Records [ScrPwD].
ACTION	Function name	Records [Change security levels(password)].
OPERATOR	Operator name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.);(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
OPE_ID	Operator ID	Records the security levels at the time of password inputs.
CHG_VALUE	Change value	When security levels are changed, records the new security levels.
PREV_VALUE	Previous value	<p>Records the result of authentication.</p> <ul style="list-style-type: none"> <li>If confirmed: [OK]</li> <li>If not confirmed: [NG]</li> </ul>

#### (ab) Level authentication (level device change)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	When level authentication is performed, records the dates and time of levels being changed by using the security level devices.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records [SqrtLv].
ACTION	Function name	Records [Change levels (device)].
OPERATOR	Operator name	Records events as shown below. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
CHG_VALUE	Change value	When security levels are changed, records the new security levels.

### (ac) Operator authentication (login)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of attempts to log in being made.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When succeeding in logging in: [Login]</li> <li>When failing to log in: [LoginNG]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When succeeding in logging in: [Login]</li> <li>When failing to log in: [Login failed]</li> </ul>
OPERATOR	Operator name	Records events as shown below. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name entered at login</li> <li>When performing operations on the VNC client: *(Operator name entered at login)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *(Operator name entered at login)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21]</li> </ul>
OPE_ID	Operator ID	When logging in is successful, records the ID numbers of the confirmed operators. When logging in results in failure, [0] is recorded.

### (ad) Operator authentication (logout)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of operations logging out.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When operators log out: [Logout]</li> <li>When operators are automatically logged out: [ALogout]</li> <li>When operators are forcibly logged out: [CLogout]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When operators log out: [Logout]</li> <li>When operators are automatically logged out: [Automatic logout]</li> <li>When operators are forcibly logged out: [Forced logout]</li> </ul>
OPERATOR	Operator name	Records events as shown below. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Logged-out operator name</li> <li>When performing operations on the VNC client: *(Logged-out operator name)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *(Logged-out operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21]</li> </ul>
OPE_ID	Operator ID	Records the ID numbers of the operators who logged out.

**(ae) Operator authentication (operator switching)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of attempts to switch operators being made.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When operator switching is successful: [ChgOp]</li> <li>When operator switching results in failure: [ChgOpNG]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When operator switching is successful: [Switch operator]</li> <li>When operator switching results in failure: [Operator switching failed]</li> </ul>
OPERATOR	Operator name	Records events as shown below. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name after operator switching</li> <li>When performing operations on the VNC client: *(Operator name after operator switching)[(VNC client IP address)] Example) *user1[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *(Operator name after operator switching)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21]</li> </ul>
OPE_ID	Operator ID	When operators are changed, records the ID numbers of the new operators.

**(af) Operator authentication (password change)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which a password change succeeded or failed.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When a password change succeeds: [ChPass]</li> <li>When a password change fails: [ChPassNG]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When a password change succeeds: [Password change]</li> <li>When a password change fails: [Password change (failure)]</li> </ul>
OPERATOR	Operator name	Records the name of the operator who has changed the password.
OPE_ID	Operator ID	Records the ID No. of the operator who has changed the password.

**(ag) Operator authentication (operator lock)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which an operator account was locked due to an authentication failure.
ACT_ABBR	Function abbreviation	Records [OpLock].
ACTION	Function name	Records [Operator lock].
OPERATOR	Operator name	Records the name of the locked-out operator.
OPE_ID	Operator ID	Records the ID number of the locked-out operator.

**(ah) Operator management (start, end)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time of the following events. <ul style="list-style-type: none"> <li>When the operator management screen or the function setting screen is displayed in the utility</li> <li>When the operator management screen or the function setting screen fails to load in the utility</li> <li>When the operator management screen or the function setting screen is closed in the utility</li> </ul>
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When the screen is displayed: [OpMStart]</li> <li>When the screen fails to load: [OpMNG]</li> <li>When the screen is closed: [OpMEnd]</li> </ul>

Output item	Name	Description
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When the screen is displayed: [Operator management: start]</li> <li>• When the screen fails to load: [Operator management: start failure]</li> <li>• When the screen is closed: [Operator management: end]</li> </ul>
OPERATOR	Operator name	Records the operator name of the administrator or sub administrator who has been authenticated by the administrator password authentication.
OPE_ID	Operator ID	Records the operator ID number of the administrator or sub administrator who has been authenticated by the administrator password authentication.
CHG_VALUE	Change value	Records events as shown below. <ul style="list-style-type: none"> <li>• When the operator management screen is displayed: [Operator management]</li> <li>• When the function setting screen is displayed: [Function setting]</li> </ul>

**(ai) Operator authentication (save, undo)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the following dates and time. <ul style="list-style-type: none"> <li>• When the changes of the operator management information are saved</li> <li>• When the changes of the operator management information are canceled</li> </ul>
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When the changes of the operator management information are saved: [OpMSave]</li> <li>• When the changes of the operator management information are canceled: [OpMUndo]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When the changes of the operator management information are saved: [Operator management: save]</li> <li>• When the changes of the operator management information are canceled: [Operator management: undo]</li> </ul>
OPERATOR	Operator name	Records the operator name of the administrator or sub administrator who has been authenticated by the administrator password authentication.
OPE_ID	Operator ID	Records the operator ID of the administrator or sub-administrator who has authenticated the administrator password.

**(aj) Operator management (import, export)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the operator management information file was imported or exported.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When importing a file: [OpMImp]</li> <li>• When exporting a file: [OpMExp]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When importing a file: [Operator management: import]</li> <li>• When exporting a file: [Operator management: export]</li> </ul>
OPERATOR	Operator name	Records the operator name of the administrator or sub-administrator who has authenticated the administrator password.
OPE_ID	Operator ID	Records the operator ID of the administrator or sub-administrator who has authenticated the administrator password.
CHG_VALUE	Change value	Records the full path to the import source file or export destination file.

**(ak) Operator management (function setting)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the function setting screen was closed in the utility.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records the changed function settings. <ul style="list-style-type: none"> <li>• Authentication type: [OpMAuthM]</li> <li>• Automatic logout time: [OpMALOut]</li> <li>• Password expiration date: [OpMPassE]</li> <li>• External authentication ID: [OpMEAulD]</li> <li>• Login block: [OpMAuthP]</li> <li>• Operator account lock: [OpMLock]</li> <li>• Password requirements: [OpMPassR]</li> <li>• Use of sub administrators: [OpMSuAdm]</li> </ul>
ACTION	Function name	Records the items changed in the function setting. <ul style="list-style-type: none"> <li>• Authentication type: [Operator management: auth. method]</li> <li>• Automatic logout time: [Operator management: automatic logout]</li> <li>• Password expiration date: [Operator management: pwd. exp. date]</li> <li>• External authentication ID: [Operator management: ext. auth. ID]</li> <li>• Login block: [Operator management: auth. prohibited]</li> <li>• Operator account lock: [Operator management: operator lock]</li> <li>• Password requirements: [Operator management: pwd requirements]</li> <li>• Sub administrator: [Operator management: sub admin.]</li> </ul>
OPERATOR	Operator name	Records the operator name of the administrator or sub-administrator who has authenticated the administrator password.
OPE_ID	Operator ID	Records the operator ID of the administrator or sub-administrator who has authenticated the administrator password.
CHG_VALUE	Change value	Records the changes that have been made to the function settings. If multiple entries are present in a sub field, the entries are separated by a slash mark (/). "n" represents a number. <ul style="list-style-type: none"> <li>• Authentication type                Authentication with an external authentication device: [External auth (serial)]                Authentication with an external authentication device and auxiliary authentication: [Ext. auth. (serial)/Op. name + pwd.]                Authentication with an external authentication device: [External auth (USB)]                Authentication with an external authentication device and auxiliary authentication: [Ext. auth. (USB)/Op. name + pwd.]</li> <li>• Automatic logout time                Automatic logout time: [n min]</li> <li>• Password expiration date                Expiration date: [Expiration: n days]                Prenotification: [Notification: n days]</li> <li>• External authentication ID                Starting position: [Initial: n bytes]                Valid data length: [Data length: n bytes]</li> <li>• Login block setting                Number of failed login attempts: [Continuous failure count: n]                Login block time: [Prohibition: n s]</li> <li>• Operator account lock                Number of consecutive failed login attempts to lock an account: [Continuous failure count: n]</li> <li>• Password requirements                Password requirement setting: [Enabled] or [Disabled]                Minimum number of characters in password: [Minimum: n characters]                Password character type: [Type: &lt;No check&gt;], [Type: &lt;[A-Z,a-z]/[0-9,Other]&gt;], [Type: &lt;[A-Z,a-z]/[0-9/Other]&gt;], or [Type: &lt;[A-Z/a-z]/[0-9/Other]&gt;]</li> <li>• Sub-administrator: [Operator management: sub admin.]                Use of sub administrators: [Enabled] or [Disabled]                Showing of uneditable operator information: [Uneditable display: enabled] or [Uneditable display: disabled]                Security level to change the function setting: [Level n or higher]</li> </ul>
PREV_VALUE	Previous value	Records the entries that have been made before the function setting changes. The sub fields are the same as for [CHG_VALUE] (Change value).

#### (a) Operator management (operator management information)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the operator management screen was closed in the utility.
ACT_ABBR	Function abbreviation	Records the changes of the operator management information. <ul style="list-style-type: none"> <li>• When a piece of operator information is added: [OpMAddOp]</li> <li>• When a piece of operator information is deleted: [OpMDeOp]</li> <li>• When a piece of operator information is edited: [OpMEdiOp]</li> </ul>

Output item	Name	Description
ACTION	Function name	Records the changes of the operator management information. <ul style="list-style-type: none"> <li>When a piece of operator information is added: [Operator management: add operator]</li> <li>When a piece of operator information is deleted: [Operator management: add operator]</li> <li>When a piece of operator information is edited: [Operator management: delete operator]</li> </ul>
OPERATOR	Operator name	Records the operator name of the administrator or sub-administrator who has authenticated the administrator password.
OPE_ID	Operator ID	Records the operator ID of the administrator or sub-administrator who has authenticated the administrator password.
DEV_NAME	Device name	Records the operator name and ID number of a piece of operator information that has been added, deleted, or edited.
CHG_VALUE	Change value	When a piece of operator information is added, the new entries are recorded in the following sub fields. When a piece of operator information is deleted, the entries before the deletion are recorded in the following sub fields. When a piece of operator information is edited, the entries after editing are recorded in the following sub fields. The entries are separated by a slash mark (/) in each sub field. n indicates a numerical value. <ul style="list-style-type: none"> <li>Security level Security level set for an operator: [Level: n]</li> <li>Password When the password is changed: [Password change]</li> <li>Administrator authority When the administrator authority is enabled: [Administrator authority: enabled] When the administrator authority is disabled: [Administrator authority: disabled]</li> <li>Password expiration date setting When no expiration date is set: [Permanent password: enabled] When an expiration date is set: [Permanent password: disabled]</li> <li>Disabling an operator account When the operator account is disabled: [Disable operators: enabled] When the operator account is enabled: [Disable operators: disabled]</li> <li>Changing a password at the next login When the password change setting is enabled: [Change password next login: enabled] When the password change setting is disabled: [Change password next login: disabled]</li> <li>External authentication When the external authentication is enabled: [External authentication: enabled] When the external authentication is disabled: [External authentication: disabled] When the external authentication ID number is changed: [Change external authentication ID]</li> <li>Operator lock When the operator account is locked: [Locked] When the operator account is unlocked: [Unlock]</li> </ul>
PREV_VALUE	Previous value	Records the entries only if any operator information has been edited. Records the entries that have been made before the operator management information edit. Items to be recorded are the same as [CHG_VALUE] (change value).

(am) Operator management (new file creation at startup)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which an operator management information file was created.
ACT_ABBR	Function abbreviation	Records [OpMNewOp].
ACTION	Function name	Records [Operator management: new].

(an) Operator management (file corruption at startup)

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which an operator management information file failed to be read due to file corruption.
ACT_ABBR	Function abbreviation	Records [OpMInfBr].
ACTION	Function Name	Records [Operator management: corrupted].

**(ao) Operator management (corrupted file restoration at startup)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which an operator management information file was restored.
ACT_ABBR	Function abbreviation	Records [OpMRstor].
ACTION	Function name	Records [Operator management: restore].
OPERATOR	Operator name	Records the operator name of the administrator or sub administrator who has restored the corrupted file.
OPE_ID	Operator ID	Records the operator ID number of the administrator or sub administrator who has restored the corrupted file.

**(ap) Operator management (illegal end)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the GOT was restarted after the GOT was accidentally powered off while displaying the operator management screen or the function setting screen in the utility.
ACT_ABBR	Function abbreviation	Records [OpMUnEnd].
ACTION	Function name	Records [Operator management: illegal end].
OPERATOR	Operator name	Records the operator name of the administrator or sub administrator who was logged in when the GOT was accidentally powered off.
OPE_ID	Operator ID	Records the operator ID number of the administrator or sub administrator who was logged in when the GOT was accidentally powered off.
CHG_VALUE	Change value	Records the date and time on which the administrator or sub administrator logged into before the GOT was accidentally powered off.

**(aq) Functional operation security authentication**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	When function operating security authentication is performed, records the dates and time of attempts to be confirmed being made.
ACT_ABBR	Function abbreviation	Records [AppOpe].
ACTION	Function name	Records [Functional Operation Security Authentication].
CHG_VALUE	Change value	Records the names of the functions that are confirmed by authentication. <ul style="list-style-type: none"> <li>• When utilities are launched: [Utility (start)]</li> <li>• When the device monitor is started: [Device monitor (start)]</li> <li>• When device tests of the sequence program monitor (SFC) are started: [Seq program monitor_SFC (device test)]</li> <li>• When device tests of the sequence program monitor (ladder) are started: [Seq program monitor_ladder (dev.test)]</li> <li>• When the editor screen for the sequence program monitor (ladder) is displayed: [Seq program monitor_ladder (edit)]</li> <li>• When the parameter setting screen for the Q motion monitor is displayed: [Q motion monitor (parameter setting)]</li> <li>• When the parameter setting screen for the servo amplifier monitor is displayed: [Servo amp monitor (parameter setting)]</li> </ul>
PREV_VALUE	Authentication result	Records the result of authentication. <ul style="list-style-type: none"> <li>• If confirmed: [OK]</li> <li>• If not confirmed: [NG]</li> </ul>

**(ar) SoftGOT-GOT link (start, end)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of SoftGOT-GOT linking starting or ending.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When starting: [SLCnctG]</li> <li>• When ending: [SLDCnctG]</li> </ul> The SoftGOT records the following logs. <ul style="list-style-type: none"> <li>• When starting: [SLCnctS]</li> <li>• When ending: [SLDCnctS]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When starting: [Connect Soft GOT-GOT link]</li> <li>• When ending: [Disconnect Soft GOT-GOT link]</li> </ul>
CHG_VALUE	Change value	Records the IP addresses of connection request sources.

(as) **SoftGOT-GOT (authorization transfer)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the authorization being transferred via a SoftGOT-GOT link.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• In the GOT: [SLChCtIG]</li> <li>• In the SoftGOT: [SLChCtIS]</li> </ul>
ACTION	Function name	Records [Shift Soft GOT-GOT link authorization].
CHG_VALUE	Change value	Records the destinations to which the authorization is transferred. When the destination is the SoftGOT, the IP address is also recorded. Example) When transferred from the GOT to the SoftGOT: [SoftGOT:192.168.3.40]
PREV_VALUE	Previous value	Records the transfer sources of the authorization. When the source is the SoftGOT, the IP address is also recorded. Example) When transferred from the GOT to the SoftGOT: [GOT]

(at) **VNC server (connection, disconnection)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the establishment of the connection to the VNC server or the disconnection from the server.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When connected: [VSCnct]</li> <li>• When disconnected: [VSDCnct]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When connected: [Connect VNC server]</li> <li>• When disconnected: [Disconnect VNC server]</li> </ul>
CHG_VALUE	Change value	Records the IP addresses of connection request sources.

(au) **VNC server (authorization transfer)**

Output item	Name	Description
[No.]	Log number	Records log numbers.
DATE	Date and time	Records the dates and time of the GOT obtaining or releasing the authorization.
ACT_ABBR	Function abbreviation	Records [VSCnCtIC].
ACTION	Function name	Records [Shift VNC server authorization].
CHG_VALUE	Change value	Records the destinations to which the authorization is transferred. When the destination is a VNC client, the IP address is also recorded. Example) When transferred from the VNC server to a VNC client: [Client:192.168.3.39]
PREV_VALUE	Previous value	Records the transfer sources of the authorization. When the source is a VNC client, the IP address is also recorded. Example) When transferred from the VNC server to a VNC client: [Server]

(av) **GOT network interaction function (master GOT)**

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the authorization is transferred.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When any equipment in the control group obtains the authorization: [MngCtrlGet]</li> <li>When the authorized equipment releases the authorization: [MngCtrlRIs]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When any equipment in the control group obtains the authorization: [Obtain operating authority]</li> <li>When the authorized equipment releases the authorization: [Release operating authority]</li> </ul>
CHG_VALUE	Change value	Records information on the equipment that obtained or released the authorization. <ul style="list-style-type: none"> <li>For the GOT: IP address</li> <li>For the VNC client: VNC:(IP address)</li> <li>For the GOT Mobile function client: M(Client No.):(IP address)</li> <li>For GT SoftGOT2000: SG(Module No.):(IP address)</li> </ul>

(aw) GOT network interaction function (equipment except the master GOT)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the authorization is transferred.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>When the equipment obtains the authorization: [UsrCtrlGet]</li> <li>When the equipment releases the authorization: [UsrCtrlRIs]</li> <li>When the equipment fails to obtain the authorization: [UsrCtrlFail]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When the equipment obtains the authorization: [Obtain operating authority use]</li> <li>When the equipment releases the authorization: [Release operating authority use]</li> <li>When the equipment fails to obtain the authorization: [Failed to obtain operating authority]</li> </ul>
OPERATOR	Operator name	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded. For [None], the security level is 0. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window. When [Operator] is selected for [Authentication Method], the following contents are recorded. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>When performing operations on the GOT Mobile function client: *[M(Client No.):(Client IP address)] Example) *[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.

Output item	Name	Description
OPE_ID	Operator ID	<p>The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded.</p> <p>For [None], the security level is 0.</p> <ul style="list-style-type: none"> <li>• When performing operations on the GOT or VNC client: Security level</li> <li>• When performing operations on the GOT Mobile function client: [-]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p> <p>When [Operator] is selected for [Authentication Method], the following contents are recorded.</p> <ul style="list-style-type: none"> <li>• When performing operations on the GOT or VNC client: Operator ID</li> <li>• If no operator is logged in, the operator ID number is 0.</li> <li>• When performing operations on the GOT Mobile function client: [-]</li> </ul> <p>To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.</p>
CHG_VALUE	Change value	Records the IP address of the master GOT.

(ax) GOT Mobile function (successful authentication)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the client became authenticated to the server (GOT).
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When the connection becomes established: [MBLCnct]</li> <li>• When the trial connection becomes established: [MBLTrialCnct]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When the connection becomes established: [GOT Mobile connection]</li> <li>• When the trial connection becomes established: [GOT Mobile trial connection]</li> </ul>
OPERATOR	Operator name	Records events as shown below. *(Operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.20]
OPE_ID	Operator ID	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When [GOT Mobile Authentication Method] is set to [GOT Mobile exclusive]: 0</li> <li>• When [GOT Mobile Authentication Method] is set to [Operator]: Operator ID</li> </ul>
CHG_VALUE	Change value	Records information obtained from the User-agent header of the HTTP request (such as the browser name of the client).

(ay) GOT Mobile function (authentication failed)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the client failed to be authenticated to the server (GOT).
ACT_ABBR	Function abbreviation	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When authentication fails: [MBLAuthNG]</li> <li>• When authentication fails because the number of connected clients has exceeded the upper limit: [MBLOver]</li> </ul>
ACTION	Function name	<p>Records events as shown below.</p> <ul style="list-style-type: none"> <li>• When the connection authentication fails: [GOT Mobile authentication failure]</li> <li>• When authentication fails because the number of connected clients has exceeded the upper limit: [GOT Mobile connection limit over]</li> </ul>
OPERATOR	Operator name	Records events as shown below. *(Operator name entered at authentication)[M-:(Client IP address)] Example) *user1[M-:192.168.3.20]
OPE_ID	Operator ID	Always records [0].
CHG_VALUE	Change value	Records information obtained from the User-agent header of the HTTP request (such as the browser name of the client).

(az) GOT Mobile function (disconnection)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the client became disconnected from the server (GOT).

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When the connection becomes disconnected: [MBLDCnct]</li> <li>• When the connection is forcibly disconnected using the client control device or the utility: [MBLDCnct]</li> <li>• When the trial connection ends: [MBLTrialDCnct]</li> <li>• When the connection is disconnected due to a communication error: [MBLTimeOut]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When the connection becomes disconnected: [GOT Mobile disconnection]</li> <li>• When the connection is forcibly disconnected using the client control device or the utility: [GOT Mobile forced disconnection]</li> <li>• When the trial connection ends: [GOT Mobile end of trial]</li> <li>• When the connection is disconnected due to a communication error: [GOT Mobile timeout]</li> </ul>
OPERATOR	Operator name	Records events as shown below.*[M(Client No.):Client IP address] Example) *[M3:192.168.3.20]

(ba) GOT Mobile function (GOT Mobile device assignment)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which the client became authenticated to the server (GOT).
ACT_ABBR	Function abbreviation	Records [MBLVtlDev].
ACTION	Function name	Records [GOT Mobile virtual device allocation].
OPERATOR	Operator name	Records events as shown below.*[M(Client No.):Client IP address] Example) *[M3:192.168.3.20]
DATA_TYPE	Data type	Records the device type of the GOT internal devices that are assigned to the GOT Mobile devices. <ul style="list-style-type: none"> <li>• Bit: [BIT]</li> <li>• Signed 16-bit binary data: [BIN16]</li> <li>• Unsigned 16-bit binary data: [BIN16_Unsigned]</li> <li>• Signed 32-bit binary data: [BIN32]</li> <li>• Unsigned 32-bit binary data: [BIN32_Unsigned]</li> <li>• BCD16: [BCD16]</li> <li>• BCD32: [BCD32]</li> <li>• Real numbers: [REAL]</li> </ul>
DEV_NAME	Device name	Records the start device of the GOT internal devices that are assigned to the GOT Mobile devices.
CHG_VALUE	Change value	Records the number of the GOT internal devices that are assigned to the GOT Mobile devices.
PREV_VALUE	Previous value	Records the start device of the GOT Mobile devices.

(bb) Screen gesture

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the dates and time when the gesture mode is switched.
ACT_ABBR	Function abbreviation	Records [ChScrGes].
ACTION	Function name	Records [Switch screen gesture].
CHG_VALUE	Change value	Records the changed gesture mode. Example) When transferred from the normal mode to the screen gesture mode: [Screen gesture mode]

(bc) Network drive (connection)

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which connecting the network drive has succeeded or failed.
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When the connection has succeeded: [VlmCnct]</li> <li>• When the connection has failed: [VlmCnctNG]</li> </ul>

Output item	Name	Description
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>When the connection has succeeded: [Connect network drive]</li> <li>When the connection has failed: [Network drive connection failed]</li> </ul>
CHG_VALUE	Change value	Records events as shown below. (Drive name)(User name) Example) N:user
PREV_VALUE	Previous value	Records events as shown below. (IP address of the file server)(Share name)(Folder path) Example) \\192.168.3.44\share\mount\doc

#### (bd) File print (start)

When multiple files are printed, operations are recorded for each file.

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the printing date and time. If multiple files are printed, the same date and time is recorded for each file.
ACT_ABBR	Function abbreviation	Records [PntStart].
ACTION	Function name	Records [File print: start printing].
OPERATOR	Operator name	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded. For [None], the security level is 0. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window. When [Operator] is selected for [Authentication Method], the following contents are recorded. <ul style="list-style-type: none"> <li>When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
OPE_ID	Operator ID	The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0. Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.
CHG_VALUE	Change value	Records the name of the first printed file.

#### (be) File print (end)

When multiple files are printed, operations are recorded for each file.

Output item	Name	Description
NO	Log number	Records log numbers.
DATE	Date and time	Records the date and time on which printing ends.

Output item	Name	Description
ACT_ABBR	Function abbreviation	Records events as shown below. <ul style="list-style-type: none"> <li>• When printing is complete: [PntEnd]</li> <li>• When printing is aborted by the user: [PntUStop]</li> <li>• When printing is aborted due to an access error: [PntCStop]</li> <li>• When printing is aborted due to a printer error: [PntPStop]</li> <li>• When printing is aborted due to a timeout error: [PntTStop]</li> <li>• When printing is aborted by the system: [PntSStop]</li> </ul>
ACTION	Function name	Records events as shown below. <ul style="list-style-type: none"> <li>• When printing is complete: [File print: normal end]</li> <li>• When printing is aborted by the user: [File print: cancelled (user)]</li> <li>• When printing is aborted due to an access error: [File print: cancelled (access error)]</li> <li>• When printing is aborted due to a printer error: [File print: cancelled (printer error)]</li> <li>• When printing is aborted due to a timeout error: [File print: cancelled (timeout error)]</li> <li>• When printing is aborted by the system: [File print: cancelled (system)]</li> </ul>
OPERATOR	Operator name	Records events only when printing is aborted by the user. The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. When [None] or [Level] is selected for [Authentication Method], the following contents are recorded. For [None], the security level is 0. <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Level(Security level number) Example) Level5</li> <li>• When performing operations on the VNC client: *Level(Security level number)[(VNC client IP address)] Example) *Level5[192.168.3.20]</li> <li>• When performing operations on the GOT Mobile function client: *Level(Security level number)[M(Client No.):(Client IP address)] Example) *Level5[M3:192.168.3.21]</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window. When [Operator] is selected for [Authentication Method], the following contents are recorded. <ul style="list-style-type: none"> <li>• When performing operations on the GOT: Operator name If no operator is logged in, the operator name is left blank.</li> <li>• When performing operations on the VNC client: *(Logged-in operator name)[(VNC client IP address)] Example) *user1[192.168.3.20] The operator name is not recorded when the operator is not logged in.</li> <li>• When performing operations on the GOT Mobile function client: *(Logged-in operator name)[M(Client No.):(Client IP address)] Example) *user1[M3:192.168.3.21] The operator name is not recorded when the operator is not logged in.</li> </ul> To record operations performed on the client, select [Collect operation logs of clients being connected to the server of GOT Mobile function] on the [Log Target] tab in [Operation Log] of the [Environmental Setting] window.
OPE_ID	Operator ID	Records events only when printing is aborted by the user. The contents to be recorded vary depending on the item selected for [Authentication Method] on the [Screen Security] tab in [Security] of the [Environmental Setting] window. Records the security level when [None] or [Level] is selected for [Authentication Method]. For [None], the security level is 0. Records the operator ID number when [Operator] is selected for [Authentication Method]. If no operator is logged in, the operator ID number is 0.
CHG_VALUE	Change value	Records the name of the last printed file.

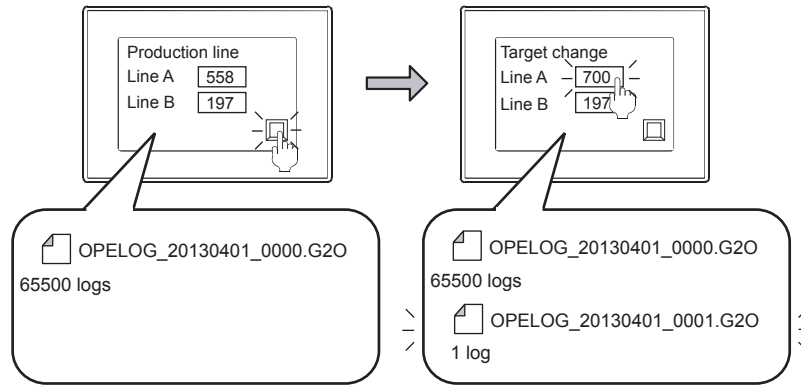

### (3) Specifications of the operations log file

Operation logs are saved in operation log files.

Up to 65500 logs can be recorded in a single operation log file.

When the number of logs exceeds 65500, another operation log file is newly created.

Data storage is needed to save operation logs.

#### (4) Operation log file name

The file name extension of operation log files is [.G2O].

A file name is any character string set by a user, followed by the automatically added date on which the file was created and version.

The version starts from 0000, and is incremented by one every time a new file is created.

After the number reaches 9999, it returns to 0000 in the name of the next new file.

For the character type and the number of characters available for file names, refer to the following.

⇒ 12.4 Restrictions for Folder Names and File Names used in GOT

For how to set file names, refer to the following.

⇒ 5.2.11 ■ 4 (1) [Basic] tab

#### (5) Drives for saving operation log files

Drive A, B, E, F, G, or X (current drive) can be selected to save operation log files.

For how to set the destination for saving, refer to the following.

⇒ 5.2.11 ■ 4 (1) [Basic] tab

#### (6) Time intervals at which operation logs are saved

You can select the time intervals, in days or weeks, at which operation logs are saved.

Saved operations log files are stored for a certain period of time and then deleted automatically.

• Saving in days (every day)

• Saving in weeks (every week)

## (7) Size setting of operation log files to be saved

The total size of all operation log files that can be saved in data storage can be specified.  
When the size exceeds the specified one, the oldest operation log file is automatically deleted.

## (8) Specifications for recording labels and tags

When operations are logged, label and tag names are also recorded.  
The following shows the labels and tags to be recorded.

- Global label
- OMRON NJ/NX tag
- AB native tag

Even if you change the label or tag set for an object or others, you can check the label or tag name as of the recording.  
Note that the size of the log file becomes large if the recorded label or tag name is long.

When the station No. switching function, the offset function, or other functions are used, the label or tag name recorded in the operation log contains the relevant information.

Example) When the global label name is LABEL\_B, the station number is 2-3, and the offset device value is 500  
The global label name is recorded as [2-3::LABEL\_B(+500)].

## ■ 2 How to use the operation log

### (1) Displaying operation logs

#### (a) Displaying with a utility

Operation logs can be checked and the files can be managed by the [Operation Log Information] utility.  
For the operations of the utility, refer to the following manual.

⇒ GOT2000 Series User's Manual (Utility)

#### (b) Converting to a CSV file or Unicode text file then displaying on a personal computer

Converting operation log files to CSV or Unicode enables you to check the operation logs.  
For output operation logs, refer to the following.

⇒ 5.2.11 ■ 1 (2) Output items of operation logs

### (2) Operating operation log files

#### (a) Operating with utilities

The following operations of utilities are available.

Item	Description
Creates a folder	Creates a folder where operation log files are stored. Folders are created by date or time period and operation log files are so managed.
Deletes a folder	Deletes a folder that stores operation log files.
Copies a file	Copies an operation log file. Perform this operation to back up an operation log file.
Deletes a file	Deletes an operation log file.
Changes a file name	Renames an operation log file.
Moves a file	Moves an operation log file to another folder. Perform this operation to back up an operation log file.
Converts a file (G2O) into a CSV file or a Unicode text file	Converts an operation log file (*.G2O) to Unicode or CSV.
Search	Searches for an operation log in an operation log file by date of creation or time.
Latest display of the list	Updates the operation log list.

For the operations of the utility, refer to the following manual.

⇒ GOT2000 Series User's Manual (Utility)

### (3) CSV file conversion or Unicode text file conversion of operation log file

The following shows how to convert an operation log file (\*.G2O) into a CSV file or a Unicode text file.

#### (a) Converting with GT Designer3

**Step 1** Save an operation log file (\*.G2O) to the personal computer by either of the following methods.

- Transferring with GT Designer3

Select [Communication] → [Read from GOT...] from the menu to transfer a file to the personal computer.

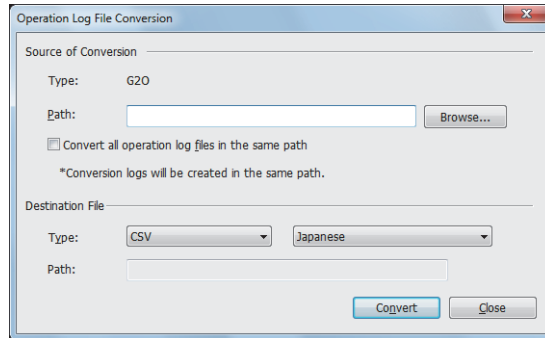

⇒ 4.3.2 ■ 3 Reading the data from the GOT

- Transferring with a data storage
  - Save an operation log file to a data storage and read it using the personal computer.
    - ⇒GOT2000 Series User's Manual (Utility)

**Step 2** Select [Tools] → [Resource Data Conversion] → [Operation Log File...] from the menu to display the [Operation Log File Conversion] dialog.

Refer to the following to enter the required items.

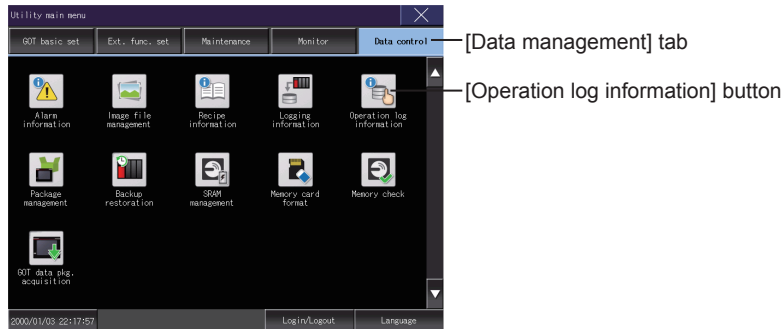

⇒5.2.11 ■ 5 [Operation Log File Conversion] dialog

### (b) Converting in the utility

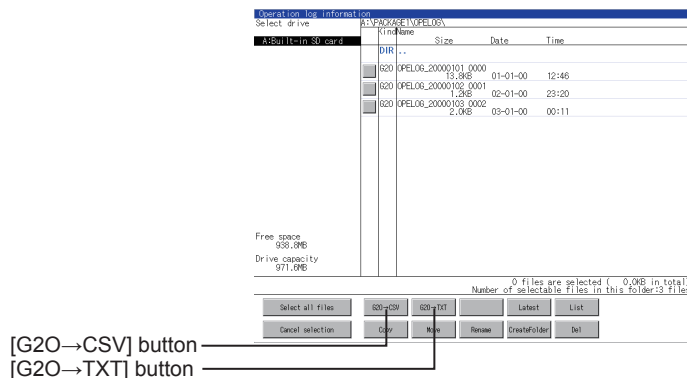

**Step 1** Start the GOT and touch the [Program/Data management] tab.

**Step 2** Touch the [Operation Log Information] to display the [Operation Log Information] screen.

**Step 3** Select a file to convert, and touch either of the following buttons.

- [G2O → CSV] button  
Converts an operation log file (.G2O) into a CSV file.
- [G2O → TXT] button  
Converts an operation log file (.G2O) into a Unicode text file.

**Step 4** A file which is converted is saved in the same location as an operation log file (\*.G2O).

### (c) Converting with the Trigger File Conversion device

To convert an operation log file (\*.G2O) in which events are being collected into a CSV file, turn on the Trigger File Conversion device with a bit switch or others.

Set the Trigger File Conversion device on the [File Conversion] tab in [Operation Log].

⇒5.2.11 ■ 4 (3) [File Conversion] tab

Check the file conversion status using the Notify Operation Log Status device.

→(4) Checking the operation log status

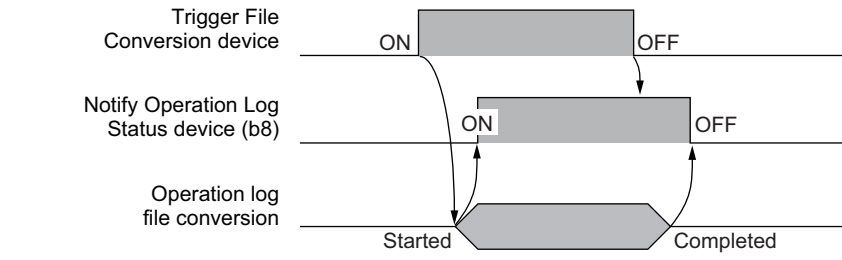

#### (4) Checking the operation log status

Check the operation log status by using the Notify Operation Log Status device.

Set the Notify Operation Log Status device on the [Basic] tab for [Operation Log] in the [Environmental Setting] window.

→5.2.11 ■ 4 (1) [Basic] tab

The following shows the details of the Notify Operation Log Status device.

Bit number	Description
b0	Turns on when operation events cannot be collected. Turns off when collecting operation events is enabled.
b1 to b7	Use prohibited
b8	Turns on when an operation log file conversion is started by using the Trigger File Conversion device. Turns off when the conversion is completed and the Trigger File Conversion device turns off. 
b9	Turns on when an automatic operation log file conversion is started. Turns off when the conversion is completed.
b10 to b15	Use prohibited

Set the Trigger File Conversion device and the automatic operation log file conversion on the [File Conversion] tab for [Operation Log] in the [Environmental Setting] window.

→5.2.11 ■ 4 (3) [File Conversion] tab

#### (5) Outputting operation log data to a report screen

You can output operation log data to a report screen.

For the report function, refer to the following.

→10.11 Outputting the Collected Data as a Report (Report Function)

### ■ 3 Precautions

#### (1) Log target when recording an operation log per object

Do not select [Object] in the [Log Target] tab of the operation log setting.

Doing so sets all the objects as the target of the operation log function.

To record an operation log per object, select [Operation Log Information] in each object setting.

#### (2) Target function for an operation log

Do not set the function which is not set in GT Designer3 as the target of the operation log.

Doing so may record an operation log even though the function does not operate.

#### (3) System language when converting an operation log file (\*.G2O)

When [System Language Switching Interlock] is set for [File Conversion Language] in the operation log setting, an operation log file is not converted in the language specified in the system language switching device.

A file is converted in the system language set in the utility.

#### (4) Converting an operation log file (\*.G2O) in the utility

When converting an operation log file (\*.G2O) into a CSV file or a Unicode text file in the utility, execute a conversion by each file.

Even if multiple files are selected at once, they cannot be converted.

#### (5) Operation log file size

The file size of an operation log cannot be calculated in advance.

To use a data storage in other functions as well, limiting the capacity used for an operation log file by setting [Specify the total log file size] in GT Designer3 is recommended.

**(6) Converting an operation log file (\*.G2O) in a language other than Japanese and English**

Before converting an operation log file (\*.G2O) in a language other than Japanese and English to a CSV file, turn on the Character Code for CSV Conversion signal (GS522.b2).

If this signal (GS522.b2) is not turned on, the characters are not displayed correctly.

For the details of the Character Code for CSV Conversion signal (GS522.b2), refer to the following.

→12.1.3 GOT special register (GS)

**■ 4 [Operation Log...]**

In [Operation Log...], configure the setting for saving the operation history of the GOT.

Select [Common] → [GOT Environmental Setting] → [Operation Log...] from the menu to display this window.

After displaying the window, select [Collect operation logs].

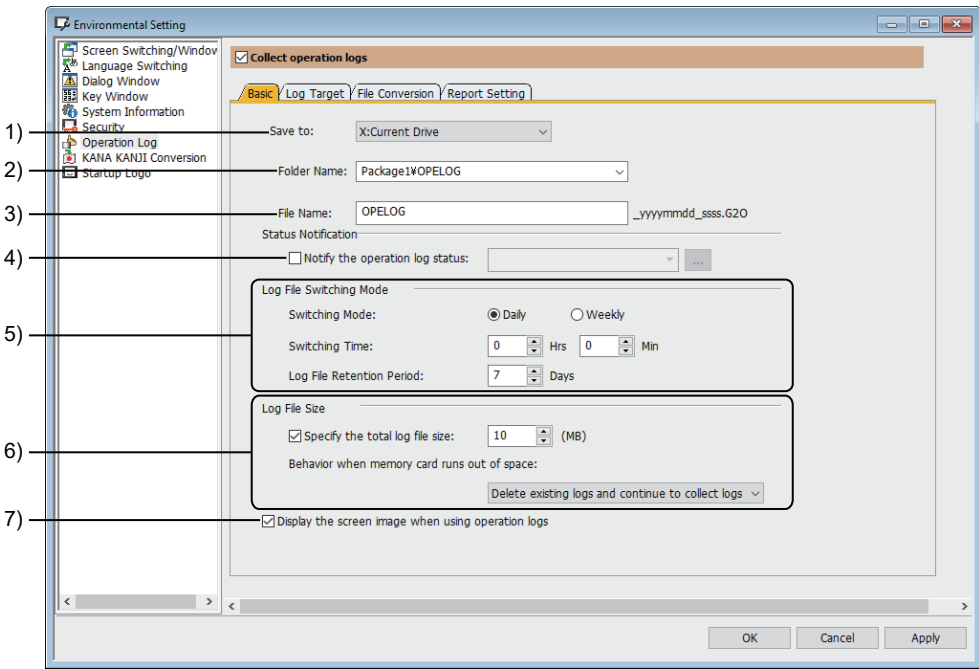

→5.2.11 ■ 4 (1) [Basic] tab

5.2.11 ■ 4 (2) [Log Target] tab

5.2.11 ■ 4 (3) [File Conversion] tab

5.2.11 ■ 4 (4) [Report Setting] tab

**(1) [Basic] tab**

**1) [Save To]**

Select the destination to save an operation log file (.G2O).

The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

→1.2.7 Drive configuration of the target GOT for data transfer

**2) [Folder Name]**

Set the name of the folder to which the operation log file (.G2O) is saved.

For the character type and the number of characters available for folder names, refer to the following.

→ 12.4 Restrictions for Folder Names and File Names used in GOT

**3) [File Name]**

Set the file name of the operation log file (.G2O).

The date and version are added automatically for the set file name.

For the character type and the number of characters available for file names, refer to the following.

→ 12.4 Restrictions for Folder Names and File Names used in GOT

**4) [Notify the operation log status]**

Set devices for notifying the collecting status of the operation log.

The word device is available.

For the details of the Notify Operation Log Status device, refer to the following.

→ 5.2.11 ■ 2 (4) Checking the operation log status

**5) [Log file switching timing]**

Set the switching mode, time, and storage period for the save destination file of the operation log.

Item	Description
[Switching Mode]	Select the switching mode for the save destination file of the operation log. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Daily]: Switches the save destination file once a day.</li> <li>• [Weekly]: Switches the save destination file once a week. After selecting this item, select the day to switch.</li> </ul>
[Switching Time]	Set the time to switch the save destination file. Set the time by minutes.
[Log File Retention Period]	Set the storage period of the operation log file (.G2O). The following shows the setting range. <ul style="list-style-type: none"> <li>• When [Daily] is selected for [Switching Mode]: [7] days to [100] days</li> <li>• When [Weekly] is selected for [Switching Mode]: [4] weeks to [53] weeks</li> </ul>

**6) [Log file size]**

Set the upper limit capacity of all the operation log files (.G2O) in the save destination folder and the operation when the capacity is insufficient.

Item	Description
[Specify the total log file size]	Set the upper limit capacity of all the operation log files (.G2O) in the save destination folder. When the capacity of all the operation log files exceeds the set capacity, the oldest operation log file is deleted. The setting range is [10] MB to [1024] MB.
[Behavior when memory card runs out of space]	Select the operation if the capacity is insufficient when a file is saved. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Delete existing logs and continue to collect logs]</li> <li>• [Delete existing logs and collect no further logs]</li> </ul>

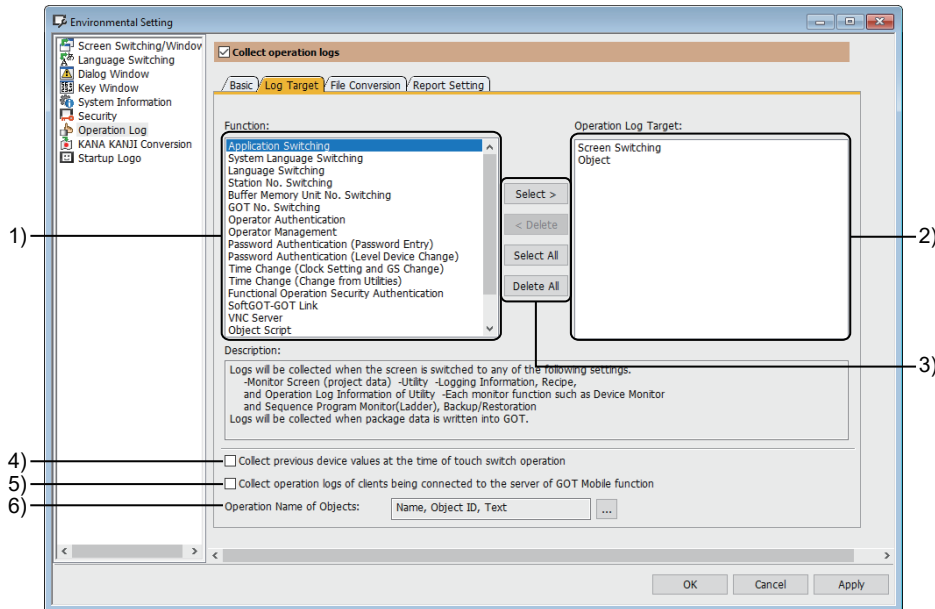

**7) [Display the screen image when using operation logs]**

Displays the screen image of the operation log selected in the operation log information screen.

For the screen image, refer to the following.

→ GOT2000 Series User's Manual (Utility)

**(2) [Log Target] tab**

### 1) [Function]

Lists the items which can be set as the target of the operation log.  
The items in this list are not recorded in the operation log file.  
For the details of each function, refer to the following.

→5.2.11 ■ 1 (1) Target operations for recording operation logs

### 2) [Operation Log Target]

Lists the items which are set as the target of the operation log.  
The items in this list are recorded in the operation log file.

### 3) Buttons

The following buttons are used for selecting or deleting items.

Item	Description
[Select] button	Moves the item selected in [Function] to [Operation Log Target].
[Delete] button	Moves the item selected in [Operation Log Target] to [Function].
[Select All] button	Moves all the items in [Function] to [Operation Log Target].
[Delete All] button	Moves all the items in [Operation Log Target] to [Function].

### 4) [Collect previous device values at the time of touch switch operation]

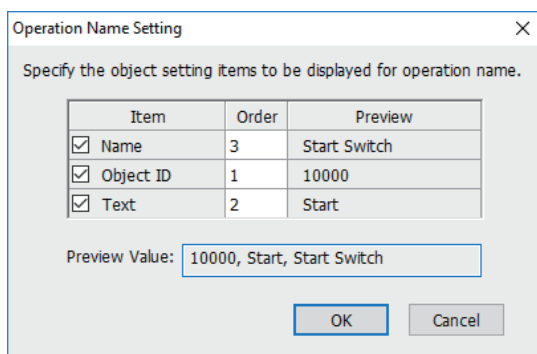

Logs the previous device value with each touch switch operation.

### 5) [Collect operation logs of clients being connected to the server of GOT Mobile function]

Logs operations performed on the client in the GOT Mobile function.  
The operation log is saved in the GOT.

### 6) [Operation Name of Objects]

This item appears when [Object] or [Object Script] is selected from [Function].  
Set the items to be recorded as OPNAME for an object.  
Click the [...] button to display the [Operation Name Setting] dialog.

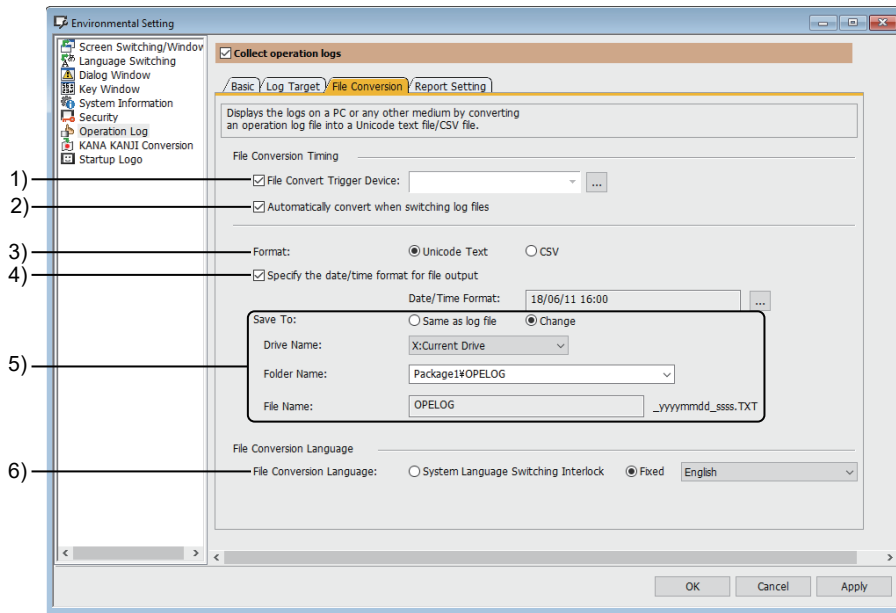

#### • [Item]

- Select an item to be recorded as OPNAME for an object. The following shows selectable items.
  - [Name] Records the name specified in the setting dialog of an object.
  - [Object ID] Records the ID number of an object.
  - [Text] Records the text displayed on a touch switch. When [Text Type] is set to [Text], only the centered text will be recorded. This setting is applied to a touch switch only.

#### • [Order]

- Set the order in which the selected items are recorded as OPNAME for an object. The setting range is [1] to [3].

### (3) [File Conversion] tab

#### 1) [File Convert Trigger Device]

Set a trigger device to convert an operation log file (.G2O) in which events are being collected into a CSV or Unicode text file.

The bit device is available.

#### 2) [Automatically convert when switching log files]

Converts a file automatically when recording an operation log file (.G2O) is completed.

#### 3) [Format]

Select the file format after the conversion.

The following shows the items to be selected.

- [Unicode Text]
- [CSV]

#### 4) [Specify the date/time format for file output]

Specify the date and time format for a conversion destination file.

Click the [...] button to specify the date and time format in the [Date/Time Setting] dialog.

→ 6.3.2 Date/time format settings

#### 5) [Save To]

Select the save destination folder for a converted file.

The following shows the items to be selected.

- [Same as log file]:  
Saves a file in the same folder as that of an operation log file (.G2O).
- [Change]:  
Set the destination to save a file.

After selecting this item, set [Drive Name] and [Folder Name].

Item	Description
[Drive Name]	Set a drive to save a converted file. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> <li>• [X:Current Drive]</li> </ul> For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer
[Folder Name]	Set the folder name of the destination to save a file. For the character type and the number of characters available for folder names, refer to the following. <ul style="list-style-type: none"> <li>• 12.4 Restrictions for Folder Names and File Names used in GOT</li> </ul>
[File Name]	The file name after the conversion is displayed.

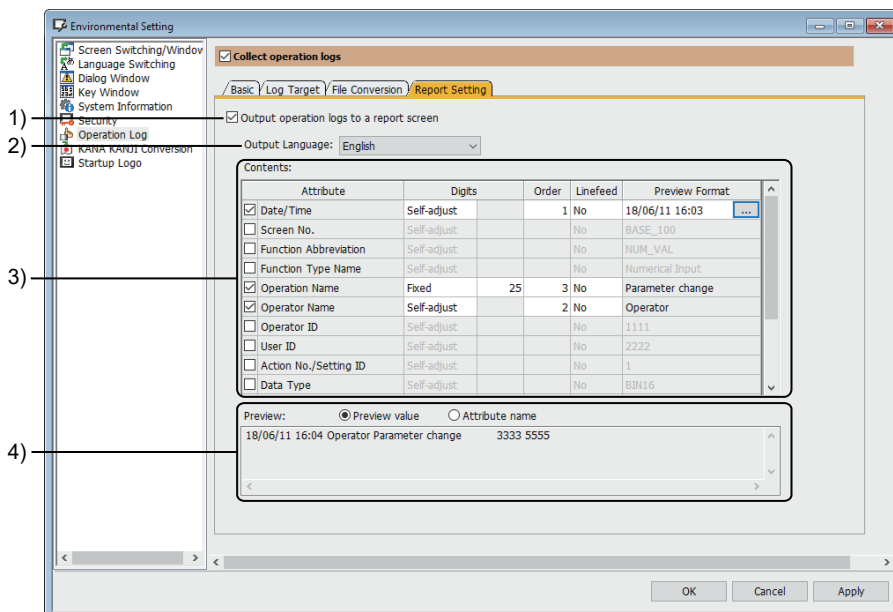

### 6) [File Conversion Language]

Select the language used for the file conversion.

The following shows the items to be selected.

- [System Language Switching Interlock]  
Uses the same language as the system language.
- [Fixed]  
Uses the selected language.  
Select [Japanese], [English], [Chinese(Simplified)], [Chinese(Traditional)], or [Korean] for the language to be used.

### (4) [Report Setting] tab

#### 1) [Output operation logs to a report screen]

Outputs operation log lines to a report.

For setting an operation log line, refer to the following.

→10.11.3 ■ 5 Settings to output operation log lines

#### 2) [Output Language]

Select a language in which a report is output.

The following shows selectable items.

- [Japanese]
- [English]

#### 3) [Contents]

Set items to be output.

Item	Description
[Attribute]	<p>Select attributes to be output. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Date/Time]</li> <li>• [Screen No.]</li> <li>• [Function Abbreviation]</li> <li>• [Function Type Name]</li> <li>• [Operation Name]</li> <li>• [Operator Name]</li> <li>• [Operator ID]</li> <li>• [User ID]</li> <li>• [Action No./Setting ID]</li> <li>• [Data Type]</li> <li>• [Device Name]</li> <li>• [Changed Value]</li> <li>• [Changed Value (Operation)]</li> <li>• [Original Value]</li> <li>• [Original Value (Display)]</li> </ul>
[Digits]	<p>Specify the number of digits of text to be output. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Self-adjust] Adjusts the number of digits of text automatically.</li> <li>• [Fixed] Specify the number of digits of text. The setting range is [1] digit to [124] digits.</li> </ul>
[Order]	<p>Set the order in which attributes are output.</p>
[Linefeed]	<p>Set whether to insert a line feed after an attribute value. If the number of digits of attribute values to be output exceeds the maximum number of digits per line, insert line feeds to output the values in multiple lines. The maximum number of digits per line is specified with [Page Columns] in the [Report Setting] dialog. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Yes]</li> <li>• [No]</li> </ul>
[Preview Format]	<p>Displays the format in which an attribute value will appear in [Preview]. When [Date/Time] is selected, the date and time format is settable. Click the [...] button to specify the date and time format in the [Date/Time Setting] dialog. For the details, refer to the following. →6.3.2 Date/time format settings</p>

#### 4) [Preview]

Displays a preview of the operation log data to be output to a report.

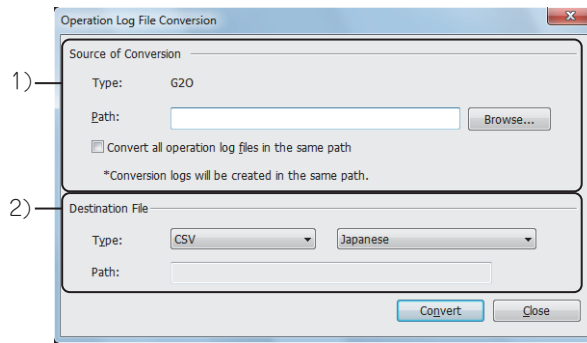

Select a preview format.

The following shows selectable items.

- [Preview value]  
Displays the values of the selected attributes in [Preview].
- [Attribute name]  
Displays the selected attributes in [Preview].

## ■ 5 [Operation Log File Conversion] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Source of Conversion]

Set the destination to save the conversion source file and the target file.

Item	Description
[Type]	The conversion source file type. [G2O] is displayed.
[Path]	Set the destination path to save the conversion source file.
[Convert all operation log files in the same path]	Select this item to set all the operation log files (.G2O) in the conversion source folder as the target of the conversion.

### 2) [Destination File]

Set the file format of the converted file and the destination to save the file.

Item	Description
[Type]	Set the file format and the language of the converted file. The settable language depends on the selected file format. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [CSV] Converts an operation log file (.G2O) into a CSV file. [Japanese] or [English] can be set for the language.</li> <li>• [Unicode] Converts an operation log file (.G2O) into a Unicode text file. [Japanese], [English], [Chinese(Simplified)], [Chinese(Traditional)], or [Korean] can be set for the language.</li> </ul>
[Convert]	Set the destination path to save the converted file.

## ■ 6 Relevant settings

Set the relevant settings other than the specific settings for the operation log as required. The following shows the functions that are available by the relevant settings.

### (1) Internal device

⇒ 12.1.3 GOT special register (GS)

Function	Setting item
Changing the character code to Unicode when a binary file is converted to CSV format	GS522.b2
Disabling all buttons except the [List] and [Latest] buttons on the [Operation Log Information] screen of the utility	GS522.b3

## 5.2.12 Configuring the settings for converting the text to Kanji character on the GOT ([KANA KANJI Conversion])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Specifications of the KANA-KANJI conversion
- 2 How to use the KANA-KANJI conversion
- 3 Precautions
- 4 [KANA KANJI Conversion]

You can convert hiragana characters input by text input into Kanji characters.

To convert hiragana characters to Kanji characters, use the touch switch for which the key code for the KANA-KANJI conversion is set.

### ■ 1 Specifications of the KANA-KANJI conversion

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Compatible language

Only Japanese is supported.

When using the KANA-KANJI conversion, set the system language to Japanese.

#### (2) Input mode

Hiragana-input is supported.

Input texts on objects by using the touch switch (key code switch).

#### (3) Conversion method

A range of phrase can be converted.

Characters are converted when the input characters match the dictionary data completely.

Example) Converting [せいさんらいん]

Touch the 変換 switch.

Convert "せいさん" and "らいん" separately.

When the Conversion switch is touched once, one conversion option is displayed. When the switch is touched again, the option selection window appears and shows more options.

When the Conversion switch is touched once, one conversion option is displayed.

When the switch is touched again, the option selection window is displayed.

**(4) Number of characters that can be input and converted at once**

Up to 40 two-byte characters (80 bytes) can be input.  
 Up to 20 two-byte characters (40 bytes) can be converted.

**(5) Supported Kanji**

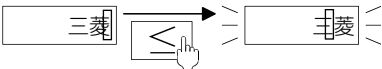

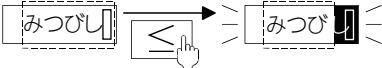

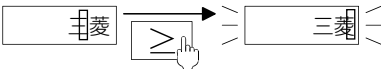

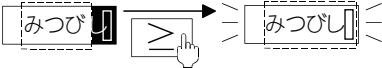

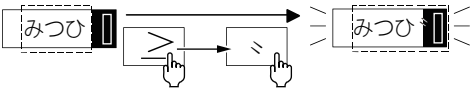

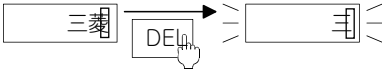

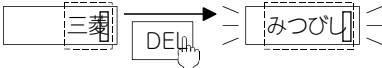

Kanji characters classified in the JIS Level-1 kanji set and JIS Level-2 Kanji set are supported.

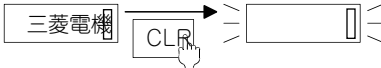

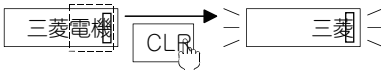

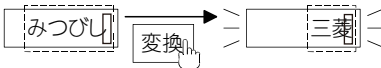

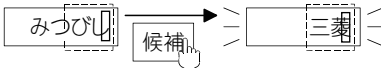

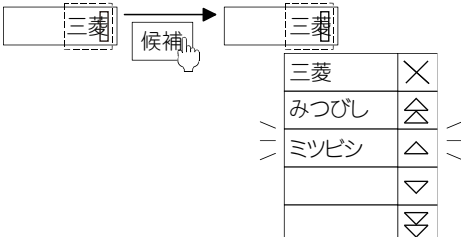

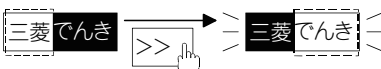

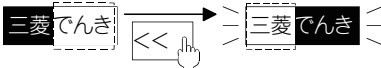

**(6) Learning conversion results**

The GOT learns conversion results when using the KANA-KANJI conversion.  
 No setting is required.  
 The GOT holds the learning result until the GOT is powered off or reset.  
 Up to 20 two-byte characters (40 bytes) can be learned.  
 Up to 1000 words can be learned.

**(7) Operation switch**

The touch switch used for the KANA-KANJI conversion operates by assigning the key code.  
 When creating a key window by the use, use the following key codes.

Item	Key code	Application and operation
Hiragana characters	Shift JIS code	Use for inputting hiragana characters.
Cursor key (Left)	0091h	<p>Use for moving a cursor.</p> <ul style="list-style-type: none"> <li>While characters are input, a cursor is moved to the left for one character.</li> </ul>  <ul style="list-style-type: none"> <li>While characters are converted, the selected phrase is shortened by one character by pressing this switch.</li> </ul> 
Cursor key (Right)	0090h	<p>Use for moving a cursor.</p> <ul style="list-style-type: none"> <li>While characters are input, a cursor is moved to the right for one character.</li> </ul>  <ul style="list-style-type: none"> <li>While characters are converted, the selected phrase is extended by one character by pressing this switch.</li> </ul>  <p>While characters are converted, touch this key and then enter a sonant mark or p-sound mark to input the mark as one character.</p> 
[DEL] key	0008h	<p>Use for deleting characters.</p> <ul style="list-style-type: none"> <li>While characters are input, the right-most input character is deleted.</li> </ul>  <ul style="list-style-type: none"> <li>While characters are converted, the conversion result on the selected strings is undone and returned to its original characters.</li> </ul> 

Item	Key code	Application and operation
[CLR] key	0088h	<p>Use for clearing characters.</p> <ul style="list-style-type: none"> <li>While characters are input, all the input characters are cleared.</li> </ul>  <ul style="list-style-type: none"> <li>While characters are converted, only the characters being converted are cleared.</li> </ul> 
[Conversion] key	0084h	<p>Use for converting characters.</p> <ul style="list-style-type: none"> <li>While characters are input, the characters are converted.</li> </ul>  <ul style="list-style-type: none"> <li>While characters are converted, the conversion result on the selected strings is undone and returned to its original characters.</li> </ul> 
[Option] key ([The former candidate] or [The next candidate])	0085h or 0086h	<p>Use for displaying the option selections.</p> <ul style="list-style-type: none"> <li>When this key is touched first, the next option selection is displayed.</li> </ul>  <ul style="list-style-type: none"> <li>When this key is touched again, the option selection window is displayed.</li> </ul> 
[>>] key	0087h	<p>Use for selecting the next phrase during the conversion.</p> <ul style="list-style-type: none"> <li>When a single phrase is converted, the input characters are determined.</li> </ul>  <ul style="list-style-type: none"> <li>When a range of phrase is converted, the next phrase is selected.</li> </ul> 
[<<] key	0089h	<p>Use for selecting the previous phrase during the conversion.</p> <ul style="list-style-type: none"> <li>While a single phrase is converted, the original characters are displayed.</li> <li>When a range of phrase is converted, the previous phrase is selected.</li> </ul> 

Item	Key code	Application and operation
[Enter] key	000Dh	<p>Use for writing characters to the device.</p> <ul style="list-style-type: none"> <li>While characters are input and converted, the displayed characters are determined.</li> </ul>  <ul style="list-style-type: none"> <li>After the conversion the characters are input to the device.</li> </ul> 

## (8) Option selection window

The option selection window displays multiple conversion options in a list at the conversion.  
The background color and the scroll button can be selected.  
The background color can be selected from [White] or [Black].  
The scroll button can be selected from [Page + Line Scroll] or [Page Scroll].

Background color: [White]  
Scroll: [Page + Line Scroll]

Background color: [Black]  
Scroll: [Page Scroll]

## ■ 2 How to use the KANA-KANJI conversion

### (1) Outline procedure of setting

You can select whether to use the KANA-KANJI conversion for each project or each screen.  
To use the KANA-KANJI conversion, configure the settings for each object and the user-created key window.

#### (a) Settings for using the KANA-KANJI conversion for each project

- Step 1** Select [Common] → [GOT Environmental Setting] → [KANA KANJI Conversion] from the menu to display the setting window of [KANA KANJI Conversion] and configure the settings for the KANA-KANJI conversion.  
⇒ 5.2.12 ■ 4 [KANA KANJI Conversion]
- Step 2** Create a user-created key window and configure the settings.  
Arrange keys for KANA-input and KANJI-conversion on the key window.  
⇒ 2.5.1 ■ 2 Creating a window screen  
5.2.4 Setting key windows ([Key Window])
- Step 3** Configure the setting for enabling the KANA-KANJI conversion for the text input arranged on each screen.  
⇒ 8.5.5 ■ 2 [Extended] tab

#### (b) Settings for using the KANA-KANJI conversion for each screen

- Step 1** Open the screen for enabling the KANA-KANJI conversion.
- Step 2** Select [Screen] → [Screen Property] from the menu to display the setting dialog, and configure the settings in the [Option Selection Window] tab.  
⇒ 2.7.1 ■ 5 [Option Selection Window] tab  
2.7.2 ■ 5 [Option Selection Window] tab
- Step 3** Create a user-created key window and configure the settings.  
Arrange keys for KANA-input and KANJI-conversion on the key window.  
⇒ 2.5.1 ■ 2 Creating a window screen  
5.2.4 Setting key windows ([Key Window])
- Step 4** Configure the setting for enabling the KANA-KANJI conversion for the text input arranged on each screen.  
⇒ 8.5.5 ■ 2 [Extended] tab

### Creating a window for the KANA-KANJI conversion using the library data

The key code switch for the KANA-KANJI conversion is registered to the library.

A key window for the KANA-KANJI conversion can be created easily by using the KANA-key and the KANA-KANJI conversion key registered in the library.

→8.1.2 ■ 1 Using the data in the library

## ■ 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Number of input digits for the text input

Do not exceed the number of input digits set in the text input.

Otherwise, determining the characters and writing to a device cannot be executed.

### (2) Input by the USB keyboard

When using the KANA-KANJI conversion, the USB keyboard cannot be used for the text input.

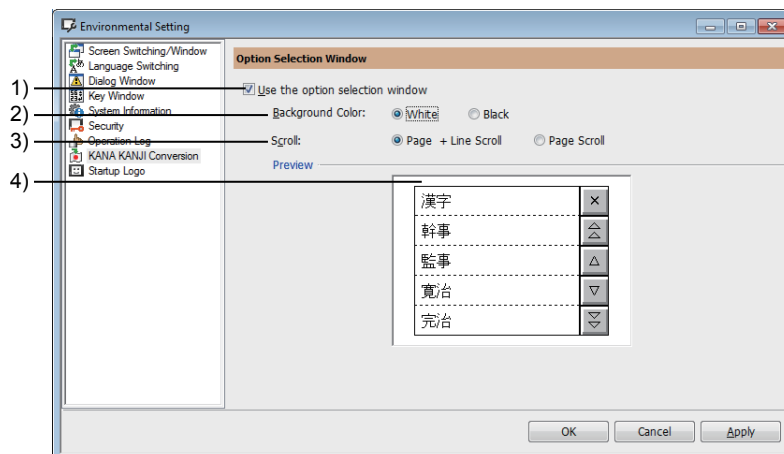

Use the key window displayed on the GOT screen.

## ■ 4 [KANA KANJI Conversion]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the display method of the option selection window in [KANA KANJI Conversion].

Select [Common] → [GOT Environmental Setting] → [KANA KANJI Conversion] from the menu to display this window.

### 1) [Use the option selection window]

Uses the option selection window to convert hiragana to kanji.

### 2) [Background Color]

Select the background color of the option selection window.

### 3) [Scroll]

Select the key to be displayed in the option selection window.

- [Page + Line Scroll]: Displays the key to scroll the screen by page and line.
- [Page Scroll]: Displays the key to scroll the screen by page.

### 4) [Preview]

Displays the preview of the option selection window which the settings of [Background Color] and [Scroll] are reflected.

## 5.2.13 Setting a screen to be displayed on the GOT at startup ([Startup Logo])

- ■ 1 Specifications of the startup logo
- 2 How to use the startup logo
- 3 Precautions
- 4 [Startup Logo]

Images in BMP or JPEG format can be displayed as the startup logo at GOT startup.

The set images in BMP or JPEG format is displayed at GOT startup.

### ■ 1 Specifications of the startup logo

#### (1) Available number of startup logos

A startup logo can be set for each project.

#### (2) Applicable image file

BMP files and JPEG files are applicable.

When an image file whose format is incompatible with the GOT is set, the pre-installed startup logo is displayed.

##### (a) BMP file

Item	Description
Format	24-bit BMP
Number of colors	BMP files in 65536 or less colors can be displayed. The colors which cannot be displayed on the GOT are subtracted.
Resolution	Images whose resolutions are lower than that of the GOT can be used. When the resolution is higher than that of the GOT, the GOT displays only the part that lies within the screen by using the center of the image as the reference.

##### (b) JPEG file

Item	Description
Format	Base line JPEG compatible with RGB full-color (Progressive JPEG and lossless JPEG are unavailable.)
Number of colors	JPEG files in 65536 or less colors can be displayed. The colors which cannot be displayed on the GOT are subtracted.
Resolution	Images whose resolutions are lower than that of the GOT can be used. When the resolution is higher than that of the GOT, the GOT displays only the part that lies within the screen by using the center of the image as the reference.

## ■ 2 How to use the startup logo

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Outline procedure of setting

- Step 1** Select [Common] → [GOT Setup] → [Basic Setting] → [Display Setting/Language Setting] from the menu to display the [GOT Setup] window, and set the display time of the startup logo in [Title Display Time].
- 5.2.13 ■ 4 [Startup Logo]
- You can also set the display time in the utility.
- GOT2000 Series User's Manual (Utility)
- Step 2** Install the package data on the GOT.
- For GT SoftGOT2000, the installation is not required.
- Step 3** The set image file is displayed as the startup logo at GOT startup.
- For GT SoftGOT2000, when the saved project is opened, the set image file is displayed as the startup logo.

## ■ 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Precautions for utilizing a project

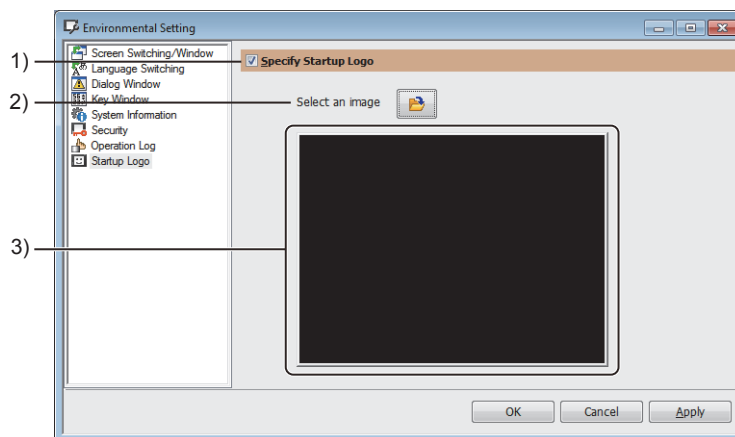

When you utilize a project where the GOT installation orientation is set to [Vertical], set the startup logo again. Otherwise, the utilized startup logo is rotated and appears in the destination project.

## ■ 4 [Startup Logo]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Startup Logo], set an image file to be displayed at GOT startup.

Select [Common] → [GOT Environmental Setting] → [Startup Logo] from the menu to display this window.

#### 1) [Specify Startup Logo]

Select this item to set an image file used as the startup logo.

#### 2) [Select an image] button

Displays the [Open] dialog.

Select a BMP file or JPEG file to be used as the startup logo.

For the details of available image files, refer to the following.

→ 5.2.13 ■ 1 Specifications of the startup logo

#### 3) Preview

Displays the preview of the image file set as the startup logo.

## 5.3 Setting the Utility Function ([GOT Setup])

---

GT27

GT25

GT23

GT21

SoftGOT2000

GS

- ⇒5.3.1 Configuring the settings of the display of the GOT ([Display Setting/Language Setting])
- 5.3.2 Setting the identification information to the GOT ([GOT ID No.])
- 5.3.3 Setting buzzer volume or utility call key of the GOT ([Operation Setting/Utility Call Key])
- 5.3.4 Configuring the settings for a mouse and a keyboard used with the GOT ([USB Host])
- 5.3.5 Setting the GOT time setting method ([Time Setting])
- 5.3.6 Setting target channels for the FA transparent function ([Transparent Mode Setting])
- 5.3.7 Configuring the settings of the GOT internal device monitor ([GOT Internal Device Monitor])
- 5.3.8 Configuring the settings of the SoftGOT-GOT link function ([SoftGOT-GOT Link])
- 5.3.9 Configuring the settings of the VNC server function ([VNC Server])
- 5.3.10 Configuring the settings of the sequence program monitor ([Sequence Program Monitor])
- 5.3.11 Configuring the settings of the backup/restoration function ([Backup/Restore])
- 5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])
- 5.3.13 Configuring the settings of the system launcher function ([System Launcher])
- 5.3.14 Configuring the settings of the iQSS utility function ([iQSS Utility])
- 5.3.15 Configuring the network drive settings ([Network Drive])

Use [GOT Setup] to configure the utility settings with GT Designer3 in advance.

With the GOT setup, the GOT operations and the utility functions, such as the display method of screen, the manage method of the clock, and the buzzer sound length, can be set.

The settings are reflected to the GOT after the package data is written into the GOT.

The settings can be reconfigured in the utility.

For the operations and settings of the utility, refer to the following manual.

- ⇒GOT2000 Series User's Manual (Utility)

When the GOT setup is enabled, settings changed in the utility are reflected to the project as well.

(Otherwise, the changed settings are not reflected to the project.)

When the project is read from the GOT to GT Designer3 after the settings are changed in the utility, the setting contents in the [GOT Setup] are changed as well.

### 5.3.1 Configuring the settings of the display of the GOT ([Display Setting/Language Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications
- 2 [Display Setting/Language Setting]

In [Display Setting/Language Setting], configure settings for the GOT display and the system language.

#### ■ 1 Specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (1) Screen saver

The screen saver function is designed to turn off the screen display if the screen is not touched within a specified time. The screen saver mode can be canceled by the screen touch operation, the human sensor, and the system information. Example) When the time to the screen saver is set to 10 minutes

For how to control the screen saver function with the system information, refer to the following.

- ➔5.2.5 ■ 2 (6) Control screens

##### (2) Human sensor

Available to GT27-X and GT27-S.

The human sensor is a sensor that detects the human approach.

Use the human sensor to release the screen saver mode.

By approaching the GOT, the screen saver mode can be canceled.

Cancels the screen saver mode when by detecting the human approach

The human sensor operation can be controlled with the system information as well.

For how to control the human sensor with the system information, refer to the following.

- ➔5.2.5 ■ 2 (6) Control screens

##### (3) Brightness adjustment mode

You can change the brightness adjustment mode of the backlight by selecting [Normal] or [Low].

To reduce the luminous intensity of the GOT screen, select [Low] instead of [Normal] for [Brightness Adjustment Mode].

Brightness adjustment mode: [Normal]  
Brightness adjustment: [32]

Brightness adjustment mode: [Low]  
Brightness adjustment: [32]

To use the [Low] mode, install the BootOS version E or later to the GOT. (Not applicable to GT21)  
For how to install the BootOS, refer to the following.

→4.3.2 ■ 1 Writing data to one GOT

## Point

### Restrictions in [Low] mode

#### (1) Backlight shutoff detection

In [Low] mode, the GOT cannot detect the backlight shutoff.

To detect the backlight shutoff, set the brightness adjustment mode to [Normal].

#### (2) Screen display

In [Low] mode, the screen may flicker, or the screen display may turn off.

If you do not use the GOT in a dark place, set the brightness adjustment mode to [Normal].

#### (a) Temporarily switching the brightness adjustment mode to the [Normal] mode in the utility screen

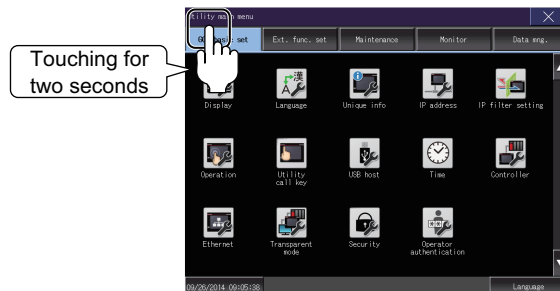

Not available to GT21.

In the [Low] mode, touching the upper-left corner of the utility main menu screen for two seconds enters the [Normal] mode temporarily.

The brightness adjustment mode returns to the original mode at the following timing.

- When the screen is switched to a monitor screen
- When the setting of [Brightness adjust] or [Brightness adjustment] is changed in the utility

(The screen is displayed using the set value of [Brightness adjust] and [Brightness adjustment].)

#### (4) POWER LED shutoff

Available to GT27, GT25, and GT2105-Q.

Even while the GOT is operating, the POWER LED can be off.

Turning off the  
POWER LED  
even while  
the GOT is operating

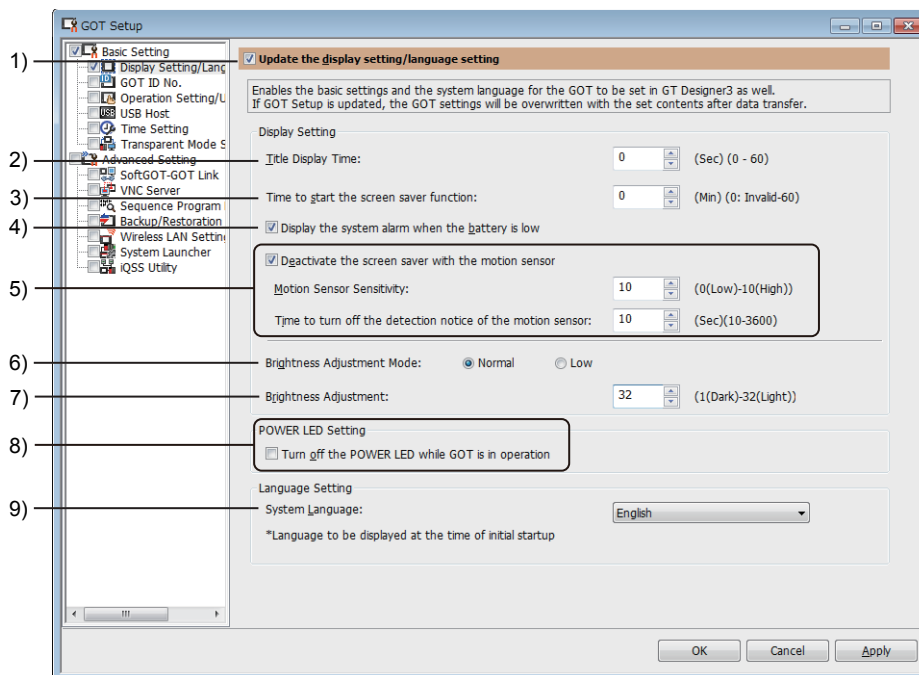

When you select [Turn off the POWER LED while GOT is in operation] in the POWER LED setting, the POWER LED only momentarily turns on at the GOT startup for checking operations.

## 2 [Display Setting/Language Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Display Setting/Language Setting], configure settings for the GOT display and the system language. Select [Common] → [GOT Setup] → [Basic Setting] → [Display Setting/Language Setting] from the menu to display this window.

### 1) [Update the display setting/language setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set [Display Setting/Language Setting] items. When a project is read from the GOT, the setting changed in the utility is reflected.

### 2) [Title Display Time]

Set the title display time at the GOT startup. The setting range is [0] to [60] second(s). Regardless the set time, the title is always displayed at GOT startup. (However, when [0] is set, the title is not displayed on GT21.) Therefore, the title display time may be longer than the set time.

### 3) [Time to start the screen saver function]

Set the time to the screen saver. The setting range is [0] (Invalid) minutes to [60] minutes.

### 4) [Display the system alarm when the battery is low]

Not available to GT21. Select this item to display the system alarm when the battery voltage is low.

### 5) [Deactivate the screen saver with the motion sensor]

Available to GT27-X and GT27-S. Cancels the screen saver mode when the human sensor detects the human motion. After selecting this item, set the sensor detection level and the time to turn off the Human Sensor Detection signal.

Item	Description
[Motion Sensor Sensitivity]	Set the human sensor detection level. The setting range is [0] to [10].
[Time to turn off the detection notice of the motion sensor]	Set the time from when the human sensor stops detecting the human motion to when the Human Sensor Detection signal turns off. The setting range is [10] to [3600] second(s).

### 6) [Brightness Adjustment Mode]

Select the brightness adjustment mode of the backlight.

- [Normal]
- [Low]

### 7) [Brightness Adjustment]

Set the intensity of the backlight.

The setting range is [1] to [32].

For GT23 with 16-level intensity adjustment, set this item with an even number.

## 8) [POWER LED Setting]

Available to GT27, GT25, and GT2105-Q.

Item	Description
[Turn off the POWER LED while GOT is in operation]	Turns off the POWER LED while the GOT is operating.

## 9) [System Language]

Select the language to be used for the utility and the system message.

The following shows the items to be selected.

- [Japanese]
- [English]
- [Chinese (Simplified)]
- [Chinese (Traditional)](Not available to GT21.)
- [Korean](Not available to GT21.)

## 5.3.2 Setting the identification information to the GOT ([GOT ID No.])

- ➔ ■ 1 Specifications
  - 2 How to use the identification information
  - 3 Precautions
  - 4 [GOT ID No.]
  - 5 [GOT Setting List] dialog
  - 6 [GOT Setting] dialog

In [GOT ID No.], set the items, such as the GOT ID number, GOT name, and Ethernet interface.

### ■ 1 Specifications

#### (1) GOT identification information

Set the identification information for each GOT.

Up to 500 pieces of GOT identification information can be stored for a project.

Item	Overview
GOT ID No.	ID number to identify the GOT
GOT name	Name to identify the GOT. Use as the identification information when obtaining the GOT list by the network.
GOT detailed description	Detailed description for the GOT. Describe the supplemental information of the GOT.
Ethernet interface setting at the GOT side	The communication interface setting at the GOT side for using the Ethernet connection.

### ■ 2 How to use the identification information

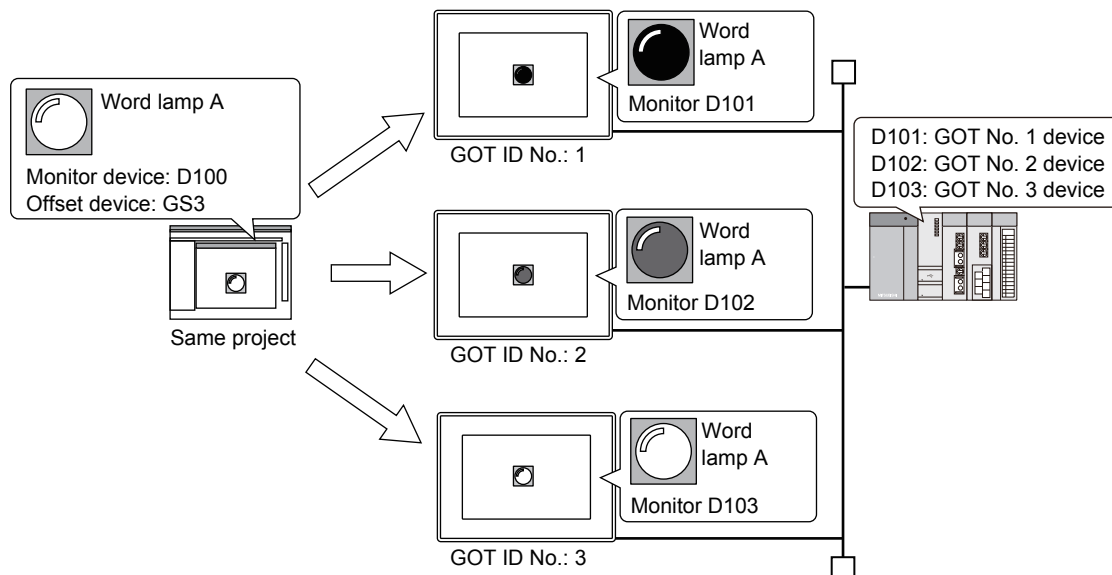

#### (1) Performing various operations in each GOT in one project

The GOT ID No. is stored in the GOT special register (GS3).

Using the GOT special register (GS3) allows object operations and script controls to have difference even when the same project is written to multiple GOTs.

Example) Writing the same project to three GOTs that have different GOT ID No.

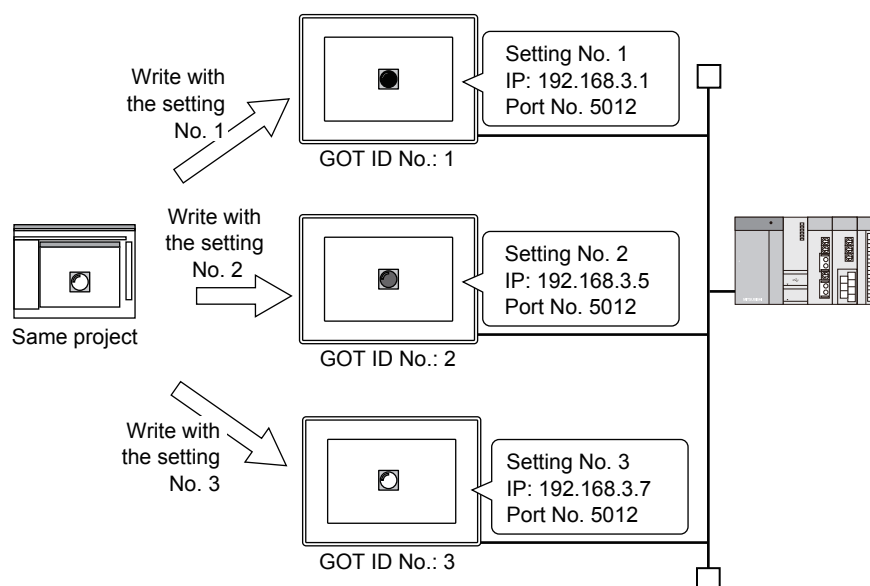

## (2) Switching the destination GOT for writing the package data

The Ethernet setting can be stored for each GOT ID No.

This enables the Ethernet interface setting to be switched when the destination GOT for writing the package data is switched.

Use this function to switch the communication setting in a system where multiple GOTs which use the same project exist. If the communication setting switching is unnecessary, preparing multiple settings is unnecessary.

## 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Ethernet interface settings which are not included in the GOT identification information

The following settings are not included the GOT identification information.

- Number of retry
- Startup time
- Communication timeout time
- Send delay time

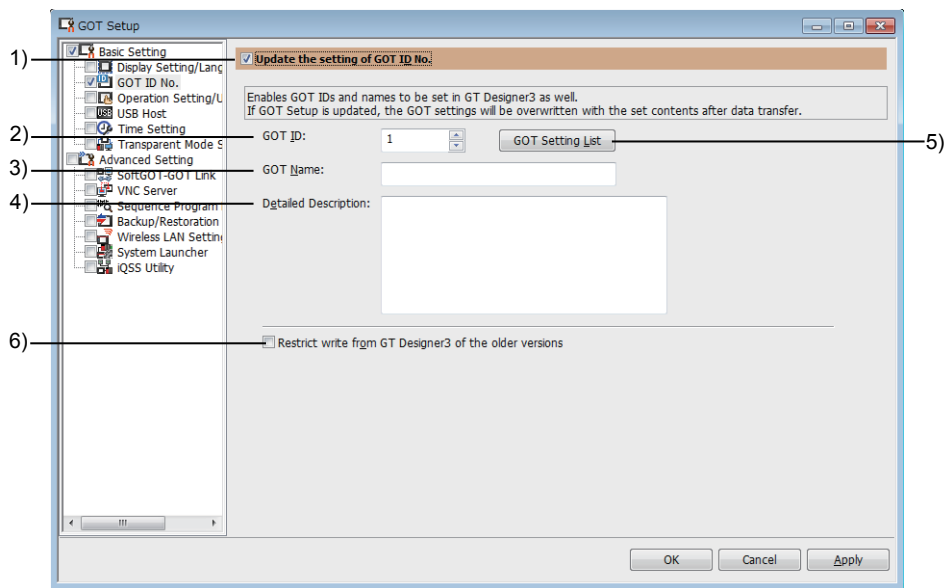

These settings cannot be changed by the GOT ID No. switching.

## ■ 4 [GOT ID No.]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [GOT ID No.], set the GOT ID and the GOT name.

Select [Common] → [GOT Setup] → [Basic Setting] → [GOT ID No.] from the menu to display this window.

### 1) [Update the setting of GOT ID No.]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set each item in [GOT ID No.].

### 2) [GOT ID]

Set an ID number to identify the GOT.

The setting range is [1] to [32767].

### 3) [GOT Name]

Set a name to identify the GOT.

Up to 32 characters can be set.

### 4) [Detailed Description]

Set a description about the GOT.

Up to 512 characters can be set.

The line feed cannot be inserted into the description.

### 5) [GOT Setting List] button

Displays the [GOT Setting List] dialog.

In the [GOT Setting List] dialog, you can set the GOT information which have been previously registered by selecting from a list.

⇒5.3.2 ■ 5 [GOT Setting List] dialog

### 6) [Restrict write from GT Designer3 of the older versions]

Disables the writing of package data, whose version is earlier than the version of the existing package data in the GOT.

When this item is enabled in the package data being executed on the GOT, the write restriction is applied to all drives of the GOT.

For precautions on writing package data to the GOT, refer to the following.

⇒4.7 Precautions

## ■ 5 [GOT Setting List] dialog

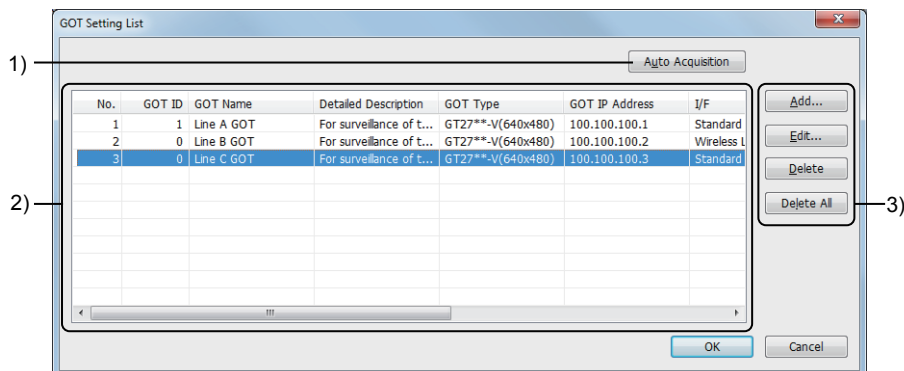

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [GOT Setting List] dialog, the GOT identification information is displayed in a list.

Add, edit, and delete the GOT identification information by using the buttons on the dialog.

Select one from the GOT identification information list and click the [OK] button. The selected information is set to the [GOT ID No.] window.

### 1) [Auto Acquisition] button

Acquires the GOT identification information automatically by Ethernet from the GOT on the same network as the personal computer.

You cannot acquire the GOT identification information of GT21.

### 2) GOT identification information list

A list of the GOT identification information saved in the project.

Add, edit, and delete the GOT identification information by using the buttons on the window.

### 3) Buttons

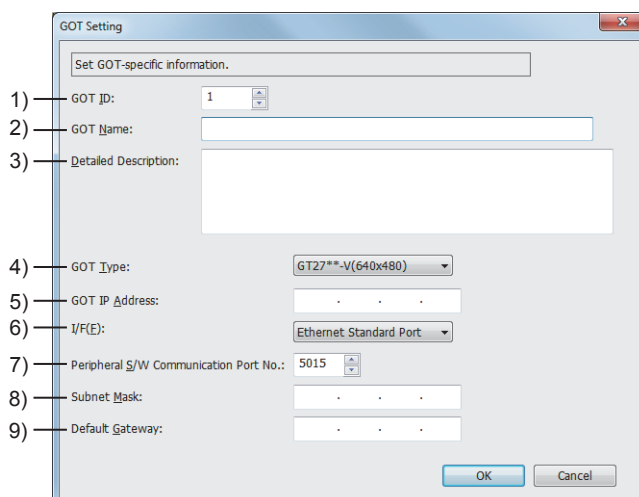

Buttons for adding, editing, and deleting the GOT identification information.

Item	Description
[Add] button	Adds new GOT individual information to the list. Enter the GOT individual information in the [GOT Setting] dialog. →5.3.2 ■ 6 [GOT Setting] dialog
[Edit] button	Edits the GOT identification information that is being selected in the GOT identification information list. Enter the GOT individual information in the [GOT Setting] dialog. →5.3.2 ■ 6 [GOT Setting] dialog
[Delete] button	Deletes the GOT identification information that is being selected in the GOT setting list.
[Delete All] button	Deletes all GOT identification information registered to the project.

## ■ 6 [GOT Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [GOT Setting] dialog, edit the GOT identification information to be registered to the project. Up to 256 GOT identification information settings can be stored.

### 1) [GOT ID]

Set an ID number to identify the GOT.

The setting range is [0] to [32767].

If 0 is set, the GOT ID is not used.

### 2) [GOT Name]

Set a name to identify the GOT.

Up to 32 characters can be set.

### 3) [Detailed Description]

Set a description about the GOT.

Up to 512 characters can be set.

The line feed cannot be inserted into the description.

### 4) [GOT Type]

Set the GOT type.

The following shows the setting range.

- [GT27\*\*-X(1024x768)]
- [GT27\*\*-S(800x600)]
- [GT27\*\*-V(640x480)]
- [GT2705-V(640x480)]
- [GT25\*\*-WX(1280x800)]
- [GT25\*\*-W(800x480)]
- [GT25\*\*-S(800x600)]
- [GT25\*\*-V(640x480)]
- [GT2505-V(640x480)]
- [GT23\*\*-V(640x480)]
- [GT2107-W(800x480)]
- [GT2105-Q (320x240)]
- [GT2104-R(480x272)]
- [GT2104-P(384x128)]
- [GT2103-P(320x128)]

For the correspondence between the GOT types and GOT models, refer to the following.

⇒1.1.2 Supported models

### 5) [GOT IP Address]

Set the IP address of the GOT.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 6) [I/F]

Set the interface for the GOT IP address.

The following shows the setting range.

Item	Applicable GOT
[Ethernet Standard Port]	GT27, GT25-S, GT25-V, GT25HS-V, GT23, GT21
[Ethernet Extended Port]	GT27, GT25-S, GT25-V (excluding GT2505-V)
[Ethernet Standard Port 1]	GT25-W
[Ethernet Standard Port 2]	
[Wireless LAN]	GT27, GT25 (excluding GT2505-V and GT25HS-V)

### 7) [Peripheral S/W Communication Port No.]

Set the port No. used for the communication with GT Designer3.

The setting range is [1024] to [65534].

Do not set the port number used for the other settings.

Duplication of the port number disables communication.

### 8) [Subnet Mask]

Set the subnet mask for the GOT.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 9) [Default Gateway]

Set the default gateway.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 5.3.3 Setting buzzer volume or utility call key of the GOT ([Operation Setting/Utility Call Key])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Specifications
- 2 [Operation Setting/Utility Call Key]

In [Operation Setting/Utility Call Key], configure settings for the GOT operations and the utility call key.

#### ■ 1 Specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (1) Buzzer sound

A buzzer sound that sounds when the touch panel is touched.  
Set no sound, the short sound, or the long sound as the buzzer sound.  
In addition, the pitch of the buzzer can be changed.(Not available to GT21.)

##### (2) Key sensitivity

The touch detection speed of the touch panel (sensitivity) and the pressing pressure that is required to detect the touch operation (pressing pressure) can be changed in this setting.

##### (3) Utility call key

A key that calls the utility screen from the monitor screen.  
Arrange the utility call key one of the four corners.  
The utility key is not displayed on the screen.  
To activate the utility call key, press the utility call key for a certain period.  
Change the depression length for the utility call key activation in this setting.

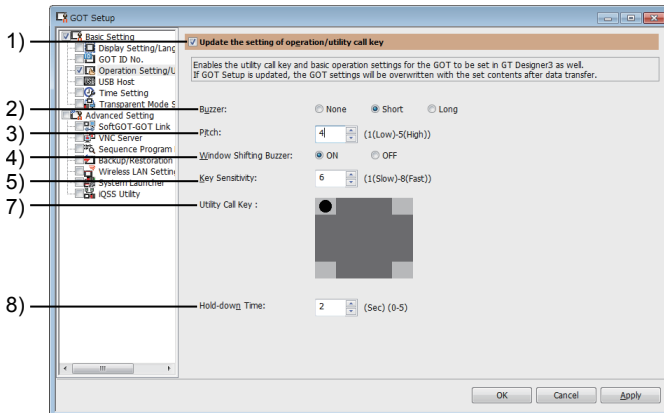

- Utility call key: Arranged on the upper left
- Depression length: Three seconds

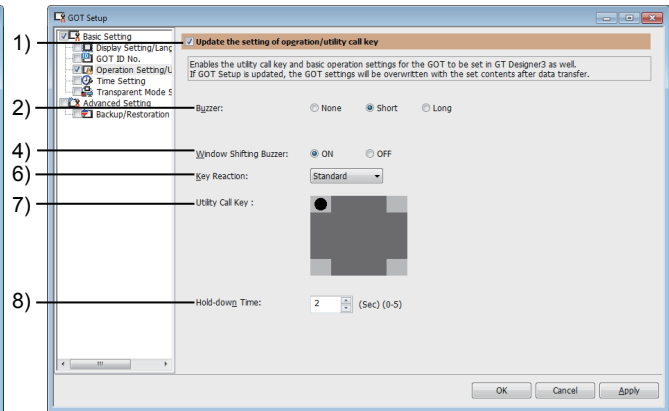

## ■ 2 [Operation Setting/Utility Call Key]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Operation Setting/Utility Call Key], configure settings for the GOT operations and the utility call key. Select [Common] → [GOT Setup] → [Basic Setting] → [Operation Setting/Utility Call Key] from the menu to display this window.

For GT27, GT25, GT23, and GT SoftGOT2000

For GT21

### 1) [Update the setting of operation/utility call key]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Select this item to configure the settings in [Operation Setting/Utility Call Key].

When a project is read from the GOT, the setting changed in the utility is reflected.

### 2) [Buzzer]

Select the buzzer sound for the touch operations of objects and buttons.

The following shows the items to be selected.

- [None]
- [Short]
- [Long]

### 3) [Pitch]

Available to GT27 and GT25.

Set the pitch of the buzzer sound for the touch operations of objects and buttons.

The setting range is [1] (low tone) to [5] (high tone).

### 4) [Window Shifting Buzzer]

Select whether to sound or not the buzzer when moving the window screen.

The setting range is [ON] or [OFF].

### 5) [Key Sensitivity]

Set the speed for the utility call key to detect the touch operation of the touch panel.

The setting range is [1] (slow) to [8] (fast).

### 6) [Key Reaction]

Set the speed for the utility call key to detect the touch operation of the touch panel.

The setting range is [Standard] to [+120ms].

### 7) [Utility Call Key]

Select the position to arrange the key (utility call key) that calls the utility screen from the monitor screen.

The squares on the four corners indicate the positions where the utility call key can be arranged.

The black circle indicates the position of the utility call key.

Click one of the squares on the four corners to select the position of the utility call key.

Click any square of the corners to change the position of the black circle.

To disable the utility call key, click the black circle.

Click the black circle to deselect.

#### 8) [Hold-down Time]

Set the depression length from you touch the utility call key to when the utility call key starts function.  
The setting range is [0] to [5] second(s).

### 5.3.4 Configuring the settings for a mouse and a keyboard used with the GOT ([USB Host])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

Only available to GT2107-W of GT21 models.

- ➔ ■ 1 Specifications
- 2 How to use a USB mouse, USB keyboard, USB barcode reader, and RFID controller
- 3 Precautions
- 4 [USB Host]

In [USB Host], select USB devices to be connected to the GOT.

#### ■ 1 Specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

Only available to GT2107-W of GT21 models.

#### (1) Using a USB mouse

You can use a USB mouse by connecting to the USB interface (host) of the GOT directly.

#### (a) Applicable USB mouse

A two-button mouse is applicable.

A wheeled mouse and a mouse with more than two buttons can be used as a two-button mouse.

Wheels or special buttons on the mouse cannot be used.

Some GOT models do not support mice equipped with special function.

#### (b) Operation target

You can operate the objects, utility call key, window screens, and menu displayed on the GOT by using a USB mouse. However, the following screens are not operable with a USB mouse.

- Touch panel calibration screen of the utility
- Touch panel check screen
- Dedicated screens for some extended functions

For the dedicated screens operable with a USB mouse, refer to the following.

➔ GOT2000 Series User's Manual (Monitor)

## (2) Using a USB keyboard

You can use a USB keyboard by connecting to the USB interface (host) of the GOT directly.

### (a) Applicable USB keyboard

The following keyboards can be used.

- Japanese 106 keyboard
- English 101 keyboard

Forward-compatible keyboards, including Japanese 109 keyboard or English 104 keyboard, are also available. However, the keys which do not exist on Japanese 106 keyboard and English 101 keyboard are not available. Some GOT models do not support keyboards equipped with special function such as the hub function.

### (b) Characters that can be input from a USB keyboard

The GOT receives inputs from a USB keyboard as key codes.

The kana input with a USB keyboard is unavailable.

To input hiragana, katakana, and kanji characters with the kana-kanji conversion function, use the key window displayed on the GOT screen.

The following shows the key code corresponding to each key on a USB keyboard.

Key on the USB keyboard	Key code on the GOT	Description
[Back Space]	0008h	Delete the character on the cursor.
[Enter] *1	000Dh	Write the entry to a specified device, display the cursor on the target object, move the cursor to a different object, or close the key window.
[Esc]	001Bh	Cancel the entry.
[_] (Hyphen)	002Dh	Reverse the sign of the value (for the numerical input only).
[.] (Period)	002Eh	Enter a decimal point (for the numerical input only).
[0] to [9]	0030h to 0039h	Enter a numeric character (for the numerical input only).
[A] to [F], [a] to [f]	0041h to 0046h	
[0] to [9]	0030h to 0039h	Enter a character. (ASCII-compatible)
[A] to [Z] *2	0041h to 005Ah	
[a] to [z] *2	0061h to 007Ah	
Symbol keys	Character codes (ASCII)	
[→], [←], [↑], [↓]	0080h, 0081h, 0082h, 0083h	Moves the cursor
[Home]	0084h	Convert the entry to kanji characters. *2
[Page Up]	0085h	Select the previous candidate.
[Page Down]	0086h	Select the next candidate.
[End]	0087h	Confirm the entry, or select the next group of hiragana characters to be converted to kanji characters.
[Delete]	0088h	Delete all the entered characters.
[Ctrl] + [→], [Ctrl] + [←]	0090h, 0091h	Moves cursor within object
[Ctrl] + [↑], [Ctrl] + [↓]	FFFAh, FFFBh	Increment, decrement

\*1 The operation on the target object varies depending on the setting in the [Environmental Setting] window ([Key Windows]).

For the details, refer to the following.

⇒5.2.4 ■ 4 [Key Window]

\*2 Not usable because the kana input with a USB keyboard is unavailable.

### (3) Using a USB barcode reader or RFID controller

You can use a USB barcode reader or RFID controller by directly connecting it to the USB interface (host) of the GOT. A USB barcode reader or RFID controller acts as a USB keyboard and sends a key code to an input object, such as the text input or the numerical input, with the USB mouse/keyboard function.

The RFID function is not available for the device connected to the USB interface (host) of the GOT. To use the RFID function, connect a device to the standard RS232 interface or the standard RS422/485 interface.

#### (a) Applicable USB barcode reader and RFID controller

USB barcode readers and RFID controllers must satisfy the following requirements.

- Equipped with a USB keyboard (HID) interface
- Compliant with USB standards

For the USB barcode readers and RFID controllers applicable to the USB mouse/keyboard function, refer to the following Technical News.

⇒ List of Valid Devices Applicable for GOT2000 Series (GOT-A-0064)

#### (b) Key codes that can be input from a USB barcode reader or RFID controller

The GOT receives inputs from a USB barcode reader or RFID controller as key codes.

Key codes that can be input are common to those for a USB keyboard.

⇒ 5.3.4 ■ 1 (2) (b) Characters that can be input from a USB keyboard

### (4) Using multiple USB devices together

You can use a USB mouse, USB keyboard, USB barcode reader, RFID controller, and data storage simultaneously via a USB hub connected to the USB interface (host) of the GOT.

Up to eight USB devices are usable. (Only one USB hub is usable, and the hub is not counted as a USB device.)

Up to four USB devices other than data storages are usable.

The number of usable data storages depends on the GOT model.

⇒ 1.2.7 Drive configuration of the target GOT for data transfer

#### (a) Applicable USB hub

A USB version 2.0 compatible USB hub is available.

## ■2 How to use a USB mouse, USB keyboard, USB barcode reader, and RFID controller

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

Only available to GT2107-W of GT21 models.

### (1) USB mouse

On the monitor screen and the utility screen, click the left button on the mouse to perform the touch operation. Clicking the right button on the mouse is disabled.

On the remote personal computer operation screen, the USB mouse behaves in the same way as clicking on a personal computer screen.

### (2) USB keyboard, USB barcode reader, and RFID controller

With a USB keyboard and USB barcode reader or RFID controller, you can input a key code to an object or a key window, move the cursor, delete text, and determine or cancel an input value.

- Numerical input, character string input  
You can input numeric values, character strings, and move the cursor.
- Writing data to a controller device (USB barcode reader only)  
You can write the read data to a controller device.
- Utility screen, system application screen  
You can operate the utility and each system application.  
In addition, you can input texts on the key window or dialogs.
- Security authentication screen  
You can input the operator ID and a password on the authentication screen.
- Dialog window  
You can operate each key on the dialog window.

The following keys and key codes are assigned to operation keys in the dialog window.

Operation key	Key on the USB keyboard	Key code of USB barcode reader and RFID controller
[OK] key, [Confirm] key, or [Yes] key	[Y] key, [y] key, or [Enter] key	59h (Y), 79h (y), or 0Dh (Enter)
[Cancel] key, [Stop] key or [No] key	[N] key, [n] key, or [Esc] key	4Eh (N), 6Eh (n), or 1Bh (Esc)
[Apply] key or [No to All] key	[A] key or [a] key	41h (A), or 61h (a)
[No to All] key	[S] key or [s] key	53h (S), or 73h (s)

## ■3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

Only available to GT2107-W of GT21 models.

### (1) Touch operation during clicking

Do not touch the GOT screen while you are clicking the USB mouse.

The GOT recognizes the operation as 2-point press.

### (2) Canceling the screen saver mode with a USB mouse

Do not cancel the screen saver mode by clicking the mouse.

Because you can cancel the screen saver mode by moving the mouse cursor, you may click unintentional position.

### (3) USB keyboard setting

When setting [USB Host], set the USB keyboard type to be used in [Keyboard Type].

If a USB keyboard type that is not used is set, some characters cannot be input correctly.

→5.3.4 ■4 [USB Host]

## 4 [USB Host]

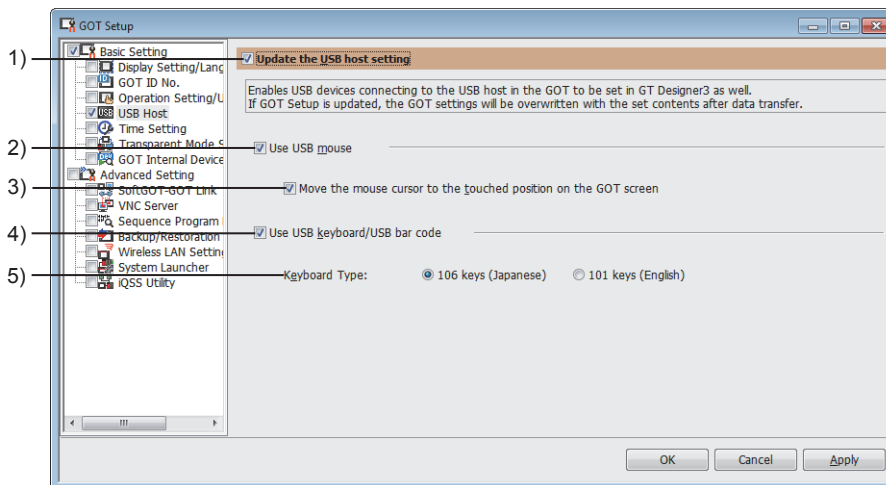

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT25HS-V.

Only available to GT2107-W of GT21 models.

In [USB Host], set USB devices to be connected to the GOT.

Select [Common] → [GOT Setup] → [Basic Setting] → [USB Host] from the menu to display this window.

### 1) [Update the USB host setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set each item in [USB Host].

When a project is read from the GOT, the setting changed in the utility is reflected.

### 2) [Use USB mouse]

Enables a USB mouse connected to the USB interface (host) of the GOT.

### 3) [Move the mouse cursor to the touched position on the GOT screen]

Select this item to move the mouse cursor to a position you touch.

### 4) [Use USB keyboard/USB bar code]

Enables a USB keyboard, USB barcode reader, or RFID controller connected to the USB interface (host) of the GOT.

### 5) [Keyboard Type]

Select the type of a USB keyboard to be used.

When using a USB barcode reader or RFID controller, select the Japanese 106 keyboard or the English 101 keyboard to input a key code.

The following shows the items to be selected.

- [106 keys (Japanese)]

Uses the Japanese 106 keyboard.

When a USB barcode reader or RFID controller is used, an input is recognized as a key code of the Japanese 106 keyboard.

- [101 keys (English)]

Uses the English 101 keyboard.

When a USB barcode reader or RFID controller is used, an input is recognized as a key code of the English 101 keyboard.

### 5.3.5 Setting the GOT time setting method ([Time Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Specifications
- 2 Precautions
- 3 [Time Setting]

In [Time Setting], the setting method for the clock data between the GOT and the controller is set.

**Point**

**GT SoftGOT2000 clock**

GT SoftGOT2000 uses the clock of the personal computer.

Therefore, the time on the personal computer is changed when the time setting function is performed.

■ 1 Specifications

GT27 GT25 GT23 GT21 SoftGOT2000 GS

(1) Clock synchronization method

The following shows the clock synchronization method on the GOT.

Clock synchronization method	Description	Supported models
Time setting function	<p>Acquire the clock data of the controller or the SNTP server and change the clock data of the GOT. GT21 and GT SoftGOT2000 cannot acquire the clock data from the SNTP server.</p> <p>When the GOT is powered on, set the clock data of the GOT to that of the controller or the SNTP server. Since the GOT does not have to hold the clock data while the GOT is powered off, no battery is required. To set the controller clock data of the controller, refer to the manual of the controller you use.</p>	<p>GT27 GT25 GT23 GT21 GS SoftGOT2000</p>
Time notification function	<p>Notify the clock data of the GOT to the controller to change that of the controller.</p> <p>At the timing of the trigger, set the clock data of the controller to that of the GOT. Since the GOT must hold the clock data while the GOT is powered off, a battery is required. Set the clock data of the GOT in the utility.</p>	<p>GT27 GT25 GT23 GT21 GS SoftGOT2000</p> <p>(Except GT2103-P)</p>

Clock synchronization method	Description	Supported models
Using the time setting function and the time notification function together	<p>Acquire the clock data of the controller or the SNTP server by the time setting function. Then change the clock data of other controllers by the time notification function. GT21 and GT SoftGOT2000 cannot acquire the clock data from the SNTP server.</p>	<p>GT27 GT25 GT23 GT21 GS SoftGOT2000</p> <p>(Except GT2103-P)</p>

## (2) Controllers available for the time setting function and the time notification function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

GOTs other than GT SoftGOT2000 perform the time setting function or the time notification function to the controllers equipped with a clock.

For controllers equipped with a clock, refer to the following.

→GOT2000 Series Connection Manual for a controller used

For the controllers subjected to the time setting function and the time notification function by GT SoftGOT2000, refer to the following.

→GT SoftGOT2000 Version1 Operating Manual

## (3) SNTP server

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The operating environment for the SNTP server depends on the OS used.

The following shows the correspondence table.

Item	Description
Model	Personal computer that Windows runs on.
OS(English version)	<ul style="list-style-type: none"> <li>• Microsoft Windows Server 2008 R2<sup>*1*2</sup></li> <li>• Microsoft Windows Server 2008<sup>*1*2</sup></li> <li>• Microsoft Windows Server 2003 x64 Edition<sup>*3*4</sup></li> <li>• Microsoft Windows Server 2003<sup>*3*4</sup></li> <li>• Microsoft Windows 2000 Server Service Pack2 or later<sup>*3</sup></li> <li>• Microsoft Windows 7 Ultimate (32 bit, 64 bit)<sup>*2*4*5</sup></li> <li>• Microsoft Windows 7 Enterprise (32 bit, 64 bit)<sup>*2*4*5</sup></li> <li>• Microsoft Windows 7 Professional (32 bit, 64 bit)<sup>*2*4*5</sup></li> <li>• Microsoft Windows Vista Ultimate (32 bit) Service Pack1 or later<sup>*2*4</sup></li> <li>• Microsoft Windows Vista Enterprise (32 bit) Service Pack1 or later<sup>*2*4</sup></li> <li>• Microsoft Windows Vista Business (32 bit) Service Pack1 or later<sup>*2*4</sup></li> <li>• Microsoft Windows XP Professional (32 bit) Service Pack2 or later<sup>*3*4</sup></li> <li>• Microsoft Windows 2000 Professional Service Pack2 or later<sup>*3</sup></li> </ul>
CPU	Use the CPU which the above OSs run on.
Memory	Use the memory which the above OSs run on.
Display	Use the hardware compatible with the above OSs.
Hard disk space	Reserve a free space which the above OSs run on. (If Windows Server 2008 R2, Windows Server 2008, Windows 7, or Windows Vista is used, 15GB or more)
Other hardware	<p>Use the hardware compatible with the above OS.</p> <ul style="list-style-type: none"> <li>• For installation: mouse, keyboard, DVD-ROM drive</li> <li>• For execution: mouse, keyboard</li> </ul>

\*1 The OS does not support the Server Core installation.  
Fully install the OS.

\*2 The standard user or administrator account is required.

\*3 For installation, the administrator authority is required.

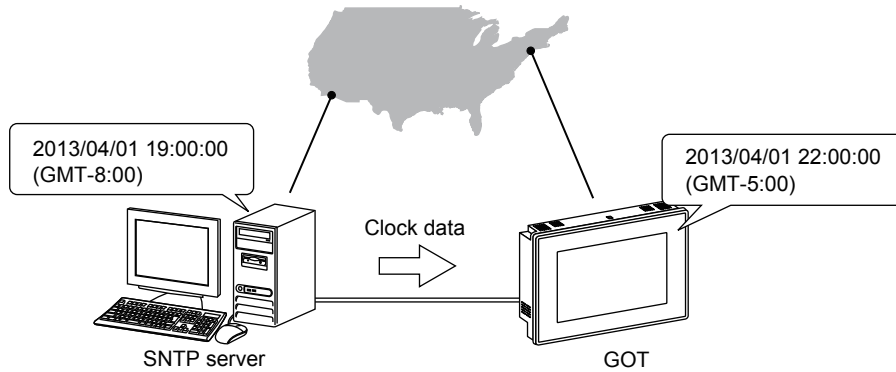

\*4 The following functions are not supported.

- Application start in Windows compatibility mode
  - Fast user switching
  - Changing your desktop themes (fonts)
  - Remote desktop
  - DPI setting other than the normal size
- \*5 Windows XP Mode is not supported.

#### (4) Local time

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the local time to enable the time setting among the countries or areas with a time difference.

You can specify the local time with a time difference from the Greenwich mean time. However the summer time cannot be set.

#### (5) Changing the current time with the GOT special register (GS)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The GOT always writes the clock data to the GOT special register (GS). The clock data of the GOT can be changed with a numerical input and others by using the clock data stored in the GOT special register (GS) and the Time Change signal.

→ 12.1.3 GOT special register (GS)

##### (a) Read device

The following devices are not available to GT SoftGOT2000.

Function	Setting item	Bit number	Description
Time Change signal	GS512	.b0	A trigger device to change the current time Changes the clock data of the GOT to the data of the change time (GS513 to GS516) when the bit is turned on.
		Change time	GS513
.b0 to .b7	Month (data type: BCD)		
GS514	.b8 to .b15		Date (data type: BCD)
	.b0 to .b7		Time (data type: BCD)
Change time	GS515	.b8 to .b15	Minute (data type: BCD)
		.b0 to .b7	Second (data type: BCD)
	GS516	.b8 to .b15	Use prohibited
		.b0 to .b7	Day (0: Sunday, 1: Monday, 2: Tuesday, 3: Wednesday, 4: Thursday, 5: Friday, 6: Saturday)

## (b) Write device

Function	Setting item	Bit number	Description
Current time	GS650	.b8 to .b15	Two lower digits of year (data type: BCD)
		.b0 to .b7	Month (data type: BCD)
	GS651	.b8 to .b15	Date (data type: BCD)
		.b0 to .b7	Time (data type: BCD)
	GS652	.b8 to .b15	Minute (data type: BCD)
		.b0 to .b7	Second (data type: BCD)
	GS653	.b8 to .b15	Use prohibited
		.b0 to .b7	Day (0: Sunday, 1: Monday, 2: Tuesday, 3: Wednesday, 4: Thursday, 5: Friday, 6: Saturday)

## 2 Precautions

### (1) Time setting function and time notification function for the same controller

Do not configure the settings to execute both the time setting function and the time notification function for the same controller.

Doing so may delay the clock data.

### (2) Ethernet settings to acquire clock data from the SNTP server

To acquire clock data from the SNTP server, set an Ethernet interface of the GOT in the [I/F Communication Setting] dialog or other setting dialogs.

The clock data is acquired via Ethernet.

If no Ethernet interface is usable, the clock data cannot be acquired.

→ 5.7.2 How to use the I/F communication setting

### (3) Controller action after the time notification function is performed

After the time notification function is performed, the target controller acts differently depending on its system configuration (such as the multiple CPU system). For example, the target controller CPU may notify the obtained time data to another CPU.

For the controller action, refer to the manual of the controller used.

### (4) Time setting function and time notification function for network-connected controllers

When the GOT and controllers are connected using any of the following connection types, only the controller of the host station or master station (specified control station) is targeted for the time setting function and the time notification function.

Connection type	Target of time setting function and time notification function
Ethernet connection	Host station
MELSECNET/H connection	Master station (specified control station) *1
MELSECNET/10 connection	
CC-Link IE Controller Network connection	
CC-Link IE Field Network connection	

\*1 When this station is disconnected, the GOT cannot perform the time setting function or the time notification function on the station.

### (5) Personal computer time zone when using GT SoftGOT2000

Set the same time zone for the personal computer and controller.

Otherwise, a time difference occurs.

### (6) Time setting function on GT SoftGOT2000

Under the following conditions, the time setting function cannot be used on GT SoftGOT2000.

If the function is used under the following conditions, a time difference occurs.

- The user who has started GT SoftGOT2000 does not have the authority to change the system time.
- The clock of the personal computer is synchronized with an Internet time server.
- Software that periodically adjusts the clock of the personal computer is used.

### ■ 3 [Time Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Time Setting], the setting method for the clock data of the GOT is set.  
Select [Common] → [GOT Setup] → [Basic Setting] → [Time Setting] from the menu to display this window.

#### 1) [Update the time setting]

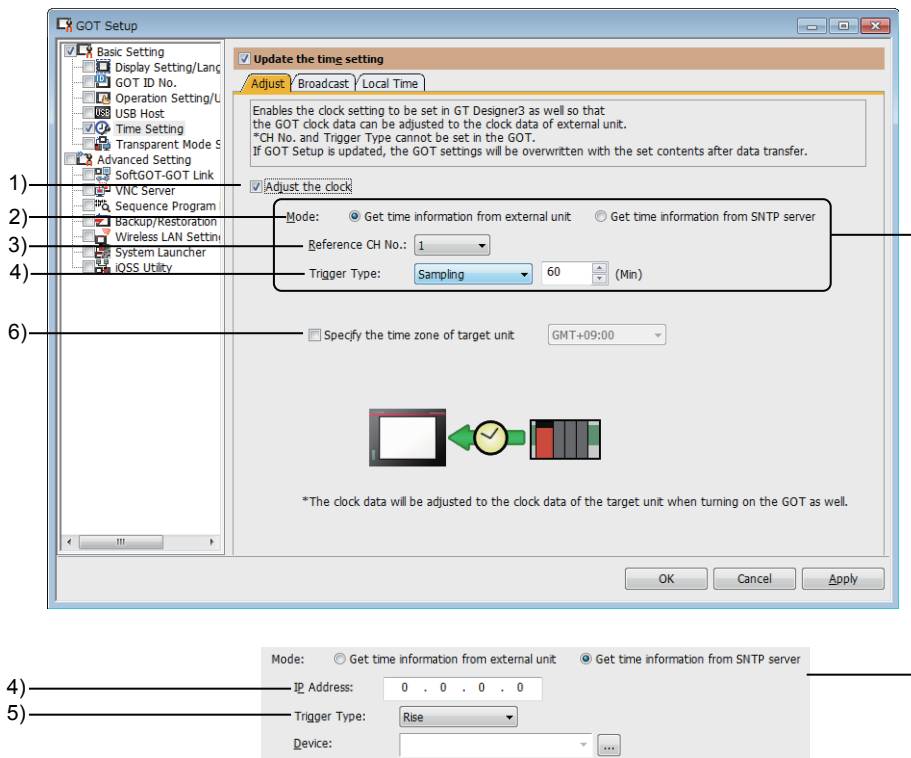

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.  
Select this item to set each item in [Time Setting].

When a project is read from the GOT, the setting changed in the utility is reflected.

- 5.3.5 ■ 3 (1) [Adjust] tab
- 5.3.5 ■ 3 (2) [Broadcast] tab
- 5.3.5 ■ 3 (3) [Local Time] tab

#### (1) [Adjust] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Adjust the clock]

Select this item to use the time setting function.  
After selecting this item, set how to acquire the clock data.

#### 2) [Mode]

Not available to GT21 and GT SoftGOT2000.  
Set the destination device of the clock data and how to acquire the clock data.

- [Get time information from external unit]  
Select this item to acquire the clock data from a controller, such as a PLC.  
After selecting this item, set [Reference CH No.] and [Trigger Type].
- [Get time information from SNTP server]  
Select this item to acquire the clock data from the SNTP server.  
After selecting this item, set [IP Address] and [Trigger Type] of the destination.

#### 3) [Reference CH No.]

For GT27, GT25, and GT23, this item is settable when [Mode] is set to [Get time information from external unit].  
Set the channel No. to connect the device from which the clock data is acquired.

The following shows the items to be selected.

- GT27, GT25: [1] to [4]
- GT21, GT23: [1] and [2]
- GT SoftGOT2000: [1]

#### 4) [IP Address]

Not available to GT21 and GT SoftGOT2000.

This item is settable when [Mode] is set to [Get time information from SNTP server].

Set the IP address of the SNTP server from which the clock data is acquired.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

#### 5) [Trigger Type]

Set the trigger to acquire the clock data.

- [Rise]
 

Acquires the clock data at the rise of the trigger device.  
After selecting this item, set the trigger device.
- [Fall]
 

Acquires the clock data at the fall of the trigger device.  
After selecting this item, set the trigger device.
- [Sampling]
 

Set the cycle to acquire the clock data.  
The setting range is [1] to [1440] minutes.

#### 6) [Specify the time zone of target unit]

Not available to GT SoftGOT2000.

Select this item to set the time zone of the destination device of the clock data.

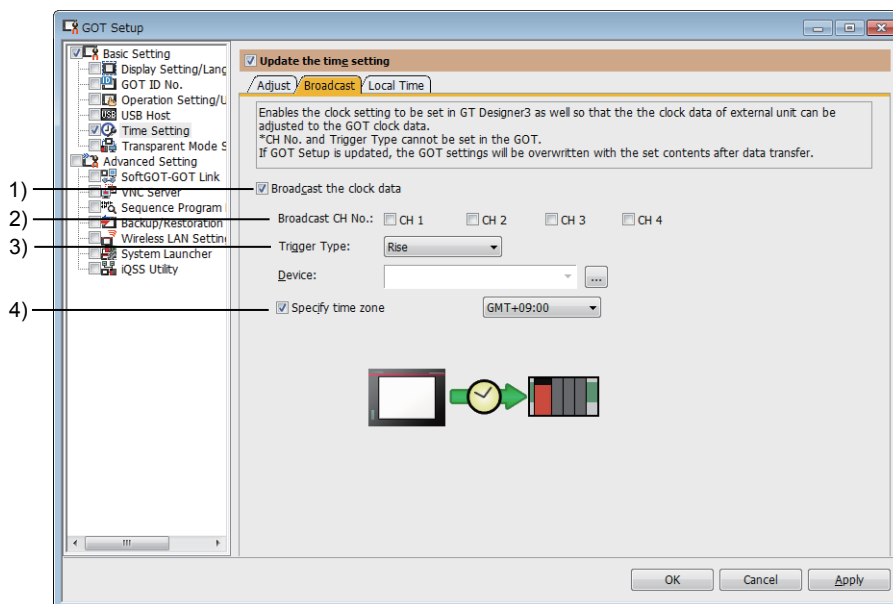

The setting range is [GMT-12:00] to [GMT+13:00], or [Custom].

When [Custom] is selected, the time difference with GMT can be set by 15 minutes.

### (2) [Broadcast] tab

Not available to GT2103-P.

#### 1) [Broadcast the clock data]

Select this item to use the time notification function.

After selecting this item, set how to notify the clock data.

#### 2) [Broadcast CH No.]

Set the channel No. to connect the destination device of the clock data.

The following shows the items to be selected.

- GT27, GT25: [1] to [4]

- GT21, GT23: [1] and [2]
- GT SoftGOT2000: [1]

### 3) [Trigger Type]

Set the trigger to notify the clock data.

- [Rise]
 

Notifies the clock data at the rise of the trigger device.  
After selecting this item, set the trigger device.
- [Fall]
 

Notifies the clock data at the fall of the trigger device.  
After selecting this item, set the trigger device.
- [Sampling]
 

Set the cycle to notify the clock data.  
The setting range is [1] to [1440] minutes.

### 4) [Specify the time zone of target unit]

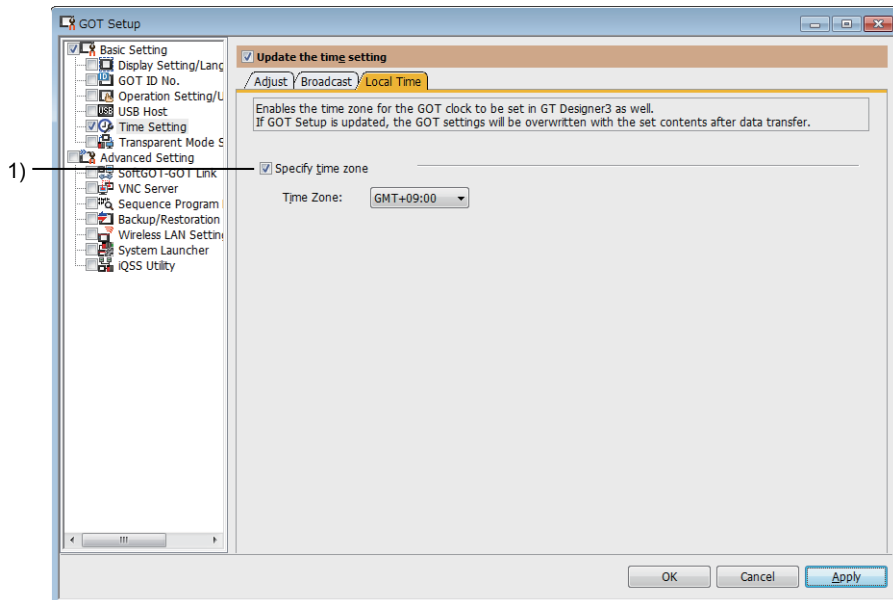

Not available to GT21 and GT SoftGOT2000.

Select this item to set the time zone of the destination device of the clock data.

The setting range is [GMT-12:00] to [GMT+13:00], or [Custom].

When [Custom] is selected, the time difference with GMT can be set by 15 minutes.

### (3) [Local Time] tab

### 1) [Specify time zone]

Select this item to set the time zone.

The setting range is [GMT-12:00] to [GMT+13:00], or [Custom].

When [Custom] is selected, the time difference with GMT can be set by 15 minutes.

## 5.3.6 Setting target channels for the FA transparent function ([Transparent Mode Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

→ ■ 1 [Transparent Mode Setting]

In [Transparent Mode Setting], set a channel number used for the FA transparent function when using the multi-channel function.

For the details of the FA transparent function, refer to the following.

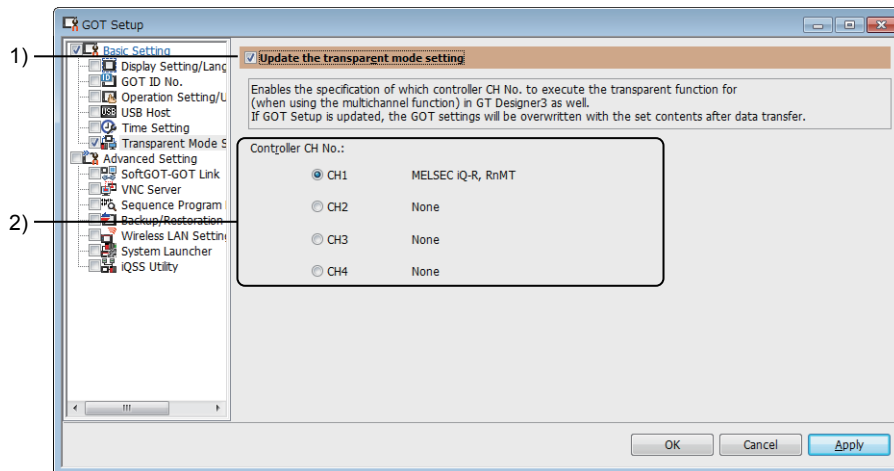

→ GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version1

### ■ 1 [Transparent Mode Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Transparent Mode Setting], set a channel number used for the FA transparent function when using the multi-channel function.

Select [Common] → [GOT Setup] → [Basic Setting] → [Transparent Mode Setting] from the menu to display this window.

#### 1) [Update the transparent mode setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set each item in [Transparent Mode Setting].

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Controller CH No.]

Select a channel number used for the FA transparent function.

The following shows the items to be selected.

- [CH1] to [CH4] (GT27 and GT25)
- [CH1] to [CH2] (GT23 and GT21)

## 5.3.7 Configuring the settings of the GOT internal device monitor ([GOT Internal Device Monitor])

→ ■ 1 [GOT Internal Device Monitor]

In [GOT Internal Device Monitor], configure the settings of the GOT internal device monitor.

For the details on the GOT internal device monitor of the GOT diagnostics function, refer to the following.

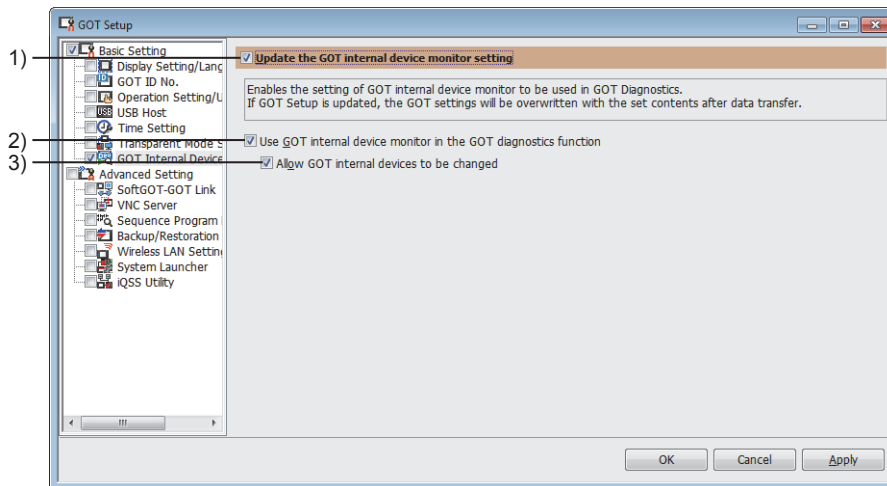

→ 11.14 Checking the Causes and Corrective Actions for an Error in the GOT (GOT Diagnostics)

### ■ 1 [GOT Internal Device Monitor]

In [GOT Internal Device Monitor], configure the settings of the GOT internal device monitor.

Select [Common] → [GOT Setup] → [Basic Setting] → [GOT Internal Device Monitor] from the menu to display the following window.

#### 1) [Update the GOT internal device monitor setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Select this item to enable the setting items in [GOT Internal Device Monitor].

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Use GOT internal device monitor in the GOT diagnostics function]

Allows GT Designer3 to monitor the GOT internal devices when the GOT diagnostics runs.

#### 3) [Allow GOT internal devices to be changed]

Allows GT Designer3 to change the values of the GOT internal devices when the GOT diagnostics runs.

## 5.3.8 Configuring the settings of the SoftGOT-GOT link function ([SoftGOT-GOT Link])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

→ ■ 1 [SoftGOT-GOT Link]

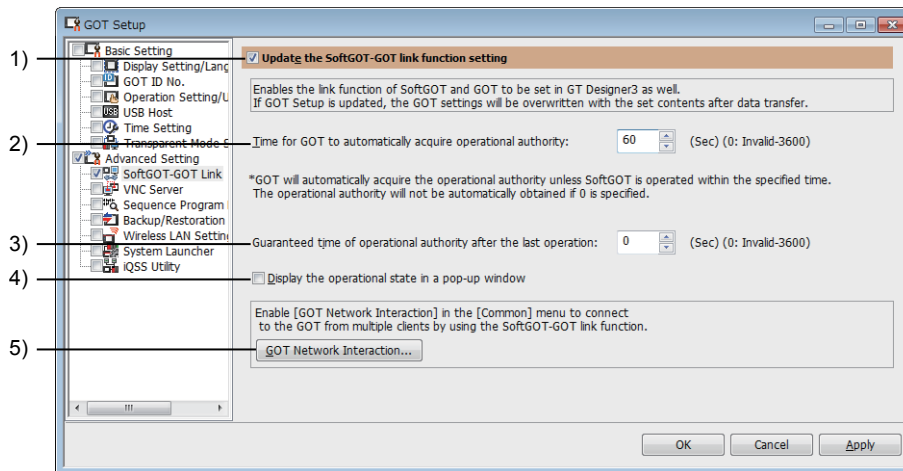

In [SoftGOT-GOT Link], configure the settings for the authorization of the SoftGOT-GOT link function and others.  
For the details of the SoftGOT-GOT link function, refer to the following.

→ GT SoftGOT2000 Version1 Operating Manual

### ■ 1 [SoftGOT-GOT Link]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [SoftGOT-GOT Link], configure the settings for the authorization of the SoftGOT-GOT link function and others.  
Select [Common] → [GOT Setup] → [Advanced Setting] → [SoftGOT-GOT Link] from the menu to display this window.

#### 1) [Update the SoftGOT-GOT link function setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.  
Select this item to set each item in [SoftGOT-GOT Link].

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Time for GOT to automatically acquire operational authority]

Set the time from when GT SoftGOT2000 is operated after GT SoftGOT2000 obtains the authorization until when the GOT automatically obtains the authorization.

The setting range is [0] (Invalid) seconds to [3600] seconds.

#### 3) [Guaranteed time of operational authority after the last operation]

Set the time to retain the authorization after GT SoftGOT2000 or the GOT obtains the authorization and then GT SoftGOT2000 or the GOT is operated.

The setting range is [0] (Invalid) seconds to [3600] seconds.

When [Use GOT network interaction function] is selected in the [GOT Network Interaction] dialog, this setting is invalid.

The authorization guarantee time set in the [GOT Network Interaction] dialog becomes valid.

→ 5.6.4 [GOT Network Interaction] dialog

#### 4) [Display the operational state in a pop-up window]

The information of GT SoftGOT2000 or the GOT with the authorization is popped up on GT SoftGOT2000 or the GOT without the authorization.

#### 5) [GOT Network Interaction] button

Displays the [GOT Network Interaction] dialog.

## 5.3.9 Configuring the settings of the VNC server function ([VNC Server])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Only available to GT2107-W of GT21 models.

⇒ ■ 1 [VNC Server]

In [VNC Server], configure the settings for the authorization of the VNC server function.  
For the details of the VNC server function, refer to the following.

⇒ 10.5 Viewing the GOT from a Personal Computer (VNC Server Function)

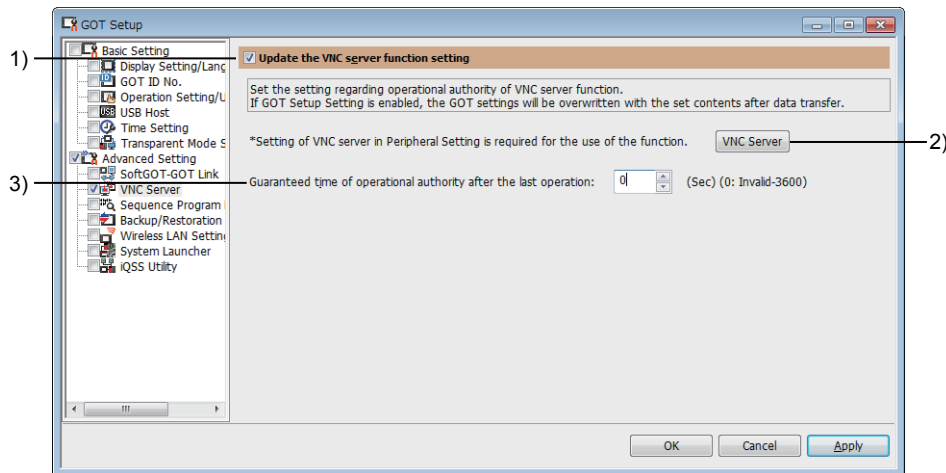

### ■ 1 [VNC Server]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Only available to GT2107-W of GT21 models.

In [VNC Server], configure the settings for the authorization of the VNC server function.

Select [Common] → [GOT Setup] → [Advanced Setting] → [VNC Server] from the menu to display this window.

#### 1) [Update the VNC server function setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.  
Select this item to set each item in [VNC Server].

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [VNC Server] button

Set how to connect the VNC server.

Click this button to display the [VNC Server] dialog.

⇒ 10.4.4 [PC Remote Operation] dialog

#### 3) [Guaranteed time of operational authority after the last operation]

Set the time to retain the authorization after the VNC server (GOT) or the VNC client (personal computer) obtains the authorization and then the VNC server (GOT) or the VNC client (personal computer) is operated.

The setting range is [0] (Invalid) seconds to [3600] seconds.

When [Use GOT network interaction function] is selected in the [GOT Network Interaction] dialog, this setting is invalid.

The authorization guarantee time set in the [GOT Network Interaction] dialog becomes valid.

⇒ 5.6.4 [GOT Network Interaction] dialog

## 5.3.10 Configuring the settings of the sequence program monitor ([Sequence Program Monitor])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

→ ■ 1 [Sequence Program Monitor]

In [Sequence Program Monitor], configure the settings for reading sequence programs and displaying comments on the sequence program monitor.

For the details of the sequence program monitor, refer to the following.

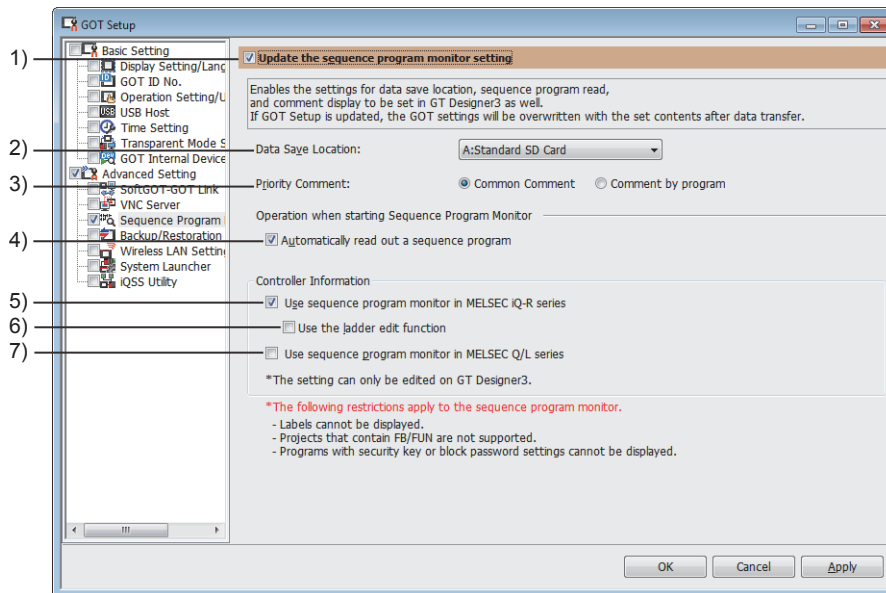

→ GOT2000 Series User's Manual (Monitor)

### ■ 1 [Sequence Program Monitor]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Sequence Program Monitor], configure the settings for reading sequence programs and displaying comments on the sequence program monitor.

Select [Common] → [GOT Setup] → [Advanced Setting] → [Sequence Program Monitor] from the menu to display this window.

#### 1) [Update the sequence program monitor setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set each item in [Sequence Program Monitor].

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Data Save Location]

Select a destination to save the data of the sequence program monitor.

The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]

For the available drives by GOT model, refer to the following.

→ 1.2.7 Drive configuration of the target GOT for data transfer

#### 3) [Priority Comment]

Select the priority comment when a common comment and each program comment are set for the same device in the sequence program.

The following shows the items to be selected.

- [Common Comment]
- [Comment by program]

#### 4) [Automatically read out a sequence program]

Automatically reads a sequence program from the controller at the sequence program monitor startup.

#### 5) [Use sequence program monitor in MELSEC iQ-R series]

Enables the sequence program monitor (iQ-R ladder).

Incorporates a system application (extended function) of [Sequence Program Monitor(iQ-R Ladder)] into the package data.

6) **[Use the ladder edit function]**

Enables the ladder edit function in the sequence program monitor (iQ-R ladder).

7) **[Use sequence program monitor in MELSEC Q/L series]**

Allows the use of the sequence program monitor (Ladder).

Incorporates a system application (extended function) of [Sequence Program Monitor(Ladder)] into the package data.

The ladder edit function is also usable.

### 5.3.11 Configuring the settings of the backup/restoration function ([Backup/Restore])

- ■ 1 [Backup/Restoration]
- 2 [Trigger Setting] dialog
- 3 [Device List] dialog (trigger device, process notification device)

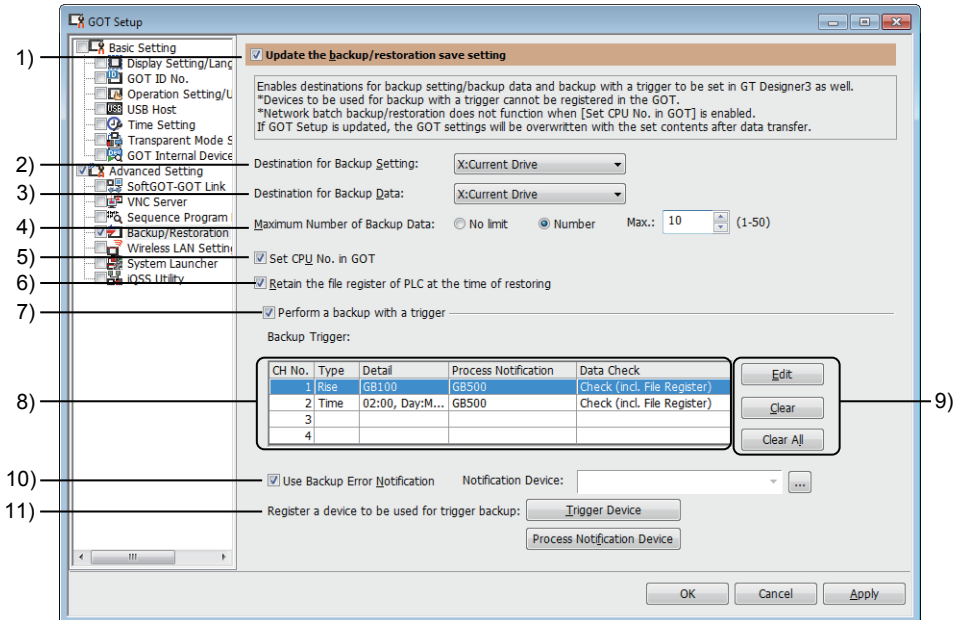

In [Backup/Restoration], configure the settings of the destination to save the backup data or the trigger backup setting. For the details of the backup/restoration function, refer to the following.

- For GT27, GT25, and GT23
  - GOT2000 Series User's Manual (Monitor)
- For GT21
  - GOT2000 Series User's Manual (Utility)

■ 1 **[Backup/Restoration]**

In [Backup/Restoration], configure the settings of the destination to save the backup data or the trigger backup setting. Select [Common] → [GOT Setup] → [Advanced Setting] → [Backup/Restoration] from the menu to display this window.

1) **[Update the backup/restore save setting]**

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Select this item to set each item in [Backup/Restoration].

When a project is read from the GOT, the setting changed in the utility is reflected.

2) **[Destination for Backup Setting]**

Select a destination to save the backup setting.

This setting is unnecessary for GT21, because GT21 has no backup setting.

The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

→1.2.7Drive configuration of the target GOT for data transfer

### 3) [Destination for Backup Data]

Select a destination to save the backup data.

The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

→1.2.7Drive configuration of the target GOT for data transfer

### 4) [Maximum Number of Backup Data]

Not available to GT21.

Select the maximum number of saved backup data.

- [No limit]  
Saves the data to the drive selected in [Destination for Backup Data] as much as possible.
- [Number]  
Saves the data up to the set number of saved backup data.  
After selecting this item, set the maximum number of saved backup data.  
The setting range is [1] to [50].

### 5) [Set CPU No. in GOT]

Not available to GT21.

Select this item to set the CPU No. of the PLC which executes a backup.

### 6) [Retain the file register of PLC at the time of restoring]

Not available to GT21.

Retains the file registers of a PLC at restoration.

### 7) [Perform a backup with a trigger]

Not available to GT21.

Select this item to execute a backup by a trigger you set.

After selecting this item, set the backup trigger from the list of backup triggers.

### 8) List of backup trigger settings

Not available to GT21.

Displays the backup trigger settings in a list.

- [CH No.]: Channel number for which the backup trigger setting is used
- [Type]: Trigger type
- [Detail]: Details of the setting
- [Process Notification]: Backup process notification device
- [Data Check]: Indicates if the data check after the backup is performed or not.

### 9) Operation button of backup trigger settings

Not available to GT21.

The following buttons edit the list of backup trigger settings.

Item	Description
[Edit] button	Displays the [Trigger Setting] dialog. →5.3.11 ■ 2 [Trigger Setting] dialog
[Clear] button	Deletes the selected backup trigger setting.
[Clear All] button	Deletes all the backup trigger settings.

### 10) [Use Backup Error Notification]

Not available to GT21.

Stores the channel number of the backup trigger in the notification device if an error occurs during the backup. After selecting this item, set [Notification Device].

A word device can be used for the notification device.

### 11) [Register a device to be used for trigger backup]

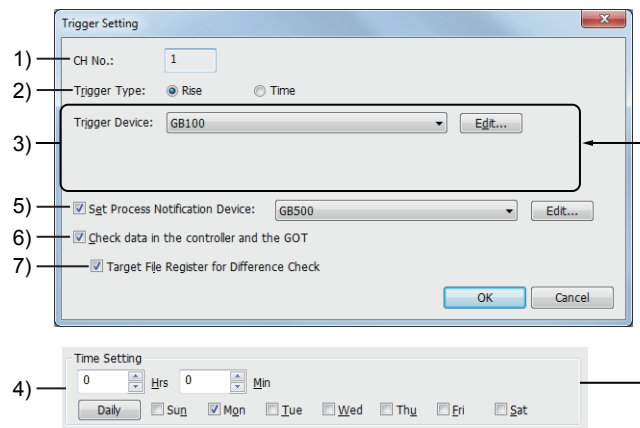

Not available to GT21.

Register the devices used for the trigger backup.

Up to 10 devices can be registered for each trigger device and process notification device.

Item	Description
[Trigger Device] button	Displays the device list (trigger device) dialog. Register bit devices used for the trigger device. →5.3.11 ■ 3 [Device List] dialog (trigger device, process notification device)
[Process Notification Device] button	Displays the device list (process notification device) dialog. Register bit devices used for the process notification device. →5.3.11 ■ 3 [Device List] dialog (trigger device, process notification device)

## ■ 2 [Trigger Setting] dialog

### 1) [CH No.]

Channel number for which the backup trigger setting is used.

### 2) [Trigger Type]

Select a trigger type to execute the backup.

The following shows the items to be selected.

- [Rise]
- [Time]

### 3) [Trigger Device]

Select a trigger device from the devices set in the [Device List (Trigger Device)] dialog.

This item is displayed when [Rise] is selected in [Trigger Type].

Item	Description
[Trigger Device] button	Displays the device list (trigger device) dialog. Register bit devices used for the trigger device. →5.3.11 ■ 3 [Device List] dialog (trigger device, process notification device)

### 4) [Time Setting]

Set the time and day to take the backup.

This item is displayed when [Time] is selected in [Trigger Type].

Item	Description
[Daily] button	Selects all the days.

### 5) [Set Process Notification Device]

Select a device to notify a backup is in process.

Select a process notification device from the devices set in the [Device List (Process Notification Device)] dialog.

Item	Description
[Edit] button	Displays the [Device List (Process Notification Device)] dialog. Register bit devices used for the process notification device. →5.3.11 ■ 3 [Device List] dialog (trigger device, process notification device)

6) **[Check data in the controller and the GOT]**

Select this item to check the data in the controller and backup data in the GOT when a backup is executed.

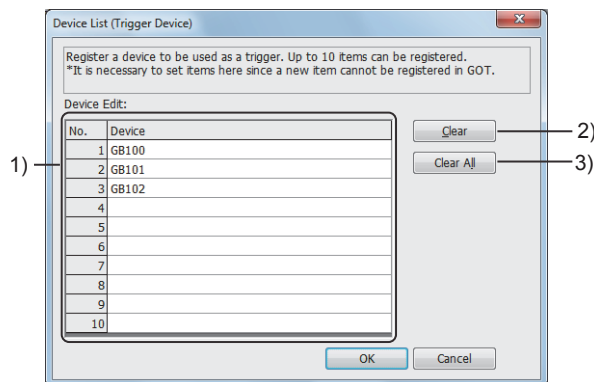

7) **[Target File Register for Difference Check]**

Select this item to check if the file register is changed when a backup is executed.

If the file register is changed as a result of the check, a backup is executed.

This item can be selected when [Check data in the controller and the GOT] is selected.

■ 3 **[Device List] dialog (trigger device, process notification device)**

1) **Device list**

Lists the trigger devices or process notification devices.

Click the [Device] field to display the [...] button.

Set the trigger device or process notification device.

The bit device is available.

2) **[Clear] button**

Deletes the selected device.

3) **[Clear All] button**

Deletes all the devices.

### 5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])

Not available to GT2505-V and GT25HS-V.

- ➔ ■ 1 Specifications
  - 2 How to use the wireless LAN (GOT operation mode: station)
  - 3 How to use the wireless LAN (GOT operation mode: access point)
  - 4 Precautions
  - 5 [Wireless LAN Setting]
  - 6 Relevant settings

In [Wireless LAN Setting], configure the wireless LAN function setting.

On a wireless LAN, the GOT operates as a station or wireless LAN access point to communicate with other devices such as a personal computer.

#### ■ 1 Specifications

Not available to GT2505-V and GT25HS-V.

##### (1) Operation mode and system configuration

The following explains the operation mode of the wireless LAN function.

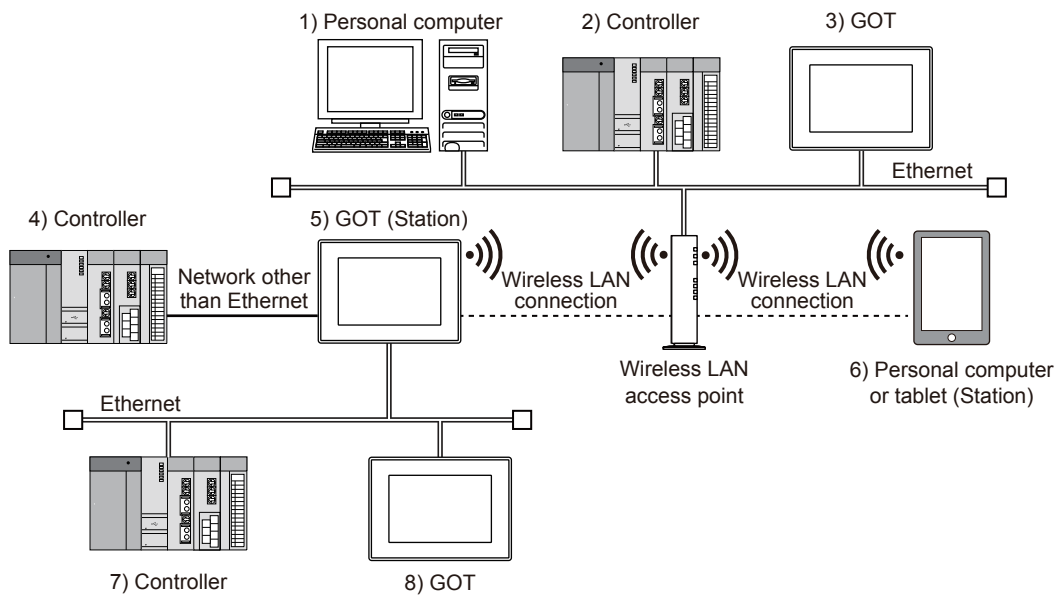

For the details of the system configuration of a wireless LAN connection, refer to the following.

- ➔ GOT2000 Series Connection Manual (Microcomputer, MODBUS/Fieldbus Products, Peripherals) for GT Works3 Version1

##### (a) When [Operation Mode] is set to [Station]

The GOT operates as a station to communicate with other devices via a wireless LAN access point.

The following shows the access range when the wireless LAN connection is used.

○ : Accessible, ×: Inaccessible, -: Outside the wireless LAN range

Access source	Access destination							
	1)	2)	3)	4)	5)	6)	7)	8)
1) Personal computer	-	-	-	○	○	-	x <sup>*1</sup>	x <sup>*1</sup>
2) Controller	-	-	-	×	x <sup>*1</sup>	-	×	x <sup>*1</sup>
3) GOT	-	-	-	x <sup>*1</sup>	○	-	x <sup>*1</sup>	x <sup>*1</sup>
4) Controller	○	×	x <sup>*1</sup>	-	-	○	-	-
5) GOT (Station)	○	x <sup>*1</sup>	○	-	-	○	-	-

Access source	Access destination							
	1)	2)	3)	4)	5)	6)	7)	8)
6) Personal computer or tablet (Station)	-	-	-	o	o	-	x <sup>*1</sup>	x <sup>*1</sup>
7) Controller	x <sup>*1</sup>	x	x <sup>*1</sup>	-	-	x <sup>*1</sup>	-	-
8) GOT	x <sup>*1</sup>	x <sup>*1</sup>	x <sup>*1</sup>	-	-	x <sup>*1</sup>	-	-

\*1 For available functions, refer to the following.

→(3) Available GOT functions when the wireless LAN function is used

**(b) When [Operation Mode] is set to [Access Point]**

The GOT operates as a wireless LAN access point to communicate with other devices such as a tablet.

Up to five stations are connectable to one GOT (wireless LAN access point).

The following shows the access range when the wireless LAN connection is used.

o : Accessible, x: Inaccessible, -: Outside the wireless LAN range

Access source	Access destination										
	1)	2)	3)	4)	5)	6)	7)	8)	9)	10)	11)
1) Personal computer	-	-	-	-	x	x	x	x	x	x	x
2) GOT (Wireless LAN access point)	-	-	-	-	o	o	x <sup>*1</sup>	x <sup>*1</sup>	x	x	o
3) Controller	-	-	-	-	x	x	x	x	x	x	x
4) Controller	-	-	-	-	x	x	x	x	x	x	x
5) Personal computer or tablet (Station)	x	o	o	x <sup>*1</sup>	-	o	o	x	x	o	o
6) GOT (Station)	x	o	x <sup>*1</sup>	x <sup>*1</sup>	o	-	-	-	-	x	o
7) Controller	x	x	x	x	x	-	-	-	-	x	x
8) Controller	x	x	x	x	x	-	-	-	-	x	x
9) Personal computer	x	x	x	x	x	-	-	-	-	x	x
10) Controller	x	x	x	x	o	x	x	x	x	-	-
11) Personal computer	x	o	o	x <sup>*1</sup>	o	o	o	x <sup>*1</sup>	x	-	-

\*2 For available functions, refer to the following.

⇒(3) Available GOT functions when the wireless LAN function is used

## (2) Required hardware, BootOS, and system application (extended function)

Operation mode	Required hardware, BootOS, and system application (extended function)	
[Station]	Hardware	<ul style="list-style-type: none"> <li>Wireless LAN communication unit (GT25-WLAN)</li> <li>Wireless LAN access point (commercial product)</li> </ul> For the wireless LAN access points validated for the wireless LAN connection, refer to the following Technical News. ⇒List of Valid Devices Applicable for GOT2000 Series (GOT-A-0064)
	BootOS	Version C or later
	System application (extended function)	[Wireless LAN]
[Access Point]	Hardware	Wireless LAN communication unit (GT25-WLAN)
	BootOS	Version C or later
	System application (extended function)	[Wireless LAN]

For information on how to install the BootOS and system application (extended function) on the GOT, refer to the following.

### ⇒4. COMMUNICATING WITH GOT

## (3) Available GOT functions when the wireless LAN function is used

When the wireless LAN function is used, the following functions are available regardless of the operation mode.

Function	Reference	
Time setting function (Acquiring time-of-day information from the SNTP server)	⇒5.3.5 Setting the GOT time setting method ([Time Setting])	
FA transparent function	⇒GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version 1	
Remote personal computer operation (Ethernet)	⇒10.3 Operating a Personal Computer by Using the GOT (Remote Personal Computer Operation (Ethernet))	
VNC Server function	⇒10.5 Viewing the GOT from a Personal Computer (VNC Server Function)	
Multimedia function (Sending a video file to a personal computer)	⇒10.8 Recording or Playing Images Taken by a Video Camera on the GOT (Multimedia Function)	
Gateway function	Server/Client function	⇒10.13 Monitoring the Controller Device, Which the GOT is Monitoring, by Using Other Personal Computers or the GOTs (Server/Client Functions)
	Mail send function	⇒10.14 Sending a Mail from the GOT (Mail Send Function)
	FTP server function	⇒10.15 Transferring a File between the GOT (FTP Server) and the Peripheral Device (FTP Client) (FTP Server Function)
	File transfer function (FTP transfer)	⇒10.16 Transferring a File between the GOT (FTP Client) and Peripheral Device (FTP Server) (File Transfer Function (FTP Transfer))
SoftGOT-GOT link function	⇒GT SoftGOT2000 Version1 Operating Manual	
MES interface function	⇒GOT2000 Series MES Interface Function Manual for GT Works3 Version1	
Log viewer function*1	⇒GOT2000 Series User's Manual (Monitor)	
GOT Mobile function	⇒10.18 Monitoring a Controller from Tablets or Other Clients (GOT Mobile Function)	

\*1 No controllers are listed in the connection target list display area of the target selection screen.  
 Directly enter the IP address of an applicable controller in [IP address].

## ■2 How to use the wireless LAN (GOT operation mode: station)

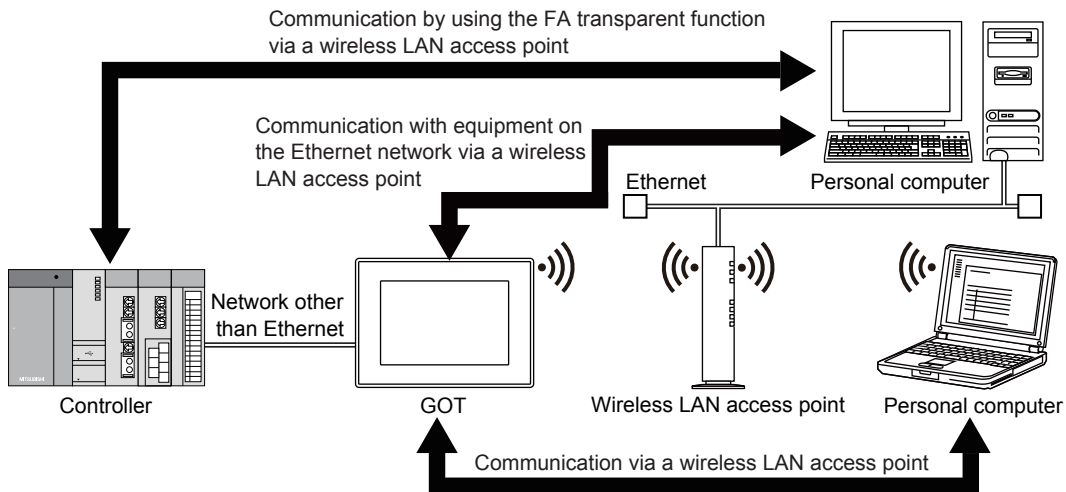

Not available to GT2505-V and GT25HS-V.

Set the GOT as a station to communicate with a personal computer via a wireless LAN access point.

When the FA transparent function is used, a communication between the PLC and the personal computer can also be used.

When the server/client function is used, a controller device can also be monitored via a gateway device.

## (1) Setting procedure

Before configuring the settings, check the SSID, security authentication method, and WEP key or passphrase of the wireless LAN access point to be used.

For the check method, refer to the following.

→ Manual of the wireless LAN access point used

Configure the settings on GT Designer3 in the following procedure.

- Step 1** Select [Common] → [GOT Setup] → [Advanced Setting] → [Wireless LAN Setting] from the menu to display the [GOT Setup] window ([Wireless LAN Setting]).
- Step 2** Set the following items, and click the [OK] button.
  - Select [Update the wireless LAN setting].
  - Select [Station] for [Operation Mode].
  - Set [Destination Access Point Setting].

→ 5.3.12 ■ 5 [Wireless LAN Setting]
- Step 3** Select [Common] → [GOT Ethernet Setting] → [GOT IP Address Setting] from the menu to display the [GOT Ethernet Setting] window ([GOT IP Address Setting]).
- Step 4** In the [Wireless LAN] tab, set the following items.
  - Select [Update GOT wireless LAN I/F setting].
  - Set [GOT IP Address].
  - Set [Subnet Mask].
  - Select [Enable wireless LAN I/F].
- Step 5** Click the [Driver Setting] button to display the [Detail Setting] dialog.
- Step 6** Set the following items, and click the [OK] button.
  - Set [GOT Net No.].
  - Set [GOT Station].
- Step 7** In the [GOT Ethernet Setting] window, click the [OK] button.
- Step 8** Select [Common] → [GOT Ethernet Setting] → [GOT Ethernet Common Setting] from the menu to display the [GOT Ethernet Setting] window ([GOT Ethernet Common Setting]).
- Step 9** Set the following items, and click the [OK] button.
  - Set [Default Gateway].
  - Set [Peripheral S/W Communication Port No.].
  - Set [Transparent Port No.].

### ■ 3 How to use the wireless LAN (GOT operation mode: access point)

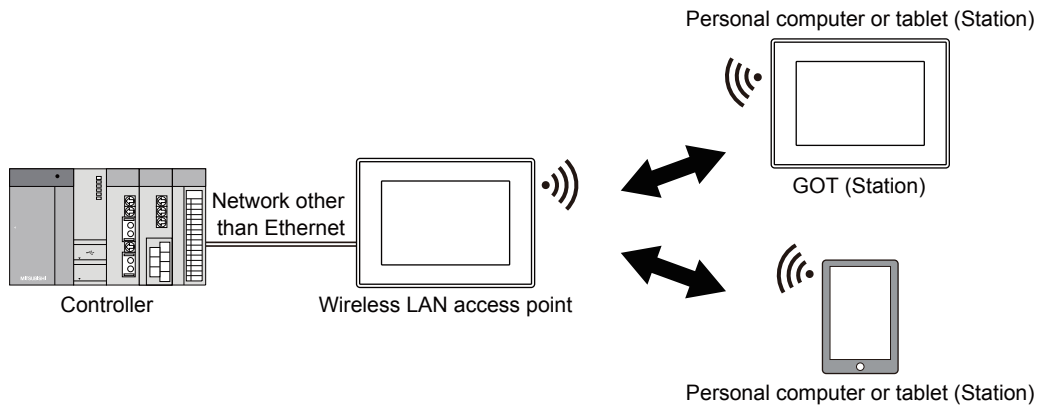

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2505-V and GT25HS-V.

Set the GOT as a wireless LAN access point to communicate with stations (such as a GOT, personal computer, and tablet) on a wireless LAN.

When the FA transparent function is used, a communication between the PLC and the personal computer can also be used.

When the server/client function is used, a controller device can also be monitored via a gateway device.

## (1) Setting procedure

Configure the settings on GT Designer3 in the following procedure.

- Step 1** Select [Common] → [GOT Setup] → [Advanced Setting] → [Wireless LAN Setting] from the menu to display the [GOT Setup] window ([Wireless LAN Setting]).
- Step 2** Set the following items, and click the [OK] button.
  - Select [Update the wireless LAN setting].
  - Select [Access Point] for [Operation Mode].
  - Set [Access Point Setting].
 ⇒5.3.12 ■ 5 [Wireless LAN Setting]
- Step 3** Select [Common] → [GOT Ethernet Setting] → [GOT IP Address Setting] from the menu to display the [GOT Ethernet Setting] window ([GOT IP Address Setting]).
- Step 4** In the [Wireless LAN] tab, set the following items.
  - Select [Update GOT wireless LAN I/F setting].
  - Set [GOT IP Address].
  - Set [Subnet Mask].
  - Select [Enable wireless LAN I/F].
- Step 5** Click the [Driver Setting] button to display the [Detail Setting] dialog.
- Step 6** Set the following items, and click the [OK] button.
  - Set [GOT Net No.].
  - Set [GOT Station].
- Step 7** In the [GOT Ethernet Setting] window, click the [OK] button.
- Step 8** Select [Common] → [GOT Ethernet Setting] → [GOT Ethernet Common Setting] from the menu to display the [GOT Ethernet Setting] window ([GOT Ethernet Common Setting]).
- Step 9** Set the following items, and click the [OK] button.
  - Set [Default Gateway].
  - Set [Peripheral S/W Communication Port No.].
  - Set [Transparent Port No.].

## ■ 4 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2505-V and GT25HS-V.

### (1) Communication with a controller via a wireless LAN

The GOT cannot communicate with a controller such as a PLC by using a wireless LAN communication unit of the GOT. To monitor the devices of a controller through the wireless LAN communication unit, use the functions available when the wireless LAN function is used.

For available functions, refer to the following.

⇒5.3.12 ■ 1 (3) Available GOT functions when the wireless LAN function is used

### (2) Precautions when using a wireless LAN

A communication may be disconnected since the radio wave condition changes dynamically due to the wireless LAN's characteristic.

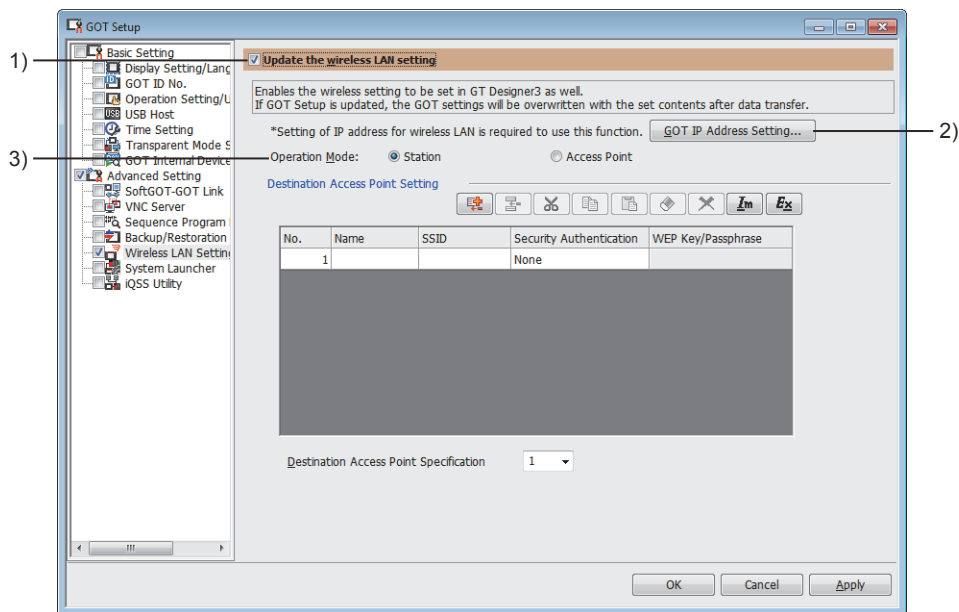

Consider the wireless environment, disconnection of a communication, and other causes when using a wireless LAN.

## ■ 5 [Wireless LAN Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2505-V and GT25HS-V.

In [Wireless LAN Setting], set the operation mode and the wireless LAN access point for the wireless LAN function.  
Select [Common] → [GOT Setup] → [Advanced Setting] → [Wireless LAN Setting] from the menu to display this window.

### 1) [Update the wireless LAN setting]

Overwrites the description set with GT Designer3 to the GOT when the package data is written.  
Select this item to set each item in [Wireless LAN Setting].

### 2) [GOT IP Address Setting] button

Displays the [Wireless LAN] tab of the [GOT Ethernet Setting] window ([GOT IP Address Setting]).  
Set an IP address for the wireless LAN interface.

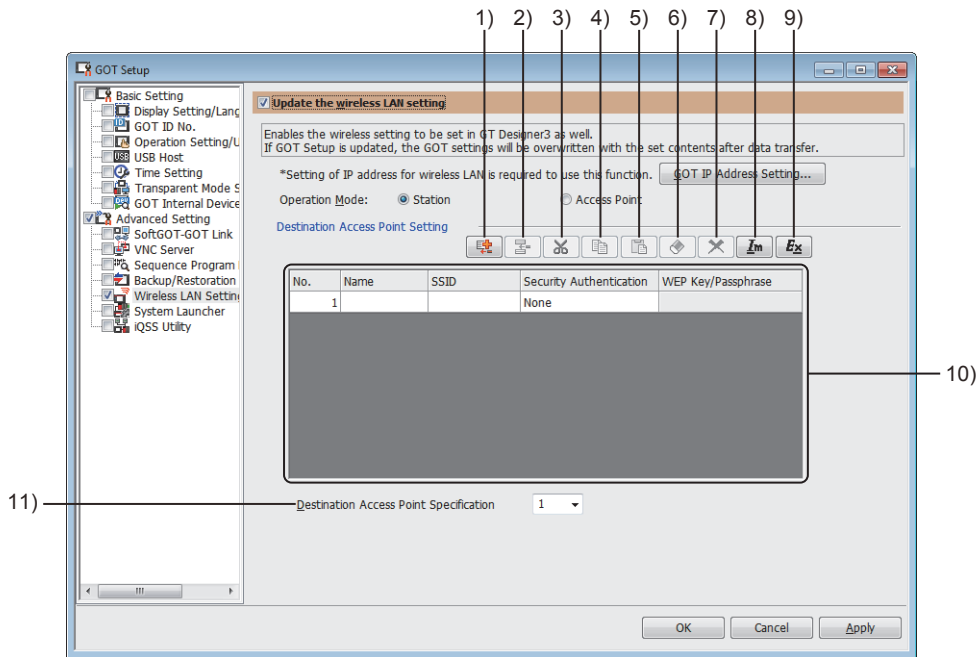

→ 5.4.1 ■ 3 (3) [Wireless LAN] tab

### 3) [Operation Mode]

Select the operation mode for the wireless LAN function.  
The setting items differ according to the operation mode.

- [Station]  
Sets the GOT as a station.  
→ (1) [Station]
- [Access Point]  
Sets the GOT as a wireless LAN access point.  
→ (2) [Access Point]

## (1) [Station]

### 1) [New Row] button

Creates a new access point setting in the access point list.

### 2) [Insert Row] button

Inserts a row in the access point list.

### 3) [Cut] button

Cuts the selected access point setting from the access point list.

### 4) [Copy] button

Copies the selected access point setting from the access point list.

### 5) [Paste] button

Pastes the copied access point setting to the access point list.

### 6) [Clear] button

Clears the selected cells.

### 7) [Delete] button

Deletes the selected access point setting from the access point list.

### 8) [Import] button

Imports the settings that were edited in a Unicode text file or CSV file to GT Designer3.

### 9) [Export] button

Saves the settings made in this dialog as a Unicode text file or CSV file.

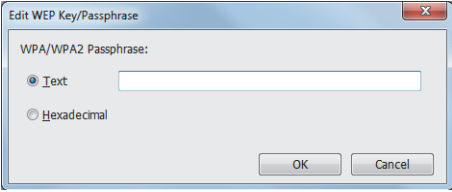

### 10) Access point list

The list of access point settings to be used for a wireless LAN connection.

Up to eight wireless LAN access points can be registered.

Item	Description
[No.]	No. of access point settings
[Name]	Set the name of the access point setting Up to 30 alphanumeric characters can be set.
[SSID]	Set the SSID of the wireless LAN access point. Up to 32 characters can be set. One-byte alphanumeric characters, one-byte spaces, and the following symbols are available for SSID. !#\$%&'()*+,-./:;<=>?@[\\^_`{ }~ When [ANY] is set, the connection with either of the terminal is available without identifying the SSID.

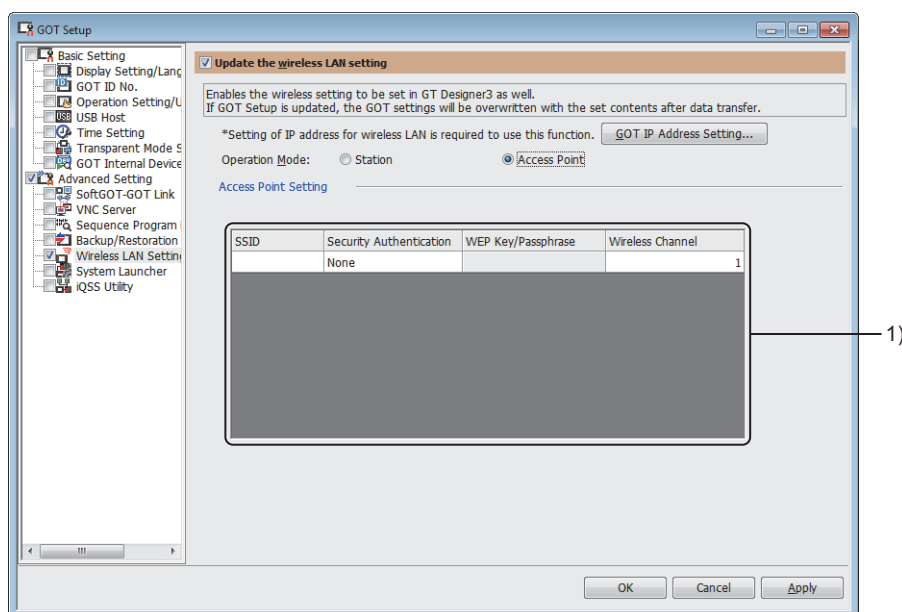

Item	Description
[Security Authentication]	<p>Select the security authentication method of the wireless LAN access point. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [WEP64]</li> <li>• [WEP128]</li> <li>• [WPA-PSK (TKIP)]</li> <li>• [WPA-PSK (AES)]</li> <li>• [WPA2-PSK (TKIP)]</li> <li>• [WPA2-PSK (AES)]</li> </ul>
[WEP Key/Passphrase]	<p>Set the WEP key or passphrase of the wireless LAN access point. Click the [...] button and input the WEP key or the passphrase.</p>  <ul style="list-style-type: none"> <li>• [Text] Input the WEP key or the passphrase in the text.</li> <li>• [Hexadecimal] Input the WEP key or the passphrase in hexadecimal.</li> </ul>

### 11) [Destination Access Point Specification]

Specify the access point No. to be used from the access point list.

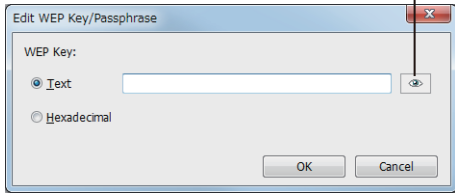

### (2) [Access Point]

### 1) Access point setting

Configure the setting to make the GOT operate as a wireless LAN access point.

Item	Description
[SSID]	<p>Set the SSID of the GOT (wireless LAN access point). Up to 32 characters can be set. One-byte alphanumeric characters, one-byte spaces, and the following symbols are available for SSID. !"#%&amp;'()*+,-./:;&lt;=&gt;?@[ ^_`{ }~</p>
[Security Authentication]	<p>Set the security authentication method of the GOT (wireless LAN access point). The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [WEP64]</li> <li>• [WEP128]</li> <li>• [WPA-PSK (TKIP)]</li> <li>• [WPA-PSK (AES)]</li> <li>• [WPA2-PSK (TKIP)]</li> <li>• [WPA2-PSK (AES)]</li> </ul>

Item	Description
[WEP Key/Passphrase]	<p>Set the WEP key or passphrase of the GOT (wireless LAN access point). Click the [...] button and input the WEP key or the passphrase.</p> <p style="text-align: center;">Password display switching button</p>  <ul style="list-style-type: none"> <li>• <b>[Text]</b> Input the WEP key or the passphrase in the text.</li> <li>• <b>[Hexadecimal]</b> Input the WEP key or the passphrase in hexadecimal.</li> <li>• <b>Password display switching button</b> Hides or displays the characters entered.</li> </ul>
[Wireless Channel]	<p>Set the wireless channel of the GOT (wireless LAN access point). The setting range is 1 to 11. The channel number must differ from the channel numbers of other wireless LAN access points near the GOT (wireless LAN access point).</p>

## 6 Relevant settings

Not available to GT2505-V and GT25HS-V.

Set the relevant settings other than the specific settings for the wireless LAN function as required.

The following shows the functions that are available by the relevant settings.

### (1) GOT internal device

⇒ 12.1.3 GOT special register (GS)

Function	Setting item
Disabling writing of the package data (containing system applications) through a wireless LAN	GS1840.b0
	GS1040.b0
Disabling writing of the package data (containing project data) through a wireless LAN	GS1840.b1
	GS1040.b1
Disabling the writing of the project data, resource data, or other data via a wireless LAN.	GS1840.b8
	GS1040.b8
Notifying that the GOT wireless LAN function is enabled	GS1060.b0
Notifying that the GOT (station) is connected to a wireless LAN access point	GS1060.b1
Notifying the GOT operation mode	GS1060.b2
Notifying the number of stations connected to the GOT (wireless LAN access point)	GS1072
Notifying the MAC address of the wireless LAN access point to which the GOT (station) is connected	GS1067 to GS1069

## 5.3.13 Configuring the settings of the system launcher function ([System Launcher])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

→ ■ 1 [System Launcher]

In [System Launcher], configure the settings of the system launcher function.

For the details of the system launcher function and the system launcher (servo network) function, refer to the following.

→ GOT2000 Series User's Manual (Monitor)

### Point

#### Installing system applications (extended functions)

To invoke a monitor function from the system configuration screen, install the system applications (extended functions) required for the system launcher function and also for the monitor function to the GOT.

Otherwise, the monitor function cannot be invoked from the system configuration screen of the system launcher.

For how to add a system application (extended function) to package data, refer to the following.

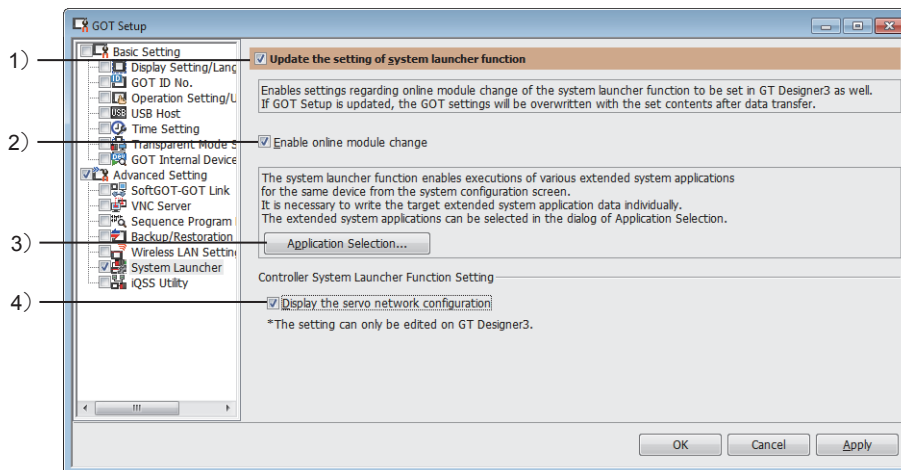

→ 4.2.2 How to use the application setting

### ■ 1 [System Launcher]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [System Launcher], configure the settings of the system launcher function.

Select [Common] → [GOT Setup] → [Advanced Setting] → [System Launcher] from the menu to display the following window.

#### 1) [Update the setting of system launcher function]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Enables the setting items in [System Launcher] to be set.

When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Enable online module change]

Enables the online module change for PLCs by operating the GOT.

#### 3) [Application Selection] button

Displays the [Application Selection] dialog.

Select a system application to be added to package data.

→ 4.2.2 How to use the application setting

#### 4) [Display the servo network configuration]

Enables the system launcher (servo network) function.

## 5.3.14 Configuring the settings of the iQSS utility function ([iQSS Utility])

- ■ 1 [iQSS Utility]
- 2 [CSP+ for iQSS Data Write] dialog

In [iQSS Utility], configure the settings of the storage location for iQSS data (CSP+).  
For the details of the iQSS utility, refer to the following.

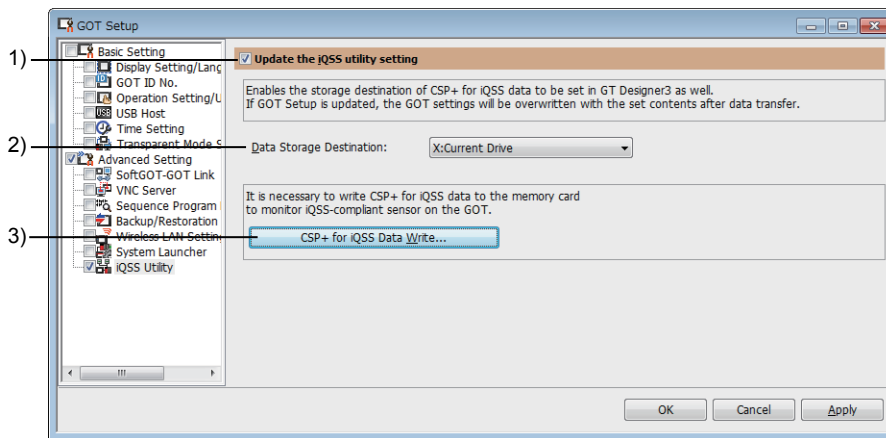

→ GOT2000 Series User's Manual (Monitor)

### ■ 1 [iQSS Utility]

In [iQSS Utility], specify iQSS data (CSP+) to be written to a data storage, and select a drive of the GOT as the storage location.

Select [Common] → [GOT Setup] → [Advanced Setting] → [iQSS Utility] from the menu to display the following window.

#### 1) [Update the iQSS utility setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.  
Enables the setting items in [iQSS Utility] to be set.  
When a project is read from the GOT, the setting changed in the utility is reflected.

#### 2) [Data Storage Destination]

Select a drive at which iQSS data (CSP+) is located.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

→ 1.2.7 Drive configuration of the target GOT for data transfer

#### 3) [CSP+ for iQSS Data Write] button

Displays the [CSP+ for iQSS Data Write] dialog to write iQSS data (CSP+) to a data storage installed on the personal computer.

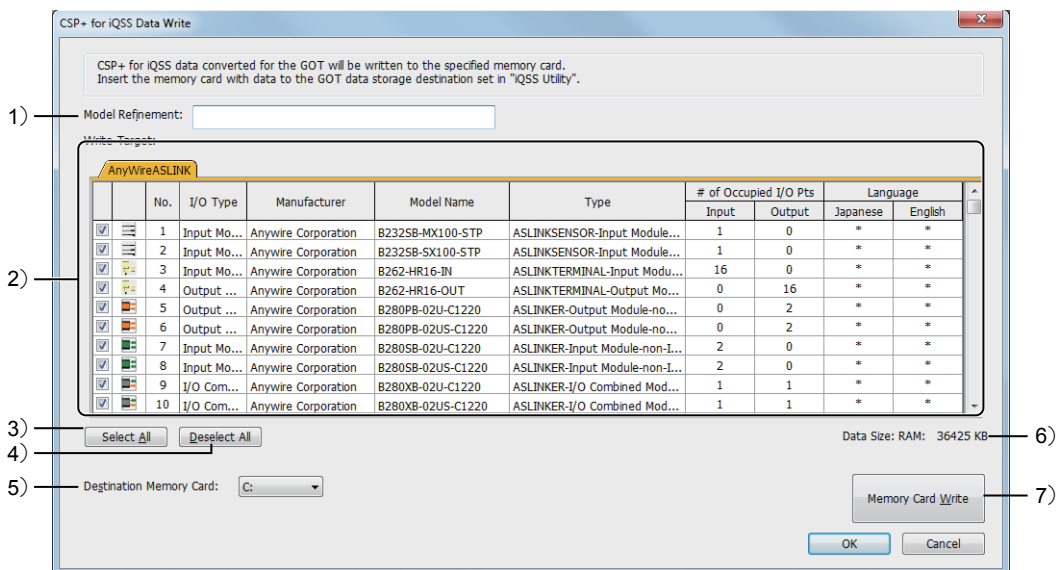

→ ■ 2 [CSP+ for iQSS Data Write] dialog

## 2 [CSP+ for iQSS Data Write] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Write iQSS data (CSP+) to a data storage installed on the personal computer.

Select [Communication] → [CSP+ for iQSS Data Write] from the menu to display the following dialog.

### 1) [Model Refinement]

Narrows down iQSS data (CSP+) in [Write Target] by the entered model name.

Up to 48 one-byte characters are settable.

Numeric characters, A to Z, a to z, one-byte spaces, and the following symbols are usable.

!#\$%&()+,.-=@[\]^\_`{ }

The entered characters are case-insensitive.

### 2) [Write Target]

Lists iQSS data (CSP+) to be written to a data storage.

All pieces of iQSS data (CSP+) are arranged in tabs by network type.

Item	Description
Checkbox	Select the iQSS data (CSP+) to be written to a data storage.
[No.]	iQSS data (CSP+) number
[I/O Type]	Input/output type of the target equipment
[Manufacturer]	Manufacturer of the target equipment
[Model Name]	Model of the target equipment
[Type]	Type of the target equipment
[# of Occupied I/O]	<ul style="list-style-type: none"> <li>[Input] Number of inputs for the target equipment</li> <li>[Output] Number of outputs for the target equipment</li> </ul>
[Language]	<ul style="list-style-type: none"> <li>[Japanese] Indicates the presence or absence of the Japanese version of iQSS data (CSP+). Displays an asterisk (*) when this version of data exists.</li> <li>[English] Indicates the presence or absence of the English version of iQSS data (CSP+). Displays an asterisk (*) when this version of data exists.</li> </ul>

### 3) [Select All]

Selects all pieces of iQSS data (CSP+) in [Write Target].

### 4) [Deselect All]

Deselects all pieces of iQSS data (CSP+) in [Write Target].

### 5) [Destination Memory Card]

Select a drive (data storage) to which iQSS data (CSP+) is written.

The selectable drives depend on the personal computer.

## 6) [Data Size]

Displays the space of the operation memory (RAM) that is required to store the iQSS data (CSP+) selected in [Write Target].

For the available space in the GOT user area, refer to the following.

→12.6.1 Data transferred to the GOT and capacity of the destination drive

## 7) [Memory Card Write] button

Writes data listed in [Write Target] to a data storage.

## 5.3.15 Configuring the network drive settings ([Network Drive])

In [Network Drive], specify a shared folder on the file server (such as a personal computer) as the network drive.

The GOT is connected to the file server via Ethernet.

The file server must support the file sharing function (SMB or CIFS).

For recommended file servers, refer to the following.

→5.3.15 ■ 1 (6) Validated file servers

### ■ 1 Network drive specifications

#### (1) System application (extended function)

To use the network drive, a system application (extended function) of [Network Drive] is required.

Configuring one of the following settings incorporates the application into the package data automatically.

- Selecting [Update the network drive setting] in [Network Drive] in the [GOT Setup] window.

→5.3.15 ■ 6 [Network Drive]

- Selecting [N:Network Drive] for [Drive Name] in the setting dialog of a function using the network drive.

To use the network drive for GT SoftGOT2000, the application is not required.

#### (2) CoreOS version

To use the network drive, install CoreOS version L or later on the GOT.

#### (3) BootOS version

To use the network drive, install BootOS version AK or later on the GOT.

#### (4) Functions that can use the network drive

- Logging function
  - 9.2 Collecting Device Data ([Logging])
- Hard copy function
  - 9.7 Capturing the Operating Screen of the GOT ([Hard Copy])
- File print function
  - GOT2000 Series User's Manual (Utility)
- Report function
  - 10.11 Outputting the Collected Data as a Report (Report Function)
- File manager
  - GOT2000 Series User's Manual (Utility)

#### (5) Port number when the network drive is used

Port No. 445 is used for the file server.

## (6) Validated file servers

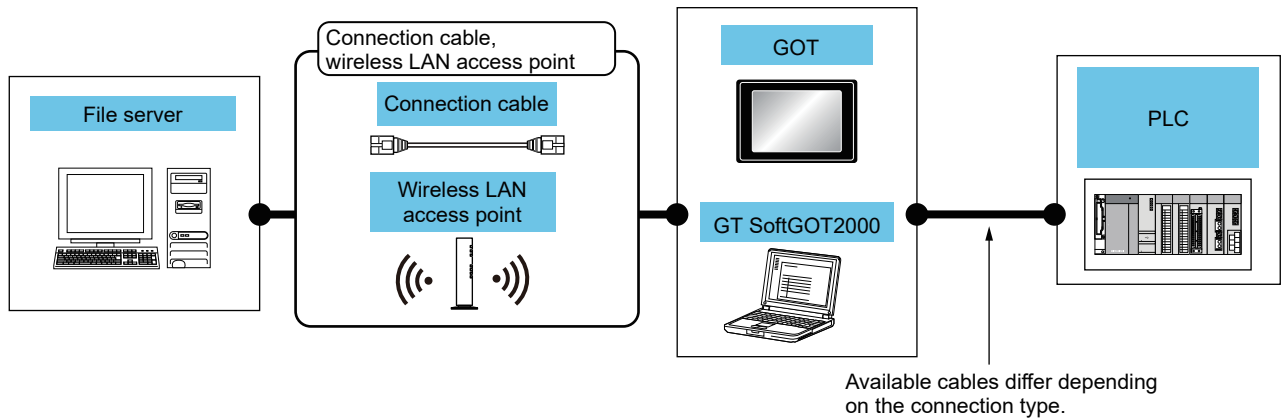

The following shows the file servers that have been validated by Mitsubishi Electric Corporation.

- Windows Server 2016 Essentials
- Windows 10 Enterprise

## ■2 System configuration when using the network drive

The following shows the system configuration when using the network drive.

File server	Connection cable <sup>*1*2</sup> , wireless LAN access point	Maximum segment length <sup>*3</sup>	GOT		PLC
			Option	GOT model	
Select by each user	<ul style="list-style-type: none"> <li>• 10BASE-T Shielded twisted pair cable (STP) or unshielded twisted pair cable (UTP): Category 3, 4, and 5</li> <li>• 100BASE-TX Shielded twisted pair cable (STP): Category 5 and 5e</li> </ul>	100m	- (Built into GOT)	GT27 GT25	For the system configuration between the GOT and the PLC, refer to each connection manual.
			GT25-J71E71-100	GT27 GT25 <sup>*6</sup>	
			GT SoftGOT2000		
	-	GT25-WLAN GT27 <sup>*4</sup> GT25 <sup>*4*6</sup>			
	<ul style="list-style-type: none"> <li>• Wireless LAN access point For the connectable wireless LAN access points and system devices, refer to the following Technical News. ⇒ List of Valid Devices Applicable for GOT2000 Series (GOT-A-0064)</li> </ul>	-	GT25-WLAN	GT27 <sup>*5</sup> GT25 <sup>*5*6</sup>	
	• Wireless LAN access point <sup>*7</sup>	-	GT SoftGOT2000		

\*1 The applicable destination to connect the twisted pair cable depends on the configuration of the Ethernet network system. Connect to the applicable Ethernet module, hub, transceiver, wireless LAN adapter (NZ2WL-JPA or NZ2WL-JPS), or other system equipment according to the Ethernet network system. Use the cable, connector, or hub that meets the IEEE802.3 10BASE-T/100BASE-TX standard. For the controller to which the wireless LAN adapter can be connected and how to configure the settings for the wireless LAN adapter, refer to the manual of the wireless LAN adapter you use.

\*2 A straight cable is usable. A cross cable is usable for directly connecting the GOT to a file server.

\*3 The length between the hub and node. The maximum length depends on the Ethernet equipment you use. When repeater hubs are used, the number of connectable hubs is as follows.

- 10BASE-T: Up to 4 cascade-connected hubs (within 500 m)
- 100BASE-TX: Up to 2 cascade-connected hubs (within 205 m)

For the cascade connection between the switching hubs, there is no theoretical limit to the number of cascades. For the limit, contact the switching hub manufacturer.

\*4 Set [Operation Mode] to [Access Point] in [Wireless LAN Setting] in the [GOT Setup] window. ⇒ 5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])

\*5 Set [Operation Mode] to [Station] in [Wireless LAN Setting] in the [GOT Setup] window. ⇒ 5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])

\*6 Not available to GT2505-V and GT25HS-V.

\*7 The usable wireless LAN access point varies with the personal computer used.

### ■ 3 How to use the network drive

To enable the network drive, configure the settings on GT Designer3 and a file server.

The following shows an example of using the folder sharing feature in Windows 10 to specify the selected folder as the network drive.

#### (1) Settings on GT Designer3

**Step 1** Set the GOT Ethernet interface.

⇒5.4 Setting the GOT Ethernet Interface ([GOT Ethernet Setting])

**Step 2** To use the GOT wireless LAN function, configure the wireless LAN connection setting.

⇒5.3.12 Configuring the settings for a wireless LAN ([Wireless LAN Setting])

**Step 3** Configure the network drive settings.

⇒5.3.15 ■ 6 [Network Drive]

**Step 4** Configure settings on the file server.

⇒(3) Settings on the file server

**Step 5** Connect the personal computer to the GOT, and write the project to the GOT.

⇒4.3 Transferring the Data between the Personal Computer and the GOT

#### (2) Settings on GT SoftGOT2000

For information on how to use the network drive for GT SoftGOT2000, refer to the following.

⇒GT SoftGOT2000 Version1 Operating Manual

#### (3) Settings on the file server

Configure the following settings with administrator privileges.

- In the [Computer Management] dialog, select [Local Users and Groups], and then right-click [Users] to select [New User] from the menu.

In the [New User] dialog, set [User name] and [Password] for access to the file server.

- In the [Control Panel] dialog, select [System] and then [Advanced system settings].

In the properties dialog, click [Change] on the [Computer Name] tab to set the computer name.

- In the [Computer Management] dialog, select [System Tools], then [Shared Folders], and then [Shares]. Right-click the shared folder and then set [Share name] in [Properties].

- In the [Control Panel] dialog, select [System and Security], then [Windows Defender Firewall], and then [Advanced system settings].

In the [Windows Defender Firewall with Advanced Security] dialog, select [Inbound Rules], and enable [File and Printer Sharing (SMB-In)].

### ■ 4 Creating a folder for each GOT

A folder is created for each GOT to save files.

Even when the file save destination setting is common to the GOTs, the files of each GOT will be saved into different folders. Each folder is created automatically and named as the IP address of each GOT.

Select [Separate destinations for each GOT] in the setting dialog for a function using the network drive.

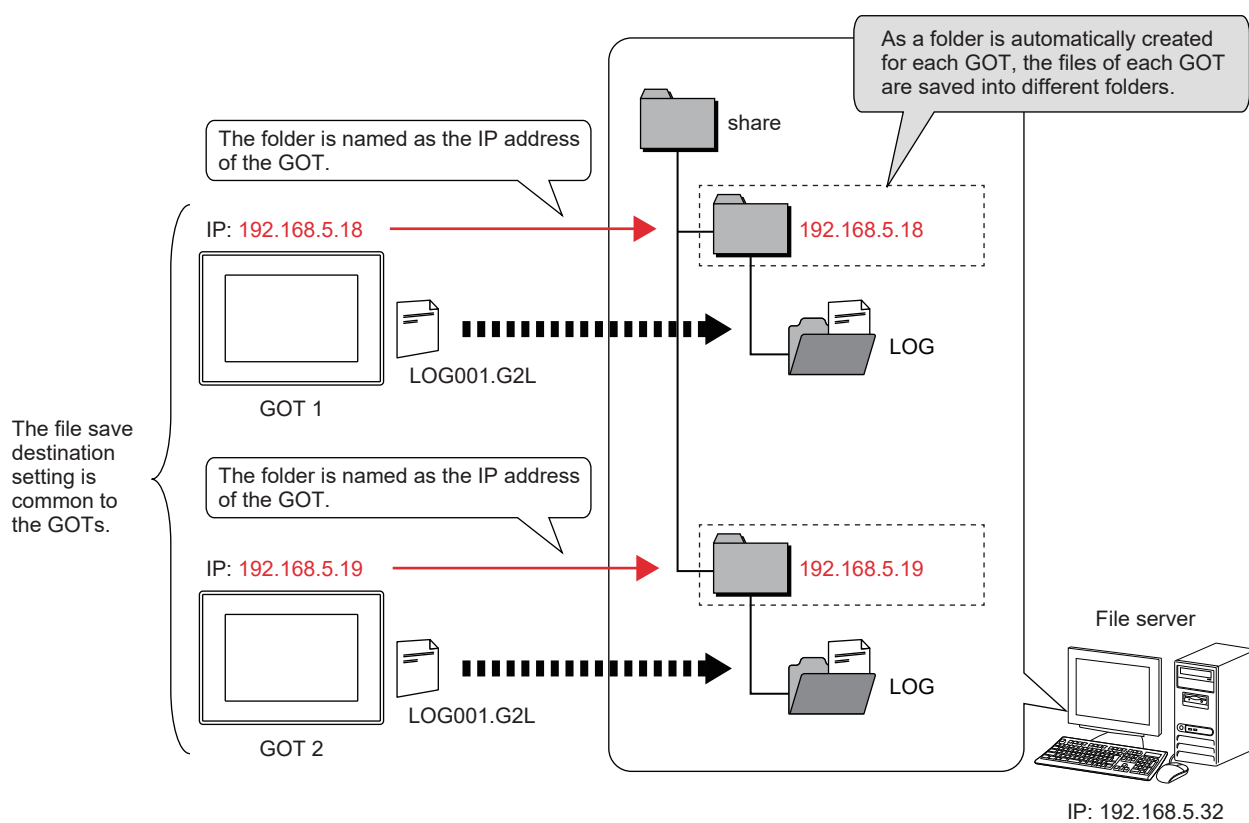

- Example) Settings for GOT 1 and GOT 2
- Path to the network drive: \\192.168.5.32\share
  - Save destination of logging files
    - [Drive Name]: [N:Network Drive]
    - [Folder Name]: LOG
    - [File Name]: LOG001.G2L

1) When [Separate destinations for each GOT] is deselected

2) When [Separate destinations for each GOT] is selected

### (1) Applicable functions

The following shows the applicable functions.  
Select [Separate destinations for each GOT].

- Logging function  
    ⇒9.2.6 [Logging] dialog
- Hard copy function  
    ⇒9.7.6 [Hard Copy] dialog
- Report function  
    ⇒2.7.3 ■ 2 [Action] tab

### (2) Folder name determination

Each folder is named as the IP address of the GOT's Ethernet interface connected to the file server.  
If the GOT is not connected to the file server, no folder will be created.

### (3) Changing the IP address of a GOT

When the IP address of a GOT is changed, files will be saved to the folder named as the new IP address.  
If a folder named as the new IP address already exists, files will be saved to the folder.  
Otherwise, a folder named as the new IP address will be created automatically.

## ■ 5 Precautions for the network drive

### (1) Slow access speed

The GOT takes a longer time to start up, save a file, or display a graph via the network drive compared with via an SD card.

### (2) When multiple GOTs use the network drive

If the GOTs have the same file save destination, select [Separate destinations for each GOT] in the setting of each applicable function as necessary to avoid overwriting files.  
    ⇒5.3.15 ■ 4 Creating a folder for each GOT

### (3) Time zone setting

Set the same time zone for the file server and GOT.  
Otherwise, a time difference will occur in the timestamps of folders and files between the file server and GOT.  
    ⇒5.3.5 ■ 3 (3) [Local Time] tab

### (4) Time stamp of a copied file

If you copy a file from a location to the network drive, the time stamp of the copied file will be updated to the date and time of the copy operation.

### (5) Setting a read-only folder

To set a read-only folder on the file server, set the folder permissions.  
In the folder properties dialog, set [Permissions] on the [Security] tab.

### (6) When the file server is under heavy load

When the file server is under heavy load, a timeout may occur.  
Specify a longer time for [Timeout Time].  
    ⇒5.3.15 ■ 6 [Network Drive]

### (7) When system alarm 391 occurs

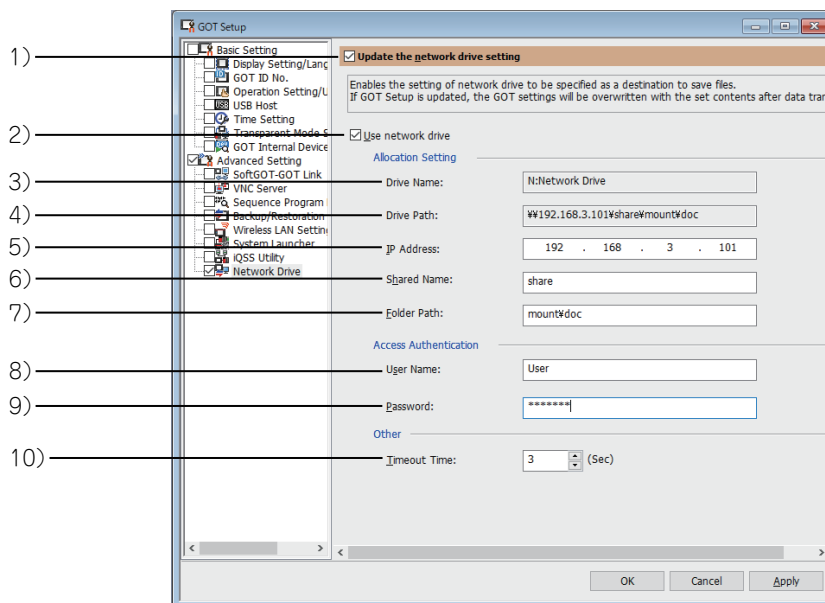

This alarm occurs when the user name or password setting is inconsistent between the GOT and the file server.  
As no automatic reconnection is performed in this case, correct the user name or password setting and then restart the GOT.

## 6 [Network Drive]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In [Network Drive], configure the settings to connect the GOT to a file server.

Select [Common] → [GOT Setup] → [Advanced Setting] → [Network Drive] from the menu to display the following window.

### 1) [Update the network drive setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written to the GOT.

### 2) [Use network drive]

Enables access to the network drive.

### 3) [Drive Name]

Displays the network drive name.

The name is fixed to [N:Network Drive].

### 4) [Drive Path]

Displays the path to the network drive.

The drive path consists of the specified IP address, shared name, and folder path.

Make sure that the number of characters (including delimiters) in the drive path is 60 or less.

### 5) [IP Address]

Specify the IP address of a file server to be connected.

The setting range is [0.0.0.0] to [255.255.255.255].

### 6) [Shared Name]

Enter the name of the shared folder (network drive) on the file server.

Make sure that the number of characters (including delimiters) in the drive path is 60 or less.

Two-byte and one-byte characters can be entered.

### 7) [Folder Path]

Set this item when specifying a folder under the shared folder as the network drive.

Make sure that the number of characters (including delimiters) in the drive path is 60 or less.

Two-byte and one-byte characters can be entered.

If this setting is unnecessary, leave it blank.

### 8) [User Name]

Set the name of a user that accesses the network drive.  
Specify a local user.  
A domain user is not supported.  
Up to 32 characters can be entered.

### 9) [Password]

Set a password for the user to access the network drive.  
Up to 32 one-byte alphanumeric characters can be entered.  
If this setting is unnecessary, leave it blank.

### 10) [Timeout Time]

Set a communication timeout period.  
The setting range is [3] seconds to [255] seconds.

## ■ 7 Relevant settings for the network drive

Set the relevant settings other than the specific settings for the network drive as required.  
The following shows the functions that are available by configuring the relevant settings.

### (1) GOT type settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] window.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Notifying the free space of the network drive. (Write device)	[Drive N empty capacity information(32bit)]
Notifying that the network drive is being accessed. (Write device: Extended Drive Information.b9)	[Extended Drive Information]
Notifying that the free space of the network drive is less than 1k byte. (Write device: Extended Drive Information.b10)	[Extended Drive Information]
Notifying that an error has occurred while the network drive is being accessed. (Write device: Extended Drive Information.b11)	[Extended Drive Information]

### (2) GOT internal devices

⇒12.1 GOT Internal Device

Function	Setting item
Notifying that data can be read from or written to the network drive.	GS251.b5

## 5.4 Setting the GOT Ethernet Interface ([GOT Ethernet Setting])

Not available to GT2105-Q.

- 5.4.1 Setting the GOT IP address
- 5.4.2 Configuring the settings common to Ethernet interfaces
- 5.4.3 Setting the IP filter

### 5.4.1 Setting the GOT IP address

Not available to GT2105-Q.

- ■ 1 Ethernet interfaces
- 2 Precautions
- 3 [GOT IP Address Setting]

Set an IP address and a subnet mask for each Ethernet interface of the GOT.

For setting the default gateway, refer to the following.

- 5.4.2 Configuring the settings common to Ethernet interfaces

#### ■ 1 Ethernet interfaces

Not available to GT2105-Q.

The usable Ethernet interfaces vary by GOT model.

GOT	Ethernet interface
GT27, GT25-S, GT25-V (excluding GT2505-V)	<ul style="list-style-type: none"><li>• Ethernet standard port</li><li>• Ethernet extended port</li><li>• Wireless LAN interface</li></ul>
GT25-W	<ul style="list-style-type: none"><li>• Ethernet standard port 1</li><li>• Ethernet standard port 2</li><li>• Wireless LAN interface</li></ul>
GT2505-V, GT25HS-V, GT23, GT21	<ul style="list-style-type: none"><li>• Ethernet standard port</li></ul>

#### ■ 2 Precautions

Not available to GT2105-Q.

##### (1) IP address setting

The same network is inaccessible through multiple Ethernet interfaces and the wireless LAN interface.

Set an IP address for each interface to access a different network.

#### ■ 3 [GOT IP Address Setting]

Not available to GT2105-Q.

In [GOT IP Address Setting], set an IP address and a subnet mask for each Ethernet interface.

Select [Common] → [GOT Ethernet Setting] → [GOT IP Address Setting] from the menu to display the following window.

- (1) [Standard Port] tab, [Port 1] tab
- (2) [Extended Port] tab, [Port 2] tab
- (3) [Wireless LAN] tab

The settings of the items in green cells are reflected from MELSOFT Navigator to the GOT project.

Set these items on MELSOFT Navigator.

## (1) [Standard Port] tab, [Port 1] tab

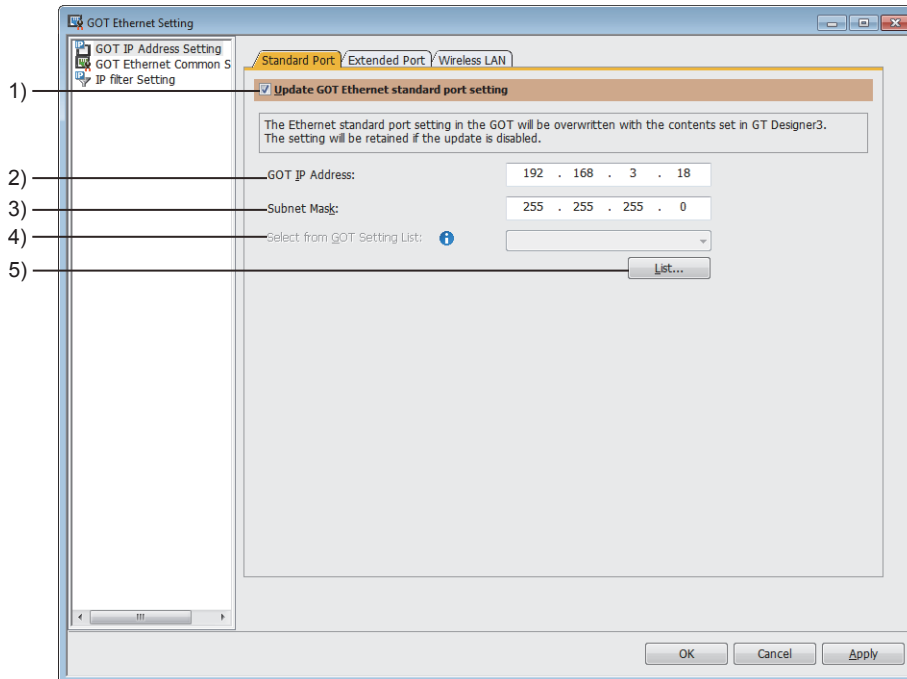

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

The tab name varies by GOT model.

- Models other than GT25-W: [Standard Port] tab
- GT25-W: [Port 1] tab

Set an IP address and a subnet mask for the Ethernet standard port or Ethernet standard port 1.

### 1) [Update GOT Ethernet standard port setting] ([Update GOT Ethernet standard port 1 setting] for GT25-W)

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Select this item to set each item on the [Standard Port] tab or the [Port 1] tab.

When a project is read from the GOT, the setting changed in the utility is reflected.

### 2) [GOT IP Address]

Set an IP address for the Ethernet standard port or Ethernet standard port 1.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 3) [Subnet Mask]

Set a subnet mask for the Ethernet standard port or Ethernet standard port 1.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 4) [Select from GOT Setting List]

Select the GOT Ethernet setting to be used among the settings registered in the [GOT Setting List] dialog.

### 5) [List] button

Displays the [GOT Setting List] dialog.

For the details of the settings, refer to the following.

→5.3.2 ■ 5 [GOT Setting List] dialog

## (2) [Extended Port] tab, [Port 2] tab

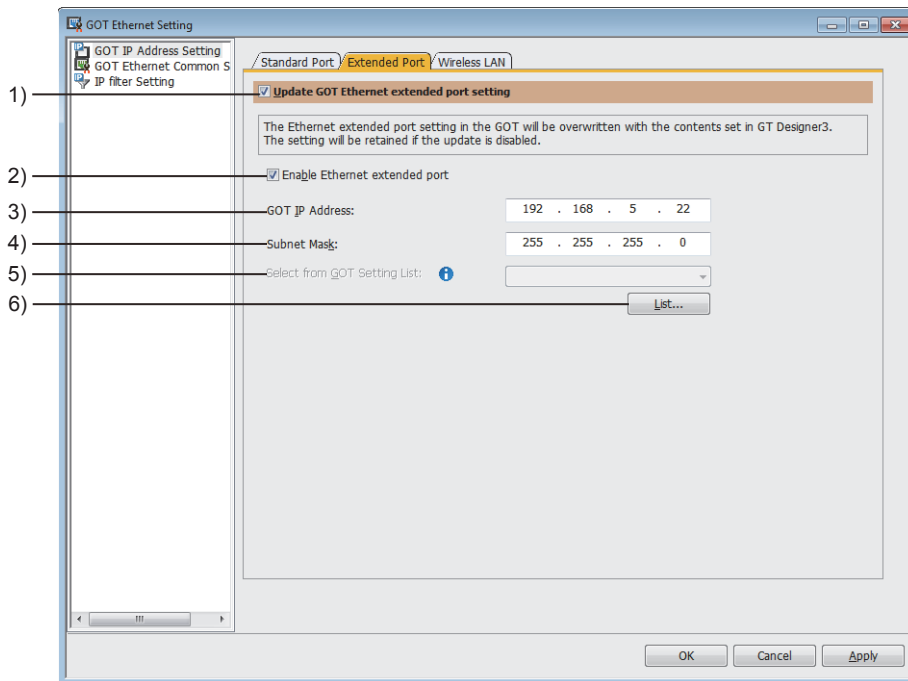

Not available to GT2505-V and GT25HS-V.

The tab name varies by GOT model.

- Models other than GT25-W: [Extended Port] tab
- GT25-W: [Port 2] tab

Set an IP address and a subnet mask for the Ethernet extended port or Ethernet standard port 2.

### 1) [Update GOT Ethernet extended port setting] ([Update GOT Ethernet standard port 2 setting] for GT25-W)

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written.

Select this item to set each item on the [Extended Port] tab or the [Port 2] tab.

When a project is read from the GOT, the setting changed in the utility is reflected.

### 2) [Enable Ethernet extended port] ([Enable Ethernet standard port 2] for GT25-W)

Enables the Ethernet extended port or Ethernet standard port 2.

Select [Enable Ethernet extended port] and click the [OK] button to use the smallest-numbered available stage of [Extend I/F Setting] in the [I/F Communication Setting] dialog as the Ethernet extended port.

### 3) [GOT IP Address]

Set an IP address for the Ethernet extended port or Ethernet standard port 2.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 4) [Subnet Mask]

Set a subnet mask for the Ethernet extended port or Ethernet standard port 2.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

### 5) [Select from GOT Setting List]

Select the GOT Ethernet setting to be used among the settings registered in the [GOT Setting List] dialog.

### 6) [List] button

Displays the [GOT Setting List] dialog.

For the details of the settings, refer to the following.

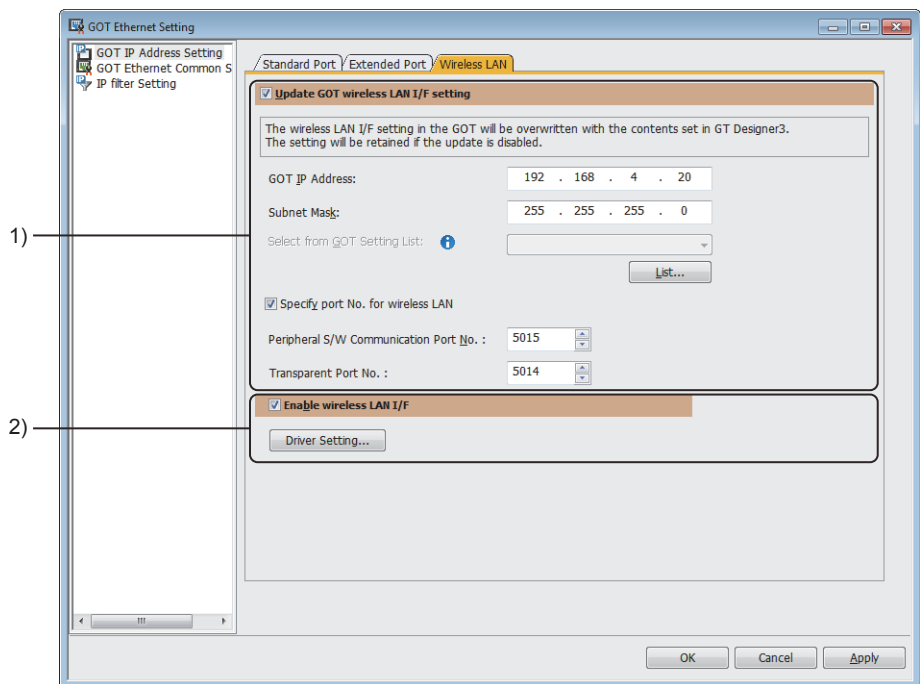

⇒ 5.3.2 ■ 5 [GOT Setting List] dialog

### (3) [Wireless LAN] tab

Not available to GT2505-V and GT25HS-V.

Set the IP address and other items for the wireless LAN interface.

#### 1) [Update GOT wireless LAN I/F setting]

Overwrites the setting data in the GOT with the ones set on GT Designer3 when package data is written. Select this item to set the following items. When a project is read from the GOT, the setting changed in the utility is reflected.

Item	Description
[GOT IP Address]	Set an IP address for the wireless LAN interface. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
[Subnet Mask]	Set a subnet mask for the wireless LAN interface. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
[Select from GOT Setting List]	Select the GOT Ethernet setting to be used among the settings registered in the [GOT Setting List] dialog.
[List] button	Displays the [GOT Setting List] dialog. For the details of the settings, refer to the following. →5.3.2 ■ 5 [GOT Setting List] dialog
[Specify port No. for wireless LAN]	Enables the port number setting (apart from the Ethernet common setting) for the wireless LAN interface.
[Peripheral S/W Communication Port No.]	Set a port number for the wireless LAN interface to communicate with GT Designer3. The setting range is [1024] to [65534]. Do not set the port number used for the other settings. Duplication of the port number disables communication.
[Transparent Port No.]	Set a port number for the wireless LAN interface to be used for the FA transparent function. The setting range is [1024] to [65534]. Do not set the port number used for the other settings. Duplication of the port number disables communication.

#### 2) [Enable wireless LAN I/F]

Enables the wireless LAN interface.

Item	Description
[Driver Setting] button	Displays the [Detail Setting] dialog. →12.11.5 [Detail Setting] dialog

## 5.4.2 Configuring the settings common to Ethernet interfaces

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

→ ■ 1 [GOT Ethernet Common Setting]

Set the default gateway and other common items for Ethernet interfaces.

### ■ 1 [GOT Ethernet Common Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

In [GOT Ethernet Common Setting], set the default gateway and other common items for Ethernet interfaces.

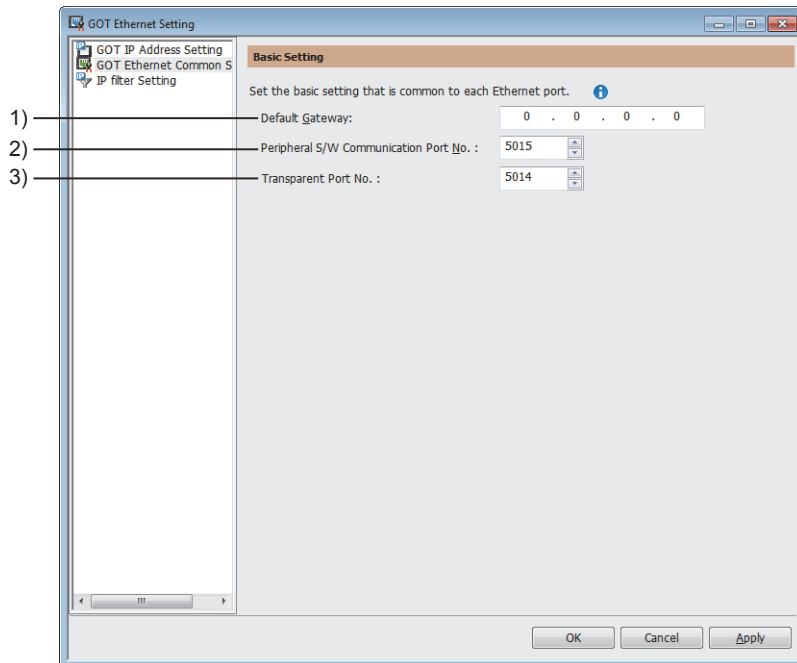

Select [Common] → [GOT Ethernet Setting] → [GOT Ethernet Common Setting] from the menu to display the following window.

You can set a port number common to Ethernet interfaces, and set another port number for the wireless LAN interface.

→ 5.4.1 ■ 3 (3) [Wireless LAN] tab

The settings of the items in green cells are reflected from MELSOFT Navigator to the GOT project.

Set these items on MELSOFT Navigator.

#### 1) [Default Gateway]

Set the default gateway.

The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].

#### 2) [Peripheral S/W Communication Port No.]

Set the port No. used for the communication with GT Designer3.

The setting range is [1024] to [65534].

Do not set the port number used for the other settings.

Duplication of the port number disables communication.

#### 3) [Transparent Port No.]

Use this port No. for the FA transparent function.

The setting range is [1024] to [65534].

Do not set the port number used for the other settings.

Duplication of the port number disables communication.

### 5.4.3 Setting the IP filter

Not available to GT2105-Q.

- ■ 1 Filtering method
- 2 Filtering list
- 3 Precautions
- 4 [IP Filter Setting]
- 5 [IP Address to Exclude] dialog

The IP filter allows or blocks access via an Ethernet network from IP addresses in the filtering list.

To use the IP filter, install version H or later of CoreOS on the GOT.

- 4.5.3 Installing the BootOS or the CoreOS to the GOT

For how to check the CoreOS version, refer to the following.

- GOT2000 Series User's Manual (Utility)

#### ■ 1 Filtering method

Not available to GT2105-Q.

The GOT filters access from IP addresses in the filtering list by the following filtering methods.

The filtering method is settable in [IP Filter Setting] on GT Designer3 or the GOT utility.

- 5.4.3 ■ 4 [IP Filter Setting]

GOT2000 Series User's Manual (Utility)

#### (1) Allowing specified IP addresses

The GOT allows access from IP addresses in the filtering list.

The GOT blocks access from IP addresses unlisted in the filtering list.

Excluded IP addresses are settable in the filtering list.

The GOT blocks access from the excluded IP addresses.

## (2) Blocking specified IP addresses

The GOT blocks access from IP addresses in the filtering list.

The GOT allows access from IP addresses unlisted in the filtering list.

Excluded IP addresses are settable in the filtering list.

The GOT allows access from the excluded IP addresses.

## ■ 2 Filtering list

Not available to GT2105-Q.

The filtering list contains IP addresses to be filtered.

The filtering list is settable in [IP Filter Setting] on GT Designer3 or the GOT utility.

→ 5.4.3 ■ 4 [IP Filter Setting]

GOT2000 Series User's Manual (Utility)

### (1) Maximum number of IP address ranges

- For GT27, GT25, and GT23  
Up to 32 IP address ranges are registrable.
- For GT21  
Up to 4 IP address ranges are registrable.

### (2) Specifying the IP address range

You can set the range of IP addresses to be registered in the filtering list.

To set the range of IP addresses, the start IP address and the end IP address must belong to the same subnet.

To set the range of IP addresses belonging to different subnets, group IP addresses by subnet for registration.

The following shows an example where the fourth octet of IP addresses indicates a subnet.

Example 1) Possible settings

- First setting: Start IP address 192.168.3.5, end IP address 192.168.3.255
- Second setting: Start IP address 192.168.4.1, end IP address 192.168.4.20

Example 2) Impossible settings

- First setting: Start IP address 192.168.3.5, end IP address 192.168.4.20
- Second setting: None

### (3) Maximum number of excluded IP addresses

- For GT27, GT25, and GT23  
Up to 32 excluded IP addresses are registrable.
- For GT21  
Up to 16 excluded IP addresses are registrable.

### ■ 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

#### (1) Taking security measures except the IP filter

Using only the IP filter cannot prevent unauthorized access perfectly.

Take additional security measures system-wide, such as setting up a firewall for the network.

#### (2) Overlap of IP address ranges

When the IP address ranges overlap in the filtering list, the GOT prioritizes the range that has been set earlier.

If an excluded IP address overlaps with an IP address in the already-specified IP address range, the excluded IP address becomes invalid.

Example) Filtering method: Blocking specified IP addresses

- First setting: 192.168.3.10 to 192.168.3.100, excluded: 192.168.3.90
- Second setting: 192.168.3.80 to 192.168.3.240, excluded: 192.168.3.85

IP address 192.168.3.85 is blocked.

#### (3) Filtering in communication via network equipment

A source IP address may be converted depending on the network route, such as via a router having the IP address conversion function or via a PLC CPU by using the FA transparent function.

When a controller communicates with the GOT via network equipment whose IP address is unlisted in the filtering list, even if the controller IP address is in the filtering list, the IP filter is not applied.

For network configurations in which a source IP address may be changed, set the filtering list in consideration of routed system equipment.

Example) When CPU 1 accesses GX Works3 via CPU 2 on a different network and then via the GOT using the FA transparent function

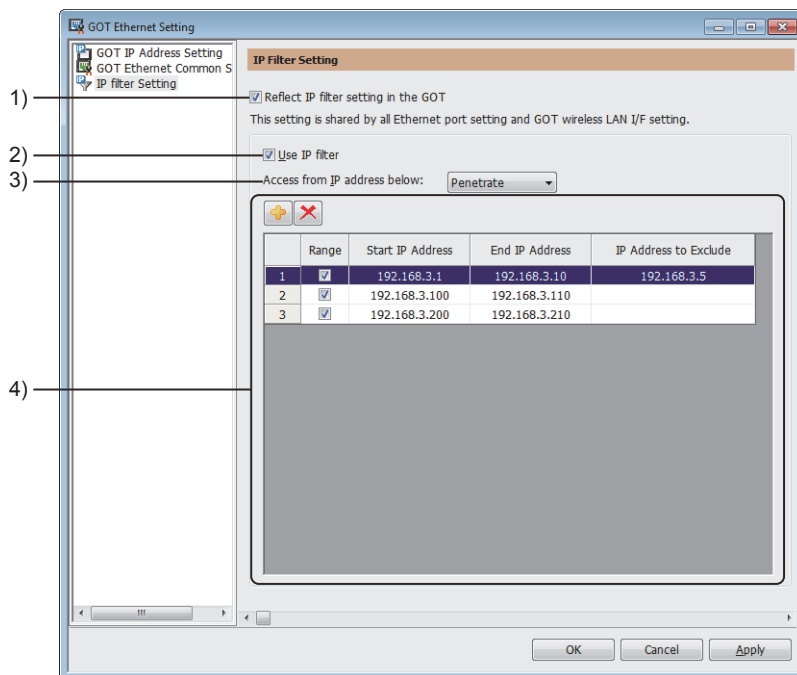

## 4 [IP Filter Setting]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

In [IP Filter Setting], set the filtering method and the filtering list.

Select [Common] → [GOT Ethernet Setting] → [IP filter Setting] from the menu to display the following window.

### 1) [Reflect IP filter setting in the GOT]

Reflects the IP filter setting to the GOT.

### 2) [Use IP filter]

Enables the IP filter.

### 3) [Access from IP address below]

Select a filtering method applied to the filtering list.

- [Penetrate]

Allows access from IP addresses ranging from [Start IP Address] to [End IP Address] in the filtering list. Blocks access from IP addresses set in [IP Address to Exclude].

- [Shut off]

Blocks access from IP addresses ranging from [Start IP Address] to [End IP Address] in the filtering list. Allows access from IP addresses set in [IP Address to Exclude].

### 4) Filtering list

Lists IP address ranges to which the IP filter is applied.

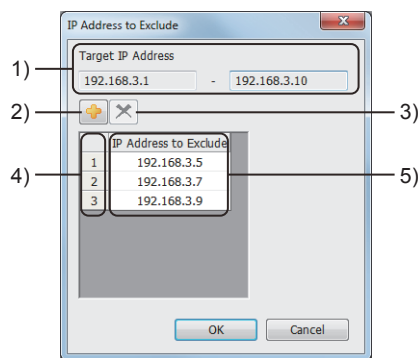

Item	Description
[Add] button	Adds an IP filter setting in the bottom of the list.
[Delete] button	Deletes a selected IP filter setting.

Item	Description
No.	IP filter setting No. Clicking an IP filter setting No. selects the row. To select multiple rows, perform one of the following operations. Hold down the [Ctrl] key and click a setting No. To deselect a selected row, perform the same operation. Select the first row in the range, hold down the [Shift] key, and click a setting No. to select the last row in the range.
[Range]	Enables the registration of IP addresses by specifying a range. To register IP addresses one by one, clear this item.
[Start IP Address]	Set the start IP address of the IP address range.
[End IP Address]	This item is settable only when [Range] is selected. Set the end IP address of the IP address range.
[IP Address to Exclude]	Set IP addresses excluded from being filtered. Click the [...] button to display the [IP Address to Exclude] dialog. →5.4.3 ■ 5 [IP Address to Exclude] dialog

## ■ 5 [IP Address to Exclude] dialog

Not available to GT2105-Q.

### 1) [Target IP Address]

Displays the IP address range to which the IP filter is applied.

### 2) [Add] button

Adds an excluded IP address in the bottom of the list.

### 3) [Delete] button

Deletes a selected excluded IP address.

### 4) No.

Excluded IP address setting No.

Clicking an excluded IP address setting No. selects the row.

To select multiple rows, perform one of the following operations.

Hold down the [Ctrl] key and click a setting No. To deselect a selected row, perform the same operation.

Select the first row in the range, hold down the [Shift] key, and click a setting No. to select the last row in the range.

### 5) [IP Address to Exclude]

Lists the IP addresses excluded from being filtered.

## 5.5 Configuring the Communication Method between the GOT and the Controller ([Controller Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 5.5.1 Setting channels
- 5.5.2 Setting the routing information
- 5.5.3 Configuring the setting of the MELSEC redundant function
- 5.5.4 Configuring the settings for switching the target station No. for monitoring
- 5.5.5 Configuring the settings for switching the buffer memory unit No. of the monitoring target

### 5.5.1 Setting channels

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Specifications of channels
- 2 How to set channels
- 3 Precautions
- 4 [Controller Setting]
- 5 [GOT (Extend Computer)] dialog
- 6 [Controller Type List] window

Set the channel used for the connection between the GOT and controllers.

#### ■ 1 Specifications of channels

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (1) Applicable channels

The following shows the channels that are available for each GOT model.

GOT model	Applicable channel No.
GT27, GT25	CH1 to CH4
GT23, GT21	CH1 to CH2
GT SoftGOT2000	CH1

CH2 to CH4 can be used only when the multi-channel function is used.

For the details of the multi-channel function, refer to the following.

→ GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version1

##### (2) Applicable communication interfaces

The following shows the communication interfaces that are available for each GOT model.

GOT model	Supported communication interface
GT27, GT25-S, GT25-V (excluding GT2505-V)	[Standard I/F(RS422/485)], [Standard I/F(RS232)], [Ethernet: Multi], [Extend I/F(1st)], [Extend I/F(2nd)], and [Extend I/F(3rd)]
GT25-W, GT2505-V, GT25HS-V	[Standard I/F(RS422/485)], [Standard I/F(RS232)], and [Ethernet: Multi]
GT2105-Q	[Standard I/F(RS422/485)] and [Standard I/F(RS232)]
GT23, GT2107-W, GT2104-R	[Standard I/F(RS422/485)], [Standard I/F(RS232)], and [Ethernet: Multi]
GT2104-P, GT2103-P	[Standard I/F(RS422/485/232(Side))], [Standard I/F(RS232(Back))], and [Ethernet: Multi]
GT SoftGOT2000	For the communication interface of GT SoftGOT2000, refer to the following. → GT SoftGOT2000 Version1 Operating Manual

For the details of the applicable communication interfaces, refer to the following.

→ GOT2000 Series User's Manual (Hardware)

For the system configuration of each controller and connection type, refer to the following.

→ GOT2000 Series Connection Manual for a controller used

## 2 How to set channels

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Setting with GT Designer3

**Step 1** Select [Common] → [Controller Setting] from the menu.

**Step 2** The [Controller Setting] window appears.

Select a channel No. to be used from the controller setting tree.

For the setting of channel No. 2 to 4, select a channel and the item shown as 1) below.

**Step 3** Configure the communication settings for each channel.

→ 5.5.1 ■ 4 [Controller Setting]

### (2) Setting the channels with the parameter reflection function of MELSOFT Navigator

The system configuration of MELSOFT Navigator can be reflected to the project of GT Designer3 using the parameter function of MELSOFT Navigator.

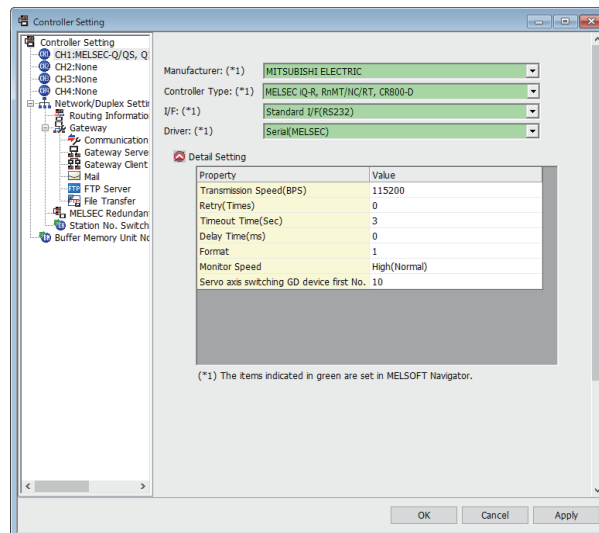

For details of the parameter functions of MELSOFT Navigator, refer to the following.

→ Help of MELSOFT Navigator

#### (a) Items to be reflected from MELSOFT Navigator

The settings of the items in green cells are reflected from MELSOFT Navigator to the GOT project.

Set these items on MELSOFT Navigator.

#### (b) Connection with the devices which iQ Works does not support

Set [Set with GT Designer3] for the channel used for the connection with the devices which iQ Works does not support in [Input Detailed Configuration Information] of MELSOFT Navigator.

After the setting, set the communication interface in [Controller Setting] of GT Designer3.

#### (c) Permitting the editing of the items reflected from MELSOFT Navigator with GT Designer3

By performing the following setting, the items reflected from MELSOFT Navigator can be edited with GT Designer3.

**Step 1** Select [Tools] → [Option] from the menu to display the [Option] dialog.

**Step 2** Display the [iQ Works] tab.

**Step 3** Select [Enable an editing of parameters set in MELSOFT Navigator].

If the items reflected from MELSOFT Navigator are edited, it makes the system configurations of the projects between GT Designer3 and MELSOFT Navigator mismatched.

Because of this mismatch, the interaction function with MELSOFT Navigator is disabled.

In this case, match the parameter setting of those projects using the parameter verification function before using the interaction function.

### 3 Precautions

#### (1) Changing the channel after the device setting

Do not change the channel to an unused one in the controller setting after the device setting.

If the channel is changed to an unused one, the device of the unused channel must be set again.

#### (2) Setting the same channel number to access multiple networks

When you set the same channel number and communication driver to access two networks, if a communication timeout occurs in one network, the timeout also occurs in the other network.

To avoid a communication timeout from occurring in both networks, set a different channel number to access each network.

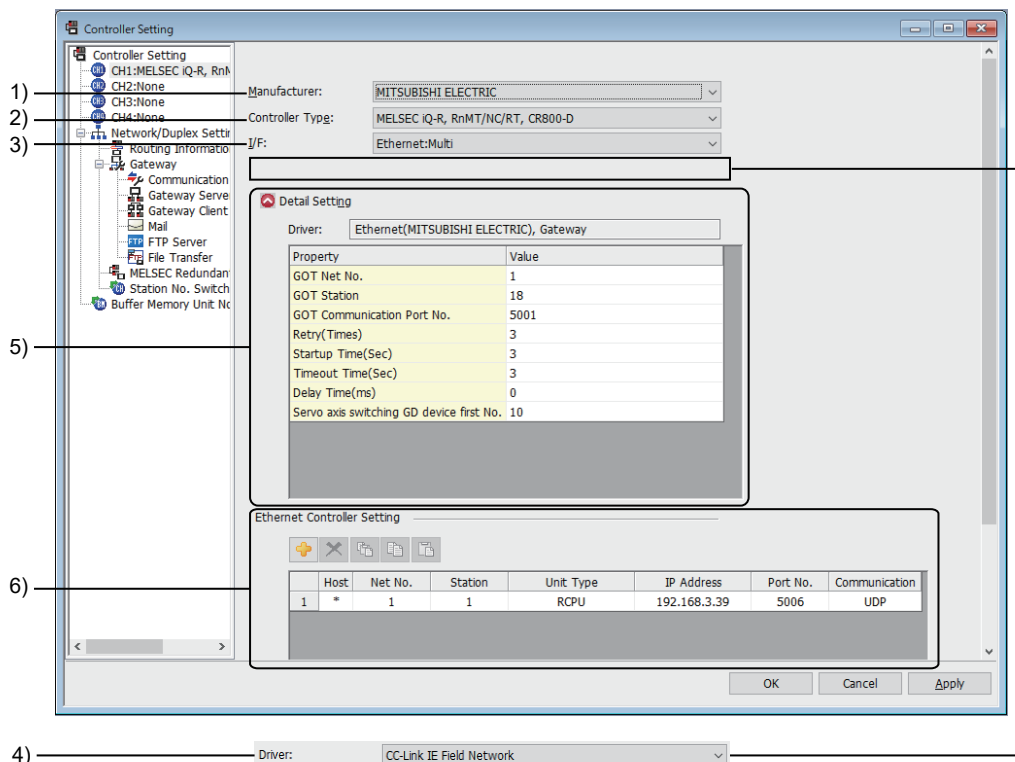

### 4 [Controller Setting]

The settings in this window depend on the conditions, such as the controller model, communication interface, and communication driver used.

For the details of the settings, refer to the following.

⇒ GOT2000 Series Connection Manual for a controller used

#### 1) [Manufacturer]

Select the manufacturer of the controller connected to the GOT.

#### 2) [Controller Type]

Select the model of the controller connected to the GOT.

⇒ 12.2.1 Correspondence between the setting of [Controller Type] and the controller used

#### 3) [I/F]

Select the communication interface of the GOT.

The selectable communication interfaces depend on the model of the GOT, controller, and connection type.

For the applicable communication interface for each GOT model, refer to the following.

⇒ 5.5.1 ■ 1 Specifications of channels

#### 4) [Driver]

Not available to GT SoftGOT2000.

This item appears when communication drivers are selectable according to the settings of [Controller Type] and [I/F].

Select the communication driver to be written to the GOT.

Refer to the following to configure the setting.

→GOT2000 Series Connection Manual for a controller used

#### 5) [Detail Setting]

Set the connection details, such as the baud rate of the communication driver and the data length.

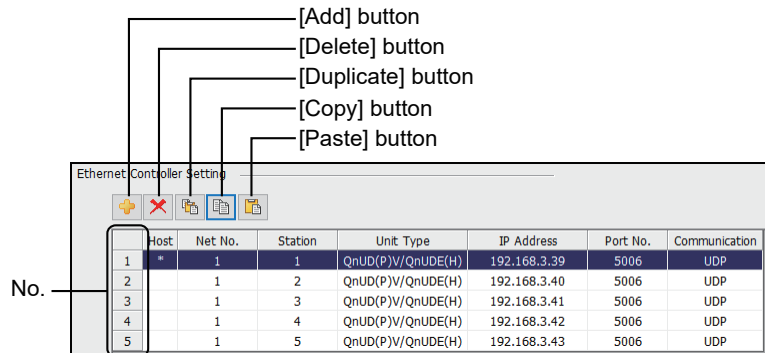

To display or hide the setting items, click the button at the left of [Detail Setting].

#### 6) [Ethernet Controller Setting]

The list of the Ethernet setting on the controller registered in the project.

This list is displayed only for the Ethernet connection.

Each setting can be edited in the list.

Item	Description
[Add] button	Adds the Ethernet setting below the bottom row of the list.
[Delete] button	Deletes a selected Ethernet setting.
[Duplicate] button	Duplicates a selected Ethernet setting below the bottom row of the list.
[Copy] button	Copies a selected Ethernet setting.
[Paste] button	Pastes a copied Ethernet setting.
No.	<p>Ethernet setting No.</p> <p>Clicking an Ethernet setting No. selects the row.</p> <p>To select multiple rows, perform one of the following operations.</p> <p>Hold down the [Ctrl] key and click a setting No. To deselect a selected row, perform the same operation.</p> <p>Select the first row in the range, hold down the [Shift] key, and click a setting No. to select the last row in the range.</p> <p>For GT21, configure the Ethernet settings in the range from [1] to [4].</p> <p>Ethernet settings of [5] and later are invalid for GT21.</p>
[Host]	<p>Selects a host station.</p> <p>Asterisk (*) is displayed with the selected Ethernet setting.</p> <p>For GT21, set the host station number in the range from [1] to [4].</p>
[Net No.]	Set the network No. of the destination Ethernet module.
[Station]	Select the station number of the destination Ethernet module.
[Unit Type]	Select the type of the destination Ethernet module.
[IP Address]	<p>Set the IP address of the controller.</p> <p>The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].</p>
[Port No.]	Set the port No. of the destination Ethernet module.
[FETCH Port No.]	<p>Set the FETCH port No. of the destination Ethernet module.</p> <p>This item is displayed only when [Ethernet(SIEMENS S7), Gateway] is selected for [Driver].</p>
[WRITE Port No.]	<p>Set the WRITE port No. of the destination Ethernet module.</p> <p>This item is displayed only when [Ethernet(SIEMENS S7), Gateway] is selected for [Driver].</p>

Item	Description
[Connection No./Rack No.]	Set the connection No. or rack No. of the destination Ethernet module. This item is displayed only when [Ethernet(SIEMENS OP), Gateway] is selected for [Driver].
[Module Position/Slot No.]	Set the module position or slot No. of the destination Ethernet module. This item is displayed only when [Ethernet(SIEMENS OP), Gateway] is selected for [Driver].
[Communication]	Displays the communication protocol corresponding to the setting of [Port No.]. Select a communication protocol. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [UDP]</li> <li>• [TCP]</li> </ul>
[Connection]	Set the message communication type according to that of the connected controller. This item is displayed only when [EtherNet/IP(AB Tag), Gateway] is selected for [Driver]. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [UCMM]</li> <li>• [Class3]</li> </ul>
[Slot No.]	Set the slot No. of the PLC to which the Ethernet module is installed. This item is displayed only when one of the following items is selected for [Driver]. <ul style="list-style-type: none"> <li>• [EtherNet/IP(AB), Gateway]</li> <li>• [EtherNet/IP(AB Tag), Gateway]</li> </ul>

## ■ 5 [GOT (Extend Computer)] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In this dialog, set the interface for connecting multiple GOTs by the microcomputer connection (serial).  
To display this dialog, select [Common] → [Peripheral Setting] → [GOT (Extended Computer)] from the menu.

### 1) [Destination I/F]

Select the interface for the connection to the GOT (Extended Computer).

The following shows the setting range.

For GT2107-W, GT2105-Q, and GT2104-R

- [Standard I/F(RS422/485)]
- [Standard I/F(RS232)]
- [Not connected]

For GT2104-P and GT2103-P

- [Standard I/F(RS422/485/232)(Side)]
- [Standard I/F(RS232(Back))]
- [Not connected]

### 2) [Detail Setting]

Set the details for the connection to the GOT (Extended Computer).

## ■ 6 [Controller Type List] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The window displayed to confirm the controllers of each channel.

Select [View] → [Docking Window] → [Controller Type List] from the menu to display the window.

## 5.5.2 Setting the routing information

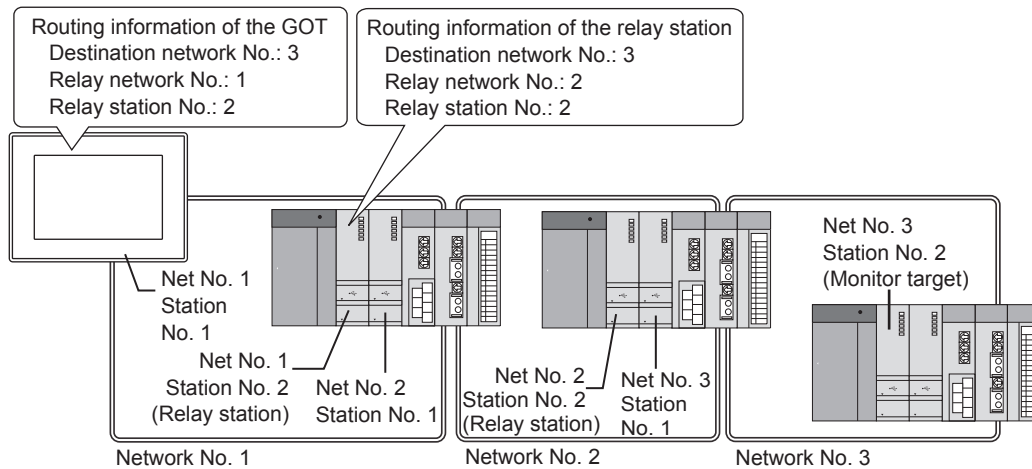

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the routing information
  - 2 How to set the routing information
  - 3 [Routing Information]

Use the routing information to specify the destination network and the network to be routed when monitoring the controller on a different network with either of the following connection types.

- Ethernet connection
- MELSECNET/H connection
- CC-Link IE Controller Network connection
- CC-Link IE Field Network connection
- SLMP connection

If the communication is performed within the host station, the routing information setting is not required.

### ■ 1 Specifications of the routing information

GT27 GT25 GT23 GT21 SoftGOT2000 GS

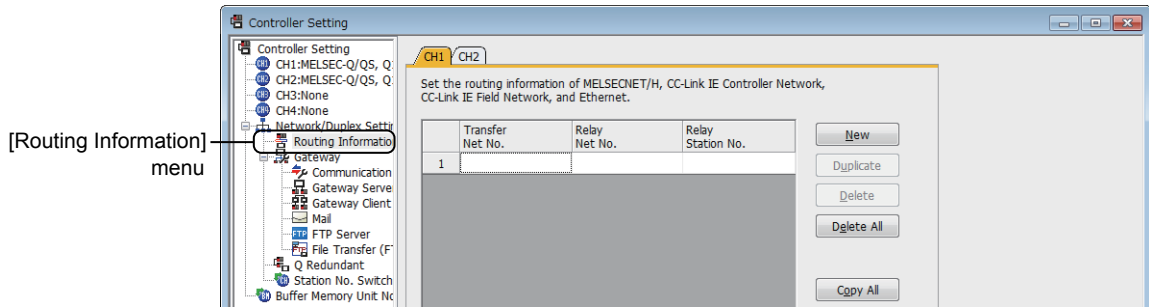

For the details of the routing parameter, refer to the following.

- Ethernet connection
  - ➔ MELSEC-Q/L Ethernet Interface Module User's Manual (Application)
- MELSECNET/H connection
  - ➔ Q Corresponding MELSECNET/H Network System Reference Manual (PLC to PLC network)
- CC-Link IE Controller Network connection
  - ➔ MELSEC-Q CC-Link IE Controller Network Reference Manual
- CC-Link IE Field Network connection
  - ➔ MELSEC-Q CC-Link IE Field Network Master/Local Module User's Manual
- SLMP connection
  - ➔ Manual of the SLMP-compatible device used

### ■ 2 How to set the routing information

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears.  
Select the [Routing Information] menu from the controller setting tree.

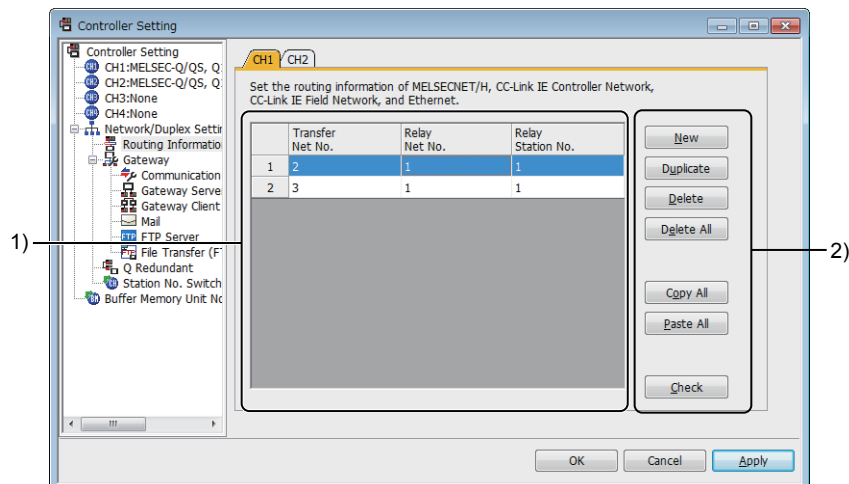

- Step 3** Configure the routing information setting for each channel.  
Select the tab of the channel for which the routing information is set.

- After selecting the tab, set the routing information.  
→ 5.5.2 ■ 3 [Routing Information]

### ■ 3 [Routing Information]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) The list of the routing information setting

The list of the routing information setting registered in the project.  
Each setting can be edited in the list.

Item	Description
[Transfer Net No.]	Set the network No. of the destination network. The setting range is [1] to [239].
[Relay Net No.]	Set the network No. of the relay network. The setting range is [1] to [239].
[Relay Station No.]	Set the station number of the relay station. The setting range is [0] to [120].

#### 2) Buttons for the routing information setting

Use the following buttons to add, copy, and delete the routing information setting in the list.

Item	Description
[New]	Adds the routing information setting below the bottom row of the list.
[Duplicate]	Duplicates a selected routing information setting below the bottom row of the list.
[Delete]	Deletes a selected routing information setting.
[Delete All]	Deletes all the routing information settings.
[Copy All]	Copies all the routing information settings in the list of the selected tab. Use this button to utilize the settings for other channels.

Item	Description
[Paste All]	Pastes the copied settings to the list. The existing settings are overwritten.
[Check]	Checks if the routing information setting has any error. The following show the points to be checked. <ul style="list-style-type: none"> <li>• Non-entered items</li> <li>• Setting range</li> <li>• Duplication of the destination network numbers</li> </ul>

### 5.5.3 Configuring the setting of the MELSEC redundant function

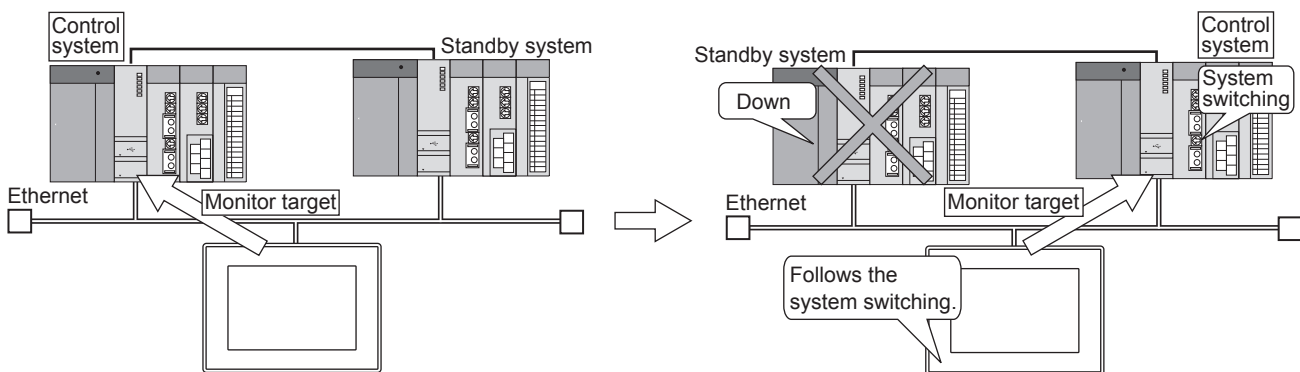

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 How to set the MELSEC redundant function
  - 2 Precautions
  - 3 [MELSEC Redundant]

You can monitor the redundant system on the GOT by specifying the control system and the standby system. If the redundant system is the target station, specifying the control system as the target CPU enables consecutive monitoring even when the system is switched from the control system to the standby system.

For the details of the redundant system, refer to the following.

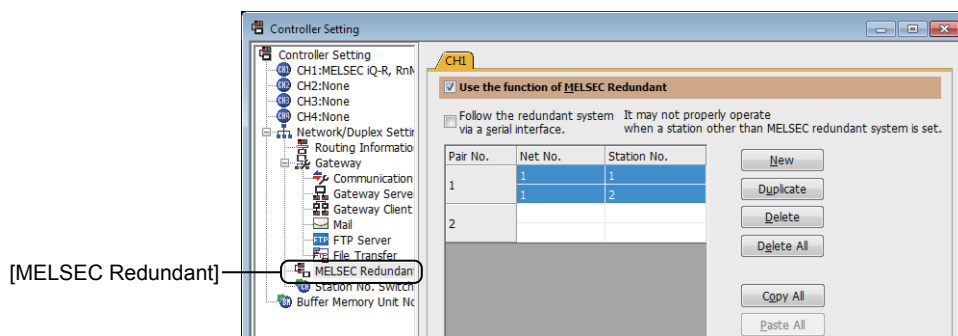

➔ GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version 1

#### ■ 1 How to set the MELSEC redundant function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Common] → [Controller Setting] from the menu.
- Step 2** The [Controller Setting] window appears. Select [MELSEC Redundant] from the setting tree.

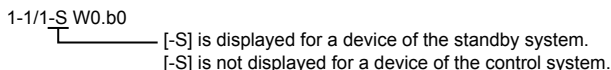

- Step 3** Configure the MELSEC redundant setting by channel. Select the target channel tab, and configure the MELSEC redundant setting. ➔ 5.5.3 ■ 3 [MELSEC Redundant]

**(1) Display of the standby system device**

The following shows the display example of a device of the standby system.

To delete [-S], use the [Network Batch Edit] dialog or other methods.

→ 11.8.4 ■ 5 [Network Batch Edit] dialog

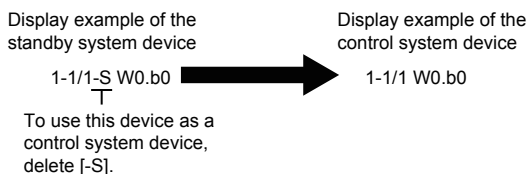

**■ 2 Precautions**

**(1) Canceling the specification of a standby system device and the redundant setting**

When you specify a device of the standby system, even if you clear [Use the function of MELSEC Redundant], the specified device is still marked with [-S] that identifies the standby system.

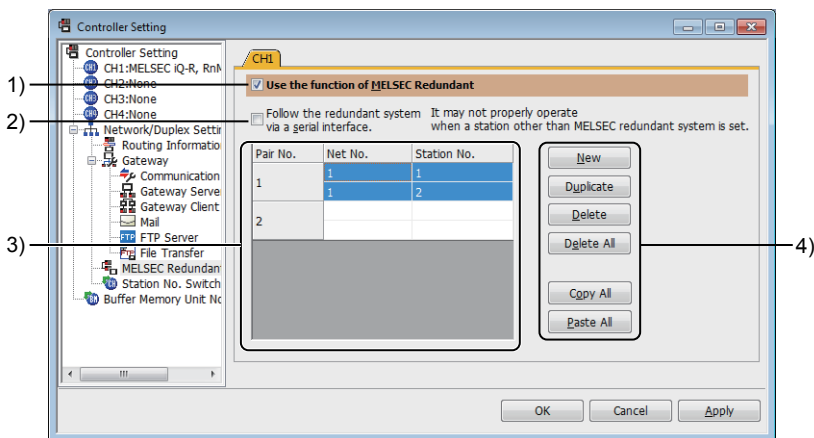

When you utilize such a device setting, change the device as shown below.

To delete [-S], use the [Network Batch Edit] dialog or other methods.

→ 11.8.4 ■ 5 [Network Batch Edit] dialog

**■ 3 [MELSEC Redundant]**

**1) [Use the function of MELSEC Redundant]**

Enables the MELSEC redundant function.  
Select this item to set each item in [MELSEC Redundant].

**2) [Follow the redundant system via a serial interface.]**

Automatically switches the monitoring target upon system switching if the redundant system is connected to the GOT by the serial connection.

**3) MELSEC redundant setting list**

Lists the MELSEC redundant settings registered in the project.  
Each setting can be edited in the list.

Item	Description
[Pair No.]	Pair number of the MELSEC redundant setting The numbers are assigned automatically starting from 1.
[Net No.]	Set the network Nos. for each pair No. The upper row is for the setting of the first redundant CPU. The setting range is [1] to [239]. The lower row is for the setting of the second redundant CPU. The network No. of the second redundant CPU is the same as the one for the first CPU.

Item	Description
[Station No.]	Set the station numbers of the redundant CPUs for each pair No. The upper row is for the setting of the first redundant CPU. The setting range is [0] to [120]. The lower row is for the setting of the second redundant CPU. The setting range is [0] to [120].

\*1 Setting [Pair No.] is not required to monitor the redundant system that is connected to the GOT by the CC-Link connection (intelligent device station).

#### 4) Operation buttons for the MELSEC redundant setting list

Add, copy, and delete a MELSEC redundant setting in the list.

Item	Description
[New]	Adds the pair No. setting below the bottom row in the list.
[Duplicate]	Duplicates a selected pair No. setting below the bottom row in the list.
[Delete]	Deletes a selected pair No. setting.
[Delete All]	Deletes all the pair No. settings.
[Copy All]	Copies all the pair No. settings in the list of the selected tab. Use this button to utilize the settings for other channels.
[Paste All]	Pastes the copied settings to the list. The existing settings are overwritten.

### 5.5.4 Configuring the settings for switching the target station No. for monitoring

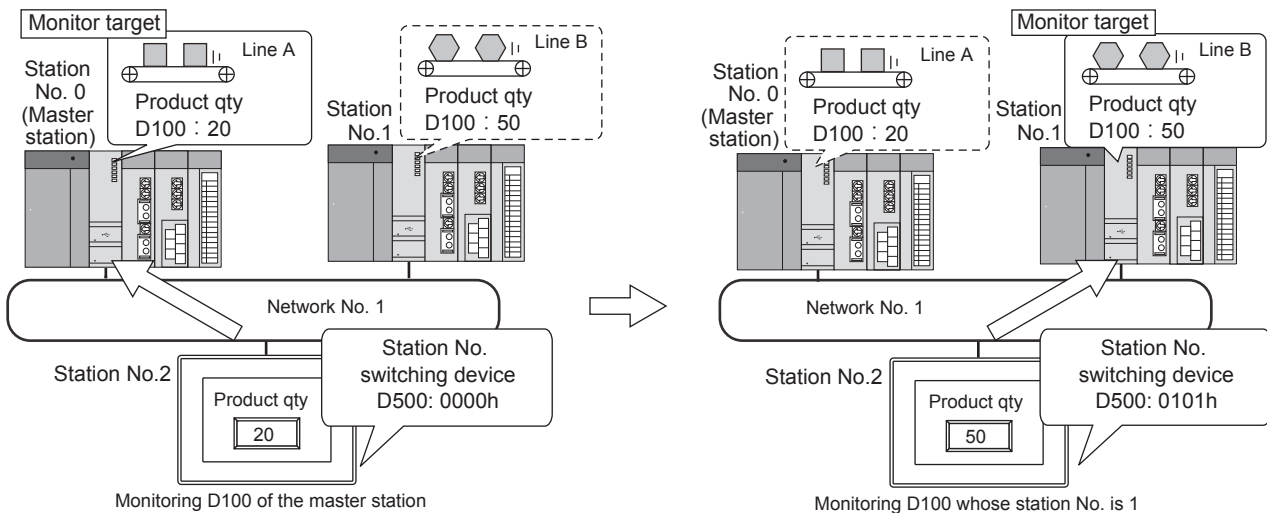

- ■ 1 Specifications of the station No. switching setting
- 2 How to use the station No. switching setting
- 3 [Station No. Switching]
- 4 Relevant settings

The station numbers of the monitor target devices can be switched by using the station No. switching. Multiple devices can be monitored through a single monitor screen in the system to which the devices executing the same control to the network are connected.

(You do not have to create the monitor screens as many as the number of devices.)

Since the number of objects to be set can be reduced, you can save the built-in memory of the GOT.

The station No. switching is available for the stations that can be monitored by the GOT.

For the stations that can be monitored by the GOT (accessible range), refer to the following.

- GOT2000 Series Connection Manual (Mitsubishi Products) for GT Works3 Version1

## 1 Specifications of the station No. switching setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Controllers applicable for the station No. switching

The following shows the controllers applicable for the station No. switching.

For the connection type that one controller is connected to one GOT, the station No. switching is not available even though the following devices are used.

#### (a) Mitsubishi products

Type	Controller
PLC, CNC, C Controller module, Motion controller, and robot controller	MELSEC-Q, MELSEC-QS, MELSEC-L, MELSEC-QnA, MELSEC-A, MELSEC-FX (Ethernet connection only), C Controller module, motion controller CPU (Q series), motion controller CPU (A series), CNC C70, and robot controller CRnD-700
Inverter	FR
Servo amplifier	MELSERVO

#### (b) Non-Mitsubishi controllers

Type	Controller	
PLC	Serial connection	FUJI PLC, JTEKT PLC, ALLEN-BRADLEY PLC, LS IS PLC, and SIEMENS PLC
	Ethernet connection	OMRON PLC, TOSHIBA PLC, YASKAWA PLC, YOKOGAWA PLC ALLEN-BRADLEY PLC, and SIEMENS PLC
Robot controller	IAI robot controller	
Servo amplifier	PANASONIC servo amplifier	
Temperature controller	AZBIL (formerly Yamatake Corporation) control equipment, OMRON temperature controller, SHINKO indicating controller, CHINO controller, FUJI temperature controller, YOKOGAWA temperature controller, and RKC temperature controller	
Other controllers	MODBUS controller	

### (2) Functions supporting the station No. switching

### (3) The channels compatible with the station No. switching

The station No. switching can be set for all the channels (CH1 to CH4).

For the setting procedure, refer to the following.

⇒5.5.4 ■ 3 [Station No. Switching]

### (4) Applicable range of the station No. switching

Select whether to use the station No. switching in the whole project or for each screen.

If you use the station No. switching in the whole project, set the station No. switching device to be used.

If you select whether to use the station No. switching or not for each screen, set the station No. switching device for each screen type.

After that, set whether to use the station No. switching or not for every screen.

For each setting procedure, refer to the following.

⇒5.5.4 ■ 3 [Station No. Switching]

2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

### (5) Stored value of the station No. switching device

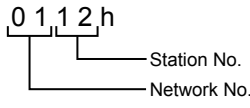

Use a word device whose data type is the unsigned BIN16 as the station No. switching device.

When the station No. switching is executed, the value to be stored in the station No. switching device differs depending on the system configuration of the monitor target.

#### (a) Data link system (MELSECNET/B, (II)), CC-Link system

Switching target	Storage value (hexadecimal)
Master station	0000h
Local station (1 to 64)	0001h to 0040h
Station No. set for each object (The monitor target which is the same as the one set if the station No. switching has not been set is used.)	00FEh
Host station (connection target)	00FFh

(b) **Network system (MELSECNET/H, MELSECNET/10), Ethernet system, CC-Link IE Controller Network system, CC-Link IE Field Network system**

Switching target	Storage value (hexadecimal)
Network No. (1 to 255)	The following shows the relation between the switching targets and the storage values. <ul style="list-style-type: none"> <li>• Upper 8 bits: Network No.</li> <li>• Lower 8bits: Station number</li> </ul> Example) Network No.: 1, PLC station No.: 18 
PLC station No. (1 to 255)	
Station No. set for each object (The monitor target which is the same as the one set if the station No. switching has not been set is used.)	00FEh
Host station (connection target)	00FFh

(6) **Using an internal device (GD) as the station No. switching device**

The GOT starts monitoring the module connected to the station No. 0 of the network No. 0 from right after the GOT is powered on until the value of the station No. switching device (GD) is set.

In this case, a system alarm due to the communication timeout may occur depending on the connection type.

To avoid the occurrence of the system alarm, create an initially-displayed screen with no object and set the station No. switching device (GD) and its value on the screen.

(7) **Touch switches, trigger action function, and script function operating in the destination station**

To execute the actions of touch switches, the trigger action function, and the script function by using the devices of the destination station after the station No. switching, select [Include touch switch action, trigger action (screen), and script (screen) for Station No. Switching].

If [Include touch switch action, trigger action (screen), and script (screen) for Station No. Switching] is not selected, each object operates as follows.

Object	Target device	Monitor target
Touch switch	The device to specify the display status of the ON/OFF figure	Device of the destination station after the station No. switching
	The device to specify a comment of the comment text	
	The device of the monitor target	The device whose station No. was set in GT Designer3
Trigger action (screen)	Trigger device	The device whose station No. has been switched
	Actions for when the condition is satisfied	The device whose station No. was set in GT Designer3
Script (screen)	Screen script, object script	The device whose station No. has been switched
	Script function (monitor device)	
	Script function (write device)	The device whose station No. was set in GT Designer3

(8) **Redrawing the screen after the station No. switching**

The screen objects are redrawn immediately after the station No. switching.

Thus, the display speed of the object may become slow temporarily.

(9) **Switching the station No. during the input operation**

When using the numerical input or text input, switch the station number after the completion of the input operation.

If the station No. is switched during the input operation, the data may not be written to the monitored device correctly. To write the station No. from the controller to the station No. switching device, use the Key Window Output signal (System signal 2-1.b11) after the completion of the input operation.

The Key Window Output signal is on while the key window is displayed.

(10) **Station No. switching while a dialog window is displayed**

The dialog window operates according to the value of the station No. switching device which is set when the dialog window is displayed.

If the value of station No. switching device is changed while the dialog window is displayed, the display and operation of the object on the dialog window are not changed.

(The devices of the objects are the same as the device before the station No. switching.)

## (11) Station No. switching for each object

The functions for which the station No. switching cannot be executed operate with the device whose station number is set by each function.

If the objects which are not compatible with the station No. switching are placed on the same screen where the objects compatible with the station No. switching are placed, note that the different station numbers are monitored for each object.

## ■ 2 How to use the station No. switching setting

### (1) How to switch the station numbers

Switch the station numbers with either of the following methods.

- Station No. switching with the station No. switching device

By storing the value which indicates the switching target in the station No. switching device, the station No. switching is executed.

For the storage values of the station No. switching devices, refer to the following.

⇒5.5.4 ■ 1 Specifications of the station No. switching setting

- Station No. switching with touch switches (Change Station No. Switch)

Touching the touch switch for which the station No. switching is set executes the station No. switching.

In this case, the setting of the station No. switching device is required.

For the setting of touch switches, refer to the following.

⇒8.2.8 [Change Station No. Switch] dialog

### (2) Setting procedure

- Step 1** When executing the station No. switching for each screen, select [Switch Station No.] in the property of the each screen for which the station No switching is executed.

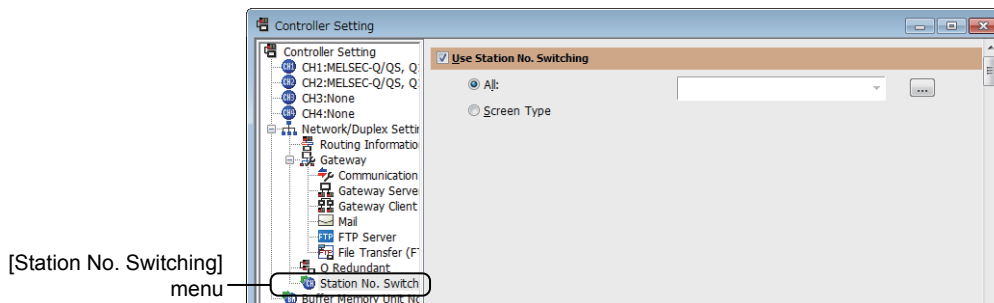

⇒2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

- Step 2** Select [Common] → [Controller Setting] from the menu.

- Step 3** The [Controller Setting] window appears.

Select the [Station No. Switching] menu from the controller setting tree.

- Step 4** Select [Use station No. Switching].

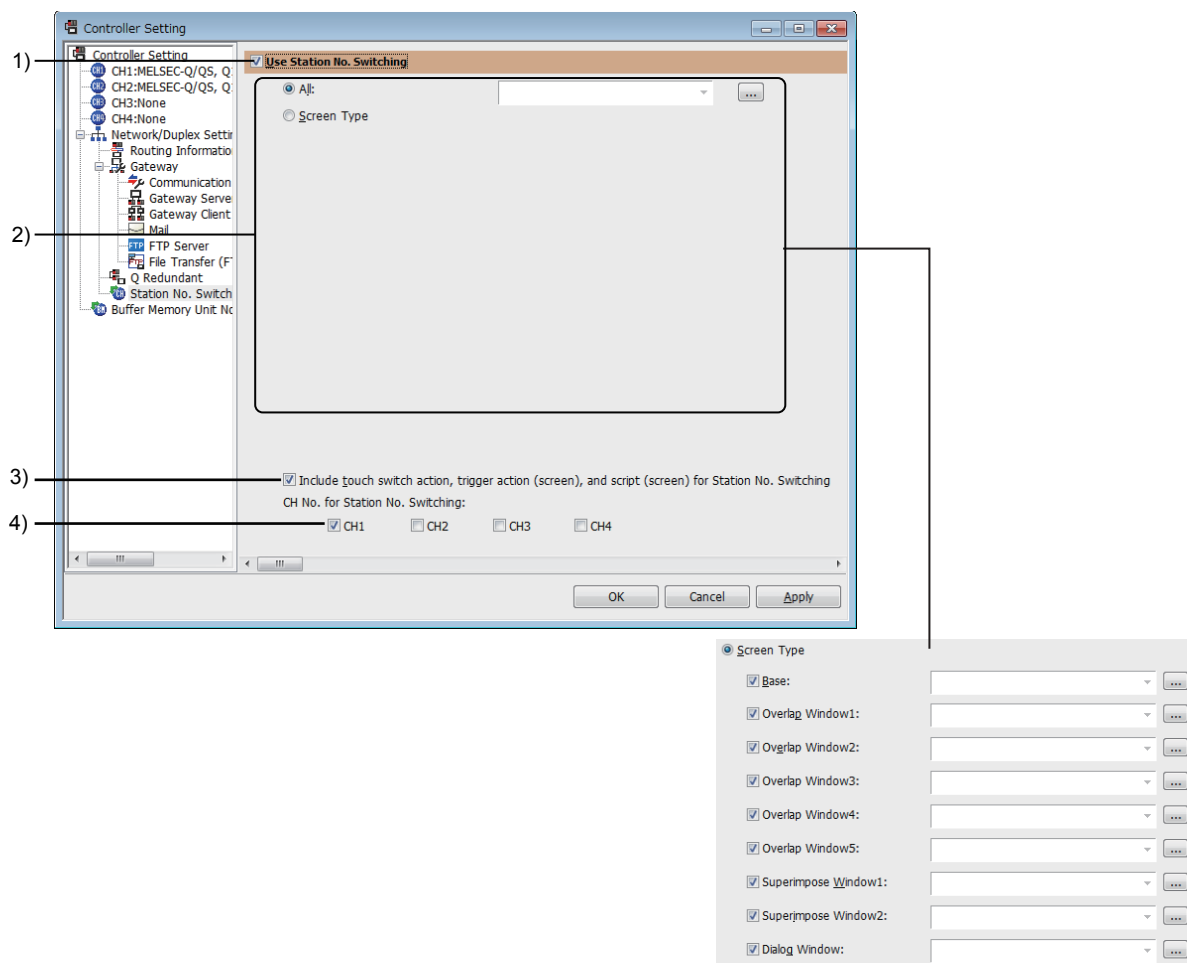

After selecting [Use station No. Switching], configure the settings of the station No. switching.

⇒5.5.4 ■ 3 [Station No. Switching]

### ■ 3 [Station No. Switching]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [All]

The station No. switching is executed to the whole project.

After selecting [All], set the station No. switching device.

Word devices whose data types are unsigned BIN 16 can be used as the station No. switching devices.

#### 2) [Screen Type]

The station No. switching is applied for each screen type.

After the selection of [Screen Type], select the screen type to be switched the station No., and set the station No. switching device.

Word devices whose data types are unsigned BIN 16 can be used as the station No. switching devices.

#### 3) [Include touch switch action, trigger action (screen), and script (screen) for Station No. Switching]

Sets the devices of touch switches, trigger actions (per screen), and screen scripts as the target of station No. switching.

For details, refer to the following.

→ 5.5.4 ■ 1 (7) Touch switches, trigger action function, and script function operating in the destination station

#### 4) [CH No. for Station No. Switching]

Selects the channel No. for which the station No. switching is executed.

## ■ 4 Relevant settings

Set the relevant settings other than the specific settings for the station No. switching function as required.  
The following shows the functions that are available by the relevant settings.

### (1) Property of screens

The property can be set for each screen.

Select the screen editor on which the key window is to be set and select [Screen] → [Display Properties] from the menu to display the [Screen Property] dialog.

⇒ 2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

Function	Setting item
Setting whether to execute the station No. switching or not for each screen	Select [Switch Station No.] from in the [Basic] tab

## 5.5.5 Configuring the settings for switching the buffer memory unit No. of the monitoring target

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the buffer memory unit No. switching
  - 2 How to use the buffer memory unit No. switching
  - 3 Precautions
  - 4 [Buffer Memory Unit No. Switching]
  - 5 Relevant settings

The GOT switches the buffer memory unit No. of the monitoring target by using the buffer memory unit No. switching device.

For systems in which multiple machines performing the same control are connected to a network, the number of monitor screens is unnecessary to match with that of machines. You can monitor the multiple machines on one monitor screen by switching the buffer memory unit No.

Since the number of objects to be set can be reduced, you can save the built-in memory space of the GOT.

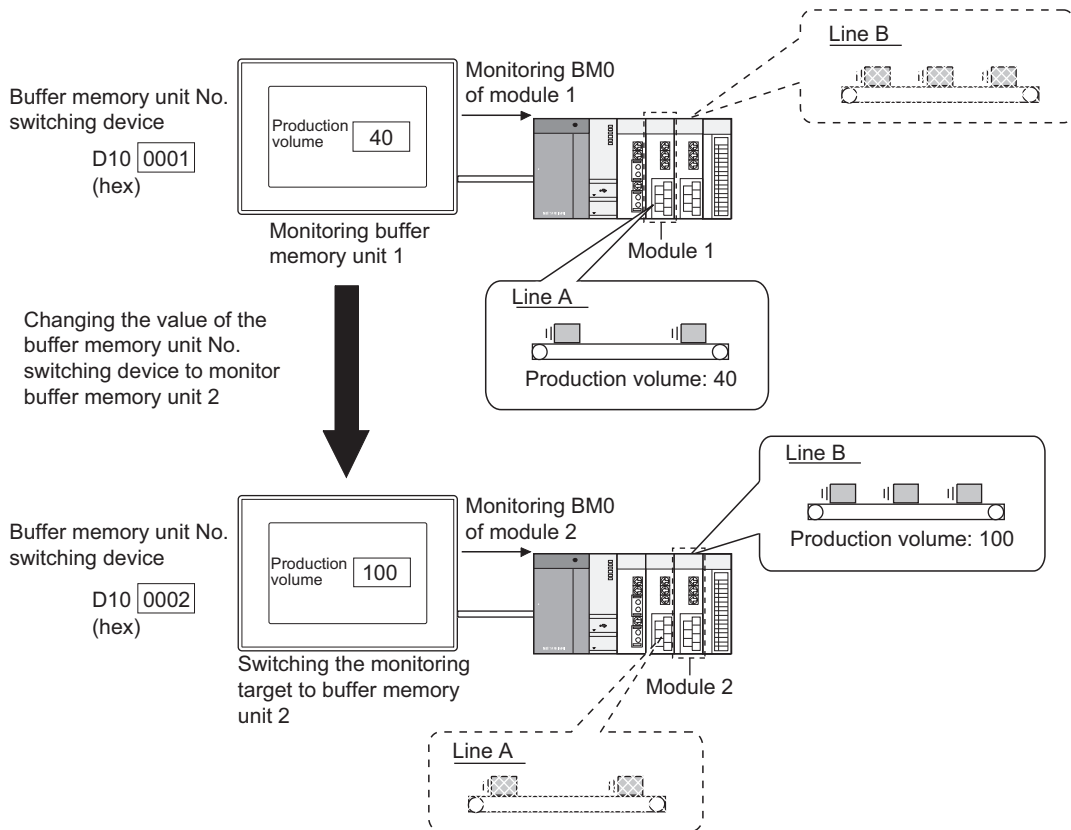

You can perform the buffer memory unit No. switching to the buffer memory that can be monitored by the GOT.

For the buffer memory that can be monitored by the GOT (accessible range), refer to the following.

- ➔ 12.2 Device Range and Settings of Each Controller

The GOT monitors the machine corresponding to the value stored in the buffer memory unit No. switching device.

Upon the buffer memory unit No. switching, the GOT redraws displayed figures and objects.

### ■ 1 Specifications of the buffer memory unit No. switching

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Controllers supporting the buffer memory unit No. switching

The following shows the controllers supporting the buffer memory unit No. switching.

Type	Controller
PLC, CNC, C Controller module, motion controller, robot controller, MELIPC	MELSEC iQ-R series, MELSEC iQ-F, MELSEC-Q, MELSEC-QS, MELSEC-L, MELSEC-QnA, MELSEC-A, C Controller module, motion controller CPU (MELSEC iQ-R series), motion controller CPU (Q series), motion controller CPU (A series), CNC C70, robot controller CRnD-700, MELIPC

## (2) Functions supporting the buffer memory unit No. switching

○ : Supported , ×: Unsupported

System information	x	-

### (3) Applicable range of the buffer memory unit No. switching

You can select whether to use the buffer memory unit No. switching in the whole project or for each screen.

To use the buffer memory unit No. switching in the whole project, set the buffer memory unit No. switching device to be shared.

To select whether to use the buffer memory unit No. switching for each screen, set the buffer memory unit No. switching device by screen type.

Additionally, set whether to use the buffer memory unit No. switching for every screen in the screen property.

For each setting procedure, refer to the following.

⇒5.5.5 ■ 4 [Buffer Memory Unit No. Switching]

2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

### (4) Data type of the buffer memory unit No. switching device

Use a word device whose data type is unsigned BIN16 as the buffer memory unit No. switching device.

### (5) Judgment of communication status

When you attempt to switch the buffer memory unit No. to a nonexistent one, the switching is not executed and the buffer memory unit No. switching device stores -1.

This enables you to judge the communication status (normal or abnormal) of the buffer memory unit.

When you monitor a buffer memory that always stores a value other than -1, if the buffer memory stores -1, the communication status is abnormal.

When a value other than -1 is stored, the communication status is normal.

Example)

For G0 (basic parameter 1) of QD74MH8, the device value ranges from 0 to 3. If G0 stores -1, the communication status is abnormal.

## ■ 2 How to use the buffer memory unit No. switching

### (1) How to switch buffer memory unit numbers

The buffer memory unit No. switching is executed by storing a value, which indicates the switching destination, in the buffer memory unit No. switching device.

The buffer memory unit No. switching device stores a value whose data type is unsigned BIN16.

### (2) Setting procedure

**Step 1** To execute the buffer memory unit No. switching by screen, select [Switch buffer memory unit No.] in the property of each screen on which the buffer memory unit No. switching is executed.

⇒2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

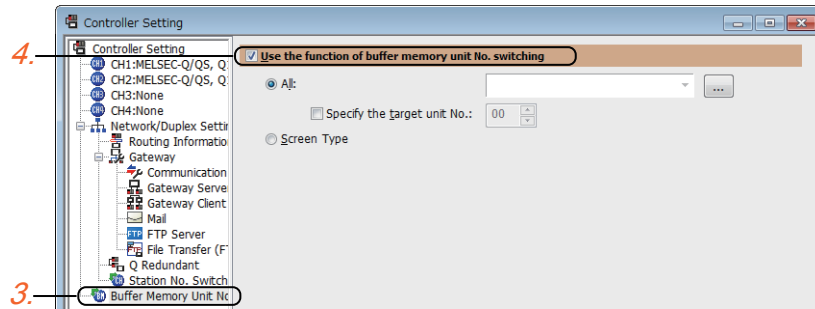

**Step 2** Select [Common] → [Controller Setting] from the menu.

**Step 3** In the [Controller Setting] window, select the [Buffer Memory Unit No. Switching] menu from the controller setting tree.

**Step 4** Select [Use the function of buffer memory unit No. switching].

Then, configure the settings for the buffer memory unit No. switching.

⇒5.5.5 ■ 4 [Buffer Memory Unit No. Switching]

### 3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Buffer memory unit No. switching in dialog windows

For dialog windows, the GOT obtains the value stored in the buffer memory unit No. switching device when a dialog window is opened.

While a user-created dialog window is being displayed, even if the value of the buffer memory unit No. switching device is changed, the buffer memory unit No. switching is not executed.

#### (2) Operation when the buffer memory unit No. switching is disabled

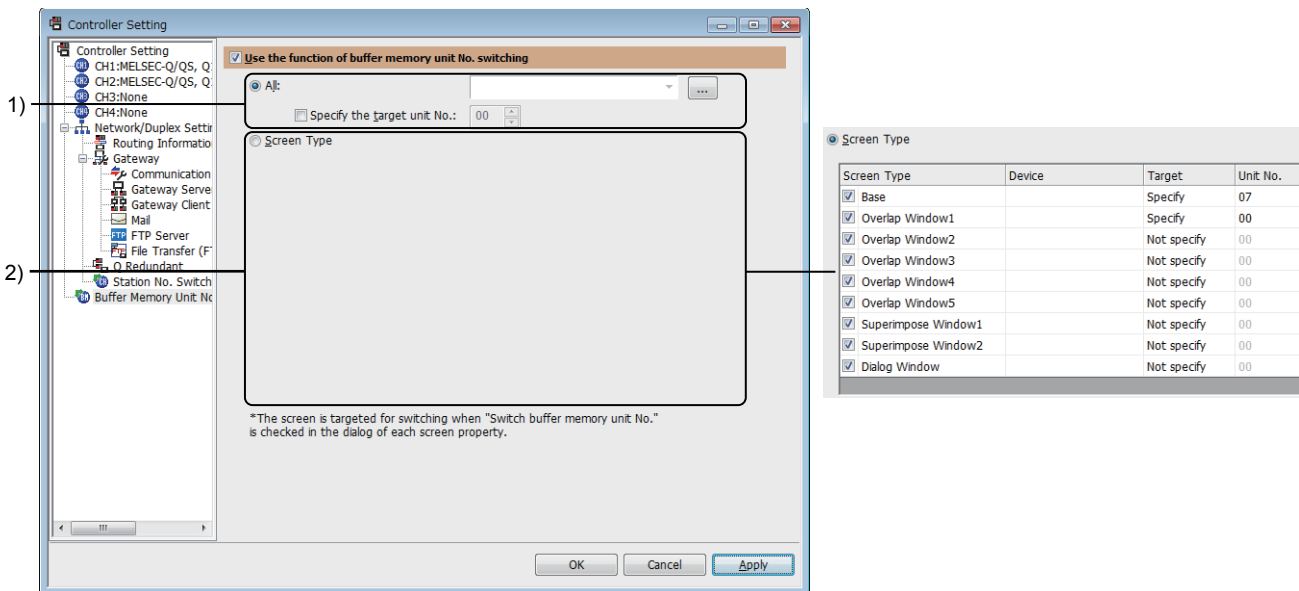

In the following cases, the GOT cannot execute the buffer memory unit No. switching and monitors the buffer memory unit No. set in the device setting of each object.

- The value of the buffer memory unit No. switching device is outside the range.
- The GOT cannot monitor the buffer memory unit to be switched to due to communication errors, such as a cable disconnection.
- The buffer memory unit No. to be switched to is outside a range of 0x00 to 0xFF.

After the GOT startup, if the GOT cannot monitor the buffer memory unit to be switched to due to communication errors, such as a cable disconnection, the GOT switches back to monitor the buffer memory unit last monitored.

### 4 [Buffer Memory Unit No. Switching]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [All]

Enables the buffer memory unit No. switching in the whole project.

Select this item, and then set the buffer memory unit No. switching device.

Word devices whose data types are unsigned BIN16 are usable.

Item	Description
[Specify the target unit No.]	Set the buffer memory unit No. to be switched.

## 2) [Screen Type]

Enables the buffer memory unit No. switching by screen type.

Select this item, select the type of screens in which the buffer memory unit No. switching is performed, and then set the buffer memory unit No. switching device and others.

Item	Description
[Screen Type]	Select a screen in which the buffer memory unit No. switching is performed.
[Device]	Set the buffer memory unit No. switching device. Word devices whose data types are unsigned BIN16 are usable.
[Target]	Set whether to specify the selected screen as the switching target. Select this item, and then set the buffer memory unit No. to be switched in [Unit No.].
[Unit No.]	Set the buffer memory unit No. to be switched.

## ■ 5 Relevant settings

Set the relevant settings other than the specific settings for the buffer memory unit No. switching function as required. The following shows the functions that are available by the relevant settings.

### (1) Property of screens

The property can be set for each screen.

Select the screen editor on which the key window is to be set and select [Screen] → [Display Properties] from the menu to display the [Screen Property] dialog.

→ 2.7.1 ■ 1 [Basic] tab

2.7.2 ■ 1 [Basic] tab

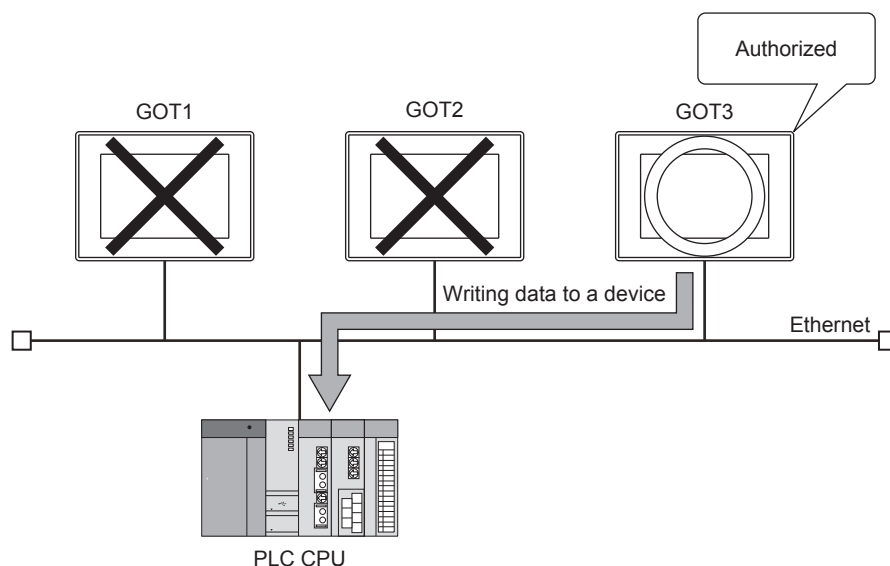

Function	Setting item
Setting whether to execute the buffer memory unit No. switching by screen	[Switch buffer memory unit No.] on the [Basic] tab

## 5.6 Setting the Interaction Function for Equipment on Ethernet ([GOT Network Interaction])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

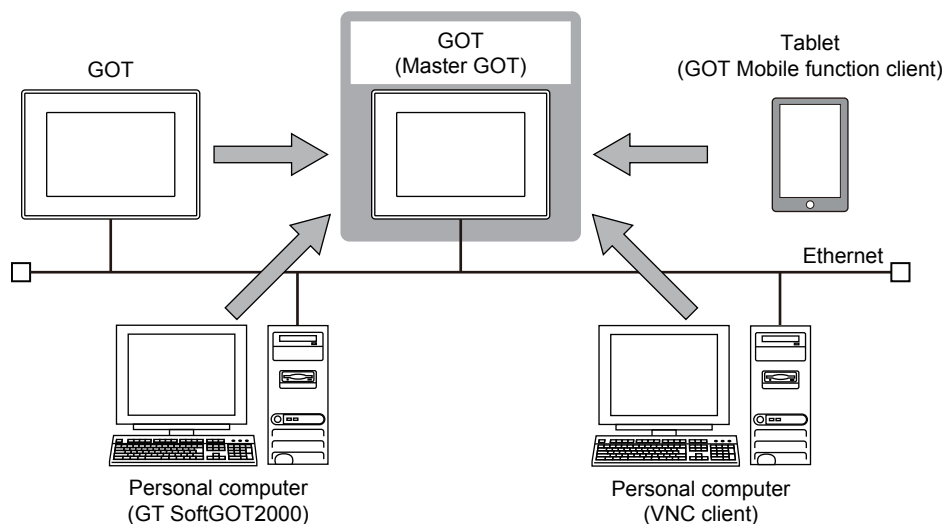

- 5.6.1 Specifications of the GOT network interaction function
- 5.6.2 How to use the GOT network interaction function
- 5.6.3 Precautions
- 5.6.4 [GOT Network Interaction] dialog

The GOT network interaction function controls the authorization (operational authority) among pieces of equipment on the same network to prevent simultaneous operations.

An authorization control group is formed consisting of such pieces of equipment. In the group, a GOT is specified as the master GOT to control the authorization.

The other pieces of equipment in the group communicate with the master GOT to obtain the authorization.

## 5.6.1 Specifications of the GOT network interaction function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Target equipment
  - 2 Authorization control scope
  - 3 Target screen
  - 4 Influences on other functions
  - 5 Required system application (extended function)

### ■ 1 Target equipment

The following shows the target equipment for the authorization control.

- GT27
- GT25
- GT23
- GT SoftGOT2000 (including when the SoftGOT-GOT link function is used)
- VNC client (VNC server function)
- Client (GOT Mobile function)

GT27 and GT25 models are settable as the master GOT.

You are recommended to set a maximum of 8 pieces of equipment including the master GOT in an authorization control group.

### ■ 2 Authorization control scope

You can enable the authorization control for pieces of equipment when the following requirements are satisfied.

- The pieces of equipment are on the same subnet.
- The same master GOT is specified for the pieces of equipment.

### ■ 3 Target screen

You can set whether the authorization is required to operate objects on a screen by screen basis.

The following shows the target screens for the authorization control.

- Base screen
- Window screen (when displayed as a superimpose window or overlap window)

- Mobile screen

When the authorization control is enabled in a screen, the applicable equipment needs the authorization to operate the objects on the screen.

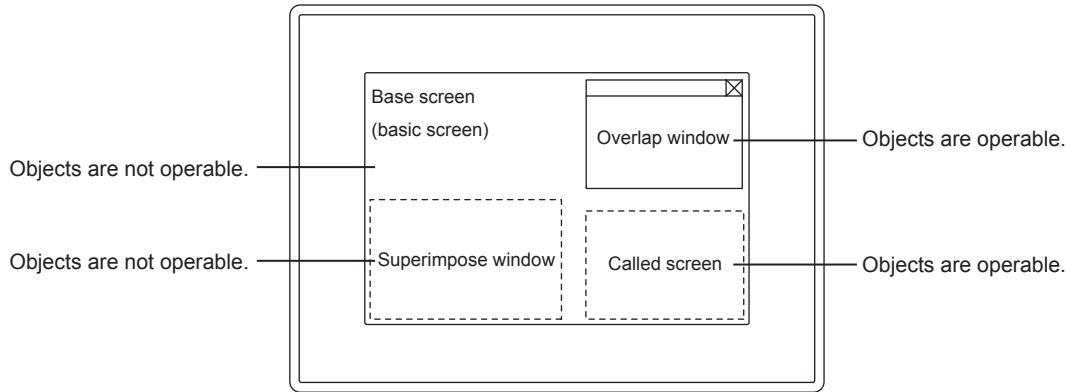

If unauthorized equipment displays such a screen, the objects on the screen are not operable.

When the authorization control is disabled in a screen, the applicable equipment does not need the authorization to display the screen and operate the objects or the utility call key on the screen.

If the authorization control is enabled in some screens and disabled in others, the setting of each screen determines whether to activate the authorization control.

Example) Availability of operation on unauthorized equipment

- Base screen (Basic screen of the set overlay screen function): The authorization control is enabled.
- Superimpose window: The authorization control is enabled.
- Overlap window: The authorization control is disabled.
- Called screen (Screen called from the base screen): The authorization control is disabled.

#### ■ 4 Influences on other functions

Enabling the GOT network interaction function influences other functions as follows.

Function	Influence
SoftGOT-GOT Link Function	The authorization control of the SoftGOT-GOT link function becomes disabled. The authorization control of the GOT network interaction function becomes enabled. Multiple GT SoftGOT2000 modules are connectable to one GOT. In this case, each GT SoftGOT2000 module must be run on different personal computers. If multiple modules of GT SoftGOT2000 are run on one personal computer, the modules cannot connect to the same GOT simultaneously. The popup display of the GOT network interaction function is applied to the GT SoftGOT2000 or GOT screen. →GT SoftGOT2000 Version1 Operating Manual
VNC Server Function	Even though the GOT network interaction function is enabled, the authorization control of the VNC server function remains active. To operate a screen in which the authorization control is enabled, the VNC server or VNC client requires the authorization from both the GOT network interaction function and the VNC server function. (When you perform operations on the VNC client, the VNC server obtains the authorization of the GOT network interaction function.) The popup display of the GOT network interaction function is applied to the VNC server or VNC client screen. →10.5 Viewing the GOT from a Personal Computer (VNC Server Function)
GOT Mobile function	To operate a screen in which the authorization control is enabled, the client requires the authorization from the GOT network interaction function. →10.18 Monitoring a Controller from Tablets or Other Clients (GOT Mobile Function)

#### ■ 5 Required system application (extended function)

To use the GOT network interaction function, a system application (extended function) of [GOT Network Interaction] is required.

Selecting [Use GOT network interaction function] in the [GOT Network Interaction] dialog incorporates the application into package data automatically.

⇒5.6.4 [GOT Network Interaction] dialog

## 5.6.2 How to use the GOT network interaction function

- ■ 1 Setting on GT Designer3
  - 2 Operation on target equipment
  - 3 Authorization control and status notification with devices

### ■ 1 Setting on GT Designer3

Configure the following setting in all the projects of the GOTs that are under control of the GOT network interaction function.

- Step 1** Select [Common] → [GOT Network Interaction] from the menu to display the [GOT Network Interaction] dialog.
- 5.6.4 [GOT Network Interaction] dialog
- Step 2** Set the following items, and click the [OK] button.
- Select [Use GOT network interaction function].
  - Set the IP address of the master GOT in [IP address of GOT controlling operational authority].
- Set the following items if necessary.
- [Guaranteed time of operational authority after the last operation]
  - [Specify the home screen No.]
- Step 3** To enable the authorization control for a screen, select [Target for exclusive control of operational authority] in the [Basic] tab in the [Screen Property] dialog.
- 2.7 Changing Screen Property
- To collectively enable or disable the authorization control for all the base screens and window screens, configure the setting in the [GOT Network Interaction] dialog.
- To collectively enable or disable the authorization control for all the mobile screens, configure the setting in [Exclusive Control of Operational Authority] in the [GOT Mobile Setting] window.

### ■ 2 Operation on target equipment

On unauthorized equipment, when you switch a screen to another screen in which the authorization control is enabled, the equipment is automatically authorized if no equipment in the control group holds the authorization. The popup display appears on the applicable equipment.

On the popup display, you can check the authorization status, and manually grant or release the authorization.

For the details of operations and the differences by equipment, refer to the following.

- (1) Obtaining the authorization
- (2) Releasing the authorization
- (3) Operation on the popup display

You can also use GOT internal devices to check the authorization status and control the authorization, such as prohibiting equipment from obtaining it.

- 5.6.2 ■ 3 Authorization control and status notification with devices

#### (1) Obtaining the authorization

On unauthorized equipment, when you switch a screen to another screen in which the authorization control is enabled, the equipment tries to obtain the authorization.

The screen is switched regardless of whether the equipment obtains the authorization.

To manually grant the authorization to equipment, touch the status icon on the popup display.

To grant the authorization of the VNC server function to the VNC server or VNC client, touch the message display area on the popup display.

- (3) Operation on the popup display

When the set overlay screen function is used, the behavior of obtaining the authorization differs depending on the setting of the destination basic screen.

Setting of the destination basic screen	Automatic acquisition of the authorization
The authorization control is enabled.	The applicable equipment tries to obtain the authorization at screen switching. The automatic acquisition of the authorization can be disabled. →5.6.2 ■ 3 (1) Authorization control with devices
The authorization control is disabled.	The applicable equipment does not try to obtain the authorization at screen switching.

For the details of the set overlay screen function, refer to the following.

- 8.29 Placing Another Screen on a Screen

## (2) Releasing the authorization

On the authorized equipment, when you switch a screen to another screen in which the authorization control is disabled, the equipment automatically releases the authorization. (Note that the authorization is not automatically released in some cases. For example, in the set overlay screen function, the destination screen contains a called screen in which the authorization control is enabled.)

When another equipment in the control group tries to obtain the authorization, even if the authorized equipment is displaying a screen in which the authorization control is enabled, the authorization is released from the authorized equipment.

However, if the authorization guarantee time is set, the authorization is not released until the set time elapses from the last operation.

To manually release the authorization, perform the operation on the popup display.

⇒(3) Operation on the popup display

On the master GOT, you can also release the authorization from the authorized equipment by using the GOT internal devices.

⇒5.6.2 ■ 3 (1) Authorization control with devices

For the authorized GOT, the authorization is not released even if the GOT transitions to screen saver mode.

## (3) Operation on the popup display

On the target equipment for the authorization control, you can check the authorization status and manually grant or release the authorization on the popup display.

The conditions for the popup display to appear differ depending on the target equipment.

Target equipment	Display condition
GT27, GT25, and GT23 (other than the VNC server)	When a screen is switched to another screen in which the authorization control is enabled, the popup display appears.
GT SoftGOT2000	
GOT Mobile function client	
GOT (VNC server)	<ul style="list-style-type: none"> <li>When the authorization control of the VNC server function is enabled The popup display always appears on the screen.</li> <li>For the VNC client started with the exclusive password for monitoring, the popup display appears when a screen is switched to another screen in which the authorization control is enabled.</li> </ul>
VNC client	<ul style="list-style-type: none"> <li>When the authorization control of the VNC server function is disabled The popup display appears when a screen is switched to another screen in which the authorization control is enabled.</li> </ul>

The authorization is not required to perform operations on the popup display.

Example) Popup display on the GOT

### 1) Display position switching button

Switches the position of the popup display. (Top, middle, bottom)

### 2) Message display area

Displays information including the authorization status.

On the VNC server or VNC client, touching the message display area obtains the authorization of the VNC server function.

If you do so on the screen in which the authorization control is enabled, the authorization of the GOT network interaction function is obtained together.

The format of the IP address displayed in the message differs according to the equipment type.

Type	Format	Example
GT27, GT25, and GT23	(IP address):g(GOT ID)	192.168.3.18:g1
GT SoftGOT2000	(IP address):s(Module No.)	192.168.3.19:s1
VNC client *1	(IP address):v1	192.168.3.20:v1
GOT Mobile function client	(IP address):m(Client No.)	192.168.3.21:m1

\*1 The IP address of the VNC server is displayed.

### 3) Home screen button

Switches to the home screen.

The home screen differs depending on the target equipment.

- For equipment other than the GOT Mobile function client  
Base screen specified in [Specify the home screen No.] in the [GOT Network Interaction] dialog
- For the GOT Mobile function client  
Mobile screen specified in [Specify the home screen No.] of [Exclusive Control of Operational Authority] in the [GOT Mobile Setting] window

If no screen is set as the home screen, touching this button displays the lowest numbered screen.

### 4) Status icon

Indicates the status of the target equipment.

Touching a status icon obtains or releases the authorization.

(This action is not available if the GOT Mobile function client is authenticated by using a guest operator account.)

The type of the target equipment determines the icon to be displayed.

Equipment	When displaying a screen in which the authorization control is disabled	When displaying a screen in which the authorization control is enabled		
		Unauthorized	Authorized	In process of obtaining authorization
Equipment other than the VNC server and VNC client	-			
VNC server, VNC client (The authorization control of the VNC server function is disabled.)*1	-			
VNC server, VNC client (The authorization control of the VNC server function is enabled and the VNC server has the authorization.)				
VNC server, VNC client (The authorization control of the VNC server function is enabled and the VNC client has the authorization.)				

\*1 For the VNC client started with the exclusive password for monitoring, the icon when the authorization control of the VNC server function is disabled appears.

## 3 Authorization control and status notification with devices

In the GOT network interaction function, by using the devices for the authorization control and status notification, you can prohibit equipment from obtaining the authorization, check the authorization status, and perform other operations.

The type of the target equipment determines the devices to be used.

Target equipment	Devices for authorization control and status notification
GOT	GOT internal devices →12.1.3 GOT special register (GS)
GOT Mobile function client	Devices that are set in [Operational Authority Status Control Device] and [Operational Authority Status Notification Device] of [Exclusive Control of Operational Authority] in the [GOT Mobile Setting] window →10.18.6 [GOT Mobile Setting] window

## (1) Authorization control with devices

The following shows how to control the operation of the GOT network interaction function with devices.

Target equipment	Control details	Operation	
		Equipment other than the GOT Mobile function client	GOT Mobile function client
All	Disabling the automatic acquisition of the authorization at the time to switch to a screen in which the authorization control is enabled	Turn on GS1795.b0.	Turn on b0 of [Operational Authority Status Control Device].
Master GOT	Prohibiting equipment except the master GOT in the control group from obtaining the authorization	Turn on GS1796.b0.	-
Master GOT	Disabling the authorization guarantee time	Turn on GS1796.b1.	-
Master GOT	Prohibiting equipment including the master GOT in the control group from obtaining the authorization	Turn on GS1796.b2.	-

To ignore the authorization guarantee time and forcibly release the authorization from the authorized equipment, perform the following operation on the master GOT: Turn on GS1796.b1 to disable the authorization guarantee time, and then turn on GS1796.b0 or GS1796.b2.

## (2) Status notification with devices

The following shows how to check the authorization status of the GOT network interaction function with devices.

Target equipment	Notification details	Operation	
		Equipment other than the GOT Mobile function client	GOT Mobile function client
All	Notifying that the equipment obtains the authorization	GS1460.b0 turns on.	The b0 of [Operational Authority Status Notification Device] turns on.
All	Notifying that a screen requiring the authorization is being displayed	GS1460.b1 turns on.	The b1 of [Operational Authority Status Notification Device] turns on.
Equipment other than the GOT Mobile function client	Notifying the IP address of the master GOT when the equipment obtains the authorization	GS1461 and GS1462 store the data.	-
Equipment other than the GOT Mobile function client	Notifying the time (second) elapsed since the equipment obtained the authorization	GS1463 stores the data.	-
Equipment other than the GOT Mobile function client	Notifying the remaining authorization guarantee time (second)	GS1464 stores the data.	-
Master GOT	Notifying that any equipment in the control group obtains the authorization	GS1465.b0 turns on.	-
Master GOT	Notifying that equipment except the master GOT in the control group is prohibited from obtaining the authorization (GS1796.b0 is on.)	GS1465.b1 turns on.	-
Master GOT	Notifying that equipment including the master GOT in the control group is prohibited from obtaining the authorization (GS1796.b2 is on.)	GS1465.b2 turns on.	-
Master GOT	Notifying the IP address of the authorized equipment	GS1466 and GS1467 store the data.	-
Master GOT	Notifying the type of the authorized equipment	GS1468 stores the data. • 0: GOT • 1: GT SoftGOT2000 • 2: GOT Mobile function client	-
Master GOT	Notifying the identification information on the authorized equipment	GS1469 stores the data. • GOT: GOT ID number • GT SoftGOT2000: Module No. • GOT Mobile function client: Client number	-
Master GOT	Notifying the time (second) elapsed since the equipment obtained the authorization	GS1470 stores the data.	-

## 5.6.3 Precautions

### ■ 1 Precautions for drawing

#### (1) Specifying the master GOT

Set the same master GOT IP address in the projects of the GOTs that are in the same authorization control group. If you set different IP addresses, the exclusive authorization control is not available.

#### (2) Setting the home screen

When setting a screen as the home screen, make sure that the authorization control is disabled in the screen. Otherwise, you cannot switch a screen to the home screen on unauthorized equipment.

### ■ 2 Precautions for use

#### (1) Master GOT startup timing

Start the master GOT earlier than other pieces of equipment in an authorization control group. No equipment can obtain the authorization before the master GOT is started.

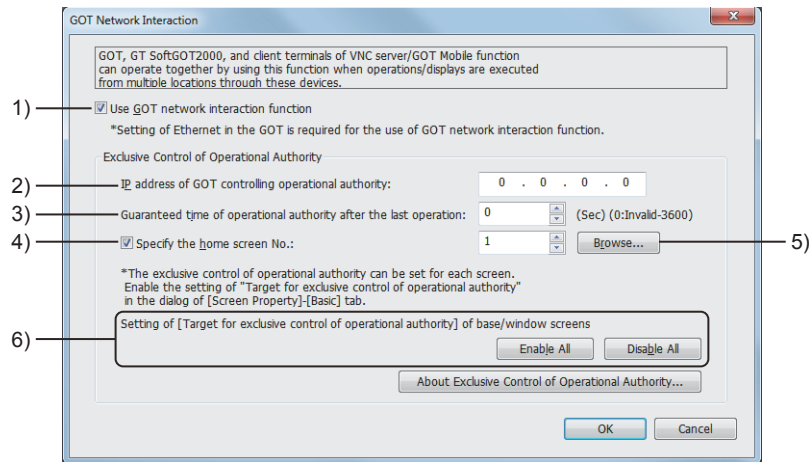

#### (2) Restrictions on the alarm popup display

While the popup display of the GOT network interaction function is being displayed, the alarm popup display is disabled.

## 5.6.4 [GOT Network Interaction] dialog

In the [GOT Network Interaction] dialog, configure the settings for the GOT network interaction function. Select [Common] → [GOT Network Interaction] from the menu to display this dialog.

### 1) [Use GOT network interaction function]

Enables the GOT network interaction function.

### 2) [IP address of GOT controlling operational authority]

Set the IP address of the master GOT.

GT27 and GT25 models are settable as the master GOT.

### 3) [Guaranteed time of operational authority after the last operation]

Set a period of time to hold the authorization after the authorized equipment is operated.

The setting range is [0] (Invalid) seconds to [3600] seconds.

### 4) [Specify the home screen No.]

Set a base screen as the home screen. On the popup display of the GOT network interaction function, touching the home screen button displays the set base screen.

Make sure that the authorization control is disabled in the set base screen.

### 5) [Browse] button

Displays the [Screen Image List] dialog.

You can check screen images and select a screen as the home screen.

- [Screen Type]

Displays the screen type.

- Screen image list

Displays screen images.

- Jump

Specify a screen number and click the [Jump] button to select the screen in the screen image list.

### 6) [Setting of [Target for exclusive control of operational authority] of base/window screens]

Item	Description
[Enable All] button	Selects [Target for exclusive control of operational authority] for all the base screens and window screens.
[Disable All] button	Clears [Target for exclusive control of operational authority] for all the base screens and window screens.

## 5.7 Checking the Interface Settings of the GOT ([I/F Communication Setting])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 5.7.1 Specifications of the I/F communication setting
- 5.7.2 How to use the I/F communication setting
- 5.7.3 [I/F Communication Setting] dialog

In the [I/F Communication Setting] dialog, set the communication interface of the GOT.

### 5.7.1 Specifications of the I/F communication setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 Communication interface configuration

The following shows the GOT communication interfaces that appear in the [I/F Communication Setting] dialog. The usable interfaces vary by GOT model.

For the details of each communication interface, refer to the following.

- GOT2000 Series User's Manual (Hardware)
- GOT2000 Series Connection Manual for a controller used

#### (1) Communication interfaces of GT27, GT25-S, and GT25-V

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485]	[0], [1] to [4], [5] to [8]
	[I/F-2: RS232]	[0], [1] to [4], [5] to [8], [A]
	[I/F-3:USB]	[9]
Ethernet interface	[Ethernet]	[0], [1] to [4], [9], [A], [Multi]
Extension interface	[1st]	[0], [1] to [4], [5] to [8], [A], [-]
	[2nd]	[0], [1] to [4], [5] to [8], [A], [-]
	[3rd]	[0], [1] to [4], [5] to [8], [A], [-]

The wireless LAN interface setting does not appear in the [I/F Communication Setting] dialog.

For the wireless LAN interface setting, refer to the following.

- 5.4.1 Setting the GOT IP address

#### (2) Communication interfaces of GT25-W, GT2505-V, and GT25HS-V

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485]	[0], [1] to [4], [5] to [8]
	[I/F-2: RS232]	[0], [1] to [4], [5] to [8], [A]
	[I/F-3:USB]	[9]
Ethernet interface	[Ethernet]	[0], [1] to [4], [9], [A], [Multi]

For GT25HS-V, do not select any item other than the above.

Otherwise, the setting becomes invalid.

The wireless LAN interface setting does not appear in the [I/F Communication Setting] dialog.

For the wireless LAN interface setting, refer to the following.

- 5.4.1 Setting the GOT IP address

#### (3) Communication interfaces of GT23

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485]	[0], [1] to [2], [5] to [8]
	[I/F-2: RS232]	[0], [1] to [2], [5] to [8], [A]
	[I/F-3:USB]	[9]
Ethernet interface	[Ethernet]	[0], [1] to [2], [9], [A], [Multi]

#### (4) Communication interfaces of GT2105-Q

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485]	[0], [1] to [2], [8], [9]
	[I/F-2: RS232]	[0], [1] to [2], [8], [9], [A]
	[I/F-3:USB]	[9]

#### (5) Communication interfaces of GT2107-W and GT2104-R

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485]	[0], [1] to [2], [8], [9]
	[I/F-2: RS232]	[0], [1] to [2], [8], [9], [A]
	[I/F-3:USB]	[9]
Ethernet interface	[Ethernet]	[0], [1] to [2], [9], [A], [Multi]

#### (6) Communication interfaces of GT21-P

Interface		Settable channel number
Standard interface	[I/F-1: RS422/485/232(Side)]	[0], [1] to [2], [8], [9]
	[I/F-2: RS232(Back)]	[0], [1] to [2], [8], [9], [A]
	[I/F-3:USB]	[9]
Ethernet interface	[Ethernet]	[0], [1] to [2], [9], [A], [Multi]

### 5.7.2 How to use the I/F communication setting

#### ■ 1 Setting with GT Designer3

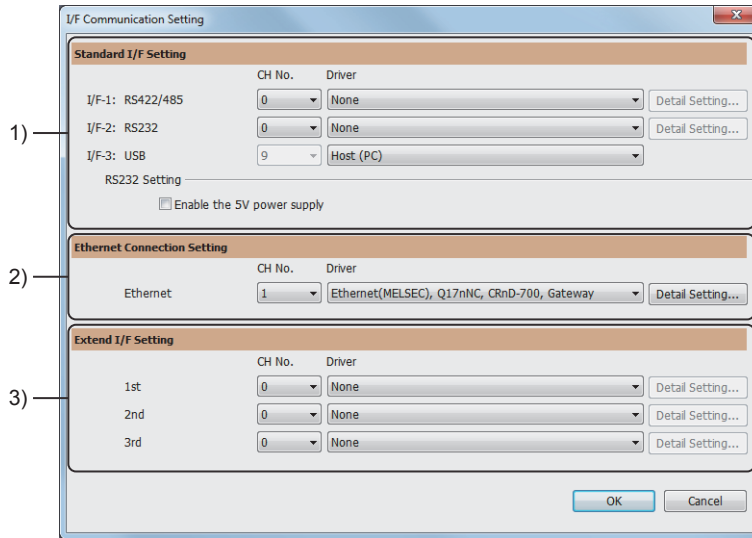

- Step 1** Select [Common] → [I/F Communication Setting] from the menu.
- Step 2** The [I/F Communication Setting] dialog appears.  
Check and set the interface connection setting.  
→ 5.7.3 [I/F Communication Setting] dialog

#### ■ 2 Using the parameter reflection function of MELSOFT Navigator

When setting [Controller Setting] in GT Designer3 using the parameter function of MELSOFT Navigator, all of I/F Communication Setting are grayout and cannot be edited. Set these items at [Controller Setting] or [Peripheral Unit Setting].

## 5.7.3 [I/F Communication Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Standard I/F Setting]

Set the channel No. and communication driver for the communication interface that included as standard.

Item	Description
[I/F-1] to [I/F-3]	Displays the communication type of standard interfaces 1 to 3. For the details of each standard interface, refer to the following. →5.7.1 ■ 1 Communication interface configuration
[CH No.]	Set a channel number for each standard interface. The number of settable channels varies by GOT model. • 0: Does not use the standard interface. • 1 to 4: Used for the controllers of channel numbers 1 to 4 set in [Controller Setting]. • 5 to 8: Used for the barcode function, the RFID function, the remote personal computer operation function (Serial), and the GOT (Extended Computer). • 9: Used for the host station (personal computer). • A: Used for the report function (with a serial printer) and the hard copy function (with a serial printer).
[Driver]	Set a communication driver for each standard interface. The settable communication drivers vary by GOT model or connection type. For details, refer to the following. →GOT2000 Series Connection Manual for a controller used
[Detail Setting] button	Displays the [Detail Setting] dialog. Set the connection details, such as the number of retries and the communication timeout period. →12.11.5 [Detail Setting] dialog
[Enable the 5V power supply] [Enable the 5V power supply (for GT14-RS2T4-9P only)] (GT2505-V only)	Enables the 5 V power supply feed function through the standard interface ([I/F-2:RS232]). GT23, GT21 and GT SoftGOT2000 do not support this item.

### 2) [Ethernet Connection Setting]

Set a channel number and a communication driver for each Ethernet interface.

Not available to GT2105-Q.

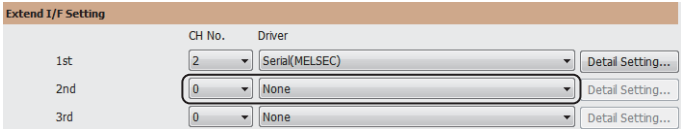

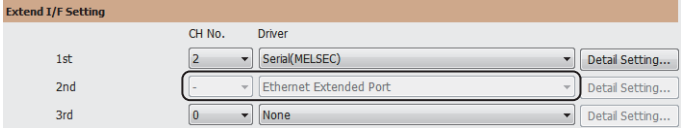

Item	Description
[CH No.]	Set a channel number for each Ethernet interface. The number of settable channels varies by GOT model. • 0: Does not use the Ethernet interface. • 1 to 4: Used for the controllers of channel numbers 1 to 4 set in [Controller Setting]. • 9: Used for the Ethernet download. • A: Used for the remote personal computer operation function (Ethernet), the VNC server function, the gateway function, and the MES interface function. • Multi: Used for the multi-channel Ethernet connection.

Item	Description
[Driver]	Set a communication driver for each Ethernet interface. The settable communication drivers vary by GOT model or connection type. For details, refer to the following. →GOT2000 Series Connection Manual for a controller used
[Detail Setting] button	Displays the [Detail Setting] dialog. Set the connection details, such as the number of retries and the communication timeout period. →12.11.5 [Detail Setting] dialog

### 3) [Extend I/F Setting]

Not available to GT2505-V, GT25HS-V, GT23, and GT21.

Set a channel number and a communication driver for the 1st to 3rd stages of the extension interface.

Item	Description
[1st] to [3rd]	Displays the communication type of the extension interface (1st to 3rd stages).
[CH No.]	<p>Set a channel number for each stage of the extension interface. The number of settable channels varies by GOT model.</p> <ul style="list-style-type: none"> <li>• 0: Does not use the extension interface.</li> <li>• 1 to 4: Used for the controllers of channel numbers 1 to 4 set in [Controller Setting].</li> <li>• 5 to 8: Used for the barcode function, the RFID function, and the remote personal computer operation function (Serial).</li> <li>• A: Used for the report function (with a serial printer), the hard copy function (with a serial printer), the remote personal computer operation function (Ethernet), the video output function, the VNC server function, the gateway function, and the MES interface function.</li> <li>• -: Indicates an unused stage when [Enable Ethernet extended port] is selected in the [Extended Port] tab of the [GOT Ethernet Setting] window ([GOT IP Address Setting]).</li> </ul>  <p>When the first stage is used and the second and third stages are not used</p>   <p>For the second stage, [-] appears in [CH No.] and [Ethernet Extended Port] appears in [Driver].</p> <p>→5.4.1 ■ 3 (2) [Extended Port] tab, [Port 2] tab</p>
[Driver]	Set a communication driver for each stage of the extension interface. The settable communication drivers vary by GOT model or connection type. For details, refer to the following. →GOT2000 Series Connection Manual for a controller used
[Detail Setting] button	Displays the [Detail Setting] dialog. Set the connection details, such as the number of retries and the communication timeout period. →12.11.5 [Detail Setting] dialog

## 5.8 Comment Setting ([Comment])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 5.8.1 Specifications of comments
- 5.8.2 How to use comment
- 5.8.3 Precautions
- 5.8.4 Setting comments

Comments are the character strings registered to the project by a user.  
 Comments can be used for displaying the character strings with each object.  
 Comments are used for displaying the same character string with multiple objects or for displaying messages which are changed by the device value.  
 Comments supporting multiple languages can be displayed with the language switching device.  
 Example) Changing a message to be displayed on the comment display according to the device value of D100

Comment group No. 1

Comment No.	Column No.1
1	Start
2	Running
3	Done
:	:

· D100 = 1

Comment No.1 is displayed.

· D100 = 2

Comment No.2 is displayed.

· D100 = 3

Comment No.3 is displayed.

### 5.8.1 Specifications of comments

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■1 Number of comments

Item	Description
Max. No. of comment groups for a project	500
Max. No. of comments for a comment group	32767
Max. No. of comment columns for a comment group	30

#### ■2 Number of characters

Item	Description
Comment group title	Up to 32 characters
Comment	Up to 1024 characters

#### ■3 Applicable object

- Touch switch
- Lamp
- Comment display
- Alarm display (user)
- Simple alarm display\*<sup>1</sup>
- Historical Data List Display
- Recipe display (record list)\*<sup>1</sup>
- Graphical meter
- Comment print\*<sup>1</sup>

\*<sup>1</sup> Windows fonts are not usable.

## ■4 Applicable font

### (1) Font

- 12 dots (Standard, HQ Mincho, HQ Gothic)
- 16 dots (Standard, HQ Mincho, HQ Gothic)
- Windows font

### (2) KANJI region

- Japan
- China(GB)-Mincho
- China(Big5)-Gothic

## ■5 Display attributes

The display attributes are settable for each comment.

The display attributes valid for displaying a comment vary with the object.

Object name	Text color	Invert	Blink	High quality font	Text style	Shade color
Touch switch	Selectable	Nonexistent	Nonexistent	Comment group setting	Selectable	Selectable
Lamp	Selectable	Nonexistent	Nonexistent	Selectable	Selectable	Selectable
Comment display	Selectable	Selectable	Selectable	Selectable	Selectable	Selectable
Historical data list display	Object setting	Nonexistent	Nonexistent	Object setting	Object setting	Object setting
Alarm display (user), simple alarm display	Object setting	Nonexistent	Nonexistent	Object setting	Object setting	Object setting
Alarm popup display	Varying with the condition	Nonexistent	Nonexistent	Object setting	Object setting	Object setting
Recipe display (record list)	Object setting	Nonexistent	Nonexistent	Object setting	Object setting	Object setting
Graphical meter	Selectable	Nonexistent	Nonexistent	Object setting	Object setting	Object setting

The following explains the details of each display attribute shown in the above table.

### (1) Selectable

You can select the display attribute in the object setting or the one in the comment group setting.

To use the display attribute in the object setting, select [Change Attribute of Comment Setting] in the object setting.

To use the display attribute in the comment group setting, deselect this item.

### (2) Nonexistent

The relevant display attribute is nonexistent for the object.

Accordingly, the display attribute in the comment group setting is invalid.

### (3) Comment group setting

The display attribute in the comment group setting is used.

Accordingly, the display attribute in the object setting is invalid.

### (4) Object setting

The display attribute in the object setting is used.

Accordingly, the display attribute in the comment group setting is invalid.

### (5) Varying with the condition

When [Comment Color (System Alarm: Fixed)] is selected for [Switching Type] in [Alarm Text Color Switching] in the object setting, the display attribute in the comment group setting is used.

→9.1.4 ■ 4 [Alarm Popup Display] dialog

When any other item is selected for [Switching Type], the display attribute in the object setting is used.

## ■6 Available file format for importing, exporting

Unicode text files and CSV files can be used.

## 5.8.2 How to use comment

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Register comments to a comment group.

Create comment groups according to the usage of the comments and register the comments.

If you set multiple comment columns in a comment group, the comments prepared in multiple languages can be switched with language switching devices.

The device comments, which are created by GX Works2 or GX Developer, can be read and registered as a comment group.

For information on how to register comments to a comment group, refer to the following.

→ 6.1.5 ■ 4 [Device Comment / Device Definition List] dialog

### ■ 1 Using comments

The following shows how to use comments.

**Step 1** Create a comment group according to the usage of the comments.

→ 5.8.4 ■ 2 Creating a new comment group

**Step 2** Open the comment group and register comments.

→ 5.8.4 ■ 1 Opening comment group

5.8.4 ■ 3 Creating a new row

5.8.4 ■ 4 Inserting a row

5.8.4 ■ 5 Inserting a column

**Step 3** Set the comments for each object.

→ 8.2 Placing a Touch Switch

8.3 Placing a Lamp

8.7 Placing a Comment Display

8.10 Placing a Historical Data List Display

8.11 Placing an Alarm Display

8.12 Placing a Simple Alarm Display

### ■ 2 Comment group

A comment group is a group of comments.

To register the comments, create a comment group in a project.

Multiple comment groups can be created in a project.

If multiple comment groups are created, the comment groups can be used according to the purpose.

Example) Specifying a comment group No. with a device and changing the comment type to be displayed

Comment group No.1: Comment for normal message

Comment No.	Column No.1	Column No.2
1	開始	Start
2	実行中	Running
3	完了	Done
:	:	:

Comment group No.2: Comment for error message

Comment No.	Column No.1	Column No.2
1	緊急停止	Emergency stop
2	通信エラー	Communication error
3	異物混入	Contamination
:	:	:

Comment group No.: Specified with D300

· D300 = 1

Comment for normal message  
(Comment group No.1) is  
displayed.

· D300 = 2

Comment for error message  
(Comment group No.2) is  
displayed.

### ■3 Displaying multi-language comments (Language switching device)

If you set multiple comment columns in a comment group, the comments can be registered in multiple languages for one comment No.

The comments registered in multiple languages can be switched by switching the comment column to be displayed with the language switching devices.

Example) Switching comments with the language switching device

Comment group No. 1

Comment No.	Column No.1	Column No.2
1	開始	Start
2	実行中	Running
3	完了	Done
⋮	⋮	⋮

Comment No. to be displayed: 1

Language switching device: D500

· D500 = 1

Comment of the column

No.1 is displayed.

· D500 = 2

Comment of the column

No.2 is displayed.

#### (1) Comment group which does not operate with language switching devices

If a comment group which does not operate with a language switching device is required, configure the following settings in the language switching device settings.

- Select [Display] for [Alternative Display (when the language switching device value is out of the range (1-30) or comment column No. does not exist)].
- Set [1] for [Comment Column No.].

By the above settings, column No.1 is always displayed regardless of the value of the language switching device if the comment group has column No.1 only.

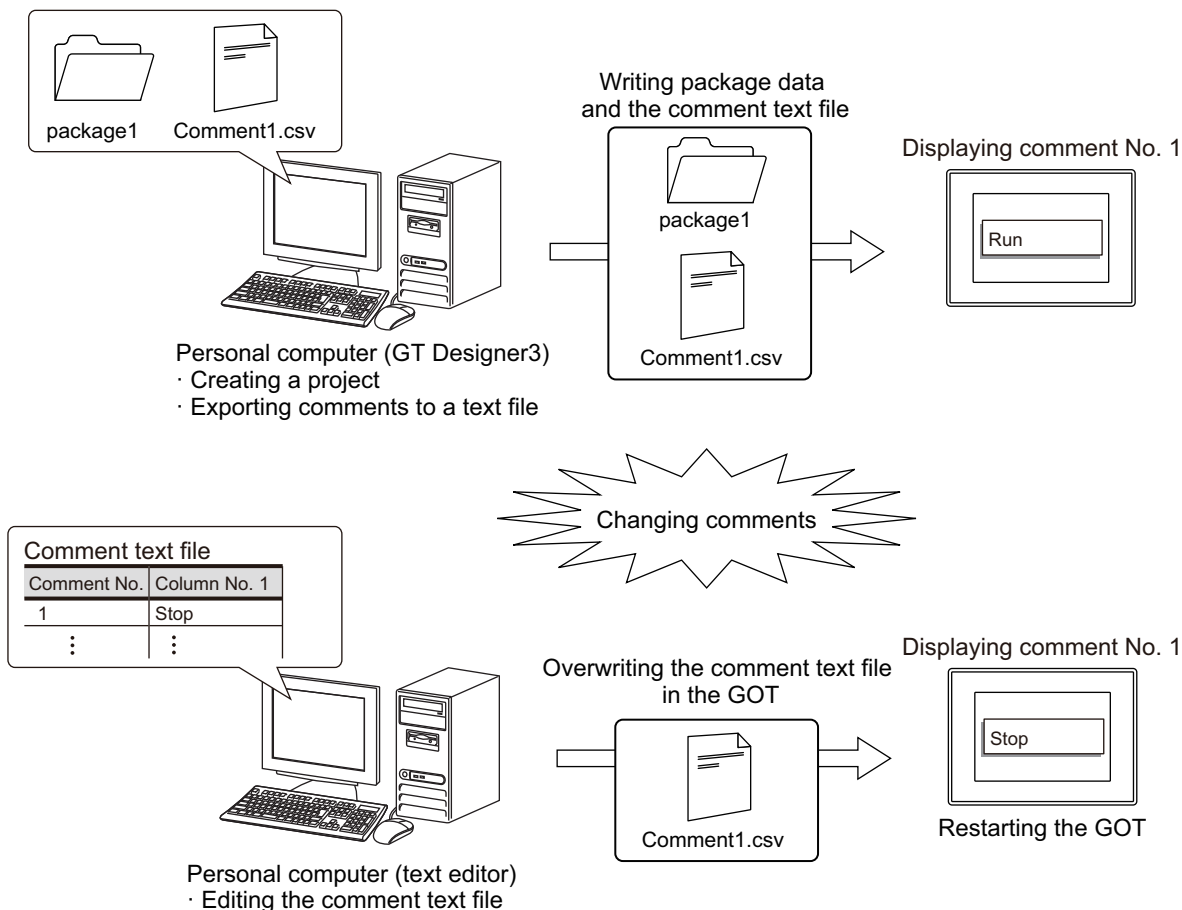

⇒5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

### ■4 Displaying the comments of a text file

Not available to GT23 and GT21.

The GOT can display comments by reading a comment text file from the installed data storage.

After you change a comment, overwrite the comment text file in the data storage and restart the GOT to display the new comment.

To display the comments of a text file, configure the relevant settings in the project.  
 Configure the settings by comment group.

### (1) Procedure for displaying the comments of a text file

Configure the following settings for a comment group from which comments are exported to a text file.

- Step 1** In the [Comment Group Property] dialog, configure the settings as shown below.
- Select [Read comment data from the memory card].
  - Click the [File Access] button to display the [File Access] dialog, and set the save destination and file name of a text file.

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

- Step 2** Export a target comment group to the text file.

In the [Save As] dialog, set [File name] and [Format] as shown below.

- [File name]: Set the file name specified in the [File Access] dialog.
- [Format]: Select [GT Designer3-GOT Common Format].

⇒5.8.4 ■ 7 Exporting a comment group

- Step 3** Save the text file to the folder specified in the [File Access] dialog.

- Step 4** Write the package data to the GOT.

For the communication method between the personal computer (GT Designer3) and the GOT, refer to the following.

⇒4. COMMUNICATING WITH GOT

If the text file is saved after package data has been written to the GOT, restart the GOT.

## (2) Procedure for reflecting comment changes

- Step 1** Edit a comment text file with a text editor, and overwrite the text file in the data storage with the edited one.
- Step 2** Restart the GOT.

## (3) Font restrictions

Windows fonts and HQ fonts are not usable to display the comments of a text file. Even if a Windows font or HQ font is specified in the object setting dialog, the GOT displays the comments in a standard font.

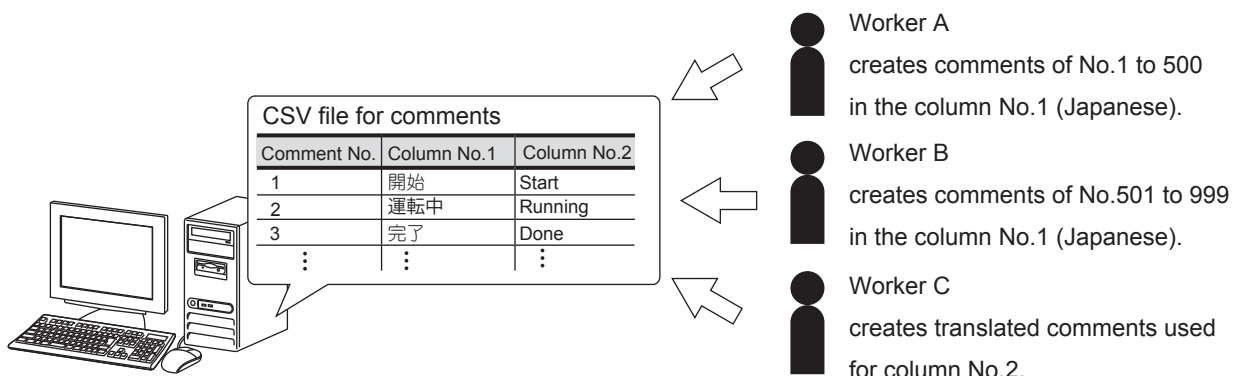

Font specified in a text file	Font used on the GOT
12-dot HQ Gothic 12-dot HQ Mincho	12-dot Standard
16-dot HQ Gothic Windows fonts	16-dot Standard (Gothic)
16-dot HQ Mincho	16-dot Standard (Mincho)

## (4) Influence on the GOT startup time

When this function is used, the GOT reads a comment text file at startup, resulting in a longer startup time. To minimize the increase of the startup time, enable this function only for the comment group in which comments may be changed.

## ■ 5 Importing or exporting comments

Comments can be imported or exported with a personal computer. Available text files are Unicode text file and CSV file. If you need to set a large amount of comments, working hours required to create the comments can be shortened by importing the text files for comments created by multiple persons. To create a new text file for comments, using a text file exported from a comment group is recommended.

The format of the text files for comments is common for both Unicode text files and CSV files. However, use the following delimiters for each file.

- Unicode text files: Tab (t)
- CSV file: Comma (,)

The following three formats are supported.

Select a format for a comment text file according to the version of GT Designer3 to which the text file is imported.

Format	Description
[GT Designer3-GOT Common Format]	Compatible with GT Designer3 Version 1.195D or later. To display the comments of a text file, use this format. →(1) Format of the text file for comments
[Ver.1.165X - 1.190Y Compatible]	Compatible with GT Designer3 Version 1.165X to 1.190Y. →(2) Ver. 1.165X to 1.190Y-compatible format or Ver. 1.100E to 1.163V-compatible format
[Ver.1.100E - 1.163V Compatible]	Compatible with GT Designer3 Version 1.100E to 1.163V. →(2) Ver. 1.165X to 1.190Y-compatible format or Ver. 1.100E to 1.163V-compatible format

## (1) Format of the text file for comments

	A	B	C	D	E	F	G	H	I	J	K	L	M
1)	[File Format]	[1.195D]											
2)	[Comment Group No.]	1											
3)	[Column No. / Remark]	1 English	2 Japanese	3 Simplified Chinese									
4)	[Windows Font]	Arial	MS PGothic	None									
5)	[Character Set]	Western	Japanese										
6)	[Kanji Region]	1	1	3	[Color]	[Reverse]	[Blink]	[Style]	[Solid]	[12dot HQ Gothic]	[12dot HQ Mincho]	[16dot HQ Gothic]	[16dot HQ Mincho]
7)		1 Stop	停止	停止	#BFBFBF	Yes	None			0	0	1	0
8)		2 In operation	運転	运行	#00FF00	No	None			0	0	1	0
		3 Check	点検	検査	#FFFF00	No	None	S	#0000FF	0	0	1	0
		4 Error	異常	异常	#FF0000	Yes	Med			0	0	0	0
9)													

### 1) Format version

The format version is fixed at [1.195D].

### 2) Comment group No.

Set a comment group No.

The setting range is 1 to 500.

### 3) Column No., remarks

Set a column No. of a comment column and a remarks for the comment columns.

Separate the column No. and the remarks with a one-byte space.

The setting range of the column Nos. is 1 to 30.

Up to 32 characters can be set as remarks.

### 4) Windows font and character set

Displays the Windows fonts that are selected in the [Comment Group Property] dialog.

Displays the character sets that are specified for the selected Windows fonts.

For the setting details, refer to the following.

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

Even if Windows fonts are set for the comments of a text file, the GOT displays the comments in standard fonts.

### 5) KANJI region

Set a KANJI region for each comment column.

The target comment column of the KANJI region is the comment column specified under these items.

The following shows the setting range of KANJI regions.

- 1: Japan
- 2: China(GB)-Mincho
- 3: China(Big5)-Gothic

### 6) Character property

Set character properties for each comment.

Input a property name to the first row, then input each setting in the subsequent rows.

Item	Description
Character color	Set the comment text color with a hexadecimal color code. The setting range is #000000 to #FFFFFF.
Reverse	Set whether to reverse the characters or not. The following shows the setting range. • Yes: Reversed • No: Not reversed
Blink	Set a blink style of characters. The following shows the setting range. • None: Not blinking • Low: Blinking at a low speed • Med: Blinking at a medium speed • High: Blinking at a high speed
Character effect	Set the text style. The following shows the setting range. • Blank: Standard • B: Bold • S: Shadow • R: Embossed

Item	Description
Shade Color	Set the color of the shade when the character effect is shadow or engrave. The setting range is the same as the character colors.

## 7) HQ font

Set whether to use a HQ font.

Input a property name to the first row, then input each setting in the subsequent rows.

The following shows the usable HQ fonts.

- 12-dot HQ Gothic
- 12-dot HQ Mincho
- 16-dot HQ Gothic
- 16-dot HQ Mincho

The following shows the setting range of each setting item.

- 0: Not used
- 1: Used

Even if HQ fonts are set for the comments of a text file, the GOT displays the comments in standard fonts.

## 8) Comment number

Set a comment number for the comment.

The setting range is 1 to 32767 (decimal) or 0x0001 to 0x7FFF (hexadecimal).

## 9) Comment

Input text for the comment.

Up to 1024 characters can be set.

### (2) Ver. 1.165X to 1.190Y-compatible format or Ver. 1.100E to 1.163V-compatible format

		1)	2)	3)	4)	5)

6)	4 Error	異常	異常	異常	異常	Red	Yes	Medium	Normal		No	No	No	No	5	5	1	2	4	1	2	4	1

Ver. 1.100E to 1.163V-compatible format

### 1) Comment group No.

Set a comment group No.

The setting range is 1 to 500.

### 2) KANJI region

Set a KANJI region for each comment column.

The target comment column of the KANJI region is the comment column specified under these items.

The following shows the setting range of KANJI regions.

- 1: Japan
- 2: China(GB)-Mincho
- 3: China(Big5)-Gothic

### 3) Character property

Set character properties for each comment.

Input a property name to the first row, then input each setting in the subsequent rows.

Item	Description
Character color	<p>Set the character color for comments. Set the comment character color by one of the following methods. If the character color is set with a color number or a RGB value, check the actual color by GT Designer3 before the setting.</p> <ul style="list-style-type: none"> <li>For specifying the character color with a color name The following shows the available color names. Black, blue, green, aqua, red, purple, yellow, white, dark white, gray, dark blue, dark green, dark aqua, dark red, dark purple, dark yellow</li> <li>For specifying the character color with a color number The setting range is 0 to 255.</li> <li>For specifying the character color with a RGB value Separate the R value (red), G value (green), and B value (blue) with commas (.). The setting range of R value (red) G value (green) B value (blue) is 0 to 255.</li> </ul>
Reverse	<p>Set whether to reverse the characters or not. The following shows the setting range.</p> <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
Blink	<p>Set a blink style of characters. The following shows the setting range.</p> <ul style="list-style-type: none"> <li>None</li> <li>Low</li> <li>Medium</li> <li>High</li> </ul>
Character effect	<p>Set the text style. The following shows the setting range.</p> <ul style="list-style-type: none"> <li>Normal</li> <li>Bold</li> <li>Solid</li> <li>Raised</li> </ul>
Shade Color	<p>Set the color of the shade when the character effect is shadow or engrave. The setting range is the same as the character colors.</p>

#### 4) HQ font

Set whether to use a HQ font.

Input a property name to the first row, then input each setting in the subsequent rows.

The following shows the available characters and fonts.

- 12-dot HQ Gothic
- 12-dot HQ Mincho
- 16-dot HQ Gothic
- 16-dot HQ Mincho

The following shows the setting range of each setting item.

- Yes
- No

#### 5) Numbers of characters, digits, and rows

The numbers of characters, digits, and rows of the comments are displayed.

These items are outputted when the comments are exported. However, inputting these items is not necessary for importing the comments.

The following shows the contents to be outputted.

- Number of characters  
The number of characters contained in the comment.  
A character is counted as one character, and a line feed is counted as two characters.
- Number of digits  
The number of digits is required to store comments.  
A one-byte character is counted as one character, and a two-byte character is counted as two characters. The number of the longest digits in all rows is displayed.  
Line feeds are not counted to the number of digits.
- Number of lines  
The number of lines of the comment.

Example. Description of the numbers of characters, digits, and rows in a CSV file

Column No.1	Column No.2		Number of characters (1)	Number of digits (1)	Number of columns (1)	Number of characters (2)	Number of digits (2)	Number of columns (2)
はい。☑ 実行しました。	Yes. ☑ Executed the task.	➔	12	14	2	23	17	2
			Numbers of characters,digits, and rows of thecolumn No.1			Numbers of characters, digits, and rows of the column No.2		

## 6) Comment No. notation

Set the comment No. notation.

The following shows the setting range.

- Blank: Decimal
- HEX: Hexadecimal

## 7) Column No., remarks

Set a column No. of a comment column and a remarks for the comment columns.

Separate the column No. and the remarks with a one-byte space.

The setting range of the column Nos. is 1 to 30.

Up to 32 characters can be set as remarks.

## 8) Windows font and character set

Displays the Windows fonts that are selected in the [Comment Group Property] dialog.

Displays the character sets that are specified for the selected Windows fonts.

For the setting details, refer to the following.

➔5.8.4 ■ 2 (1) [Comment Group Property] dialog

## 9) Comment number

Set a comment number for the comment.

The setting range is 1 to 32767 (decimal) or 0x0001 to 0x7FFF (hexadecimal).

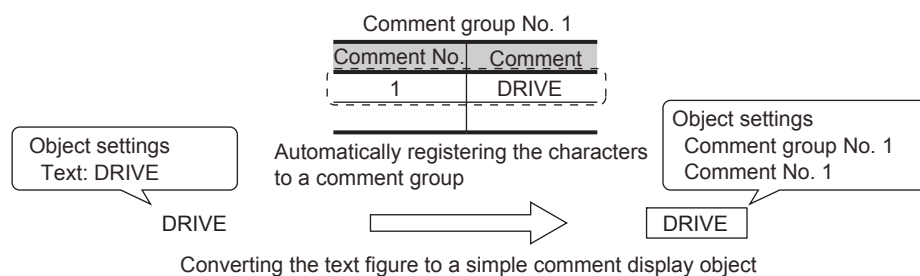

## 10) Comment

Input text for the comment.

Up to 1024 characters can be set.

## ■6 Comment registration using the characters of the text figure

In the text figure setting, you can register the characters entered in the [Text] field to a comment group, and convert the text figure to a simple comment display object.

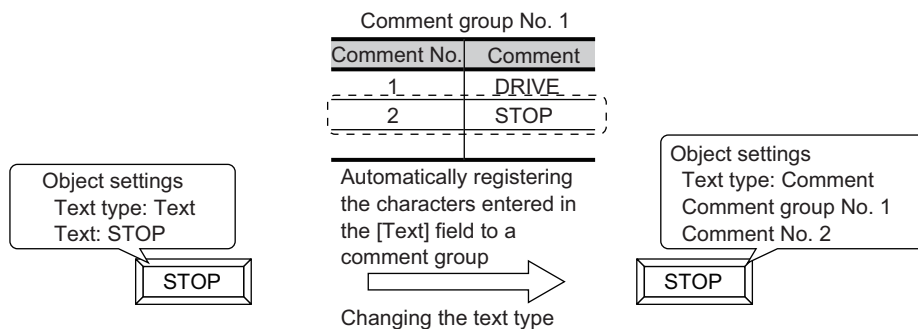

For the registration method, refer to the following.

➔5.8.4 ■ 12 (1) Registering the characters of a text figure to a comment group

## ■7 Comment registration using the text type [Text]

In the object setting, you can register the characters entered in the [Text] field to a comment group by changing the text type from [Text] to [Comment].

For the registration method, refer to the following.

→5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group

### 5.8.3 Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 HQ character of Chinese (Simplified, Traditional)

##### (1) Chinese (Simplified)

Characters in Chinese (Simplified) cannot be displayed in the 12-dot HQ Gothic or 16-dot HQ Gothic font.

If the 12-dot HQ Gothic or 16-dot HQ Gothic is selected at the comment registration, the characters are displayed in the 12-dot HQ Mincho or 16-dot HQ Mincho.

##### (2) Chinese (Traditional)

Characters in Chinese (Traditional) cannot be displayed in the 12-dot HQ Mincho or 16-dot HQ Mincho font.

If the 12-dot HQ Mincho or 16-dot HQ Mincho is selected at the comment registration, the characters are displayed in the 12-dot HQ Gothic or 16-dot HQ Gothic.

#### ■ 2 Exporting multi-language comments

A comment group for which multiple languages including Chinese are used may not be saved in a CVS file properly. Export a comment group including multiple languages in the Unicode text file format.

#### ■ 3 Importing the exported comments to GT Designer3 whose display language is different

If you export comments to a file with a GT Designer3 module, the file cannot be imported to another GT Designer3 module that uses a different display language.

#### ■ 4 Overwriting comments when importing a text file for comments

When a text file for comments is imported, comments in the file are used to overwrite the comment group in the import destination.

Before importing comments, check the comment group in the import destination and comments in the text file to be imported.

For details, refer to the following.

→5.8.4 ■ 6 Importing comments

#### ■ 5 Precautions for using Windows fonts

##### (1) Project data size

When comments in Windows fonts are registered to comment groups, the project data size becomes large.

To reduce the project data size, configure the following settings.

- Separate comment groups into two types: group with the Windows font setting and group without the Windows font setting.
- Set the same text size for the objects that display the same comment.
- Set the same text style for the objects that display the same comment.

##### (2) Comment exceeding the display range in length

A comment exceeding the display range in length may appear incorrectly.

Set the comment within the display range.

##### (3) Display for a comment group of more than 128 MB

If the data size of a comment group exceeds 128 MB, some comments in Windows fonts are not displayed properly.

Make sure that the data size of a comment group is 128 MB or less.

## 5.8.4 Setting comments

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ ■ 1 Opening comment group
- 2 Creating a new comment group
- 3 Creating a new row
- 4 Inserting a row
- 5 Inserting a column
- 6 Importing comments
- 7 Exporting a comment group
- 8 Comment searching
- 9 Jumping to the specified comment
- 10 Changing property
- 11 Switching display or non-display of the property
- 12 Registering characters to a comment group (Text figure, touch switch, and others)

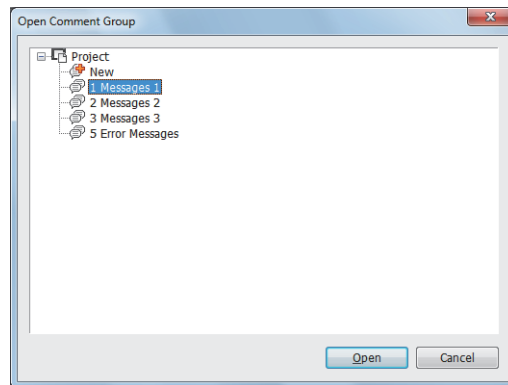

### ■ 1 Opening comment group

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows a procedure to open the existing comment groups in the [Open Comment Group] dialog.

**Step 1** Select [Common] → [Comment] → [Open] from the menu to open the [Open Comment Group] dialog.

⇒ 5.8.4 (1) [Open Comment Group] dialog

**Step 2** Select the target comment group and click the [Open] button.

⇒ 5.8.4 ■ 1 (2) [Comment List] window

### Point

#### Operation from the project tree

The existing comment groups can be opened from the [Project] window.

Step 1. Open [Comment] in the project tree in the [Project] window.

Step 2. A comment group is opened by either of the following operations.

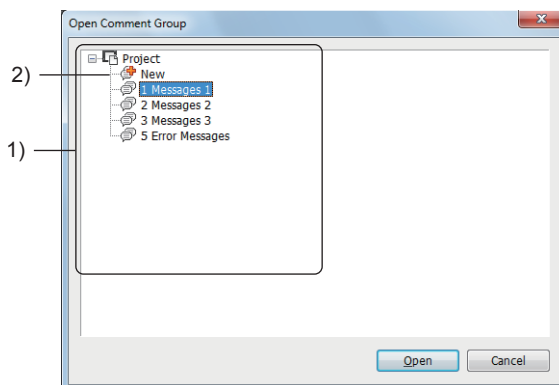

- Double-clicking a comment group

- Right-clicking a comment group to select [Open]

### (1) [Open Comment Group] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [Open Comment Group] dialog displays a list of all the comment groups registered to the project. Select [Common] → [Comment] → [Open] from the menu to display the dialog.

#### 1) Comment group list

The list of comment groups registered to the project.

Select a comment group and click the [Open] button to display the [Comment List] dialog.

⇒5.8.4 ■ 1 (2) [Comment List] window

#### 2) [New]

Creates a new comment group.

After clicking the [New] button, create a new comment group in the displayed dialog.

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

### (2) [Comment List] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

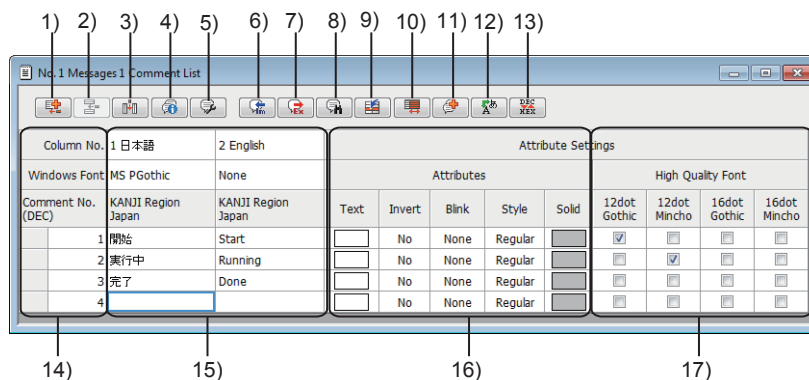

The [Comment List] window displays the list of the comments registered to a comment group.

⇒5.8.4 ■ 1 (3) Setting items in the [Comment List] window

5.8.4 ■ 1 (4) Items in the right-click menu

5.8.4 ■ 1 (5) Manipulations using a mouse and keyboard

### (3) Setting items in the [Comment List] window

#### 1) [New] button

Creates a new comment.

A new comment is added to below the bottom row of the comment list.

⇒5.8.4 ■ 2 Creating a new comment group

#### 2) [Insert Row] button

Inserts a row in the comment list.

If multiple rows are selected in the comment list, the same number of new rows are inserted above the selected ones.

When a row is inserted in the consecutive comment Nos., all rows after the inserted row are renumbered.

⇒5.8.4 ■ 4 Inserting a row

### 3) [Insert Column] button

Inserts a column in the comment column.

If multiple columns are selected in the comment list, the same number of new columns are inserted to the left of the selected ones.

When a column is inserted to the consecutive column Nos., all columns on the right of the inserted column are renumbered.

⇒5.8.4 ■ 5 Inserting a column

### 4) [Comment Group Property] button

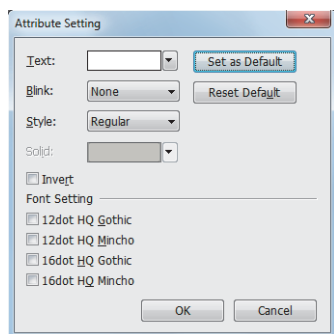

Check or change the detail of the comment group including the comment name and KANJI region.

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

### 5) [Attribute Setting] button

Set the character property of comments.

⇒5.8.4 ■ 10 Changing property

- **[Text]**  
Set the character color.
- **[Blink]**  
Set the blinking speed of characters.  
The following shows the items to be selected.
  - [None]
  - [Low]
  - [Medium]
  - [High]
- **[Style]**  
Select a character effect.  
The following shows the items to be selected.
  - [Standard]
  - [Bold]
  - [Solid]
  - [Raised]
- **[Solid]**  
Select the shade color of characters when [Solid] or [Raised] is selected for [Style].
- **[Invert]**  
Highlights characters.  
This item can be selected only when [Regular] is selected for [Style].
- **[Font Setting]**  
This item is displayed when [Read comment data from the memory card] is deselected in the [Comment Group Property] dialog.  
Select a font for comments.  
The following shows the items to be selected.
  - [12dot HQ Gothic]
  - [12dot HQ Mincho]
  - [16dot HQ Gothic]
  - [16dot HQ Mincho]

### 6) [Import] button

Imports comments from a Unicode text file or a CSV file.

After clicking the button, select a file to import in the displayed dialog.

⇒5.8.4 ■ 6 Importing comments

### 7) [Export] button

Exports a comment group into a Unicode text file or a CSV file.

After clicking the button, select a file to export in the displayed dialog.

⇒5.8.4 ■ 7 Exporting a comment group

### 8) [Search] button

Searches a comment.

⇒5.8.4 ■ 8 Comment searching

- **[Search String]**  
Input a character string to search information.
- **[Direction]**  
Select the search direction.
- **[Search Next] button**  
Searches the next option.
- **[Close] button**  
Closes the [Search] dialog.

### 9) [Jump] button

Jumps to the specified comment No.

⇒5.8.4 ■ 9 Jumping to the specified comment

- **[Jump]**  
Set a target comment No.
- **[Jump] button**  
Displays the comment No. which is specified in [Jump].
- **[Close] button**  
Closes the [Jump] dialog.

#### 10) [Display/Hide Attribute] button

Switches display or non-display of the character property setting field, HQ character setting field, and outline font setting field.

⇒5.8.4 ■ 11 Switching display or non-display of the property

#### 11) [New Group] button

Creates a new comment group.

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

#### 12) [Language Switching] button

Configures the language switching settings.

After clicking the button, configure the language switching settings in the [Environmental Setting] window.

⇒5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

#### 13) [Comment No. Notation Switching] button

Switches the comment No. notation of the comment No. field between decimal and hexadecimal.

#### 14) Comment No. field

The field to display and change the comment Nos.

Comment Nos. are always displayed in ascending order.

Comment Nos. are assigned automatically when a new comment is created.

The comment Nos. can be changed by double-clicking a comment No cell.

Clicking a cell left to a comment No. selects the row.

To select multiple rows, perform one of the following operations.

- Hold down the [Ctrl] key and click a target cell. To deselect a selected row, perform the same operation.
- Select the first row in the range, hold down the [Shift] key, and click a target cell to select the last row in the range.
- Click the first cell and drag to the last cell in the range.

#### 15) Comment field

The field to display and edit text of comments.

Column No. and remarks	Column No.	1 日本語	2 English
Windows Font	Windows Font	MS PGothic	None
KANJI region	Comment No. (DEC)	KANJI Region Japan	KANJI Region Japan
Comment	1	開始	Start
	2	実行中	Running
	3	完了	Done
	4		

Item	Description
Column No. and remarks	Column No. and remarks of a comment column Click a target cell to edit its contents.
Windows Font	This item is displayed when [Read comment data from the memory card] is deselected in the [Comment Group Property] dialog. Displays the Windows fonts that are selected in the [Comment Group Property] dialog. Click a Windows font cell to select the column. To select multiple columns, perform one of the following operations. • Click a Windows font cell to select the first column in the range, hold down the [Shift] key, and click another Windows font cell to select the last column in the range. • Click a Windows font cell and drag to the last cell in the range. To change the set Windows fonts, double-click a Windows font cell to display the [Comment Group Property] dialog. ⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

Item	Description
KANJI region	<p>KANJI region of a comment column</p> <p>The KANJI region is changeable in the [Comment Group Property] dialog.</p> <p>→5.8.4 ■ 2 (1) [Comment Group Property] dialog</p> <p>Click a KANJI region cell to select the column.</p> <p>To select multiple columns, perform one of the following operations.</p> <ul style="list-style-type: none"> <li>• Click a KANJI region cell to select the first column in the range, hold down the [Shift] key, and click another KANJI region cell to select the last column in the range.</li> <li>• Click a KANJI region cell and drag to the last cell in the range.</li> </ul>
Comment	<p>Set the comment corresponding to a comment No.</p> <p>Double-click a target cell to edit its comment.</p>

## 16) Character property setting field

The field to display and set the character property of comments.

Available character properties differ depending on the object types.

For the difference among the object types, refer to the following.

→5.8.1 ■ 5 Display attributes

Item	Description
Character color	<p>Set the character color.</p> <p>Select a color from the color palette.</p>
Reverse	<p>Select this item to highlight the characters.</p> <p>This item can be selected only when [Regular] is selected for [Style].</p>
Blink	<p>Set the blinking speed of characters.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
Character effect	<p>Select a character effect.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Standard]</li> <li>• [Bold]</li> <li>• [Solid]</li> <li>• [Raised]</li> </ul>
Shade Color	<p>Select the shade color of characters when [Solid] or [Raised] is selected for [Style].</p> <p>Select a color from the color palette.</p>

## 17) HQ character setting

This item is displayed when [Read comment data from the memory card] is deselected in the [Comment Group Property] dialog.

Set whether to use HQ characters.

The fonts selected in this setting can be used for objects.

However, some objects cannot use some fonts even if the fonts are selected in this setting.

For the difference among the object types, refer to the following.

→5.8.1 ■ 5 Display attributes

#### (4) Items in the right-click menu

The [Comment List] dialog can be edited with the right-click menu.

##### 1) [New Row]

Creates a new comment.

A new comment is added to below the bottom row of the comment list.

##### 2) [Cut]

Cuts a selected row, column, or cell.

##### 3) [Copy]

Copies a selected row, column, or cell.

##### 4) [Paste]

Paste the cut or copied row, column, or cell.

##### 5) [Insert Row]

Inserts a row in the comment list.

If multiple rows are selected in the comment list, the same number of new rows are inserted above the selected ones.

When a row is inserted in the consecutive comment Nos., all rows after the inserted row are renumbered.

##### 6) [Insert Column]

Inserts a column in the comment list.

If multiple columns are selected in the comment list, the same number of new columns are inserted to the left of the selected ones.

When a column is inserted to the consecutive column Nos., all columns on the right of the inserted column are renumbered.

##### 7) [Delete]

Deletes a selected row, column, or cell.

##### 8) [Clear Text]

Deletes the character strings set in a selected row or column.

##### 9) [Copy to Excel]

Copies a selected row or column to an Excel sheet.

Paste the selected row or column to an Excel sheet.

##### 10) [Paste from Excel]

Pastes a column or cell to the comment list.

Cut or copy the column or cell in the source Excel worksheet in advance.

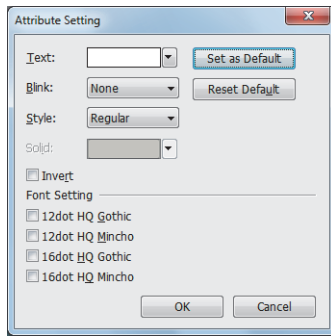

If the number of columns to be pasted exceeds the number of columns in the comment list, new columns are added to the comment list.

##### 11) [Select All]

Selects all the comments in the comment list.

##### 12) [Property]

Set the character property of comments.

- **[Text]**  
Set the character color.
- **[Blink]**  
Set the blinking speed of characters.  
The following shows the items to be selected.
  - [None]
  - [Low]
  - [Medium]
  - [High]
- **[Style]**  
Select a character effect.  
The following shows the items to be selected.
  - [Standard]
  - [Bold]
  - [Solid]
  - [Raised]
- **[Solid]**  
Select the shade color of characters when [Solid] or [Raised] is selected for [Style].
- **[Invert]**  
Highlights characters.  
This item can be set only when [Regular] is selected for [Style].
- **[Font Setting]**  
This item is displayed when [Read comment data from the memory card] is deselected in the [Comment Group Property] dialog.  
Select a font for comments.  
The following shows the items to be selected.
  - [12dot HQ Gothic]
  - [12dot HQ Mincho]
  - [16dot HQ Gothic]
  - [16dot HQ Mincho]

## (5) Manipulations using a mouse and keyboard

The following shows how to manipulate the cells in the [Comment List] window with a mouse and keyboard. You can select, copy, cut, or paste the cells in the comment No. field and the comment field.

Operation	Action
Arrow (Up/Down/Left/Right)	Move the cell pointer.
[Shift] + Arrow (Up/Down/Left/Right)	Extend the selection of cells. Select the first cell, hold down the [Shift] key and press an arrow key to extend the selection.
[Shift] + Click	Select a range of cells. Select the first cell in the range, hold down the [Shift] key and click the last cell in the range.
[Ctrl] + [C]	Copy the contents of a selected cell. When multiple cells are selected, the contents of all the selected cells are copied.
[Ctrl] + [X]	Cut the contents of a selected cell.
[Ctrl] + [V]	Paste the contents of the clipboard to a selected cell.

## ■ 2 Creating a new comment group

The following shows how to create a comment group.

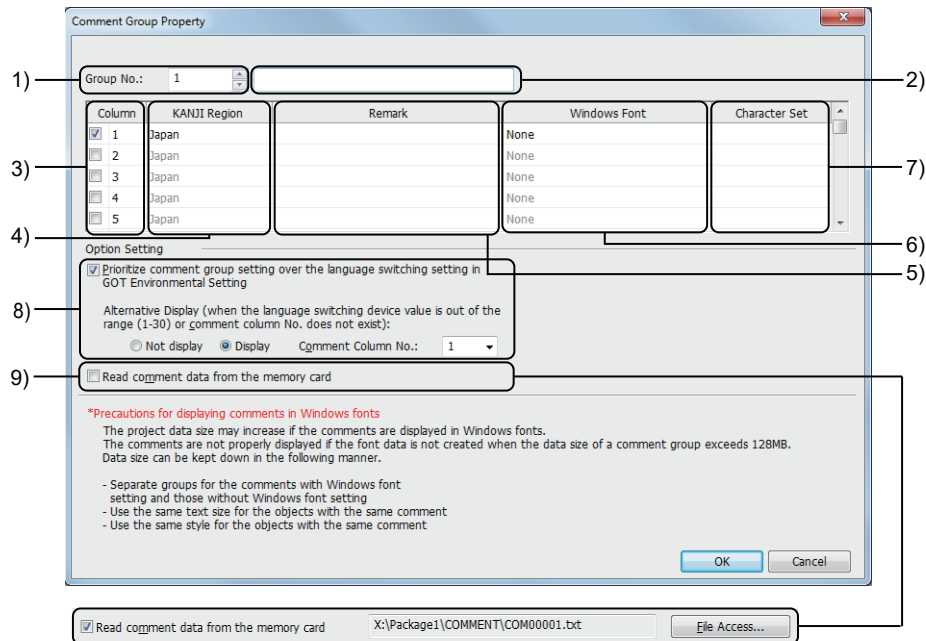

- Step 1** Open the [Comment Group Property] dialog by either of the following operations.
- Selecting [Common] → [Comment] → [Open] from the menu to open the [Open Comment Group] dialog and clicking the [New Comment Group] button
    - ⇒ 5.8.4 ■ 1 (1) [Open Comment Group] dialog
  - Double-clicking [New Comment Group] in the comment part of the project tree in the [Project] window
    - ⇒ 2.2.4 ■ 1 [Project] window
  - Right-clicking [Comment] of the project tree and selecting [New Comment Group] from the menu
    - ⇒ 2.2.4 ■ 1 [Project] window
- Step 2** Set the created comment group in the [Comment Group Property] dialog.
- ⇒ 5.8.4 ■ 2 (1) [Comment Group Property] dialog

## (1) [Comment Group Property] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Create a new comment group in the [Comment Group Property] dialog.

Select [Common] → [Comment] → [New Comment Group] from the menu to display the dialog.

### 1) [Group No.]

Set a comment group No.

### 2) Title

Set a title of the comment group.

Up to 32 characters can be set.

### 3) [Column No.]

Set column Nos. to be used in the comment group.

Select column Nos. to be used.

### 4) [KANJI Region]

Set a KANJI region for each comment column.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

### 5) [Remark]

Set remarks for each comment column.

Up to 32 characters can be set.

### 6) [Windows Font]

This item is displayed when [Read comment data from the memory card] is deselected.

Select a Windows font for each comment column.

### 7) [Character Set]

This item is displayed when [Read comment data from the memory card] is deselected.

Select a character set for each selected Windows font.

The selectable character sets vary with the selected Windows font.

### 8) [Prioritize language switching of GOT environmental setting]

Set whether to prioritize the setting in this dialog over the settings of the language switching of the GOT environmental settings.

This item can be set only when the language switching device is set in the GOT environmental settings.

Item	Description
[Alternative Display (when the language switching device value is out of the range (1-30) or comment column No. does not exist)]	<p>Set the display method of the comment columns for when the column No. of the comment column specified by the language switching device does not exist.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Not display]           <p>Comments are not displayed.</p> </li> <li>• [Display]           <p>The comment of the specified column No. is displayed.</p> <p>After selecting this item, set a column No. of the column to be displayed.</p> <p>When [Read comment data from the memory card] is selected, the comment column number specified in [Language Switching] in the GOT environmental settings is applied.</p> </li> </ul>

### 9) [Read comment data from the memory card]

Not available to GT23 and GT21.

Displays comments by reading a comment text file from the data storage installed on the GOT.

Click the [File Access] button to display the [File Access] dialog.

Set the save destination and file name of a text file.

#### • [Drive Name]

Select a drive to which the text file is saved.  
The following shows the items to be selected.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.  
→ 1.2.7 Drive configuration of the target GOT for data transfer

#### • [Folder Name]

Specify the name of the folder to which the text file is saved.  
For the restrictions on the folder name used in the GOT, refer to the following.  
→ 12.4 Restrictions for Folder Names and File Names used in GOT

#### • [File Name]

Specify the name of the text file to be saved.  
The text file can be saved as a Unicode text (\*.TXT) or CSV (\*.CSV) file.  
For the restrictions of the file name used in the GOT, refer to the following.  
→ 12.4 Restrictions for Folder Names and File Names used in GOT

## ■ 3 Creating a new row

Create a new comment row in the [Comment List] dialog or the project tree.

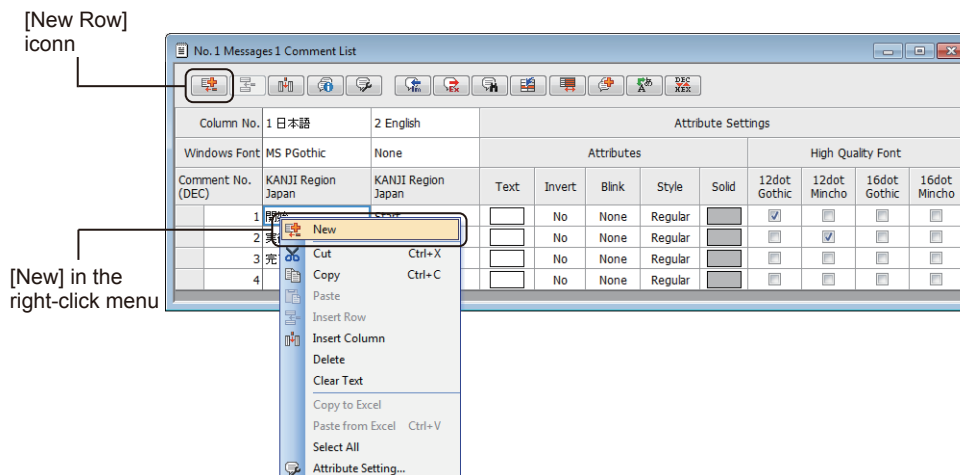

The number which is one plus the largest comment No. in the comment groups is assigned to the comment No. of a new comment.

The largest settable comment No. is 32767 (or 7FFF in hexadecimal).

If 32767 (or 7FFF in hexadecimal) is already used, the smallest unused number in the comment group is assigned to the new comment.

## (1) Adding a comment row from the [Comment List] dialog

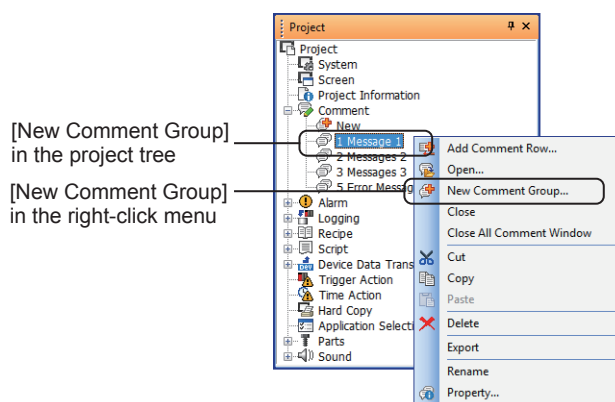

**Step 1** Click the [New Row] button, or select [New] from the right-click menu.

**Step 2** A new row is created in the comment list.

## (2) Adding a comment row from the project tree

**Step 1** Double-click [New Comment Group] from the project tree or select [New Comment Group] from the right-click menu.

**Step 2** A new row is created in the comment list.

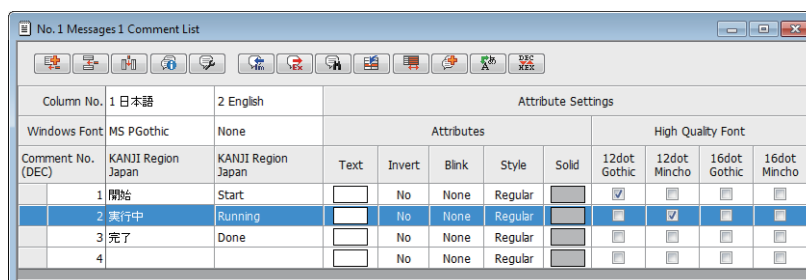

## ■ 4 Inserting a row

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

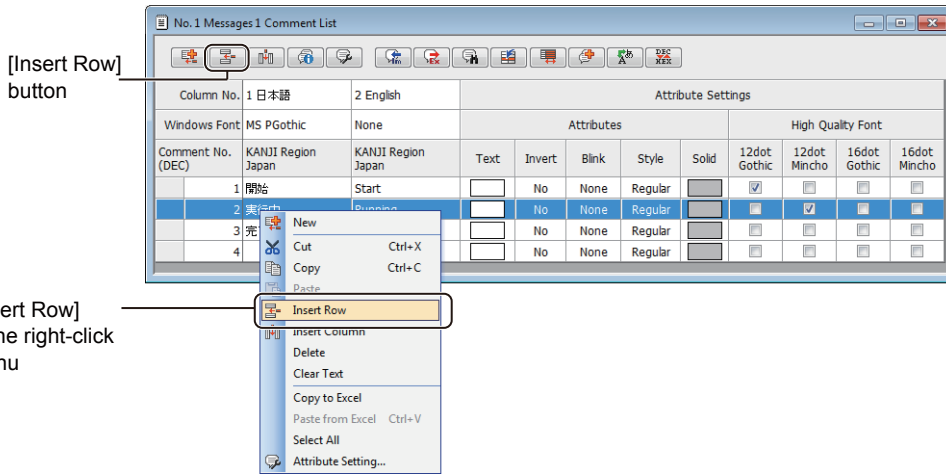

Insert a row in the [Comment List] dialog.

If multiple rows are selected in the comment list, the same number of new rows are inserted above the selected ones. When a row is inserted in the consecutive comment Nos., all rows after the inserted row are renumbered.

**Step 1** Select the place to insert a row in the [Comment List] dialog.

**Step 2** Click the [Insert Row] button, or select [Insert Row] from the right-click menu.

**Step 3** A row is inserted above the selected row.

## ■ 5 Inserting a column

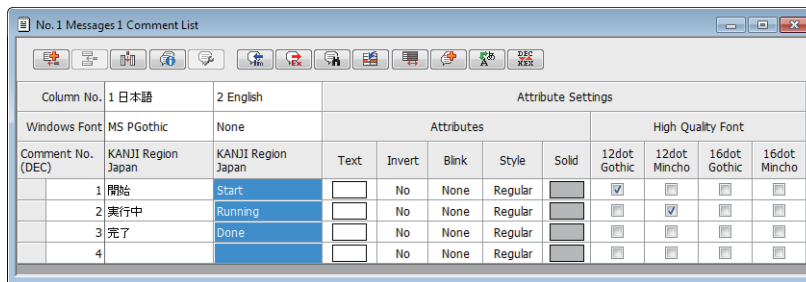

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Insert a column in the [Comment List] dialog.

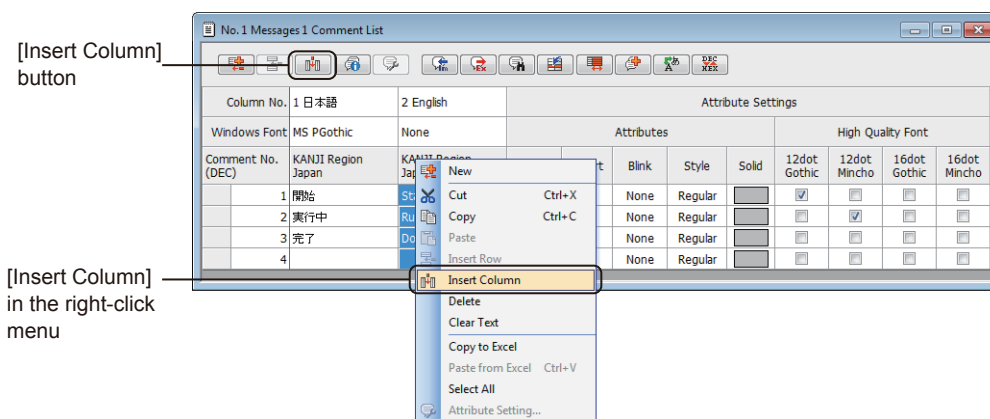

If multiple columns are selected in the comment list, the same number of new columns are inserted to the left of the selected ones.

When a column is inserted to the consecutive column Nos., all columns on the right of the inserted column are renumbered.

**Step 1** Select the place to insert a column in the [Comment List] dialog.

**Step 2** Click the [Insert Column] button, or select [Insert Column] from the right-click menu.

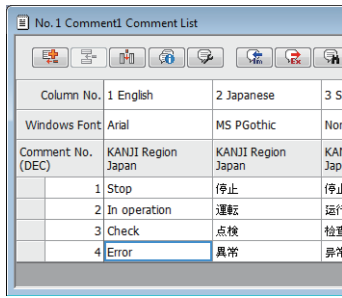

**Step 3** A column is inserted to the left side of the selected column.

## ■ 6 Importing comments

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The registered comments can be saved as a Unicode text file (\*.TXT) or a CSV file (\*.CSV).

A created file can be read as comments by the text editor or spreadsheet software.

Text editor, spreadsheet software

## (1) Adding or overwriting comments when importing comments from a file

The comment Nos. of the comments in the file to be imported and the comment Nos. of the registered comments are compared.

- If the comment Nos. are different each other, the comments in the file are added to the registered comments.
- If the comment Nos. are the same, the registered comments are overwritten with the comments in the file.

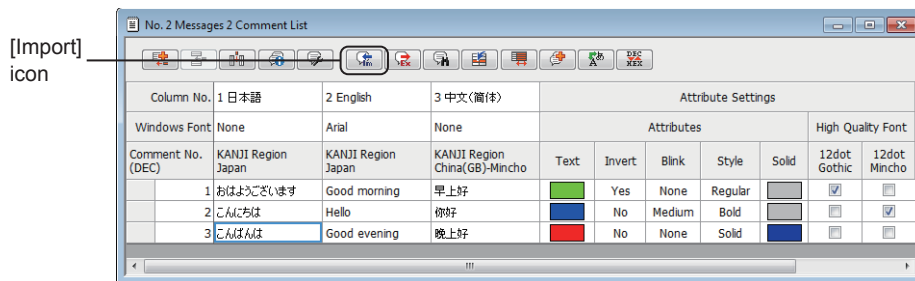

## (2) Setting procedure

Import comments in the [Comment List] dialog.

For the format of text files for comments, refer to the following.

⇒ 5.8.2 ■ 5 Importing or exporting comments

**Step 1** Click the [Import] button.

**Step 2** Select a file to be imported.

**Step 3** The following dialog appears.

Click the [Yes] button to import the comments in a text file.

## 7 Exporting a comment group

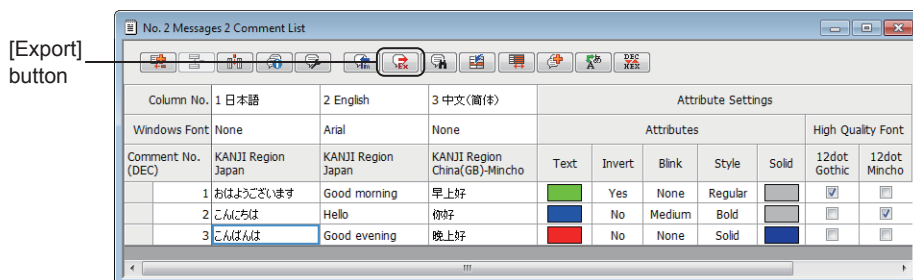

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Export a comment group in the [Comment List] dialog or the project tree.  
For the format of text files for comments, refer to the following.

→5.8.2 ■ 5 Importing or exporting comments

### (1) Exporting a comment group from the [Comment List] dialog

Step 1 Click the [Export] button.

Step 2 Set [File name], [Save as type], and [Format] to save the file.

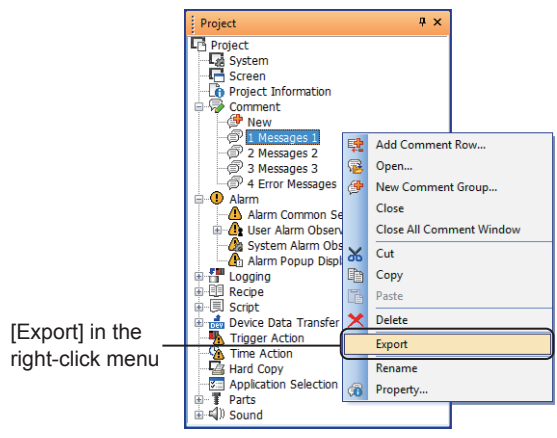

Step 3 The comment group is exported.

### (2) Exporting from the project tree

Step 1 Select a comment group in the project tree and select [Export] in the right-click menu.

→2.2.4 ■ 1 [Project] window

**Step 2** Set [File name], [Save as type], and [Format] to save the file.

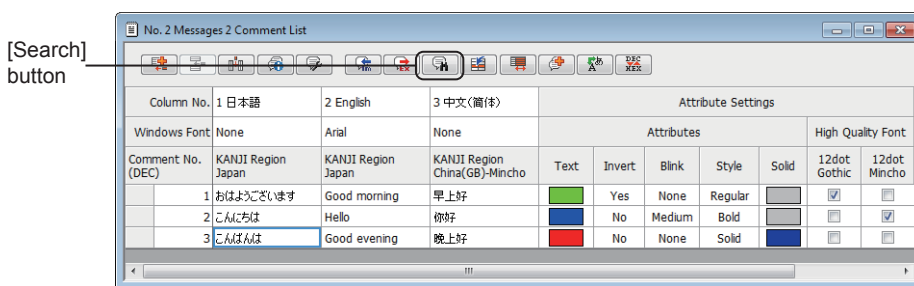

**Step 3** The comment group is exported.

## 8 Comment searching

Search a comment in the [Comment List] dialog.

**Step 1** Click the [Search] button.

**Step 2** Search a comment in the [Search] dialog.

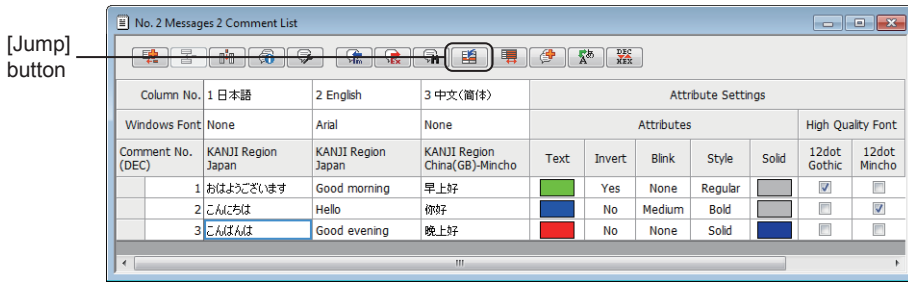

## 9 Jumping to the specified comment

Jump to the specified comment from the [Comment List] dialog.

Step 1 Click the [Jump] button.

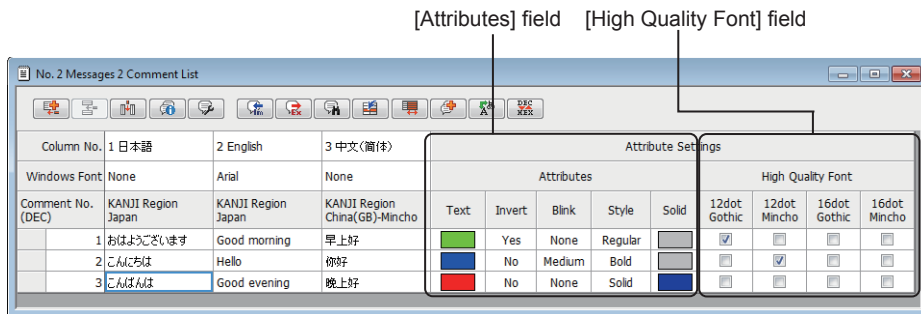

Step 2 Set a target to jump in the [Jump] dialog and click the [Jump] button.

## ■ 10 Changing property

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Change the character property of a comment in the [Comment List] dialog.  
Edit the character property in the [Attributes] or [High Quality Font] field.

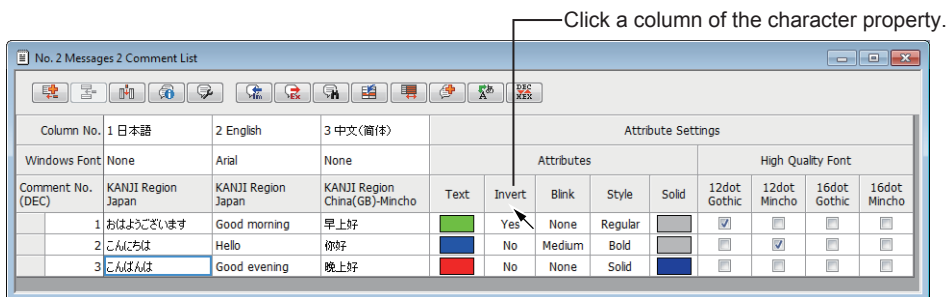

The following shows the methods of the batch editing for the character property of multiple comments.

- Changing the character property of an entire column in the [Comment List] dialog  
⇒5.8.4 ■ 10 (1) Changing the character property of an entire column in the [Comment List] dialog
- Using the [Attribute Setting] dialog  
⇒5.8.4 ■ 10 (2) Using the [Attribute Setting] dialog

### (1) Changing the character property of an entire column in the [Comment List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Step 1 Click an entire column of the character property to be changed.

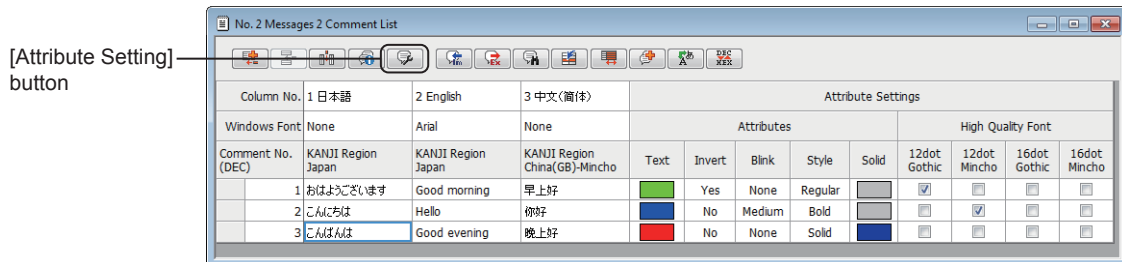

Step 2 Click an option of the property to edit the character property in batch.

Attributes				
Text	Invert	Blink	Style	Solid
	Yes	Low	Regular	
	No	None	Bold	
	No	Medium	Solid	
		High		

## (2) Using the [Attribute Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select a comment to change the character property in the [Comment List] dialog and click the [Attribute Setting] button.

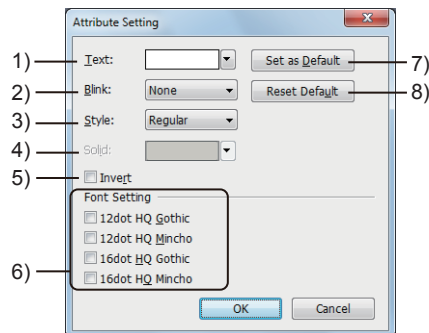

**Step 2** Change the character property of the comment in the [Attribute Setting] dialog.

→ 5.8.4 ■ 10 (3) [Attribute Setting] dialog

## (3) [Attribute Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Change the character property and font of the comment in the [Attribute Setting] dialog.

### 1) [Text]

Set the character color.

### 2) [Blink]

Set the blinking speed of characters.

The following shows the items to be selected.

- [None]
- [Low]
- [Medium]
- [High]

### 3) [Style]

Select a character effect.

The following shows the items to be selected.

- [Standard]
- [Bold]
- [Solid]
- [Raised]

### 4) [Solid]

Select the shade color of characters when [Solid] or [Raised] is selected for [Style].

### 5) [Invert]

Highlights characters.

This item can be selected only when [Regular] is selected for [Style].

### 6) [Font Setting]

This item is displayed when [Read comment data from the memory card] is deselected in the [Comment Group Property] dialog.

Select a font for the comment.

The following shows the items to be selected.

- [12dot HQ Gothic]
- [12dot HQ Mincho]
- [16dot HQ Gothic]
- [16dot HQ Mincho]

### 7) [Set as Default] button

Sets the input setting in this dialog as the default value.

→ 11.10.6 Customizing the default value

### 8) [Reset] button

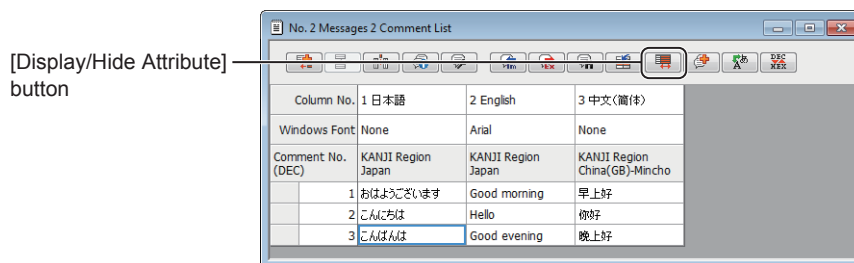

Resets the input setting in this dialog to the initial value.

## ■ 11 Switching display or non-display of the property

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the [Comment List] dialog, displaying or hiding the character property can be switched.

Switch display or non-display of the character property using the [Display/Hide Attribute] button.

## ■ 12 Registering characters to a comment group (Text figure, touch switch, and others)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- (1) Registering the characters of a text figure to a comment group
- (2) Registering the characters in the [Text] field to a comment group

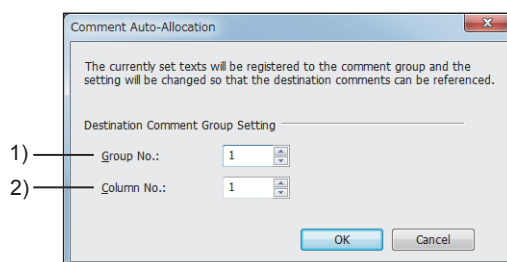

### (1) Registering the characters of a text figure to a comment group

In the text figure setting, you can register the characters entered in the [Text] field to a comment group, and convert the text figure to a simple comment display object.

**Step 1** Open the text figure setting dialog, and click the [Convert to Comment Display] button.

**Step 2** In the [Comment Auto-Allocation] dialog, set [Group No.] and [Column No.] of the comment group. You cannot register the characters to a comment group where identical characters already exist.

### 1) [Group No.]

Set the number of the comment group where the characters are to be registered.

## 2) [Column No.]

Set the column number of the comment group where the characters are to be registered.

**Step 3** Click the [OK] button to register the characters to the comment group and convert the text figure to a simple comment display object.

In the [Simple Comment Display] dialog, click the [OK] button to execute the conversion, or the [Cancel] button to cancel the conversion. However, registering the characters to the comment group is not canceled.

## (2) Registering the characters in the [Text] field to a comment group

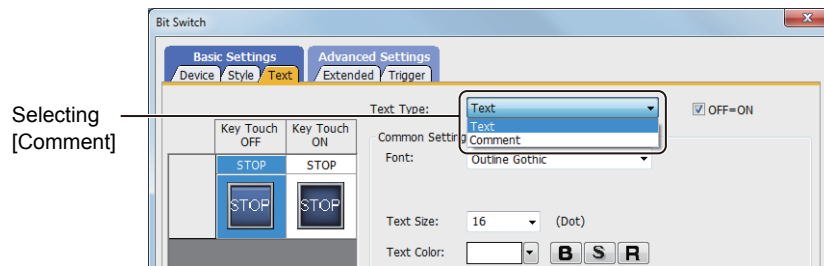

For the following objects, when entering characters in the [Text] field, you can register the characters to a comment group by changing the text type from [Text] to [Comment], and enable the registered comment to be referred.

- Touch switch
- Lamp

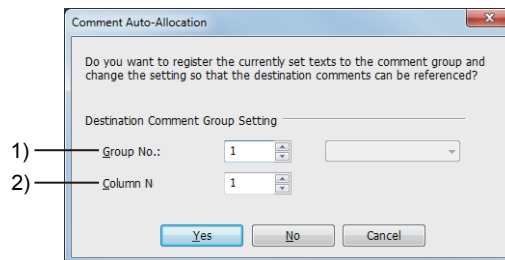

The following shows the registration procedure for a bit switch as an example.

**Step 1** Open the object setting dialog, and select the [Text] tab.

**Step 2** Select [Text] in [Text Type].

**Step 3** In the [Comment Auto-Allocation] dialog, set [Group No.] and [Column No.] of the comment group. You cannot register the characters to a comment group where identical characters already exist.

## 1) [Group No.]

Set the number of the comment group where the characters are to be registered.

## 2) [Column No.]

Set the column number of the comment group where the characters are to be registered.

**Step 4** To register the characters to the comment group, click [Yes] button.

To not to register the characters to the comment group, click [No] button.

To cancel converting the text type to [Comment], click [Cancel] button.

## 5.9 Registering Parts ([Parts])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒5.9.1 Outline of parts
- 5.9.2 Specifications of parts
- 5.9.3 How to use parts ([Parts])
- 5.9.4 Precautions
- 5.9.5 [Parts Image List] window
- 5.9.6 [Parts Setting] dialog

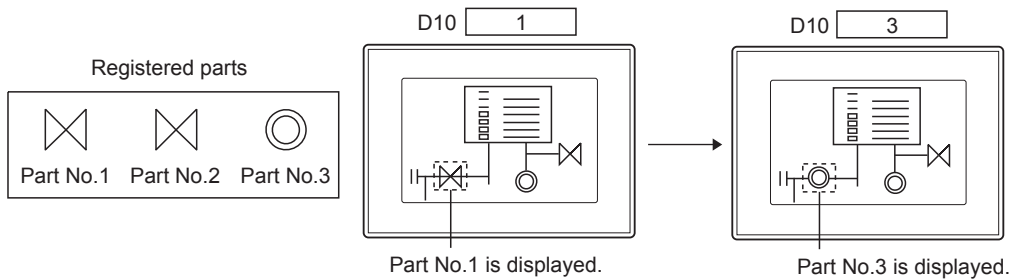

### 5.9.1 Outline of parts

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Groups of figures can be registered as parts.  
 Each of the registered parts can be set as a shape to each object.  
 The parts can also be placed directly on the screen as a figure.  
 Objects for which parts can be used depends on the figures registered as parts.

#### ■ 1 Using parts for parts display and parts movement objects

If the parts are set to a parts display or parts movement object, the GOT can display multiple parts by switching the display or display movements of the parts.

If displaying a part as a mark, you can change the white-colored area of the part to other colors.

Register a part to be displayed as a mark as follows.

- Do not use a BMP, JPEG, or PNG file as a part to be displayed as a mark.  
 (The color of the figure cannot be switched.)
- Draw the area of the figure, whose color is to be changed, in white.

#### ■ 2 Using a part as a figure

Parts can be placed on the screen as they are.

#### ■ 3 Using a part as the shapes for objects

Parts can be set as the shapes for objects including switches or lamps.

## 5.9.2 Specifications of parts

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Number of registerable parts per project

Up to 32767 parts can be registered per project.

### ■2 Figures placeable per part

Up to 10000 figures can be placed per part.

The volume of the data used for the part is the total volume of the data of the figures placed to the part.

The following figures can be placed to a part.

- Basic figure:

Line, freeform line, rectangle, polygon, circle, arc, sector, scale, piping, and paint

- ⇒7.3 Drawing a Line

- 7.4 Drawing a Line Freeform

- 7.5 Drawing a Rectangle

- 7.6 Drawing a Polygon

- 7.7 Drawing a Circle

- 7.8 Drawing an Arc or a Sector

- 7.10 Drawing a Scale

- 7.11 Drawing a Piping

- 7.12 Painting Figures

- Character string: Text and logo text

- ⇒7.1 Drawing a Text

- 7.2 Drawing a Logo Text

- Image: BMP file, JPEG file, and PNG file

- ⇒7.13 Pasting an Image File

## 5.9.3 How to use parts ([Parts])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ ■ 1 Registering parts
  - 2 Copying parts
  - 3 Deleting parts
  - 4 Editing parts
  - 5 Changing part numbers and names
  - 6 Using the image file stored in the data storage as a part

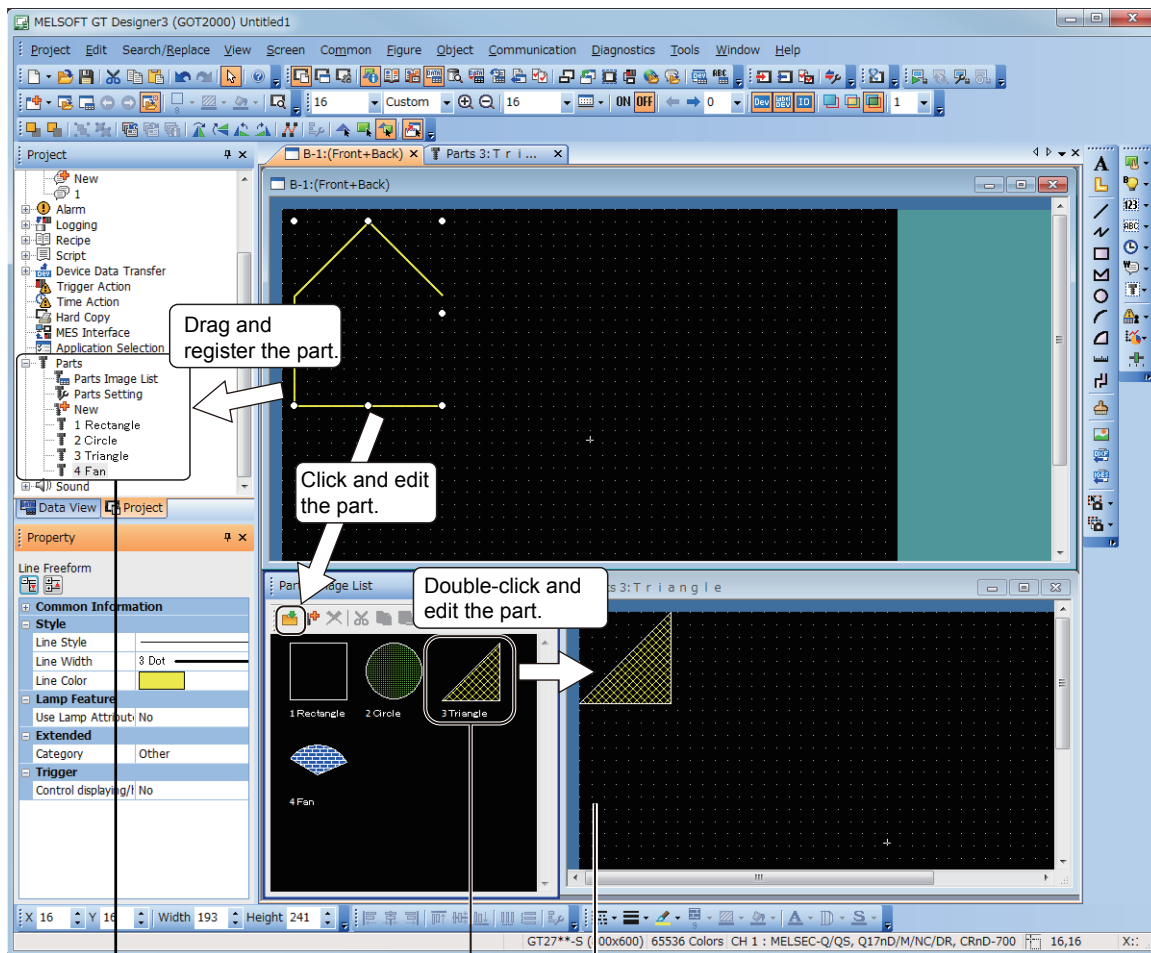

Select a part in the [Parts Image List] window or in the project tree to create, edit, or delete a part or change the property of a part.

For how to and display the [Parts Image List] window, refer to the following.

⇒5.9.5 [Parts Image List] window

For how to display the project tree, refer to the following.

⇒2.2.4 ■ 1 [Project] window

Parts editor

· This editor is for the editing of parts. You can edit the registered parts.

[Parts Image List] window

· A shape can be registered as a part by clicking the [Register] icon.  
· You can check the image of the registered shape.

Project tree

· A shape can be registered as a part by dragging it from the screen editor and releasing it in the project tree.  
· The parts image list window and the parts editor can be displayed.

## 1 Registering parts

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Parts can be registered in either of the following two methods: You can register a figure on the screen editor or you can newly create a part to register it.

- 5.9.3 ■ 1 (1) Registering a figure on the screen editor
- 5.9.3 ■ 1 (2) Creating a new part

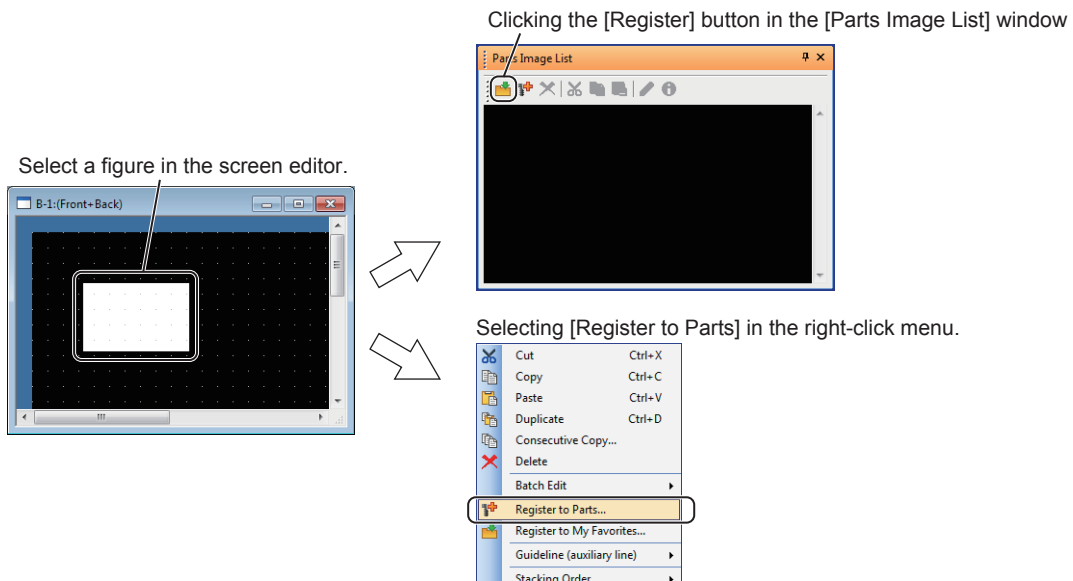

### (1) Registering a figure on the screen editor

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (a) Registering a figure as a part in the [Screen Image List] window

**Step 1** To register a figure on the screen editor as a part, select the figure and perform either of the following operations.

- Clicking the [Register] button in the [Parts Image List] window
- Selecting [Register to Parts] in the right-click menu.

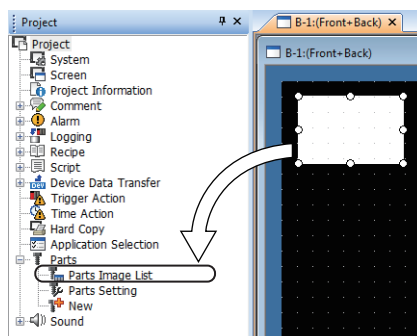

**Step 2** The [Parts Property] dialog appears.

Set [Number] and [Name] then click the [OK] button.  
The part is registered in the project data.

#### (b) Registering a figure as a part from the project tree

**Step 1** Drag the figure to be registered as a part onto the project tree.

- Step 2** The [Parts Property] dialog appears.  
Set [Number] and [Name] then click the [OK] button.  
The part is registered in the project data.

## (2) Creating a new part

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Common] → [Parts] → [New] from the menu or perform either of the following operations in the [Parts Image List] window.

- Clicking the [New] button
- Selecting [New] in the right-click menu

- Step 2** The [Parts Property] dialog appears.  
Set [Number] and [Name] then click the [OK] button.  
The part is registered in the project data.

- Step 3** Draw a figure to be registered as a part on the parts editor.  
After drawing the figure, close the parts editor.

## 2 Copying parts

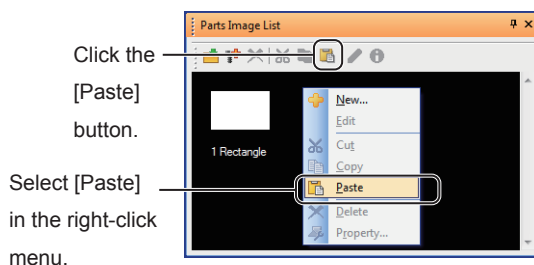

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Copying a part in the part image list

- Step 1** Select a part to be copied in the [Parts Image List] window.  
After selecting the part, perform either of the following operations.
- Clicking the [Copy] button
  - Selecting [Copy] in the right-click menu

**Step 2** Click the [Paste] button or right-click a part to select [Paste] from the menu.

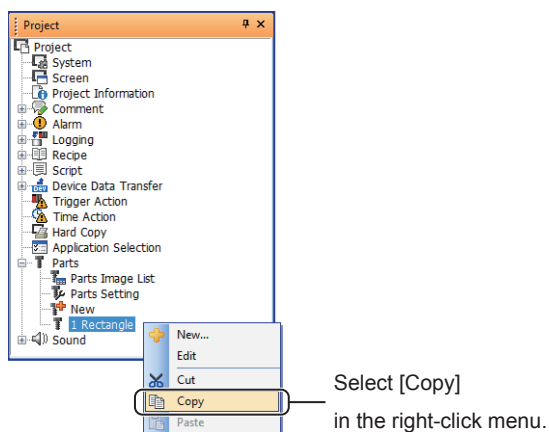

**Step 3** The [Parts Property] dialog appears.  
Set [Number] and [Name] then click the [OK] button.  
The part is registered in the project data.

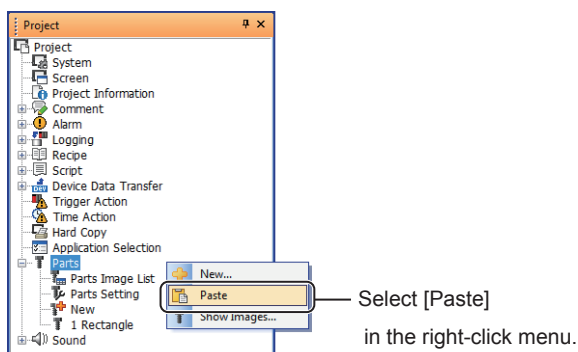

## (2) Copying a part in the project tree

**Step 1** Select a part to be copied in the project tree.  
Right-click the selected part to select [Copy] from the menu.

**Step 2** Right-click [Parts] to select [Paste].

- Step 3** The [Parts Property] dialog appears.  
Set [Number] and [Name] then click the [OK] button.  
The part is registered in the project data.

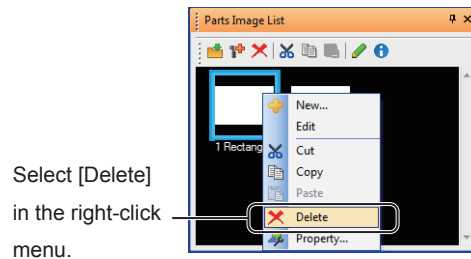

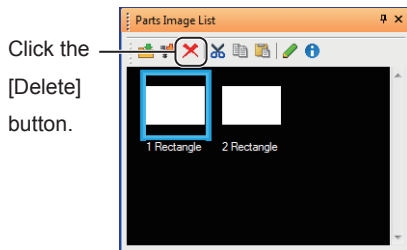

### ■ 3 Deleting parts

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

#### (1) Deleting a part in the part image list

- Step 1** Select a part to be deleted in the [Parts Image List] window.  
After selecting the part, perform either of the following operations.
- Clicking the [Delete] button
  - Selecting [Delete] in the right-click menu

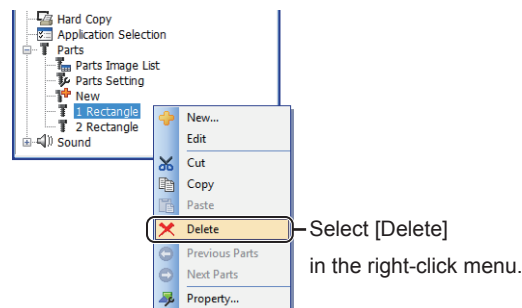

- Step 2** The confirmation dialog is displayed.  
Click the [Yes] button to delete the part displayed on the confirmation dialog.  
Click the [Delete All] button to delete all the selected parts.  
Click the [No] button to cancel the deletion of the part displayed on the confirmation dialog.  
Click the [Cancel] button to cancel the deletion of all the selected parts.

#### (2) Deleting a part in the project tree

- Step 1** Select a part to be deleted in the project tree.  
Right-click the selected part to select [Delete] from the menu.

- Step 2** The confirmation dialog is displayed.  
Click the [Yes] button to delete the part displayed on the confirmation dialog.  
Click the [Delete All] button to delete all the selected parts.  
Click the [No] button to cancel the deletion of the part displayed on the confirmation dialog.  
Click the [Cancel] button to cancel the deletion of all the selected parts.

## ■ 4 Editing parts

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Editing a part from the part-image list

- Step 1** Select a part to be edited in the [Parts Image List] window.
- After selecting the part, perform either of the following operations.
- Clicking the [Edit] button
  - Selecting [Edit] in the right-click menu

Click the [Edit] button.

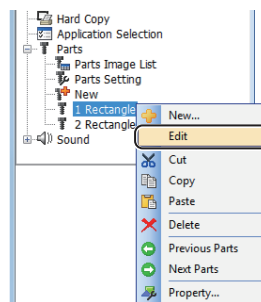

Select [Edit] in the right-click menu.

- Step 2** The parts editor appears.
- Edit the selected part.
- After editing the part, close the parts editor.

### (2) Editing a part from the project tree

- Step 1** Select a part to be edited in the project tree.
- Right-click the selected part to select [Edit] from the menu.

Click [Edit] in the right-click menu.

- Step 2** The parts editor appears.
- Edit the selected part.
- After editing the part, close the parts editor.

## ■ 5 Changing part numbers and names

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Changing the number or name of a part in the part image list

- Step 1** Select a part whose number or name is to be changed in the [Parts Image List] window.  
After selecting the part, perform either of the following operations.
- Clicking the [Property] button
  - Selecting [Property] in the right-click menu

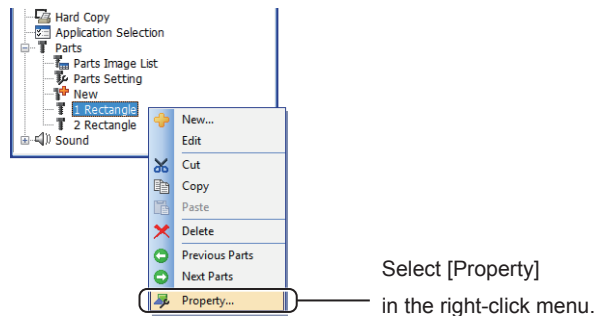

- Step 2** The [Parts Property] dialog appears.  
After changing [Number] or [Name], click the [OK] button to apply the change.

### (2) Changing the number or name of a part in the project tree

- Step 1** Select a part whose number or name is to be changed in the project tree.  
Right-click the selected part to select [Property] from the menu.

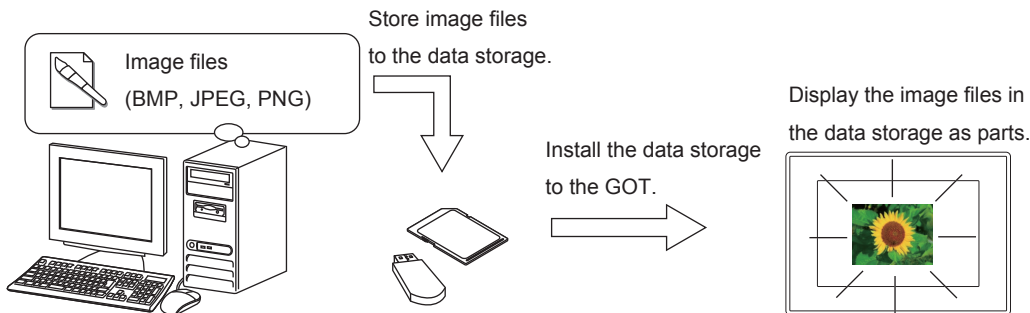

- Step 2** The [Parts Property] dialog appears.  
After changing [Number] or [Name], click the [OK] button to apply the change.

## ■ 6 Using the image file stored in the data storage as a part

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The image file stored in the data storage can be used for the parts display or parts movement.  
Storing parts in the data storage reduces the size of the project data.

The following two methods are provided to use an image file in the data storage as a part.

- 5.9.3 ■ 6 (1) Specifying an image file from an object
- 5.9.3 ■ 6 (2) Specifying an image file in the project

### (1) Specifying an image file from an object

Specify an image-file part stored in the data storage in the object setting of the parts display or parts movement. Prepare one folder for each object to save image files separately per object.

Item	Description
Folder name	Specified with the setting of the parts display or parts movement.
File name	Specified with the setting of the parts display or parts movement.
Available drive	Drive A, drive B, drive E, drive F, drive G, and drive X (current drive)
Setting range	Object units
Maximum number of parts	Max. 65536 parts

The following shows the procedure to register image files.

**Step 1** Create a folder in the data storage to store image files.

Create a folder per object (parts display or parts movement).

The folder name must be the same as the name set for the parts display or parts movement.

**Step 2** Store an image file to be used as a part to the created folder.

The file name must be the same as the name set for the parts display or parts movement.

Example) File name: IMG, parts No.: 0123, number of digits: 4

Parts No. is assigned according to [Digits] set for the parts display or parts movement.

- Five digits: 00001 to 65535
- Four digits: 0001 to 9999
- Three digits: 001 to 999
- Two digits: 01 to 99
- One digit: 1 to 9

## (2) Specifying an image file in the project

Use parts No. 9001 or later number as the numbers dedicated for image-file parts.

In this case, store image files in one folder.

The file name and the folder name are fixed.

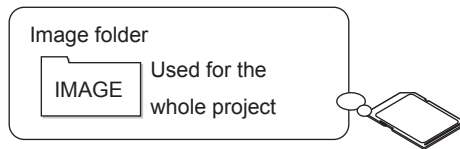

Item	Description
Folder name	IMAGE (fixed)
File name	IMG + 0 + rightmost three digits of the parts No,
Available drive	Drive A
Setting range	Project units
Maximum number of parts	Max. 999 parts

The following shows the procedure to register image files.

### Step 1 Create a folder name it as IMAGE in the SD-card.

If any name other than IMAGE is used for the folder, the image file cannot be displayed with the parts display or parts movement.

Create a folder for image files for the parts display and parts movement in the SD card. (Folder name: IMAGE)

### Step 2 Store image files to be used as parts in the IMAGE folder in the SD-card.

Set each file name as follows.

Example) Parts No.: 9123

■ 1 Restriction for displaying figures

(1) Line width of outer frame

Draw the external frame of the figure with one dot of the line width to register as a part.  
 The outer frame line with the width of two or more dots may not be displayed correctly.  
 To display the outer frame line with the width of two or more dots, perform either of the following operations.

- Drawing the outer frame line in combination with figures that have one-dot line width

- Setting a figure with an outer frame of two or more dots on the unused base screen and displaying the base screen as a part in the parts display

(2) Line width of line (excluding slant lines)

A line (excluding slant lines) that has the width of two to seven dots and has been registered as a part may not be displayed correctly.

To display the line with the width of two or more dots, perform either of the following operations.

- Drawing a line by deforming a rectangle (color fill)
- Drawing a line in combination with lines that have one-dot line width

■ 2 Size of the image-file parts stored in the data storage

BMP JPEG, or PNG parts are displayed on the GOT in the same size as the ones of the image-file parts stored in the data storage.

The image file bigger than the display size of the GOT cannot be displayed.

Store image-file parts whose sizes are the same as or smaller than the display size of GOT in the data storage.

## 5.9.5 [Parts Image List] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Displays the list of parts registered in GT Designer3. You can register, edit, or delete parts in the [Parts Image List] window.

Select [Common] → [Parts] → [Parts Image List] from the menu to display this dialog.

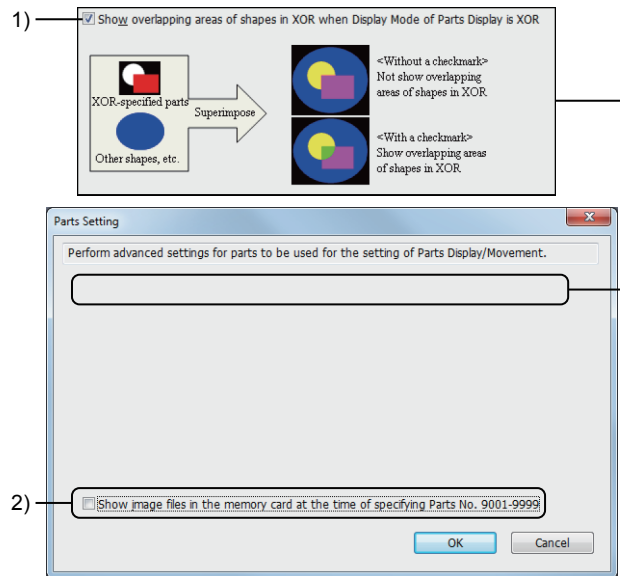

- 1) **[Register] button**  
Registers a selected figure as a part.
- 2) **[New Register] button**  
Registers a new part.
- 3) **[Delete] button**  
Deletes a selected part.
- 4) **[Cut] button**  
Cuts a selected part.
- 5) **[Copy] button**  
Copies a selected part.
- 6) **[Paste] button**  
Pastes a copied or cut part to a selected area.
- 7) **[Edit] button**  
Edits a selected part on the parts editor.
- 8) **[Property] button**  
Changes the number or name of a selected part.
- 9) **Parts image list**  
Displays the list of the thumbnails, numbers, and names of the registered parts.

## 5.9.6 [Parts Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Sets the display of the parts in the parts display or parts movement.

Select [Common] → [Parts] → [Parts Setting] from the menu to display the [Parts Setting] dialog.

### 1) [Show overlapping areas of shapes in XOR when Display Mode of Parts Display is XOR]

#### **GOT Graphic Ver.1**

When the display mode of the parts display or parts movement is set to [XOR], the XOR synthesis is performed to all the grouped figures together.

### 2) [Show image files in the memory card at the time of specifying Parts No. 9001-9999]

Displays the BMP, JPEG, or PNG parts stored in the parts display or parts movement as parts.

# 6. BASIS OF SETTING AND EDITING

---

6.1	Device Settings. . . . .	6 - 2
6.2	Setting Trigger Types . . . . .	6 - 80
6.3	Date/Time Format Settings. . . . .	6 - 95
6.4	Color Settings . . . . .	6 - 99
6.5	Placing and Editing Figures and Objects . . . . .	6 - 104
6.6	Editing Operations . . . . .	6 - 142

## 6.1 Device Settings

---

### ■ 1 Devices that can be set in GT Designer3 projects

For the types and the ranges of the devices that can be set in GT Designer3 projects, refer to the following.

- 12.1 GOT Internal Device
- 12.2 Device Range and Settings of Each Controller

### ■ 2 Available devices of the target controllers for monitoring

#### (1) Range of devices that can be set

The range of the devices that can be set in GT Designer3 projects depends on the type of the controller.

For the devices that can be set in controllers of each type, refer to the following.

- 12.2 Device Range and Settings of Each Controller

For how to set the devices, refer to the following.

- 6.1.1 How to set devices

#### (2) Range of devices that can be set in controllers

The ranges of devices that can be set in GT Designer3 and those available for controllers may differ.

GT Designer3 does not automatically check if the devices set (specified by the names and numbers) in its project can be used by the controllers being connected.

To check if the devices can be used by the controllers being connected, follow the instructions shown below.

##### (a) Checking when setting the controllers

For the types and the ranges of the devices available for the controllers, refer to the following.

- GOT2000 Series Connection Manual for a controller used

##### (b) Checking when drawing

For the types and the ranges of the devices that can be set in GT Designer3 projects, refer to the following.

- 12.2 Device Range and Settings of Each Controller

##### (c) Check with the system alarm.

When you attempt to monitor devices that cannot be used by the controller, by specifying the names or a range, a system alarm occurs.

(Alarm: G01-322 Specified device numbers are outside the available range. Check the available range.)

### ■ 3 Device setting with labels and tags

Labels and tags are usable in the device setting on GT Designer3.

By using labels and tags, you can create project data without paying attention to the actual devices.

Available labels and tags depend on the system configuration.

#### (1) System label

This label can be used only for iQ Works projects.

System labels are intended for use in a large-scale system incorporating Mitsubishi Electric products.

- 6.1.2 How to set system labels

#### (2) Global label

This label is for RCPUs and motion controller CPUs (MELSEC iQ-R series).

You can use global labels by importing them from GX Works3 or MT Developer2.

Global labels are intended for use in a medium-scale system configuration where only the MELSEC iQ-R series equipment and GOTs are connected.

- 6.1.3 How to set global labels

#### (3) Label (GT Designer3)

This label can be used only for GT Designer3 projects.

You can use labels (GT Designer3) by assigning devices that can be monitored by the GOT.

Labels (GT Designer3) are usable regardless of the scale of a system configuration.

- 6.1.4 How to set labels (GT Designer3)

#### (4) OMRON NJ/NX tag

You can use OMRON NJ/NX tags by importing a tag file created with OMRON programming software to GT Designer3.

These tags are intended for use in a system configuration including OMRON PLCs.

- 6.1.6 How to set OMRON NJ/NX tags

## (5) RSLogix 5000 tag and AB native tag

You can use these tags by importing tag files created with ALLEN-BRADLEY programming software to GT Designer3. The tags are intended for use in a system configuration including ALLEN-BRADLEY PLCs.

- ⇒ 6.1.7 Using RSLogix 5000 tags
- 6.1.8 How to set AB native tags

## 4 Using device comments and device definitions

By importing device comments and device definitions in GT Designer3, the device comments and device definitions are usable in the device setting.

- ⇒ 6.1.5 Using device comments and device definitions

### 6.1.1 How to set devices

Set devices in the device setting dialog of each object or with the input assist.

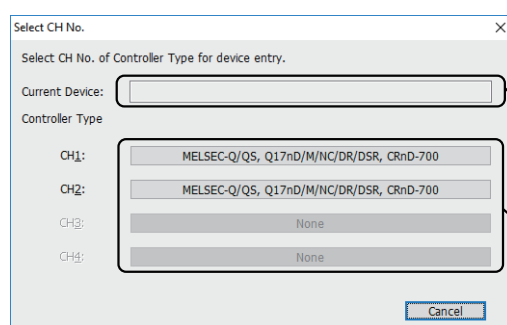

Example) When setting a device monitored by a bit lamp

## 1 Setting devices in the device setting dialog

To set devices, display the device setting dialog from the setting dialog of the object.

- Step 1** Click the [...] button in the [Device/Style] tab to display the device setting dialog or the [Select CH No.] dialog.
- To display the [Select CH No.] dialog, set multiple controllers and then make the following setting or perform the following operation.
- Set [Display only when setting new device] or [Always display] on the [Edit] tab in the [Options] dialog.
    - ⇒ 11.10.4 ■ 1 [Options] dialog ([Edit] tab)
  - Click the [...] button while pressing the [Shift] key of the personal computer.
- Step 2** In the [Select CH No.] dialog, select the controller.
- Click the controller button to display the device setting dialog.

The device being set is displayed.

@ 2 : 1-5 / 2 D200 . b5

- Bit position
- Device No.
- Device name
- CPU No.
- Station No.
- NW No.
- Channel No.

The channel No. of the controller and name of the controller type are displayed.

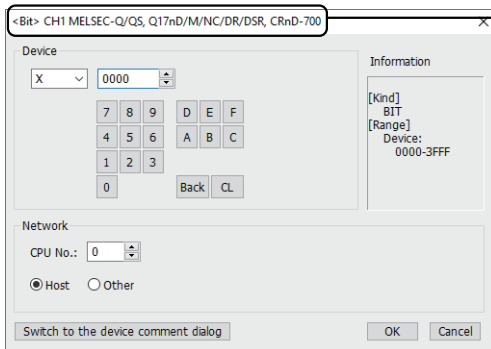

For the details of the system label, refer to the following.

⇒ 6.1.2 How to set system labels

**Step 3** Select the target device in the dialog, and click the [OK] button to set the device for the object.

For details of the settings in the device setting dialog for each controller, refer to the following.

⇒ 12.2 Device Range and Settings of Each Controller

The channel No. of the controller and name of the controller type being set are displayed.

**Step 4** After settings being made in the device setting dialog, the device set in the setting dialog for the object is displayed.

For the display by the object setting dialog, refer to the following.

⇒ 12.2 Device Range and Settings of Each Controller

Once a device is set, the device can be set by selecting from the list in the setting dialog of each object from the next time.

Up to 5 previously set devices are listed. Subsequently, these are replaced in turn by each successive new entry.

## ■ 2 Setting devices with the input assist

The target device can be searched in the setting dialog for the object without opening the device setting dialog.

For how to use the input assist, refer to the following.

⇒ 11.3 Setting Devices from Device Comments (Input Assist)

## 6.1.2 How to set system labels

- ■ 1 Conditions for use of system labels
  - 2 Applicable system labels
  - 3 System label setting
  - 4 System label update/check
  - 5 Registering system labels
  - 6 Generating route information on GT Designer3
  - 7 Precautions

For iQ Works, system labels can be used instead of setting devices on GT Designer3.  
(The system labels cannot be used for applications other than iQ Works.)

The system labels are divided into system label Ver.1 and system label Ver.2.

You cannot use system labels Ver.1 and system labels Ver.2 simultaneously.

- System label Ver.1

The system label Ver.1 is a character string with a controller device assigned.

The system label Ver.1 is shared among the projects in a workspace.

- System label Ver.2

Not available to GT21.

The system label Ver.2 is a character string with a global label for GX Works3 or MT Developer2 assigned.

The system label Ver.2 is shared among projects in a workspace.

You can register the both types of system labels in the system label database with GT Designer3.

The system label database is used to manage the system labels.

When a workspace is saved in MELSOFT Navigator, a system label database is created in the workspace.

When no system label database exists in a workspace, system labels cannot be used.

### ■ 1 Conditions for use of system labels

#### (1) Conditions for projects

System labels can be used only a workspace saved in MELSOFT Navigator.

A system label database is not created for a GT Designer3 project in a workspace created by GT Designer3 (not started from MELSOFT Navigator). Therefore, the system labels cannot be used.

To use the system labels, save the GT Designer3 project in a workspace created by MELSOFT Navigator.

#### (2) GOT type setting

To use system labels, select [Use system labels in conjunction with MELSOFT Navigator] in the [Type Setting] dialog.

→ 5.1.4 [Type Setting] dialog

#### (3) Function that does not support the system labels

The system labels cannot be used in the device setting for the MES interface function.

For the MES interface function, specify devices directly.

### ■ 2 Applicable system labels

The GOT can use system labels that satisfy the following conditions.

System labels not applicable to the GOT are recognized as incorrect labels.

Those invalid labels can be set in a GT Designer3 project, but cannot be written to the GOT or data storage.

#### (1) System label name

The GOT can use system labels that satisfy the following conditions.

System labels that do not satisfy the following conditions cannot be set for GT Designer3.

- For the system label Ver.1, the number of characters used in the name of a system label is 32 or less.
- For the system label Ver.2, the number of characters used in the name of a system label is 256 or less.
- One-byte kana characters are not used.
- The following one-byte symbols are not used.

. , , [ , ] , : , ! , " , # , \$ , % , & , ' , ( , ) , \* , + , ; , < , = , > , ? , \ , ^ , ` , { , | , } , ~ , ?

- A system label name is not the same as a device name.
- Reserved characters are not used.

For reserved characters, refer to the following.

⇒ GX Works2 Version1 Operating Manual (Common)

## (2) Registering system labels in a system label database

System labels that are not registered in a system label database are recognized as incorrect labels.

For how to register the system labels in the system label database, refer to the following.

- Registering system labels by MELSOFT Navigator

⇒ Help for MELSOFT Navigator

- Registering system labels by GT Designer3

⇒ ■ 5 Registering system labels

## (3) Data types

System labels with the following data types are recognized as incorrect system labels.

Do not set the system labels with the following data types.

- [Time]
- [Pointer]
- [FLOAT[Double Precision]]

When [Reflect the data type of label] is selected on the [Edit] tab in the [Options] dialog, the data types of system labels are reflected to GT Designer3 settings.

⇒ 11.10.4 Customizing the settings related to editing operations

The following shows the usable data types of system labels.

○ : Applicable, - : Not applicable

Data type of system label		Device data type or device type	Bit specification of word device
Bit		Bit	-
Word [Signed]		Signed BIN 16	○
		BCD16	-
Word [Unsigned]/Bit [16bit]		Unsigned BIN 16	○
Double Word [Signed]		Signed BIN 32	-
		BCD32	-
Double Word [Unsigned]/Bit [32Bit]		Unsigned BIN 32	-
Timer, Counter, Retentive timer	Current value or setting value	Signed BIN 16	-
	Contact	Bit	-
	Coil		
Timer [Unsigned], Counter [Unsigned], Retentive timer [Unsigned]	Current value	Unsigned BIN 16	-
	Contact	Bit	-
	Coil		
Long timer, Long counter, Long retentive timer	Current value	Unsigned BIN 32	-
	Contact	Bit	-
	Coil		
Single-precision real number		Real number	-
String*1		Unsigned BIN 16 or string	-
String [Unicode]*1			-

\*1 Available for the following functions.

- Text display object
- Text input object
- Text print object
- Logging function
- Recipe function

#### (4) System label handled as a special structure

GT Designer3 handles the following data types of system labels as special structures.

Although MELSOFT Navigator handles such a label as one, GT Designer3 handles the label as multiple labels.

Data type of system label	Device data type or device type	Notation of system label	Devices of MELSEC-iQ-R/iQ-F/Q/L	Devices of MELSEC-FX
Timer	Signed BIN16	System label name	Timer (current value) (TN)	Timer (current value) (T)
		System label name/V	-	Timer (set value) (TS)
	Bit	System label name/T	Timer (contact) (TT)	Timer contact (T)
		System label name/C	Timer (coil) (TC)	-
Timer (unsigned)	Unsigned BIN 16	System label name	Timer (current value) (TN)	-
		System label name/T	Timer (contact) (TT)	-
	Bit	System label name/C	Timer (coil) (TC)	-
		System label name/V	-	-
Counter	Signed BIN16	System label name	Counter (current value) (CN)	Counter (current value) (C)
		System label name/V	-	Counter (set value) (CS)
	Bit	System label name/T	Counter (contact) (CT)	Counter contact (C)
		System label name/C	Counter (coil) (CC)	-
Counter (unsigned)	Unsigned BIN 16	System label name	Counter (current value) (CN)	-
		System label name/T	Counter (contact) (CT)	-
	Bit	System label name/C	Counter (coil) (CC)	-
		System label name/V	-	-
Retentive timer	Signed BIN16	System label name	Retentive timer (contact) (SS)	Timer (current value) (T)
		System label name/V	-	Timer (set value) (TS)
	Bit	System label name/T	Retentive timer (contact) (SS)	Timer contact (T)
		System label name/C	Retentive timer (contact) (SC)	-
Retentive timer (unsigned)	Unsigned BIN 16	System label name	Retentive timer (contact) (SN)	-
		System label name/T	Retentive timer (contact) (SS)	-
	Bit	System label name/C	Retentive timer (coil) (SC)	-
		System label name/V	-	-
Long timer* <sup>1</sup>	Unsigned BIN 32	System label name	Timer (current value) (LTN)	-
	Bit	System label name/T	Timer (contact) (LTN)	-
		System label name/C	Timer (coil) (LTC)	-
Long counter* <sup>2</sup>	Unsigned BIN 32	System label name	Counter (current value) (LCN)	-
	Bit	System label name/T	Counter (contact) (LCT)	-
		System label name/C	Counter (coil) (LCC)	-
Long retentive timer* <sup>1</sup>	Unsigned BIN 32	System label name	Retentive timer (contact) (LSN)	-
	Bit	System label name/T	Retentive timer (contact) (LSS)	-
		System label name/C	Retentive timer (coil) (LSC)	-

\*1 Only available to MELSEC iQ-R series.

\*2 Available to MELSEC iQ-R series and MELSEC iQ-F.

#### (5) Devices assigned to system labels

Assign devices that can be monitored by the GOT to system labels.

The following system labels are recognized as incorrect labels.

- System labels with devices assigned that cannot be monitored by the GOT
- System labels without devices assigned

### (6) Global labels assigned to system labels Ver.2

Assign global labels settable in GT Designer3 to system labels Ver.2.  
The following system labels Ver.2 are recognized as invalid labels.

- System labels Ver.2 to which global labels that cannot be set in GT Designer3 are assigned
- System labels Ver.2 to which no global labels are assigned

For the conditions of global labels usable in GT Designer3, refer to the following.

⇒6.1.3 ■ 1 Usable global labels

## ■ 3 System label setting

As well as devices, system labels are settable in the setting dialog of objects or others.

### (1) Entering system label name directly

Enter a system label name in the text box of [Device] in the setting dialog.

The bit specification is available for a system label whose data type is word.  
In this case, enter the label name in the following format.

A0\_StopFlag . b15  
└──────────┬────────┘ └──┘  
System label Bit number  
name

When incorrect label names including a system label name that is not registered in the system label database is entered, ?? is added to just before the system label name.

Check the system label setting, and then configure the setting again, or register the system label in the system label database.

⇒6.1.2 ■ 4 System label update/check

### (2) Selecting a system label from the label list

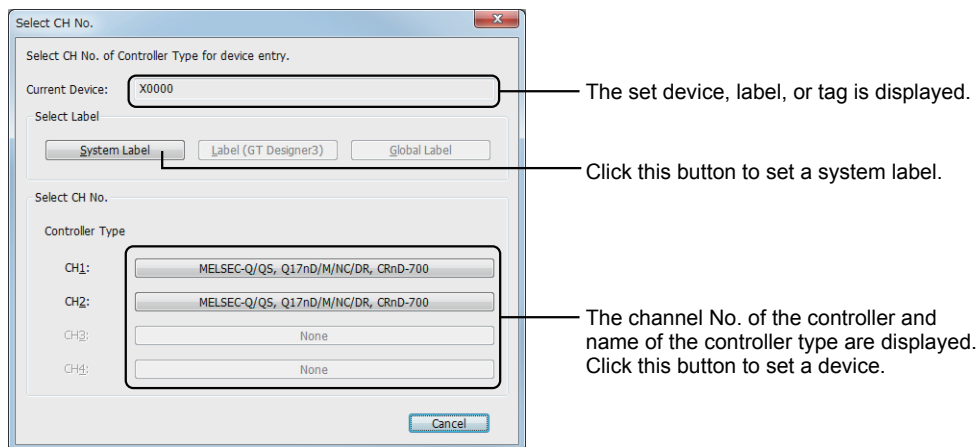

**Step 1** In the setting dialog of an object or others, hold down the [Shift] key and click the [...] button of [Device] to display the [Select CH No.] dialog.

If you click the [...] button without holding down the [Shift] key, the dialog to appear varies with the selection of [CH No. Selection Dialog Display Setting] on the [Edit] tab of the [Options] dialog.

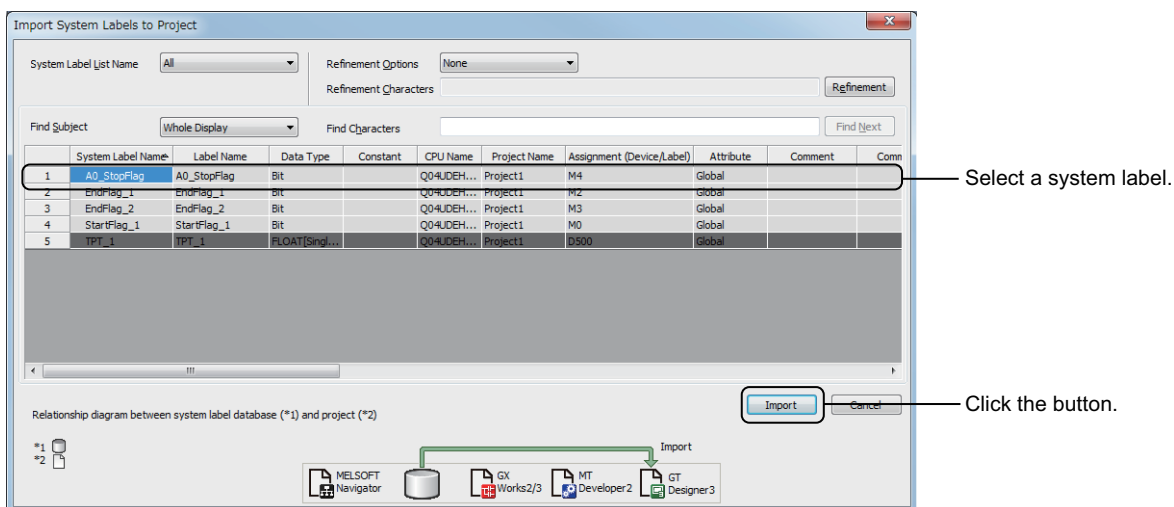

For the setting details, refer to the following.

⇒11.10.4 Customizing the settings related to editing operations

**Step 2** In the [Select CH No.] dialog, click the [System Label] button to display the [Import System Labels to Project] dialog.

**Step 3** Select a system label from the system label list and click the [Import] button. The selected system label is set for [Device].

### (3) Setting system labels with the input assist

You can search and set system labels in the setting dialog for the object, without opening the [Import System Labels to Project] dialog.

For how to use the input assist, refer to the following.

→ 11.3 Setting Devices from Device Comments (Input Assist)

## 4 System label update/check

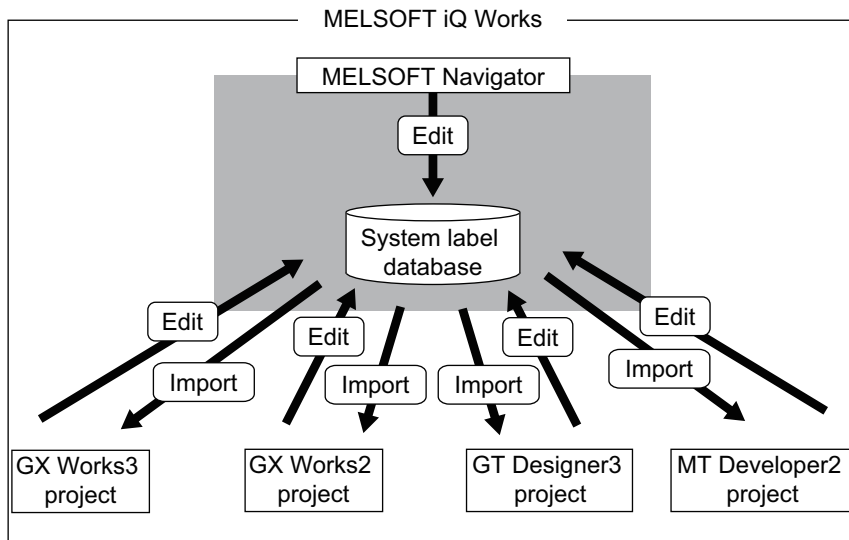

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Data of a system label database can be edited by each software for iQ Works.

Therefore, system labels used with GT Designer3 settings may not be updated.

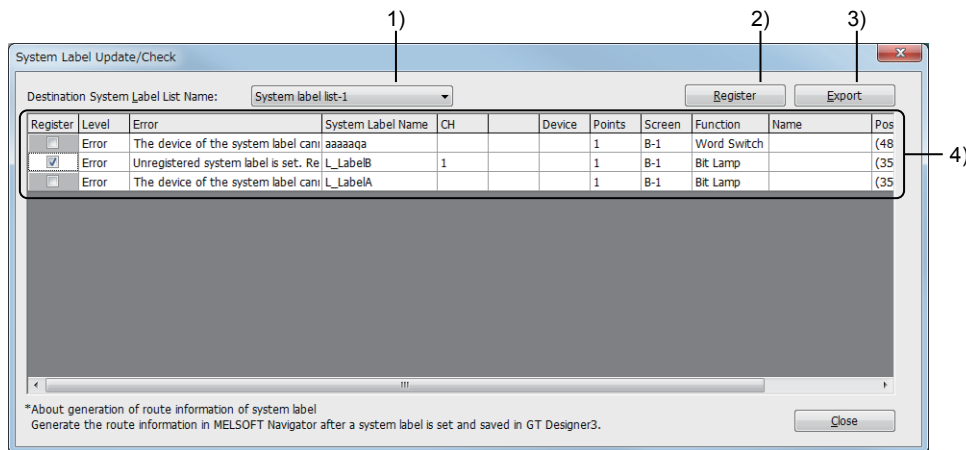

When the system label update/check is executed, GT Designer3 project data are updated by importing data in the system label database. And then the set system labels are checked whether the labels are applicable.

When registering, changing, or deleting data in the system label database by MELSOFT Navigator or others, execute the system label update/check and import the latest system labels.

### (1) Operating procedure

- Step 1** Select [Tools] → [System Label Update/Check] from the menu to update and/or check system labels.
- Step 2** When the system label settings are incorrect, the [System Label Update/Check] dialog appears. Refer to the following to remove errors.

#### 1) [Destination System Label List Name]

Select a system label list to which system labels are registered.

#### 2) [Register] button

Registers a system label selected in the error list into the system label database.

⇒ ■ 5 Registering system labels

#### 3) [Export] button

Exports the result of the system label update/check as a CSV file or a Unicode text file.

#### 4) Error list

Displays error information including the sources of the errors.

For errors, causes, and corrective actions, refer to the following.

⇒(5) Error messages

To register an unregistered system label in the system label database, select [Register].

### (2) Effect of the system label update/check

When system labels set on GT Designer3 have been deleted from the system label database, they are recognized as invalid labels.

When system labels Ver.2 are used, if you change the names of the labels collectively with MELSOFT Navigator, the changes are reflected to the names of system labels set in GT Designer3.

### (3) Automatically executing the system label update/check

To match a project data and another project data, GT Designer3 automatically executes the system label update/check in the following operations.

- Open a GT Designer3 project. (Only when system labels are changed)
- Save a GT Designer3 project.
- Select [Communication] → [Write to GOT] or [Write to Memory Card] from the menu.
- Check or uncheck [Use system labels in conjunction with MELSOFT Navigator] in the [Type Setting] dialog.
- Start or update GT Simulator3.
- The supported model is excluded in the [Controller Setting] dialog.

In the [iQ Works] tab of the [Option] dialog, you can set whether or not to execute the automatic check when initiating a GT Designer3 project.

For the setting method, refer to the following.

→ 11.10.7 Interaction with iQ Works

#### (4) System label update notification

When the system labels set for the GT Designer3 project are changed or deleted in the system label database, the system label update notification icon is displayed on the status bar.

Right-click the system label update notification icon, and then select [System Label Update/Check] to update and/or check system labels.

System label update notification icon

#### (5) Error messages

The following table shows the errors, causes, and corrective actions for the system label update/check.

Error	Cause	Corrective action
Controller and this project are not allocated in MELSOFT Navigator. Allocate this project with the controller and save in MELSOFT Navigator.	<ul style="list-style-type: none"> <li>• The current used project is not assigned to the system configuration diagram</li> </ul>	<ul style="list-style-type: none"> <li>• Assign the current used project to the controller, and then save the project by MELSOFT Navigator</li> <li>→ Help for MELSOFT Navigator</li> </ul>
Device setting of the system label or controller setting of GT Designer3 is incorrect. Check the device setting of the system label and controller setting.	<ul style="list-style-type: none"> <li>• A device that cannot be monitored by the GOT is set.</li> <li>• The device number of a device set for the system label is out of range or invalid.</li> </ul>	<ul style="list-style-type: none"> <li>• Check the device setting of the device assigned to the system label.</li> <li>→ ■ 2 Applicable system labels 12.2 Device Range and Settings of Each Controller</li> <li>Help for MELSOFT Navigator</li> </ul>
	<ul style="list-style-type: none"> <li>• A value out of the range is specified for an element of array.</li> <li>• A label name of the structure that does not exist is specified.</li> <li>• /T, /S, or /C is specified for a system label with the data type other than [Timer], [Counter], and [Retentive Timer].</li> </ul>	<ul style="list-style-type: none"> <li>• Check the data type assigned to the system label.</li> <li>→ Help for MELSOFT Navigator</li> </ul>
	<ul style="list-style-type: none"> <li>• A system label with an unavailable channel No. is set.</li> </ul>	<ul style="list-style-type: none"> <li>• Check the controller setting for each channel.</li> <li>→ GOT2000 Series Connection Manual For GT Works3 Version1 compatible for a controller used</li> </ul>
Unregistered system label is set. Register it in a system label of MELSOFT Navigator.	<ul style="list-style-type: none"> <li>• A system label that is set for GT Designer3 does not exist in the system label database.</li> </ul>	<ul style="list-style-type: none"> <li>• Register the system label in the system label database.</li> <li>→ ■ 5 Registering system labels</li> </ul>
A system label of unavailable data type is selected. Set the device again.	<ul style="list-style-type: none"> <li>• A system label with the data type ([Time], [Pointer], or [FLOAT[Double Precision]]) not available for GT Designer3 is set.</li> </ul>	<ul style="list-style-type: none"> <li>• Set a system label with the data type available for GT Designer3 to the device setting.</li> <li>→ ■ 2 Applicable system labels ■ 3 System label setting</li> <li>Help for MELSOFT Navigator</li> </ul>
The device of the system label cannot be obtained. Allocate the device to the system label in MELSOFT Navigator.	<ul style="list-style-type: none"> <li>• The device assigned to the system label Ver.1 cannot be obtained.</li> <li>• The global label assigned to the system label Ver.2 cannot be obtained.</li> </ul>	<ul style="list-style-type: none"> <li>• Assign a device to the system label Ver.1.</li> <li>• Assign a global label to the system label Ver.2.</li> <li>→ Help on MELSOFT Navigator GX Works3 Operating Manual</li> </ul>

Error	Cause	Corrective action
The routing information of the system label cannot be acquired. Generate the routing information of the system label in MELSOFT Navigator.	<ul style="list-style-type: none"> <li>The route information cannot be obtained with MELSOFT Navigator.</li> <li>The system configuration diagram of MELSOFT Navigator does not match the controller setting of the Designer3 project.</li> </ul>	<ul style="list-style-type: none"> <li>Generate the route information of the system label, and then save a workspace. A system label of string type is set. Export the data of corresponding global labels set for the system labels from GX Works3 and import it in GT Designer3, then select the system label again.	<ul style="list-style-type: none"> <li>The global labels assigned to the system labels Ver.2 of the string type or Unicode string type have not been imported to GT Designer3.</li> </ul>	<ul style="list-style-type: none"> <li>Import the assigned global labels to GT Designer3.</li> <li>After the import, set the relevant system labels Ver.2 again.</li> </ul> →6.1.3 ■ 2 Importing global labels

## ■ 5 Registering system labels

The following procedure shows how to register system labels in the system label database by GT Designer3.

**Step 1** Enter a system label name to be registered directly to the text box in [Device] for the dialog box of objects.

**Step 2** Select [Tools] → [System Label Update/Check] from the menu to execute the system label update/check and list errors in the [System Label Update/Check] dialog.

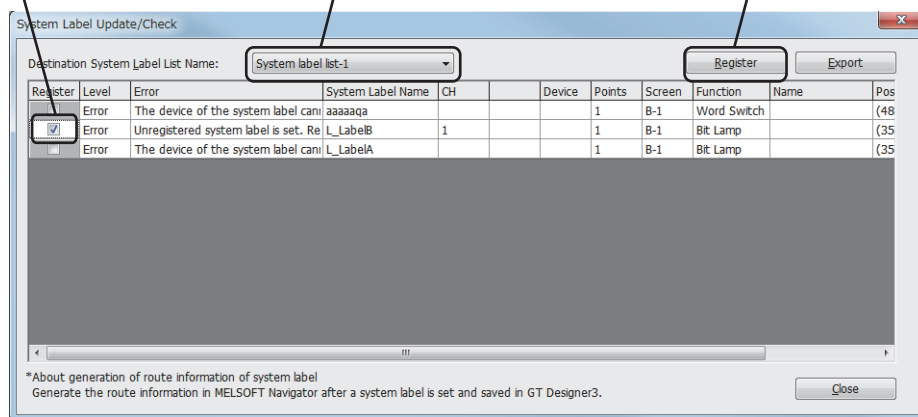

**Step 3** Configure the following settings and click the [Register] button to display a confirmation dialog.

- Check-mark the box in the [Register] column for the system label to be registered.
- In [Destination System Label List Name], select a system label list to register system labels.

Select a system label to be registered.

Select a system label list to register the selected label.

Click the [Register] button.

**Step 4** Click the [Yes] button to register the selected system label to the system label database.

**Step 5** Close the [System Label Update/Check] dialog to save the project on GT Designer3.

**Step 6** Update the system label list by using MELSOFT Navigator.

When the system label list is not updated, the registered data are not reflected in the system label list. For how to operate MELSOFT Navigator, refer to the following.

→Help for MELSOFT Navigator

## ■ 6 Generating route information on GT Designer3

### (1) Conditions under which the route information is generated

When all the following conditions are satisfied, the route information can be generated by GT Designer3.

- GT Designer3 is started by using MELSOFT Navigator.
- When the project is saved, only a route information obtainment error has occurred at the system label update/check.

**Step 1** Save the project data.

**Step 2** The confirmation dialog box appears.

Click the [Yes] button to start generating the route information.

**Step 3** The route information is generated, and GT Designer3 is displayed at the front.

### (2) Operations with which the route information cannot be created

The route information is not generated under the following conditions.

- The project data is saved collectively by using MELSOFT Navigator.
- The project data is saved in the save confirmation dialog box displayed when GT Designer3 exits.
- GT Designer3 is started by using MELSOFT Navigator, the GOT type is changed, and then the project data is saved.
- The project data is saved while GT Simulator3 is started by using GT Designer3.
- Generating route information takes 20 minutes or more.

## ■ 7 Precautions

### (1) Changing a system configuration diagram by MELSOFT Navigator

The route information of the system label is manually generated by the system configuration diagram for MELSOFT Navigator.

When changing the system configuration diagram for MELSOFT Navigator, generate the route information again by MELSOFT Navigator.

After generating the route information, reflect parameters with the route information on a GT Designer3 project by MELSOFT Navigator.

For how to operate MELSOFT Navigator, refer to the following.

⇒ Help for MELSOFT Navigator

### (2) Data type of system labels and data type of devices

When [Reflect the data type of system label] is selected in the [Option] dialog, the data types of system labels are reflected to the GT Designer3 settings.

For how to set the items in the [Option] dialog, refer to the following.

⇒ 11.10.7 Interaction with iQ Works

### (3) Class for system label

To use a system label with [VAR\_GLOVAL\_CONSTANT] set for the class, use the system label with a bit device assigned.

When the system label with other than a bit device assigned, the system label is not applicable to GT Designer3.

### (4) System label names that can be set for consecutive devices

To set consecutive devices, system label names that are not registered in the system label database cannot be entered. Enter a system label name that is registered in the system label database.

When you use a system label to specify consecutive devices, the consecutive devices, beginning with the device or the device of the global label assigned to the system label, must be within the device range.

Otherwise, you cannot set the system label to specify the consecutive devices in the device setting.

### (5) When the system label database is inaccessible

Depending on the version of GT Designer3, the system label database is inaccessible.

If this problem is not solved with the troubleshooting shown in the error message, install the latest version of GT Designer3.

## **(6) Device range when devices are automatically assigned on GX Works2**

When devices are automatically assigned to system labels in GX Works2, set the device range that can be monitored by the GOT in the automatic device assignment setting.

Otherwise, the GOT may not monitor some of the assigned devices.

⇒Help for GX Works2

12.2.2 Mitsubishi Electric equipment

## **(7) Precautions for using system labels Ver.1**

The GOT incorrectly monitors the system labels to which index-modified devices are assigned.

If you set such system labels on GT Designer3, the index modification is invalid.

Example) When you set the system label Ver.1 to which D0Z0 is assigned, the GOT handles D0Z0 as D0.

## **(8) Precautions for using system labels Ver.2**

### **(a) Importing global labels**

Import the global labels that are assigned to the system labels Ver.2 of the string type or Unicode string type.

The system labels Ver.2 may not work properly when the assigned global labels have not been imported.

After the import, set the relevant system labels Ver.2 again.

### **(a) Station No. switching**

The station No. switching is not available to the station that uses system labels Ver.2.

Do not use system labels Ver.2 for the station requiring the station No. switching.

### **(b) Writing package data**

When you set system labels Ver.2 in a project and write the project data to the GOT, [Write Mode] is not selectable in the [Write Option] dialog.

In this case, [Write Mode] is fixed to [Synchronize].

⇒4.8.3 [Write Option] dialog (for writing data to one GOT)

### **(c) When using a system label Ver.2 to specify consecutive devices**

When you use a system label Ver.2 to specify consecutive devices, the consecutive devices, beginning with the device assigned to the label, must be within the device range.

Otherwise, you cannot set the system label Ver.2 to specify the consecutive devices in the device setting.

## 6.1.3 How to set global labels

- ■ 1 Usable global labels
  - 2 Importing global labels
  - 3 Setting global labels
  - 4 Performing the label name resolution
  - 5 Precautions
  - 6 [Global Label List] dialog
  - 7 [Select Global Label] dialog
  - 8 [Global Label Reference] dialog

You can use global labels for the device setting on GT Designer3.

By using global labels, you can create the project data without paying attention to the actual devices.

The following shows the import sources of global labels.

- GX Works3 project in which global labels are set
- CSV file to which global labels are exported from the label editor of GX Works3 or MT Developer2

For the details of usable global labels, refer to the following.

- ■ 1 Usable global labels

For precautions on the use of global labels, refer to the following.

- ■ 5 Precautions

The following shows the procedure for setting global labels.

**Step 1** Compile global labels with GX Works3 or MT Developer2.

Using the global labels without compilation may cause inconsistency in the global label settings between GT Designer3 and the controller.

For how to compile global labels, refer to the following.

- GX Works3 Operating Manual

Help for MT Developer2

To import global labels from a GX Works3 project, proceed to step 3.

**Step 2** Export global labels from the project created with GX Works3 or MT Developer2.

For structure-type global labels, export them separately from other data types of global labels.

For how to export global labels, refer to the following.

- GX Works3 Operating Manual

Help for MT Developer2

**Step 3** Import the global labels to GT Designer3.

- ■ 2 Importing global labels

You can check the imported global labels in the [Global Label Reference] dialog.

- ■ 8 [Global Label Reference] dialog

**Step 4** Set the imported global labels to objects or others.

- ■ 3 Setting global labels

To monitor the device assigned to a global label, the GOT performs the label name resolution at the following timing.

- The GOT starts up. (The GOT is powered on, restarts by reset, or re-runs the project.)
- The GOT detects that the labels used for the controllers are updated.
- The Start Label Name Resolution signal (GS1880.b1) turns on.

For the details of the label name resolution, refer to the following.

- ■ 4 Performing the label name resolution

### ■ 1 Usable global labels

#### (1) Required setting on GT Designer3

To use global labels, set the following item in [Controller Setting].

- [MELSEC iQ-R, RnMT/NC/RT, CR800-D]
- [MELIPC]

For the details of [Controller Setting], refer to the following.

- 5.5.1 ■ 4 [Controller Setting]

## (2) Global label setting

Global labels must be created with GX Works3 or MT Developer2 and have the following settings.

- Access to the labels from external devices is permitted.
- The class is set to VAR\_GLOBAL or VAR\_GLOBAL\_RETAIN.

For the details of the global label setting, refer to the following.

⇒GX Works3 Operating Manual  
Help for MT Developer2

## (3) Array-type global label setting

The array must satisfy the following requirements.

- One-, two-, or three-dimensional array
- For the undefined labels: the subscript for each dimension as shown below

Array	Subscript range
One-dimensional array	-2147483647 to 2147483647
Two-dimensional array	-268435455 to 268435455
Three-dimensional array	-262143 to 262143

## (4) Global label name

The global label name must satisfy the following requirements.

Otherwise, the global label cannot be set on GT Designer3.

- Up to 256 characters are used for a global label name.  
Up to 300 characters can be used for the name of a structure of global labels.
- A global label name starts from text or an underscore (\_).
- No ASCII line terminator is used.  
LF (\n, line feed), CR (\r, carriage return), and CR followed immediately by LF (\r\n)
- No the following space character is used.  
ASCII code: SP (space), VT (\v, vertical tabulation), HT (\t, horizontal tabulation), and FF (\f, form feed)  
Unicode: fullwidth space (\u3000)
- No the following one-byte symbol is used.  
/\ \* ? < > | " : [ ] ; , = + % ' ^ @ { } . ! # \$ & ~ ` ( ) -
- No device name, identifier of files, or instruction of sequence programs is used as a global label name.
- No reserved character is used.

## (5) Data type of the global label

You can use the global label whose data type is as follows.

○ : Applicable, - : Not applicable

Data type of global label	Data type of device on GX Works3	Device data type or device type on GT Designer3	Bit specification of word device
Bit	BOOL	Bit	-
Word [Signed]	INT	Signed BIN16	○
		BCD16	-
Word [Unsigned]/Bit [16bit]	WORD	Unsigned BIN16	○
Double Word [Signed]	DINT	Signed BIN32	-
		BCD32	-
Double Word [Unsigned]/Bit [32Bit]	DWORD	Unsigned BIN32	-
Single-precision real number	REAL	Real	-
Timer	Contact	TIMER	Bit
	Coil	TIMER	Bit
	Current value	TIMER	Unsigned BIN16
Retentive timer	Contact	RETENTIVETIMER	Bit
	Coil	RETENTIVETIMER	Bit
	Current value	RETENTIVETIMER	Unsigned BIN16

Data type of global label		Data type of device on GX Works3	Device data type or device type on GT Designer3	Bit specification of word device
Counter	Contact	COUNTER	Bit	-
	Coil	COUNTER	Bit	-
	Current value	COUNTER	Unsigned BIN16	-
Long timer	Contact	LTIMER	Bit	-
	Coil	LTIMER	Bit	-
	Current value	LTIMER	Unsigned BIN32	-
Long retentive timer	Contact	LRETENTIVETIMER	Bit	-
	Coil	LRETENTIVETIMER	Bit	-
	Current value	LRETENTIVETIMER	Unsigned BIN32	-
Long counter	Contact	LCOUNTER	Bit	-
	Coil	LCOUNTER	Bit	-
	Current value	LCOUNTER	Unsigned BIN32	-
String* <sup>1</sup>		STRING	Unsigned BIN 16 or string	-
String [Unicode]* <sup>1</sup>		WSTRING		

\*1 Available for the following functions.

- Text display object
- Text input object
- Text print object
- Logging function
- Recipe function

## (6) Global label handled as a special structure

GT Designer3 handles the following data types of global labels as special structures.

Although GX Works3 or MT Developer2 handles such a label as one, GT Designer3 handles the label as multiple labels.

Data type of global label		Notation on GT Designer3	Notation on GX Works2 and MT Developer2
Timer Retentive timer Counter Long timer Long retentive timer Long counter	Contact	Global label name.S	Global label name
	Coil	Global label name.C	
	Current value	Global label name.N	

## (7) Functions unsupported the global labels

The global labels cannot be used in the device setting for the MES interface function.

For the MES interface function, specify devices directly.

## (8) Using the global label for the setting that requires multiple devices

To set the global label for the setting that requires two or more consecutive devices or multiple devices, use the global label whose data type is as follows.

- Array type
- Bit-specified word device
- String
- String [Unicode]

## ■2 Importing global labels

Import global labels from a project or CSV file.

The import source project must be created with GX Works3.

### (1) Importing global labels from a project

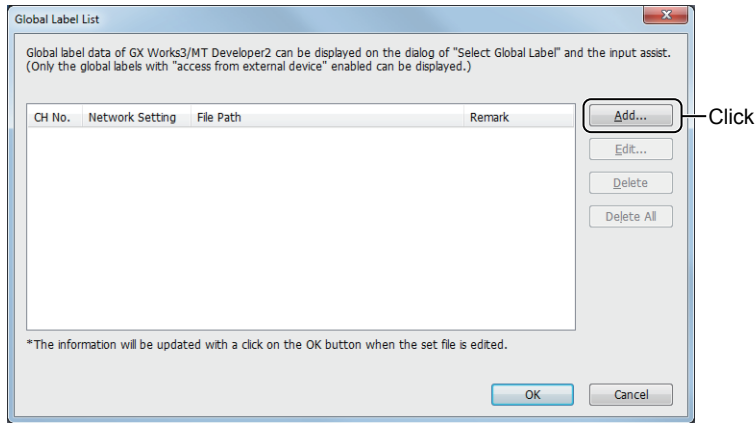

Specify a GX Works3 project and import global labels from the project.

Before the import, install GX Works3 version 1.040S or later.

If GX Works3 has not been installed, you cannot import global labels.

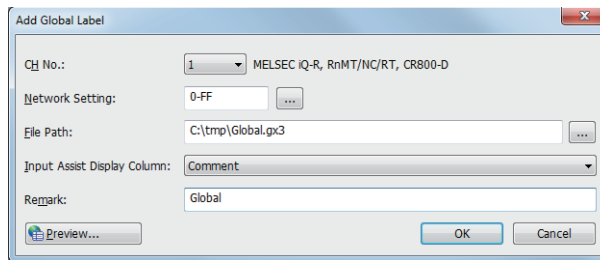

**Step 1** Select [Project] → [Import Other Data] → [Global Label] from the menu to display the [Global Label List] dialog.

**Step 2** Click the [Add] button to display the [Global Label List] dialog.

**Step 3** Specify global labels to be imported.

→ ■ 6 [Global Label List] dialog

**Step 4** Click the [OK] button to import the global labels to the project.

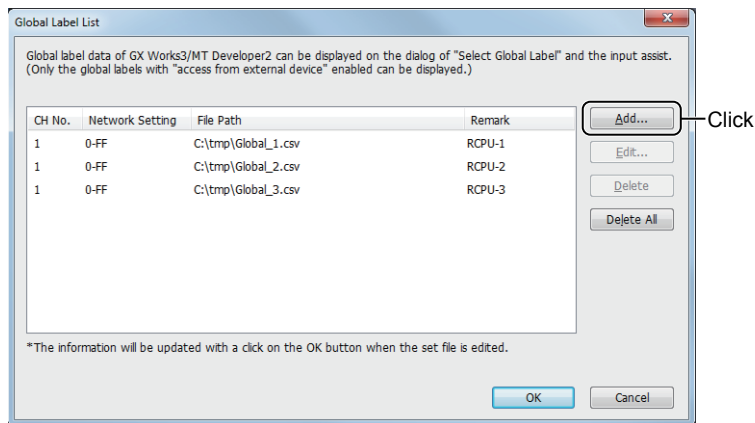

## (2) Importing global labels from a CSV file

**Step 1** Save CSV files of global labels, which are exported from GX Works3 or MT Developer2, to the hard disk of the personal computer.

Save CSV files of structure-type global labels to the same folder.

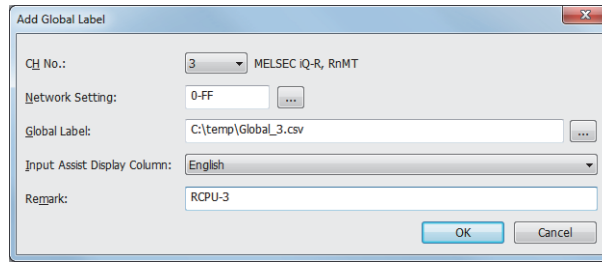

**Step 2** Select [Project] → [Import Other Data] → [Global Label] from the menu to display the [Global Label List] dialog.

**Step 3** Click the [Add] button to display the [Global Label List] dialog.

**Step 4** Specify global labels to be imported.

→ ■ 6 [Global Label List] dialog

**Step 5** Click the [OK] button to import the global labels to the project.

### 3 Setting global labels

#### Point

#### Checking the data type of the global label

When you change the data type of the object device or others, the data types may be inconsistent between the global label and the object device or others.

After setting the global label, check if the data types are consistent between the global label and the object device or others.

To check the data types, you are recommended to compare the CSV file of global labels with the CSV file exported from [Device List] of GT Designer3.

#### (1) Directly entering the global label name

Enter the global label name in the text box of [Device] in the setting dialog.

At the beginning of the name, add a ":" symbol indicating the global label.

For a structure-type global label, add a period (.) and a member name after the structure name.

For an array-type global label, add an element number surrounded by square brackets ([ ]) after the array name.

Directly entering the global label name

- For the global label

@2 : 1-5 / 2 :: StopFlg1 . b1

- For the structure-type global label

@2 : 1-5 / 2 :: StopFlg1 . FLG\_A

- For the array-type global label

@2 : 1-5 / 2 :: StopFlg1 [1]

When you enter the global label name directly, the data type consistency check between the global label and the object device or others is not performed automatically.

Therefore, the data types may be inconsistent between the global label and the object device or others.

#### (2) Selecting a global label from the label list

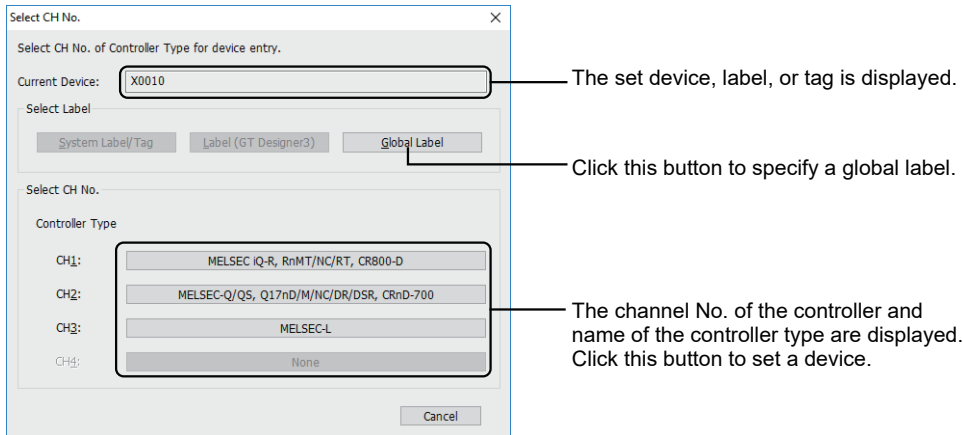

**Step 1** In the setting dialog of an object or others, hold down the [Shift] key and click the [...] button of [Device] to display the [Select CH No.] dialog.

If you click the [...] button without holding down the [Shift] key, the dialog to appear varies with the selection of [CH No. Selection Dialog Display Setting] on the [Edit] tab of the [Options] dialog.

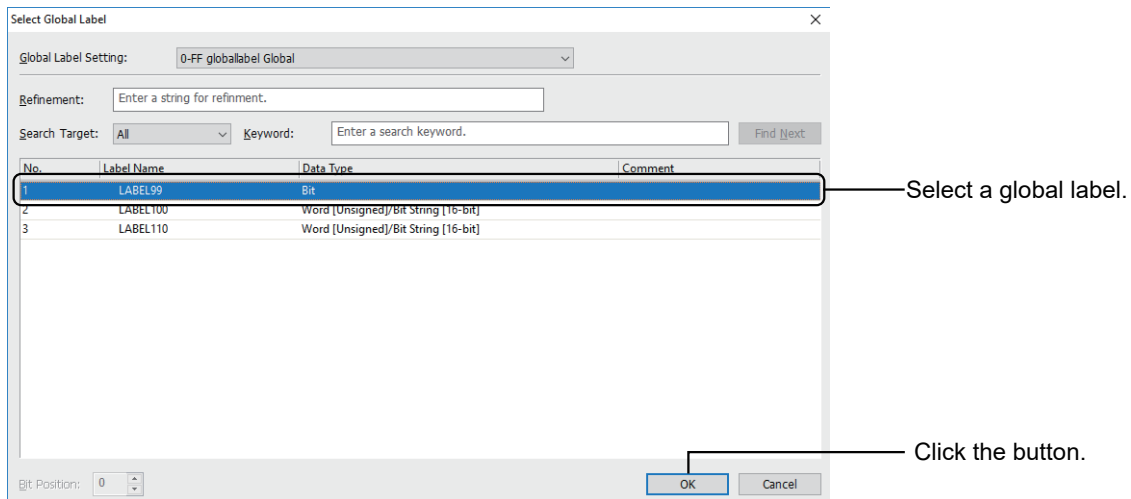

For the setting details, refer to the following.

⇒ 11.10.4 Customizing the settings related to editing operations

**Step 2** In the [Select CH No.] dialog, click the [Global Label] button to display the [Select Global Label] dialog.

**Step 3** Select a global label from the label list and click the [OK] button to set the selected label for [Device].

### (3) Using the input assist

Search and set global labels in the setting dialog of the object.

For how to use the input assist, refer to the following.

⇒ 11.3 Setting Devices from Device Comments (Input Assist)

When using the input assist, you have to import the global labels in advance.

Import the global labels before setting them.

⇒ ■ 2 Importing global labels

## ■ 4 Performing the label name resolution

The label name resolution obtains the devices assigned to global labels from controllers.

The obtained device information is recorded in a label name resolution file.

When the GOT starts up or detects the update of global labels, the GOT obtains the devices assigned to global labels from controllers and switches the monitoring devices.

### Point

#### Label name resolution file

The label name resolution file is used to correlate global label names used in the project with device names used in the controller.

Referring to the label name resolution file, the GOT identifies the devices assigned to the global labels.

The label name resolution file is created for each channel in the project startup drive at the timing such as the first execution of the label name resolution.

Using the GOT utility, you can delete the label name resolution file.

For the deletion method, refer to the following.

→GOT2000 Series User's Manual (Utility)

### (1) Label name resolution methods

Select one of the following methods to resolve label names.

- Batch method

→(a) Batch method

- Split method

Not available to GT SoftGOT2000.

→(b) Split method

To switch between the above methods, set [Perform the label name resolution in global label block unit] in the [Global Label List] dialog.

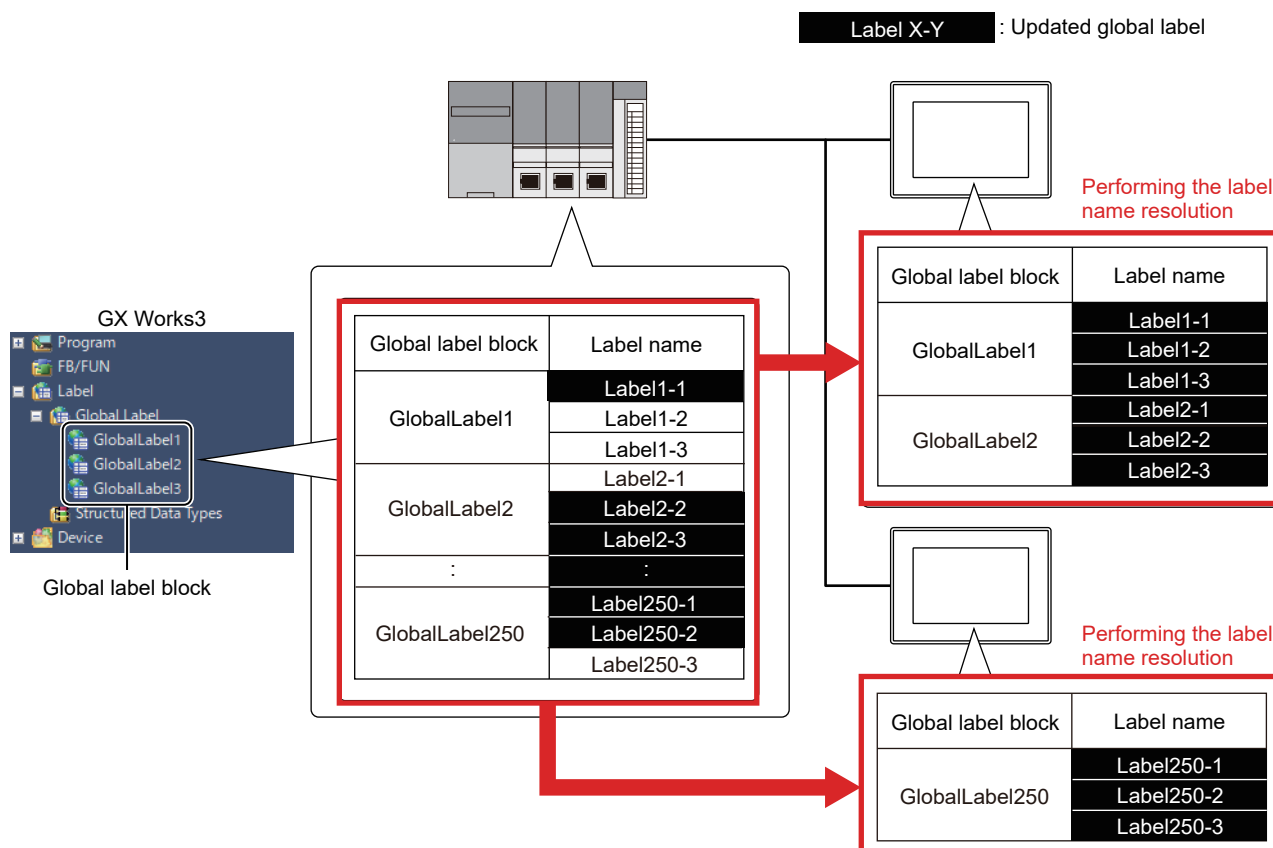

→6.1.3 ■ 6 [Global Label List] dialog

#### (a) Batch method

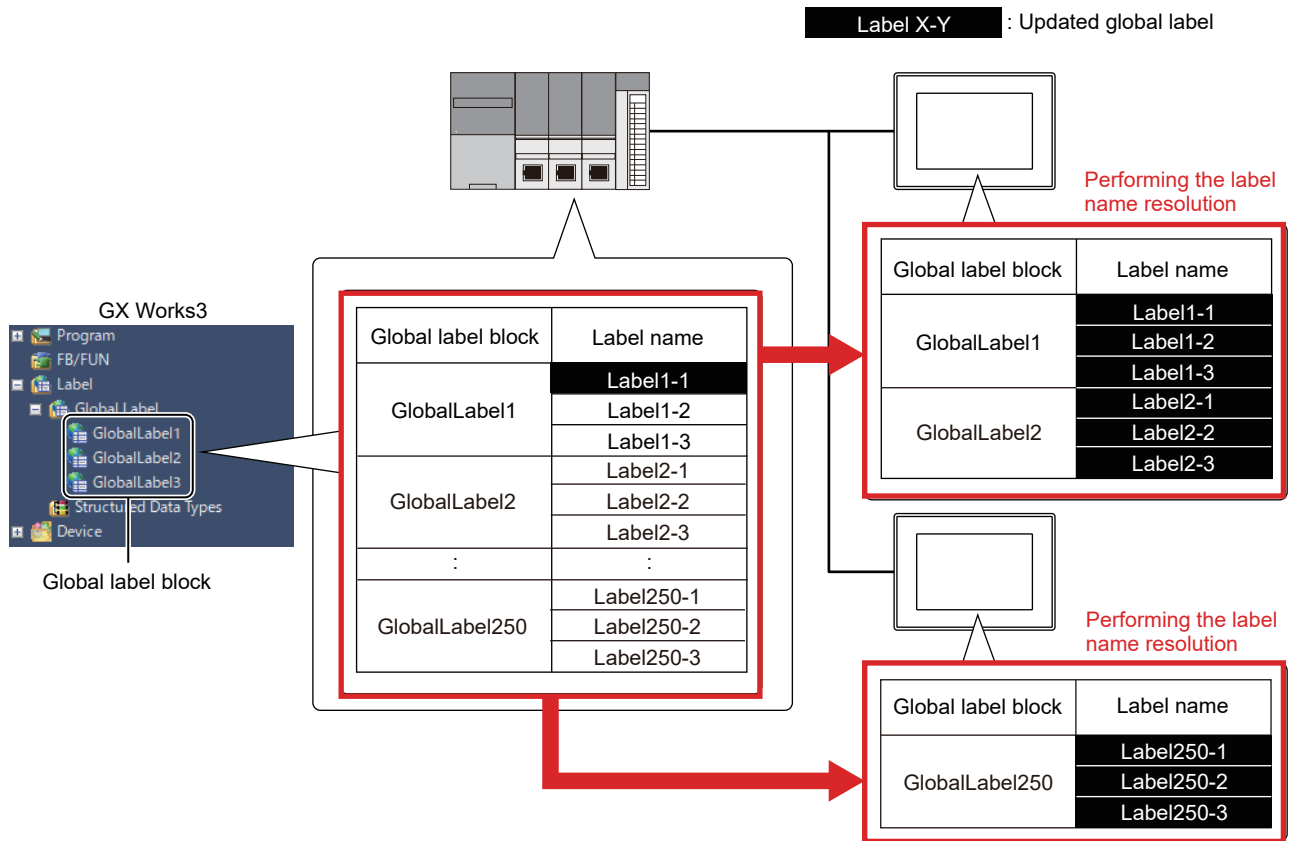

When a global label in a GX Works3 project is updated, the GOT performs the label name resolution on all the global labels in the project.

This method is recommended for use when only one global label block exists in the project or many global label blocks are targeted for the label name resolution.

Example 1) When many global label blocks are targeted for the label name resolution, the batch method takes less time to complete the resolution as compared with the split method.

Example 2) When a few global label blocks are targeted for the label name resolution, the batch method takes more time to complete the resolution as compared with the split method.

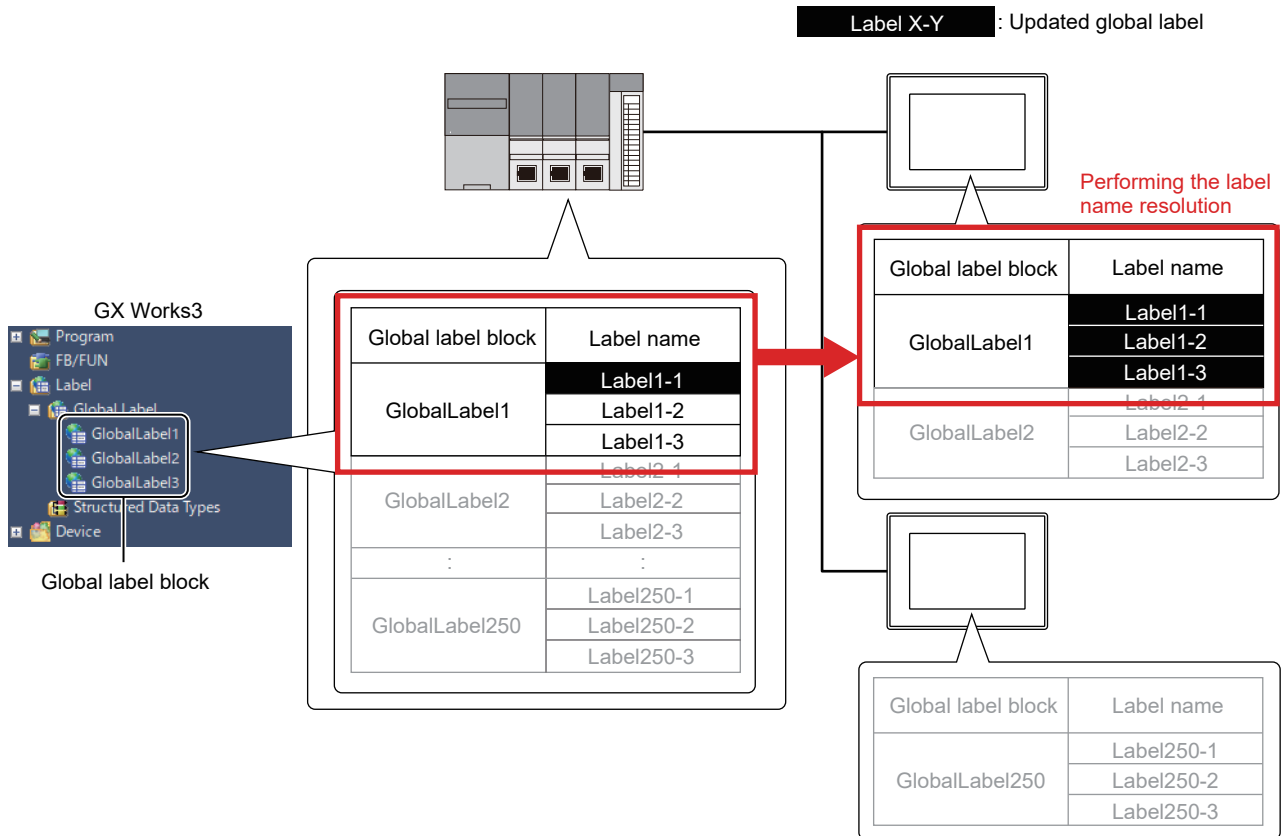

**(b) Split method**

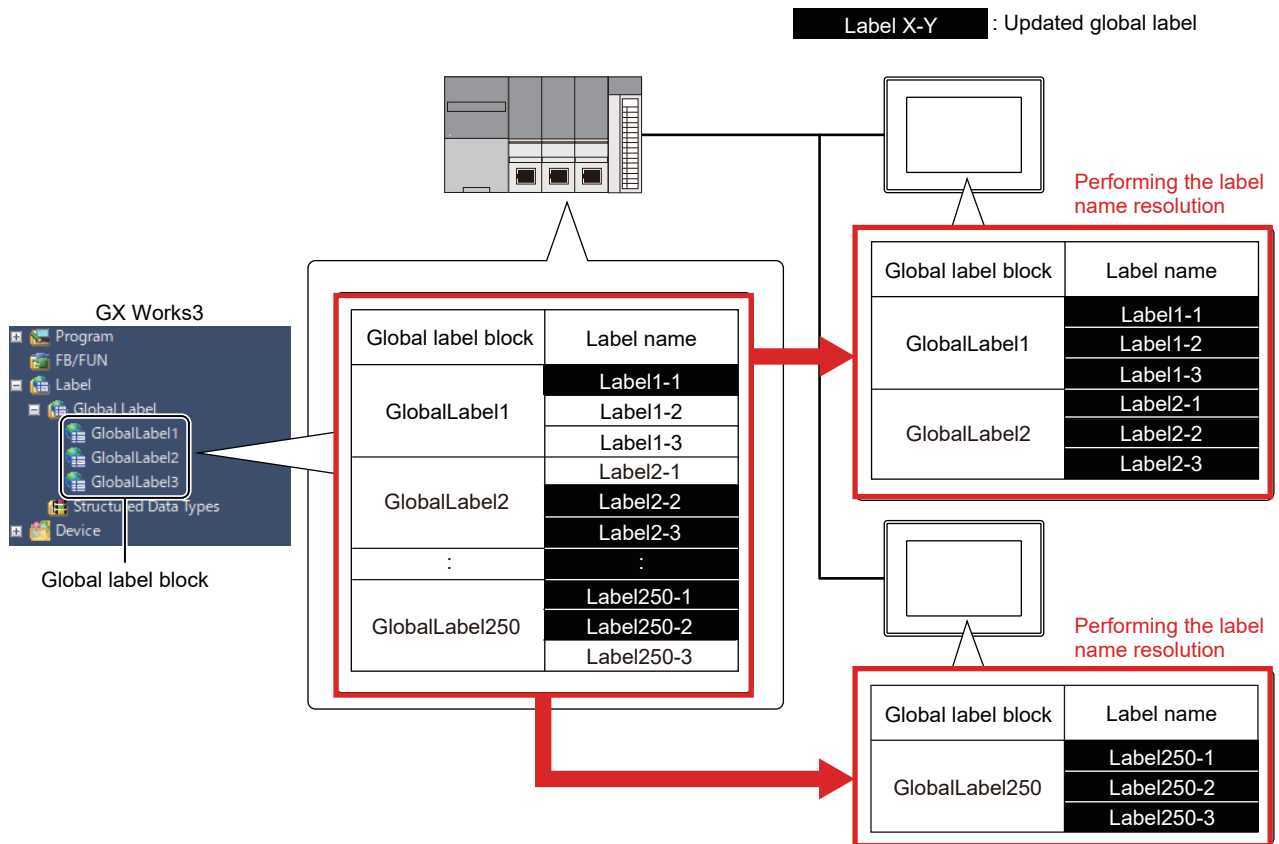

When a global label is updated, the GOT performs the label name resolution only on the global label block containing the updated label.

This method is recommended for use when a few global label blocks are targeted for the label name resolution.

Example 1) When a few global label blocks are targeted for the label name resolution, the split method takes less time to complete the resolution as compared with the batch method.

Example 2) When many global label blocks are targeted for the label name resolution, the split method takes more time to complete the resolution as compared with the batch method.

The split method is usable when one of the following PLC CPUs is connected to the GOT.  
 If the firmware of the connected PLC CPU does not support the split method, regardless of the setting of [Perform the

label name resolution in global label block unit], the GOT will perform the label name resolution by the batch method.

Model	Firmware version
R04CPU R08CPU R16CPU R32CPU R120CPU R04ENCPU R08ENCPU R16ENCPU R32ENCPU R120ENCPU	Version 40 or later
R08SF CPU R16SF CPU R32SF CPU R120SF CPU	Version 16 or later

The global labels targeted for the label name resolution vary depending on the conditions under which operations are performed on GX Works3.

If all the following conditions are satisfied, the GOT performs the label name resolution only on the global label block containing the updated label.

Otherwise, the GOT performs the label name resolution on all the global labels in the project.

- The project is kept open between the instant when it is written to a PLC with [Write to PLC] and the instant when it is rewritten to the PLC with [Online Program Change].
- A global label is added to or changed in an existing global label block.

For the operation when a global label is deleted or renamed on the PLC side, refer to the following.

⇒6.1.3 ■ 5 (2) (c) Deleting or renaming a global label

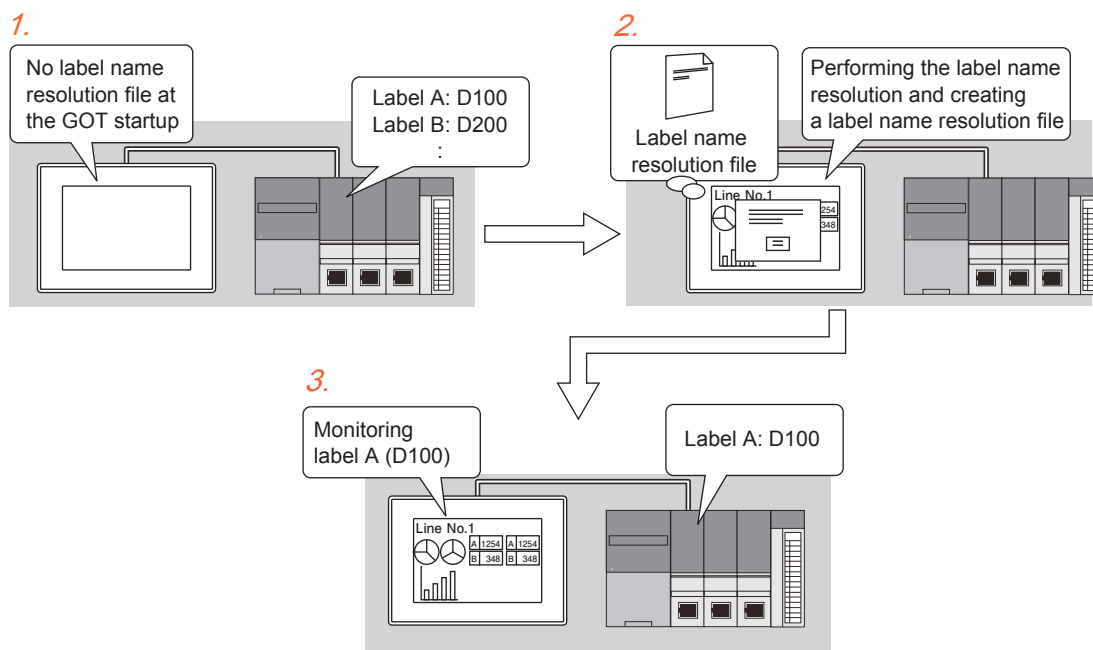

## (2) Label name resolution performed automatically

The GOT performs the label name resolution automatically at the following timing.

- The GOT starts up. (The GOT is powered on, restarts by reset, or re-runs the project.)
- The GOT detects that the labels used for the controllers are updated.

### (a) When the GOT starts up

The following shows an example when no label name resolution file exists at the GOT startup.

**Step 1** The GOT checks if a label name resolution file exists at startup.

**Step 2** If no label name resolution file exists, the GOT performs the label name resolution on all the global labels used in the project and creates a label name resolution file.  
If a label name resolution file exists, the GOT performs the label name resolution on the unresolved global labels in the file.

- Step 3** After the label name resolution ends, the GOT starts device monitoring on all the channels.
- The GOT stops device monitoring on the channel where the resolution is canceled or not performed.
- The GOT cannot monitor the global label that has an error occurred during the resolution.
- Accordingly, the object that uses this global label cannot appear on the GOT.
- For the resolution results, check the Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084).
- 12.1.3 ■ 3 (49) Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084)

**(b) When the GOT detects the update of global labels**

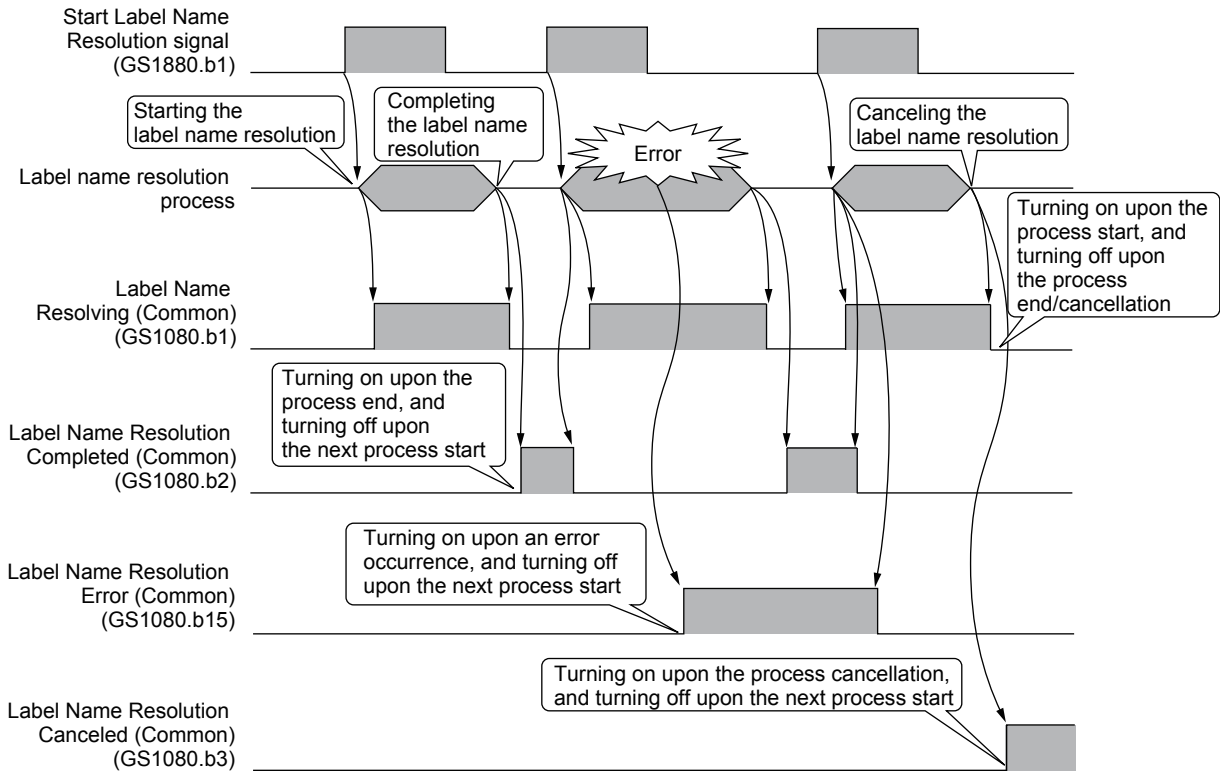

- Step 1** The device assigned to the monitored global label is updated from D100 to D200.
- Step 2** Upon detecting the global label update on a station, the GOT stops the device update on the station and displays a system alarm.
- After the label update completes on the PLC side, the GOT performs the label name resolution on the station.
- Step 3** After the label name resolution ends, the GOT restarts device monitoring.
- The GOT cannot monitor the global label that has an error occurred during the resolution.
- Accordingly, the object that uses this global label cannot appear on the GOT.
- For the resolution results, check the Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084).
- 12.1.3 ■ 3 (49) Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084)

**(3) Label name resolution performed by a user**

Turing on the Start Label Name Resolution signal (GS1880.b1) performs the label name resolution.

To monitor the status of the label name resolution, use the Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084) simultaneously.

For the details of the Label Name Resolution Control (GS1880) and the Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084), refer to the following.

- ⇒ 12.1.3 ■ 3 (49) Label Name Resolution Status (Common, CH1 to CH4) (GS1080, GS1081 to GS1084)
- 12.1.3 ■ 6 (17) Label Name Resolution Control (GS1880)

#### (4) GOT operation during the label name resolution

Upon starting the label name resolution, the GOT stops monitoring all the channels. The GOT performs the label name resolution on all the monitored global labels by channel. The following dialog appears during the resolution.

##### 1) Numbers of resolved label names and errors

The number of resolved label names by channel is displayed. The number of errors is displayed after the number of resolved label names.

##### 2) [Cancel] button

Cancels the label name resolution.

If an error occurs during the label name resolution, a system alarm occurs after the resolution ends. Check the system alarm for the details of the error.

- ⇒ GOT2000 Series User's Manual (Utility)

The GOT cannot monitor the global label that has an error occurred during the resolution. Accordingly, the object that uses this global label cannot appear on the GOT.

#### (5) Canceling the label name resolution

To cancel the label name resolution, touch the [Cancel] button in the dialog displayed during the resolution.

When the resolution is canceled, the GOT stops monitoring the channels where the resolution is canceled or not performed, and turns on the Channel Shutdown Control (CH1 to CH4) (GS539.b0, GS549.b0, GS559.b0, GS569.b0). To restart monitoring these channels, turn off the Channel Shutdown Control (CH1 to CH4) (GS539.b0, GS549.b0, GS559.b0, GS569.b0).

→ 12.1.3 ■ 5 (64) Channel Shutdown Control (CH1 to CH4) (GS539, GS549, GS559, GS569)

## ■ 5 Precautions

### (1) Precautions for using global labels

#### (a) Station No. switching

The station No. switching is not available to the monitored station that uses global labels.  
Do not use global labels for the station requiring the station No. switching.

#### (b) Writing the package data

When you set global labels in a project and write the project data to the GOT, [Write Mode] is not selectable in the [Write Option] dialog.  
In this case, [Write Mode] is fixed to [Synchronize].

#### (c) When using a global label to specify consecutive devices

When you use a global label to specify consecutive devices, the consecutive devices, beginning with the device assigned to the label, must be within the device range.  
Otherwise, you cannot set the global label to specify the consecutive devices in the device setting.

#### (d) Data type of a global label

The following data types appear incorrectly in the [Global Label Reference] dialog or the [Select Global Label] dialog under the following condition: After importing global labels to a project with version 1.170C or earlier of GT Designer3, you open the project with the latest version of GT Designer3.

- [Timer]
- [Retentive Timer]
- [Counter]
- [Long Timer]
- [Long Retentive Timer]
- [Long Counter]

In such a case, import the global labels again with the latest version of GT Designer3.

#### (e) Directly entering a global label name

When the data type of a global label is string or Unicode string, import the label and then set the label by entering its name.  
If you do not import the label before setting it, the data type cannot be recognized as string or Unicode string, and a system alarm occurs.

#### (f) Number of characters to be displayed

When you use a global label whose data type is string or Unicode string, set the number of characters to be displayed according to the number of characters set with GX Works3.

#### (g) Setting the object or function that uses a global label

Configure the following settings for the object or function that uses a global label whose data type is string or Unicode string.

Object or function	Data type	Setting
Text display object, text input object	String	Deselect [Display in order of High -> Low] in the [Extended] tab.
	String [Unicode]	Select [Display in order of High -> Low] in the [Extended] tab.

Object or function	Data type	Setting
Text print object	String	Deselect [Display in order of High -> Low].
	String [Unicode]	Select [Display in order of High -> Low].
Recipe function, logging function	String	Select [High-->Low] for [Storage Order] in the [Device] tab.
	String [Unicode]	Select [Low-->High] for [Storage Order] in the [Device] tab.

#### (h) Monitor speed setting

To read or write 235 two-byte characters or more, select [High(Normal)] or [Middle] for [Monitor Speed] in [Detail Setting] in the [Controller Setting] window.

If you select [Low] for [Monitor Speed], a system alarm occurs when the data is read or written.

⇒5.5.1 ■ 4 [Controller Setting]

#### (i) Global label assigned with a device out of the device range

When data is written to the global label that is assigned with a device out of the device range, a system alarm occurs. Assign a device within the device range to the global label.

#### (j) Device assigned to a global label

The monitoring speed may decrease depending on whether data types are consistent between the monitored global label and the device assigned to the label.

For an array-type global label, assigning a device to an element of the array as shown below may improve the monitoring performance.

- When the data type of an element is bit  
Assign a bit device to the element.
- When the data type of an element is not bit  
Assign a word device to the element.

### (2) Precautions for the label name resolution

#### (a) Differences of whether a label name resolution file exists

In the following cases, the GOT performs the label name resolution on all global labels. Therefore, the label name resolution may take longer time to complete.

- The GOT has no label name resolution file.
- The GOT has the label name resolution file in which all label names are unresolved.
- The GOT has the label name resolution file that is not created by using the global labels in the project.

#### (b) Size of a label name resolution file

Using the split method results in a larger label name resolution file as compared with using the batch method. Reserve enough free space to store the file, and then perform the label name resolution.

#### (c) Deleting or renaming a global label

If a global label on the PLC side is updated with [Online Program Change] of GX Works3, manipulate the relevant label on the GOT side as shown below, and then perform the label name resolution.

- When deleting a global label on the PLC side  
Delete the relevant global label on the GOT side.
- When renaming a global label on the PLC side  
Rename the relevant global label on the GOT side.

#### (d) Communication timeout during the label name resolution

When the controller communication times out during the label name resolution, the resolution is skipped. The global labels used for the skipped station are counted as the resolved labels.

#### (e) Screen switching during the label name resolution

The GOT stops device monitoring on a channel where the label name resolution is being performed. Therefore, when you switch the screen during the resolution, objects using the devices of the channel cannot appear on the destination screen.

#### (f) Device update during the label name resolution

The GOT stops the device update on a station where the label name resolution is being performed. When you monitor the station by using object functions, functions running on the GOT background, or others, the latest device values are not reflected until the resolution process ends.

⇒8. OBJECT FUNCTION

9. FUNCTIONS PERFORMED ON THE BACKGROUND OF THE GOT

#### (g) Global labels using a data type of structure

When a structure-type global label has a structure-type member, if you manually assign devices to the child members of the structure-type member, the GOT will fail to perform the label name resolution on these child members. System error 328 occurs.

To solve the above problem, take one of the following corrective actions.

- Perform operations so that the devices are automatically assigned to the members.
- Directly set the manually assigned devices as monitor devices.

The following shows an example where the GOT cannot resolve some label names.

Example) When ST\_B is set as the data type of Struct\_B that is a member of ST\_A on GT Works3

If devices are manually assigned to the labels in ST\_B, the GOT cannot resolve these label names.

○ : Resolved, × : Not resolved

Structure A			Structure B			[Device] (Manually assigned)	Result of the label name resolution
Structure name	[Label Name] (Name of a member)	[Data Type] (Data type of a member)	Structure name	[Label Name] (Name of a member)	[Data Type] (Data type of a member)		
ST_A	LabelA_1	[Word [Signed]]	-	-	-	D10	○
	LabelA_2	[Word [Signed]]	-	-	-	D20	○
	Struct_B	ST_B(Structure B)	ST_B	LabelA_1	[Word [Signed]]	D100	×
				LabelA_2	[Word [Signed]]	D200	×

#### (h) Corrective action for unresolved label names

The following shows the conditions resulting in unresolved label names.

- The label name resolution is executed during the PLC initial processing.
- The relevant labels are nonexistent on the PLC side.

In both cases, system alarm 328 occurs.

To identify the exact condition resulting in unresolved label names, turn on GS1880.b2 before the label name resolution is executed.

Condition resulting in unresolved label names	Label name resolution result		Corrective action
	When GS1880.b2 is off	When GS1880.b2 is on	
The label name resolution is executed during the PLC initial processing.	Unresolved label names are existent. System error 328 occurs.	Unresolved label names are existent. No system alarm occurs.	Change the title display time of the GOT so as to execute the label name resolution after the PLC initial processing. →5.2.13 ■ 4 [Startup Logo]
The relevant labels are nonexistent on the PLC side.		Unresolved label names are existent. System error 328 occurs.	Correct the label settings.

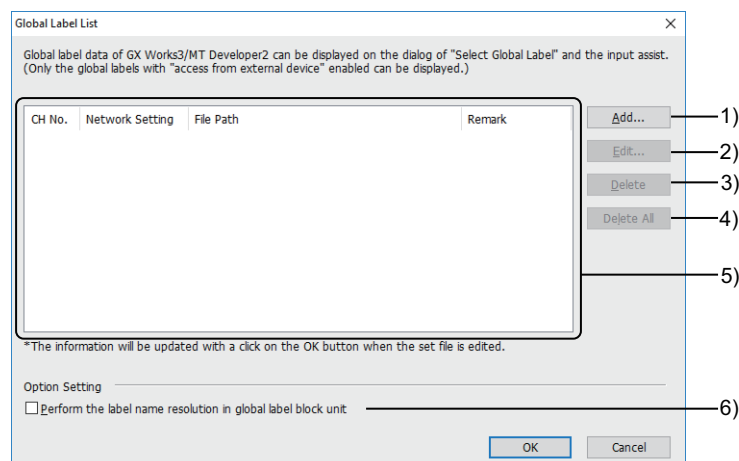

## ■ 6 [Global Label List] dialog

You can add, edit, or delete a global label in the [Global Label List] dialog.

To display this dialog, perform one of the following operations.

- Select [Project] → [Import Other Data] → [Global Label] from the menu.
- In the [Project] window, click [Label] and then [Global Label], and double-click [Import/Setting].

### 1) [Add] button

Displays the [Add Global Label] dialog.  
Import global labels.

→(1) [Add Global Label] dialog or [Edit Global Label] dialog

### 2) [Edit] button

Displays the [Edit Global Label] dialog.  
Edit the settings to import the global labels of the selected file.

→(1) [Add Global Label] dialog or [Edit Global Label] dialog

### 3) [Delete] button

Deletes the global labels of the selected file.

### 4) [Delete All] button

Deletes all global labels.

### 5) Global label list

Lists the imported global labels and the connected channels.

### 6) [Perform the label name resolution in global label block unit]

Not available to GT SoftGOT2000.

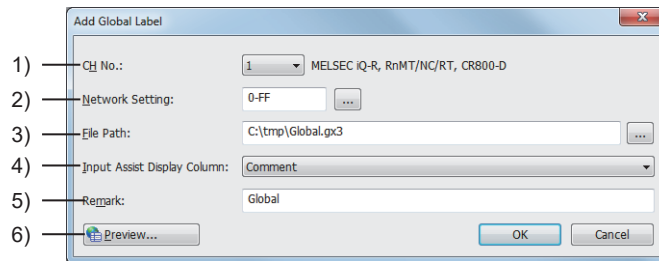

Performs the label name resolution by the split method.

The label name resolution is performed only on the global label block containing an updated label.

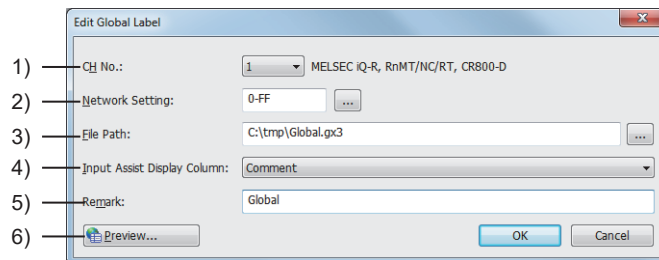

For the details, refer to the following.

→6.1.3 ■ 4 (1) Label name resolution methods

## (1) [Add Global Label] dialog or [Edit Global Label] dialog

[Add Global Label] dialog

[Edit Global Label] dialog

### 1) [CH No.]

Select the CH No. for connection to the PLC having the global label setting.

### 2) [Network]

Set the network setting for the PLC having the global label setting.

### 3) [File Path]

Specify the path to a project or CSV file from which global labels are imported.

### 4) [Input Assist Display Column]

For the comment set in the global label, specify the column of the comment to be displayed in the input assist.

If a project is specified with [File Path], the applicable comments are fixed.

### 5) [Remark]

Set remarks to be displayed in the [Global Label List] dialog.

### 6) [Preview] button

This item appears only when a project is specified with [File Path].

Displays the [Global Label Preview] dialog showing the details of target global labels.

The global label that cannot be imported is highlighted in gray.

The displayed project data is not editable.

## 7 [Select Global Label] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can select a global label from the label list and set the label in the device setting of an object or others in the [Select Global Label] dialog.

To display this dialog, click the [Global Label] button in the [Select CH No.] dialog.

### 1) [Global Label Setting]

Select a combination of the channel number, network setting, and remarks of the imported global labels.

### 2) [Refinement]

Enter characters to narrow down the global labels in the label list.

Only the global labels narrowed down by the entered characters are displayed in the label list.

Up to 32 characters can be entered.

The entered characters are case-insensitive.

### 3) Search

Search the global label list for a label by the specified keyword.

Set [Search Target] and enter a search keyword in [Keyword].

Click the [Find Next] button to search for a global label by the search keyword.

The following shows the items selectable for [Search Target].

- [All]
- [Label Name]
- [Data Type]
- [Comment]

Up to 32 characters can be entered in [Keyword].

The entered characters are case-insensitive.

### 4) Global label list

Lists global labels.

Select a global label from the label list and click the [OK] button to set the label for [Device].

Item	Description
[No.]	Number of a global label
[Label Name]	Name of a global label
[Data Type]	Data type of a global label
[Comment]	Comment set for a global label

### 5) [Bit Position]

Set the bit position of a global label.

The setting range is [0] to [15].

If you use the [Device List] window to display the [Select Global Label] dialog, [Bit Position] is not settable.

## ■ 8 [Global Label Reference] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [Global Label Reference] dialog lists the global labels imported to GT Designer3.

To display this dialog, double-click a target global label, or right-click the label and select [Open] from the right-click context menu in the [Project] window.

### 1) [Global Label Setting]

Select a combination of the channel number, network setting, and remarks of the imported global labels.

### 2) [Refinement]

Enter characters to narrow down the global labels in the label list.

Only the global labels narrowed down by the entered characters are displayed in the label list.

Up to 32 characters can be entered.

The entered characters are case-insensitive.

### 3) Search

Search the global label list for a label by the specified keyword.

Set [Search Target] and enter a search keyword in [Keyword].

Click the [Find Next] button to search for a global label by the search keyword.

The following shows the items selectable for [Search Target].

- [All]
- [Label Name]
- [Data Type]
- [Comment]

Up to 32 characters can be entered in [Keyword].

The entered characters are case-insensitive.

### 4) Global label list

Lists global labels.

Item	Description
[No.]	Number of a global label
[Label Name]	Name of a global label
[Data Type]	Data type of a global label
[Comment]	Comment set for a global label

## 6.1.4 How to set labels (GT Designer3)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Specifications of the label (GT Designer3)
  - 2 Registering, editing, and deleting the label (GT Designer3)
  - 3 Setting a label (GT Designer3)
  - 4 Label check
  - 5 Precautions
  - 6 [Label Group List] dialog
  - 7 [Label Group] window
  - 8 [Register to Label] dialog
  - 9 [Select Label (GT Designer3)] dialog

You can use labels (GT Designer3) for the device setting on GT Designer3.

A label (GT Designer3) is a character string with a device assigned and usable only in GT Designer3 projects.

The GOT internal devices and the devices of Mitsubishi Electric and non-Mitsubishi Electric products can be assigned to labels (GT Designer3).

By using labels (GT Designer3), you can create the project data without paying attention to the actual devices.

To create labels (GT Designer3), create a label group first.

By managing the labels (GT Designer3) by label group, you can efficiently perform manipulations on the labels, such as editing label names and changing assigned devices.

### ■ 1 Specifications of the label (GT Designer3)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Devices that can be assigned to the labels

You can assign devices of the following controllers to the labels (GT Designer3).

- Devices of Mitsubishi Electric products
- Devices of non-Mitsubishi Electric products
- GOT internal devices (excluding gateway devices (EG))

You can set the labels (GT Designer3) without devices assigned on GT Designer3. However, if you write a project having such settings to the GOT, the GOT does not operate correctly.

For the details of the controller devices, refer to the following.

- 12.1 GOT Internal Device
- 12.2 Device Range and Settings of Each Controller

#### (2) Using different types of labels or tags together

The labels (GT Designer3) can be used together with the following labels and tags.

Select labels or tags as required.

- System label
- Global label
- OMRON NJ/NX tag
- RSLogix 5000 tag
- AB native tag

#### (3) Label group

A label group is used to classify labels (GT Designer3).

All labels (GT Designer3) are registered in label groups.

Up to 200 label groups can be set for one project.

The numbers or names of the label groups cannot overlap each other.

Set a unique number and name to all label groups.

#### (4) Number of registrable labels

Up to 204800 labels (GT Designer3) can be registered in one project.

Up to 10000 labels (GT Designer3) can be registered in one label group.

#### (5) Label name

The label name must satisfy the following requirements.

Otherwise, the label (GT Designer3) cannot be set on GT Designer3.

- A label group contains no labels with the same names.
- Up to 256 characters are used for a label name.
- The following one-byte symbols are not used.

/\\*? <> | " : [ ] ; , = + % ' ^ @ { } . ! # \$ & ~ ` ( ) -

## (6) Data type of the label (GT Designer3)

The following data types are settable for labels (GT Designer3).

○ : Applicable, -: Not applicable

Data type of the label (GT Designer3)	Bit specification of word device
[BIT]	-
[Signed BIN16]	○ *1
[Unsigned BIN16]	○ *1
[Signed BIN32]	-
[Unsigned BIN32]	-
[BCD16]	-
[BCD32]	-
[Real]	-

\*1 The bit specification is not available when a device incapable of being bit-specified is assigned to the label (GT Designer3).

When [Reflect the data type of label] is selected on the [Edit] tab in the [Options] dialog, the data types of labels (GT Designer3) are reflected to the settings of objects and others at the time of device specification.

⇒11.10.4 Customizing the settings related to editing operations

If you change the data type of a label (GT Designer3) already set to an object or others, the change is not reflected to the setting of the object or others.

## (7) Array-type label (GT Designer3)

The array must satisfy the following requirements.

- The number of dimensions is three or less.
- (Number of elements in the first dimension) × (Number of elements in the second dimension) × (Number of elements in the third dimension) is 2147483648 or less.

⇒6.1.4 ■ 7 (1) [Data Type Selection] dialog

## (8) Functions unsupporting the labels (GT Designer3)

The labels (GT Designer3) cannot be used in the device setting for the MES interface function.

For the MES interface function, specify devices directly.

## (9) Exported file of a label group

The following shows the exported file configuration of a label group.

1)	2)					
		1) Label_group_A				
3)		Test label group.				
		Label Name	Data Type	Assign (Device)	Comment	Comment2
		StartSwitch_A	Bit	X01 00	Comment3	...
		ExitSwitch_A	Bit	X01 01	...	Comment16
		StartLamp_A	Signed BIN1 6	D500		
		ExitLamp_A	Unsigned BIN1 6	D501		
		EmergencyStopSwitch	Bit[0..100]	X01 02		

4)          5)          6)                                  7)

### 1) Label group No.

Group No. of the label group.

The setting range is [1] to [200].

### 2) Label group name

Name of the label group.

Up to 32 characters can be set.

### 3) Detailed description

Detailed description of the label group.

Up to 512 characters can be set.

A line feed is counted as two characters.

#### 4) [Label Name]

Name of the label (GT Designer3).

Up to 256 characters can be set.

#### 5) [Data Type]

Data type of the label (GT Designer3), and array elements

The array elements are displayed only when the array setting is configured.

Example) When the data type is bit and array elements are set in three dimensions

The following shows the items to be selected for the data type.

- [BIT]
- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

The setting range of array elements is [-2147483648] to [2147483647].

(Number of elements in the first dimension) × (Number of elements in the second dimension) × (Number of elements in the third dimension) must be 2147483648 or less.

#### 6) [Assign (Device)]

Device assigned to the label (GT Designer3).

An invalid device is displayed as [??].

#### 7) [Comment], [Comment2] to [Comment16]

Comment set for the label (GT Designer3).

Up to 1024 characters can be set.

### (10) Labels that can be imported

The following labels can be imported.

- Labels (GT Designer3)
- Global labels created with GX Works3, GX Works2, or MT Developer2 (except structure-type global labels)

## ■ 2 Registering, editing, and deleting the label (GT Designer3)

Register labels (GT Designer3) in a label group.

Create a label group in advance, and register the labels (GT Designer3).

### (1) Creating a label group

The following shows the procedure for creating a label group.

**Step 1** Perform one of the following operations to open the [Label Group Property] dialog.

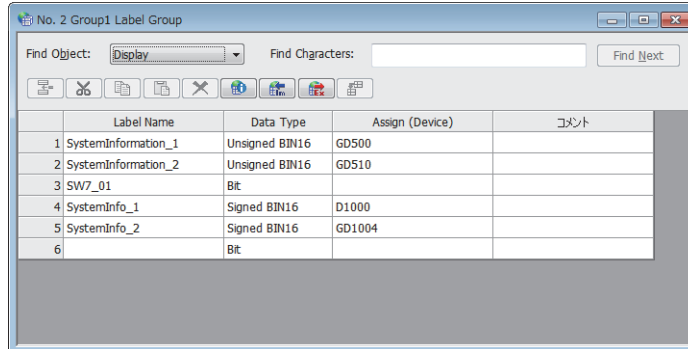

- Select [Common settings] → [Label] → [Open] from the menu to display the [Label Group List] dialog, and click the [New] button.  
⇒ 6.1.4 ■ 6 [Label Group List] dialog
- In the [Project] window, double-click [New] under [Label (GT Designer3)].  
Alternatively, right-click [Label (GT Designer3)] and select [New Label Group] from the right-click context menu.  
⇒ 2.2.4 ■ 1 [Project] window

**Step 2** In the [Label Group Property] dialog, set the label group.

⇒ 6.1.4 ■ 6 (1) [Label Group Property] dialog

### (2) Registering, editing, and deleting a label in the [Label Group] dialog

- Step 1** Perform one of the following operations to open the [Label Group] dialog.
- Select [Common settings] → [Label] → [Open] from the menu to display the [Label Group List] dialog. In the dialog, select a target label group and click the [Edit] button.
    - ⇒ 6.1.4 ■ 6 [Label Group List] dialog
  - Right-click a target label group in [Label] of the project tree, and select [Open].
    - ⇒ 2.2.4 ■ 1 [Project] window
- Step 2** Register, edit, or delete a label (GT Designer3) in the [Label Group] dialog.
- ⇒ ■ 7 [Label Group] window

### (3) Utilizing a label (GT Designer3) from a screen

When a screen is created by utilizing screen data from a different project, the label groups set in the source screen are selectable.

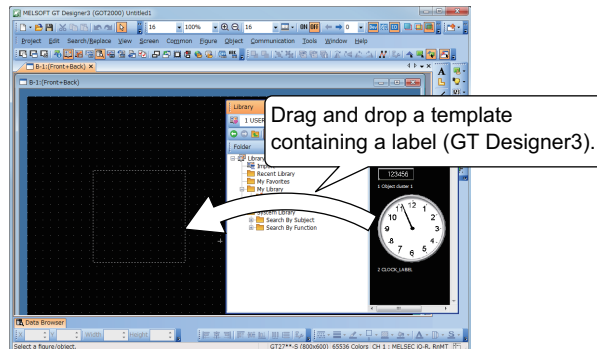

For how to create a screen by utilizing screen data from a different project, refer to the following.

⇒ 11.4.2 How to use the project utilization

### (4) Utilizing a label (GT Designer3) from a template

When a template containing a label (GT Designer3) is dragged and dropped from the library or others, the label also comes with the template.

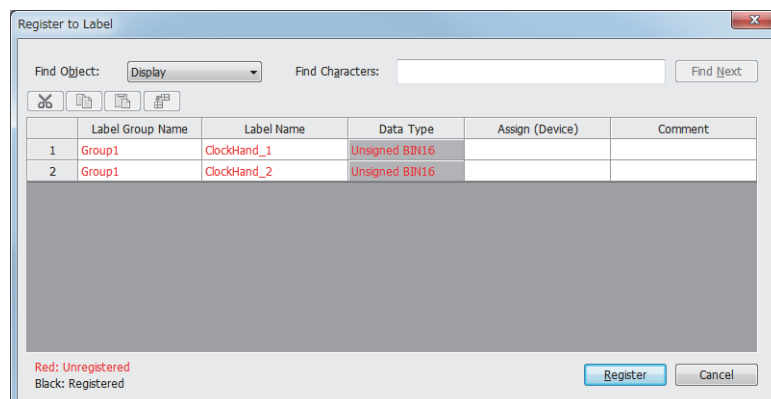

- Step 1** Drag and drop a template containing a label (GT Designer3) from the library or others to the screen editor.

- Step 2** When the template is pasted, the [Register to Label] dialog appears.

Import the labels (GT Designer3).

⇒ ■ 8 [Register to Label] dialog

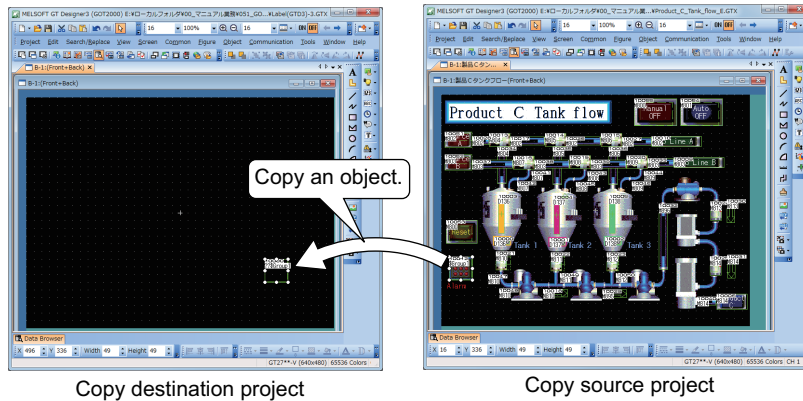

When some labels (GT Designer3) listed have the same label group name and label name, but have different assigned devices and comments, registration is made as follows:  
Consecutive numbers are added to the label names, and the labels are registered as different ones.

### (5) Utilizing a label (GT Designer3) from an object

When an object with a label (GT Designer3) set is copied, the label also comes with the object.

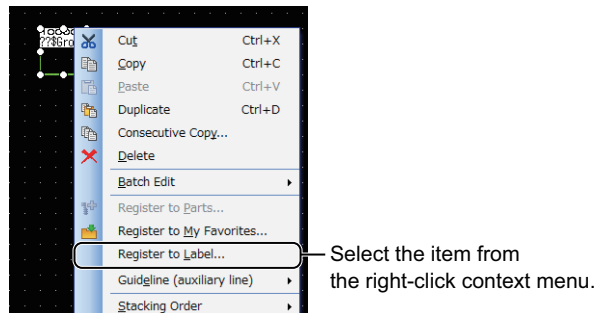

- Step 1** Open a copy source project and a copy destination project on different GT Designer3 modules.
- Step 2** Copy an object with a label set in the source project, and paste the object in the destination project.

If a label (GT Designer3) registered in the copy destination project has the same label group name and label name, but has a different assigned device and comment, the following occurs.  
The label setting of the source object is not copied, and the setting of the label already registered remains effective.

(The rest of the procedure is unnecessary.)

- Step 3** Right-click the pasted object, and select [Register to Label].

- Step 4** In the [Register to Label] dialog, incorporate the label into the project.

➡ ■ 8 [Register to Label] dialog

### (6) Importing and exporting a label group

You can import or export a label group by specifying a file as shown below.

- Import  
CSV file, Unicode text file, or GX Works3 project

- Export  
CSV file or Unicode text file

For the configuration of the exported file, refer to the following.

⇒6.1.4 ■ 1 (9) Exported file of a label group

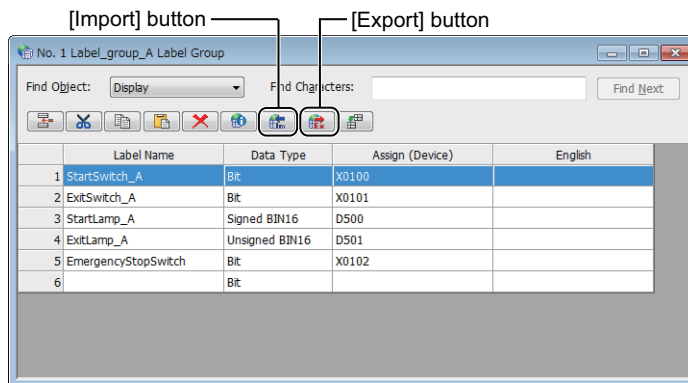

To import a label group from a GX Works3 project, all the following conditions must be satisfied.

- GX Works3 version 1.040S or later is installed.
- [Global Label (GX Works3)] is selected for [Label Type] in the [Import Label] dialog.

**Step 1** Perform one of the following operations to open the [Label Group] dialog.

- Select [Common settings] → [Label] → [Open] from the menu to display the [Label Group List] dialog. In the dialog, select a target label group and click the [Edit] button.  
⇒6.1.4 ■ 6 [Label Group List] dialog
- Right-click a target label group in [Label] of the project tree, and select [Open].  
⇒2.2.4 ■ 1 [Project] window

**Step 2** Click the [Import] or [Export] button to import or export a label group.

**Step 3** In the displayed dialog, perform the import or export operation.

- Import

In the [Import Label] dialog, select a file of labels (GT Designer3) or global labels to be imported, and click the [OK] button.

⇒6.1.4 ■ 7 (2) [Import Label] dialog

If [Access from External Device] is enabled for the global labels to be imported, a confirmation dialog appears upon clicking the [OK] button in the [Add Global Label] dialog.

To disable the access from external devices and import the labels as the labels (GT Designer3), click the [Yes] button in the confirmation dialog.

To display the [Global Label List] dialog, click the [No] button in the confirmation dialog.

The access from external devices remains enabled, and you cannot import the labels as the labels (GT Designer3).

To import the labels as global labels, perform the operation in the [Global Label List] dialog.

⇒6.1.3 ■ 6 [Global Label List] dialog

To return to the [Label Group] window, click the [Cancel] button in the confirmation dialog.

- Export

In the [Save As] dialog, set [Save in], [File Name], and [Save as type], and then click the [Save] button.

Import

Export

## (7) Registering labels (GT Designer3) automatically

Labels (GT Designer3) are automatically registerable based on the profile (CSP+) data in the personal computer used. For the details, refer to the following.

### ■ 3 Setting a label (GT Designer3)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### Point

#### Checking the data type of the label (GT Designer3)

When you change the data type of the object or others, the data types may be inconsistent between the label (GT Designer3) and the object or others.

After setting the label (GT Designer3), check if the data types are consistent between the label (GT Designer3) and the object or others.

To check the data types, you are recommended to compare the exported CSV file of a label group with the CSV file exported from [Device List].

→ 11.8.2 Listing devices (Device list)

6.1.4 ■ 2 (6) Importing and exporting a label group

#### (1) Directly entering a label name

In the setting dialog of an object or others, enter the name of a label (GT Designer3) directly in the text box of [Device]. At the beginning of the name, enter a symbol "\$" indicating the label group.

Between the label group name and the label name, enter a delimiter ":".

To specify a bit of the label (GT Designer3) to which a word device is assigned, append a bit number (b0 to b15) to the label name.

To enter an array element, enclose the subscripts of the element in a square bracket ([]).

For a multidimensional array, enter a comma (,) to separate the subscripts in each dimension.

Enter the label name and array element.

#### · Label name

#### · Array

#### (2) Selecting a label (GT Designer3) from the label list

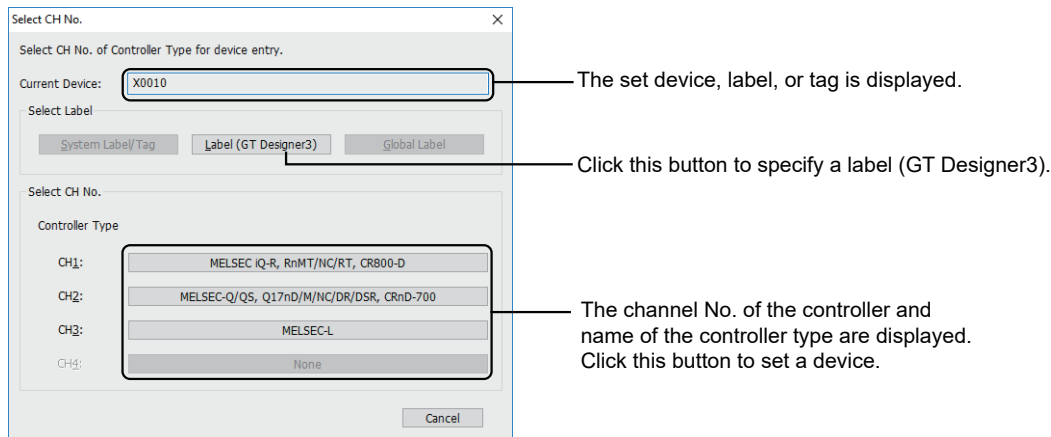

**Step 1** In the setting dialog of an object or others, hold down the [Shift] key and click the [...] button of [Device] to display the [Select CH No.] dialog.

If you click the [...] button without holding down the [Shift] key, the dialog to appear varies with the selection of [CH No. Selection Dialog Display Setting] on the [Edit] tab of the [Options] dialog.

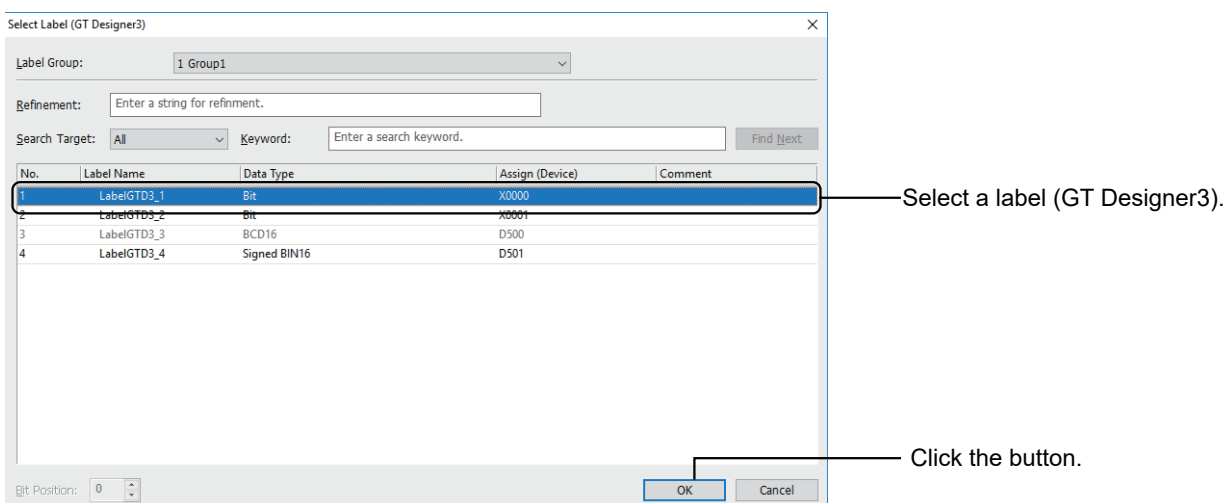

For the setting details, refer to the following.

→ 11.10.4 Customizing the settings related to editing operations

**Step 2** In the [Select CH No.] dialog, click the [Label (GT Designer3)] button to display the [Select Label (GT Designer3)] dialog.

**Step 3** Select a label (GT Designer3) from the label list and click the [OK] button to set the selected label for [Device].

### (3) Using the input assist

When setting a device, you can enter a label (GT Designer3) using the input assist. Search for and set the label (GT Designer3) in the setting dialog of an object. For how to use the input assist, refer to the following.

→ 11.3 Setting Devices from Device Comments (Input Assist)

### 4 Label check

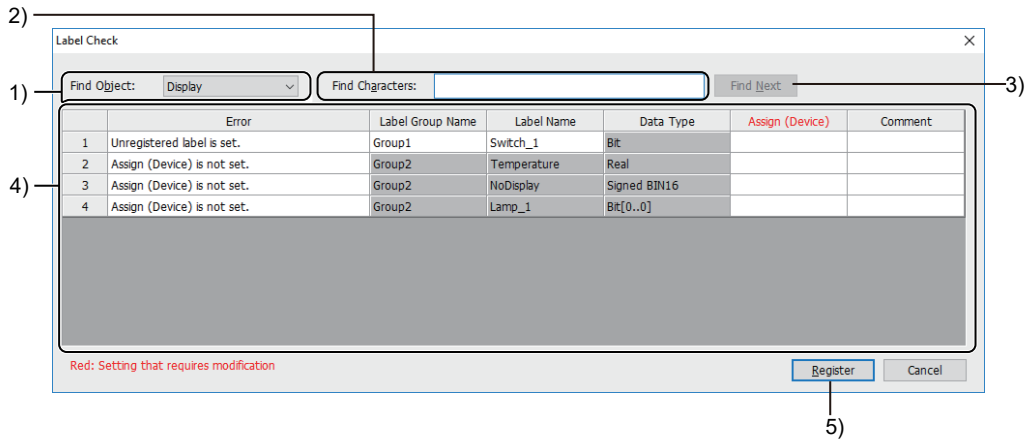

The label check function checks set labels (GT Designer3) for errors to correct the errors. Perform one of the following operations to execute the label check.

- Select [Tool] → [Label Check] from the menu.
- Right-click a target label group in [Label] of the project tree, and select [Open].

→ 2.2.4 ■ 1 [Project] window

In the [Label Check] dialog, correct the errors.

### 1) [Find Object]

Select the target to be searched in the label check error list.

### 2) [Find Characters]

Set a character string to be searched for.  
The search string is case-insensitive.

### 3) [Find Next]

Searches the list by the settings of [Find Object] and [Find Characters].

### 4) Label check error list

Lists errors detected by the label check.  
You can correct each item in the list.

Item	Description
[Error]	Description of the detected error. →(1) Error messages, causes, and corrective actions
[Label Group Name]	Name of the label group to which the label (GT Designer3) belongs.
[Label Name]	Name of the label (GT Designer3). Up to 256 characters can be set.
[Data Type]	Data type of the label (GT Designer3), and array elements The array elements are displayed only when the array setting is configured. Example) When the data type is bit and array elements are set in three dimensions <div style="text-align: center;"> </div>
[Assign (Device)]	Device assigned to the label (GT Designer3). An invalid device is displayed as [??].
[Comment]	Comment set for the label (GT Designer3) where an error occurs. The comment is displayed according to the setting of [Input Assist Display] in the [Label Group Property] dialog. →6.1.4 ■ 6 (1) [Label Group Property] dialog Up to 1024 characters can be set.

### 5) [Register] button

Registers the label (GT Designer3) in the label group.

### (1) Error messages, causes, and corrective actions

The following lists messages, causes, and corrective actions for errors detected by the label check.

Error message	Cause	Corrective action
Unregistered label is set.	• A label (GT Designer3) unregistered in the label group is set.	<ul style="list-style-type: none"> <li>• Register the label (GT Designer3) in the label group.</li> <li>• Delete the label (GT Designer3) if unnecessary.</li> </ul> → ■ 7 [Label Group] window

Error message	Cause	Corrective action
The array element count is invalid. Register the label as a new label or check the setting on the Device List, etc. and change the setting.	<ul style="list-style-type: none"> <li>After an array-type label (GT Designer3) was set for an object or others, the array setting of the label was changed in the label list.</li> </ul>	<ul style="list-style-type: none"> <li>Register the relevant label (GT Designer3) in the label group as a new one.</li> <li>Correct the array setting of the relevant label (GT Designer3).</li> <li>Delete the label (GT Designer3) if unnecessary. <ul style="list-style-type: none"> <li>→ ■ 7 [Label Group] window</li> </ul> </li> </ul>
Assign (Device) is not set.	<ul style="list-style-type: none"> <li>A label (GT Designer3) without a device assigned is set.</li> </ul>	<ul style="list-style-type: none"> <li>Assign a device to the label (GT Designer3). <ul style="list-style-type: none"> <li>→ ■ 7 [Label Group] window</li> </ul> </li> </ul>
Invalid device is set for Assign (Device).	<ul style="list-style-type: none"> <li>A device of a channel No. that cannot be set is assigned to a label (GT Designer3).</li> <li>A device that cannot be monitored by the GOT is assigned to a label (GT Designer3).</li> </ul>	<ul style="list-style-type: none"> <li>Assign a valid device to the label (GT Designer3). <ul style="list-style-type: none"> <li>→ ■ 7 [Label Group] window</li> </ul> </li> </ul>

## ■ 5 Precautions

### (1) Consecutive copy of an object with a label (GT Designer3) set

When you copy an object with a label (GT Designer3) set by using the consecutive copy function, the device number is not incremented.

When using the consecutive copy, specify the device directly in the device setting of an object copy.

### (2) Changing a label (GT Designer3) in the script text

Even if you change a label name or label group in the [Label Group] dialog, the change is not reflected to the script text containing the label.

When using a label (GT Designer3) in the script text, check the script text and change the label setting accordingly.

### (3) When using a label (GT Designer3) to specify consecutive devices

When you use a label (GT Designer3) to specify consecutive devices, the consecutive devices, beginning with the device assigned to the label, must be within the device range.

Otherwise, you cannot set the label (GT Designer3) to specify the consecutive devices in the device setting.

You also cannot use an unregistered label (GT Designer3) to specify consecutive devices.

### (4) Utilizing labels (GT Designer3) from a different project

You cannot incorporate labels (GT Designer3) from a different project in the [Utilize Data (Project)] dialog or the [Utilize Data (Screen)] dialog.

To utilize a label group from a different project, use [Utilize Project].

→ 11.4 Utilizing Other Project Data

### (5) When an unregistered label (GT Designer3) is used in the device setting

When you set an unregistered label (GT Designer3) in the device setting for an object, after registering the label in the [Label Group] window, close the screen on which the object is placed.

If you edit the label name and the label group name without closing the screen after the registration, the changes are not reflected to the object.

### (6) Writing package data

When you set labels (GT Designer3) in a project and write the project data to the GOT, [Write Mode] is not selectable in the [Write Option] dialog.

In this case, [Write Mode] is fixed to [Synchronize].

→ 4.8.3 [Write Option] dialog (for writing data to one GOT)

## ■ 6 [Label Group List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Create, edit, or delete a label group.

### 1) Label group list

Lists label groups registered in the project.

### 2) [New] button

Displays the [Label Group Property] dialog to create a label group.

→ (1) [Label Group Property] dialog

### 3) [Edit] button

Displays the [Label Group] dialog to edit the label group setting and labels (GT Designer3).

→ ■ 7 [Label Group] window

### 4) [Copy] button

Copies a selected label group.

### 5) [Paste] button

Pastes a copied label group in the label group list.

#### • [Destination No.]

Set the number of the label group to be pasted.

#### • Label group name

Set the name of the label group to be pasted.

### 6) [Delete] button

Deletes a selected label group.

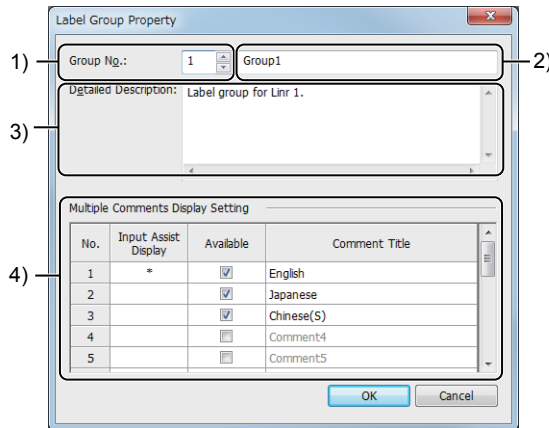

### 7) [Delete All] button

Deletes all the label groups in the label group list.

(1) [Label Group Property] dialog

Create or delete a label group.

1) [Group No.]

Set the group No. of the label group.

The setting range is [1] to [200].

2) Label group name

Set the name of the label group.

Up to 32 characters can be set.

3) [Detailed Description]

Set the detailed description of the label group.

Up to 512 characters can be set.

A line feed is counted as two characters.

4) [Multiple Comments Display Setting]

Set comments for the label group.

Up to 16 comments can be set.

The set comments can be used for the input assist.

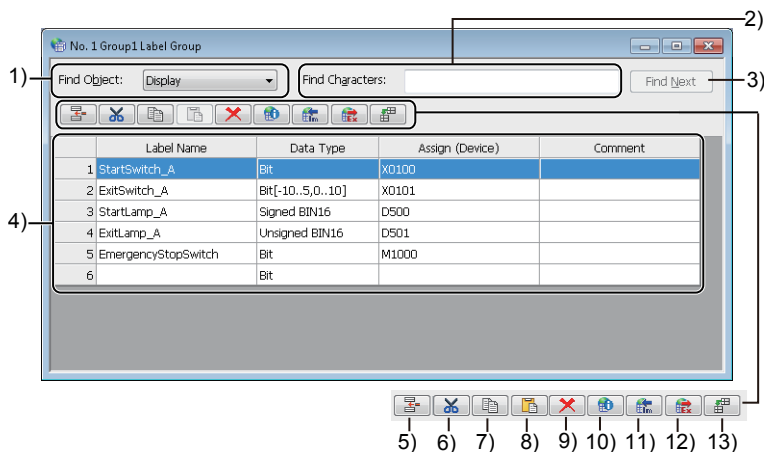

Item	Description
[Input Assist Display]	Select comments to be displayed in the input assist.
[Available]	Enables the comment title input.
[Comment Title]	Set remarks for the comment. Up to 32 characters can be set.

7 [Label Group] window

Create, edit, or delete a label (GT Designer3) in a label group.

The label group setting is also changeable.

- 1) **[Find Object]**  
Select the target to be searched in the label (GT Designer3) list.
- 2) **[Find Characters]**  
Set a character string to be searched for.  
The search string is case-insensitive.
- 3) **[Find Next]**  
Searches the list by the settings of [Find Object] and [Find Characters].
- 4) **Label (GT Designer3) list**  
Lists labels (GT Designer3) that belong to the label group.

Item	Description
[Label Name]	<p>Name of the label (GT Designer3). Up to 256 characters can be set. Click [Label Name] to select the column. To select multiple cells in the same column, perform one of the following operations.</p> <ul style="list-style-type: none"> <li>• Drag the target cells.</li> <li>• Select the first cell in the range, hold down the [Shift] key and click the last cell in the range.</li> <li>• Select the first cell, hold down the [Shift] key and press an arrow key to extend the selection.</li> </ul>
[Data Type]	<p>Data type of the label (GT Designer3), and array elements Click a target cell and then click the [...] button to display the [Data Type Selection] dialog. → (1) [Data Type Selection] dialog The array elements are displayed only when the array setting is configured. Example) When the data type is bit and array elements are set in three dimensions</p> <div style="text-align: center;"> <p style="text-align: center;">Data type                      Array element</p> <p style="text-align: center;"><b>Bit</b>[0..5, -10..10, 50..100]</p> <p style="text-align: center;">Third dimension      Second dimension      First dimension</p> </div>
[Assign (Device)]	<p>Device assigned to the label (GT Designer3). An invalid device is displayed as [??]. Click [Assign (Device)] to select the column. To select multiple cells in the same column, perform one of the following operations.</p> <ul style="list-style-type: none"> <li>• Drag the target cells.</li> <li>• Select the first cell in the range, hold down the [Shift] key and click the last cell in the range.</li> <li>• Select the first cell, hold down the [Shift] key and press an arrow key to extend the selection.</li> </ul>
[Comment], [Comment2] to [Comment16]	<p>Comments for the label (GT Designer3). Up to 1024 characters can be set. Click [Comment] or [Comment2] to [Comment16] to select the corresponding column. To select multiple cells in the same column, perform one of the following operations.</p> <ul style="list-style-type: none"> <li>• Drag the target cells.</li> <li>• Select the first cell in the range, hold down the [Shift] key and click the last cell in the range.</li> <li>• Select the first cell, hold down the [Shift] key and press an arrow key to extend the selection.</li> </ul>

- 5) **[Insert Row] button**  
Inserts a row above a selected row in the label (GT Designer3) list.
- 6) **[Cut] button**  
Cuts a row, column, or cell selected in the label (GT Designer3) list.  
Note that a cell in the [Data Type] column cannot be cut alone.  
You can paste the cut data on another text editing application (such as Microsoft Excel and Notepad).
- 7) **[Copy] button**  
Copies a row, column, or cell selected in the label (GT Designer3) list.  
You can paste the copied data on another text editing application (such as Microsoft Excel and Notepad).
- 8) **[Paste] button**  
Pastes a copied row, column, or cell to the location specified in the label (GT Designer3) list.  
You can also copy or cut data that is created with a text editing application (such as Microsoft Excel and Notepad), and paste the data to the label (GT Designer3) list.  
However, you cannot paste data to multiple columns at once.
- 9) **[Delete] button**  
Deletes a row, column, or cell selected in the label (GT Designer3) list.  
Note that a cell in the [Data Type] column cannot be deleted alone.
- 10) **[Label Group Property] button**

Displays the [Label Group Property] dialog to change the label group setting.

→6.1.4 ■ 6 (1) [Label Group Property] dialog

### 11) [Import] button

Imports a label group from a CSV file, Unicode text file, or GX Works3 project.

Set the file to be imported in the [Import Label] dialog.

→(2) [Import Label] dialog

### 12) [Export] button

Exports the label group to a CSV file or Unicode text file.

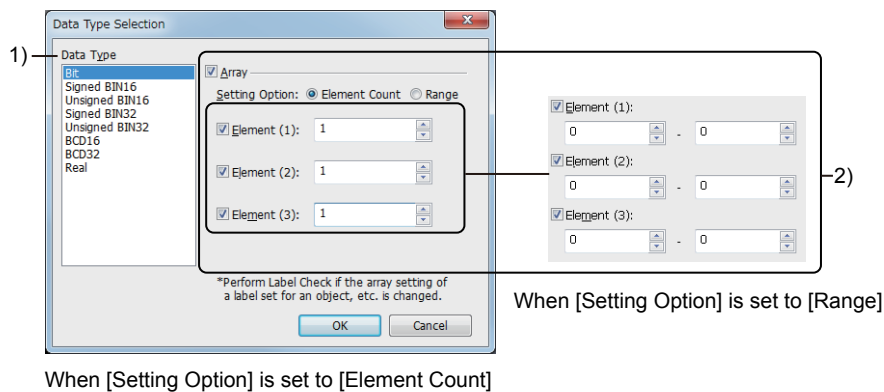

Set the file to be exported in the [Save As] dialog.

### 13) [Batch Edit] button

Displays the [Batch Edit] dialog to collectively change the label group, channel, or network settings of rows selected in the label (GT Designer3) list.

→(3) [Batch Edit] dialog

## (1) [Data Type Selection] dialog

### 1) [Data Type]

Select the data type of the label (GT Designer3).

The following shows the items to be selected.

- [Bit]
- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

### 2) [Array]

Set the array for the label (GT Designer3).

Item	Description
[Setting Option]	Select the method of specifying the array. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Element Count]</li> <li>• [Range]</li> </ul>
[Element (1)], [Element (2)], [Element (3)]	When [Element Count] is selected for [Setting Option], the number of array elements in each dimension is settable. (The smallest subscript for each dimensions is always 0.) The setting range is [1] to [2147483648]. (Number of elements in the first dimension) × (Number of elements in the second dimension) × (Number of elements in the third dimension) must be 2147483648 or less.
[Element (1)], [Element (2)], [Element (3)]	When [Range] is selected for [Setting Option], the lower and upper bounds of each dimension are settable. The setting range is [-2147483648] to [2147483647]. (Number of elements in the first dimension) × (Number of elements in the second dimension) × (Number of elements in the third dimension) must be 2147483648 or less.

## (2) [Import Label] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When [Label Type] is set to [Label (GT Designer3)]

When [Label Type] is set to [Global Label (GX Works2)], [Global Label (GX Works3)], or [Label (MT Developer2)]

### 1) [Label Type]

Select the type of labels to be imported.

The setting of [Controller Type] in the [Controller Setting] window determines the selectable items.

○ : Selectable × : Not selectable

[Controller Type]	[Label Type]			
	[Label (GT Designer3)]	[Global Label (GX Works2)]	[Global Label (GX Works3)]	[Label (MT Developer2)]
[MELSEC iQ-R, RnMT/NC/RT, CR800-D] (GT27, GT25, GT23, GT SoftGOT2000)	○	×	○	○
[MELSEC iQ-R, RnMT/RT, CR800-D] (GT21 only)	○	×	○	×
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700] (GT27, GT25, GT23, GT SoftGOT2000)	○	○	×	○
[MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700] (GT21 only)	○	○	×	×
[MELSEC-QnA, MELDAS C6*]	○	○	×	×
[MELSEC-QnA]	○	○	×	×
[MELSEC-L]	○	○	×	×
[MELSEC-A]	○	○	×	×
[MELSEC-FX]	○	○	×	×
[MELIPC]	○	×	○	○

### 2) [CH No.]

This item is settable when [Label Type] is set to [Global Label (GX Works2)], [Global Label (GX Works3)], or [Label (MT Developer2)].

Select the channel number of the controller that uses labels (GT Designer3) or global labels.

### 3) [Network Setting]

This item is settable when [Label Type] is set to [Global Label (GX Works2)], [Global Label (GX Works3)], or [Label (MT Developer2)].

Set the network for the controller that uses labels (GT Designer3) or global labels.

For GT21, this item is not settable if [Controller Type] is set to [MELSEC-QnA] or [MELSEC-A] in the [Controller Setting] window.

### 4) [File Path]

Specify the path to a CSV file, Unicode text file, or GX Works3 project.

(3) [Batch Edit] dialog

Collectively change the settings of the labels (GT Designer3) selected in the label (GT Designer3) list in the [Label Group] window or the [Register to Label] dialog.

1) [CH No.]

This item cannot be set in the following cases.

- No devices are assigned to all the selected labels (GT Designer3).
- GOT internal devices are assigned to all the selected labels (GT Designer3).

The channel numbers of the labels (GT Designer3) are changed collectively. Select the channel number to be changed to.

2) [Network Setting]

This item cannot be set in the following cases.

- Devices of different controllers are assigned to the selected labels (GT Designer3).
- No devices are assigned to all the selected labels (GT Designer3).
- GOT internal devices are assigned to all the selected labels (GT Designer3).

The network settings of the labels (GT Designer3) are changed collectively. Click [...] and configure the network setting in the [Network Setting] dialog.

The setting contents depend on the controller. Refer to the descriptions of the device setting dialog for each controller.

→ 12.2 Device Range and Settings of Each Controller

3) [Label Group Name]

This item can be set only when this dialog is opened in the [Register to Label] dialog.

The label group names of the labels (GT Designer3) are changed collectively. Select a label group name.

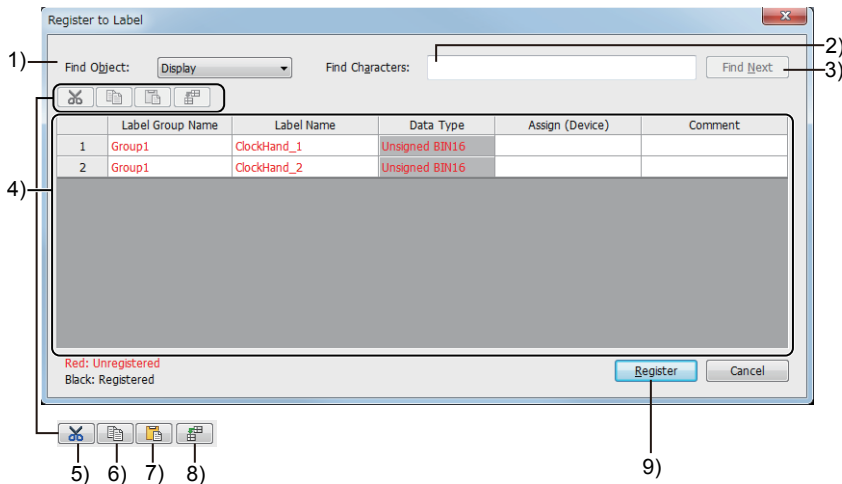

4) [Replace] button

Collectively reflects the setting changes made in this dialog to the labels (GT Designer3) selected in the [Label Group] window or the [Register to Label] dialog.

■ 8 [Register to Label] dialog

The labels (GT Designer3) set for an object and others are listed. Register unregistered labels (GT Designer3) in label groups.

- 1) **[Find Object]**  
Select the target to be searched in the label (GT Designer3) list.
- 2) **[Find Characters]**  
Set a character string to be searched for.  
The search string is case-insensitive.
- 3) **[Find Next]**  
Searches the list by the settings of [Find Object] and [Find Characters].
- 4) **List of labels (GT Designer3)**  
Lists the labels (GT Designer3) set in the project.  
The names of labels (GT Designer3) unregistered in label groups are shown in red.

Item	Description
[Label Group Name]	Name of the label group. Up to 32 characters can be set.
[Label Name]	Name of the label (GT Designer3). Up to 256 characters can be set.
[Data Type]	Data type of the label (GT Designer3), and array elements The array elements are displayed only when the array setting is configured. Example) When the data type is bit and array elements are set in three dimensions <div style="text-align: center;"> </div>
[Assign (Device)]	Device assigned to the label (GT Designer3). An invalid device is displayed as [??].
[Comment]	Comment for the label (GT Designer3). The comment is displayed according to the setting of [Input Assist Display] in the [Label Group Property] dialog. →6.1.4 ■ 6 (1) [Label Group Property] dialog Up to 1024 characters can be set.

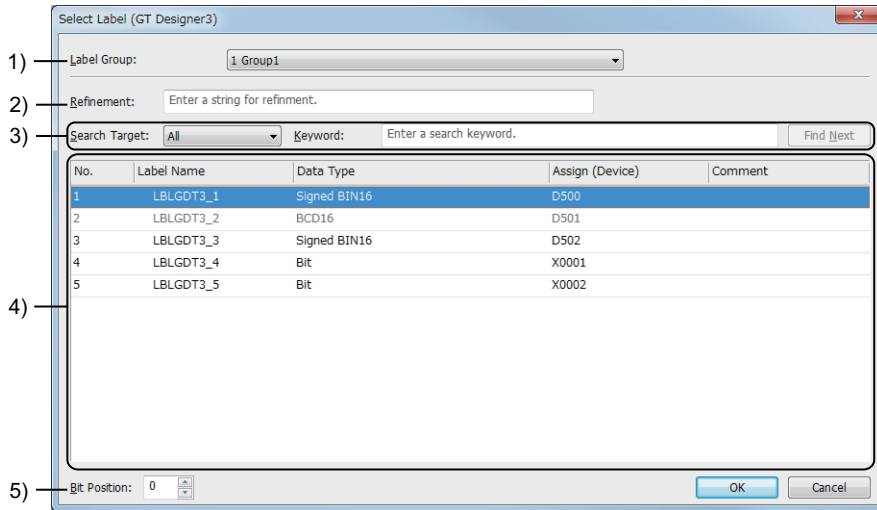

- 5) **[Cut] button**  
Cuts a selected row from the label (GT Designer3) list.
- 6) **[Copy] button**  
Copies a selected row in the label (GT Designer3) list.
- 7) **[Paste] button**  
Pastes a copied row in the label (GT Designer3) list.
- 8) **[Batch Edit] button**  
Displays the [Batch Edit] dialog to collectively change the label group, channel, or network settings of rows selected in the label (GT Designer3) list.  
→6.1.4 ■ 7 (3) [Batch Edit] dialog
- 9) **[Register] button**  
Registers the labels (GT Designer3) in label groups.

#### ■ 9 [Select Label (GT Designer3)] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can select a label (GT Designer3) from the label list and set the label in the device setting of an object or others in the [Select Label (GT Designer3)] dialog.

To display this dialog, click the [Label (GT Designer3)] button in the [Select CH No.] dialog.

### 1) [Label Group]

Select a label group to be displayed in the label (GT Designer3) list.

### 2) [Refinement]

Enter characters to narrow down the labels (GT Designer3) in the label list.

Only the labels (GT Designer3) narrowed down by the entered characters are displayed in the label list.

Up to 32 characters can be entered.

The entered characters are case-insensitive.

### 3) Search

Search the label (GT Designer3) list for a label by the specified keyword.

Set [Search Target] and enter a search keyword in [Keyword].

Click the [Find Next] button to search for a label (GT Designer3) by the search keyword.

The following shows the items selectable for [Search Target].

- [All]
- [Label Name]
- [Data Type]
- [Assign (Device)]
- [Comment]

Up to 32 characters can be entered in [Keyword].

The entered characters are case-insensitive.

### 4) Label (GT Designer3) list

Lists the labels (GT Designer3) of the label group selected in [Label Group].

Select a label (GT Designer3) from the label list and click the [OK] button to set the label for [Device].

Item	Description
[No.]	Number of a label (GT Designer3)
[Label Name]	Name of a label (GT Designer3)
[Data Type]	Data type of a label (GT Designer3)
[Assign (Device)]	Device assigned to a label (GT Designer3)
[Comment]	Comment set for a label (GT Designer3)

### 5) [Bit Position]

Set the bit position of a label (GT Designer3).

The setting range is [0] to [15].

If you use the [Device List] window or the [Edit Script (script name)] dialog to display the [Select Label (GT Designer3)] dialog, [Bit Position] is not settable.

## 6.1.5 Using device comments and device definitions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can retrieve the following device comments and device definitions for the device setting on GT Designer3.

- Device comments of a MITSUBISHI ELECTRIC PLC or MELIPC
- Device definitions of a MITSUBISHI ELECTRIC servo amplifier, inverter, or others

While checking the details of devices in a sequence program or others, you can set the devices on GT Designer3, avoiding setting incorrect device numbers.

To retrieve the device comments, select the MITSUBISHI ELECTRIC PLC for [Controller Type] in the controller setting. To retrieve the device definitions, select a MITSUBISHI ELECTRIC servo amplifier, inverter, or others for [Controller Type] in the controller setting.

### ■ 1 Importing device comments and device definitions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Import device comments and device definitions to refer to devices with GT Designer3.

- Step 1** Select [Project] → [Import Other Data] → [Device Comment/Device Definition] from the menu.
- Step 2** The [Device Comment/Device Definition] dialog is displayed.  
Set device comments or device definitions to be used.  
→ ■ 4 [Device Comment / Device Definition List] dialog
- Step 3** Click the [OK] button to complete importing.

#### (1) Destination for device comment data

Device comment data (\*.csv) of GX Works2 is created in the destination specified when the device comment is exported.

Device comment data (\*.wcd) of GX Developer is created in the project of GX Developer.

#### (2) Data of GX Developer to be used

Data of GX Developer that is necessary to use this function is only device comment data (\*.wcd).

The other projects of GX Developer are not needed.

#### (3) If device comments are corrected using GX Works2 or GX Developer

The device comments that have been set in a GT Designer3 project are not updated automatically.

To update the comments, click the [OK] button in the [Device Comment/Device Definition] dialog.

#### (4) Set device comments and device definitions

They are saved in the project and retained.

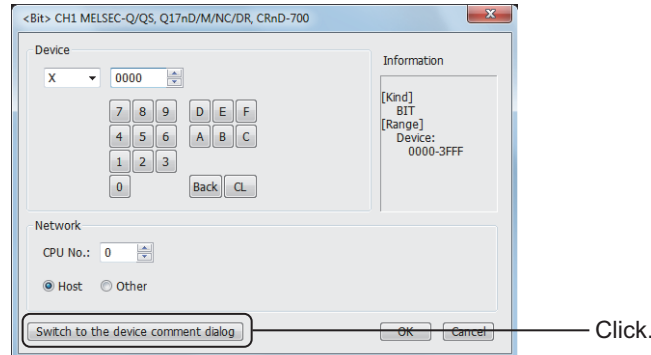

## 2 Referring to device comments and device definitions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set device comments and device definitions to be retrieved with the setting dialog or input assist.

### (1) Setting device comments and device definitions to be retrieved with the dialog for selecting

**Step 1** In the device setting dialog, click the [Switch to the device comment dialog] button or [Switch to the device define dialog] button.

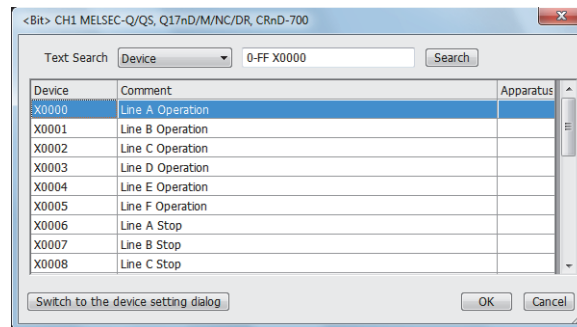

**Step 2** The setting dialog for device comments or device definitions appears.

Search devices to be used and set them.

⇒ 6.1.5 ■ 5 Device comment setting dialog

6.1.5 ■ 6 Device definition setting dialog

**Step 3** Click the [OK] button after the settings to complete the device settings.

### (2) Setting device comments and device definitions to be retrieved using the input assist

Device comments and device definitions can be searched and set in the setting dialog for the object without opening the setting dialog for device comments or device definitions.

For how to use the input assist, refer to the following.

⇒ 11.3 Setting Devices from Device Comments (Input Assist)

## 3 Precautions

### (1) Restriction by the project security

Users who are prohibited to edit by the security for the whole project cannot import device comments, device definitions, and tag files.

For the project security, refer to the following.

⇒ 2.13 Protecting a Project by Registering Users

### (2) Changing storage location of tag files

If the storage location of the tag files has been changed after tag files were imported, update the tag files and set the path to the new storage location.

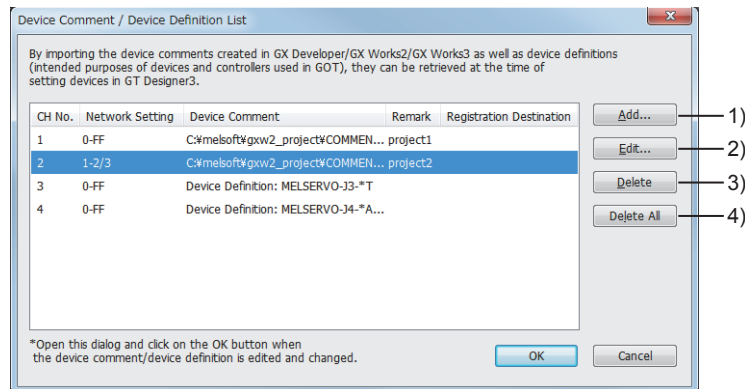

If the path is not changed, the tag files are not displayed in the tag view when device settings are made.

## ■4 [Device Comment / Device Definition List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Project] → [Import Other Data] → [Device Comment/Device Definition] from the menu to display the setting dialog.

Device definitions describe the uses of servo amplifier devices and inverter devices.

For the correspondences between the devices used in the GOT and the data of a servo amplifier or inverter, refer to the following.

⇒ 12.2 Device Range and Settings of Each Controller

### 1) [Add] button

Displays the [Add Device Comment / Device Definition] dialog.

Add the device comments or device definitions to be retrieved.

⇒ (1) [Add Device Comment / Device Definition] dialog or [Edit Device Comment / Device Definition] dialog

### 2) [Edit] button

Displays the [Edit Device Comment / Device Definition] dialog.

Edit the settings to import the device comments or device definitions of the selected controller.

⇒ (1) [Add Device Comment / Device Definition] dialog or [Edit Device Comment / Device Definition] dialog

### 3) [Delete] button

Deletes selected device comments or device definitions.

### 4) [Delete All] button

Deletes all device comments or device definitions.

## Point

### (1) Changing the GOT type

After the GOT type being changed, if the CH No. set in the [Device Comment / Device Definition List] dialog cannot be used by the newly set GOT type, the device comments and device definitions of the CH No. are deleted.

### (2) Changing the controller model

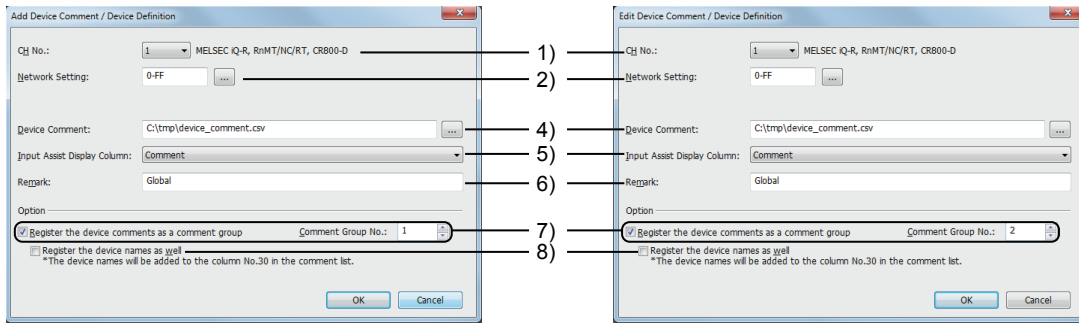

If the controller model is changed, the device comments and device definitions of the CH No., for which the previous model is set, are deleted.

### (3) Device definitions for which [Network Setting] is set to [0-0]

If a MITSUBISHI ELECTRIC servo amplifier is selected for [Controller Type] in the controller setting, the device definitions for which [Network Setting] is set to [0-0] are added automatically.

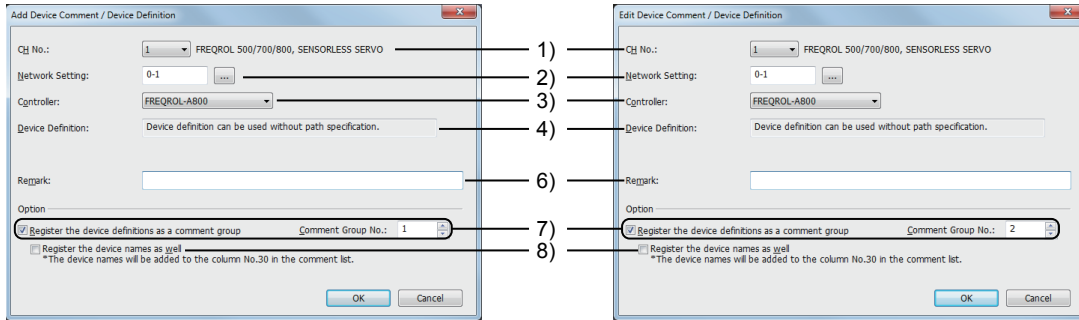

The device definitions can be retrieved in the device definition setting dialog or by the input assist, but cannot be updated and deleted because they are not displayed in the list in the [Device Comment / Device Definition List] dialog.

(1) [Add Device Comment / Device Definition] dialog or [Edit Device Comment / Device Definition] dialog

Adding device comments

Editing the settings for the device comments

Adding device definitions

Editing the settings for the device definitions

1) [CH No.]

Select the channel number of the controller having the device comments or device definitions to be added.

2) [Network Setting]

Specify the network of the controller having the device comments or device definitions to be added.

3) [Controller]

Set this item only for connection to an inverter.

Select the controller having the device comments or device definitions to be added.

4) [Device Comment], [Device Definition]

Set the file necessary to use the device comments.

If a MITSUBISHI ELECTRIC servo amplifier or inverter is selected with [CH No.], this setting is unnecessary.

- GX Works3, GX Works2: CSV file into which the device comment is exported
- GX Developer: Device comment file

5) [Input Assist Display Column]

Specify the column of the device comment to be displayed in the input assist.

6) [Remark]

Set remarks to be displayed in the [Device Comment / Device Definition List] dialog.

Up to 200 characters can be set.

When the device comments of GX Works2 are imported, the project name of GX Works2 is set.

7) [Register the device comments as a comment group], [Register the device definitions as a comment group]

Registers the imported device comments or device definitions as a comment group.

Set the destination comment group number in [Comment Group No.].

The setting range is [1] to [500].

The data of [Remark] is set to the comment group name.

Up to 32 characters can be used for the comment group name, and the 33rd or later characters are not used.

8) [Register the device names as well]

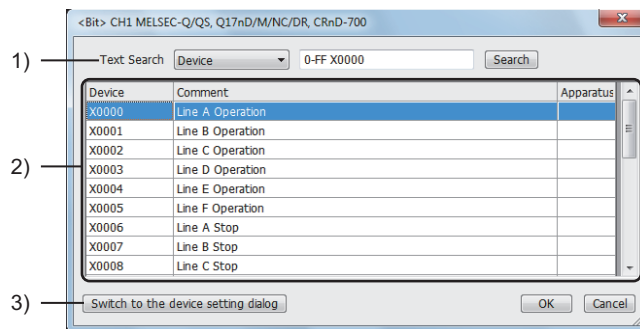

Registers the device names to the comment group, together with the device comments or the device definitions.

The device names are added to column No.30 in the comment group where the device comments are registered.

## 5 Device comment setting dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the device setting dialog, click the [Switch to the device comment dialog] button to display the device comment setting dialog.

### 1) [Text Search]

Select the range (category) of the character string and type the character string to search the target device comment.

The following shows the items to be selected.

- [Device]
- [Comment]
- [Machines]

### 2) Device comment list

Displays the device comments that match the search criteria.

### 3) [Switch to the device setting dialog] button

Switches the display to the device setting dialog.

## Point

### Searching the buffer memory

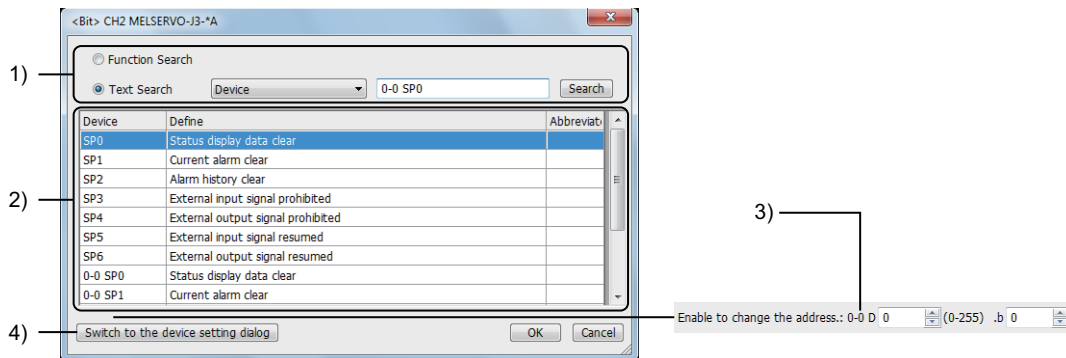

If any of the following items has been selected for [Controller Type] in the [Controller Setting] dialog, the buffer memory cannot be searched in the dialog for selecting device comments.

- [MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700] (GT27, GT25, GT23, GT SoftGOT2000)
- [MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700] (GT21 only)
- [MELSEC-QnA, MELDAS C6\*]
- [MELSEC-L]
- [MELSEC-FX]

## 6 Device definition setting dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the device setting dialog, click the [Switch to the device define dialog] button to display the device definition setting dialog.

### 1) Search method

Select the method of searching.

Item	Description
[Function Name Search]	Select a function to search the target device. Depending on the controller, the setting range differs.
[Text Search]	Select the range (category) of the character string and type the character string to search the target device comment. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Definition]</li> <li>• [Symbol]</li> <li>• [Device]</li> </ul>

### 2) Device comment list

Displays the device definitions that match the search criteria.

### 3) Device number entry field

This item appears when [Controller Type] is set to one of the following items in the [Controller Setting] window and the device number for the selected device definition is user-changeable.

- [FREQROL 800]
- [FREQROL 800/E700NE(Batch monitor)]
- [IAI ROBO CYLINDER]
- [IAI X-SEL Controller]
- [Azbil DMC50]

The device number of each set device is changeable.

The setting range differs depending on the device.

### 4) [Switch to the device setting dialog] button

Switches the display to the device setting dialog.

## 6.1.6 How to set OMRON NJ/NX tags

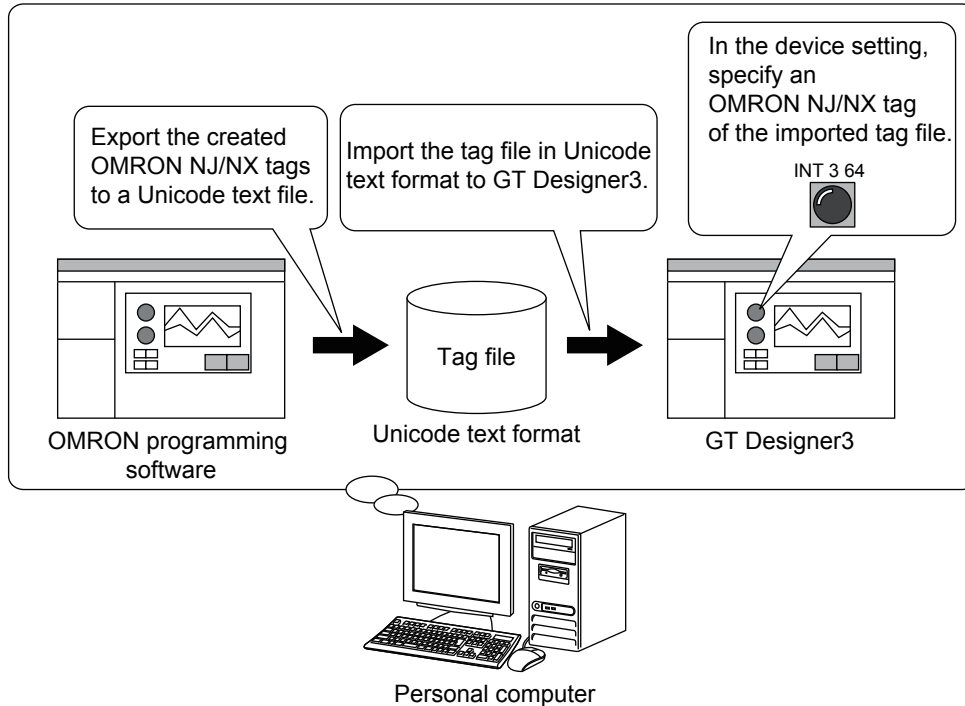

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2105-Q.

You can import the OMRON NJ/NX tags created with OMRON programming software to GT Designer3.

The imported OMRON NJ/NX tags are usable in the device setting.

Using OMRON NJ/NX tags enables you to create project data without paying attention to the actual devices.

For the usable OMRON NJ/NX tags, refer to the following.

→ ■ 1 Usable OMRON NJ/NX tags

For the precautions on using OMRON NJ/NX tags, refer to the following.

→ ■ 6 Precautions

The following shows the procedure for specifying an OMRON NJ/NX tag in the device setting.

**Step 1** Create OMRON NJ/NX tags with OMRON programming software.

For the procedure for creating an OMRON NJ/NX tag, refer to the following.

→ OMRON programming software manual

**Step 2** Export the created OMRON NJ/NX tags.

The contents of the exported OMRON NJ/NX tags are copied to the clipboard.

For the procedure for exporting the tags, refer to the following.

→ OMRON programming software manual

**Step 3** Paste the copied contents from the clipboard to a text file, and save the file in Unicode text format.

**Step 4** Import the tag file in Unicode text format to GT Designer3.

→ ■ 4 Importing a tag file

**Step 5** In the device setting, specify an OMRON NJ/NX tag of the imported tag file.

→ ■ 5 Setting an OMRON NJ/NX tag

### ■ 1 Usable OMRON NJ/NX tags

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can import the OMRON NJ/NX tags created with OMRON programming software to GT Designer3.

The imported OMRON NJ/NX tags are usable for the channel whose [Controller Type] is set to [OMRON NJ/NX] in the controller setting.

For the above channel, only OMRON NJ/NX tags and GOT internal devices are usable in the device setting.

### (1) Specifications of the tag file

You can import the tag files created for the following PLCs to GT Designer3.

PLC type		Model
OMRON PLC	NJ series	NJ501-1500, NJ501-1400, NJ501-1300, NJ501-1520, NJ501-1420, NJ501-1320, NJ501-1340, NJ301-1200, NJ301-1100, NJ101-1000, NJ101-9000, NJ101-1020, NJ101-9020
	NX series	NX1P2-1140DT, NX1P2-1140DT1, NX1P2-1040DT, NX1P2-1040DT1, NX1P2-9024DT, NX1P2-9024DT1

### (2) Supported software

You can import the tag files created with the following programming software to GT Designer3.

Manufacturer	Software	Software version
OMRON Corporation	Sysmac Studio	1.00 or later

### (3) Tag file format

Create tag files in Unicode text format.

You cannot import the tag files in any other file format to GT Designer3.

## ■ 2 Requirements for OMRON NJ/NX tags

### (1) Tag name and structure name

The tag name or structure name must satisfy the following requirements.

- A name consists of alphanumeric characters (A to Z, a to z, and 0 to 9), one-byte katakana, multibyte characters, and underscores (\_).
- The length of a tag name is 127 bytes or less.  
Up to 300 characters can be set for a structure name.

However, the names containing the following combinations of characters are unusable.

- A name begins with a number (0 to 9), underscore (\_), or "P\_".
- A name ends with an underscore (\_).
- Underscores (\_) are used successively in a name.
- A name begins or ends with a space.

### (2) Data type

The following shows the usable data types.

○ : Applicable, -: Not applicable

Data type of OMRON NJ/NX tag	Device data type or device type on GT Designer3	Bit specification of word device
BOOL	Bit	-
	Signed BIN16	○
WORD	Unsigned BIN16	○
	BCD16	-
	Signed BIN32	-
DWORD	Unsigned BIN32	-
	BCD32	-
	Real	-
	Signed BIN16	○
INT	Unsigned BIN16	○
	BCD16	-
	Signed BIN32	-
DINT	Unsigned BIN32	-
	BCD32	-
	Real	-
	Signed BIN16	○
UINT	Unsigned BIN16	○
	BCD16	-
	Signed BIN16	○

Data type of OMRON NJ/NX tag	Device data type or device type on GT Designer3	Bit specification of word device
UDINT	Signed BIN32	-
	Unsigned BIN32	-
	BCD32	-
	Real	-
REAL	Signed BIN32	-
	Unsigned BIN32	-
	BCD32	-
	Real	-
STRING *1	String	-

\*1 Available for the following functions.

- Text display object
- Text input object
- Text print object
- Logging function
- Recipe function

### (3) Using an OMRON NJ/NX tag for the setting that requires multiple devices

To set an OMRON NJ/NX tag for the setting that requires consecutive or separate devices, use an OMRON NJ/NX tag whose data type is as follows.

- Structure
- String
- Array
- Bit specification of word device

### (4) Structure-type OMRON NJ/NX tags

The data type of a structure must be as follows.

- Boolean
- Bit string
- Integer
- Real
- String

### (5) Array-type OMRON NJ/NX tags

The array must satisfy the following requirements.

- One-, two-, or three-dimensional array
- Any data type other than string
- For the undefined tags: the subscript for each dimension as shown below

Array	Subscript range
One-dimensional array	0 to 65535
Two-dimensional array	0 to 65535
Three-dimensional array	0 to 65535

### ■ 3 Offset setting for OMRON NJ/NX tags

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For an array-type tag, the offset setting is applied to the element numbers.

Example) Offset setting for an OMRON NJ/NX tag in Tag[4,4,4]

OMRON NJ/NX tag set for an object or others	Offset device value	Offset result
Tag[0,1,1]	2	Tag[0,1,3]
	-1	Tag[0,1,0]
	5	Tag[0,2,1] (As the row number of the element tag is changed, a system alarm occurs if Tag[4,4,4] has not been imported.)
	119	A system alarm occurs due to invalid array subscripts.

For the tags of a structure, if the structure is set as an array element, the offset setting is not applied to the tags.

For the array-type tags of a structure, the offset setting is applied to the tags.

Example) Offset setting for the OMRON NJ/NX tags of a structure

OMRON NJ/NX tag set for an object or others	Offset result
STRUCT01[1].INT01	The offset setting is not applied to the tags of a structure that is set as an array element.
STRUCT01.INT02[1]	The offset setting is applied to the array-type tags of a structure.

### ■ 4 Importing a tag file

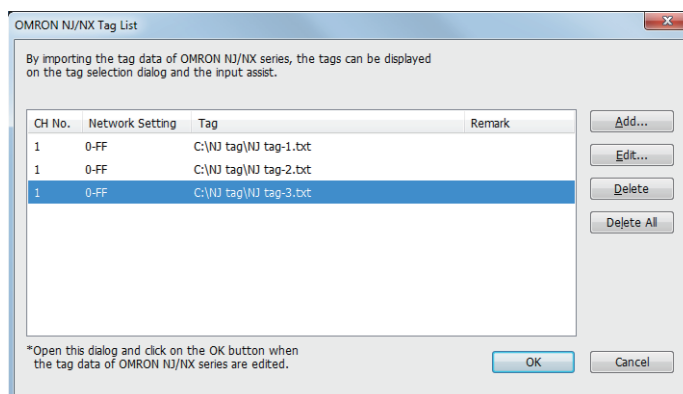

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the procedure for importing a tag file to GT Designer3.

**Step 1** Select [Project] → [Import Other Data] → [Tag] → [OMRON NJ/NX Tag] from the menu.

**Step 2** The [OMRON NJ/NX Tag List] dialog appears.

→ ■ 7 [OMRON NJ/NX Tag List] dialog

### ■ 5 Setting an OMRON NJ/NX tag

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### Point

#### Checking the data type of an OMRON NJ/NX tag

If you change the data type of an object or others, the data types may be inconsistent between the set OMRON NJ/NX tag and the object or others.

After setting an OMRON NJ/NX tag, check if the data types are consistent between the tag and the object or others.

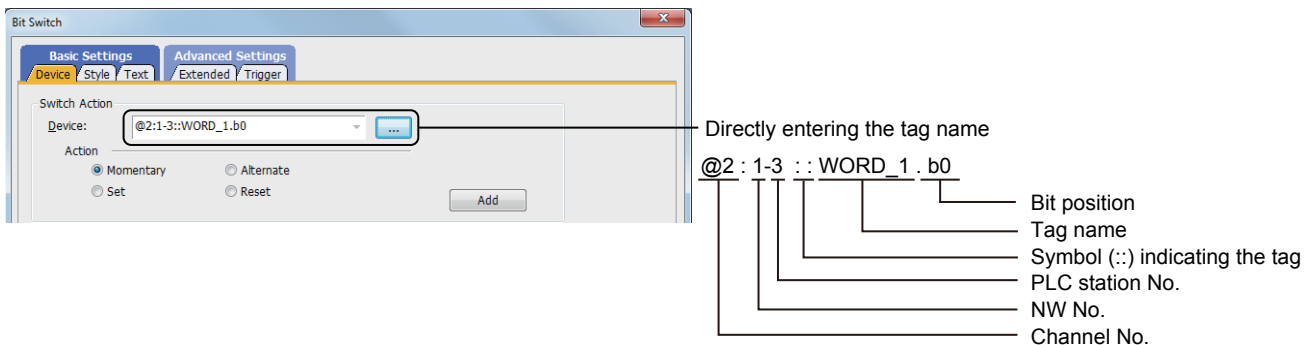

To check the data type consistency, you are recommended to compare the used tag file with the file exported from [Device List] of GT Designer3.

#### (1) Directly entering a tag name

Enter an OMRON NJ/NX tag name directly in the textbox of [Device] in the setting dialog of an object or others.

At the beginning of the tag name, add a "::" symbol indicating the tag.

When you enter the tag name directly, the data type consistency check between the OMRON NJ/NX tag and the object or others is not performed automatically.

The data types may be inconsistent between the OMRON NJ/NX tag and the object or others.

## (2) Selecting an OMRON NJ/NX tag from the tag list

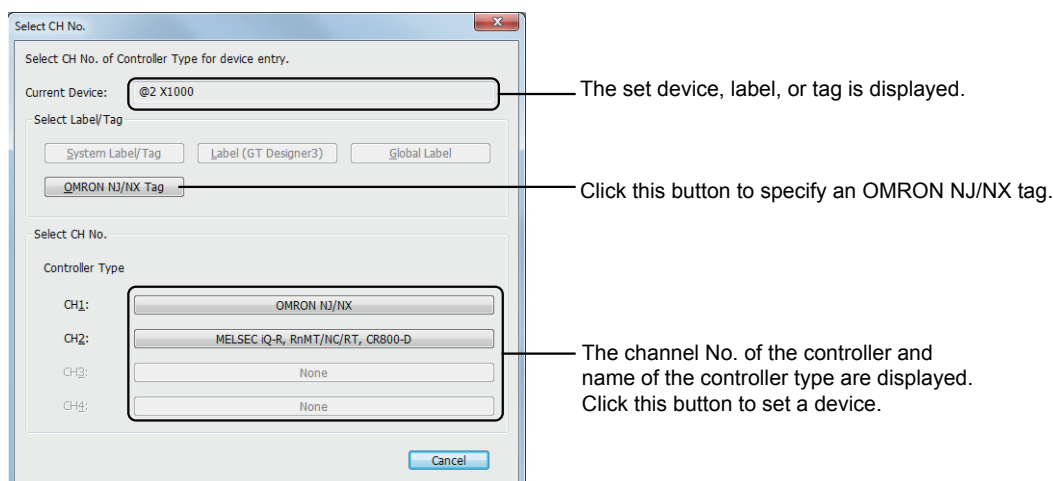

**Step 1** In the setting dialog of an object or others, hold down the [Shift] key and click the [...] button of [Device] to display the [Select CH No.] dialog.

If you click the [...] button without holding down the [Shift] key, the dialog to appear varies with the selection of [CH No. Selection Dialog Display Setting] on the [Edit] tab of the [Options] dialog.

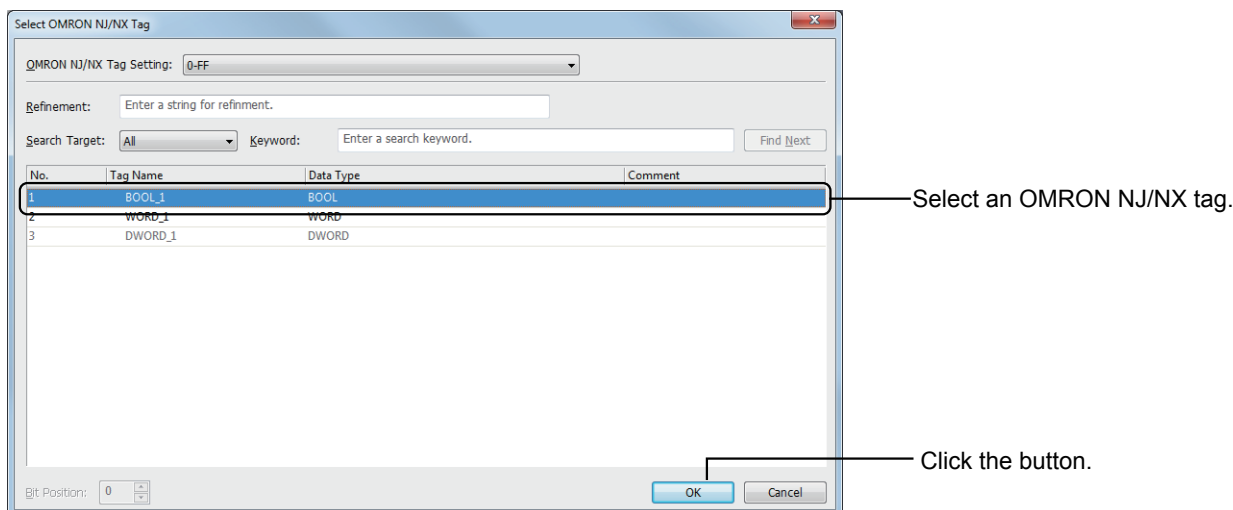

For the setting details, refer to the following.

⇒ 11.10.4 Customizing the settings related to editing operations

**Step 2** In the [Select CH No.] dialog, click the [OMRON NJ/NX Tag] button to display the [Select OMRON NJ/NX Tag] dialog.

**Step 3** Select an OMRON NJ/NX tag from the tag list and click the [OK] button to set the tag in [Device].

### (3) Using the input assist

Search for an OMRON NJ/NX tag to set the tag in the setting dialog of an object or others.

For information on how to use the input assist, refer to the following.

⇒ 11.3 Setting Devices from Device Comments (Input Assist)

When using the input assist, you must import OMRON NJ/NX tags in advance.

Import the OMRON NJ/NX tags before setting them.

⇒ ■ 4 Importing a tag file

## ■ 6 Precautions

### (1) OMRON NJ/NX tag name

When you use multiple OMRON NJ/NX tags whose names are long, the monitoring process may take a longer time.

### (2) Tag settings in a project read from the GOT

When a project containing OMRON NJ/NX tags is read from the GOT, check the tags in the [OMRON NJ/NX Tag List] dialog.

If a tag file is displayed in red, import the tag file again.

### (3) Directly entering an OMRON NJ/NX tag name

For a string-type OMRON NJ/NX tag, import the tag and enter the tag name to specify it.

If you do not import the tag before setting it, the data type cannot be recognized as string, and a system alarm occurs.

### (4) Importing an identically-named OMRON NJ/NX tag of a different data type

After an OMRON NJ/NX tag is set in the project, if you import an identically-named OMRON NJ/NX tag of a different data type, the set tag may be displayed as [??].

If [??] is displayed, set the relevant OMRON NJ/NX tag again.

### (5) Setting the object or function that uses an OMRON NJ/NX tag

Configure the following settings for the object or function that uses a string-type OMRON NJ/NX tag.

- Text display object, text input object  
Select [Display in order of High -> Low] in the [Extended] tab.
- Text print object  
Select [Display in order of High -> Low].
- Recipe function, logging function  
Select [Low->High] for [Storage Order] in the [Device] tab.

### (6) Character code

The GOT uses UTF-16 encoding, and the OMRON NJ or NX series uses UTF-8 encoding.

When you use a string-type OMRON NJ/NX tag, perform encoding conversion (between UTF-16 and UTF-8) and then write or read the tag.

The string length in bytes varies with the encoding format.

- UTF-16  
One character takes two bytes.
- UTF-8  
One character takes one to three bytes.  
A null (one byte) is appended to a string.

As the length of a string in UTF-16 differs from that of the string in UTF-8, an OMRON NJ/NX tag may not be written or read properly.

Set the number of characters to be displayed and the number of bytes for a string-type OMRON NJ/NX tag with consideration of the string length difference between UTF-16 and UTF-8.

### (7) Startup time setting

If data is written to or read from an OMRON NJ/NX tag immediately after the OMRON NJ or NX series is turned on, a system alarm may occur.

In such a case, specify a longer time after which the GOT start communicating with the OMRON NJ or NX series by setting [Startup Time(Sec)] of the [Detail Setting] dialog in the controller setting.

⇒ 12.11.5 [Detail Setting] dialog

### (8) Station No. switching while an OMRON NJ/NX tag is being used

The station No. switching is not available to the station using an OMRON NJ/NX tag.

Do not use an OMRON NJ/NX tag for the station requiring the station No. switching.

## (9) Number of characters of the comment set for an OMRON NJ/NX tag

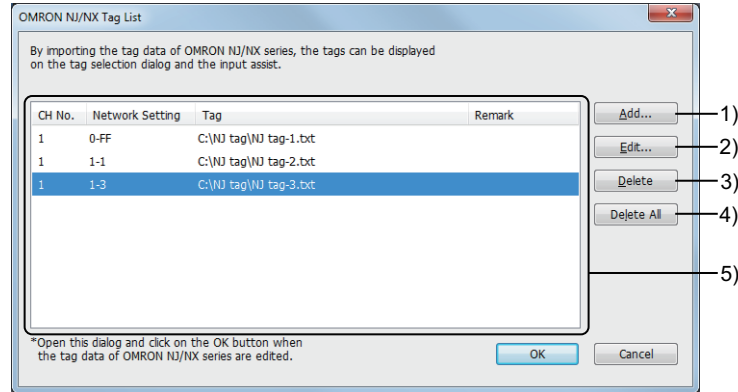

For an OMRON NJ/NX tag, set a comment in 1024 characters or less.

The 1025th and subsequent characters are not displayed on GT Designer3.

## ■ 7 [OMRON NJ/NX Tag List] dialog

To display this dialog, select [Project] → [Import Other Data] → [Tag] → [OMRON NJ/NX Tag] from the menu.

### 1) [Add] button

Displays the [Add Tag] dialog.

Import an OMRON NJ/NX tag file.

→ (1) [Add Tag] dialog or [Edit Tag] dialog

### 2) [Edit] button

Displays the [Edit Tag] dialog.

Edit the settings of the selected tag file.

→ (1) [Add Tag] dialog or [Edit Tag] dialog

### 3) [Delete] button

Deletes a selected tag file.

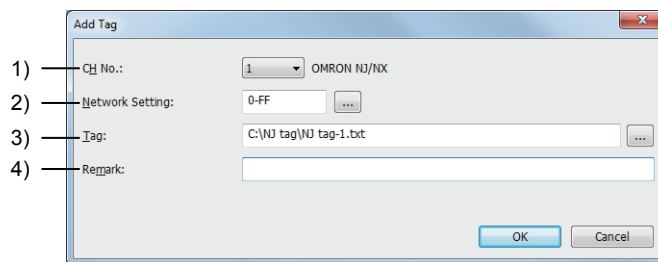

### 4) [Delete All] button

Deletes all tag files.

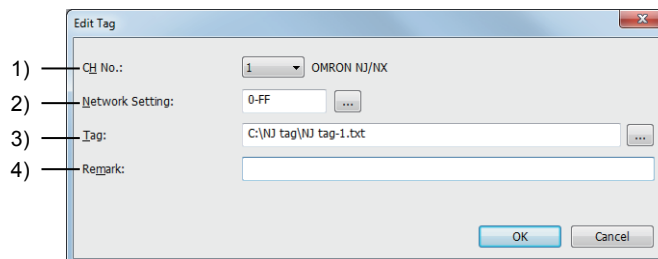

### 5) Tag file list

Lists the imported OMRON NJ/NX tag files and the connected channels.

## (1) [Add Tag] dialog or [Edit Tag] dialog

[Add Tag] dialog

[Edit Tag] dialog

### 1) [CH No.]

Select the channel number of the PLC having the OMRON NJ/NX tag setting.

2) **[Network Setting]**

Specify the network of the PLC having the OMRON NJ/NX tag setting.

3) **[Tag]**

Specify the path to a Unicode text file of OMRON NJ/NX tags.

4) **[Remark]**

Set remarks to be displayed in the [OMRON NJ/NX Tag List] dialog.

■ 8 **[Select OMRON NJ/NX Tag] dialog**

In the [Select OMRON NJ/NX Tag] dialog, select an OMRON NJ/NX tag from the tag list to set the tag in the device setting of an object or others.

To display this dialog, click the [OMRON NJ/NX Tag] button in the [Select CH No.] dialog.

1) **[OMRON NJ/NX Tag Setting]**

Select a combination of the channel number, network setting, and remarks of the imported OMRON NJ/NX tags.

2) **[Refinement]**

Enter characters to narrow down the OMRON NJ/NX tags in the tag list.

Only the OMRON NJ/NX tags narrowed down by the entered characters are displayed in the tag list.

Up to 32 characters can be entered.

The entered characters are case-insensitive.

3) **Search**

Search the OMRON NJ/NX tag list for a tag by the specified keyword.

Set [Search Target] and enter a search keyword in [Keyword].

Click the [Find Next] button to search for the next occurrence of the keyword.

The following shows the items selectable for [Search Target].

- [All]
- [Tag Name]
- [Data Type]
- [Comment]

Up to 32 characters can be entered in [Keyword].

The entered characters are case-insensitive.

4) **OMRON NJ/NX tag list**

Lists the OMRON NJ/NX tags.

Select an OMRON NJ/NX tag from the tag list and click the [OK] button to set the tag in [Device].

Item	Description
[No.]	Number of an OMRON NJ/NX tag
[Tag Name]	Name of an OMRON NJ/NX tag

Item	Description
[Data Type]	Data type of an OMRON NJ/NX tag
[Comment]	Comment set for an OMRON NJ/NX tag

### 5) [Bit Position]

Set the bit position of an OMRON NJ/NX tag.

The setting range is [0] to [15].

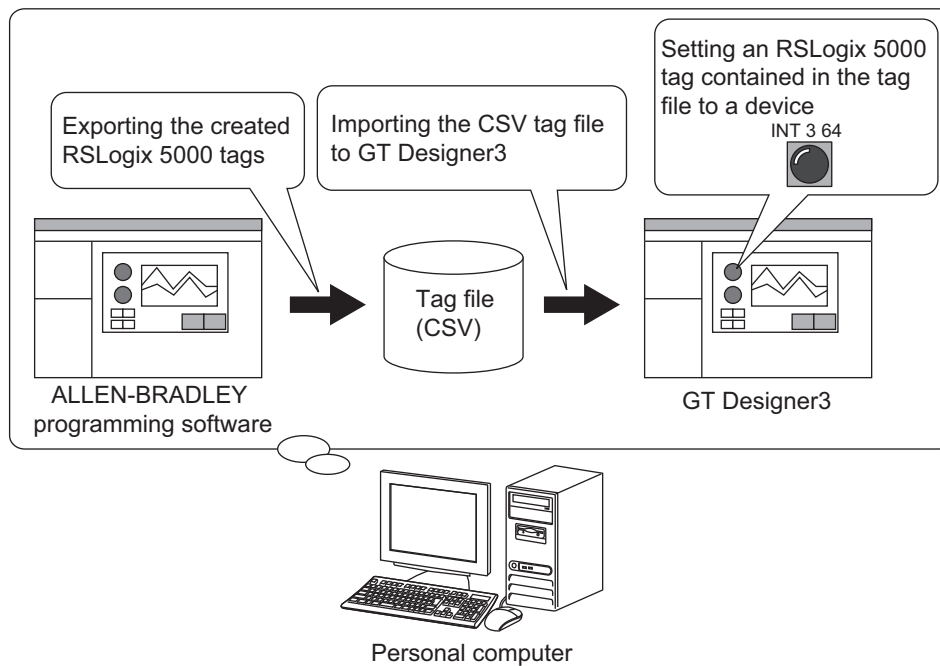

If the [Select OMRON NJ/NX Tag] dialog has been brought up from the [Device List] dialog, [Bit Position] is not settable.

## 6.1.7 Using RSLogix 5000 tags

Not available to GT2105-Q.

You can import RSLogix 5000 tags, which are created with ALLEN-BRADLEY programming software, to GT Designer3. The imported RSLogix 5000 tags are usable in the device setting.

The following shows the procedure for setting RSLogix 5000 tags to devices.

- Step 1** Create RSLogix 5000 tags with ALLEN-BRADLEY programming software.  
For how to create RSLogix 5000 tags, refer to the following.  
→ ALLEN-BRADLEY programming software manual
- Step 2** Export the created RSLogix 5000 tags in the CSV format.  
For the procedure for exporting tags, refer to the following.  
→ ALLEN-BRADLEY programming software manual
- Step 3** Import the tag files which were created in the CSV format to GT Designer3.  
→ ■ 1 Importing a tag file
- Step 4** Set the RSLogix 5000 tags in the imported tag file to devices.  
→ ■ 2 Referring to RSLogix 5000 tags

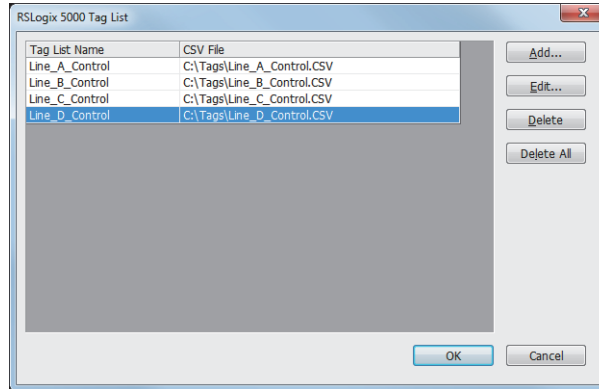

## ■ 1 Importing a tag file

The following shows the procedure for importing tag files to GT Designer3.

- Step 1** Select [Project] → [Import Other Data] → [Tag] → [RSLogix 5000 Tag] from the menu.
- Step 2** Add, delete, or edit tag files in the [RSLogix 5000 Tag List] dialog.

→ ■ 3 [RSLogix 5000 Tag List] dialog

### (1) Specifications of the tag file

#### (a) Supported PLC

GT Designer3 can import tag files which are created for the following PLCs.

PLC type		Model
ALLEN-BRADLEY PLC	ControlLogix series	1756-L, 1756-L1M1, 1756-L1M2, 1756-L1M3, 1756-L61, 1756-L62, 1756-L63, 1756-L64, 1756-L55M12, 1756-L55M13, 1756-L55M14, 1756-L55M16, 1756-L55M22, 1756-L55M23, 1756-L55M24
	CompactLogix series	1769-L31, 1769-L32E, 1769-L32C, 1769-L35E, 1769-L35CR

#### (b) Supported software

You can import tag files, which are created with the following programming software, to GT Designer3.

Manufacturer	Software
Rockwell Automation, Inc. (ALLEN-BRADLEY)	RSLogix 5000

#### (c) Supported tag

You can import only controller tags with GT Designer3.  
Program tags cannot be imported.

### (2) Requirements for creating tag files

The following explains the requirements for creating tag files with RSLogix 5000.

#### (a) Tag mapping

Map the created RSLogix 5000 tags.  
Tags without mapping cannot be set in devices using GT Designer3.

#### (b) Tag file format

Create tag files in the CSV format.  
GT Designer3 cannot import tag files in formats other than the CSV format.

#### (c) Composition of tag files

To import tag files to GT Designer3, the following settings are required.  
Set the following fields with RSLogix 5000.

Field	Description	Input example
TYPE	Set the type of the target records. Set the type TAG: the tag type that can be read to GT Designer3 is only the type TAG.	TAG
SCOPE	Leave blank.	-
NAME	Set a tag name. The setting range is 0 to 40 character (s).	tagBOOL

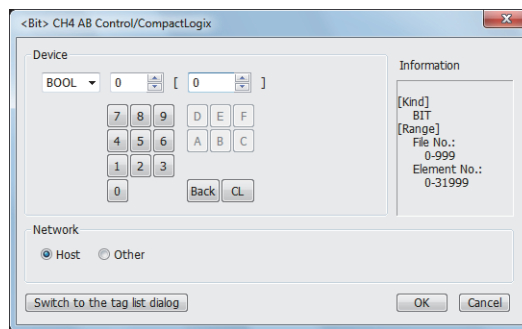

Field	Description	Input example
DESCRIPTION	Set the comment of the tag in ASCII characters. The setting range is 0 to 120 character (s).	\$0050\$004C\$0043
DATATYPE	Set the data type and the element number. The setting range depends on the data types. • INT, DINT, REAL: The setting range is [0] to [1000]. • BOOL: The setting range is [0] to [32000].	BOOL[10]
SPECIFIER	Leave blank.	-
ATTRIBUTES	Set the attribute. RADIX PLCMappingFile or PLC2Mapping can be selected. If this field is PLCMappingFile, set the file number. The setting range of the file number is 0 to 999.  (PLCMappingFile := 100)  <div style="margin-left: 100px;"> <span style="border-bottom: 1px solid black; display: inline-block; width: 100px;"></span> <span style="border-bottom: 1px solid black; display: inline-block; width: 100px;"></span>  <span style="margin-left: 100px;">File number</span>  <span style="margin-left: 100px;">Attribute</span> </div>	(PLCMappingFile := 100)

## ■ 2 Referring to RSLogix 5000 tags

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

The following shows the procedure for setting imported tags into devices.

**Step 1** Click the [Switch to the tag list dialog] button from the device setting dialog.

**Step 2** In the tag list dialog (RSLogix 5000 tag), set the RSLogix 5000 tag to be used.

➡ ■ 4 Tag list dialog (RSLogix 5000 tag)

**Step 3** Click the [OK] button to complete the RSLogix 5000 tag setting.

### ■ 3 [RSLogix 5000 Tag List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Project] → [Import Other Data] → [Tag] → [RSLogix 5000 Tag] from the menu to display the setting dialog.

#### 1) Tag file list

The tag files which have been imported to GT Designer3 appear in a list.

#### 2) [Add] button

Displays the [Add Tag List] dialog.  
Add a tag file to the tag file list.

- [Tag List Name] Set the tag list name for the tag file to be added.
- [CSV File] Set the path to the tag file to add.

#### 3) [Edit] button

Displays the [Edit Tag List] dialog.  
Edit the settings of the selected tag file.

- [Tag List Name] Displays the tag list name before the edit.
- [CSV File] Displays the tag list name before the edit.

#### 4) [Delete] button

Deletes a selected tag file.

#### 5) [Delete All] button

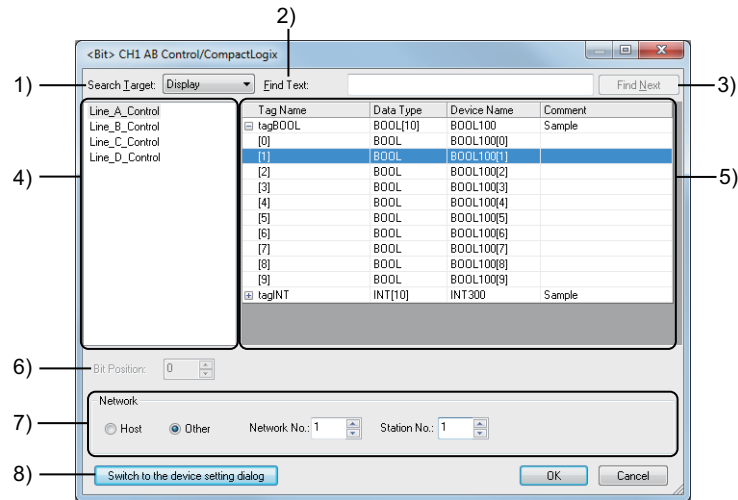

Deletes all the tag files from the tag file list.

## 4 Tag list dialog (RSLogix 5000 tag)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Click the [Switch to the tag list dialog] button in the device setting dialog to display the tag list dialog.

### 1) [Search Target]

Select the target item for searching in the tag view.

The following shows the items to be selected.

- [Display]
- [Tag Name]
- [Data Type]
- [Device Name]
- [Comment]

### 2) [Find Text]

Set a character string to search.

This search operation is case-insensitive.

### 3) [Find Next] button

Searches by the settings in [Search Target] and [Find Text].

### 4) Tag file list

The tag files which have been imported to GT Designer3 appear in a list.

### 5) Tag view

Displays the contents of a selected tag file in a list.

### 6) [Bit Position]

Set a bit position.

The setting range is [0] to [15].

### 7) [Network]

Set the station No. of the destination controller for monitoring.

[Host] or [Other] can be set.

When selecting [Other], set [Network No.] and [Station No.].

### 8) [Switch to the device setting dialog] button

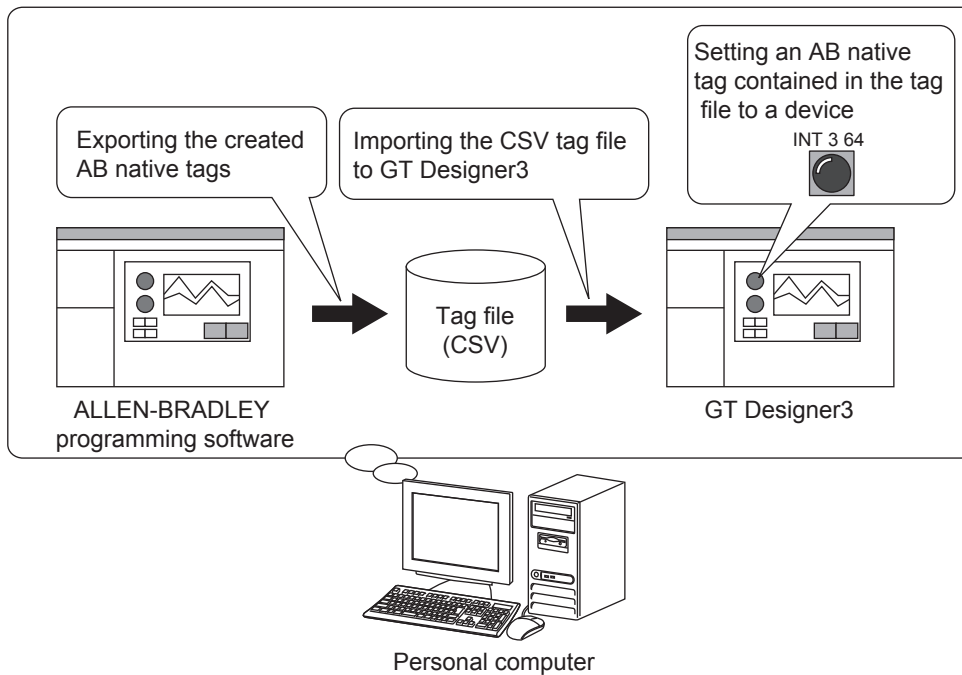

Switches to the device setting dialog.

## 6.1.8 How to set AB native tags

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can import AB native tags, which are created with ALLEN-BRADLEY programming software, to GT Designer3. The imported AB native tags are usable in the device setting.

By using AB native tags, you can create the project data without paying attention to the actual devices.

For the details of usable AB native tags, refer to the following.

→ ■ 1 Usable AB native tags

For precautions on the use of AB native tags, refer to the following.

→ ■ 4 Precautions

The following shows the procedure for setting AB native tags to devices.

- Step 1** Create AB native tags with ALLEN-BRADLEY programming software.  
For how to create AB native tags, refer to the following.  
→ ALLEN-BRADLEY programming software manual
- Step 2** Export the created AB native tags in the CSV format.  
For the procedure for exporting tags, refer to the following.  
→ ALLEN-BRADLEY programming software manual
- Step 3** Import the tag files which were created in the CSV format to GT Designer3.  
→ ■ 2 Importing a tag file
- Step 4** Set the AB native tags contained in the imported tag file to devices.  
→ ■ 3 Setting AB native tags

### ■ 1 Usable AB native tags

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can import AB native tags, which are created with ALLEN-BRADLEY programming software, to GT Designer3. The imported AB native tags are usable for the channel whose [Controller Type] is [AB Control/CompactLogix(Tag)] in the controller setting.

For the channel whose [Controller Type] is [AB Control/CompactLogix(Tag)], only AB native tags and GOT internal devices are usable in the device setting.

To use controller devices in the device setting, do not select [AB Control/CompactLogix(Tag)] for [Controller Type].

**(1) Specifications of the tag file**

GT Designer3 can import tag files which are created for the following PLCs.

PLC type		Model
ALLEN-BRADLEY PLC	ControlLogix5000 series	1756-L, 1756-L1M1, 1756-L1M2, 1756-L1M3, 1756-L55M12, 1756-L55M13, 1756-L55M14, 1756-L55M16, 1756-L55M22, 1756-L55M23, 1756-L55M24, 1756-L61, 1756-L62, 1756-L63, 1756-L64, 1756-L72S, 1794-L33, 1794-L34
	CompactLogix series	1769-L32E, 1769-L35E

**(2) Supported software**

You can import tag files, which are created with the following programming software, to GT Designer3.

Manufacturer	Software	Software version
Rockwell Automation, Inc. (ALLEN-BRADLEY)	RSLogix 5000	13 or later

**(3) Tag file format**

Create tag files in the CSV format.

GT Designer3 cannot import tag files in formats other than the CSV format.

**(4) Required setting for AB native tags****(a) External access**

To use AB native tags, select an item other than [None] for the external access.

**(b) Scope**

The AB native tags must be defined as follows.

Scope	Description
Controller (global data)	Controller tags. Direct access to the tags is available. The tags are not output to the [SCOPE] column of a CSV file.

**(c) Tag name and structure name**

Tag names and structure names must satisfy the following requirements.

- A name consists of one-byte alphanumeric characters (A to Z, a to z, 0 to 9) and underscores (\_).
- A name begins with a one-byte alphanumeric character (A to Z, a to z) or an underscore (\_).
- Up to 40 characters are set for a tag name.  
Up to 300 characters can be set for a structure name.
- Underscores (\_) are not used successively in a name.
- A tag name does not end in an underscore (\_).

**(d) Data type**

You can use the AB native tag whose data type is as follows.

○ : Supported, - : Unsupported

Data type of AB native tag	Device data type or device type on GT Designer3	Bit specification of word device
BOOL	Bit	-
INT	Signed BIN16	○
	Unsigned BIN16	○
	BCD16	-
DINT	Signed BIN32	-
	Unsigned BIN32	
	BCD32	
	Real	
REAL	Signed BIN32	-
	Unsigned BIN32	
	BCD32	
	Real	

**(e) Using the AB native tag for the setting that requires multiple devices**

To set the AB native tag for the setting that requires two or more consecutive devices or multiple devices, use the AB

native tag whose data type is as follows.

- Structure
- String
- Array
- Bit specification of word device

**(f) Constant value**

The AB native tags specified as constants (True) are not usable.

**(g) Structure-type AB native tags**

The data type of a structure must be as follows.

- String
- Predefined data type
- Module-defined data type
- User-defined data type

The string-type AB native tags are usable for the following functions.

- Text display object
- Text input object
- Text print object
- Logging function
- Recipe function

**(h) Array-type AB native tags**

The array must satisfy the following requirements.

- One-, two-, or three-dimensional array
- For the BOOL data type: one-dimensional array  
(However, for the BOOL undefined tags, one-, two-, or three-dimensional arrays are usable.)
- For the undefined tags: the subscript for each dimension as shown below

Array	Subscript range
One-dimensional array	0 to 2147483647
Two-dimensional array	0 to 268435455
Three-dimensional array	0 to 262143

**■ 2 Importing a tag file**

The following shows the procedure for importing tag files to GT Designer3.

**Step 1** Select [Project] → [Import Other Data] → [Tag] → [AB Native Tag] from the menu.

**Step 2** Add, delete, or edit tag files in the [AB Native Tag List] dialog.

→ ■ 5 [AB Native Tag List] dialog

### 3 Setting AB native tags

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### Point

#### Checking the data type of the AB native tag

When you change the data type of the object device or others, the data types may be inconsistent between the AB native tag and the object device or others.

After setting the AB native tag, check if the data types are consistent between the AB native tag and the device of an object or others.

To check the data type consistency, you are recommended to compare the tag file exported from RSLogix 5000 with the file exported from [Device List] of GT Designer3.

#### (1) Directly entering the tag name

Enter the AB native tag name directly in the text box of [Device] in the setting dialog.

At the beginning of the tag name, add a ":" symbol indicating the tag.

Directly entering the tag name

@2 : 1-5 :: StopFlg1 . b1

Bit position

Tag name

Symbol (::) indicating the tag

PLC station No.

NW No.

Channel No.

When you enter the tag name directly, the data type consistency check between the AB native tag and the object device or others is not performed automatically.

Therefore, the data types may be inconsistent between the AB native tag and the object device or others.

#### (2) Using the input assist

Search and set AB native tags in the setting dialog of objects or others.

For how to use the input assist, refer to the following.

→ 11.3 Setting Devices from Device Comments (Input Assist)

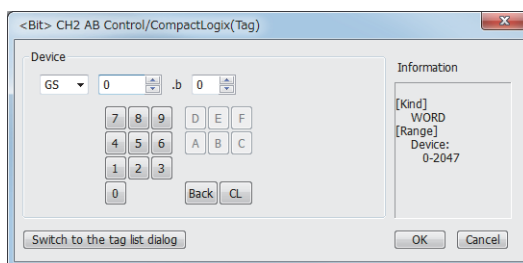

When using the input assist, you have to import the AB native tags in advance.

Import the AB native tags before setting them.

→ ■ 2 Importing a tag file

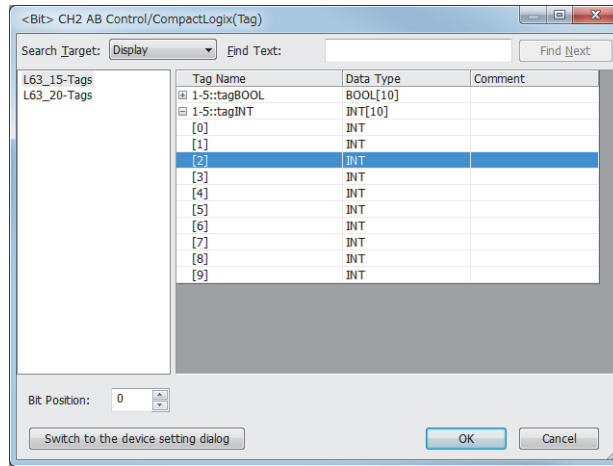

#### (3) Selecting a tag from the tag list

**Step 1** Click the [Switch to the tag list dialog] button from the device setting dialog.

**Step 2** In the tag list dialog (AB native tag), set the AB native tag to be used.

→ ■ 6 Tag list dialog (AB native tag)

**Step 3** Click the [OK] button to complete the AB native tag setting.

## 4 Precautions

### (1) Precautions for importing a tag file

#### (a) Tag files to be imported

For importing AB native tags, use CSV files exported from RSLogix 5000.  
When you use a CSV file edited after the export, the tags may be imported incorrectly.

#### (b) AB native tags which cannot be imported

The AB native tags of a structure cannot be imported from a tag file.  
Therefore, the input assist is not available for setting such tags.  
To use the AB native tags of a structure, enter the tag name directly in the device field.

### (2) Unusable AB native tags

The string-type AB native tags of a structure are unusable on the GOT.

### (3) AB native tag name

When you use multiple AB native tags whose names are long, the monitoring process may take a longer time.

### (4) Directly entering an AB native tag name

When the data type of an AB native tag is string, import the tag and then set the tag by entering its name.  
If you do not import the tag before setting it, the data type cannot be recognized as string, and a system alarm occurs.

### (5) Device setting for the channel whose [Controller Type] is [AB Control/CompactLogix(Tag)]

For the channel whose [Controller Type] is [AB Control/CompactLogix(Tag)] in the controller setting, only AB native tags and GOT internal devices are usable in the device setting.  
To use controller devices in the device setting, do not select [AB Control/CompactLogix(Tag)] for [Controller Type].

### (6) Station No. switching while AB native tags are being used

The station No. switching is not available to the station using AB native tags.  
Do not use AB native tags for the station requiring the station No. switching.

### (7) Number of characters when a string-type AB native tag is used

Set an even number of characters to be stored.  
If you set an odd number of characters, some characters may not be monitored.

### (8) Data type of a structure

The data type of a structure varies depending on the data type name of the structure.

- When the data type name contains the word "STRING"  
String-type structure
- When the data type name does not contain the word "STRING"  
Non-string type structure.

**(9) Offset setting for AB native tags**

The offset setting is not available to AB native tags.  
 Do not configure the offset setting for AB native tags.  
 ⇒ 6.1.9 Offset

**(10) Writing package data**

When you set AB native tags in a project and write the project data to the GOT, [Write Mode] is not selectable in the [Write Option] dialog.  
 In this case, [Write Mode] is fixed to [Synchronize].  
 ⇒ 4.8.3 [Write Option] dialog (for writing data to one GOT)

**(11) Number of characters of the comment set for an AB native tag**

Set the comment in 1024 characters or less for an AB native tag.  
 The 1025th and subsequent characters are not displayed on GT Designer3.

**■ 5 [AB Native Tag List] dialog**

Select [Project] → [Import Other Data] → [Tag] → [AB Native Tag] from the menu to display the setting dialog.

**1) [Add] button**

Displays the [Add Tag List] dialog.  
 Import an AB native tag file.

- **[CH No.]**  
Select the CH No. for connection to the PLC that uses AB native tags.
- **[Network Setting]**  
Specify the network for the PLC that uses AB native tags.
- **[Tag List Name]**  
Set the tag list name displayed on GT Designer3.
- **[CSV File]**  
Set the path of a tag file.

**2) [Edit] button**

Displays the [Edit Tag List] dialog.  
 Edit the settings of the selected tag file.

- **[CH No.]**  
Select the CH No. for connection to the PLC that uses AB native tags.
- **[Network Setting]**  
Specify the network for the PLC that uses AB native tags.
- **[Tag List Name]**  
Set the tag list name displayed on GT Designer3.
- **[CSV File]**  
Set the path of a tag file.

**3) [Delete] button**

Deletes a selected tag file.

**4) [Delete All] button**

Deletes all tag files.

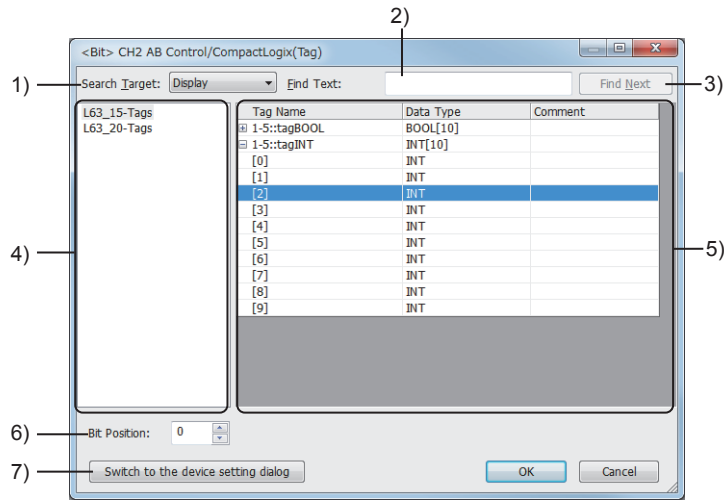

## 5) Tag file list

Lists the imported tag files of AB native tags and the connected channels.

## ■ 6 Tag list dialog (AB native tag)

Click the [Switch to the tag list dialog] button in the device setting dialog to display the tag list dialog.

### 1) [Search Target]

Select the target item for searching in the tag view.

The following shows the items to be selected.

- [Display]
- [Tag Name]
- [Data Type]
- [Device Name]
- [Comment]

### 2) [Find Text]

Set a character string to search.

This search operation is case-insensitive.

### 3) [Find Next] button

Searches by the settings in [Search Target] and [Find Text].

### 4) Tag file list

The tag files which have been imported to GT Designer3 appear in a list.

### 5) Tag view

Displays the contents of a selected tag file in a list.

### 6) [Bit Position]

Set a bit position.

The setting range is [0] to [15].

### 7) [Switch to the device setting dialog] button

Switches to the device setting dialog.

## 6.1.9 Offset

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Offset setting
  - 2 Application examples
  - 3 Precautions

Multiple target devices for monitoring can be switched according to a single device setting.

(In the simple alarm display, multiple target comments for displaying can be switched according to a single device.)

Example) Monitoring the status of multiple devices by switching them with a single device

The value set in the device using the offset is added to the devices set for each object.

The device set by the offset is hereinafter referred to as offset device.

- Devices set for each object D200, D201, D202
- Offset device D100

Monitored devices are switched according to the value stored in the offset device.

### ■ 1 Offset setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Objects and functions for which the offset setting is available

The offset setting is available for the following objects and functions.

For how to set, refer to the following.

Object, function	Reference
Touch switch <sup>*1*2</sup>	→8.2 Placing a Touch Switch
Lamp (bit, word) <sup>*3</sup>	→8.3 Placing a Lamp
Numerical Display	→8.4 Placing a Numerical Display and Numerical Input
Numerical Input	
Text Display	→8.5 Placing a Text Display and Text Input
Text Input	
Comment Display	→8.7 Placing a Comment Display
Parts display (bit, word)	→8.8 Placing a Parts Display
Parts movement (bit, word)	→8.9 Placing a Parts Movement
Simple Alarm Display	→8.12 Placing a Simple Alarm Display
Level	→8.23 Placing a Level Object
Panel Meter	→8.24 Placing a Panel Meter
Line Graph	→8.15 Placing a Line Graph
Trend Graph	→8.16 Placing a Trend Graph
Bar Graph	→8.17 Placing a Bar Graph
Statistics Bar Graph	→8.18 Placing a Statistics Bar Graph
Statistics Pie Graph	→8.19 Placing a Statistics Pie Graph

Object, function	Reference
Scatter Graph	⇒8.20 Placing a Scatter Graph
Slider	⇒8.25 Placing a Slider
Script	⇒9.8 Controlling Operations with Scripts ([Script])
Trigger Action	⇒9.5 Operating a Device as a Trigger ([Trigger Action])

\*1 For the switch, the offset device value is added to the device number of the device specified for the target action in [Action List].

However, the offset device value is not added to the device number of the device specified for any action of [SP function].

\*2 For the following touch switches, the offset setting is available for the lamp function as well.

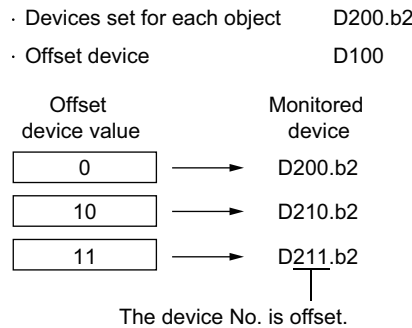

- Switch
- Bit switch
- Word switch
- Go To Screen switch
- Change Station No. switch
- Key window display switch

\*3 The offset device value is added to the device number set in [Device] in the [Device/Style] tab.

## (2) Device settings

If a bit of a word device is specified, the device No. is offset.

Example)

## ■ 2 Application examples

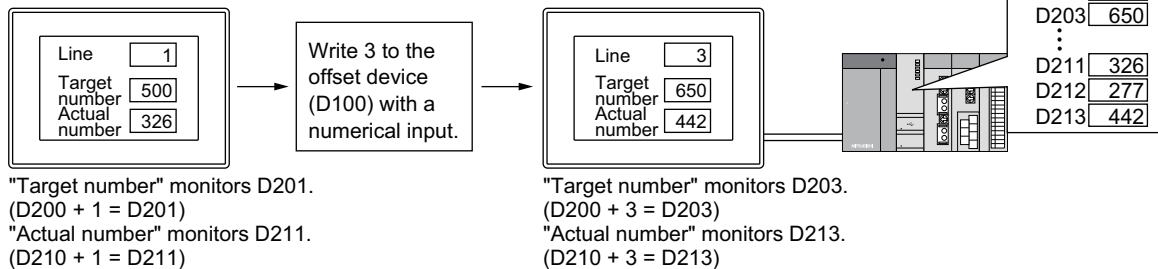

### (1) Switching and monitoring multiple line statuses with a single numerical display

⇒8.4 Placing a Numerical Display and Numerical Input

Line : Numerical input      Device      D100

Target number : Numerical display      Device      D200  
Offset device      D100

Actual number : Numerical display      Device      D210  
Offset device      D100

### (2) Displaying multiple comments by switching them with a single device

The offset device value is added to the comment No. of comments set for a simple alarm display.

To display multiple comments using a simple alarm display in the usual way, you have to set the same number of bit devices with that of comments to be displayed. If the offset is used, multiple comments can be displayed by switching them with a single device.

⇒9.1.5 Viewing alarm events (Alarm display)

#### (a) Offsetting display settings

The offset device value is added to the No. associated with the comment to be displayed.

First comment No. : 1  
 Comment No. offset device : D200

D200   
 Comment 1 is displayed when an alarm occurs.  
 (First comment No.1 + 0 = 1)

D200   
 Comment 2 is displayed when an alarm occurs.  
 (First comment No.1 + 1 = 2)

### (b) Offsetting detail display settings

The offset device value is added to the No. of the comment (comment window), window screen, and base screen to be displayed as detail displays.

Detail display : Comment window  
 First comment No. : 1  
 Comment No. offset device : D200

D200   
 "Detail display" displays comment 1.  
 (First comment No.1 + 0 = 1)

D200   
 "Detail display" displays comment 2.  
 (First comment No.1 + 1 = 2)

## 3 Precautions

### (1) Precautions for drawing

#### (a) Monitoring a trigger device for a trigger action periodically

Offset with a cycle longer than that of monitoring.

Example) Sampling cycle (7 s) of the offset device value > Sampling cycle of trigger action (5 s)

#### (b) Operation is not performed normally with the sampling cycle setting for the trigger action

If an object for which the offset has been specified is placed on the monitor screen, monitoring the trigger device for a trigger action becomes slow.

If a trigger action has been used, do not place objects for which the offset has been specified on the monitor screen.

### (2) Precautions for use

#### (a) Changing the offset value

Monitor devices are read every time the offset value changes.

Frequent changes of the offset value may cause slower monitor speeds.

#### (b) When the device No. goes out of the range by executing the offset

When the device No. goes out of the range by executing the offset, monitoring and writing are not performed.

The error can be displayed if a simple alarm display is set.

If multiple devices are monitored in a single graph display, the display depends on the setting of the devices being monitored.

Trend graph, line graph, bar graph, and statistics graph

- If the devices are set contiguously: The previous display is held.
- If the devices are set randomly:

The previous display is held only when the device No. goes out of the range. Otherwise the display reflects the offset devices in monitoring.

Scatter graph

- If the devices are set contiguously: The previous display is held.
- If the devices are set randomly: The previous display is held.

#### (c) When an offset device is set outside the device range

Even if you set an offset device outside the device range, no system alarm occurs.

Make sure to set the offset device within the device range.

## 6.2 Setting Trigger Types

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following conditions can be set to each object for monitoring or writing.

### 1 Display condition

Set to an object that monitors a device.

If the condition is not satisfied, monitoring the device is stopped or the display of the object is deleted.

Example)

Displaying only the numerical display function which is used for monitoring lines in production

Production Start signal (Line1: M11, Line 2: M12, Line3: M13)

### 2 Operating condition

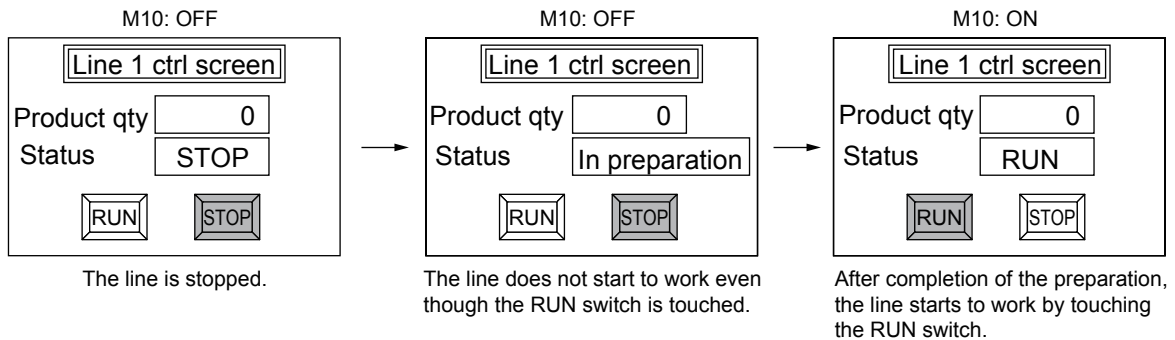

Set to an object that writes to a device.

If the condition is not satisfied, operation is prohibited or the display of the object is retained.

Example)

Setting a device for interlock to a touch switch

Line Operation Ready signal: M10

### 3 Background function condition

Set to functions including the script and logging.

If the set condition is not satisfied, operation and saving data are not executed.

## 6.2.1 Specifications of the trigger type

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Trigger types
- 2 Correspondence between functions and trigger types

### ■ 1 Trigger types

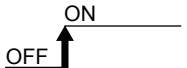

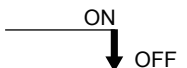

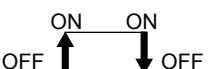

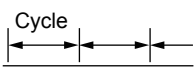

GT27 GT25 GT23 GT21 SoftGOT2000 GS

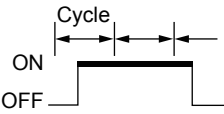

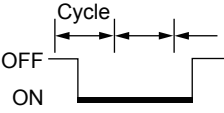

The following shows trigger types available for the display condition, operating condition, and background function condition.

#### (1) Available trigger type

For the trigger types available for each object and function, refer to the following.

- ■ 2 Correspondence between functions and trigger types

Trigger type	Execution condition	Operation
Ordinary	None	The device is monitored at the monitoring cycle of the GOT.
ON		<ul style="list-style-type: none"> <li>• The condition is satisfied while the trigger device is on or off.</li> <li>• When set to an object (display condition)                             <ul style="list-style-type: none"> <li>While the condition is satisfied, the device is monitored at the monitoring cycle of the GOT.</li> </ul> </li> </ul>
OFF		<ul style="list-style-type: none"> <li>• While the condition is not satisfied, the display of the object is deleted. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>• When set to an object (operating condition)                             <ul style="list-style-type: none"> <li>While the condition is satisfied, the set operation is executed at the monitoring cycle of the GOT.</li> <li>While the condition is not satisfied, the display of the previous object is retained.</li> </ul> </li> <li>Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(b) Operation performed when the operating condition is not satisfied</li> <li>• When set as the background function condition                             <ul style="list-style-type: none"> <li>Operation and saving data are executed.</li> </ul> </li> </ul>
Rise		<ul style="list-style-type: none"> <li>• The condition is satisfied when the trigger device is on or off.</li> <li>• When set to an object (display condition)</li> </ul>
Fall		<ul style="list-style-type: none"> <li>• When the condition is satisfied, the device is monitored only once.</li> <li>• While the condition is not satisfied, the display of the object is retained. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> </ul>
Rise/Fall		<ul style="list-style-type: none"> <li>• When set as the background function condition                             <ul style="list-style-type: none"> <li>Operation and saving data are executed.</li> </ul> </li> </ul>
Sampling		<ul style="list-style-type: none"> <li>• The condition is satisfied at each set cycle.</li> <li>• When set to an object (display condition)                             <ul style="list-style-type: none"> <li>When the condition is satisfied, the device is monitored only once.</li> <li>While the condition is not satisfied, the display of the object is deleted.</li> </ul> </li> <li>Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>• When set as the background function condition                             <ul style="list-style-type: none"> <li>Operation and saving data are executed.</li> </ul> </li> </ul>

Trigger type	Execution condition	Operation
Range	Word device value Example) Trigger device: D100 Range: $0 < D100 < 100$ Condition is satisfied: $D100 = 100$ Condition is not satisfied: $D100 = -100$	When the trigger device value is within the set range, the condition is satisfied. <ul style="list-style-type: none"> <li>When set to an object (display condition) While the condition is satisfied, the device is monitored at the monitoring cycle of the GOT. While the condition is not satisfied, the display of the object is retained. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>When set to an object (operating condition) While the condition is satisfied, the set operation is executed at the monitoring cycle of the GOT. While the condition is not satisfied, the display of the previous object is retained. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(b) Operation performed when the operating condition is not satisfied</li> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
Bit Trigger	Logical operation result of the on/off status of the specified bit devices	When the set AND or OR condition matches with the status of the specified devices, the condition is satisfied. <ul style="list-style-type: none"> <li>When set to an object (display condition) While the condition is satisfied, the device is monitored at the monitoring cycle of the GOT. While the condition is not satisfied, the display of the object is deleted. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>When set to an object (operating condition) While the condition is satisfied, the set operation is executed at the monitoring cycle of the GOT. While the condition is not satisfied, the display of the previous object is retained. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(b) Operation performed when the operating condition is not satisfied</li> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
ON Sampling		The condition is satisfied while the trigger device is on or off. <ul style="list-style-type: none"> <li>When set to an object (display condition) While the condition is satisfied, the device is monitored at the set cycle. While the condition is not satisfied, the display of the object is deleted. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
OFF Sampling		The condition is satisfied while the trigger device is on or off. <ul style="list-style-type: none"> <li>When set to an object (display condition) While the condition is satisfied, the device is monitored at the set cycle. While the condition is not satisfied, the display of the object is deleted. Operation performed while the condition is not satisfied can be changed by changing the setting.</li> <li>→(a) Operation performed when the display condition is not satisfied</li> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
View Change	When the display of the object is changed	The condition is satisfied when the display of the object is changed. <ul style="list-style-type: none"> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
Synchronize Display Trigger	The same condition as the display condition set to the object	The condition is satisfied when the object for which the trigger type is set is displayed. <ul style="list-style-type: none"> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
Key Code Input	When the following key codes are input <ul style="list-style-type: none"> <li>• 0008h (Delete the least significant digit and right-shift all digits for one digit)</li> <li>• 0088h (Delete the content being input)</li> <li>• 002Dh (Alternate the sign)</li> <li>• 002Eh (.)</li> <li>• ASCII code, shift JIS code, Kanji code</li> </ul>	The condition is satisfied when the key codes shown on the left are input. <ul style="list-style-type: none"> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
Input Fixation	When the input data is written into the device by the key code 000Dh (Execute)	The condition is satisfied when the key code which determines the input content. <ul style="list-style-type: none"> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>
Device Writing	When bit set or word set is executed by a touch switch	The condition is satisfied when the touch switch with the bit set or word set is executed. <ul style="list-style-type: none"> <li>When set as the background function condition Operation and saving data are executed.</li> </ul>

Trigger type	Execution condition	Operation
When closing a screen	When the screen is switched to another screen or closed	The condition is satisfied when the screen is switched to another screen or closed. • When set as the background function condition Operation and saving data are executed.
Time*1	The day and time which are set	The condition is satisfied when the day and time set to the GOT comes. • When set as the background function condition Operation and saving data are executed.

\*1 For the setting procedure, refer to the following.

⇒9.6 Operating the Set Time as a Trigger ([Time Action])

**(a) Operation performed when the display condition is not satisfied**

Operation performed when the condition is not satisfied can be changed by changing the setting in the setting dialog.

For the setting items for each trigger type, refer to the following.

⇒6.2.2 ■ 1 Setting display conditions and operating conditions

- Displaying an object when the screen is switched for the first time  
When [Display objects immediately after the screen is switched regardless of display conditions] is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.
- Retaining the display of the object  
When [Retain the object display when display conditions are not satisfied] is selected, the display of the object is retained when the condition which has been satisfied goes to be not satisfied.

**(b) Operation performed when the operating condition is not satisfied**

When [Clear the input object] of the [Environmental Setting] window or the [Screen Property] dialog is selected, the display of the object is deleted when the condition is not satisfied.

For how to configure the setting in the [Environmental Setting] window or the [Screen Property] dialog, refer to the following.

⇒2.7 Changing Screen Property

5.2.4 Setting key windows ([Key Window])

**(c) Object with a shape**

When the trigger type is [ON], [OFF], or [Bit Trigger] and a shape frame is set to the object  
If the object is deleted, only the shape frame is left and displayed.

## (2) Operation of multiple bit conditions

As the display condition, operating condition, or background function condition, two to eight bit devices and their on/off status can be set.

Logical AND or logical OR is executed to the on/off status of the bit devices for the set number.

Example) When M10, M11, and M12 are used as the display conditions

○ : Condition is satisfied

× : Condition is not satisfied

Display condition	M10 is ON	M11 is OFF	M12 is ON	Operation result	
				Logical AND	Logical OR
ON, OFF (Satisfied/Not satisfied)	OFF (×)	OFF (○)	OFF (×)	×	○
	ON (○)	OFF (○)	OFF (×)	×	○
	OFF (×)	ON (×)	OFF (×)	×	×
	ON (○)	ON (×)	OFF (×)	×	○
	OFF (×)	OFF (○)	ON (○)	×	○
	ON (○)	OFF (○)	ON (○)	○	○
	OFF (×)	ON (×)	ON (○)	×	○
	ON (○)	ON (×)	ON (○)	×	○

## ■ 2 Correspondence between functions and trigger types

The following shows objects and functions for which the display condition, operating condition, and background function condition can be set.

Available trigger types differ depending on the type of an object or a function.

## (1) Display condition

Function	Available trigger type		
	GT27, GT25, GT23, GT SoftGOT2000	GT21	
Lamp			
Numerical display			
Text display			
Comment display			
Parts display (Bit part) <sup>*1</sup>	<ul style="list-style-type: none"> <li>• Ordinary</li> <li>• ON</li> <li>• OFF</li> <li>• Rise</li> <li>• Fall</li> <li>• Rise/Fall</li> <li>• Sampling</li> <li>• Range</li> <li>• Bit Trigger</li> <li>• ON Sampling</li> <li>• OFF Sampling</li> </ul>	<ul style="list-style-type: none"> <li>• Ordinary</li> <li>• ON</li> <li>• OFF</li> <li>• Range</li> <li>• Bit Trigger</li> </ul>	
Parts display (Word part) <sup>*2</sup>			
Parts movement			
Line graph			
Bar graph			
Statistics bar graph			
Statistics pie graph

## 6.2.2 Setting Trigger Types

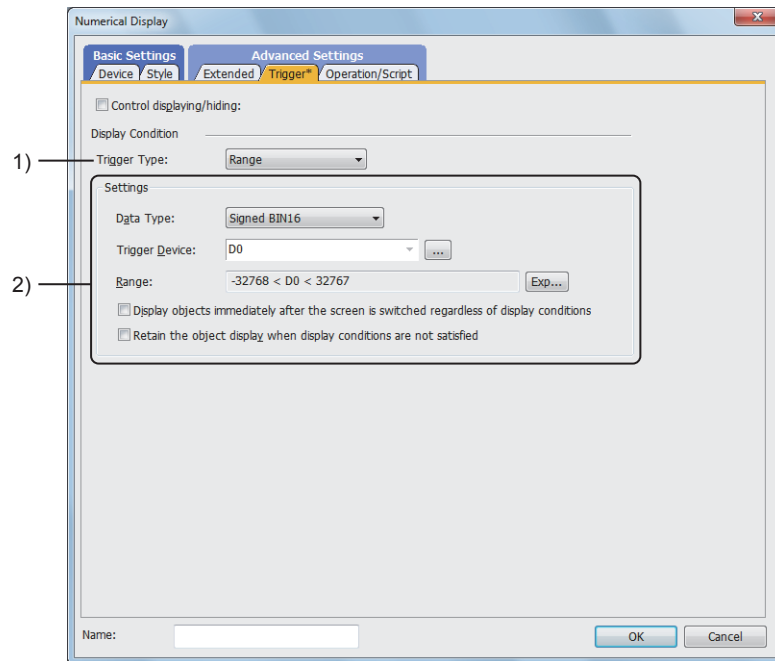

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Setting display conditions and operating conditions
- 2 Setting background function conditions

### ■ 1 Setting display conditions and operating conditions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The display condition and operating condition can be set in the [Trigger] tab of the setting dialog of each object. Since different setting items are prepared for each display condition and operating condition, refer to each description for the setting item displayed on the setting dialog.

#### 1) [Trigger Type]

Select a trigger to display or operate the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

For available triggers for each object, refer to the following.

- ➔ ■ 2 Correspondence between functions and trigger types

#### 2) [Settings]

The setting items differ depending on the setting of [Trigger Type].

For the setting items for each trigger, refer to the following.

- ➔ (1) When [Ordinary] is selected
- (2) When [ON] or [OFF] is selected
- (3) When [Rise], [Fall], or [Rise/Fall] is selected
- (4) When [Sampling] is selected

- (5) When [Range] is selected
- (6) When [Bit Trigger] is selected
- (7) When [ON Sampling] or [OFF Sampling] is selected

To set a device, refer to the following.

→6.1 Device Settings

### (1) When [Ordinary] is selected

No setting item is prepared.

### (2) When [ON] or [OFF] is selected

#### 1) [Trigger Device]

Set a trigger device.

#### 2) [Display objects immediately after the screen is switched regardless of display conditions]

Not available to GT21.

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

#### 3) [Retain the object display when display conditions are not satisfied]

Not available to GT21.

When this item is selected, the display of the object is retained when the condition which has been satisfied goes to be unsatisfied.

### (3) When [Rise], [Fall], or [Rise/Fall] is selected

#### 1) [Trigger Device]

Set a trigger device.

#### 2) [Display objects immediately after the screen is switched regardless of display conditions]

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

### (4) When [Sampling] is selected

#### 1) [Sampling]

Set a cycle at which the device is monitored.

The setting range differs depending on the type of an object or a function.

- [1] second to [3600] seconds
- [1] x 100ms to [36000] x 100ms

#### 2) [Display objects immediately after the screen is switched regardless of display conditions]

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

### (5) When [Range] is selected

#### 1) [Data Type]

Select the data type of the trigger device.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [Real]

## 2) [Trigger Device]

Set a trigger device.

## 3) [Range]

Click the [Range] button to set the range of the trigger device.

→6.5.5 ■ 2 (3) [Edit Range] dialog

## 4) [Display objects immediately after the screen is switched regardless of display conditions]

Not available to GT21.

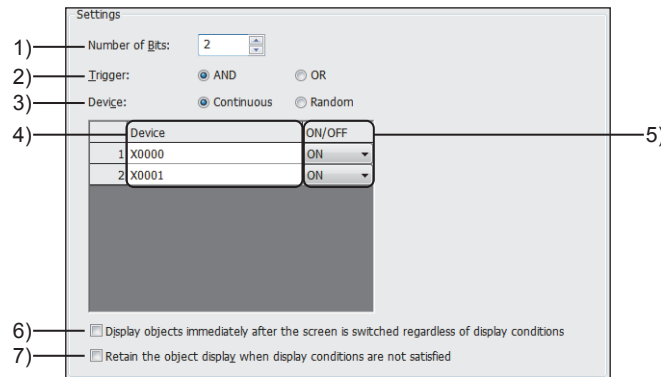

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

## 5) [Retain the object display when display conditions are not satisfied]

Not available to GT21.

When this item is selected, the display of the object is retained when the condition which has been satisfied goes to be unsatisfied.

## (6) When [Bit Trigger] is selected

### 1) [Number of Bits]

Set the number of conditions.

The setting range is [2] to [8].

### 2) [Trigger]

Select trigger conditions of multiple bits.

The following shows the items to be selected.

- [AND]: The condition is satisfied when all the set [ON/OFF] conditions match with the on/off status of the devices.
- [OR]: The condition is satisfied when one or more of the set [ON/OFF] conditions match with the on/off status of the devices.

### 3) [Device]

Select how to set the multiple devices.

The following shows the items to be selected.

- [Continuous]: Sets devices successively for the number set in [Number of Bits] starting from the device numbers specified for the set device.
- [Random]: Sets devices one by one for the number set in [Number of Bits].

### 4) [Device]

Select each row to set a trigger device.

The set devices are displayed on the list.

### 5) [ON/OFF]

Select the on/off status as the trigger condition for each device set in [Device].

The following shows the items to be selected.

- [ON]

- [OFF]

6) **[Display objects immediately after the screen is switched regardless of display conditions]**

Not available to GT21.

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

7) **[Retain the object display when display conditions are not satisfied]**

Not available to GT21.

When this item is selected, the display of the object is retained when the condition which has been satisfied goes to be unsatisfied.

**(7) When [ON Sampling] or [OFF Sampling] is selected**

1) **[Trigger Device]**

Set a trigger device.

2) **[Sampling]**

Set a cycle at which the device is monitored.

The setting range differs depending on the type of an object or a function.

- [1] second to [3600] seconds
- [1] x 100ms to [36000] x 100ms

3) **[Display objects immediately after the screen is switched regardless of display conditions]**

When this item is selected and if the screen is switched for the first time, the device is monitored and displayed even though the display condition is not satisfied.

4) **[Retain the object display when display conditions are not satisfied]**

When this item is selected, the display of the object is retained when the condition which has been satisfied goes to be unsatisfied.

**2 Setting background function conditions**

Set the background function condition in one of the following dialogs according to the function used.

- The setting dialog for each function
- [TriggerSetting] dialog

Example) When set in the [TriggerSetting] dialog

Click the [TriggerSetting] button in the setting dialog to display the [TriggerSetting] dialog.

1) **[Trigger Type]**

Select a trigger to display or operate the object.

The following shows the items to be selected.

- [None]
- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]

- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]
- [View Change]
- [Synchronize Display Trigger]
- [Key Code Input]
- [Input Fixation]
- [Device Writing]
- [When closing a screen]

For available triggers for each object, refer to the following.

⇒ ■ 2 Correspondence between functions and trigger types

## 2) [Settings]

The setting items differ depending on the setting of [Trigger Type].

For the setting items for each trigger, refer to the following.

- ⇒(1) When [None], [Ordinary], [View Change], [Synchronize Display Trigger], [Key Code Input], [Input Fixation], [Device Writing], or [When closing a screen] is selected
- (2) When [ON] or [OFF] is selected
- (3) When [Rise], [Fall], or [Rise/Fall] is selected
- (4) When [Sampling] is selected
- (5) When [Range] is selected
- (6) When [Bit Trigger] is selected
- (7) When [ON Sampling] or [OFF Sampling] is selected

To set a device, refer to the following.

⇒6.1 Device Settings

### (1) When [None], [Ordinary], [View Change], [Synchronize Display Trigger], [Key Code Input], [Input Fixation], [Device Writing], or [When closing a screen] is selected

No setting item is prepared.

### (2) When [ON] or [OFF] is selected

#### 1) [Trigger Device]

Set a trigger device.

### (3) When [Rise], [Fall], or [Rise/Fall] is selected

#### 1) [Trigger Device]

Set a trigger device.

### (4) When [Sampling] is selected

### 1) [Sampling]

Set a cycle at which the device is monitored.

The setting range differs depending on the type of an object or a function.

- [1] second to [3600] seconds
- [1] x 100ms to [36000] x 100ms
- [1] x 100ms to [600] x 100ms
- [1] minute to [1440] minutes

### (5) When [Range] is selected

Trigger Type: Range

Settings

1) Data Type: Signed BIN16

2) Trigger Device: D0

3) Range: -32768 < D0 < 32767

4) Operation Mode: Satisfied

### 1) [Data Type]

Select the data type of the trigger device.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [Real]

### 2) [Trigger Device]

Set a trigger device.

### 3) [Range]

Click the [Range] button to set the range of the trigger device.

→ 6.5.5 ■ 2 (3) [Edit Range] dialog

### 4) [Operation Mode]

Select an operation mode of when the condition is satisfied.

- [Satisfied]: When the condition is satisfied, the operation is executed.
- [Satisfied (Sampling)]: While the condition is satisfied, the operation is executed at each set cycle.

### (6) When [Bit Trigger] is selected

Trigger Type: Bit Trigger

Settings

1) Number of Bits: 2

Device	ON/OFF
1 X0000	ON
2 X0001	ON

Trigger:  AND  OR

Dev[ic]e:  Continuous  Random

### 1) [Number of Bits]

Set the number of conditions.

The setting range is [2] to [8].

### 2) [Trigger]

Select trigger conditions of multiple bits.

The following shows the items to be selected.

- [AND]: The condition is satisfied when all the set [ON/OFF] conditions match with the on/off status of the devices.
- [OR]: The condition is satisfied when one or more of the set [ON/OFF] conditions match with the on/off status of the devices.

### 3) [Device]

Select how to set the multiple devices.

The following shows the items to be selected.

- [Continuous]: Sets devices successively for the number set in [Number of Bits] starting from the device numbers specified for the set device.
- [Random]: Sets devices one by one for the number set in [Number of Bits].

#### 4) [Device]

Select each row to set a trigger device.  
The set devices are displayed on the list.

#### 5) [ON/OFF]

Select the on/off status as the trigger condition for each device set in [Device].  
The following shows the items to be selected.

- [ON]
- [OFF]

### (7) When [ON Sampling] or [OFF Sampling] is selected

#### 1) [Trigger Device]

Set a trigger device.

#### 2) [Sampling]

Set a cycle at which the device is monitored.

The setting range differs depending on the type of an object or a function.

- [1] second to [3600] seconds
- [1] x 100ms to [36000] x 100ms
- [1] x 100ms to [600] x 100ms
- [1] minute to [1440] minutes

## 6.2.3 Precautions

### ■ 1 Trigger setting for a line graph

If the number of devices monitored by the line graph is large and [Trigger Type] is [Ordinary], processing the object may delay.

In that case, change [Trigger Type] to [Sampling] and set 2 or more seconds for the cycle.

## 6.3 Date/Time Format Settings

When the date and time are displayed on the objects, the display format of the date and time can be selected.

### ■1 Date format

Set the display format of the date.

The display of the date can be changed according to language switching.

### ■2 Time format

Set the display format of the time.

### 6.3.1 Specifications of date/time formats

- ■ 1 Types of date/time formats
- 2 Correspondence between functions and date/time formats

### ■1 Types of date/time formats

The following shows the types of date/time formats.

#### (1) Date format

Example) To display Wednesday, December 25, 2013

Date format			Display contents
[Delimiter] is [/]	[Delimiter] is [-]	[Delimiter] is [.]	
25/12/13	25-12-13	25.12.13	Date, month, year
25/Dec	25-Dec	25.Dec	Date, month
25/DEC	25-DEC	25.DEC	
25/Dec(WED)	25-Dec(WED)	25.Dec(WED)	Date, month (day)
25/DEC(WED)	25-DEC(WED)	25.DEC(WED)	
25/Dec/13	25-Dec-13	25.Dec.13	Date, month, year
25/DEC/13	25-DEC-13	25.DEC.13	
25/Dec/13(WED)	25-Dec-13(WED)	25.Dec.13(WED)	Date, month, year (day)
25/DEC/13(WED)	25-DEC-13(WED)	25.DEC.13(WED)	
25/Dec/2013	25-Dec-2013	25.Dec.2013	Date, month, year
25/DEC/2013	25-DEC-2013	25.DEC.2013	
25/Dec/2013(WED)	25-Dec-2013(WED)	25.Dec.2013(WED)	Date, month, year (day)
25/DEC/2013(WED)	25-DEC-2013(WED)	25.DEC.2013(WED)	
25/12/2013	25-12-2013	25.12.2013	Date, month, year
25/12/2013(WED)	25-12-2013(WED)	25.12.2013(WED)	Date, month, year (day)
25/12	25-12	25.12	Date, month
25/12(WED)	25-12(WED)	25.12(WED)	Date, month (day)
25/12/13(WED)	25-12-13(WED)	25.12.13(WED)	Date, month, year (day)
12月25日	12月25日	12月25日	Month, year
12月25日(水)	12月25日(水)	12月25日(水)	Month, year (day)
13年12月25日	13年12月25日	13年12月25日	Year, month, date
13年12月25日(水)	13年12月25日(水)	13年12月25日(水)	Year, month, date (day)
2013年12月25日	2013年12月25日	2013年12月25日	Year, month, date
2013年12月25日(水)	2013年12月25日(水)	2013年12月25日(水)	Year, month, date (day)

Date format			Display contents
[Delimiter] is [/]	[Delimiter] is [-]	[Delimiter] is [.]	
12/25(水)	12-25(水)	12.25(水)	Month, year (day)
13/12/25(水)	13-12-25(水)	13.12.25(水)	Year, month, date (day)
2013/12/25(水)	2013-12-25(水)	2013.12.25(水)	

## (2) Time format

Example) To display 13:25:45

Time format	Display contents
13:25	Hour:minute
13:25:45	Hour:minute:second
01:25(PM)	Hour:minute (12-hour display format)
01:25:45(PM)	Hour:minute:second (12-hour display format)
13時25分	Hour:minute
13時25分45秒	Hour:minute:second
午前01時25分	Hour:minute (12-hour display format)
午前01時25分45秒	Hour:minute:second (12-hour display format)

## ■ 2 Correspondence between functions and date/time formats

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the objects for which the date/time formats can be set.

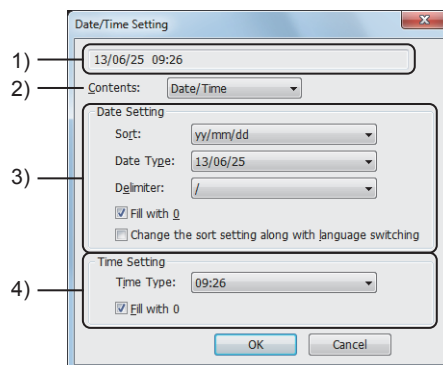

Object, function	Display format
Alarm display	Date/Time formats
Logging	
Date display	Date format
Time display	Time format

### 6.3.2 Date/time format settings

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Click the button of the date/time setting item in the setting dialog of each object to display the [Date/Time Setting] dialog. For how to set [Date Display] and [Time Display], refer to the following.

→ 8.6 Placing a Date Display and Time Display

#### 1) Preview

Displays a preview of the date and time.

#### 2) [Contents]

Select the date and time to be displayed.

The following shows the items to be selected.

- [Date/Time]: Displays the date and time.

- [Date]: Displays only the date.
- [Time]: Displays only the time.

### 3) [Date Setting]

Set the display format of the date.

Item	Description
[Sort]	<p>Select a sorting order of year, month and date. When [Change the sort setting along with language switching] is selected, a sorting order cannot be selected. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [yy/mm/dd]</li> <li>• [mm/dd/yy]</li> <li>• [dd/mm/yy]</li> </ul>
[Date Type]	<p>Select the display type of the date. The items to be displayed differ depending on the selected item of [Delimiter] and [Fill with 0]. The following shows the default items to be selected. Example) To display Wednesday, December 25, 2013</p> <ul style="list-style-type: none"> <li>• [25/12/13]</li> <li>• [25/Dec]</li> <li>• [25/DEC]</li> <li>• [25/Dec(WED)]</li> <li>• [25/DEC(WED)]</li> <li>• [25/Dec/13]</li> <li>• [25/DEC/13]</li> <li>• [25/Dec/13(WED)]</li> <li>• [25/DEC/13(WED)]</li> <li>• [25/Dec/2013]</li> <li>• [25/DEC/2013]</li> <li>• [25/Dec/2013(WED)]</li> <li>• [25/DEC/2013(WED)]</li> <li>• [25/12/2013]</li> <li>• [25/12/2013(WED)]</li> <li>• [25/12]</li> <li>• [25/12(WED)]</li> <li>• [25/12/13(WED)]</li> <li>• [12月25日]</li> <li>• [12月25日(水)]</li> <li>• [13年12月25日]</li> <li>• [13年12月25日(水)]</li> <li>• [2013年12月25日]</li> <li>• [2013年12月25日(水)]</li> <li>• [12/25(水)]</li> <li>• [13/12/25(水)]</li> <li>• [2013/12/25(水)]</li> </ul>
[Delimiter]	<p>Select a delimiter used for separating expressions of year, month and date. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [/]</li> <li>• [-]</li> <li>• [.]</li> </ul>
[Fill with 0]	<p>When the month and/or date are/is in single digit, 0 is displayed before the single-digit number.</p>

Item	Description
[Change the sort setting along with language switching]	<p>Changes a sorting order of the date associating with language switching. When the following items are selected in [Date Type], this function cannot be set.</p> <ul style="list-style-type: none"> <li>• [12月25日]</li> <li>• [12月25日(水)]</li> <li>• [13年12月25日]</li> <li>• [13年12月25日(水)]</li> <li>• [2013年12月25日]</li> <li>• [2013年12月25日(水)]</li> <li>• [12/25(水)]</li> <li>• [13/12/25(水)]</li> <li>• [2013/12/25(水)]</li> </ul> <p>To use this function, set [Region Setting] in [Language Switching] of [Environmental Setting] window. →5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])</p>

#### 4) [Time Setting]

Set the display format of the time.

Item	Description
[Time Type]	<p>Select the display type of the time. The display of the setting range differs depending on the selected item of [Fill with 0]. The following shows the default items to be selected. Example) To display 13:25:45</p> <ul style="list-style-type: none"> <li>• [13:25]</li> <li>• [13:25:45]</li> <li>• [01:25(PM)]</li> <li>• [01:25:45(PM)]</li> <li>• [13時25分]</li> <li>• [13時25分45秒]</li> <li>• [午前01時25分]</li> <li>• [午前01時25分45秒]</li> </ul>
[Fill with 0]	<p>When the time, minute, and/or second are/is in single digit, 0 is displayed before the single-digit number.</p>

#### ■ 1 Available colors

65536 colors are prepared.

### 6.4.2 Color settings

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Click the color set in each setting dialog or the button on the right of the color to display the color palette.

Select a color from the color palette.

→ ■ 1 Color palette

#### ■ 1 Color palette

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### 1) Basic colors

Select a color to be displayed.

##### 2) Custom colors

Select a color to be displayed.

When you specify a color in the dialog displayed with the [More Color] button, the color is added to the color palette. The colors existing in the palette will not be added as a new one.

##### 3) [More Color] button

Displays the [65536 Colors] dialog.

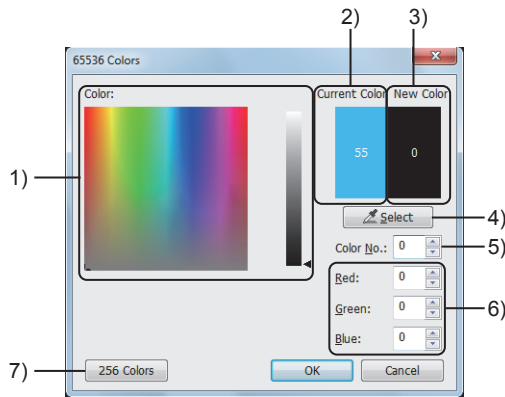

→ ■ 2 [65536 Color] dialog

#### 4) [Fill Effects] button

Displays the [Fill Effects] dialog.  
Set the gradation or pattern.

→ ■ 4 [Fill Effects] dialog

### ■ 2 [65536 Color] dialog

#### 1) [Color]

Select a color to be displayed.

#### 2) [Current Color]

Displays the currently set color.

#### 3) [New Color]

Displays the color set in the following setting items.

- [Color]
- [Select] button
- [Color No.]

#### 4) [Select] button

Changes the shape of the mouse cursor to a dropper and displays the color of the clicked position in [New Color].  
When you move the mouse cursor with the display of the dropper, the color on which the cursor is placed is displayed in [New Color].

#### 5) [Color No.]

Specifies a color to be displayed with its number from 256 colors.

The setting range is [0] to [255].

For each number of 256 colors, refer to the following.

→ ■ 3 [256 Color] dialog

#### 6) RGB value

Set a color to be displayed with three colors: red, green, and blue.

Item	Description
[Red]	Set the display ratio of red. The setting range is [0] to [255].
[Green]	Set the display ratio of green. The setting range is [0] to [255].
[Blue]	Set the display ratio of blue. The setting range is [0] to [255].

#### 7) [256 Colors] button

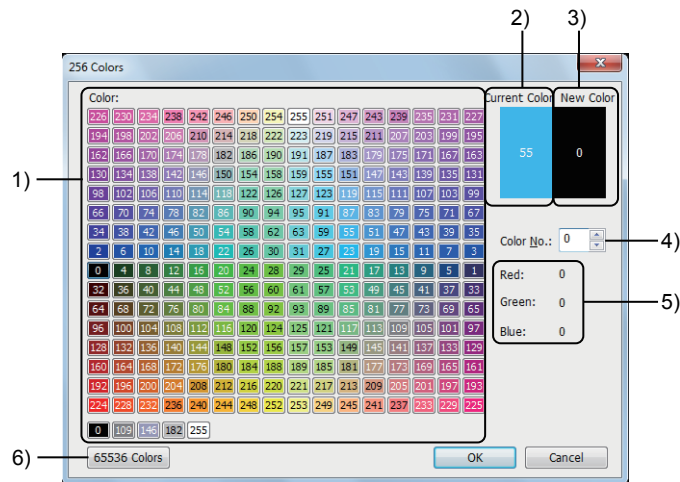

Switches the dialog to the [256 Color] dialog.

If a color which cannot be displayed with 256 colors is set, the color is changed to an approximate color in 256 colors when the dialog is switched to the [256 Color] dialog.

### ■ 3 [256 Color] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) **[Color]**  
Select a color to be displayed.
- 2) **[Current Color]**  
Displays the currently set color.
- 3) **[New Color]**  
Displays the color set in the following setting items.
  - [Color]
  - [Color No.]
- 4) **[Color No.]**  
Specifies a color to be displayed with its number from 256 colors.  
The setting range is [0] to [255].
- 5) **RGB value**  
Indicates the numerical values of red, green, and blue for the selected color.
- 6) **[65536 Colors] button**  
Switches the dialog to the [65536 Color] dialog.

### ■ 4 [Fill Effects] dialog

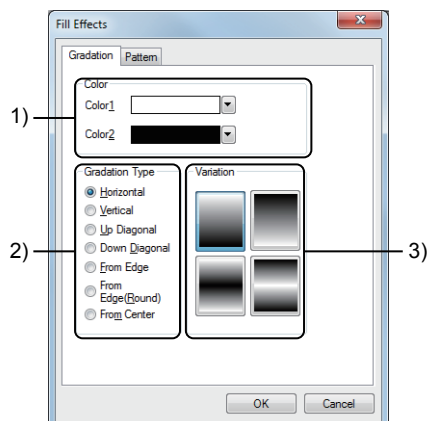

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the fill effects, such as the gradation or pattern.

To apply the setting configured on a tab, click the [OK] button on the tab.

- ⇒ (1) [Gradation] tab
- (2) [Pattern] tab

#### (1) [Gradation] tab

### 1) [Color]

Select two gradient colors.

→ ■ 1 Color palette

### 2) [Gradation Type]

Select a gradation type.

The following shows the items selectable for the logo text.

- [Horizontal]
- [Vertical]
- [Up Diagonal]
- [Down Diagonal]
- [From Edge]
- [From Edge (Round)]
- [From Center]

### **GOT Graphic Ver.2**

The following shows the items selectable for the screen background color.

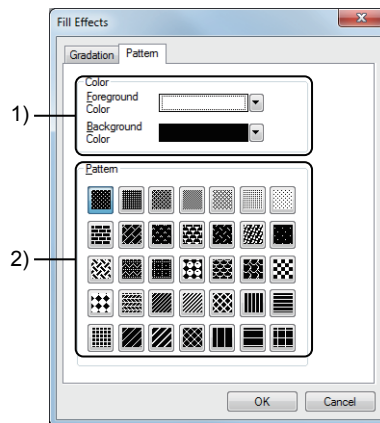

- [Horizontal]
- [Vertical]
- [Up Diagonal]
- [Down Diagonal]

### 3) [Variation]

Select a gradient to be applied.

The displayed gradients vary depending on the setting of [Gradation Type].

### (2) [Pattern] tab

### 1) [Color]

Select a foreground color and a background color for the pattern.

Item	Description
[Foreground Color]	Pattern color.
[Background Color]	Pattern background color.

### 2) [Pattern]

Select a pattern.

## 6.4.3 Precautions

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■ 1 Changing to an approximate color

When a color out of the range of 65536 colors is selected, the color is changed to an approximate color which is available in 65536 colors.

The changing method to an approximate color differs depending on the following setting items.

- Selecting a color with the [Color] or [Select] button  
When the [OK] button is clicked, the color is changed to an approximate color.
- Setting a color by the RGB value  
When the values of [Red], [Green], and [Blue] are input, the values are changed to approximate values.

## 6.5 Placing and Editing Figures and Objects

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Use figures and objects placing them on the screen.

For placements and settings common to both figures and objects, refer to the following.

- ⇒6.5.1 Placing figures and objects
- 6.5.2 Selecting figures and objects on the screen editor
- 6.5.3 Editing figures and objects
- 6.5.4 Common setting for figures
- 6.5.5 Common setting for objects

- Figures

With figures, characters and shapes can be designed.

Being unchanged according to devices and setting values, figures have no function other than being characters and shapes.

For available figures and the setting methods with GT Designer3, refer to the following.

⇒7. FIGURES

- Objects

With objects, device values can be displayed, and characters and shapes can be designed.

The objects of each type have its own functions and change according to devices and setting values.

For available objects and the setting methods with GT Designer3, refer to the following.

⇒8. OBJECT FUNCTION

### 6.5.1 Placing figures and objects

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 Selecting figures and objects to be placed

Select figures and objects to be placed.

##### (1) Selecting from the menu

You can select a figure or an object to be placed from [Figure] or [Object] in the menu bar.

##### (2) Selecting from the tool bars

When the tool bars are displayed, figures and objects can be selected from the buttons in the tool bars.

For how to display the tool bars and for the types of buttons in the tool bars, refer to the following.

⇒2.2.2 Toolbar and shortcut keys

### (3) Selecting from the part image list

If figures have been registered in the list as parts, you can select them to place, from the part image list in the [Parts Image List] window.

For how to register parts and display the [Parts Image List] window, refer to the following.  
 →5.9 Registering Parts ([Parts])

## ■2 Placing selected figures and objects

Place figures and objects you have selected on the screen editor.

### (1) Placing without changing size

Place figures and objects in their default sizes.

**Step 1** Select a figure or an object.

When a figure or an object is selected, the mouse cursor changes its shape.

**Step 2** Move the cursor to the position where the figure or object is to be placed.

**Step 3** In the following operation with the mouse or keyboard, the figure or object is placed.

- Mouse  
Click.
- Keyboard  
Press the [Enter] key twice.

### (2) Placing with changing size

Place figures and objects in changing their sizes.

**Step 1** Select a figure or an object.

When a figure or an object is selected, the mouse cursor changes its shape.

**Step 2** Move the cursor to the position where the figure or object is to be placed.

**Step 3** In the following operation with the mouse or keyboard, the size of the figure or object to be placed is changed.

- Mouse  
Click and drag it to the desired position.
- Keyboard  
Press the [Enter] key once and move the cursor key to the desired position.

**Step 4** In the following operation with the mouse or keyboard, the figure or object that has been changed in its size is placed.

- Mouse  
Release the mouse button.
- Keyboard  
Press the [Enter] key once.

### ■3 Changing the operation performed when figures and objects are placed

To change the operation performed when figures and objects are placed, set the following items on the [Edit] tab in the [Options] dialog.

- [Place figures/objects sequentially]
- [Deselect figures/objects once they are placed]
- [Display the setting dialog once figures/objects are placed]
- [Move figures/objects in the screen display area (move to temporary area with the Alt key)]

For how to display the [Option] dialog and for the operations with the above setting items, refer to the following.

⇒11.10.4 Customizing the settings related to editing operations

### ■4 Placing a figure or object with guidelines

You can place figures and objects with the help of guidelines.

For how to display the guidelines, refer to the following.

⇒2.6.8 Displaying guidelines

### ■5 Setting and checking the object ID

Object ID numbers are automatically set to figures and objects that are placed. Users cannot change set object ID numbers.

#### (1) Range of the object ID numbers to be set

The setting range is [10000] to [64999].

#### (2) Retaining object ID numbers

Object ID numbers are retained by the project.

#### (3) Pasting copied or cut figures and objects

Pasted figures and objects have new object ID numbers.

#### (4) Checking object ID numbers

When [Object ID] is selected in the [Option] dialog, objects that are placed on the screen editor are displayed with their object ID numbers.

Figures are not displayed with object ID numbers.

For how to display the [Option] dialog and set the items in the dialog, refer to the following.

⇒11.10.5 Customizing the display

## 6.5.2 Selecting figures and objects on the screen editor

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Selecting figures and objects on the screen editor
  - 2 Selecting figures and objects in the [Data View] window
  - 3 [Data View] window

### ■ 1 Selecting figures and objects on the screen editor

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can select figures and objects by clicking the figures and objects on the screen editor with the mouse cursor.

#### (1) Selectable figures and objects on the screen editor

The target for selecting can be set in three ways: figures only, objects only, or figures and objects. For how to select the target, refer to the following.

→ 6.6.7 [Object of Selection]

#### (2) Selecting figures and objects that have been placed behind others

Click the overlapping part of the figures and objects while pressing the [Ctrl] key.

Figures can be selected one by one with each click.

#### (3) Selecting multiple figures and objects

##### (a) Mouse drag operation

Drag to take the figures and objects in the square area.

When the mouse button is released, all the figures and objects in the area are selected.

##### (b) [Shift] key + Mouse operation

Click the figures and objects to be selected while pressing the [Shift] key.

Click multiple figures and objects while holding the [Shift] key to select them.

#### (4) Deselecting figures and objects

Click the targets for deselecting in a selection of multiple figures and objects, while pressing the [Shift] key.

Click the selected figures and objects while holding the [Shift] key to deselect them.

### ■ 2 Selecting figures and objects in the [Data View] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The [Data View] window displays the list of the figures and objects displayed on the screen editor being edited.

If you select a figure or an object displayed in the [Data View] window, the corresponding figure or object on the screen editor is selected.

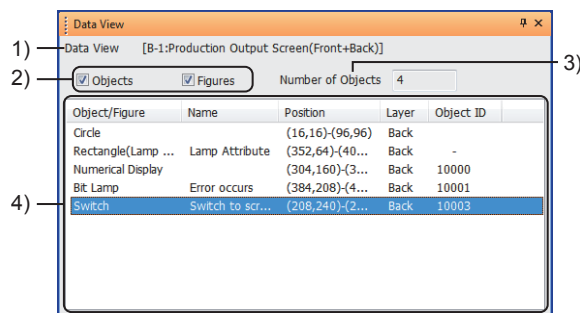

For how to display the [Data View] window and set the items in the window, refer to the following.

⇒ ■ 3 [Data View] window

### ■ 3 [Data View] window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [View] → [Docking Window] → [Data View] from the menu to display the setting window.

#### 1) [Data View]

Displays the screen type, screen number, and title of the screen editor being edited and the layers displayed on the editor.

#### 2) Objects to be displayed

Select whether to display the figures and objects in the data view or not.

Item	Description
[Objects]	Displays the objects in the data view.
[Figures]	Displays the figures in the data view.

### 3) [Number of Objects]

Displays the number of the objects placed in the screen editor.

The number is displayed regardless of the [Objects] setting.

As to figures, only those with the lamp attribute setting are counted in as objects.

### 4) Data view

Displays the list of the figures and objects which are placed on the screen editor being edited.

The items in the list depend on the [Objects] and [Figures] settings.

Item	Description
[Figure/Object]	Displays the names of the figures and objects.
[Name]	Displays the set names if they have been set for [Name] of the figures and objects.
[Position]	Displays the coordinates of the figures and objects which are placed on the screen editor.
[Layer]	Displays the layers in which the figures and objects are placed.
[Object ID]	Displays the object ID numbers which are set for the objects. As to figures, what are displayed depend on whether or not the lamp attribute has been set. <ul style="list-style-type: none"><li>• If the lamp attribute has been set [-] is displayed.</li><li>• If the lamp attribute has not been set Nothing is displayed.</li></ul>

## 6.5.3 Editing figures and objects

- ■ 1 Operating with the menu
  - 2 Moving, enlarging, or reducing a figure or object with guidelines
  - 3 Changing sizes
  - 4 Changing the attributes in the property sheets

### ■ 1 Operating with the menu

Edit selected figures and objects with the [Edit] menu.

For the items in the [Edit] menu and restrictions on the items, refer to the reference for each editing operation.

Editing operation	Reference
Canceling the last operation or redoing the canceled operation	→6.6.1 [Undo], [Redo]
Copying or cutting figures and objects and pasting them	→6.6.2 [Cut], [Copy], [Paste]
Copying and pasting figures and objects simultaneously	→6.6.3 [Duplicate]
Copying and pasting figures and objects specifying the number of them and the interval between them	→6.6.4 [Consecutive Copy]
Deleting figures and objects	→6.6.6 [Delete]
Grouping two or more figures and objects or releasing them from grouping	→6.6.8 [Group], [Ungroup]
Changing the display order of figures and objects on the screen editor	→ 6.6.9 ■ 1 [Move to the Front of Front Layer] 6.6.9 ■ 2 [Move to the Back of Back Layer]
Changing the display order of objects in the same layer	→ 6.6.9 ■ 3 [Move to the Front of Layer] 6.6.9 ■ 4 [Move to the Back of Layer] 6.6.9 ■ 7 [Move to the Front] 6.6.9 ■ 8 [Move to the Back]
Aligning the display positions of multiple figures and objects	→6.6.10 [Align]
Flipping figures and objects	→ 6.6.11 ■ 1 [Flip Vertical] 6.6.11 ■ 2 [Flip Horizontal]
Rotating figures and objects	→ 6.6.11 ■ 3 [Rotate Left] 6.6.11 ■ 4 [Rotate Right]
Moving the vertexes of figures	→6.6.12 [Edit Vertices]
Fixing the frame width of the object shape when the object is resized	→6.6.13 [Edit Objects with Fixed Frame Width]
Selecting whether to adjust the touch areas of objects automatically or manually	→6.6.14 [Edit Touch Area]
Scaling the texts set on objects in proportion to the object sizes	→6.6.15 [Adjust Direct Text Size]
Setting categories of figures and objects	→6.6.19 [Add to Category]
Changing the shapes of objects	→6.6.20 [Shape Change]

### ■ 2 Moving, enlarging, or reducing a figure or object with guidelines

You can move, enlarge, or reduce a figure or object by using the guidelines as the reference.

Move

Enlarge

Reduce

For how to display the guidelines, refer to the following.

→2.6.8 Displaying guidelines

### ■ 3 Changing sizes

Change the sizes of figures and objects.

### (1) Types of handles

The point that appears around selected figures and objects is called "handle".

There are two types of handles:

- Size change handle

Use this handle to change the sizes of figures and objects.

- Vertex edit handle

Use this handle to edit the sides of figures.

For how to switch between the types of the handles, refer to the following.

⇒6.6.12 [Edit Vertices]

### (2) Resizing a figure

Resize a figure.

If the vertex edit handles have been displayed, switch to the size change handles.

The following shows the procedure for resizing a figure.

- Step 1** Select a figure.
- Step 2** The handles are displayed around the figure.
- Step 3** Drag a handle with the mouse cursor to change the size of the figure.

Example) Size change in the horizontal direction

Example) Size change in the vertical and horizontal directions with the base point of the corner

### (3) Resizing an object

Resize an object.

If the vertex edit handles have been displayed, switch to the size change handles.

The following shows the procedure for resizing an object.

- Step 1** Select an object.
- Step 2** The handles are displayed around the object.
- Step 3** Drag a handle with the mouse cursor to change the size of the object.

The sizes of the following objects are determined according to the text sizes that the objects display. When sizes need to be changed, change the text sizes in the setting dialogs for the objects.

- Alarm display
- Historical data list

**(4) Operations in combination of the [Ctrl] key, the [Shift] key, and the [Alt] key**

The size changing method can be changed in combination of the [Ctrl] key, the [Shift] key, and the [Alt] key.

- Dragging handles while pressing the [Ctrl] key  
The sizes of figures and objects can be changed symmetrically about their centers.

- Dragging handles while pressing the [Shift] key  
The sizes can be changed with their horizontal-to-vertical ratios fixed.

- Dragging handles while pressing the [Ctrl] and [Shift] keys  
The sizes of figures and objects can be changed symmetrically about their centers with the horizontal-to-vertical ratios fixed.

- Dragging handles while pressing the [Alt] key  
The [Snap] setting in the [Option] dialog becomes invalid and the sizes can be changed in dots.  
⇒ 11.10.5 Customizing the display

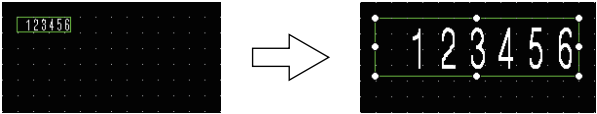

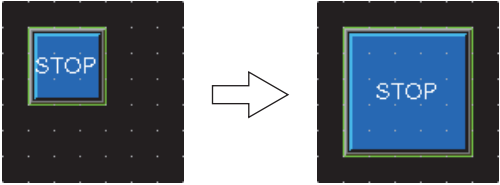

**(5) Resizing multiple figures and objects**

Resize the selected figures and objects collectively.

## (6) Resizing the text displayed on an object

Text other than direct text automatically change their sizes in proportion to the changes of the objects sizes. Whether or not the text sizes are automatically changed depends on the type of the objects.

Tex size (changed/ unchanged)	Object	Description
Changed	<ul style="list-style-type: none"> <li>Numerical Display</li> <li>Numerical Input</li> <li>Text Display</li> <li>Text Input</li> <li>Date Display</li> <li>Time Display</li> </ul>	<p>The text sizes are enlarged by 0.5 to 8 times in proportion to the changes of the object sizes. Example) When the size of an object for numerical display is changed</p> 
Unchanged	<ul style="list-style-type: none"> <li>Touch Switch</li> <li>Bit Lamp</li> <li>Word Lamp</li> <li>Comment Display</li> <li>Historical Data List Display</li> <li>Alarm Display</li> <li>Recipe Display (Record List)</li> <li>Line Graph</li> <li>Trend Graph</li> <li>Bar Graph</li> <li>Statistics Bar Graph</li> <li>Statistics Pie Graph</li> <li>Scatter Graph</li> <li>Historical Trend Graph</li> <li>Graphical Meter</li> <li>Panel Meter</li> <li>Slider</li> <li>Hyperlink</li> </ul>	<p>Change the text sizes with the text size setting of each object. The text sizes are not changed automatically even if the object sizes are changed. Example) When the size of a touch switch is changed</p> 

The font type is automatically switched between 12-dot Standard and 16-dot Standard (Gothic) according to the changed text size.

## (7) Resizing the text when [Text Type] is set to [Text]

When [Adjust Direct Text Size] is selected, the text displayed on one of the following objects is resized automatically according to the object size.

- Touch switch
- Word lamp
- Bit lamp
- Graphical meter
- Panel meter
- Hyperlink

For how to set [Adjust Direct Text Size], refer to the following.

⇒6.6.15 [Adjust Direct Text Size]

When [Adjust Direct Text Size] is enabled

When [Adjust Direct Text Size] is disabled

The font type is automatically switched between 12-dot Standard and 16-dot Standard (Gothic) according to the changed text size.

### (8) Resizing the text when [Text Type] is set to [Comment]

When [Adjust Text Size] is selected in the object setting dialog, the text is resized automatically according to the object size.

(The text displayed in a Windows font is not enlarged automatically, and is reduced differently from the one displayed in a non-Windows font.)

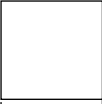

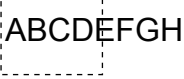

The minimum text size to be adjusted is settable with [Minimum Size].

The following shows the objects for which [Adjust Text Size] and [Minimum Size] are settable.

- Touch switch
- Bit lamp
- Word lamp
- Comment display
- Historical data list display
- Alarm display
- Recipe display (Record list)
- Graphical meter
- Hyperlink

If a part of the text extends off the display frame, the text appears differently according to the setting of [Adjust Text Size] as shown below.

Text to be displayed on the object		[Adjust Text Size]	
		Selected	Deselected
Display frame		<ul style="list-style-type: none"> <li>• Font other than a Windows font</li> <li>The text is resized automatically to fit on the display frame.</li> </ul>	<ul style="list-style-type: none"> <li>• Font other than a Windows font</li> <li>The portion of the character string that has been extending off the frame starts a new line to fit in the display frame.</li> </ul>
Character string to be displayed			
		<ul style="list-style-type: none"> <li>• Windows font</li> <li>The text is resized automatically to fit on the display frame.</li> </ul>	<ul style="list-style-type: none"> <li>• Windows font</li> <li>Even if a part of the text extends off the display frame, the text does not wrap to the next line.</li> <li>The part extending off the frame is not displayed.</li> <li>(If a character straddles the frame, only the part of the character within the frame is displayed.)</li> </ul>

Text to be displayed on the object	[Adjust Text Size]	
	Selected	Deselected
Display frame  Character string to be displayed ABCDEFGH 	<ul style="list-style-type: none"> <li>Font other than a Windows font</li> </ul> After the text is displayed in the size specified with [Minimum Size], if a part of the text still extends off the display frame, the part is not displayed. (If a character straddles the frame, the character is not displayed.) The text is displayed left aligned. 	<ul style="list-style-type: none"> <li>Font other than a Windows font</li> </ul> After the text wraps to the next line, if a part of the text still extends off the display frame, the part is not displayed. (If a character straddles the frame, the character is not displayed.) 
	<ul style="list-style-type: none"> <li>Windows font</li> </ul> After the text is displayed in the size specified with [Minimum Size], if a part of the text still extends off the display frame, the part is not displayed. (If a character straddles the frame, only the part of the character within the frame is displayed.) The text alignment is not changed. 	<ul style="list-style-type: none"> <li>Windows font</li> </ul> Even if a part of the text extends off the display frame, the text does not wrap to the next line. The part extending off the frame is not displayed. (If a character straddles the frame, only the part of the character within the frame is displayed.) 

If the HG font is used, the appearance of the font may change after the change of the size.

If the appearance has been changed, adjust the size of the object so that the appearance returns to that of the HG font.

### (9) Resizing the shape of an object

The shape of an object is resized according to the object size.

The resize behavior of the shape frame width varies according to the shape type and the frame width fixing setting.

Shape type	Resize behavior of the shape frame width
Library	<p>The resize behavior of the frame width varies according to the frame width fixing setting.</p> <p>→6.6.13 [Edit Objects with Fixed Frame Width]</p> <ul style="list-style-type: none"> <li>When the frame width fixing setting is enabled</li> </ul> <p>For the object shape to which the setting is applicable, resizing the object does not change the frame width.</p>  <p>For the object shape to which the setting is inapplicable, resizing the object resizes the frame width.</p> <ul style="list-style-type: none"> <li>When the frame width fixing setting is disabled</li> </ul> <p>Resizing an object resizes the frame width.</p> 
My Library	Resizing an object resizes the frame width.

Shape type	Resize behavior of the shape frame width
Basic Figure	<p>The resize behavior of the frame width varies according to the shape state. For the shape with a fixed frame width, the shape name includes [Fixed Width].</p> <p>Shape: <input type="text" value="Square_3D_Fixed Width : Rect_2"/> <input type="button" value="Shape..."/></p> <ul style="list-style-type: none"> <li>For the object shape with a fixed frame width Resizing an object does not change the frame width.</li> </ul>  <ul style="list-style-type: none"> <li>For the object shape with a variable frame width Resizing an object resizes the frame width.</li> </ul> 

### (10) Resizing the touch area

When you set a shape for an object, resizing the object may make the touch area and the shape different-sized and misaligned.

In such a case, select the object and perform the following operations to adjust the touch area and the shape.

- Centering the touch area in the shape

Right-click the object and select [Centering] from the right-click menu.

The touch area is centered in the shape.

- Editing the touch area and the shape separately

Select the object, and then select [Edit] → [Edit Touch Area] → [Manual Edit] from the menu.

The sizes and display positions of the touch area and the shape can be edited separately.

- Making the shape and the touch area fit into each other

Select the touch switch, and then select [Edit] → [Edit Touch Area] → [Self-adjust] from the menu.

The shape and the touch area fit into each other.

- Always adjusting the shape and the touch area automatically

Select [Edit] → [Edit Touch Area] → [Constant Self-adjust] from the menu.

For all objects, their shapes and touch areas are always adjusted automatically.

## ■4 Changing the attributes in the property sheets

Figure and object settings can be changed in the property sheets.

For how to display the property sheets and set in the property sheets, refer to the following.

⇒ 11.9 Checking and Editing Settings of Screens and Objects (Property Sheet)

### 6.5.4 Common setting for figures

GT27 GT25 GT23 GT21 SoftGOT2000 GS

⇒ ■ 1 Lamp attribute setting

#### ■1 Lamp attribute setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (1) Figures for which the lamp attributes can be set

The following lists the figures for which the lamp attributes can be set.

For how to set the lamp attributes, refer to the setting dialog of each figure.

Figure	Reference
Line	⇒ 7.3 Drawing a Line
Freeform line	⇒ 7.4 Drawing a Line Freeform
Rectangle	⇒ 7.5 Drawing a Rectangle
Polygon	⇒ 7.6 Drawing a Polygon
Circle	⇒ 7.7 Drawing a Circle
Piping	⇒ 7.11 Drawing a Piping

##### (2) Display and operation when the lamp attribute is set

The figure having the lamp attribute setting changes its display color and operates in the same manner as a bit lamp.

##### (3) The maximum number of figures per screen

When figures that have the lamp attributes set for them are placed on the screen editor, they are counted as lamps.

For the maximum number of lamps per screen, refer to the following.

⇒ 1.2.3 ■ 3 Functions arrangeable on the screen

## 6.5.5 Common setting for objects

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 Setting object shapes
- 2 Setting conditions
- 3 Superimposition
- 4 Setting data operations

### ■ 1 Setting object shapes

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Setting shapes for objects spruces up the displays of the objects.

There are two types of shapes: those for external forms such as a lamp and those for frames, such as a numerical display and graph.

- Shapes for external forms

- Shapes for frames

#### (1) Specifications of object shapes

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### (a) Image types that can be set for objects

Images can be selected from the basic figures, library, or parts

##### (b) Applying shapes to two or more conditions or both the on and off statuses for a single object

Shapes can be applied to each condition, the on status, and the off status.  
However, the basic figures, library, and parts cannot be mixed.

##### (c) Selecting shapes from the favorite in the library, my library, or parts

Shapes cannot be selected if they have not been registered in the library or as parts.  
For how to register shapes in the library and as parts, refer to the following.

→5.9 Registering Parts ([Parts])

8.1.2 ■ 2 Registering the data in the library

#### (2) How to use object shapes

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the procedure for setting a shape for an object.

Example) setting a shape for a bit lamp

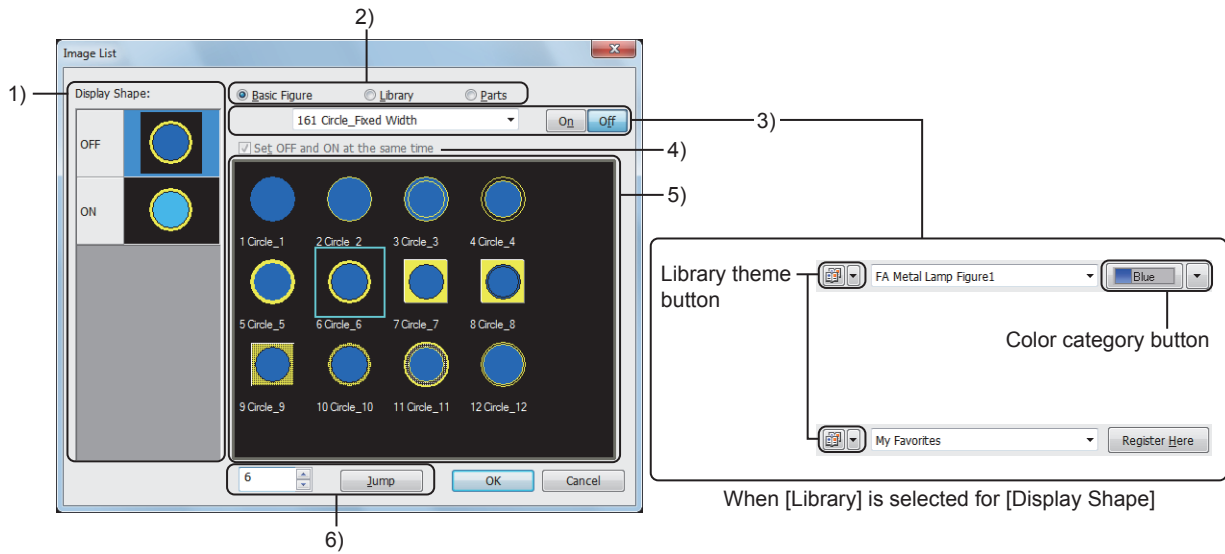

- Step 1** Place a bit lamp on the screen editor and display the setting dialog.
- Step 2** Click the [Shape] button in the [Device/Style] tab to display the [Image List] dialog.
  - (3) [Image List] dialog
- Step 3** In the [Image List] dialog, select the shapes for the on and off statuses.
- Step 4** After selecting the shapes, click the [OK] button of the [Image List] dialog and setting dialog to complete the shape settings.

### (3) [Image List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains each setting item using the setting dialog for a bit lamp.

Different types of objects have different necessary setting items. Refer to the setting items explained in this section that are provided for the object to be used.

#### 1) [Display Shape]

Displays the image for each condition or the on/off status.

When selecting different images for each condition, or for the on and off statuses, select the target object with this setting item.

#### 2) Image types

This item is not displayed when the target object has one selectable image type only.

Select the image type of the shapes.

The following shows the items to be selected.

- [Basic Figure]
- [Library]
- [Parts]

#### 3) Types of the basic figure or library

Can be set if [Basic Figure] or [Library] is selected for the image type.

Select shape types from the basic figure or library.

Item	Description
[ON] button, [OFF] button	Switches between displaying the on status image and off status image in [Display Shape] and the shape image list.
Library theme button	Can be set only when [Library] is selected for the image type. Select the type of the library.
Color category button	Changes the color category of the shape image list.
[Register Here] button	Can be set only when items other than [System Library] are selected with the library theme button. Registers in the favorite or my library the shapes selected for [Display Shape] and in the shape image list.

#### 4) [Set OFF and ON at the same time], [Set every state at the same time]

Different objects have different setting items.

- [Set OFF and ON at the same time]  
Sets the same shape for both objects displayed in [ON] and [OFF] of [Display Shape].
- [Set every state at the same time]  
Sets the same shape for all the conditions displayed in [Display Shape].

#### 5) Shape image list

Select the shape to be set for the object.

#### 6) [Jump] button

Specify a number shown in the shape image list and click the [Jump] button to select the shape associated with the specified number.

## ■ 2 Setting conditions

If conditions are set, colors, shapes, and characters set for the object can be changed according to the on/off statuses of bit devices and the values of word devices.

### (1) Specifications of conditions

#### (a) Settable conditions

The following lists the conditions that can be set for objects.

- ON or OFF status of bit devices
- Values of word devices
- Values of word devices that the objects monitor

#### (b) Objects for which the conditions can be set

The following shows the objects for which the conditions can be set and the conditions that can be set for each object.

Object	Condition
Word lamp	
Numerical display	<ul style="list-style-type: none"> <li>• On and off statuses of bit devices</li> <li>• Values of word devices</li> <li>• Values of word devices that the objects monitor</li> </ul>
Parts display (Word part)	
Parts movement (Word part)	
Numerical input	
Comment display (Word comment)	<ul style="list-style-type: none"> <li>• Values of word devices<sup>*1</sup></li> <li>• Values of word devices that the objects monitor</li> </ul>
Level object	
Panel meter	
Scatter graph	

\*1 Must be the values of the word devices being monitored.

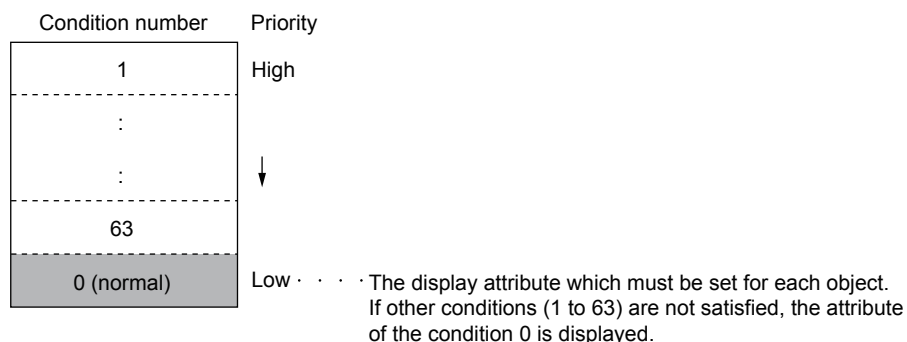

#### (c) The maximum number of conditions set for a single object

Up to 64 types of conditions can be set.

#### (d) Order of the priority given to displays

If two or more conditions overlap, the display that results from a satisfied condition with smaller No. is prioritized.

If all the conditions 1 to 63 are not satisfied, the display for the condition 0 is shown.

Example) If condition 1 and condition 2 are satisfied simultaneously

## (2) How to use conditions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (a) The operating examples of conditions

- Changing the display according to the on and off statuses of a bit device

Example) Setting the following conditions for a numerical display  
If M10 is on, the shape color changes to black.

- Changing the display according to the value of a word device

Example) Setting the following conditions for a numerical display  
If condition 1,  $5 \leq D100 \leq 9$ , is true, the shaped color changes to gray.  
If condition 2,  $10 \leq D100$ , is true, the shape color changes to black.

- Changing the display according to the value of a word device being monitored

Example) Setting the following conditions for a level display  
If condition 1,  $D100 = 40$ , is true, the shape color changes to light gray.  
If condition 2,  $D100 = 60$ , is true, the shape color changes to gray.  
If condition 3,  $D100 = 90$ , is true, the shape color changes to black.

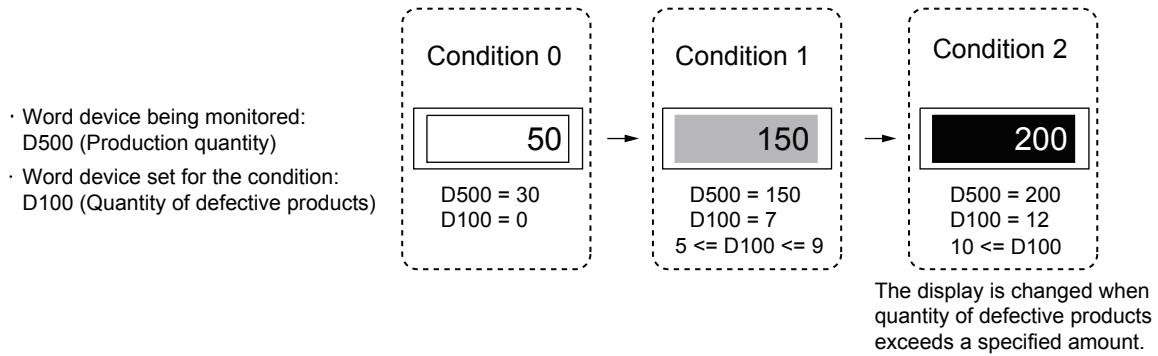

### (b) Setting example of conditions

The following shows a setting example of conditions.

For details of the setting items, refer to the setting dialog of each object.

Example) Setting condition 0 to condition 2 for a numerical display

- If condition 1,  $5 \leq D100 \leq 9$ , is true, the shape color changes to gray.
- If condition 2,  $10 \leq D100$ , is true, the shape color changes to black.

**Step 1** Place a numerical display on the screen editor and display the setting dialog.

**Step 2** Set condition 0 in the [Style] tab.

If both condition 1 and 2 have not been satisfied, the shape which has been set for condition 0 is displayed.

- Numerical Color: Black
- Blink: None
- Reverse: Unchecked
- Shape Color: White
- Frame Color: Green

**Step 3** Set condition 1 in the [Style] tab.

- Click the add button to create condition 1.
- Condition 1:  $5 \leq D100 \leq 9$
- Numerical Color: Black
- Blink: None
- Reverse: Unchecked
- Shape Color: Gray
- Frame Color: Green

For the setting dialog displayed by clicking the [Range] button, refer to the following.

→(3) [Edit Range] dialog

**Step 4** Set condition 2 in the [Style] tab.

- Click the add button to create condition 2.
- Condition 2:  $10 \leq D100$
- Numerical Color: White
- Blink: None
- Reverse: Unchecked
- Shape Color: Black
- Frame Color: Green

For the setting dialog displayed by clicking the [Range] button, refer to the following.

→(3) [Edit Range] dialog

**Step 5** Click the [OK] button of the setting dialog to complete the shape settings.

### (c) Display example of overlapping conditions

If conditions are overlapped, the condition of smaller No. is prioritized.

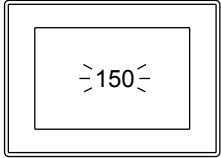

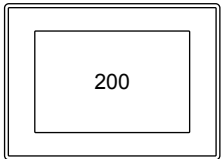

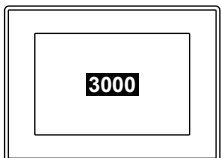

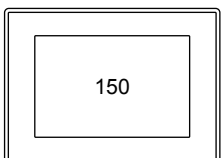

Example)

Setting conditions for a numerical display

- Monitored device: D500
- Data type: Signed 16-bit binary data

Order of priority given to operations when they overlap	Condition No.	Value range with which the set color is displayed	Numerical value color
High ↓ Low	1	M10: ON	Red (with blink)
	2	200 <= \$V <= 300	Blue
	3	1000 <= \$V	Yellow (inverted)
	Condition 0 (normal)	-	Green

Condition 1	If M10 turns on, the numerical value is displayed in red (with blink).	
Condition 2	If the value of the monitor device is 200 to 300 (200 <= \$V <= 300), the numerical value is displayed in blue.	
Condition 3	If the value of the monitor device value is 1000 or greater (1000 <= \$V), the numerical value is displayed in yellow (inverted).	
Condition 0 (normal)	If the condition is other than condition 1 to 3, the numerical value is displayed in green.	

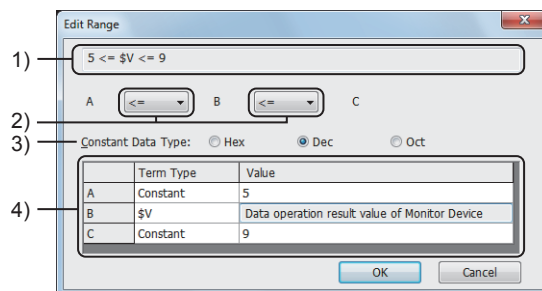

### (3) [Edit Range] dialog

Displayed by clicking the [Range] button in the object's setting dialog.

Depending on the type of the object, the setting items in the setting dialog differ.

Refer to the setting items explained in this section that are provided for the object to be used.

#### 1) Range expression

Range expression that has been set.

#### 2) Relational operators

Select relational operators used in the range expression.

The following shows the items to be selected.

- [<]: The left side value is smaller than the right side value.
- [<=]: The left side value equals or smaller than the right side value.
- [=]: The left side value equals the right side value.

- [!]=: The left side value and the right side value are different.
- [None]: Not compared.

### 3) [Constant Data Type]

Select the data type if [Constant] has been selected for [Term Type] of the range expressing setting. This item is available if other than [Real] is set for [Data Type] when setting [Range] of [Trigger Type]. The following shows the items to be selected.

- [Hex]
- [Dec]
- [Oct]

### 4) Range expression setting

Item	Description
[Term Type]	<p>Select the type and value of each side (A to C) of the range expression. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Constant]: Operates with constants.</li> <li>• [\$V], [\$W], monitor device: Operates the value of the target word device for monitoring or writing. If a monitor device is selected, the target word device that has been set is displayed. Set this item in the range expression as it is compulsory.</li> <li>• [Other Device]: Operates the value of a word device. The data type is the same as the device to be monitored ([\$V], [\$W], monitor device)</li> </ul>
[Value]	<p>Select the value of each side (A to C) of the range expression. Depending on the [Term Type], the setting item differs.</p> <ul style="list-style-type: none"> <li>• When [Constant] is selected: Set a numerical value.</li> <li>• If [\$V], [\$W], or monitor device: The target device for monitoring is displayed.</li> <li>• When [Other Device] is selected: Set a device.</li> </ul>

#### Point

#### Device range setting when [Data Type] is [Real]

For a device whose [Data Type] is [Real], the GOT and a controller handle the device value a little differently. If you set a precise input condition using [=] or [!]=, the input range may not be checked properly. When checking the input range with such a device, do not use [=] and [!]= to set the input condition. For the data type specifications, refer to the following.

→ 1.2.6 ■ 2 Data type of devices

### ■ 3 Superimposition

Windows can be displayed in superimposition in layers and on the same screen.

- (1) Specifications of superimposition
- (2) Using layers
- (3) Not using layers
- (4) Special superimposition
- (5) Precautions

#### (1) Specifications of superimposition

In superimposition, figures and objects are placed and displayed in the same layer or multiple layers. For the layers, refer to the following.

→ 1.2.3 ■ 2 (4) Mobile screen specifications

**(a) Display method**

The following shows how to display figures and objects in superimposition.

Display method	Description	Windows for which superimposition is enabled
Superimposing in the same layer	<p><b>GOT Graphic Ver.2</b></p> <p>The object stacking order on the GOT conforms to that on GT Designer3.</p> <p><b>GOT Graphic Ver.1</b></p> <p>If [Adjust object display order in GOT to the one in GT Designer3] of the [Type Setting] dialog is checked, the display order arranged on GT Designer3 is ensured when the figures and objects are displayed on the GOT.</p> <p>→5.1.4 [Type Setting] dialog</p> <p>If objects are superimposed in the same layer, the objects are not displayed or operate normally depending on the type of objects.</p> <p>For the objects that are displayed and operate normally in the same layer, refer to the following.</p> <p>→(3) Not using layers</p>	<ul style="list-style-type: none"> <li>• Base screen</li> <li>• Overlap window</li> <li>• rimpose window</li> <li>• Dialog window</li> <li>• Key window</li> <li>• Mobile Screen</li> </ul>
Superimposing in the use of the front and back layer	<p>Figures and objects can be displayed in superimposition if they are placed separately in the front layer and the back layer.</p> <p>For the superimposition using the layers, refer to the following.</p> <p>→(2) Using layers (4) Special superimposition</p>	<ul style="list-style-type: none"> <li>• Base screen</li> <li>• Overlap window</li> <li>• rimpose window</li> <li>• Key window</li> </ul> <p>For windows other than those listed above, the object stacking order on the GOT may differ from that on GT Designer3 because the layers are combined into one layer.</p> <p>In such a case, enable the object stacking order adjustment so that the object stacking order on the GOT conforms to that on GT Designer3.</p> <p>→5.1.4 [Type Setting] dialog</p>

**(b) Figures and objects that are displayed in the topmost position in the layer at all times**

The following figures and objects are displayed in the topmost position in the layer at all times.

- Alarms: If [Display Type] is set to [Flow]
- Scatter graphs: If [Store Memory] is set
- Figures drawn by the free figure drawing function of the object scripts

**(2) Using layers**

A base screen and a window screen consist of two layers: the front layer and the back layer. Two objects can be superimposed by placing objects and figures separately in each layer.

(a) Figures and objects which can be placed in each layer

Layer	Available figures and objects
Front layer	Figures (Pipings with the lamp attribute), objects
Back layer	Figures, objects

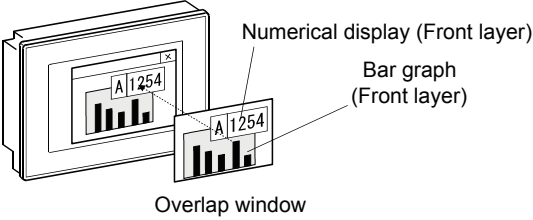

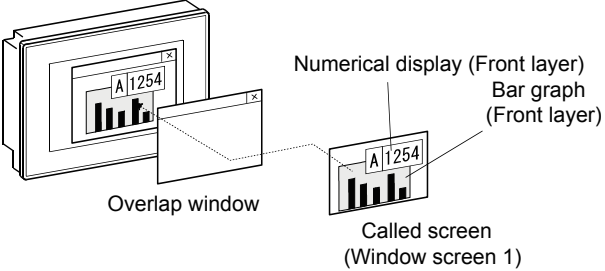

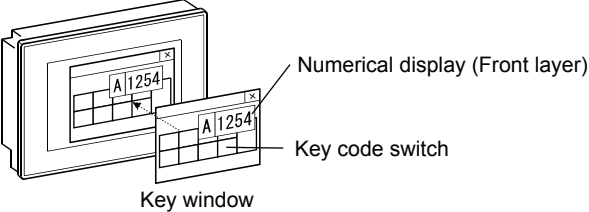

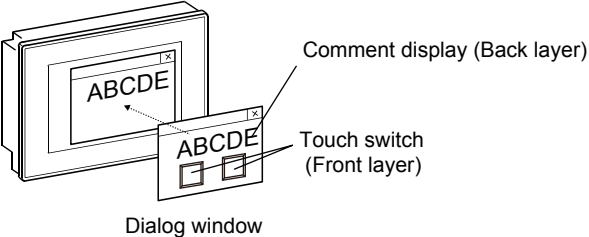

(b) Screens on which the layers are enabled, and the display order of figures and objects

The display order of figures and objects placed in the front layer and back layer may or may not follow the order of the layers.

The following shows the display order of figures and objects on each screen.

Screen type	Layer	Display order of objects on the GOT
Base screen		<p>Displayed in order of the layers.</p> <p>Numerical display (Front layer) Bar graph (Front layer)</p> <p>Base screen</p>
Windows called on base screens by the set overlay screen function	Valid	<p>Displayed in order of the layers.</p> <p>Numerical display (Front layer) Bar graph (Front layer)</p> <p>Called screen (Window screen 1)</p>
Superimpose window		<p>Displayed in order of the layers.</p> <p>Numerical display (Front layer) Bar graph (Front layer)</p> <p>Superimpose window</p>
Windows called on superimpose windows by the set overlay screen function	Valid	<p>Displayed in order of the layers.</p> <p>Numerical display (Front layer) Bar graph (Front layer)</p> <p>Superimpose window Called screen (Window screen 1)</p>

Screen type	Layer	Display order of objects on the GOT
Overlap window		<p>Displayed in order of the layers.</p>  <p>Numerical display (Front layer) Bar graph (Front layer) Overlap window</p> <p>With GT23, the layers are combined into a single layer and displayed.</p>
Windows called on overlap windows by the set overlay screen function	Valid	<p>Displayed in order of the layers.</p>  <p>Numerical display (Front layer) Bar graph (Front layer) Overlap window Called screen (Window screen 1)</p> <p>With GT23, the layers are combined into a single layer and displayed.</p>
Key window	Valid	<p>Displayed in order of the layers.</p>  <p>Numerical display (Front layer) Key code switch Key window</p> <p>With GT23, the layers are combined into a single layer and displayed.</p>
Dialog window	Invalid	<p>The layers are combined into a single layer and displayed.</p>  <p>Comment display (Back layer) Touch switch (Front layer) Dialog window</p>

### (c) Transparent color

#### **GOT Graphic Ver.1**

The transparent color is set for the front layer.

The part of an object that is in the same color as the transparent color has transparency.

To make an object transparent, match the transparent color with the color of the part of the object.

Set the transparent color for the front layer in the [Screen Property] dialog.

For how to set the [Screen Property] dialog, refer to the following.

⇒ 2.7 Changing Screen Property

This function is not available on windows, such as a dialog window, where the layers are combined into a single one when they are displayed on the GOT.

If an object for which the same color as the transparent color of the front layer is set is placed on windows such as a dialog window, the object is displayed in the set color without transparency.

Example) If transparent colors are set for superimpose windows and dialog windows

#### (d) Superimposing two or more windows using the layers

The following shows how the layers and the transparent colors act when superimpose windows and set overlay screen function are used to superimpose and display two or more windows.

##### • Layers

The front layers and back layers that have been set for two or more windows are combined into a single front layer and back layer when the screen are superimposed.

Superimposed objects on the combined layers may not be displayed or operate normally.

When superimposing windows, prevent the objects in the front layers or back layers from being superimposed.

Certain objects can be displayed and operate normally.

For the objects that can be superimposed in the same layer, refer to the following.

##### ⇒(3) Not using layers

##### • Transparent colors

#### **GOT Graphic Ver.1**

The transparent colors for superimpose windows and called windows are ignored and the transparent colors for the base screens are enabled.

To make the objects transparent, match the colors with the transparent colors for the base screens.

**(3) Not using layers**

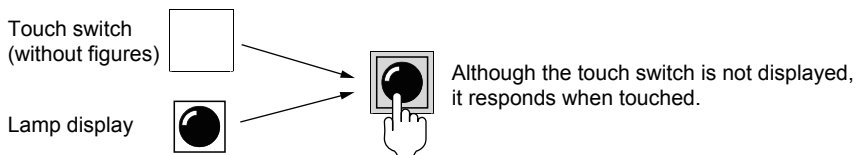

Certain objects can be displayed and operate normally even when they are superimposed in the same layer. The following lists the objects that can be superimposed in the same layer.

Combination	Reference
Touch switch and the other objects	(a) Superimposition with touch switches
Level object, numerical display, comment display	(b) Superimposition with level objects
Parts display and parts display	(c) Superimposition of parts displays

**(a) Superimposition with touch switches**

Touch switches without figures and texts can be used in superimposition with the other objects.

The following lists the objects that can be superimposed with touch switches.

Objects that can be superimposed with touch switches			
Lamp	Numerical display*1	Numerical input	Text display*1
Text input	Date display	Time display	Comment display

Objects that can be superimposed with touch switches			
Parts display	Parts movement	Historical data list display	Alarm display* <sup>2</sup>
Level object	Panel meter	Line graph	Trend graph
Bar graph	Statistics bar graph	Statistics pie graph	Scatter graph
Historical trend graph	Hyperlink		

\*1 To superimpose a numerical display and a text display, place them in separate layers.

⇒(2) Using layers

\*2 An alarm display with a touch operation arranged for it cannot be superimposed with touch switches.

When superimposing touch switches with objects, do not make the following settings for the touch switches.

- Selecting items other than [None] for [Shape] in the [Style] tab
- Setting [Reverse switch area] if [None] has been selected for [Shape] in the [Style] tab
- Selecting [Text] for [Text Type] in the [Text] tab and then inputting a text to [Text]

For how to set touch switches, refer to the following.

⇒8.2 Placing a Touch Switch

### (b) Superimposition with level objects

The numerical display, numerical input, and comment display objects can be superimposed on the level object. Multiple objects can be superimposed on one level object.

#### **GOT Graphic Ver.2**

For a level object, the boundary color cannot be set.

For a numerical display or comment display, [Display Mode] is fixed to [Transparent].

For superimposing objects on a level object, refer to the following.

⇒8.23.2 How to use the level object (GOT Graphic Ver.2)

#### **GOT Graphic Ver.1**

For superimposing objects on a level object, refer to the following.

⇒8.23.3 How to use the level object (GOT Graphic Ver.1)

Depending on the display mode of the objects with which levels objects are superimposed, the displays of the level objects differ.

The following shows application examples.

Example 1) When [Display Mode] is set to [Transparent] for a numerical display, numerical input, or comment display  
The numerical display color and text color are displayed as is.

Example 2) When [Display Mode] is set to [XOR] for a numerical display, numerical input, or comment display  
When the target object is superimposed on the fill color portion of the level object, the color of the overlapping portion is inverted in the target object.

However, inputting a value on the numerical input does not apply the fill color of the level object to the overlapping portion of the numerical input.

The new value is not reflected to the display until you touch the numerical input again.

### (c) Superimposition of parts displays

#### **GOT Graphic Ver.1**

Two or more parts can be displayed in superimposition.

Select [Overwrite] for [Display Mode] of parts displays.

#### (4) Special superimposition

By using superimpose windows and the set overlay screen function, and multiple placements on the same screen, up to eight objects including touch switches, numerical inputs, and character string inputs set for each window can be superimposed.

##### (a) Special method for superimposing touch switches, numerical inputs, and character string inputs

- Superimposition with superimpose windows  
 Superimpose windows are superimposed in front of the base screen, and displayed as a single window.  
 For the specifications of the superimpose window, refer to the following.  
 ⇒ 1.2.3 Screen types and the specifications

- Superimposition with the set overlay screen function  
 Calling base screens and window screens on basic screens (base screens and superimpose windows), this function displays them as a single screen.  
 For how to set the set overlay screen function, refer to the following.  
 ⇒ 8.29 Placing Another Screen on a Screen

- Superimposition by multiple placements on the same screen (for touch switches only)  
 Up to six touch switches on the front layer and back layer of a screen can be superimposed.

**Point**

**Setting two or more actions for a single touch switch**

If switches are used, a set of actions arranged when two or more touch switches are superimposed can be imposed on a single touch switch.

For how to set touch switches, refer to the following.

→8.2 Placing a Touch Switch

**(b) Actions for superimposed touch switches, numerical inputs, and character string inputs**

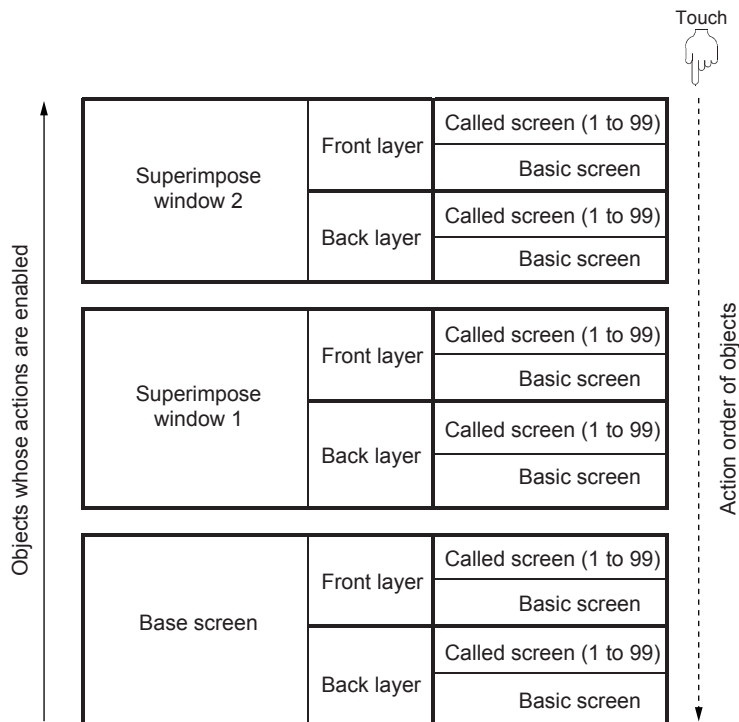

- Number of objects that have their actions enabled  
 Actions for up to six objects including superimposed touch switches, numerical inputs, and character string inputs are enabled by multiple placements, and if superimpose window 1 and 2 are displayed, actions for up to eight objects are enabled.  
 Actions for touch switches, numerical inputs, and character string inputs coming after eighth are not enabled.

- Key window actions in superimposition  
 Of two or more superimposed numerical inputs or character string inputs, only the first enabled numerical input or character string input opens the touch key window if [Display when touched] has been selected for the key window action in the [Key Window Advanced Setting] tab of the [Screen Property] dialog.  
 The other objects do not work.
- Actions of the overlapping key code switches  
 When different key codes are set for the overlapping key code switches, some of the switches may not function depending on the key code type.

**(c) Order of priority according to the combination of superimposition**

The following shows the order of priority given to actions for touch switches, numerical inputs, and character string inputs, according to the combination of superimposed windows.

- Order of actions for called screens

Actions for called screens are enabled in order of the set overlay screen function displaying the called screens.

For the display order with set overlay screen function, refer to the following.

⇒8.29 Placing Another Screen on a Screen

- The number of called screens that can have the objects on them enabled

Superimposed objects including touch switches, numerical inputs, and character string inputs on a maximum of 99 called screens are enabled.

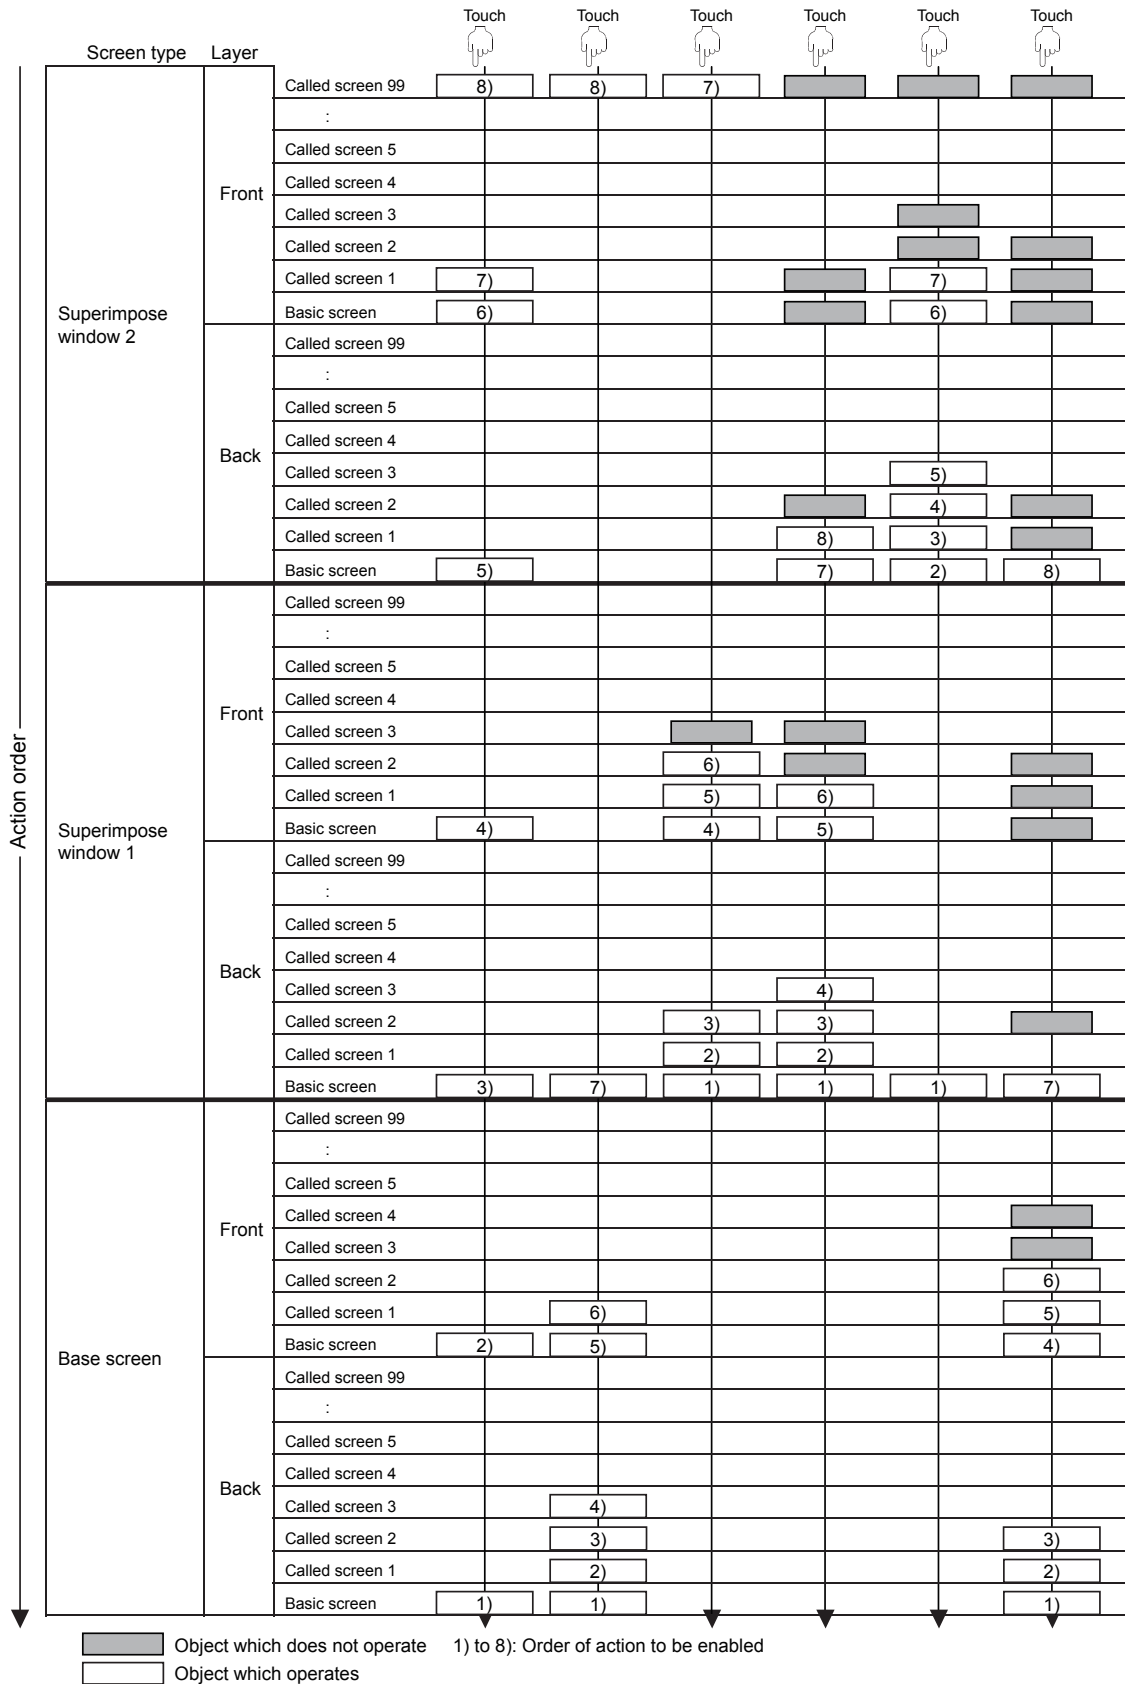

If 100 or more screens have been called, the touch switches, numerical inputs, and character string inputs on the screens called after the hundredth do not work.

- Operation when the key window is displayed

When a numerical input object or a text input object calls the key window, the objects (touch switch, numerical input, and text input) behind this object and overlapping the key window do not operate.

(d) Application examples

The following shows enabled touch switches, numerical inputs, or character string inputs set on two or more screens. The numbers 1 to 99 added to "Called window" indicate the order in which windows are called on base screens or window screens.

## (5) Precautions

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (a) Superimposing in the same layer the figures and objects that are always displayed in the topmost position in the layers.

If the following figures and objects are superimposed on the same layer, they may not be displayed normally depending on the settings made for them.

- Alarms: If [Display Type] is set to [Flow]
- Scatter graphs: If [Store Memory] is set
- Figures drawn by the free figure drawing function of the object scripts

To superimpose the objects of each type listed above, place them in the separate layers.

### (b) Displaying objects with the XOR synthesis

#### GOT Graphic Ver.1

- If neither figure nor object has been placed behind objects that have been placed in the front layer  
If neither figure nor object has been placed behind the objects for the XOR synthesis, the objects integrate into the XOR synthesis with the transparent color of the front layer.
- Integrating into the XOR synthesis with figures  
Place objects in the back layer.

### (c) Superimposing objects with [Simultaneous Press] set for them

If keys with simultaneous presses disabled are superimposed, the keys do not work even if they are touched.

### (d) Placing a PNG image

#### GOT Graphic Ver.1

When you place a semi-transparent PNG image (with alpha channel) or an object using such an image as its shape on a layer, the semi-transparent area may appear differently depending on the layer.

- Front layer  
The semi-transparent area displays the color specified for [Front Layer Transparent Color], appearing opaque.  
To display the area transparent, place another image or figure between the PNG image or object and the front layer.
- Back layer  
The semi-transparent area appears transparent.

For the semi-transparent PNG image file (with alpha channel), refer to the following.

⇒7.13 (3) PNG file

## ■ 4 Setting data operations

GT27 GT25 GT23 GT21 SoftGOT2000 GS

If data operations are set for each object, set values of word devices are operated and monitored using the values after the operations.

Example) Using a data operation for a numerical display

- Monitored device: D101

### (1) Specifications of the data operation

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The data operation can be set for the following objects.

- Bit lamp
- Word lamp
- Numerical display
- Numerical input (only the logical AND operation is available for bit mask processing)

- Comment display
- Parts display
- Parts movement
- Historical data list display
- Line graph
- Trend graph
- Bar graph
- Statistics bar graph
- Statistics pie graph
- Scatter graph
- Historical trend graph
- Graphical meter
- Level object
- Panel meter

### (a) Bitwise operations

Data are operated and determined in bitwise operation.

The bitwise operation is the function that operates each bit of the value of a word device.

- Mask processing

Performs a logical operation on the value of a word device using a set pattern value.

- Logical AND

If the corresponding bits of a device value and a pattern value are both 1, the result is 1. Otherwise the result is 0.

- Logical OR

If the corresponding bits of a device value and a pattern value are both 0, the result is 0. Otherwise the result is 1.

- Exclusive OR

If the corresponding bits of a device value and a pattern value are equal, the result is 0, otherwise 1.

Example) When using the logical AND

Monitor device value	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
AND																
Pattern value (hexadecimal number)	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	0	0	0	0	1	1	1	1	1	1	1	1	0	0	0	0
↓																
Operation result	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	0	0	0	0	0	1	0	1	0	1	0	1	0	0	0	0

- Shift processing

Operates the value of a word device shifting each bit to right or left.

If a device of a signed data type is monitored, an arithmetic shift operation is performed.

Example) Operation with right shift by 4 bits

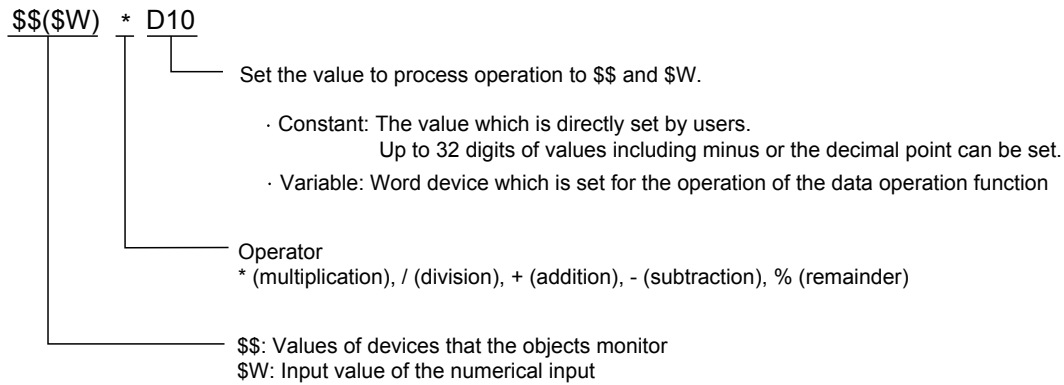

- If signed data is monitored

Monitor device value	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	1	0	0	1	0	1	0	1	0	0	0	1	1	1	0	1
Right-shift the values for 4 bits																
Operation result	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	1	1	1	1	1	0	0	1	0	1	0	1	0	0	0	1

- If unsigned data is monitored

Monitor device value	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	1	0	0	1	0	1	0	1	0	0	0	1	1	1	0	1
Right-shift the values for 4 bits																
Operation result	b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
	0	0	0	0	1	0	0	1	0	1	0	1	0	0	0	1

- Data operation  
Operates the value of a word device applying a data operating expression.  
Select the format of the data operating expression from among nine types.  
The following shows an example of the data operating expression.

### (b) Order of priority given to the operating processes

The following shows the order of priority given to the operating processes for device monitoring and numerical input

- When monitoring a device

Priority	Operating process
High	Mask processing
↓	Shift processing
Low	Data operation

- When using a numerical input

Writing the value after the operating process to a word device

Priority	Operating process
High	Data operation
↓	Shift processing
Low	Mask processing

Reading the value of a word device after the operating process

Priority	Operating process
High	Mask processing
↓	Shift processing
Low	Data operation

### (2) How to use data operations

#### (a) Procedure for setting a data operation

The following shows the procedure for setting a data operation for an object.

For details of the setting items, refer to the setting dialog of each object.

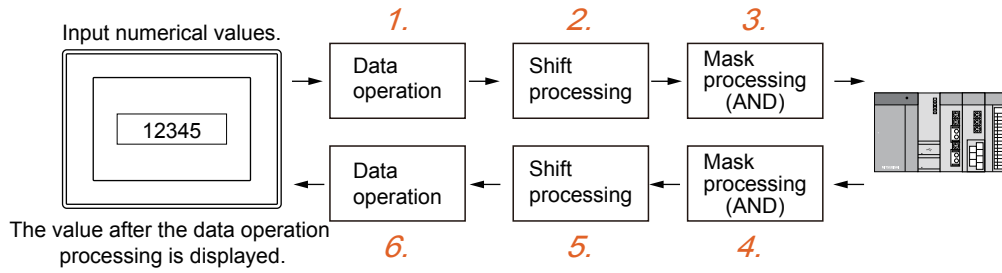

- Step 1** Place an object to the screen editor and display the setting dialog.
- Step 2** Select [Data Operation] for [Operation Type] in the [Operation/Script] tab.
- Step 3** Select the operation to be used from [Bit Mask], [Bit Shift], and [Data Operation].  
When selecting [Data Operation], click the [Exp] button to display the [Edit Data Expression] dialog.  
→(3) [Edit Data Expression] dialog
- Step 4** Click the [OK] button in the setting dialog to complete setting the operating processes.

#### (b) Order of priority given to two or more set operating processes in numerical input, and the operations to be performed.

The following shows the order of priority given to operating processes in writing to and reading from a word device with a numerical input, and the operations to be performed.

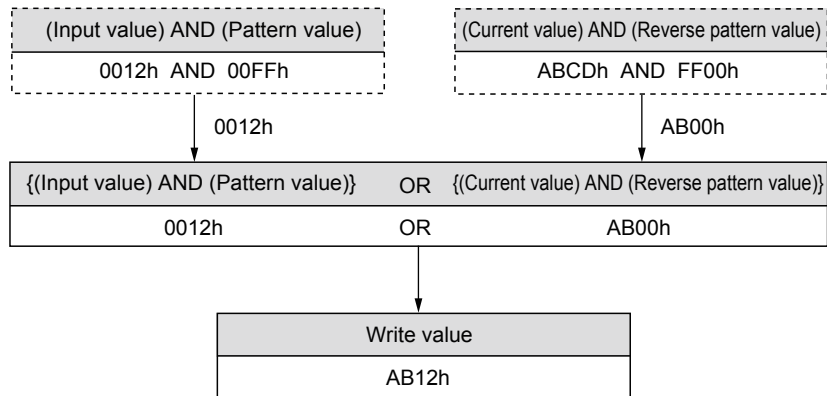

In writing and reading, the numbers in ascending order corresponds to the order of decreasing precedence.

- Writing the value after the operating processes to the word device: Step 1 to 3
- Reading the value of the word device after the operating processes: Step 4 to 6

- Step 1** Data operation  
Operates the input value in the operating expression for the write operation on the device value.
- Step 2** Shift processing  
Sifts the bits of the input value to the set direction.
- Step 3** Mask processing (AND)  
Puts the input value through the mask processing with a set pattern value.  
Performs the following operation so that the value is written with the bits on which mask processing was executed removed.  
(Written value) = ((Input value) AND (Pattern value)) OR ((Current value) AND (Reverse pattern value))  
Example) Overwriting the rightmost 2 bits of the current value ABCDh with 12h

- Input value (value the user inputted): 0012h
- Current value (value before overwriting): ABCDh
- Pattern value (value the user set): 00FFh
- Reverse pattern value (value the GOT creates for operation)

- Step 4** Mask processing  
Puts the device value through the mask processing with a set pattern value.
- Step 5** Shift processing  
Sifts the bits of the device value to the direction opposite to that in writing.
- Step 6** Data operation  
Operates the written value in the operating expression for the read operation on the device value, and displays it.

(3) [Edit Data Expression] dialog

Displayed when the [Exp] button in [Data Expression] is clicked.

Depending on the type of the object, the setting items in the setting dialog differ.

Refer to the setting items explained in this section that are provided for the object to be used.

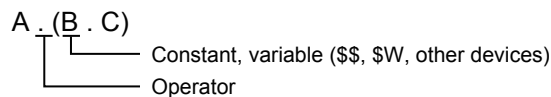

1) **Operating expression**

Displays a set operating expression.

2) **[Style]**

Select the format of the expression.

The following shows the items to be selected.

- [None]
- [A.B]
- [A.(B.C)]
- [(A.B).C]
- [A.((B.C).D)]
- [A.(B.(C.D))]
- [((A.B).C).(D.E)]
- [(A.B).((C.D).E)]
- [((A.B).(C.D)).E]

3) **Operators**

Select operators to be used in the operating expression.

The following shows the items to be selected.

- [+]: Addition
- [-]: Subtraction
- [\*]: Multiplication
- [/]: Division
- [%]: Remainder

If [%] is selected, the left side is divided by the right side, and the operation result is the remainder.

Example) 100 % 3 = 1(100 ÷ 3 = 33 and the remainder is 1)

4) **[Constant Data Type]**

Select the data type if [Constant] has been selected for [Term Type] of the range expressing setting.

The following shows the items to be selected.

- [Hex]
- [Dec]
- [Oct]

## 5) Range expression setting

Item	Description
[Term Type]	<p>Select the type and value of each side (A to E) of the range expression. The following shows the items to be selected.</p> <ul style="list-style-type: none"><li>• [Constant]: Operates with constants.</li><li>• [\$\$], [\$W]: Operates the value of the target word device for monitoring or writing. Set this item in the range expression as it is compulsory.</li><li>• [Other Device]: Operates the value of a word device. The data type is the same as the device to be monitored ([\$\$], [\$W]).</li></ul>
[Value]	<p>Select the value of each side (A to E) of the range expression. Depending on the [Term Type], the setting item differs.</p> <ul style="list-style-type: none"><li>• When [Constant] is selected: Set a numerical value.</li><li>• When [\$\$] or [\$W] is selected: The target device for monitoring is displayed.</li><li>• When [Other Device] is selected: Set a device.</li></ul>

## 6.6 Editing Operations

---

GT27

GT25

GT23

GT21

SoftGOT2000

GS

- ⇒6.6.1 [Undo], [Redo]
- 6.6.2 [Cut], [Copy], [Paste]
- 6.6.3 [Duplicate]
- 6.6.4 [Consecutive Copy]
- 6.6.5 [Select All]
- 6.6.6 [Delete]
- 6.6.7 [Object of Selection]
- 6.6.8 [Group], [Ungroup]
- 6.6.9 [Stacking Order]
- 6.6.10 [Align]
- 6.6.11 [Rotate/Flip]
- 6.6.12 [Edit Vertices]
- 6.6.13 [Edit Objects with Fixed Frame Width]
- 6.6.14 [Edit Touch Area]
- 6.6.15 [Adjust Direct Text Size]
- 6.6.16 [Template Registration]
- 6.6.17 [Edit Template Attribute]
- 6.6.18 [Set to Default]
- 6.6.19 [Add to Category]
- 6.6.20 [Shape Change]
- 6.6.21 [Display Template Property]
- 6.6.22 [Setting]

## 6.6.1 [Undo], [Redo]

The operations of [Undo] and [Redo] are available only on the editor screen and the data view.

### ■1 [Undo]

Cancels the last operation.

**Step 1** Select [Edit] → [Undo] from the menu.

**Step 2** The last operation is canceled.

### ■2 [Redo]

Redoes the operation canceled by [Undo].

**Step 1** Select [Edit] → [Redo] from the menu.

**Step 2** The operation canceled by [Undo] is redone.

### ■3 Operation histories of [Undo] and [Redo]

#### (1) Number of storable operations

There is no limit to the number of storable operations to the operation histories.

#### (2) Unit of the operation histories

The operation history is held per screen.

Therefore, when creating multiple screens, display a screen to which you want to redo operations and perform [Undo] or [Redo].

#### (3) Timing when the operation history is deleted

The operation histories of [Undo] and [Redo] are deleted at the following timing.

##### (a) Deletion of the operation histories of both [Undo] and [Redo]

- Closing a project
- Deleting or cutting the target screen
- Pasting a copied or cut screen to a selected area
- Changing the controller type
- Executing the [Collective Edit] command on the [Edit Objects with Fixed Frame Width] submenu
- Changing the GOT type

##### (b) Deletion of the operation history of [Redo] only

- Performing other editing operations (such as placing an object) when [Redo] is available

## 6.6.2 [Cut], [Copy], [Paste]

---

You can cut or copy a selected target and paste it onto an arbitrary area.  
You can cut, copy, and paste the following targets.

- [Cut], [Copy]

Select a target from the placed or set data (including figures, objects, and windows) in a screen editor, the [Screen] window, or the [Project] window.

- [Paste]

Select an area where the cut or copied target is pasted in a screen editor, the [Screen] window, or the [Project] window.

### ■ 1 [Cut]

Cuts a selected target.

- Step 1** Select a target data.
- Step 2** Select [Edit] → [Cut] from the menu.
- Step 3** The selected target is cut.

### ■ 2 [Copy]

Copies a selected target.

- Step 1** Select a target data.
- Step 2** Select [Edit] → [Copy] from the menu.
- Step 3** The selected target is copied.

### ■ 3 [Paste]

Pastes the cut or copied data.

- Step 1** Cut or copy a target data.
- Step 2** Select [Edit] → [Paste] from the menu.
- Step 3** The cut or copied data is pasted onto an arbitrary area.

### ■ 4 Holding the cut or copied data

The cut or copied data is overwritten when a new data is cut or copied.

The last cut or copied data is deleted at the following timing.

- When a figure, an object, or an image file is cut or copied  
The data is deleted when the project where the cut or copied target is used is closed.
- When character strings or data on the data browser are cut or copied  
The data is deleted when another target is cut or copied.

### ■ 5 Precautions

#### (1) Pasting a target from other projects

If the controller settings differ between in the copy source project and the copy destination project, the set devices may be displayed as [??].

Check if the pasted device has no problem and set the device again as required.

#### (2) Cutting, copying, and pasting data between projects created by GT Designer3(GOT2000) and GT Designer3(GOT1000)

Cutting, copying, and pasting data between projects created by GT Designer3(GOT2000) and GT Designer3(GOT1000) are unavailable.

### 6.6.3 [Duplicate]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Copies and pastes a selected figure or object at a time.  
 Select a figure or an object placed on the screen editor and use [Duplicate].

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Duplicate] from the menu.
- Step 3 The selected figure or object is copied and pasted with a certain interval.

#### 1 Intervals between the pasted targets

You cannot change the intervals for pasting figures or objects.

### 6.6.4 [Consecutive Copy]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Copies and pastes a selected figure or object at a time based on the settings.  
 Select a figure or an object placed on the screen editor and use [Consecutive Copy].

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Consecutive Copy] from the menu to display the [Consecutive Copy] dialog.
- Step 3 Configure the settings and click the [OK] button. The figure or object is pasted based on the settings.

#### 1 [Consecutive Copy] dialog

1) Total count after copy  
 X: 4 Y: 2

2) Interval  
 Interval  Figure/Object  
 X: 1 (Dot) Y: 1 (Dot)

3) Detail Setting  
 Copy Range:  Screen + Temporary area  Screen

4) Copy Direction:  Down  Up  Left  Right

5)  Increment device No.  
 [Note] Labels/tags are excluded. The same label/tag will be set.

6) Target Device:  Monitor/Lamp Device  All  
 Increment (DEC): 1

7) Increment Batch Setting...

	Device	Increment (DEC)
1	X0000	1
2	X0100	10
3	X0200	100

#### 1) [Total count after copy]

Set the number of figures or objects to be pasted.

- [X]: Set the number of figures or objects to be horizontally pasted.

The setting range is [1] to [100].

- [Y]:  
Set the number of figures or objects to be vertically pasted.  
The setting range is [1] to [100].

Example) When the following settings are configured

[X]: [3]

[Y]: [2]

[Copy Direction]: 

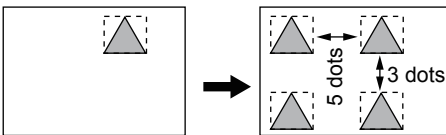

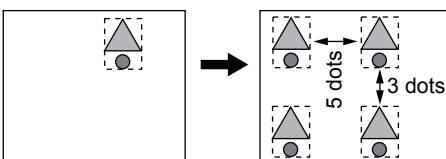

## 2) [Interval]

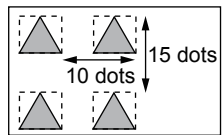

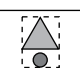

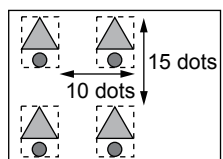

Set an interval between figures or objects to be pasted.

The following shows the items to be selected.

- [Interval]
- [+Figure/Object]

The setting ranges of [X] and [Y] differ depending on the selected item.

Item	Description
When [Interval] is selected	<p>The following shows the setting range.</p> <ul style="list-style-type: none"> <li>• [X]: Set an interval between figures or objects to be horizontally pasted. The setting range is [0] to [300].</li> <li>• [Y]: Set an interval between figures or objects to be vertically pasted. The setting range is [0] to [300].</li> </ul> <p>Example) When the following settings are configured</p> <p>[X]: [5]</p> <p>[Y]: [3]</p> <p>[Copy Direction]: </p>  <p>For one figure</p>  <p>For multiple figures</p>

Item	Description
When [+ Figure/Object] is selected	<p>The following shows the setting range.</p> <ul style="list-style-type: none"> <li>• [X]: Set an interval between figures or objects to be horizontally pasted. The setting range is [0] to [300 + Horizontal size of the copy source figure or object (dots)].</li> <li>• [Y]: Set an interval between figures or objects to be vertically pasted. The setting range is [0 + Vertical size of the copy source figure or object (dots)] to [300 + Vertical size of the copy source figure or object (dots)].</li> </ul> <p>Example) When the following settings are configured [X]: [10] [Y]: [15] [Copy Direction]: </p> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="border: 1px solid gray; padding: 5px; margin-right: 10px;">  </div> <div style="font-size: 2em; margin: 0 10px;">→</div> <div style="border: 1px solid gray; padding: 5px;">  </div> </div> <p style="text-align: center;">For one figure</p> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="border: 1px solid gray; padding: 5px; margin-right: 10px;">  </div> <div style="font-size: 2em; margin: 0 10px;">→</div> <div style="border: 1px solid gray; padding: 5px;">  </div> </div> <p style="text-align: center;">For multiple figures</p> </div>

### 3) [Copy Range]

Set an area where figures or objects can be pasted.

The following shows the items to be selected.

- [Screen + Temporary area]
- [Screen]

### 4) [Copy Direction]

Set a direction in which figures or objects are pasted.

The following shows the items to be selected.

### 5) [Increment device No.]

Increments the device numbers of the pasted figures or objects.

Labels and tags do not support the increment of device numbers.

The consecutive copy function sets the label or tag of the source object to the pasted objects.

### 6) [Target Device]

Set the target devices whose device numbers are to be incremented.

The following shows the items to be selected.

- [Monitor/Lamp Device]
- [All]

### 7) Amount of increments

This item is settable when [Increment device No.] is selected.

Set the value to increment the device number set for the object.

The setting items differ depending on the setting of [Target Device].

Item	Description
[Increment (DEC)]	Set the value to increment the device number. The setting range is [-10000] to [10000].
[Increment Batch Setting] button	This setting is available only when [Target Device] is [All]. Set the value to increment all the displayed devices. The setting range is [-10000] to [10000].
[Device]	This setting is available only when [Target Device] is [All]. All the devices that are set as objects are displayed.

## 6.6.5 [Select All]

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Selects all the data placed or set on the selected screen editor or window.

Select a screen editor, the [Comment List] window, or other screens and use [Select All].

- Step 1** Select a screen editor or a window on which the data you want to select is placed or set.
- Step 2** Select [Edit] → [Select All] from the menu.
- Step 3** All the targets that are placed or set on the screen editor or the window are selected.

## 6.6.6 [Delete]

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Deletes a selected target.

Select a target data from the placed or set data in a screen editor, the [Screen] window, or the [Project] window and use [Delete].

- Step 1** Select a target data.
- Step 2** Select [Edit] → [Delete] from the menu.
- Step 3** The selected target is deleted.

## 6.6.7 [Object of Selection]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the targets to be selected on a screen editor.

Select a screen editor or other screens and use [Object of Selection].

The settings are reflected to the whole project.

### ■1 [Figure]

Set this item to select only figures from figures and objects placed on the screen editor.

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Object of Selection] → [Figure] from the menu.

**Step 3** You can select only figures on the screen editor.

### ■2 [Object]

Set this item to select only objects from figures and objects placed on the screen editor.

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Object of Selection] → [Object] from the menu.

**Step 3** You can select only objects on the screen editor.

### ■3 [Figure + Object]

Set this item to select both figures and objects placed on the screen editor.

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Object of Selection] → [Figure + Object] from the menu.

**Step 3** You can select figures and objects on the screen editor.

### ■4 [Report Line]

Set this item to select lines on the screen editor of the report screen.

**Step 1** Select the screen editor of the report screen.

**Step 2** Select [Edit] → [Object of Selection] → [Report Line] from the menu.

**Step 3** You can select lines on the screen editor of the report screen.

### ■5 [Overlay Screen]

Set this item to select called screens placed on the screen editor.

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Object of Selection] → [Overlay Screen] from the menu.

**Step 3** You can select called screens on the screen editor.

### ■6 Precautions

#### (1) Placing figures, objects, or called screens

You can newly place a figure, an object, or a called screen regardless of the selection of [Object of Selection].

When the figure, object, or called screen that was newly placed is out of the selection target, the setting of [Object of Selection] is changed to include it to the selection target.

Example) When [Figure] is selected for [Object of Selection] and an object is placed

The setting of [Object of Selection] is changed to [Figure + Object].

#### (2) Selecting grouped figures or objects

You can select grouped figures or objects when the selected target is included in the group.

Example) When [Figure] is selected for [Object of Selection]

- A group that includes figures only: Selectable
- A group that includes figures and objects: Selectable
- A group that includes objects only: Unselectable

#### (3) Selecting figures and objects in the [Data View] window

You can select only the target data selected in [Object of Selection].

## 6.6.8 [Group], [Ungroup]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Groups multiple figures and objects into one.

Groups are treated as figures.

You can group and ungroup the following targets.

- [Group]

Select multiple figures and objects placed on the screen editor.

For the grouping of the template information, figures and objects that are registered to the template, refer to the following.

⇒ 11.6 Efficient Drawing with Templates

- [Ungroup]

Select a group that is placed on the screen editor.

### ■ 1 [Group]

Groups the selected figures and objects into one.

**Step 1** Select multiple figures or objects.

**Step 2** Select [Edit] → [Group] → [Group] from the menu.

**Step 3** The selected figures or objects are grouped.

### ■ 2 [Ungroup]

Cancels the grouping of a selected group.

**Step 1** Select a group.

**Step 2** Select [Edit] → [Group] → [Ungroup] from the menu.

**Step 3** The grouping of the selected group is canceled.

### ■ 3 Editing grouped figures and objects

You can individually select and edit grouped figures and objects without ungrouping them.

For a grouping of multiple groups of figures and objects, you can also select and edit each figure or object in the grouping by using the same procedure.

**Step 1** Select a group.

**Step 2** Select a figure or object to be edited in the group.

**Step 3** Double-click the selected figure or object to display the setting dialog.

#### (1) Editing or operating each figure or object

When editing or operating grouped figures or objects individually, you cannot perform the following operations.

- Moving a figure or object
- Resizing a figure or object
- Resizing the touch area of a figure or object
- Deleting a figure or object

#### ■4 Precautions

##### (1) Setting in the property sheet

You can change the set items common to all the figures and objects in the group in the property sheet.

The changed setting is reflected to all the figures and objects in the group.

In the property sheet, you cannot change the setting of a figure or object in a group.

To change the setting of a figure or object in a group, display the corresponding setting dialog and make changes.

##### (2) Changing the coordinates

When you select a grouping of figures or objects, the [Coordinate/Size] toolbar and the [Property] window display the coordinates of the upper-left corner of the grouping.

If you change the coordinates, the figures and objects in the grouping move accordingly while their intervals remain unchanged.

For information on how to change the coordinates, refer to the following.

⇒2.2.2 ■ 14 [Coordinate/Size]

11.9.4 [Property] window

##### (3) Changing the size (width and height)

When you select a grouping of figures and objects, the [Coordinate/Size] toolbar and the [Property] window display the width and height of the grouping. The width and height are not changeable in the above toolbar and window.

To change the size of the grouping, use the size change handle on the screen editor.

### 6.6.9 [Stacking Order]

Changes the display order of figures and objects.

Select a figure or an object placed on the screen editor and use [Stacking Order].

For the layers, refer to the following.

⇒6.5.5 ■ 3 Superimposition

#### ■1 [Move to the Front of Front Layer]

Moves the selected figure or object to the topmost position on the front layer.

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Stacking Order] → [Move to the Front of Front Layer] from the menu.

**Step 3** The selected figure or object is moved to the topmost position on the front layer.

#### ■2 [Move to the Back of Back Layer]

Moves the selected figure or object to the back on the back layer.

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Stacking Order] → [Move to the Back of Back Layer] from the menu.

**Step 3** The selected figure or object is moved to the back on the back layer.

#### ■3 [Move to the Front of Layer]

Moves the selected figure or object to the topmost position on the same layer.

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Stacking Order] → [Move to the Front of Layer] from the menu.

**Step 3** The selected figure or object is moved to the topmost position on the same layer.

#### ■ 4 [Move to the Back of Layer]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Moves the selected figure or object to the back position on the same layer.

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Stacking Order] → [Move to the Back of Layer] from the menu.
- Step 3 The selected figure or object is moved to the back on the same layer.

#### ■ 5 [Move to the Foreground]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Moves the selected figure or object to the topmost position.

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Stacking Order] → [Move to the Foreground] from the menu.
- Step 3 The selected figure or object is moved to the topmost position.

#### ■ 6 [Move to the Background]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Moves the selected figure or object to the back.

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Stacking Order] → [Move to the Background] from the menu.
- Step 3 The selected figure or object is moved to the back.

#### ■ 7 [Move to the Front]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Moves the selected figure or object to the front of the figure or object on the selected one in the same layer.

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Stacking Order] → [Move to the Front] from the menu.
- Step 3 The selected figure or object is moved to the front of the figure or object on the selected one in the same layer.

#### ■ 8 [Move to the Back]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Moves the selected figure or object to the back of the figure or object behind the selected one in the same layer.

- Step 1 Select a figure or an object.
- Step 2 Select [Edit] → [Stacking Order] → [Move to the Back] from the menu.
- Step 3 The selected figure or object is moved to the back of the figure or object behind the selected one in the same layer.

## 6.6.10 [Align]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Aligns multiple figures and objects.

Select multiple figures and objects that are placed on the screen editor and use [Align].

The alignment behavior differs according to whether a figure or object is anchored among selected figures and objects.

If you anchor a selected figure or object, the selected figures and objects are aligned to the anchored figure or object according to the specified alignment type.

(The anchored figure or object is framed in red.)

Example) When the left alignment is performed while a lamp object is anchored

If you do not anchor a selected figure or object, the selected figures and objects are aligned according to the specified alignment type.

Example) When the left alignment is performed while no figure or object is anchored

### ■ 1 [Left]

Aligns the selected figures and objects to the left.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Left] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the left edge of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned to the left edge of the leftmost-selected figure or object.

### ■ 2 [Center (Horizontal)]

Horizontally centers the selected figures and objects.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Center (Horizontal)] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the center of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned through their centers.

### ■ 3 [Right]

Aligns the selected figures and objects to the right.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Right] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the right edge of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned to the right edge of the rightmost-selected figure or object.

### ■ 4 [Top]

Aligns the selected figures and objects to the top.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Top] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the top edge of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned to the top edge of the highest-selected figure or object.

### ■ 5 [Center (Vertical)]

Vertically centers the selected figures and objects.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Center (Vertical)] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the center of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned through their

centers.

## ■6 [Bottom]

Aligns the selected figures and objects to the bottom.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select a figure or object to be anchored from among those already selected as necessary.

The anchored figure or object is framed in red.

**Step 3** Select [Edit] → [Align] → [Bottom] from the menu.

If you have an anchored figure or object, the selected figures and objects are aligned to the bottom edge of the anchored figure or object.

If you do not have an anchored figure or object, the selected figures and objects are aligned to the bottom edge of the lowest-selected figure or object.

## ■7 [Align Sideways]

Aligns the selected figures and objects so that they are equally spaced horizontally.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select [Edit] → [Align] → [Align Sideways] from the menu.

The selected figures and objects are equally spaced horizontally between the following points (reference points).

- Upper-left corner of the leftmost-selected figure or object
  - Upper-left corner of the rightmost-selected figure or object
- (Anchoring of a selected figure or object is invalid.)

## ■8 [Align Lengthways]

Aligns the selected figures and objects so that they are equally spaced vertically.

**Step 1** Select figures and objects to be aligned.

**Step 2** Select [Edit] → [Align] → [Align Lengthways] from the menu.

The selected figures and objects are equally spaced vertically between the following points (reference points).

- Upper-left corner of the highest-selected figure or object
  - Upper-left corner of the lowest-selected figure or object
- (Anchoring of a selected figure or object is invalid.)

## ■ 9 [Custom]

Aligns the selected figures and objects with multiple conditions.

- Step 1** Select multiple figures and objects.
- Step 2** Select [Edit] → [Align] → [Custom] from the menu to display the [Align] dialog.
- Step 3** Configure the alignment settings and click the [OK] button to align the figures and objects.

### (1) [Align] dialog

#### 1) Preview

Previews the alignment of the figures and objects.

#### 2) [Align equally]

Aligns figures and objects evenly and horizontally or vertically.

- [Horizontal]: Evenly and horizontally aligns figures and objects.
- [Vertical]: Evenly and vertically aligns figures and objects.

#### 3) Horizontal alignment

Set the base position for evenly and horizontally aligning figures and objects.

Item	Description
[None] button	Does not align figures and objects.
[Left] button	Aligns figures and objects to the left.
[Center] button	Aligns figures and objects to the center.
[Right] button	Aligns figures and objects to the right.

#### 4) Vertical alignment

Set the base position for evenly and vertically aligning figures and objects.

Item	Description
[None] button	Does not align figures and objects.
[Top] button	Aligns figures or objects to the top.
[Center] button	Aligns figures and objects to the center.
[Bottom] button	Aligns figures or objects to the bottom.

#### 5) [Apply] button

Reflects the settings to the figures and objects on the screen editor.

## 6.6.11 [Rotate/Flip]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Rotates or flips a selected figure.

Select a figure placed on the screen editor and use [Rotate/Flip].

### ■1 [Flip Vertical]

Flips a selected figure vertically.

**Step 1** Select a figure.

**Step 2** Select [Edit] → [Rotate/Flip] → [Flip Vertical] from the menu.

**Step 3** The selected figure is flipped vertically.

### ■2 [Flip Horizontal]

Flips a selected figure horizontally.

**Step 1** Select a figure.

**Step 2** Select [Edit] → [Rotate/Flip] → [Flip Horizontal] from the menu.

**Step 3** The selected figure is flipped horizontally.

### ■3 [Rotate Left]

Rotates a selected figure 90 degrees counterclockwise.

**Step 1** Select a figure.

**Step 2** Select [Edit] → [Rotate/Flip] → [Rotate Left] from the menu.

**Step 3** The selected figure is rotated 90 degrees counterclockwise.

### ■4 [Rotate Right]

Rotates a selected figure 90 degrees clockwise.

**Step 1** Select a figure.

**Step 2** Select [Edit] → [Rotate/Flip] → [Rotate Right] from the menu.

**Step 3** The selected figure is rotated 90 degrees clockwise.

### ■5 Precautions

#### (1) Rotating or flipping a group

A group is rotated or flipped as one figure.

#### (2) Figures which cannot be rotated

If a figure after the rotation does not fit in the screen display area or the temporary area, the figure cannot be rotated.

## 6.6.12 [Edit Vertices]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Switches the handle of a selected figure to the size change handle or the vertex edit handle.

→6.5.3 Editing figures and objects

Select a screen editor or others and use [Edit Vertices].

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Edit Vertices] from the menu to switch the handle to the size change handle or the vertex edit handle.

### ■1 Editing a figure with the vertex edit handle

#### (1) Figures that can be edited with the vertex edit handle

The following shows the figures whose handles are changed when [Edit] → [Edit Vertices] is selected from the menu.

- [Line Freeform]
- [Piping]
- [Polygon]

#### (2) Operation example of the vertex edit handle

The following shows the operation example for editing a freeform line with the vertex edit handle.

**Step 1** Select a figure.

**Step 2** Drag the handle to change the vertex position.

**Step 3** Release the mouse button to determine the change of the vertex position of the figure.

### ■2 Precautions

#### (1) Editing vertexes of grouped figures

Editing vertexes of grouped figures is unavailable.

## 6.6.13 [Edit Objects with Fixed Frame Width]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Fixes or does not fix the frame width of the object shape when the object is resized.  
 When the frame width fixing setting is enabled, resizing an object does not change the frame width.  
 This setting is effective on the entire project.

Example) When an object is enlarged

The frame width fixing setting is applied when the following conditions are satisfied.

Condition	Details
The frame width fixing setting must be enabled.	The frame width fixing setting is enabled by default. This setting is disabled when you open a project created with GT Designer3 version earlier than 1.175H.
The resize target object must be one to which the frame width fixing setting is applicable.	For the applicable objects, refer to the following. → ■ 3 Objects to which the frame width fixing setting is applicable
The target object shape must be one to which the frame width fixing setting is applicable.	The applicable shapes are included in the system library. For each shape, check the [Library data Property] dialog for applicability. If [Shape] is any other than [None], the frame width fixing setting is applicable to the shape. →8.1.3 [Library] window

### ■1 [Always Fix the Width]

Fixes or does not fix the shape frame width.

- Step 1** Select [Edit] → [Edit Objects with Fixed Frame Width] → [Always Fix the Width] from the menu.
- Step 2** The frame width is fixed or not fixed.

### ■2 [Collective Edit]

Changes the shape frame widths of all objects that satisfy the frame width fixing conditions.

After the change, the frame widths become fixed.

For the frame width fixing conditions, refer to the following.

→6.6.13 [Edit Objects with Fixed Frame Width]

- Step 1** Select [Edit] → [Edit Objects with Fixed Frame Width] → [Collective Edit] from the menu.
- Step 2** The shape frame widths of all applicable objects are changed.  
After the change, the frame widths become fixed.

### ■3 Objects to which the frame width fixing setting is applicable

The following shows the objects to which the frame width fixing setting is applicable.

○ : Applicable, ×: Not applicable

Object	Applicability	Remarks
Touch Switch	Switch	○ -
	Bit Switch	○ -

Hyperlink	○	-	

## ■4 Precautions

### (1) Reducing an object

Even when the frame width fixing setting is enabled, if you reduce the object size (width or height) to less than its shape frame width, the frame width is reduced as well.

#### 6.6.14 [Edit Touch Area]

Select the editing method of the touch area.

You can perform [Manual Edit], [Self-adjust], and [Constant Self-adjust] to the following targets.

- [Manual Edit], [Constant Self-adjust]  
Select a screen editor or others.
- [Self-adjust]  
Select a touch switch placed on the screen editor.

When [Adjust the touch area to be smaller than its object size by 1-dot at the time of touch area self-adjust] is selected on the [Edit] tab in the [Options] dialog, the touch area is reduced to be inside the object area. The edge of the touch area becomes 1 dot away from the edge of the object area.

→ 11.10.4 Customizing the settings related to editing operations

This setting helps prevent unintended touches when objects are adjacent to each other.

## ■ 1 [Manual Edit]

Allows you to edit the touch area manually.

- Step 1 Select a screen editor.
- Step 2 Select [Edit] → [Edit Touch Area] → [Manual Edit] from the menu.
- Step 3 You can edit the touch area manually.

## ■ 2 [Self-adjust]

Adjusts the size of the touch area automatically according to the object size.

When [Constant Self-adjust] is set, this setting is unavailable.

- Step 1 Select a touch switch.
- Step 2 Select [Edit] → [Edit Touch Area] → [Self-adjust] from the menu.
- Step 3 The size of the touch area of the selected touch switch is adjusted automatically.

## ■ 3 [Constant Self-adjust]

Always adjusts the size of the touch area automatically according to the object size.

- Step 1 Select a screen editor.
- Step 2 Select [Edit] → [Edit Touch Area] → [Constant Self-adjust] from the menu.
- Step 3 The touch areas of placed touch switches and newly placed touch switches are always adjusted automatically.

## 6.6.15 [Adjust Direct Text Size]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Scales the size of the direct input text according to the object size.

→ 6.5.3 Editing figures and objects

Select a screen editor or others and use [Adjust Direct Text Size].

**Step 1** Select a screen editor.

**Step 2** Select [Edit] → [Adjust Direct Text Size] from the menu.

**Step 3** When [Adjust Direct Text Size] is active, text size is changed by scaling the object size and when not active, not changed.

### ■1 Precautions

#### (1) Maximum and minimum sizes of texts

When the objects are scaled beyond the maximum or minimum size of texts, the texts hold the maximum or minimum size.

Objects can be scaled regardless of the maximum or minimum size of the texts.

Example 1) Enlarging an object beyond the maximum size of the texts

The texts hold the maximum size. Only the object size is enlarged.

Example 2) Reducing the object size beyond the minimum size of the texts

The texts hold the minimum size. Only the object size is reduced.

When the object size is reduced beyond the minimum size of the texts, the texts are displayed beyond the object.

## 6.6.16 [Template Registration]

---

Registers a selected figure or object to the template or deletes the registration of a figure or an object from the template. For figures and objects that can be registered to the template, refer to the following.

⇒11.6 Efficient Drawing with Templates

You can perform [Register to Template] or [Deregister from Template] to the following targets.

- [Register to Template]  
Select a figure or an object placed on the screen editor.
- [Deregister from Template]  
Select a figure or an object that is registered to the template and placed on the screen editor.

### ■ 1 [Register to Template]

Registers a selected figure or object to the template.

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Template Registration] → [Register to Template] from the menu to display the setting dialog.

For how to set the setting dialog, refer to the following.

⇒11.6 Efficient Drawing with Templates

### ■ 2 [Deregister from Template]

Deletes the registration of a selected figure or object from the template.

**Step 1** Select a figure of object that is registered to the template.

**Step 2** Select [Edit] → [Template Registration] → [Deregister from Template] from the menu.

**Step 3** The selected figure or object is deleted from the template.

## 6.6.17 [Edit Template Attribute]

---

Displays the setting dialog to edit a template attribute.

Select a figure, an object, and a template information box placed on the screen editor and use [Edit Template Attribute].

**Step 1** Select a figure, an object, or a template information box.

**Step 2** Select [Edit] → [Edit Template Attribute] from the menu to display the setting dialog.

For how to set the setting dialog, refer to the following.

⇒11.6 Efficient Drawing with Templates

## 6.6.18 [Set to Default]

---

Configures the settings of a selected figure or an object as the default values.

For the default values, refer to the following.

⇒11.10.6 Customizing the default value

Select a figure or an object placed on the screen editor and use [Set to Default].

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Set to Default] from the menu to configure the settings of the selected figure or object as the default value.

## 6.6.19 [Add to Category]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Sets a category of a selected figure or an object.  
For the categories, refer to the following.

→ 11.7 Managing figures and objects by category

Select a figure or an object placed on the screen editor and use [Add to Category].

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Add to Category] from the menu.

**Step 3** Select an item to be set for [Category] of the selected figure or an object from the following.

- [Switch]
- [Lamp]
- [Other]
- [User-defined Category]

**Step 4** When you select [User-defined Category], the [Category] dialog is displayed.

In the [Category] dialog, you can select the user-created categories as well as [Switch], [Lamp], and [Other].  
For how to create a category, refer to the following.

→ 11.7.4 [Category List] window

**Step 5** The selected content is set to [Category] of the selected figure or object.

## 6.6.20 [Shape Change]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the shape of a selected object.

Select an object that is placed on the screen editor to which a shape can be set and use [Shape Change].

**Step 1** Select an object.

**Step 2** Select [Edit] → [Shape Change] from the menu to display the [Image List] dialog.

For how to configure the settings in the [Image List] dialog, refer to the following.

→ 6.5.5 ■ 1 Setting object shapes

### ■ 1 Precautions

#### (1) Setting shapes of multiple objects

When multiple objects are selected and if the settings of shapes of each object are different, [Shape Change] is not available.

## 6.6.21 [Display Template Property]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Displays the settings of the template.

For how to set the [Property] window, refer to the following.

→ 11.6 Efficient Drawing with Templates

Select a figure, an object, or a template information box placed on the screen editor and use [Display Template Property].

**Step 1** Select a figure, an object, or a template information box.

**Step 2** Select [Edit] → [Display Template Property] from the menu to display the [Property] window.

## 6.6.22 [Setting]

---

Displays the setting dialog of a selected figure or an object.

Select a figure or an object placed on the screen editor and use [Setting].

**Step 1** Select a figure or an object.

**Step 2** Select [Edit] → [Setting] from the menu to display the setting dialog of the selected figure or object.

### ■ 1 Operation target

Select a figure or an object placed on the screen editor.

## 7.1 Drawing a Text

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Draw a text.

### 1 How to draw

- Step 1 Select [Figure] → [Text] from the menu.
- Step 2 Place the cursor on the position where you draw the text, and click on it.  
The [Text] dialog appears.
- Step 3 Configure the settings in the [Text] dialog.  
⇒7.1.1 [Text] dialog
- Step 4 After the setting, click the [OK] button.  
The text is placed.

### 2 Similar functions

The following shows other functions which enables the text to be displayed on the GOT screen.

#### (1) [Logo Text]

Draws the text with outline or gradation.

The logo text is effective to make the text highly visible.

⇒7.2 Drawing a Logo Text

The logo text can be converted from the text in the [Text] dialog.

#### (2) [Text Display]

Uses the values stored in the word device as the text code to display the text on the object.

⇒8.5 Placing a Text Display and Text Input

#### (3) [Comment Display]

Displays the text registered in the project on the object.

The comment display is used to display the same text on multiple objects or to display the messages corresponding to the device values.

⇒5.8 Comment Setting ([Comment])

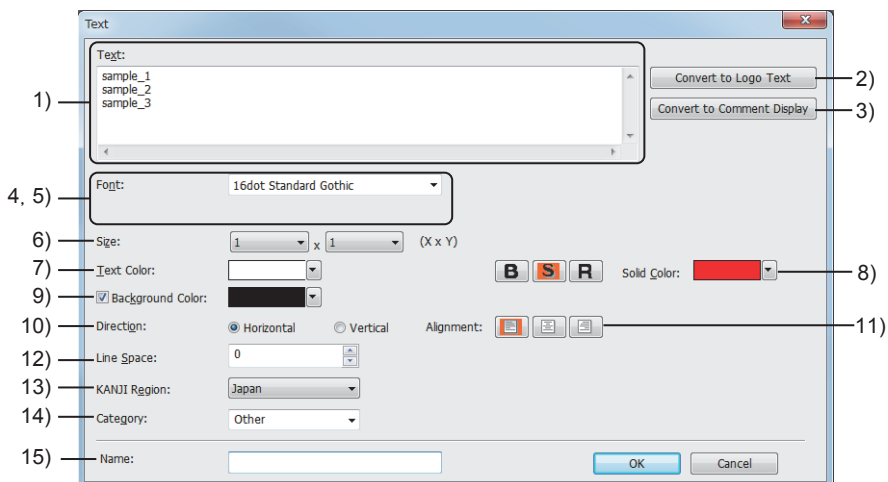

8.7 Placing a Comment Display

### 7.1.1 [Text] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

#### 1) [Text]

Set the text to be displayed.

The input text is displayed on the screen.

Example)

[Text] dialog

Screen

Up to 512 characters can be set.

To display the text in multiple lines, press the [Enter] key at the end of the text in each line.

(When a line feed is inserted, two characters per line feed are added to the number of characters.)

## 2) [Convert to Logo Text] button

Converts the text to the logo text.

The [Text] dialog changes to the [Logo Text] dialog.

→7.2.1 [Logo Text] dialog

## 3) [Convert to Comment Display] button

Registers text to a comment group and converts the text figure to a simple comment display object.

For the conversion method, refer to the following.

→5.8.4 ■ 12 (1) Registering the characters of a text figure to a comment group

## 4) [Font]

Select the font.

→1.2.5 Font specifications

The following shows the items to be selected.

- [6x8dot]
- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [TrueType Mincho]
- [TrueType Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)
- Windows fonts

When selecting a Windows font, set the font style as necessary.

## 5) [Character Set]

Set the language.

Set this item when a Windows font is selected for [Font].

## 6) [Size]

Set the text size (width × height magnification or dots).

The setting range differs depending on the font type.

→1.2.5 Font specifications

When [6x8dot] is selected for [Font], the text size cannot be set.

## 7) [Text Color]

Select the text color.

For the details of the color, refer to the following.

→6.4 Color Settings

## 8) Text style

Set the style of the text to be displayed.

One style ([Bold], [Solid], or [Raised]) is settable only.

- **[Bold] button**  
Displays the text in bold.
- **[Solid] button**  
Displays the text with a shadow.
- **[Raised] button**  
Displays the text embossed.
- **[Solid Color]**  
When [Solid] or [Raised] is selected as the text style, set the color of the shadow.

## 9) [Background Color]

Select this item to color the background of the text.

## 10) [Direction]

Select the direction of the text.

The following shows the items to be selected.

- [Horizontal]
- [Vertical]

When [TrueType Mincho], [TrueType Gothic], [Outline Kaisho], [Outline Gothic], [Outline], or a Windows font is selected for [Font], this setting is fixed to [Horizontal].

## 11) [Alignment]

Set the horizontal position of the text.

This item is applied when the text is entered in two or more lines.

- **Left button**  
Aligns the text to the left.
- **Center button**  
Aligns the text to the center.
- **Right button**  
Aligns the text to the right.

## 12) [Line Space]

Set the space between lines.

The setting range is [0] to [128] dot(s).

## 13) [KANJI Region]

Select the KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

Example)

Difference between [Japan] and [China(GB)-Mincho]

[Japan]

[China(GB)-Mincho]

When [TrueType Mincho], [TrueType Gothic], or a Windows font is selected for [Font], this setting is not available.

## 14) [Category]

Select the category to which the figure belongs.

→11.7 Managing figures and objects by category

## 15) [Name]

Set the figure name.

The name is displayed in the [Data View] window, property sheet, and others.

Up to 100 characters can be set.

(1) **Displaying the text in the vertical direction**

The following shows the text displayed in the vertical direction.

Example 1) In the case of "-"  
 Horizontal direction: Terminal  
 Vertical direction: T  
 e  
 r  
 m  
 i  
 n  
 a  
 l

Example 2) In the case of "()"  
 Horizontal direction: (Caution)  
 Vertical direction: (  
 C  
 a  
 u  
 t  
 i  
 o  
 n  
 )

(2) **Text supported by the GOT**

(a) **Text supported by the 6x8dot font**

The 6x8dot font supports ASCII characters 20h to 7Eh.

When unsupported texts are used, the text is displayed differently between GT Designer3 and the GOT.

- For GT Designer3: The unsupported text is displayed as "■".
- For the GOT: The unsupported text and all subsequent texts cannot be displayed.

Example) |A|B|C|ア|D|イ|1|2|3|

Display on GT Designer3  
 ABC■D■123

Display on GOT  
 ABC \_\_\_\_\_  
 Not displayed

- \* Alphanumeric: A to Z, a to z, 0 to 9
- Symbol: !, ", #, \$, %, &, ', (, ), \*, +, -, ., /, :, ;, <, =, >, ?, @, [, \, ], ^, \_ , ` , {, |, }, space

(b) **Font for the GOT and GT Designer3**

The GOT and GT Designer3 support the common Unicode 2.1-compliant fonts.

Thus, the GOT can display the languages used in various countries, including Japanese, Korean, Chinese (Pekingese), English, German, and French.

When using multiple languages, refer to the following section.

⇒ 1.2.5 Font specifications

(3) **Setting of the background color**

[Background Color] and either of [Bold], [Solid], or [Raised] are selected for one setting, the text may be run off the left edge or top edge.

## 7.2 Drawing a Logo Text

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Draw a logo text.

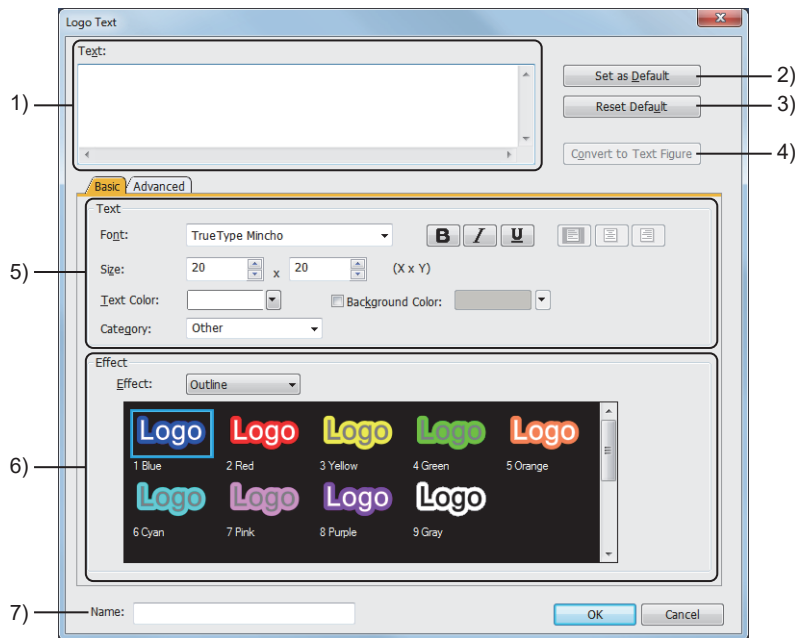

### 1 How to draw

- Step 1** Select [Figure] → [Logo Text] from the menu.
- Step 2** Place the cursor on the position where you draw the text, and click on it.  
The [Logo Text] dialog appears.
- Step 3** Configure the settings in the [Logo Text] dialog.  
→ 7.2.1 [Logo Text] dialog
- Step 4** After the setting, click the [OK] button.  
The logo text is placed.

### 7.2.1 [Logo Text] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1 [Basic] tab

#### 1) [Text]

- Set the text to be displayed.
- The input text is displayed on the screen.

Example)

- Up to 512 characters can be set.
- To display the text in multiple lines, press the [Enter] key at the end of the text in each line.  
(When a line feed is inserted, two characters per line feed are added to the number of characters.)

#### 2) [Set as Default] button

- Sets the currently configured setting in the dialog as a default.

The default setting is applied at the next startup.

### 3) [Reset Default] button

Resets the default setting configured by the [Set as Default] button.

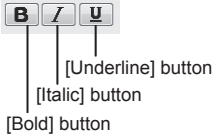

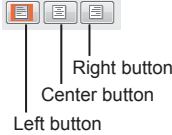

### 4) [Convert to Text Figure] button

Converts the logo text to the text.

The [Logo Text] dialog changes to the [Text] dialog.

⇒7.1.1 [Text] dialog

### 5) [Text]

Item	Description
[Font]	<p>Select the font.            ⇒1.2.5 Font specifications            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• Windows fonts</li> </ul>
Text Style	<p>Set the decoration of the text.</p>  <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Boldifies the text.</li> <li>• <b>[Italic] button</b> Italicizes the text.</li> <li>• <b>[Underline] button</b> Underlines the text.</li> </ul>
Alignment	<p>Set the horizontal position of the text.            This item is applied when the text is entered in two or more lines.</p>  <ul style="list-style-type: none"> <li>• <b>Left button</b> Aligns the text to the left.</li> <li>• <b>Center button</b> Aligns the text to the center.</li> <li>• <b>Right button</b> Aligns the text to the right.</li> </ul>

[Text Color]	<p>Select the text color.            For the details of the color, refer to the following.            ⇒6.4.2 Color settings            When [Fill Effects] is selected, the text can be displayed with gradation or pattern.</p>
[Background Color]	<p>To make the background of the text transparent, do not select this item.            To color the background of the text, select this item.            For the details of the color, refer to the following.            ⇒6.4.2 Color settings</p>
[Category]	<p>Select the category to which the figure belongs.            ⇒11.7 Managing figures and objects by category</p>

## 6) [Effect]

Item	Description
[Effect]	<p>Select the effect type. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Outline]</li> <li>• [Solid]</li> <li>• [3D]</li> <li>• [Stamp]</li> <li>• [Neon]</li> </ul> <p>Example)</p>  <p>[Outline]      [Solid]      [3D]      [Stamp]      [Neon]</p>
Preset list	<p>Select the effect color from the 16 color shades. The selectable color shades differs depending on each effect type in [Effect]. After selecting the color, configure the detail setting in [Effect] in the [Advanced] tab.</p>

## 7) [Name]

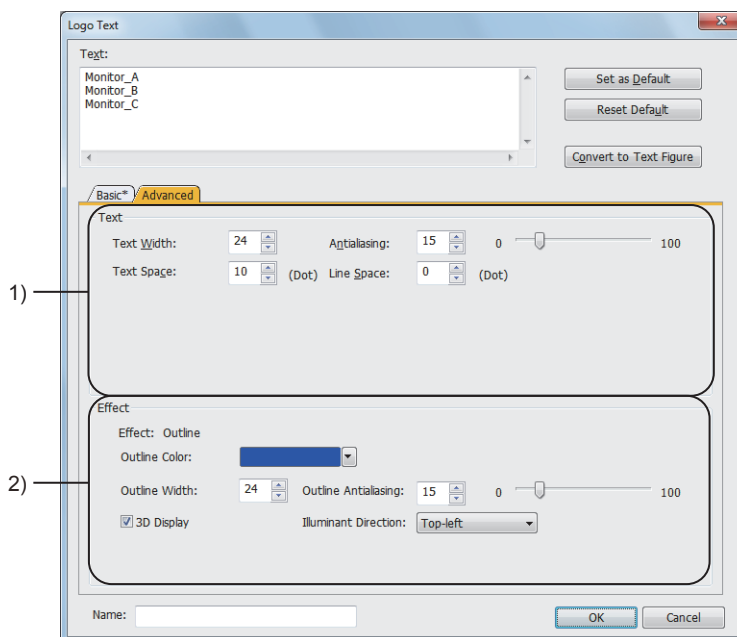

Set the figure name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Advanced] tab

### 1) [Text]

Item	Description
[Text Width]	Set the width of the text. The setting range is [0] to [100] dot(s).
[Antialiasing]	Set the value of the anti-aliasing (which eliminates the aliasing of pixels) for the text. The setting range is [0] to [100] dot(s).
[Text Space]	Set the space between the texts. The setting range is [0] to [128] dot(s).
[Line Space]	Set the space between lines. The setting range is [0] to [128] dot(s).

### 2) [Effect]

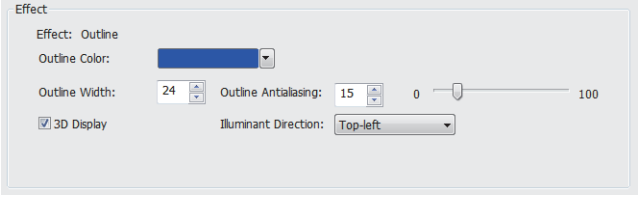

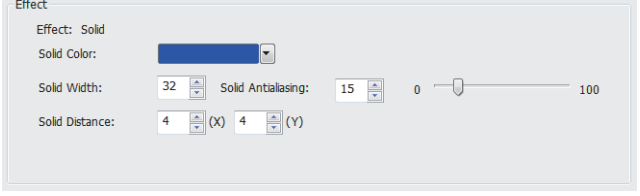

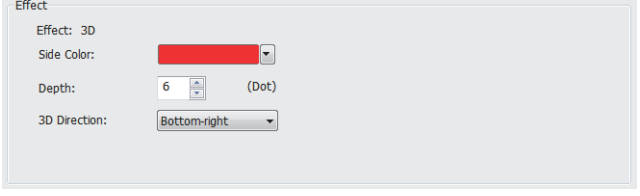

Configure the setting for the effect.

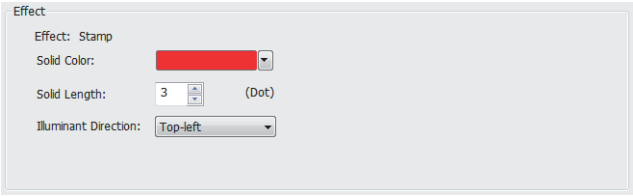

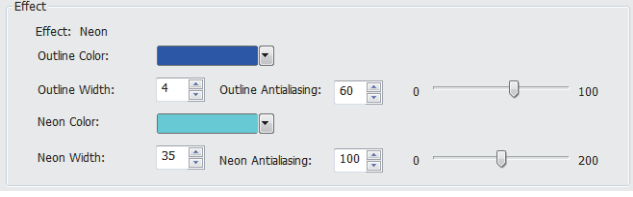

The setting range differs depending on each effect type in [Effect] in the [Basic] tab.

If you set the effect in the [Advanced] tab, and then select the effect color from the preset list in the [Basic] tab, the advanced setting is reset and cannot be restored.

For information on how to set colors, refer to the following.

→6.4 Color Settings

Item	Description
<p>For [Outline]</p>	 <ul style="list-style-type: none"> <li>• [Outline Color] Select the color of the outline.</li> <li>• [Outline Width] Set the width of the outline. The setting range is [0] to [100] dot(s).</li> <li>• [Outline Antialiasing] Set the value of the anti-aliasing (which eliminates the aliasing of pixels) for the outline. The setting range is [0] to [100] dot(s).</li> <li>• [3D Display] Select this item to display the logo text in three dimensions.</li> <li>• [Illuminant Direction] Set the illuminant direction in 3D display. The following shows the items to be selected. ·[Top-left] ·[Bottom-left] ·[Top-right] ·[Bottom-right]</li> </ul>
<p>For [Solid]</p>	 <ul style="list-style-type: none"> <li>• [Solid Color] Set the color of the shade.</li> <li>• [Solid Width] Set the width of the shade. The setting range is [0] to [100] dot(s).</li> <li>• [Solid Antialiasing] Set the value of the anti-aliasing (which eliminates the aliasing of pixels) for the shade. The setting range is [0] to [100] dot(s).</li> <li>• [Solid Distance] Set the position of the shade against the text by using the X-axis and Y-axis relative coordinates. The setting range is [-20] to [20] dot(s).</li> </ul>
<p>For [3D]</p>	 <ul style="list-style-type: none"> <li>• [Side Color] Select the color of the three dimensional side.</li> <li>• [Depth] Select the depth of the three dimensional side. The setting range is [0] to [20] dot(s).</li> <li>• [3D Direction] Set the direction of the three dimensions. The following shows the items to be selected. ·[Top-left] ·[Bottom-left] ·[Top-right] ·[Bottom-right]</li> </ul>

Item	Description
For [Stamp]	 <ul style="list-style-type: none"> <li>• [Solid Color] Set the color of the shade.</li> <li>• [Solid Length] Set the length of the shade. The setting range is [0] to [20] dot(s).</li> <li>• [Illuminant Direction] Set the illuminant direction. The following shows the items to be selected. ·[Top-left] ·[Bottom-left] ·[Top-right] ·[Bottom-right]</li> </ul>
For [Neon]	 <ul style="list-style-type: none"> <li>• [Outline Color] Select the color of the outline.</li> <li>• [Outline Width] Set the width of the outline. ### ■ 1 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Line Style]

Select the style of the frame.

The following shows the items to be selected.

- Straight line
- Fine broken line
- Coarse broken line
- Speck chain line
- Two-dot long and two short dashes line

#### 2) [Line Width]

Select the width of the frame.

The following shows the items to be selected.

- [1 Dot]
- [2 Dot]
- [3 Dot]
- [4 Dot]
- [5 Dot]
- [7 Dot]

#### 3) [Line Color]

Select the color of the frame.

For the details of the color, refer to the following.

→6.4.2 Color settings

#### 4) [Pattern]

Select the pattern.

The following shows the items to be selected.

- [None]:  
Set no pattern.  
Only the frame line of the rectangle is displayed.
- Other than [None]:  
Select a pattern.  
The following shows the items to be selected.

5) **[Shape Color]**

Select the pattern color.

6) **[Background Color]**

Select the background color.

7) **[Type]**

Select the type of the corner.

The following shows the items to be selected.

- [Ordinary]
- [Rounded]
- [Octagonal]

Example)

For [Rounded], when the value other than [1 Dot] is selected for [Line Width], the line style is automatically changed to the straight line.

For [Rounded], when the style other than the straight line is selected for [Line Style], the line width is automatically changed to [1 Dot].

8) **[Radius]**

Set the radius of the corner.

Set this item when [Rounded] or [Octagonal] is selected for [Type].

The radius can be set from [0] dot.

The maximum value is the value calculated by dividing either of the vertical and horizontal sides of a rectangle, whichever is shorter, by 2. The value is rounded down after the decimal point. (Unit: dot)

9) **[Name]**

Set the figure name.

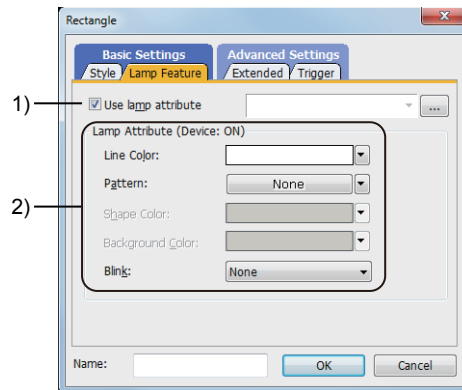

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

The default setting is applied at the next startup.

10) **[Reset Default] button**

Resets the default setting configured by the [Set as Default] button.

11) **[Name]**

Set the figure name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 7.9 Drawing a Table

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Draw a table.

### 1 How to draw

**Step 1** Select [Figure] → [Table] from the menu.

**Step 2** Draw a table on the screen.

Drag the pointer from the start point to the end point.

**Step 3** Double-click the table to display the [Table] dialog.

→ 7.9.1 [Table] dialog

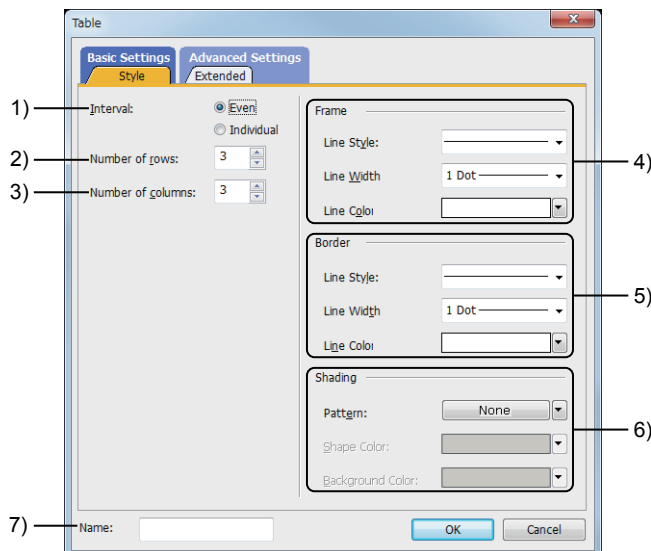

### 7.9.1 [Table] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1 [Style] tab
- 2 [Extended] tab

### 1 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Interval]

Select the row height and column width.  
The following shows the items to be selected.

- [Even]

Distributes rows and columns evenly.

Dragging a handle on the table frame or a border automatically resizes rows and/or columns and distributes them evenly according to the table size.

Example) Changing the table width with the columns spaced evenly

Drag the handle to the right.

• [Individual]

Set the height of a row or the width of a column.

Dragging a handle on the table frame resizes the table with the locations of borders unchanged.

Example) Changing the table width with the locations of borders unchanged

Drag the handle to the right.

Dragging a border only moves this border.

Example) Moving a border to change the width of a column

Drag the border to the right.

2) [Number of rows]

Set the number of rows.

The setting range depends on the setting of [Interval] and the table height.

The setting range is [1] row to [30] rows in the following cases.

- [Interval] is set to [Even].
- [Interval] is set to [Individual] and the table height is 31 dots or more.

When [Interval] is set to [Individual] and the table height is 30 dots or less, the setting range is [1] row to "Table height (dot) - 1" rows.

Example) When [Interval] is set to [Individual] and the table height is 4 dots

The setting range is [1] row to [3] rows.

3) [Number of columns]

Set the number of columns.

The setting range depends on the setting of [Interval] and the table width.

The setting range is [1] column to [30] columns in the following cases.

- [Interval] is set to [Even].
- [Interval] is set to [Individual] and the table width is 31 dots or more.

When [Interval] is set to [Individual] and the table width is 30 dots or less, the setting range is [1] column to "Table width (dot) - 1" columns.

Example) When [Interval] is set to [Individual] and the table width is 5 dots

The setting range is [1] column to [4] columns.

#### 4) [Frame]

Item	Description
[Line Style]	Select the style of the frame. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Straight line</li> <li>• Fine broken line</li> <li>• Coarse broken line</li> <li>• Speck chain line</li> <li>• Two-dot long and two short dashes line</li> </ul>
[Line Width]	Select the width of the frame. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
[Line Color]	Select the color of the frame. For the frame color, refer to the following. →6.4.2 Color settings

#### 5) [Border]

Item	Description
[Line Style]	Select the style of the border. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Straight line</li> <li>• Fine broken line</li> <li>• Coarse broken line</li> <li>• Speck chain line</li> <li>• Two-dot long and two short dashes line</li> </ul>
[Line Width]	Select the width of the border. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
[Line Color]	Select the color of the border. For the border color, refer to the following. →6.4.2 Color settings

#### 6) [Shading]

Item	Description
[Pattern]	Select the pattern. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]: Set no pattern. The table frame and borders are displayed.</li> <li>• Other than [None]: Select a pattern. The following shows the items to be selected.</li> </ul> <p>1:  2:  3:  4:  5:  6:  7: </p> <p>8:  9:  10:  11:  12:  13:  14: </p> <p>15:  16:  17:  18:  19:  20:  21: </p> <p>22:  23:  24:  25:  26:  27:  28: </p> <p>29:  30:  31:  32:  33:  34:  35: </p> <p>36:  37: </p>
[Shape Color]	Select the color of the pattern. For the pattern color, refer to the following. →6.4.2 Color settings
[Background Color]	Select the background color. For the background color, refer to the following. →6.4.2 Color settings

### 7) [Name]

Set the figure name.

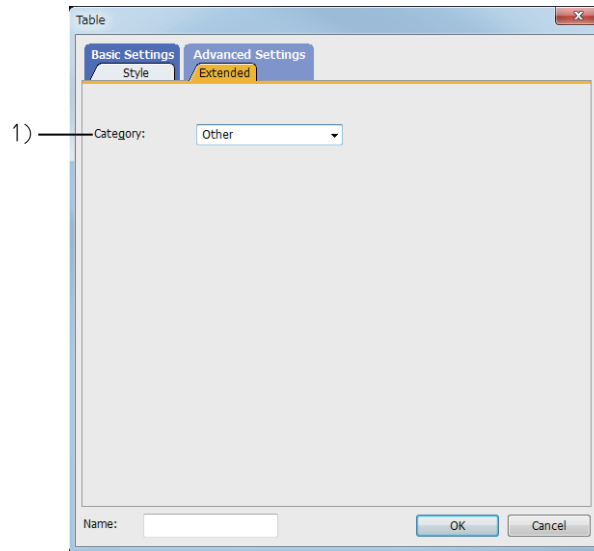

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

### ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Category]

Select the category to which the figure belongs.

⇒ 11.7.1 Specifications of the category

## 7.10 Drawing a Scale

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Draw a scale.

### ■1 How to draw

**Step 1** Select [Figure] → [Scale] from the menu.

**Step 2** Draw the scale on the screen.

Drag the pointer from the start point to the end point.

- Basic drawing

- Drawing with the [Shift] key pressed

The scale is drawn with same length in vertical and horizontal directions.

- Drawing with the [Ctrl] key pressed

The scale is drawn with the start point as a center.

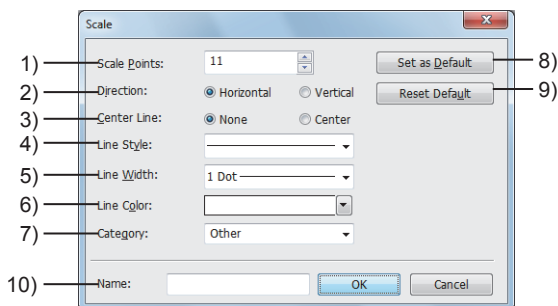

**Step 3** Double-click the drawn scale to display the [Scale] dialog.

→ 7.10.1 [Scale] dialog

## 7.10.1 [Scale] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Scale Points]

Set the number of lines on the scale.  
The setting range is [2] to [255].

### 2) [Direction]

Select the direction of the scale.  
The following shows the items to be selected.

- [Horizontal]
- [Vertical]

### 3) [Center Line]

Select the center line which passes vertically through the scale.  
The following shows the items to be selected.

- [None]
- [Center]

### 4) [Line Style]

Select the style of the line.  
The following shows the items to be selected.

- Straight line
- Fine broken line
- Coarse broken line
- Speck chain line
- Two-dot long and two short dashes line

### 5) [Line Width]

Select the width of the line.  
The following shows the items to be selected.

- [1 Dot]
- [2 Dot]
- [3 Dot]
- [4 Dot]
- [5 Dot]
- [7 Dot]

### 6) [Line Color]

Select the color of the line.  
For the details of the color, refer to the following.  
⇒6.4.2 Color settings

7) **[Category]**

Select the category to which the figure belongs.

→ 11.7 Managing figures and objects by category

8) **[Set as Default] button**

Sets the currently configured setting in the dialog as a default.

The default setting is applied at the next startup.

9) **[Reset Default] button**

Resets the default setting configured by the [Set as Default] button.

10) **[Name]**

Set the figure name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 7.11 Drawing a Piping

GT27

GT25

GT23

GT21

SoftGOT2000

GS

Draw a piping.

### 1 How to draw

**Step 1** Select [Figure] → [Piping] from the menu.

**Step 2** Draw the line to become the piping on the screen.

Drag the pointer from the start point to the end point to draw the first line.

**Step 3** To draw the next line, click the end point of the previous line.

- Basic drawing

- Drawing with the [Shift] key pressed

The direction of the vertex can be changed at every 45 degrees.

**Step 4** To finish the drawing, double-click the last vertex.

When 100 vertices are drawn, the drawing automatically ends.

**Step 5** Double-click the drawn piping to display the [Piping] dialog.

⇒7.11.1 [Piping] dialog

### Point

#### Editing the vertex

Select [Edit] → [Edit Vertices] from the menu to switch the size editing handle to the vertex editing handle.

The vertex editing handle enables the position of the vertex to be modified.

For details, refer to the following.

⇒6.6.12 [Edit Vertices]

## 7.12 Painting Figures

GT27 GT25 GT23 GT21 SoftGOT2000 GS

GOT Graphic Ver.1

Paint areas or figures enclosed by lines.

### 1 How to paint

- Step 1 Select [Figure] → [Paint] from the menu.
- Step 2 Place the cursor inside the area to be painted, and click it.

The [Paint] dialog appears.

- Step 3 Configure the settings in the [Paint] dialog.

→ 7.12.1 [Paint] dialog

- Step 4 After the setting, click the [OK] button.

The paint mark is displayed in the painted area, and the painting is completed.

The paint mark is displayed on GT Desinger3 only.

### Point

#### Before painting

Draw the area to be painted as follows:

- (1) Enclose the area with the straight lines

- (2) Select the same color for all the lines enclosing the area.

## 7.12.1 [Paint] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Boundary Color]

Select the same color as the one for all the lines enclosing the area.  
For the details of the color, refer to the following.

→6.4.2 Color settings

### 2) [Pattern]

Select the pattern.

The following shows the items to be selected.

- [None]:  
Set no pattern.  
Only the frame line of the figure is displayed.
- Other than [None]:  
Select a pattern.  
The following shows the items to be selected.

### 3) [Shape Color]

Select the pattern color.

### 4) [Background Color]

Select the background color.

### 5) [Category]

Select the category to which the figure belongs.

→11.7 Managing figures and objects by category

### 6) [Set as Default] button

Sets the currently configured setting in the dialog as a default.

The default setting is applied at the next startup.

### 7) [Reset Default] button

Resets the default setting configured by the [Set as Default] button.

## Point

### (1) Precautions

- Place the area to be painted behind the paint mark.  
If the area is placed on the front of the paint mark, the area cannot be painted.
- Do not select the same color for the area as the one for the lines enclosing the area.  
If the same color is selected, the area cannot be painted.
- Enclose the area to be painted without any clearance between the lines.  
If there is any clearance between the lines, the paint is run off the lines.
- If the same color is selected for [Boundary Color] and either of [Shape Color] or [Background Color], the area may not be painted.

In such a case, shift the position of the paint mark.

(2) **Display on the screen editor**

(a) **When a part of the area is unpainted**

In some cases, a part of the area is unpainted.

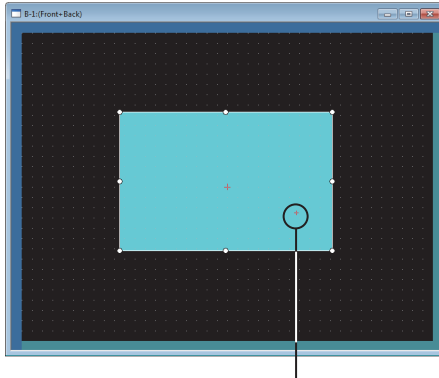

Redisplay the screen editor, and check whether the whole area is painted.

→ 2.6.3 Redisplaying a selected screen editor

(b) **When the paint mark is not displayed**

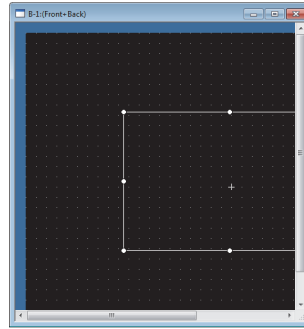

When the paint mark is not displayed in the window, the area cannot be painted.

Display the paint mark in the window, and paint the area properly.

Paint mark

When the paint mark is displayed

When the paint mark is not displayed

## 7.13 Pasting an Image File

Import an image file to GT Designer3, and paste it on the screen.

### ■1 Applicable image files

The following types of image files can be pasted.

#### (1) BMP file

Item	Description
Type of file	24-bit BMP, 256-color BMP, 16-color BMP, Monochrome BMP
Number of colors	65536 colors or less (The colors which cannot be displayed on the GOT are subtracted.)
Image size	2000×1600 or smaller

#### (2) JPEG file

Item	Description
Format	RGB full color-compliant baseline JPEG (JFIF, EXIF)
Number of colors	65536 colors or less (The colors which cannot be displayed on the GOT are subtracted.)
Image size	2000×1600 or smaller

#### (3) PNG file

Item	Description
Format	32-bit PNG data with RGB+ $\alpha$ channel $\alpha$ channel (transparency information) supported, RGB 24-bit PNG
Number of colors	65536 colors or less (The colors which cannot be displayed on the GOT are subtracted.)
Image size	2000×1600 or smaller

### Point

#### (1) Transparent area and semi-transparent area ( $\alpha$ channel) of PNG file

The transparency of the transparent area and semi-transparent area of the PNG file differs according to the data before the PNG file is imported (the value of  $\alpha$  channel).

- Transparent area ( $\alpha=0$ )  
The transparent area displays the background color.
- Semi-transparent area ( $0<\alpha<1$ )  
The color of the semi-transparent area is combined with the background color.

#### (2) Placing PNG files

When a PNG image with an  $\alpha$  channel is placed on the front layer and there are no other images in the background, the translucent part of the image is superimposed on the transparent color of the screen.

Because the composite color is different from the transparent color of the screen, the back layer cannot be seen.

### ■2 How to paste

**Step 1** Select [Figure]→[Import Image Data] from the menu.

The [Open] dialog appears.

**Step 2** Select the image file to be pasted.

When you paste the JPEG file, set [JPEG Quality].

[Low]: The image quality deteriorates, and the file size becomes smaller.
