[High]: The image quality improves, and the file size becomes larger.

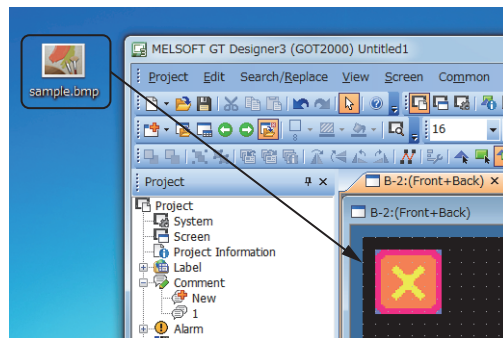

- Step 3** Click the [Open] button.  
The imported image file is pasted on the screen editor.
- Step 4** Click the position where you paste it.  
Pasting is completed.

**Point**

**Pasting the image file by drag-and-drop**

The image file can be pasted on GT Designer3 screen by drag-and-drop.

**3 Editing the image**

The following shows how to edit the pasted image.

**(1) Editing the image**

- Step 1** Double-click the image to be edited.

- Step 2** When you edit the image of the BMP file, the [Bitmap Attribute Change] dialog appears.  
Click the [Open image data in Paint] button.

- Step 3** The paint window of Windows appears.

Edit the image on the paint window.

- Step 4** After editing, select [File] → [Update document] from the menu.  
The paint window is closed, and editing is completed.

## (2) Setting the transparent color

When the image of the BMP file is pasted, the area of the specified color can be transparent.

- Step 1** Double-click the image to be edited.

- Step 2** The [Bitmap Attribute Change] dialog appears.  
Click the [Specify a transparent color for image data] button.

- Step 3** The [Transparent Setting] dialog appears.  
Select [Enable the transparent setting].

- Step 4** Select the color to be transparent in the preview image.

- Step 5** The selected color becomes transparent.  
To save the image, click the [OK] button.

- Step 6** Setting is completed.

## ■ 4 Precautions

### (1) Applicable image size

To paste the image on GT Designer3, the image size should be 2000×1600 or smaller.

If the width or height exceeds the above size, it is automatically adjusted within 2000×1600 when the image file is imported.

The ratio between height and width are fixed.

### (2) For BMP file

The color of the image displayed on GT Designer3 and the GOT may be slightly different from the color of the BMP file.

### (3) For JPEG file

In the following cases, the image quality may deteriorate.

- When the pasted JPEG file is in the JFIF format, and not the baseline JPEG
- When the pasted image of the JPEG file is edited

To avoid the image quality deterioration, use the BMP file.

### (4) For GT21

The GOT may not display an image with dimensions larger than those of the screen display area on the screen editor.

Adjust the dimensions of the image to fit into the screen display area.

## 7.14 Pasting DXF Data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Import the data of the DXF file (AutoCAD Data Exchange Format file) to GT Designer3, convert the data into the figure data of GT Designer3, and paste it on the screen.

### ■1 Supported version of DXF file

The DXF files with the following versions are supported.

- R12
- R13
- R14

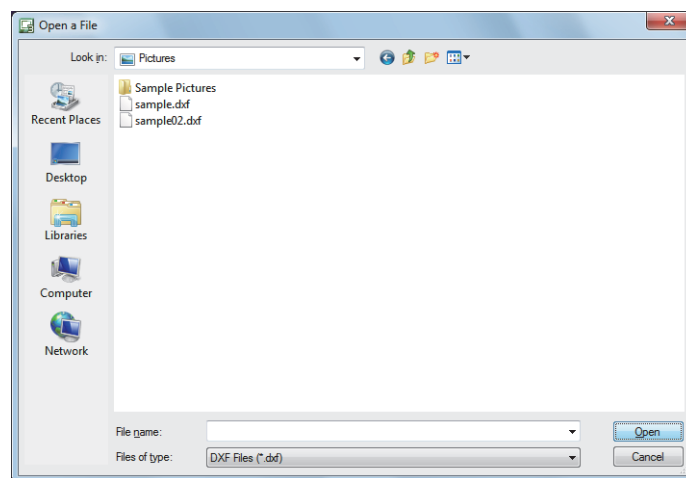

To use the DXF file with unsupported version, change to any of the above versions.

### ■2 How to paste

**Step 1** Select [Figure] → [Import DXF Data] from the menu.

The [Open] dialog appears.

**Step 2** Select the DXF file to be pasted.

**Step 3** Click the [Open] button.

The figure data is pasted on the screen editor.

**Step 4** Click the position where you paste it.

Pasting is completed.

### Point

#### (1) Editing the figure data

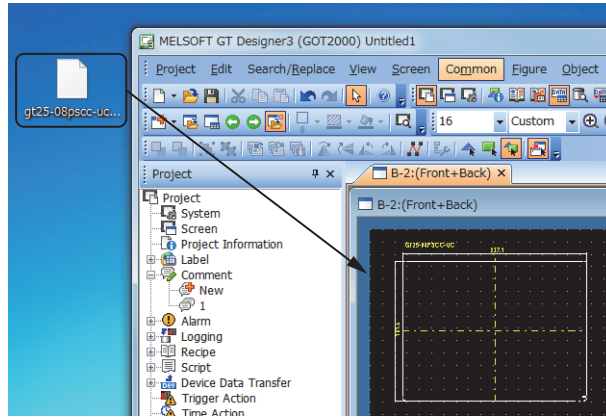

The figure data of the DXF file is grouped.

For information on how to edit a grouping of figures, refer to the following.

→ 6.6.8 [Group], [Ungroup]

#### (2) Pasting the file by drag-and-drop

The DXF file can be pasted on GT Designer3 screen by drag-and-drop.

### 3 Convertible information

#### (1) Convertible data

The following data of the DXF file can be converted into the data of GT Designer3.

##### (a) Converting the figure data

The figure data is converted from the data of the DXF file as below.

DXF data (Before pasting)	GTD3 data (After pasting)	Remarks
ARC	Arc	-
ATTDEF	(Skipped)	-
ATTRIB	Text	<ul style="list-style-type: none"> <li>The text size is converted to the nearest one within the range of 0.5 to 8 dots.</li> <li>The direction of the text is converted to the nearest one at every 90 degrees.</li> <li>The text style and inclination angle are not converted.</li> </ul>
CIRCLE	Circle	-
DIMENSION	Group	The color and line style are converted based on the definition of BLOCK instead of the layer of DIMENSION.
ELLIPSE	Circle or Arc	When the main axis is inclined, the figure is converted so that its main axis will be rotated to vertical or horizontal.
INSERT	Group	<ul style="list-style-type: none"> <li>The color and line style are converted based on the definition of BLOCK instead of the layer of INSERT.</li> <li>The scale and rotation angle are not converted.</li> </ul>
LEADER	Line Freeform* <sup>1</sup>	The figure is converted to the freeform line by connecting each vertex with the straight line.
LINE	Line	-
LWPOLYLINE	Line Freeform* <sup>1</sup> or Polygon* <sup>1</sup>	<ul style="list-style-type: none"> <li>The figure is converted to the freeform line or polygon by connecting each vertex with the straight line.</li> <li>The figure with curved lines is not converted.</li> </ul>
MLINE	Line Freeform* <sup>1</sup>	<ul style="list-style-type: none"> <li>MLINESTYLE is not converted.</li> <li>The color and line style of the freeform line are converted based on the layer definition.</li> <li>Cap processing is not supported.</li> </ul>
MTEXT	Text	<ul style="list-style-type: none"> <li>The text size is converted to the nearest one within the range of 0.5 to 8 dots.</li> <li>The direction of the text is converted to the nearest one at every 90 degrees.</li> <li>The format code and text style are not converted.</li> </ul>
POINT	Circle, Rectangle, or Line	-
POLYLINE	Line Freeform* <sup>1</sup> or Polygon* <sup>1</sup>	<ul style="list-style-type: none"> <li>The figure is converted to the freeform line or polygon by connecting each vertex with the straight line.</li> <li>The figure with curved lines is not converted.</li> </ul>
SEQEND	(End of sequence data)	-
SOLID	Polygon	-
SPLINE	Line Freeform* <sup>1</sup> or Polygon* <sup>1</sup>	The figure is converted to the freeform line or polygon by connecting each fit point with the straight line.

DXF data (Before pasting)	GTD3 data (After pasting)	Remarks
TEXT	Text	<ul style="list-style-type: none"> <li>The text size is converted to the nearest one within the range of 0.5 to 8 dots.</li> <li>The direction of the text is converted to the nearest one at every 90 degrees.</li> <li>The text style and inclination angle are not converted.</li> </ul>
TRACE	Polygon*1	-

\*1 When the number of vertices of the freeform line or polygon is 1000 or more, 1000th or more vertices cannot be displayed on the GOT.

Draw the figure on GT Designer3 so that the number of vertices will be 999 or less.

**(b) Converting the line**

The line width is converted to 1 dot.

The line style is converted as below.

DXF data (Before pasting)	GTD3 data (After pasting)	Image
CONTINUOUS	Straight line	
DASHED	Coarse broken line	
HIDDEN	Coarse broken line	
CENTER	Speck chain line	
PHANTOM	Two-dot long and two short dashes line	
User definition	Straight line	
Others	Straight line	

**(c) Converting the color**

The color is converted as below.

DXF data (Before pasting)	GTD3 data (After pasting)
Red (0x01)	Red (0xE0)
Yellow (0x02)	Yellow (0xFC)
Green (0x03)	Green (0x1C)
Light blue (0x04)	Light blue (0x1F)
Blue (0x05)	Blue (0x03)
Purple (0x06)	Purple (0xE3)
White (0x07)	White (0xFF)
Black (0x08)	Black (0x00)
Dark red (0x09)	Dark red (0xC0)
Dark yellow (0x0A)	Dark yellow (0xF0)
Dark green (0x0B)	Dark green (0x18)
Dark-light blue (0x0C)	Dark-light blue (0x1E)
Dark blue (0x0D)	Dark blue (0x02)
Dark purple (0x0E)	Dark purple (0xC3)
Dark white (0x0F)	Dark white (0xFE)
Others	White (0xFF)

**Editing the figure data after pasted**

Only the figure data of the DXF file which can be pasted on GT Designer3 is converted. Therefore, a part of the figure data may not be displayed as original data.

The following shows some of the examples.

- φ cannot be displayed.
  - As φ in DXF file is not the shift JIS code, it cannot be converted.

- BLOCK consisting of line and circle is enlarge-displayed.  
→ As the scale is set in INSERT, BLOCK cannot be displayed in the proper size.  
Check the figure and adjust it as necessary.

## (2) Precautions

- The data with the layer off cannot be converted.
- Only the shift JIS code text is compatible.
- Regardless of the unit, the dimension 1 on the DXF file is converted to 1 dot on GT Designer3.
- To import the figure data to GT Designer3, the dimension should be 2048×1536 or smaller.  
If the width or height exceeds the above size, the figure data cannot be imported.

Example) Figure data which cannot be imported

- Some DXF files may require 10 minutes or more for importing.
- The pasted figure data is registered in [Other] in [Category].

## 7.15 Pasting IGES Data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Import the data of the IGES (Data Exchange Format among CADs) to GT Designer3, convert the data into the figure data of GT Designer3, and paste it on the screen.

### ■1 Supported IGES file

The supported files are the wire frame format IGES files (\*.igs, \*.ige, \*.iges) with Autodesk Inventor manufactured by Autodesk, Inc..

### ■2 How to paste

- Step 1** Select [Figure] → [Import IGES Data] from the menu.  
The [Open] dialog appears.
- Step 2** Select the IGES file to be pasted.

- Step 3** Click the [Open] button.  
The [Preview] dialog appears, and the figure data is displayed.

- Step 4** Click the [Option] button to display the [Option] dialog.  
Set the optimization level for converting the curved line to freeform line.  
[Low]: The image quality deteriorates, and the file size becomes smaller.  
[High]: The image quality improves, and the file size becomes larger.

**Step 5** Adjust the size and direction of the figure data.

- Left drag: Rotates the figure data to the direction in which it is dragged.
- Right drag: Moves the figure data to the direction in which it is dragged.
- Left and right drag to upward : Increases the size of the figure data.
- Left and right drag to downward: Decrease the size of the figure data.

The figure data is pasted on the screen in the size and direction displayed in the [Preview] dialog.

**Step 6** After adjusting, click the [Save] button.

The figure data is pasted on the screen editor.

**Step 7** Click the position where you paste it.

Pasting is completed.

### Point

#### Editing the figure data

The figure data of the IGES file is grouped.

For information on how to edit a grouping of figures, refer to the following.

→6.6.8 [Group], [Ungroup]

## 3 Precautions

### (1) Data which cannot be imported

When the IGES file has unsupported entity, the following dialog is displayed.

Clicking the [No] button displays the [Preview] dialog; however, the unsupported entity and subsequent ones are not imported.

The following shows the examples.

- Parent entity (importable)-child entity (importable)-grandchild entity (not importable)  
→ Although the parent entity and child entity are imported, the grandchild entity is not imported.
- Parent entity (importable)-child entity (not importable)-grandchild entity (importable)  
→ Although the parent entity is imported, the child entity and grandchild entity are not imported.
- Parent entity (not importable)-child entity (importable)-grandchild entity (importable)  
→ As the parent entity is not importable, all the entities are not imported.

### (2) Importable entities

GT Designer3 supports the entities defined by JAMA-IGES.

The following shows the importable entities.

Entity name	Entity ID
Circle	100
Ellipse	104
Line	110
Transformation matrix	124
Rational B-spline curve	126
General note	212
Subfigure definition	308
Color definition	314
Subfigure entity	408

### (3) Nested format groups

When some groups are nested in the IGES file, only the bottom level groups are imported.

### (4) Displaying the figure data which cannot be imported on the GOT

To display the figure data which cannot be imported on the GOT, use the capture function.

→ 7.16 Capturing and Pasting an Image File

## 7.16 Capturing and Pasting an Image File

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The capture function enables the personal computer screen to be captured and pasted on GT Designer3 screen.

### ■ 1 Applicable image files

The following types of image files can be pasted.

- BMP file
- JPEG file

### ■ 2 How to paste

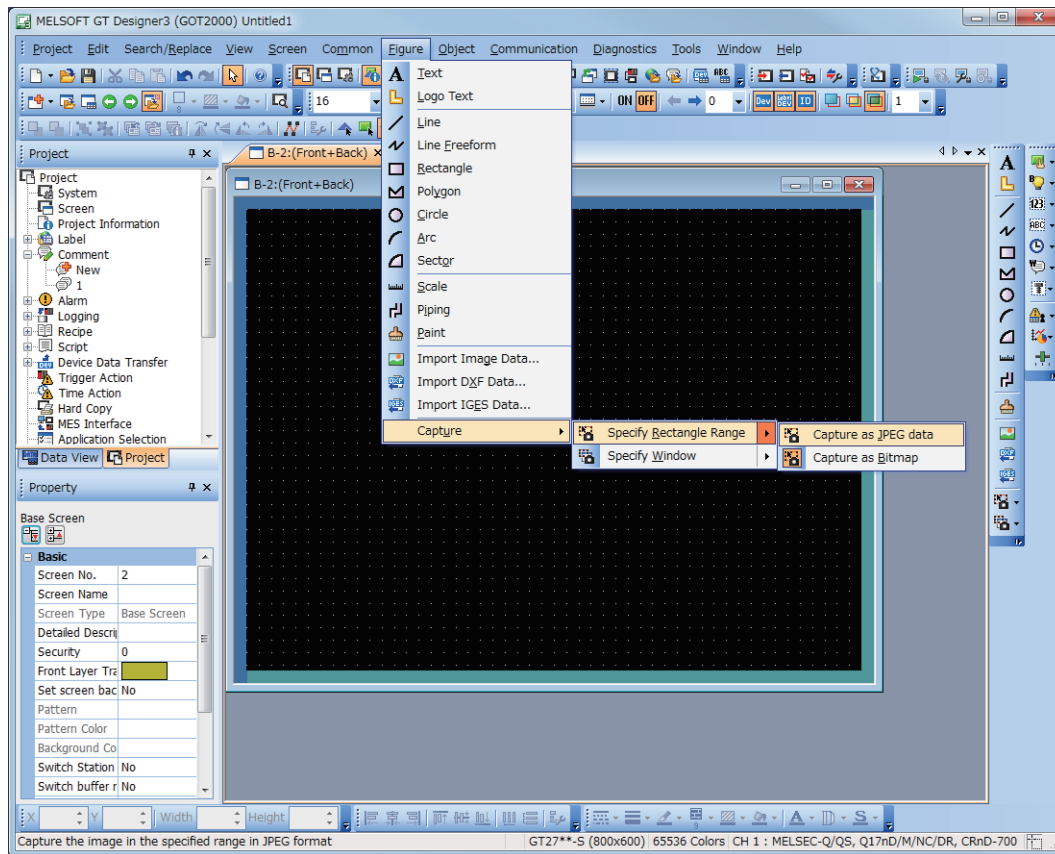

**Step 1** Select [Figure] → [Capture] from the menu to select how to specify the range to be captured.

- [Specify Rectangle Range]: Select this item to specify the range to be captured.
- [Specify Window]: Select this item to specify the window to be captured.

**Step 2** Select the type of the image file to be pasted.

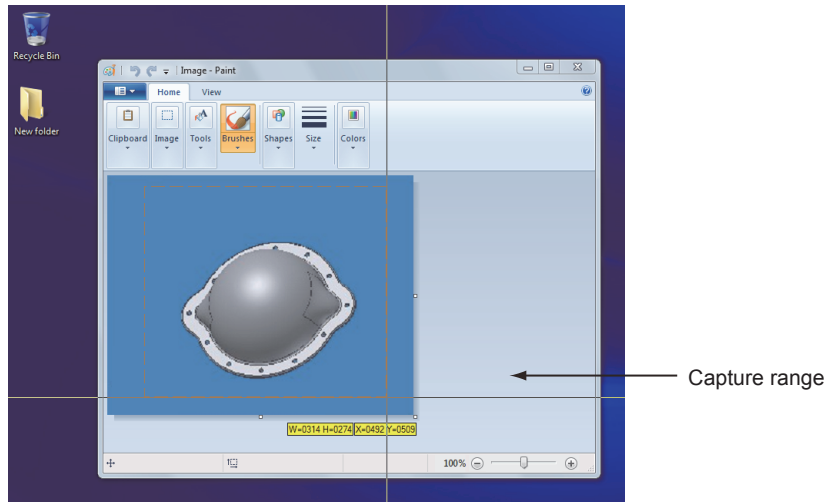

The following shows the items to be selected.

- [Capture as JPEG data]
- [Capture as Bitmap]

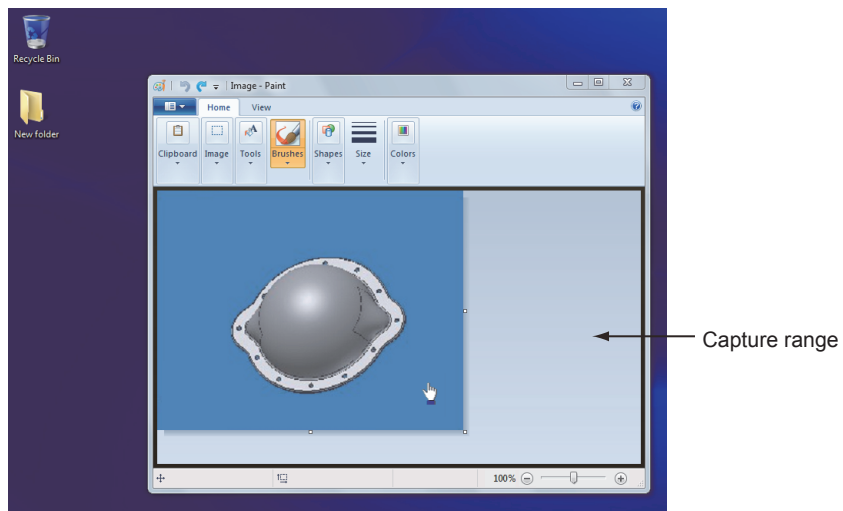

**Step 3** GT Designer3 screen becomes minimized and the capture is enabled.

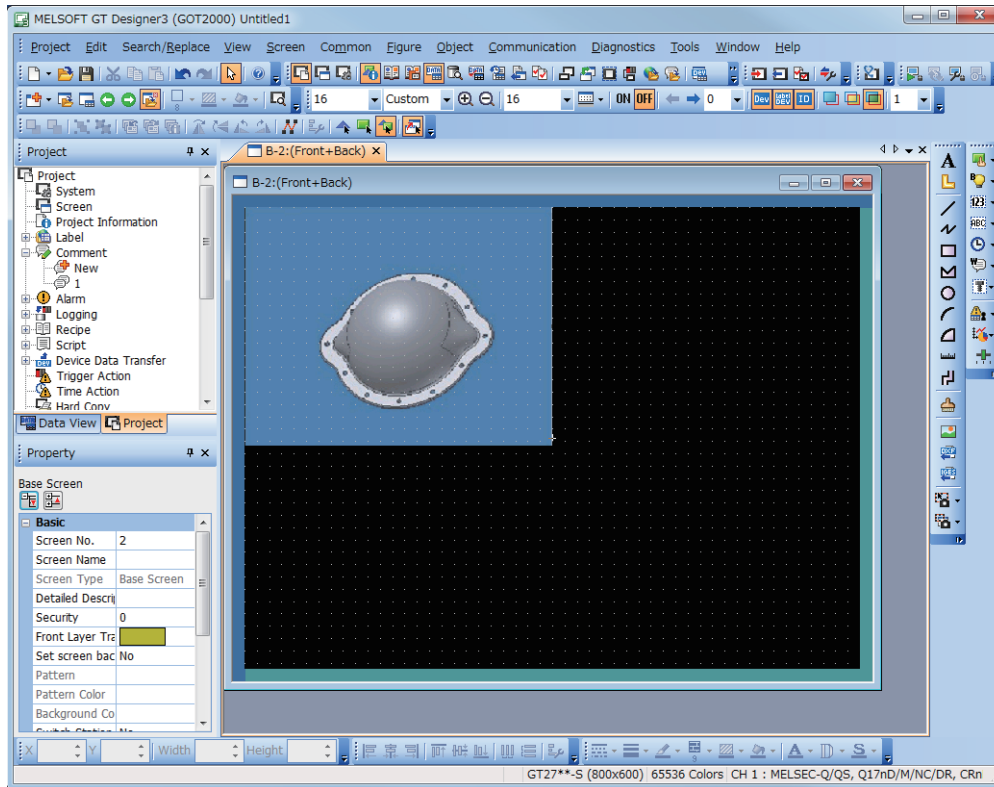

- When [Specify Rectangle Range] is selected  
Specify the rectangle range to be captured.

- When [Specify Window] is selected  
Click the window to be captured.

- Step 4** The imported image file is pasted on the screen editor.  
Click the position where you paste it.  
Pasting is completed.

## Point

### Canceling the capture

In the capture mode, the operations other than the capture are disabled.

To cancel the capture, press the [ESC] key.

### ■ 3 Editing the image

For how to edit the imported image file, refer to the following.

→ 7.12.1 ■ 3 Editing the image

### ■ 4 Precautions

- When the image with large size is imported or the screen with multiple images is opened, longer time may be required than usual.
- Depending on the file type including the application with DirectX or application to play the video, the capture may be disabled.
- For the dual display, the capture is enabled on the primary display only.
- To paste the image on GT Designer3, the image size should be 2048×1536 or smaller.

## 8.1 Using Objects in the Library

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The library contains figures, objects, templates, and images.  
You can place them on a screen.  
They are preset or user-created.

### 8.1.1 Specifications of the library

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 Registerable library data types

##### (1) Figure

Figures drawn by the user.

##### (2) Object

Objects set by the user.

##### (3) Template

Templates set by the user.

For the details of the templates, refer to the following.

⇒ 11.6 Efficient Drawing with Templates

##### (4) Image file

BMP files, JPEG files, and PNG files.

#### ■ 2 Library classifications

The following shows the library classifications.

##### (1) [System Library]

This folder stores the preset figures, objects, templates, and images.

You can select them from the subfolders below.

- [Search By Subject] folder: Data are classified by appearance.
- [Search By Function] folder: Data are classified by function.

The [Search By Subject] folder and the [Search By Function] folder store the same data.

##### (2) [My Library]

This folder stores the user-created figures, objects, templates, and imported images.

You can create library folders to store the library data in [My Library].

Create folders for each purpose.

#### Point

##### Library folder

Up to two hierarchies can be created in a library folder.

### (3) [My Favorites]

Register library data that is used frequently.

The library data registered as [My Favorites] is displayed on the [My Favorites] tool bar.

### (4) [Recently Used Library]

Up to 10 library data sets that are used by the user recently are recorded.

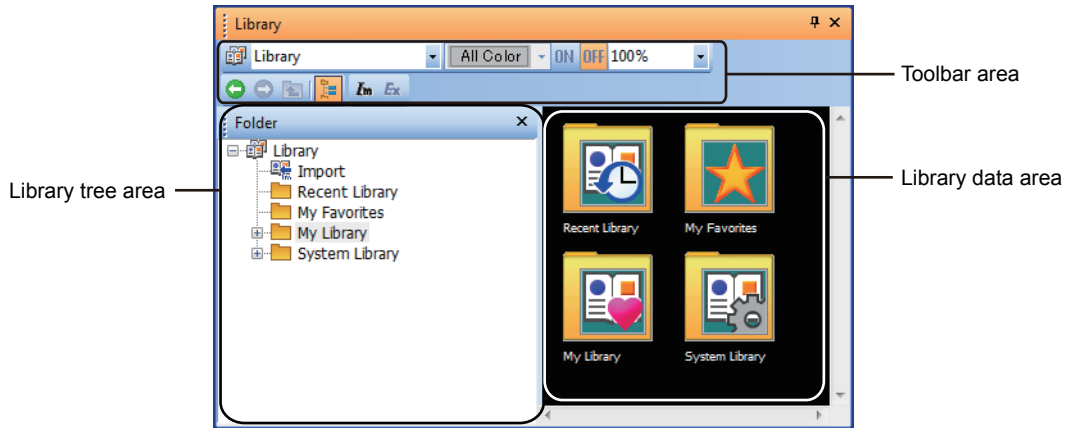

The data is not registered in this folder, and you cannot add, delete, or edit the library data in this folder.

## ■ 3 Screen configurations

The following shows the screen of the library.

### (1) [Library] window

A window for operating the library data.

For the details of [Library] window, refer to the following.

⇒ 8.1.3 [Library] window

## 8.1.2 How to use the library

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows what you can do with libraries and each reference section.

- Using the data registered in the library
  - ➔ ■ 1 Using the data in the library
- Registering figures, objects, or templates as the library data
  - ➔ ■ 2 Registering the data in the library
- Copying and pasting the library data
  - ➔ ■ 3 Copying the library data
- Deleting the library data
  - ➔ ■ 4 Deleting the library data
- Editing the library data
  - ➔ ■ 5 Editing the library data
- Changing the attribute of the library data
  - ➔ ■ 6 Changing the attribute of the library data
- Saving my library
  - ➔ ■ 7 Saving the library data
- Opening the saved my library
  - ➔ ■ 8 Opening the library data
- Importing the library data or image files
  - ➔ ■ 9 Importing the library data
- Saving library folders in my library
  - ➔ ■ 10 Exporting the library data

### ■ 1 Using the data in the library

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select library data and place on the screen editor.

**Step 1** Select the library data to be used from the library.

**Step 2** Click a location on the screen editor where the library data is placed.  
The library data is arranged.

#### Point

##### (1) Using the data in [My Favorites]

The library data registered in [My Favorites] can be selected from the My Favorites tool bar as well.

(2) Using with changing size

You can change the size of the library data placed on the screen data by dragging a mouse.

(3) Using templates

For the details of the templates, refer to the following.

→ 11.6.2 How to use the template

■ 2 Registering the data in the library

GT27 GT25 GT23 GT21 SoftGOT2000 GS

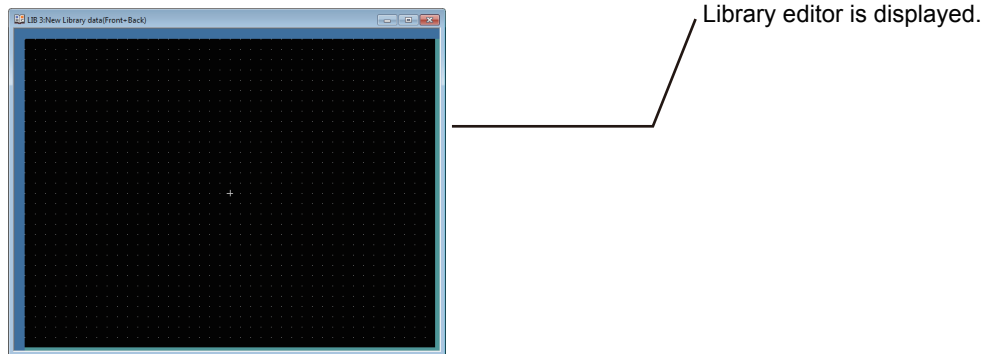

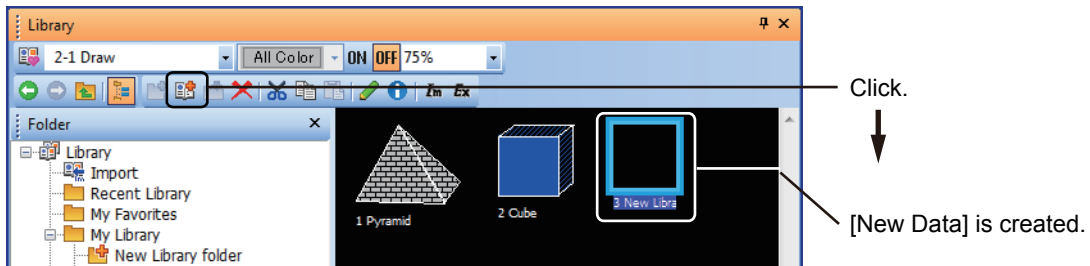

(1) Creating library data

Step 1 Set a location for registering the library data.

Select a folder to store the data from [My Library] and double-click.  
To create a new folder, double-click the [Create New Folder] button.

Step 2 Click the [Create New Library Data] button.

New library data is displayed.

Step 3 Place a figure, object or template on the library editor to edit.

For how to edit the library data, refer to the following.

→ ■ 5 Editing the library data

- Step 4** When you complete the editing, click the [Close] button.  
The library data closes.
- Step 5** To change the library data number or the library data name, refer to the following.
- ▶ **6 Changing the attribute of the library data**

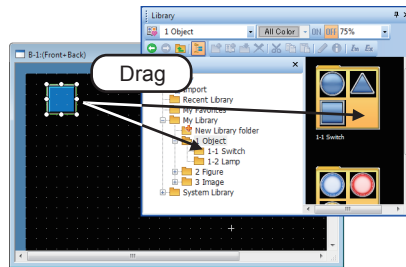

**Point**

**Registering the data on the screen editor to the library**

Figures, objects, templates on the screen editor can be registered to the library with the following method.

**(1) Dragging**

Drag a figure, object, or template on the screen editor to the library tree area or the library data area to register the data as the library data.

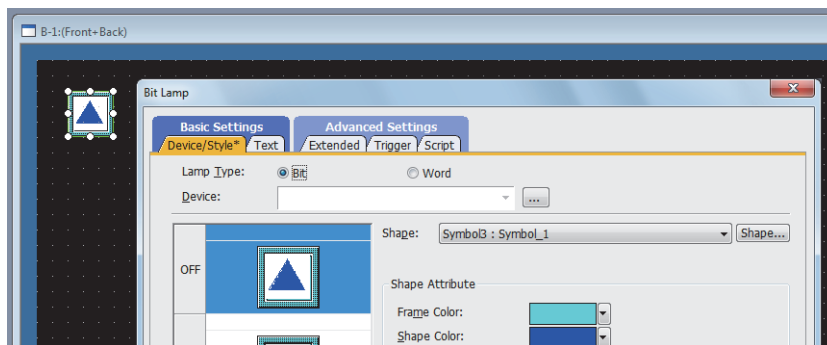

The data is registered in the library folder in [My Favorites] or [My Library].

**(2) Registering from the right-click menu**

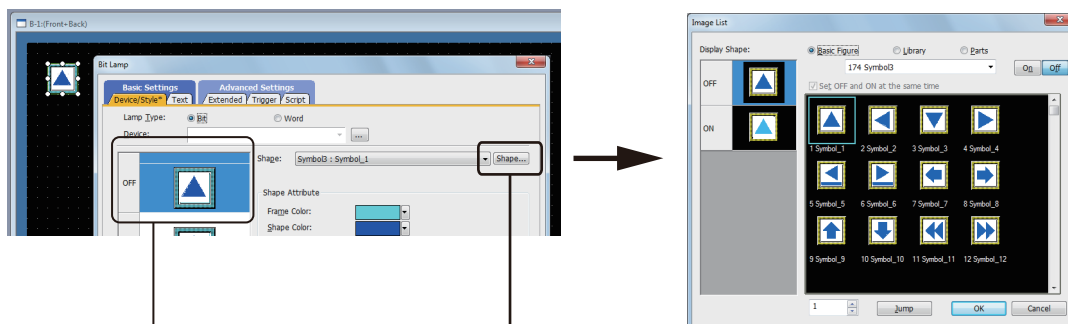

Select a figure, object, or template on the screen editor and select [Register to My Favorites] from the right-click menu to register the data to [My Favorites].

**(2) Registering figure used as object**

- Step 1** Display the object setting dialog.

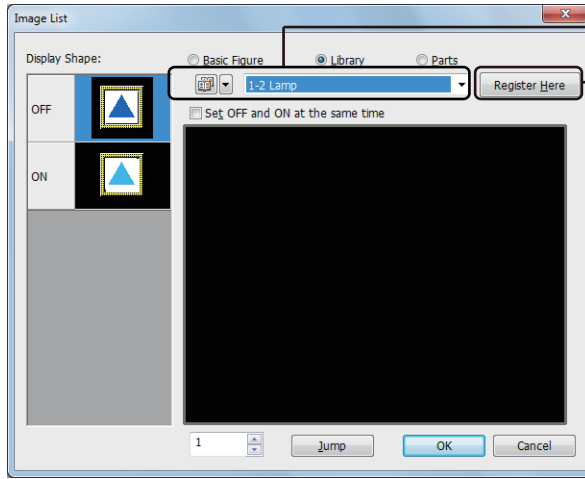

- Step 2** Select a figure from the preview list and click the [Figure] button.  
The [Image List] dialog is displayed.

1. Select a figure for registration.    2. Click.

- Step 3** Select a library folder where figure is to be registered.  
The data is registered in the library folder in [My Favorites] or [My Library].
- Step 4** Click the [Register Here] button.

- 3. Select a library for registering the figure.
- 4. Click.

**Step 5** The [Library data Property] dialog is displayed.  
Set [Number] and [Name] of the library data and click the [OK] button.

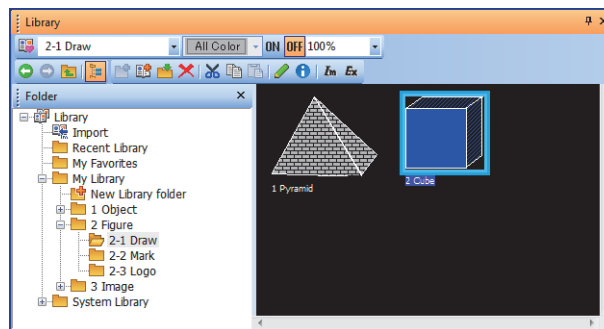

**Step 6** A figure is registered to the library folder.

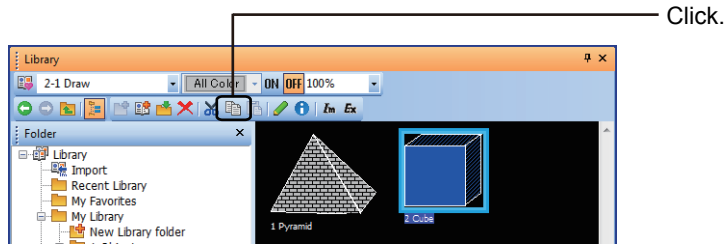

### 3 Copying the library data

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

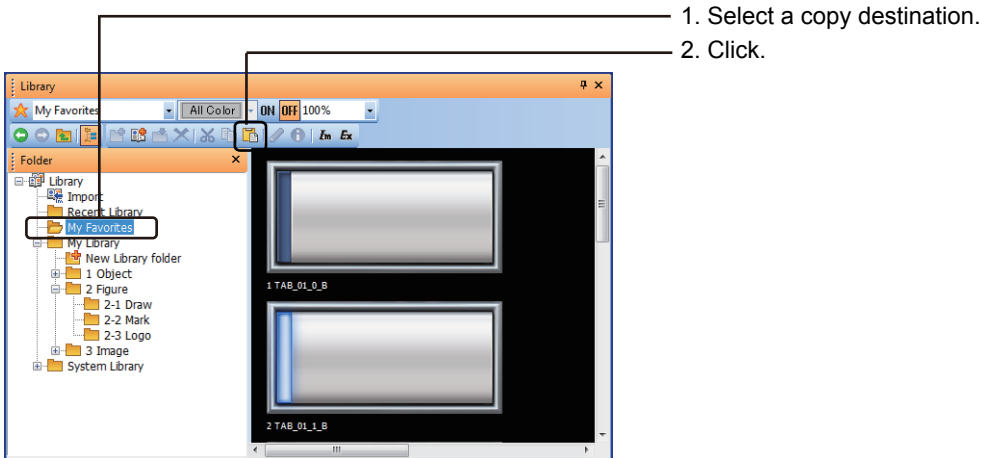

**Step 1** Select a library folder or a library data to be copied from the library.

**Step 2** Click the [Copy] button.

**Step 3** Select the copy destination folder and click the [Paste] button.

**Step 4** If library data having the same number as the copy source library data exists, the [Overwriting the Library Data Confirmation] dialog is displayed.

- To overwrite the library data, click the [Yes] button.
- To overwrite all the library data, click the [All Yes] button.
- To not to overwrite the library data, click the [Save as Different Number] button and set a new number.
- To cancel pasting, click the [No] button.
- To cancel the pasting of all the data, click the [Cancel] button.

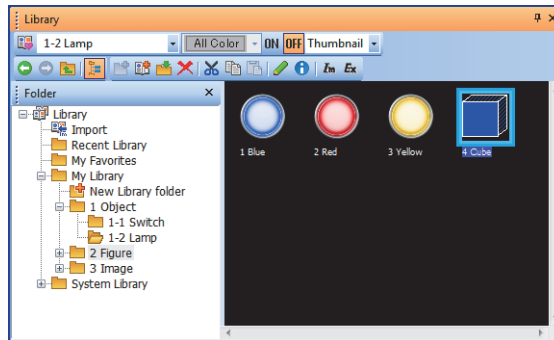

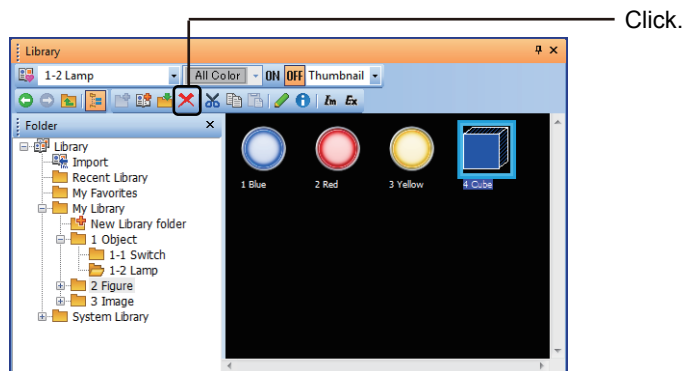

## ■4 Deleting the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select a library folder or a library data to be deleted from the library.

**Step 2** Click the [Delete] button.

**Step 3** The following dialog appears.

Clicking the [Yes] button deletes selected library folder or the selected library data.

### Point

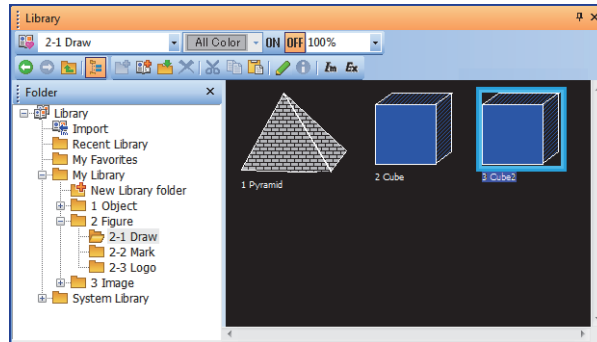

#### Deleting the library folder

Note that deleting the library folder deletes all the library data sets registered in the library folder as well.

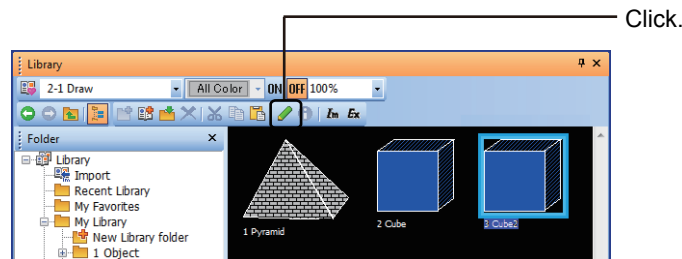

## ■ 5 Editing the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select a library folder to be edited.

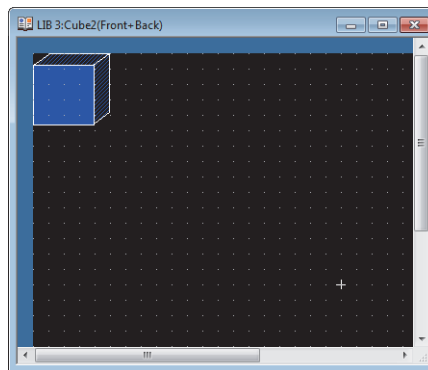

**Step 2** Click the [Edit] button.

**Step 3** The library data editor is displayed.

Edit the library data.

The edited contents are reflected to the library data immediately.

To cancel the wrong edited contents, click the [Undo] button before closing the library editor.

The edited contents are determined after the library editor is closed.

**Step 4** When you completed editing the library data, close the screen.

Click the [Close] button on the top right of the screen.

### Point

#### (1) Utilizing another data to the library data

Utilize the library data by the following methods.

##### (a) Copying a figure, object, or template

By copying data on the screen editor to the library editor, you can use the data on the library data.

##### (b) Utilizing another data

You can paste another library data on the library editor.

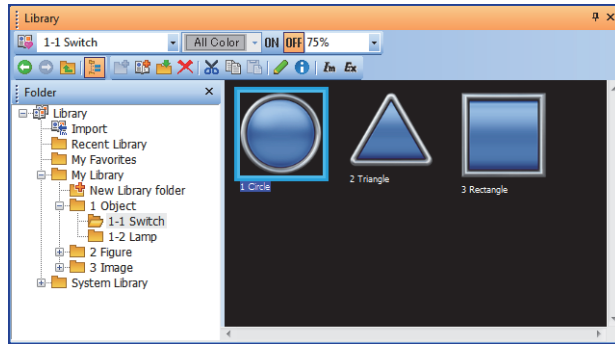

#### (2) Displaying the library editor by the double-click operation

You can display the library editor by double-clicking the library data on the library data area.

## 6 Changing the attribute of the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select a library data for changing the attribute.

**Step 2** Click the [Attribute Change] button.

**Step 3** The [Library data Property] dialog is displayed.

Set the number and name of the library data.

After setting, click the [OK] button to determine the change of the attribute of the library data.

## 7 Saving the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The library data in [My Library] and [My Favorites] can be saved as the different library from using library.

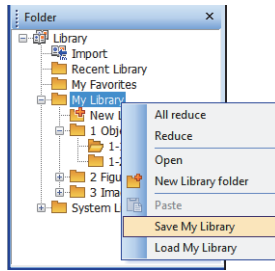

By saving multiple user-created libraries in the hard disk of the personal computer, you can use multiple user-created libraries at drawing.

### 8.1.2 8 Opening the library data

In addition, by copying a user-created library to other personal computers, you can use the same library in multiple personal computers.

**Step 1** Select [My Library] on the library tree and select [Save My Library] from the right-click menu.

**Step 2** The [Save My Library] dialog is displayed.

Click the [Browse] button to specify the saving destination.

The folder name of saved library is fixed to [MyLibrary].

If the library has already saved in the specified saving destination, the data is overwritten.

When you do not overwrite the data, specify another saving destination.

After specifying, click the [OK] button.

**Step 3** The [MyLibrary] folder is created in the specified folder and the library data registered in [My Library] and [My Favorites] are saved.

**Point**

**(1) Saved library file**

Do not execute operations such as add, delete, or change the name to saved [MyLibrary] folder of files in the folder.

The library may not be read properly.

**(2) Saving multiple libraries**

If the library has already saved in the specified saving destination, the data is overwritten.

When you do not overwrite the data, specify another saving destination.

**(3) Name of saved library file**

[My Favorites] folder is saved as [000\_My Favorites.my2].

The file name of [My Library] is determined according to the library folder number and name.

Example) When the library folder number is 1 and the name is abc

0 0 1 \_ a b c . m y 2

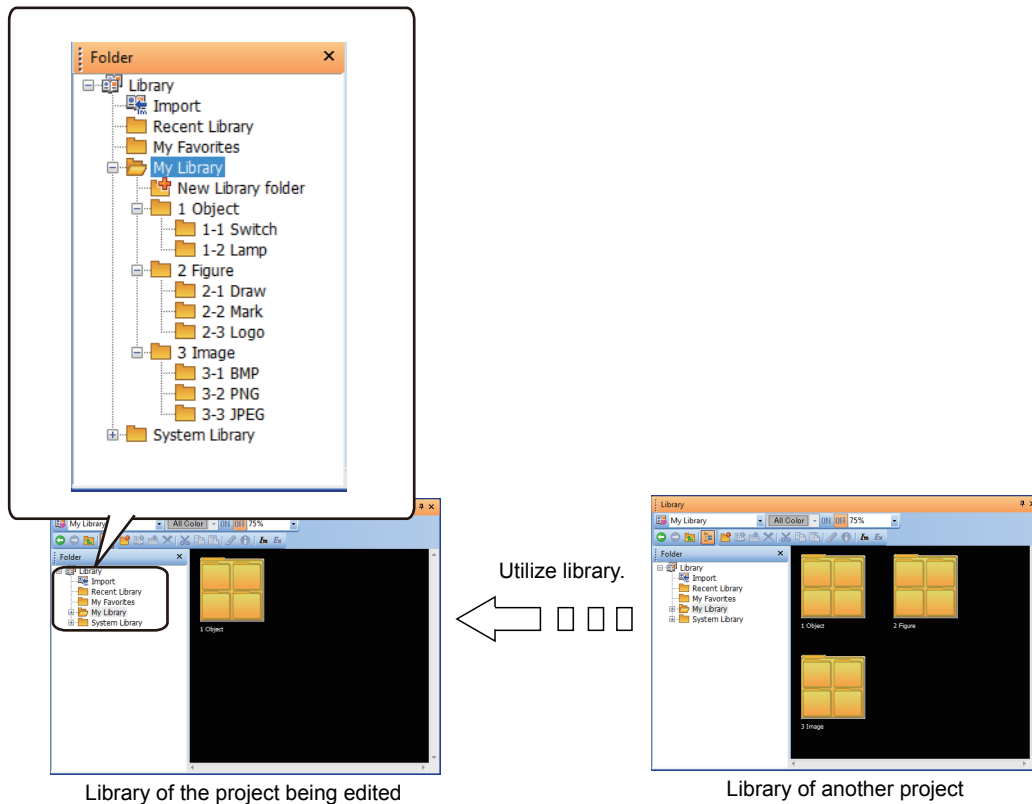

\_\_\_\_\_ Folder name

\_\_\_\_\_ Folder number

## 8 Opening the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can use [My Library] or [My Favorites] saved in other projects in the creating project.  
The current library is replaced with the library saved in other projects.

**Step 1** Select [My Library] on the library tree and select [Open My Library] from the right-click menu.

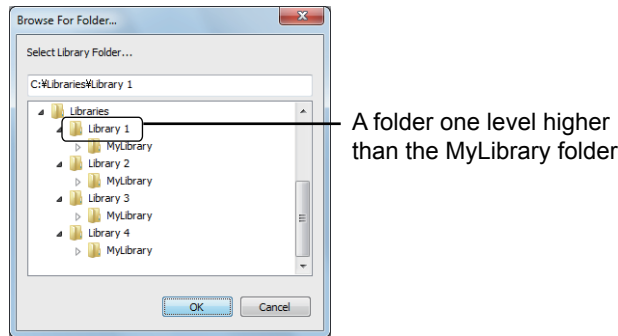

**Step 2** When the library is being edited, the dialog for confirming whether to save the library is displayed. Click the [Yes] button to save the library, click the [No] button not to save the library.

**Step 3** The [Open My Library] dialog is displayed. Click the [Browse] button.

- Step 4** Specify the folder where the library to be read is saved (the folder one level higher than [MyLibrary] folder). After specifying the folder, click the [OK] button to replace the library.

## ■ 9 Importing the library data

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can use the library data created in other projects by importing. In addition, imported image files can be registered as the library data. Up to 512 pieces of library data can be stored in one library folder. The following shows importable file types.

- [My Library File (\*.my2, \*.mlb, \*.lbe)]  
Exported library data sets.  
my2 file: Library data exported from GT Designer3 (GOT2000).  
mlb file: Library data exported from GT Designer3 (GOT1000).  
lbe file: Library data exported from GT Designer2.
- [Import Library File (\*.il2, \*.ilb)]  
Library files to be imported to the system library.  
Obtain library files by one of the following methods.
  - Go to the following directory: [(Path to the installation location of GT Designer3)\GTD3\_2000\App\LibraryData].
  - Contact your local distributor.
 The imported library files are deleted when you update the version of GT Designer3. Import the library files again as necessary.
- [Image File (\*.bmp, \*.jpg, \*.jpeg, \*.jpe, \*.png)]  
Image files used as the library data.

### (1) Importing the library data

- Step 1** Click the [Import] button.

- Step 2** Select [Files of type].

**Step 3** Select the file to be imported and click the [Open] button.

**Step 4** When a library folder having the same number as the imported library exists, [Overwriting the Library Folder Confirmation] dialog is displayed.

- When you overwrite the library data, click the [Yes] button.
- When you do not overwrite the library data, click the [No] button.  
The library folder is not imported.
- To abort all imports when importing multiple library folders, click the [Cancel] button.
- To change the folder number to be imported, click the [Save as Another Number] button.

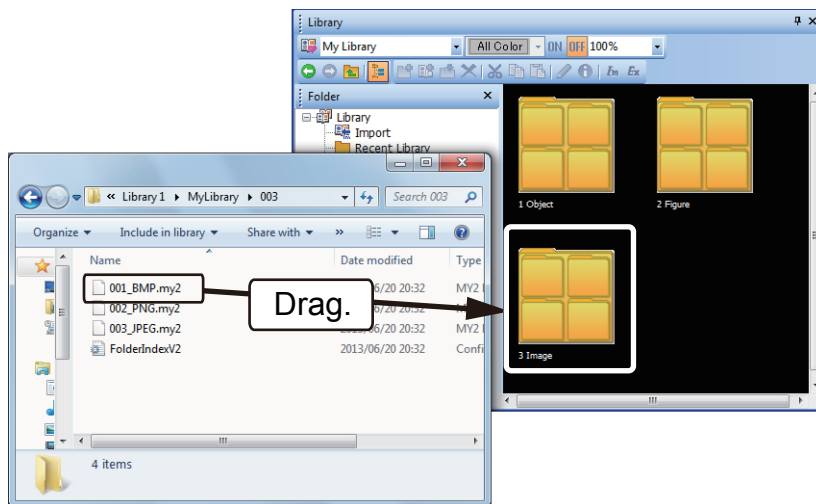

**Step 5** The my library file is added to [My Library] and the imported library file is added to [System Library]. When you import [My Favorites], unused library number is assigned automatically.

## Point

### Importing by drag operation

You can import the library folder by dragging.

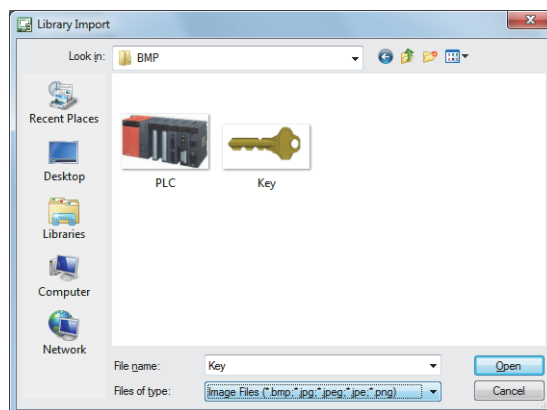

## (2) Importing image data

**Step 1** Click the [Import] button.

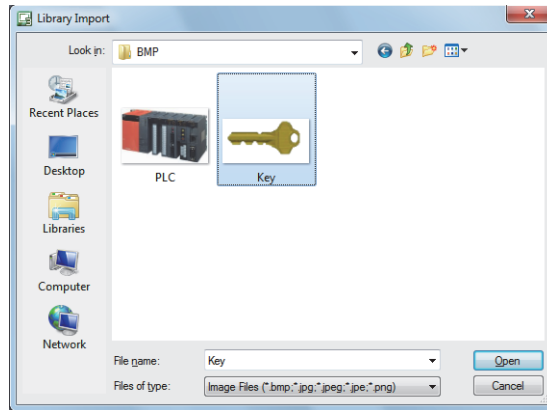

**Step 2** In the [Import Library] dialog, select [Image File (\*.bmp, \*.jpg, \*.jpeg, \*.jpe, \*.png)] for [Files of type].

- Step 3** Select the file to be imported and click the [Open] button.  
Specifying multiple files is also available.

- Step 4** In the [Choose import folder] dialog, select a library folder for saving the file, and click the [OK] button.

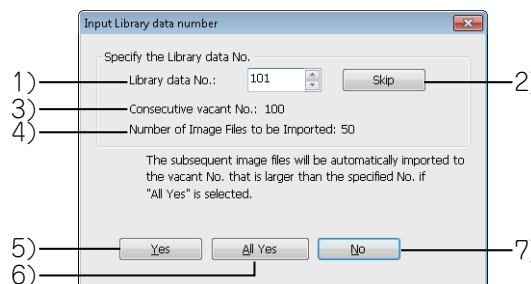

- Step 5** In the [Confirm Library data number specification] dialog, perform one of the following operations.

- To display the [Input Library data number] dialog, click the [Yes] button.  
For specifying the library data number, refer to the following.  
    ⇒ (a) [Input Library data number] dialog
- To save the file with a vacant library number assigned automatically, click the [No] button.  
When multiple files are selected, the [Confirm Library data number specification] dialog appears repeatedly for each file.
- To save all the files with vacant library numbers assigned automatically, click the [All No] button.
- To cancel the import process and close the [Confirm Library data number specification] dialog, click the [Cancel] button.

**(a) [Input Library data number] dialog**

Specify the library data number for the file to be imported.

1) **[Library data No.]**

Displays a vacant library data number.  
The number is changeable.  
The setting range is [1] to [512].

2) **[Skip] button**

Switches the library data number to the start number of the subsequent consecutive vacant numbers.

3) **[Consecutive vacant No.]**

Displays the number of consecutive vacant numbers, beginning with the current library data number.

4) **[Number of Image Files to be Imported]**

Displays the number of files to be imported.

5) **[Yes] button**

Saves the file with the vacant number specified in [Library data No.].

6) **[All Yes] button**

Saves the files with the consecutive vacant numbers, starting from the number specified in [Library data No.].

When the number of files to be imported exceeds that of the current consecutive vacant numbers, the subsequent vacant numbers are used to save all the files.

When [Library data No.] is set to 513 or larger, even if consecutive vacant numbers starting with a number less than 513 exist, the import process is stopped.

7) **[No] button**

Returns to the [Confirm Library data number specification] dialog.

■ 10 Exporting the library data

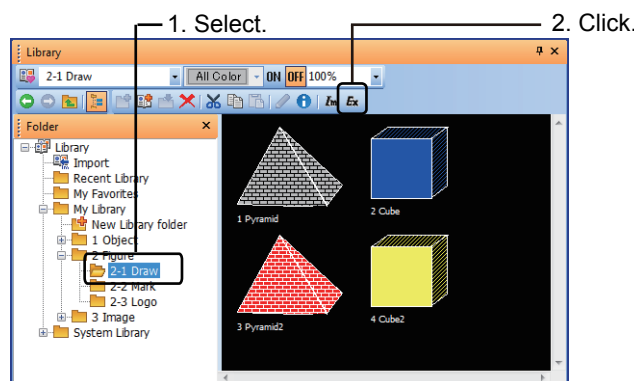

Export the library data registered in [My Library] in units of folder.

You can use the exported library data in other projects.

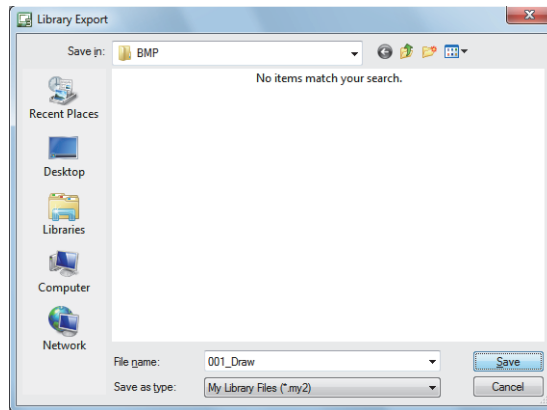

[My Favorites] and [System Library] cannot be exported.

**Step 1** Select the library folder to be exported from the library tree and click the [Export] button.

- Step 2** The [Export Destination Specification] dialog is displayed.  
 Set [Save in] and [File Name] and click the [Save] button.  
 The export is completed.

### 8.1.3 [Library] window

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Figures, objects and image data are stored in the library.  
 Select [View] → [Docking Window] → [Library List] from the menu to display the [Library] window.

1) Display bar

The display statuses of the library data area are displayed.

- **[Library Group]**  
Switches the library type to be displayed on the library data area. The selected library contents are displayed on the library data area.
- **[Library Folder Name]**  
Select the library folder to be displayed on the library data area from the libraries selected in the library group.
- **[Color]**  
Switch the color system of figures to be displayed on the library data area. This item is available when selecting [System Library] folder. The following shows the items to be selected.
  - [All]
  - [Blue]
  - [Red]
  - [Yellow]
  - [Green]
  - [Orange]
  - [Light Blue]
  - [Purple]
  - [Pink]
  - [Gray]
  - [Gold]
  - [Silver]
  - [Black]
  - [White]
- **[ON], [OFF]**  
Switches display or non-display of figures displayed on the library data area.
- **[Display format]**  
Switches the display format of figures displayed on the library data area. The following shows the items to be selected.
  - [150%], [100%], [75%], [50%], [25%]: Displays the library data with selected scale.
  - [Thumbnail]: Displays the library data with a certain size.
  - [Detail]: Displays the library data and attribute value with a certain size.

## 2) Move bar

- **[Back]**  
Moves to the previous library folder.
- **[Forward]**  
Moves to the next library folder.
- **[Upper]**  
Moves to a one level higher library folder.
- **[Tree View]**  
Switches display or non-display of a library tree.

## 3) Edit bar

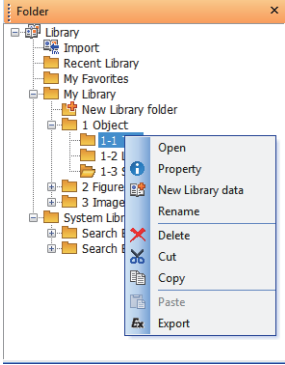

- **[Create Library Folder]**  
Creates a library folder.
- **[New Library Data]**  
Creates library data.
- **[Register Data]**  
Registers the data selected on the screen editor as the library data.
- **[Delete]**  
Deletes the selected library folder or library data.
- **[Cut]**  
Cuts the selected library folder or library data.
- **[Copy]**  
Copies the selected library folder or library data.
- **[Paste]**  
Pastes the copied library folder or library data.
- **[Edit]**  
Edits the selected library data.
- **[Edit Attribute]**  
Changes attributes of the library folder or the library data. When the library data in the system library is selected, the library data property is displayed.
- **[Import]**  
Imports library folders or image files.
- **[Export]**  
Exports the selected library folder.

## 4) Library tree area

Clicking the [Tree View] button on the toolbar switches display or non-display of trees.

Item	Description
Library tree configurations	<div data-bbox="884 210 1091 577" style="text-align: center;"> <p data-bbox="895 613 1145 645">User-created library folder</p> </div> <ul style="list-style-type: none"> <li>• <b>[Import]</b> Imports library folders or image files. →8.1.2 ■ 9 Importing the library data</li> <li>• <b>[Recently Used Library]</b> Displays the library data that is used by the user recently on the library data area.</li> <li>• <b>[My Favorites]</b> A folder where library data that is used frequently is registered. When you open the folder, registered library data is displayed on the library data area.</li> <li>• <b>[My Library]</b> A folder where user-created library folders are stored.</li> <li>• [Create Folder] Creates a library folder.</li> <li>• User-created library folder A folder where the library data is registered.</li> <li>• <b>[System Library]</b> A folder where figures, objects, templates that are registered in advance are stored.</li> <li>• [Search by Appearance] A folder where library data that is classified by appearance is stored. The same library data is stored in the [Search by Function] folder as well.</li> <li>• [Search by Function] A folder where library data that is classified by functions is stored. The same library data is stored in the [Search by Appearance] folder as well.</li> </ul>
Operation by buttons on the move bar and the edit bar	Operate the library tree by buttons on the move bar and the edit bar. →2) Move bar 3) Edit bar

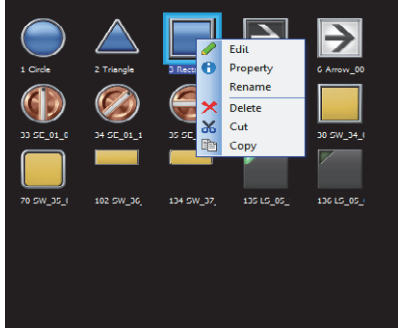

Item	Description
Right-click operation	<p>The library tree can be selected from the right-click menu.</p>  <ul style="list-style-type: none"> <li>• <b>[Open]</b> Displays the contents in the library folder to the library data area.</li> <li>• <b>[Unfold]</b> Displays the one hierarchy of contents in the library folder to the library data area.</li> <li>• <b>[Unfold All]</b> Displays the all hierarchies of contents in the library folder to the library data area.</li> <li>• <b>[Fold]</b> Folds the one hierarchy of library folder displayed in the library tree. Subfolders are not folded.</li> <li>• <b>[Fold All]</b> Folds the all hierarchies of library folder displayed in the library tree. Subfolders are folded.</li> <li>• <b>[Create Library Folder]</b> Creates a library folder in [My Library]. A deed-number is assigned to the created library folder automatically, and the name of the folder is [New Folder].</li> <li>• <b>[Save My Library]</b> Saves the library data registered to [My Favorites] and [My Library]. →8.1.2 ■ 7 Saving the library data</li> <li>• <b>[Open My Library]</b> Displays a library created in another project. →8.1.2 ■ 8 Opening the library data</li> <li>• <b>[Edit Attribute]</b> Displays the [Library Data Property] dialog. (The number and name of the library folder can be changed.) →8.1.2 ■ 6 Changing the attribute of the library data</li> <li>• <b>[Create Library Data]</b> Creates library data in [My Favorites] and [My Library] folder. →8.1.2 ■ 7 Saving the library data</li> <li>• <b>[Rename]</b> Changes the number and name of the library folder.</li> <li>• <b>[Delete]</b> Deletes a library folder. →8.1.2 ■ 4 Deleting the library data</li> <li>• <b>[Cut]</b> Cuts a library folder.</li> <li>• <b>[Copy]</b> Copies a library folder.</li> <li>• <b>[Paste]</b> Pastes a library folder.</li> <li>• <b>[Export]</b> Exports a library folder.</li> </ul>

## 5) Library data area

Displays the contents of the selected library data.

Figures are displayed or hidden by [ON] or [OFF] of the display bar.

Item	Description
Operation by buttons on the move bar and the edit bar	Operate the library data area by buttons on the move bar and the edit bar. →2) Move bar 3) Edit bar
Right-click operation	<p>The library data area can be operated from the right-click menu.</p>  <ul style="list-style-type: none"> <li>• <b>[Edit]</b> Edits the library data. →8.1.2 ■ 5 Editing the library data</li> <li>• <b>[Edit Attribute]</b> Changes the number and name of the library data.</li> <li>• <b>[Rename]</b> Changes the name of the library data.</li> <li>• <b>[Delete]</b> Deletes library data. →8.1.2 ■ 4 Deleting the library data</li> <li>• <b>[Cut]</b> Cuts library data.</li> <li>• <b>[Copy]</b> Copies library data.</li> <li>• <b>[Create Library Data]</b> Creates library data. →8.1.2 ■ 2 Registering the data in the library</li> <li>• <b>[Paste]</b> Pastes the copied library data.</li> <li>• <b>[Export]</b> Exports a library folder.</li> </ul>

## 8.2 Placing a Touch Switch

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Switch

You can set multiple actions of touch switches.  
Up to 147 actions can be set on a switch.  
⇒8.2.4 [Switch] dialog

### 2 Bit switch

Turns on or off a bit device.  
⇒8.2.5 [Bit Switch] dialog

- Turning on a specified bit device (Set)

- Turning off the specified bit device (Reset)

- Alternating the current status of the specified bit device (ON ← → OFF) (Alternate)

- Turning on the specified bit device only while the touch switch is touched (Momentary)

### 3 Word switch

Changes the value of a word device.  
⇒8.2.6 [Word Switch] dialog

- Writing the set value to a specified word device (Constant)
- Writing the set word device value to the specified word device (Indirect device)
- Writing the set word device value and the constant to the specified word device (Constant + Indirect device)

#### ■4 Go To Screen switch

Switches base screens and window screens.

⇒8.2.7 [Go To Screen Switch] dialog

- Switching to the screen with the base screen number previously displayed
- Switching to the screen with a specified screen number
- Switching to the screen with the specified screen number by turning on or off the specified bit device
- Switching to the screen with the specified screen number when the current value of the specified word device corresponds to the set conditional expression

#### ■5 Change Station No. switch

Switches the device of the currently monitored object to the same device with another station number.

⇒8.2.8 [Change Station No. Switch] dialog

- Switching the monitor target to a specified station number
- Switching the monitor target to the specified station number by turning on or off the specified bit device
- Switching the monitor target to the specified station number when the current value of the specified word device corresponds to the set conditional expression

#### ■6 Special function switch

Switches the screen to the utility screen, the extended function screen, or other screens.

⇒8.2.9 [Special Function Switch] dialog

#### ■7 Key window display switch

Displays a specified key window at a specified position.

Displays a cursor on a specified object.

⇒8.2.10 [Key Window Display Switch] dialog

#### ■8 Key code switch

Enables key input into the numerical input and text input, alarm display, data list display, and alarm control.

⇒8.2.11 [Key Code Switch] dialog

## ■9 Sound output

Plays or stops a sound.  
Mutes or unmutes the sound.

Set the sound output in [Add Action] in the [Switch] dialog.

⇒8.2.4 [Switch] dialog

Set a sound file used for the sound output in the [Sound File List] dialog.

⇒10.12.6 [Sound File List] dialog

### 8.2.1 Specifications of touch switch

The following shows the specifications of the touch switch.

#### ■1 Maximum number of objects arrangeable on one screen

Up to 1024 touch switches and other objects can be placed on one screen.

#### ■2 Switch action

Multiple functions can be set on one switch. (If the special function switch is set, multiple-function setting is disabled.)

Action order	Action type	Maximum number of actions	Change of action order *1
<p>Higher priority</p> <p>Lower priority</p>	Key window display	1	Unavailable
	Key code	16	
	Sound output	1	
	Word set	20	Available
	Bit set	20	
	Bit reset	20	
	Bit alternate	20	
	Bit momentary	20	
	Base	1	
	Overlap window 1	1	
	Overlap window 2	1	
	Overlap window 3	1	
	Overlap window 4	1	
	Overlap window 5	1	
	Superimpose window 1	1	Unavailable
	Superimpose window 2	1	
	Station No. Switching	21	
	Dialog window	1	Unavailable
	Total		147

\*1 The action order (except for the key window display, key code, and dialog) can be changed in the [Action] tab.

When multiple actions are set on one switch, the switch functions according to the above order by default.

Reading/writing data from/to devices are executed for all the set switch actions at once.

The order in which the bit, word, and double-word devices are handled in each controller is determined by the specifications of the controller.

Accordingly, the actions (word set, bit set, bit reset, bit alternate, and bit momentary) that are set for the switch may not be executed in the user-specified order.

If an error occurs while the GOT reads the data from the device, the GOT does not write the data to the device.

If an error occurs while the GOT writes the data to the device, the GOT writes the data to the device for the other assigned actions.

• Action example 1

When the following actions and action order are set, if an error occurs during the action of (1) Key code, the processing is interrupted.

Thus, the action of (2) Bit set is not executed.

(1)Key code: FFBBh (Save alarm contents to data storage)

(2) Bit set

• Action example 2

When the following actions and action order are set, if an error occurs while the GOT reads the data (the previous value of the bit) from the device for the action of (2) Bit alternate, the processing is interrupted.

Thus, neither (1) Word set nor (3) Bit set is executed.

(1) Word set

(2) Bit alternate

(3) Bit set

• Action example 3

When the following actions and action order are set, if an error occurs while the GOT writes the data (the alternated value of the bit) to the device in the action of (2) Bit alternate, the processing is not interrupted.

Thus, both (1) Word set and (3) Bit set are executed.

(1) Word set

(2) Bit alternate

(3) Bit set

■3 Minimum size of touch switch

The minimum size of the touch switch is 2 dots (height) × 2 dots (width).

■4 Hierarchy mode and history mode of the Go To Screen switch

(1) Hierarchy mode and history mode

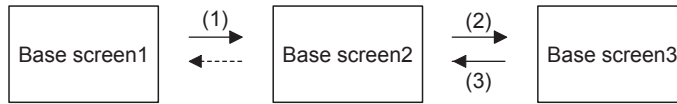

When using the previous screen display touch switch, select the hierarchy mode or history mode.

(a) Hierarchy mode

The screen returns to the base screen in the higher hierarchy when you touch the touch switch.

The screen can return to the base screen of up to the 10 level higher in the hierarchy.

Example)

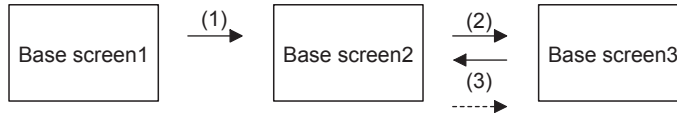

After the screen is switched in the order of (1) → (2) → (3), the screen returns to the base screen 1 in the higher hierarchy by touching the previous screen display touch switch on the base screen 2.

**(b) History mode**

The screen returns to the immediately previous base screen when you touch the touch switch. The screen can return to up to 10 previous base screens.

Example)

After the screen is switched in the order of (1) → (2) → (3), the screen returns to the immediately previous base screen 3 by touching the previous screen display touch switch on the base screen 2. (The screen returns to the base screen 2 then base screen 1 at every touch on the previous screen display touch switch on each screen.)

**(2) Hierarchy mode and history mode information**

When the GOT is powered off, the hierarchy and history information becomes invalid. When the GOT is powered off and on again, the screen does not return to the screen displayed before the power off even you touch the previous screen display touch switch. For details of how to save the history information in a memory card, refer to the following.  
 ⇒8.2.1 ■ 4 (4) Saving the history information in the memory card

**(3) How to switch the hierarchy mode and history mode**

The default setting is the hierarchy mode. The following shows how to use the previous screen display touch switch in the history mode.

**(a) Selecting the history mode on GT Designer3**

- Step 1** Select [Common] → [GOT Environmental Setting] → [Screen Switching/Windows] from the menu.
- Step 2** Select [History] in [Back Screen Switching].  
 ⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])

**(b) Switching to the history mode with the GOT internal device (GS450.b14)**

Turn on the GOT internal device (GS450.b14). Use the trigger action function to turn on the above device. For application examples, refer to the following.  
 ⇒8.2.1 ■ 4 (b) Example of settings configured to switch the modes with the GOT internal device

**(4) Saving the history information in the memory card**

In the history mode, the GOT can save a maximum of 10 screens in the history information to the memory card installed in the GOT. Once the GOT saves the history information, the screen can return to the previous screen displayed before the power off even the GOT is powered off and on again. The following shows how to save the history information in the memory card.

- Enabling the history information to be saved in the memory card in GT Designer3 settings.
  - Step 1** Select [Common] → [GOT Environmental Setting] → [Screen Switching/Windows] from the menu.
  - Step 2** Select [History] in [Back Screen Switching], and then select [Store history to the memory card].  
 ⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])
- Enabling the history information to be saved in the memory card with the GOT internal device (GS450.b13).  
 In the history mode (when GS450.b14 is on), turning on the GOT internal device (GS450.b13) enables the history information to be saved in the memory card.  
 For application examples, refer to the following.  
 ⇒(b) Example of settings configured to switch the modes with the GOT internal device

**(a) Operation overview**

After the GOT is powered on, the GOT reads the history information in the memory card at the first screen switching.

(1) After the screen is switched to the next screen, the GOT is powered off.

(2) After the GOT is powered on, touch the previous screen display touch switch in the history mode, and then the screen returns to the previous screen displayed before the power off.

(3) When the screen is switched to the next screen after the GOT is powered on, the screen also returns to a maximum of 10 previous screens displayed before the power off.

**(b) Example of settings configured to switch the modes with the GOT internal device**

Set the history mode in the first row in the [Project] tab of the [Trigger Action] dialog.

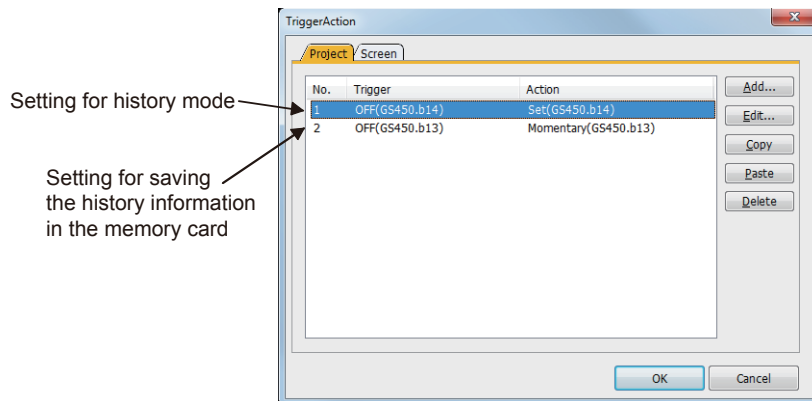

Immediately after the GOT is powered on, the mode is changed to the history mode.

For details of the trigger action, refer to the following.

⇒9.5 Operating a Device as a Trigger ([Trigger Action])

After screen transition is performed and then the mode is changed from the hierarchy mode to the history mode, the GOT loses the screen information and thus the screen may not return according to the history.

If you use the history mode, set the history mode immediately after the GOT is powered on.

## 8.2.2 How to use touch switch

---

The following shows how to use touch switches.

### ■ 1 Arranging touch switches

Arrange touch switches on a screen editor.

⇒6.5.1 Placing figures and objects

### ■ 2 Editing touch switches

Edit touch switches arranged on the screen editor.

⇒6.5.3 Editing figures and objects

### ■ 3 Setting touch switches

Configure the settings for touch switches arranged on the screen editor.

- Common setting of objects
  - ⇒6.5.5 Common setting for objects
- Settings of touch switches
  - ⇒8.2.4 [Switch] dialog
  - 8.2.5 [Bit Switch] dialog
  - 8.2.6 [Word Switch] dialog
  - 8.2.7 [Go To Screen Switch] dialog
  - 8.2.8 [Change Station No. Switch] dialog
  - 8.2.9 [Special Function Switch] dialog
  - 8.2.10 [Key Window Display Switch] dialog
  - 8.2.11 [Key Code Switch] dialog

## 8.2.3 Precautions for a touch switch

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for the touch switch.

### 1 Precautions for drawing

#### (1) Reducing basic figures in size

When a basic figure is set on the touch switch, reducing the touch switch in size may not display the figure properly.

#### (2) Valid range of the touch switch

The unit for the valid area of the touch switch is one dot.

Right-click the mouse on the object, then [Edit Touch Area] appears. You can set the shape and valid area of the touch switch individually.

Also, the valid area of the touch switch fits in the object frame by executing [Self-adjust].

→6.6.14 [Edit Touch Area]

#### (3) Superimposing the touch switch and the object

##### (a) Touch switches that cannot be superimposed

Do not superimpose the following touch switches on another touch switch.

Simultaneous press is prohibited (ON priority) for the following touch switches even if [Simultaneous Press] is not set.

The following touch switches do not function when superimposed on other touch switches or objects for which touch operation is available.

Key code <sup>*1</sup>	Description	Key code type
FFBCh	Displaying ladder	Alarm Display
-	Special function switch	-

##### (b) Superimposing the key window display switch and other touch switches

In the following cases, other touch switches superimposed with the key window display switch do not function.

- When another touch switch is arranged under the key window display switch by using the superimpose window or the set overlay screen
- When the object ID of the superimposed touch switch is larger than that of the key window display switch

If the touch switch does not function, arrange it on the key window display switch by using the superimpose window or the set overlay screen.

For superposition by using the superimpose window or the set overlay screen, refer to the following.

→6.5.5 ■ 3 Superimposition

##### (c) Go To Screen switch or switches for which the screen switching function is set

For superposition on the following objects, when [When a finger is touched (ON synchronous)] is set for [Action of Go To Screen Switch] in GOT Environmental Setting, arrange the objects so that the screen switching is functioned last.

Even if the following objects are arranged so that they function after the screen switching, they do not function.

- Touch switch
- Numerical input
- Text input

For the action order of the superimposed objects, refer to the following.

→6.5.5 ■ 3 Superimposition

#### (4) Using parts as touch switch shapes

For the GOT to which the project has been written, when editing only parts data or deleting the parts data which has been written to the GOT, check the setting of the touch switch shape again.

If the size of the parts is changed, the touch switch may not be displayed properly.

If the parts data is deleted, only the text is displayed but not the touch switch shape.

If the parts data has been updated, the data of all the touch switches and lamps which uses the updated parts needs to be updated. Therefore, saving the project data or opening the communication dialog may need longer time than usual.

#### (5) Setting [Repeat the operation while the switch is pressed]

(a) Precautions for touch switches for which operation repeat is set

Touch switch type	Precaution
Switch	When the operation repeat is set for the switch, do not set the special function, the screen switching function, or the station No. switching function. If the special function, the screen switching function, or the station No. switching function is set, the operation repeat setting is invalid.
Bit switch	If bit momentary is set for the action, the operation repeat setting is invalid.
Word switch	None
Key window display switch	In the following cases, the operation repeat is aborted. • A key window is displayed while the operation is repeated. • A key window is already displayed.
Key code switch	If a dialog window is displayed while the operation is repeated, the operation repeat is aborted.

(b) Touching simultaneously multiple touch switches for which the operation repeat is set

When multiple touch switches are touched simultaneously for which the operation repeat is set, only the operation of the last touched switch is repeated.

(6) Converting the touch switch to lamp

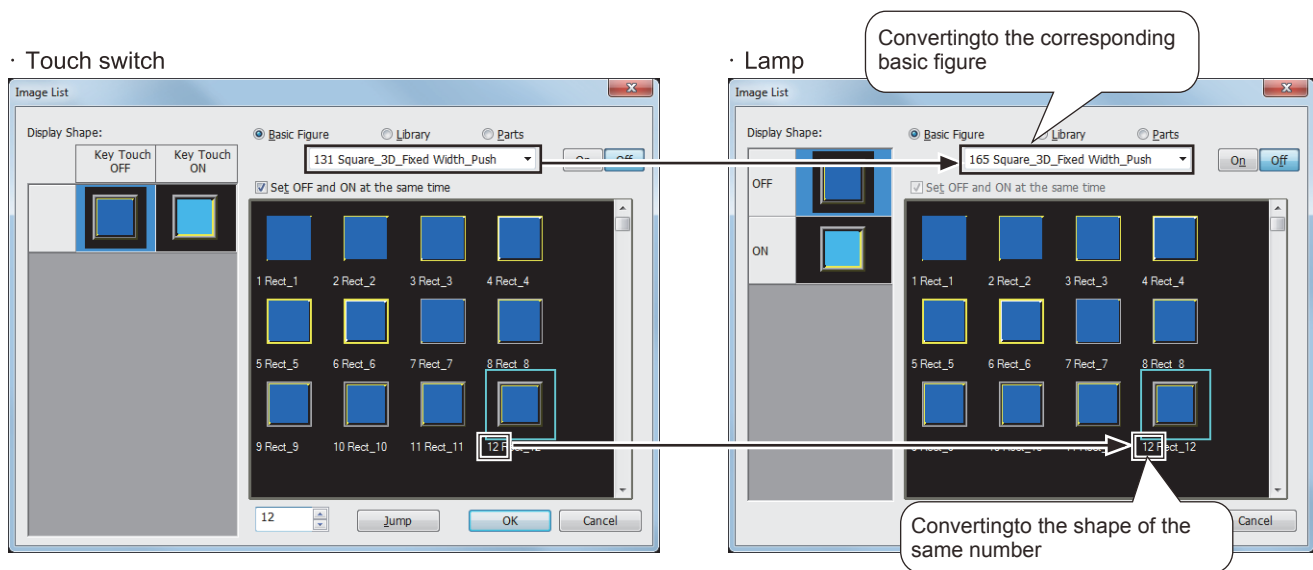

(a) Settings to be deleted

When the touch switch has been converted to a lamp, some of the settings are deleted.  
The deleted settings are applied as the default setting for the lamp.

(b) Converting basic figures

For converting the basic figure from the touch switch to the lamp, the figure of the switch is converted to the corresponding figure with the same number on the lamp.

Example: Converting the touch switch to the lamp when the basic figure [Square\_3D\_Fixed Width \_Push] is set for the touch switch

When the touch switch is converted to the lamp under the following conditions, the default basic figure is set.

- No basic figure on the lamp has the same number as the basic figure set for the touch switch.
- The basic figure [Toggle] is set for the touch switch.
- The basic figure [Selector] is set for the touch switch.

Even if the shapes have the same reference number, there may be difference between the touch switch and the lamp. Check the shape after the conversion to see if it can be properly used.

(c) Restoring the lamp to the touch switch after the conversion

To restore the lamp to the switch after conversion, select [Edit] → [Undo] from the menu.

Even if the lamp has been converted back to the touch switch, the previous settings cannot be restored.

If the [OK] button is not clicked, clicking the [Cancel] button cancels the conversion even after the [Convert to Lamp] button is clicked.

(d) Types of the lamp to be converted to

The type of the lamp to be converted to differs depending on the setting of [Lamp (Timing to change shape/text)].

- When [Key Touch State] or [Bit-ON/OFF] is selected  
The touch switch is converted to a bit lamp.
- When [Word Range] is selected  
The touch switch is converted to a word lamp.

If no setting item for [Lamp (Timing to change shape/text)] exists, the touch switch is converted to the bit lamp.

### (7) Mode of the word switch

When [Data Addition] or [Data Subtraction] is set for [Mode] of the word switch, the GOT with an old basic system application may not operate.

In such a case, install the latest basic system application to the GOT.

### (8) Channel No. setting of the special function switch

When the project data is saved or the GOT type is changed, if the channel No. set for the special function switch does not exist, the channel No. is automatically changed.

When either of the following functions is set for the special function switch, check the channel No. of the special function switch.

- Sequence program monitor (ladder)
- Sequence program monitor (SFC)

### (9) Multiple key code settings

The following key codes must be set last, as the other key codes will not be executed if set after them.

Key code	Description	Key code type
000Dh	Writes to the device and moves the cursor.	Numerical input/Text input
001Bh	Hides the cursor.	Numerical input/Text input
0080h	Moves the cursor to the right.	Numerical input/Text input
0081h	Moves the cursor to the left.	Numerical input/Text input
0082h	Moves the cursor upward.	Numerical input/Text input
0083h	Moves the cursor downward.	Numerical input/Text input
0084h	Converts to KANJI	Numerical input/Text input

FFB8h	Displays the detail/Moves to the lower hierarchy.	Alarm Display
FFB9h	Resets the selected alarm data.	Alarm Display
FFBBh	Saves the alarm details to the data storage.	Alarm Display
FFC2h	Moves to the upper hierarchy.	Alarm Display

## ■2 Precautions for use

### (1) Simultaneous 2-point press

#### (a) For GT27

GT27 supports the simultaneous touch of up to two points.

For safety, you can create a screen that operates by touching two touch switches simultaneously.

The areas where the 2-point press is inactive are displayed with broken lines.

Two-point press inactive area

For the display method of the two-point press inactive area, refer to the following.

→2.6.6 Displaying the two-point press inactive area

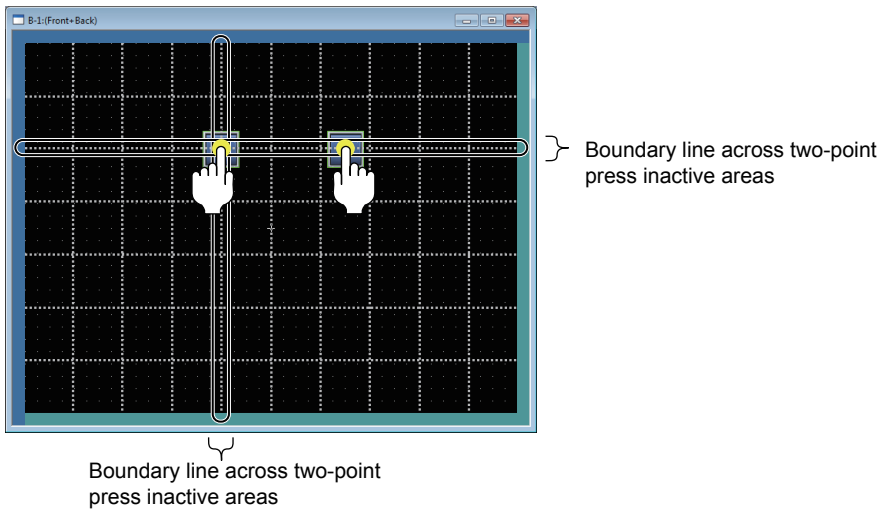

11.10.5 ■ 1 [Options] dialog ([View] tab)

When placing touch switches for the simultaneous 2-point press, note the following.

- Do not place touch switches for the simultaneous 2-point press in one two-point press inactive area. If you simultaneously touch two points in one two-point press inactive area, an untouched area may respond.

- If you simultaneously touch two points on a boundary line across two-point press inactive areas, the touch switches may not function.

- If you simultaneously touch one point on a boundary line across two-point press inactive areas, and another point in a two-point press inactive area adjacent to the line, the touch switches may not function.

Two-point press inactive areas adjacent to a boundary line

Two-point press inactive areas adjacent to a boundary line

**(b) For GT25, GT23, and GT21**

The simultaneous 2-point press is not available.  
 Do not touch two or more points on the GOT screen simultaneously.  
 The simultaneous touch of two or more points may cause the untouched area to respond.

**(2) Setting a delay**

**(a) When [Press Twice] is set**

If the touch switch has been touched only once and another monitor screen is operated, [Press Twice] does not function properly.

**(b) When [Press Twice] and the operation repeat are set**

The operation repeat is invalid at the first touch.  
 The operation repeat is valid at the second touch.

**(3) Setting the bit set, bit reset, or bit alternate together with screen switching and station No. switching**

When the bit set, bit reset, or bit alternate action is set together with the screen switching or station No. switching, the timing of the screen switching and station No. switching differs depending on the status of GS450.b12.  
 Set GS450.b12 before the first action of the touch switch.  
 This enables the status of the device after screen switching to be changed.

Setting item	GS450.b12	
	ON	OFF
Screen switching or Station No. switching + Bit set	When the finger is released from the touch switch	When the finger touches the touch switch
Screen switching or Station No. switching + Bit reset	When the finger is released from the touch switch	When the finger touches the touch switch
Screen switching or Station No. switching + Bit alternate	When the finger is released from the touch switch	When the finger touches the touch switch
Screen switching or Station No. switching + Bit momentary	When the finger is released from the touch switch	
Screen switching or Station No. switching + Word	When the finger touches the touch switch	When the finger touches the touch switch

The following shows an example in which GS450.b12 automatically turns on after the GOT is powered on by using the trigger action.

• Setting example of the trigger action

Set the GOT internal device (Always ON device: GS0.b4) as a trigger in the first low in the [Project] tab of the [Trigger Action] dialog so that GS450.b12 is on when the trigger is on.

After the GOT is powered on, the trigger action turns on GS450.b12.

For the details of the trigger action, refer to the following.

→ 9.5 Operating a Device as a Trigger ([Trigger Action])

Example) The following actions are set simultaneously for the touch switch

Bit alternate: M100

Screen switching: The screen switches to base screen 2 when M100 is on.

Screen switching: The screen switches to base screen 1 when M100 is off.

#### (a) Switching action when GS450.b12 is on

After the bit set, bit reset, or bit alternate action is executed, the screen or the station number is switched when you release the finger from the switch. The GOT operates with the value after the bit set, bit reset, or bit alternate action.

#### (b) Switching action when GS450.b12 is off

At the same timing as the bit set, bit reset, or bit alternate action, the screen or the station number is switched. The GOT operates with the value before the bit set, bit reset, or bit alternate action.

#### (4) When [Repeat the operation while the switch is pressed] is set

##### (a) Irregular operation repeat cycle

When communication time is longer than the preset operation repeat cycle, the cycle may be irregular.

To correct the cycle, take measures including setting a longer time for start delay or repeat cycle or reducing the number of monitor target devices.

Example) When the operation repeat is applied to the word switch that adds one to the device value

Setting item	Setting
Device	D100
Constant	0
Indirect device	D100

- When the operation is repeated normally  
Every time the touch switch is operated, one is added to the device value.

- When the operation repeat cycle is irregular  
Even if the touch switch is operated, the device value may not be increased.

**(b) Abort of the operation repeat**

If a dialog window is displayed while the operation is repeated, the operation repeat is aborted.

**(c) Duration of touch on the touch switch and the process of writing to the device**

While the value is written to the device, the GOT recognizes that the touch switch is touched.

Thus, even if the finger is released from the touch switch within the preset start delay time, a long device writing process may cause the GOT to recognize that the switch is touched longer than the start delay time, and which may repeat the operation.

In this case, set a longer start delay time.

**(d) Switching action while the touch switch is touched**

Security switching, language switching, or station No. switching is not executed while the touch switch is touched.

When the trigger device value for security switching, language switching, or station No. switching has been changed while the touch switch is touched, the switching is executed when the finger is released from the switch.

**(5) Hierarchy mode and history mode of the Go To Screen switch**

- When the history information is saved in the memory card, do not change the value of the screen switching device at the controller side while the GOT is powered off.  
While the GOT is powered off, the history information is not saved. Therefore, the screen does not return according to the screen transition controlled on the controller side.
- Once the mode is changed from the hierarchy mode to the history mode, the mode does not return to the hierarchy mode until the GOT is powered off even if GS450.b14 is turned off.  
This applies to GS450.b13.
- To change the mode from the hierarchy mode to the history mode using the GOT internal device (GS450.b14), select the hierarchy mode in GT Designer3 settings.  
When the history mode is selected in GT Designer3 settings, the on and off status of GS450.b14 is invalid.

## 8.2.4 [Switch] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Multiple functions can be assigned to one touch switch.

- Step 1** Select [Object] → [Switch] → [Switch] from the menu.
- Step 2** Click the position where you arrange the switch.
- Step 3** Double-click the arranged switch to display the setting dialog.

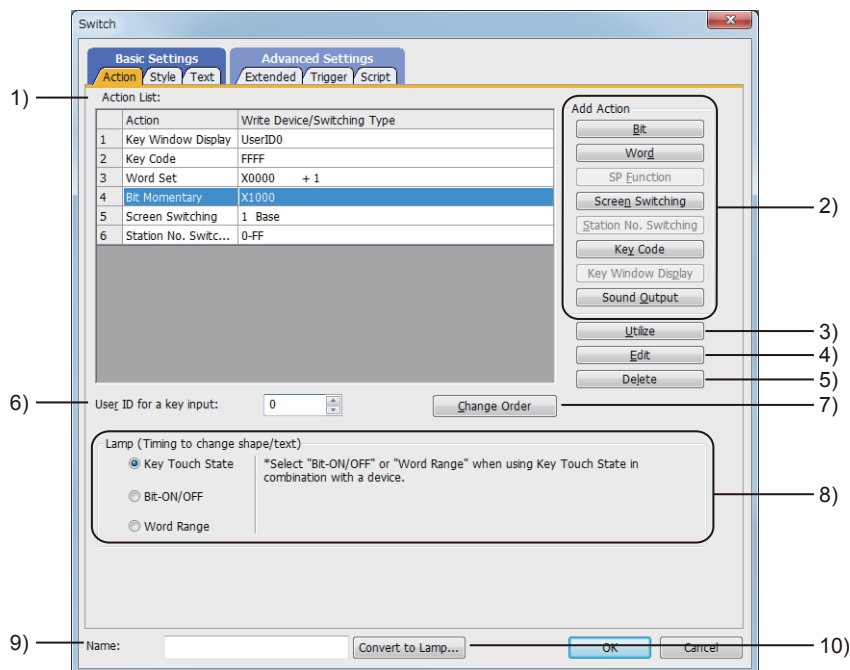

- ⇒ ■ 1 [Action] tab
- 2 [Style] tab
- 3 [Text] tab
- 4 [Extended] tab
- 5 [Trigger] tab
- 6 [Script] tab

### ■ 1 [Action] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

- ⇒ 10.18.2 ■ 2 Usable functions

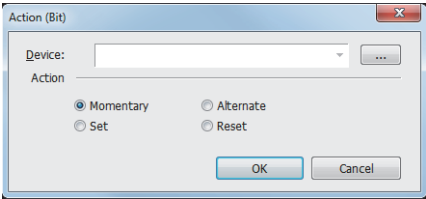

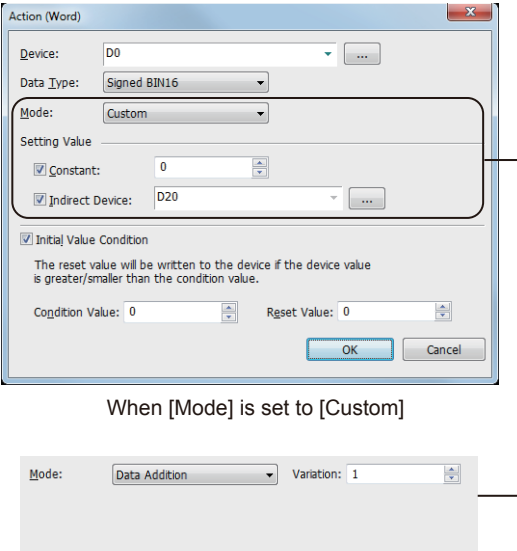

#### 1) [Action List]

Displays the actions assigned to the switch in the list.

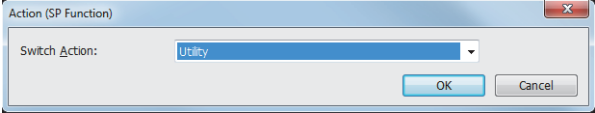

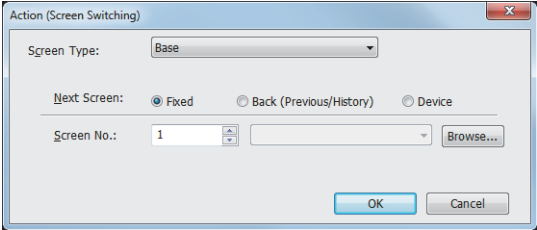

#### 2) [Add Action]

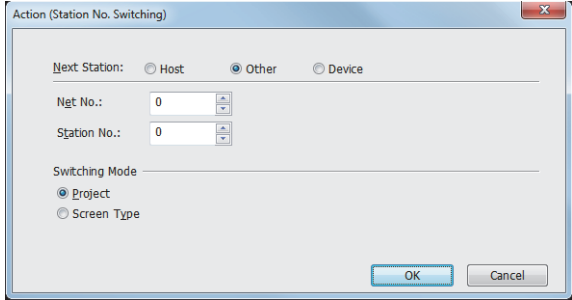

Select actions to be added to [Action List].

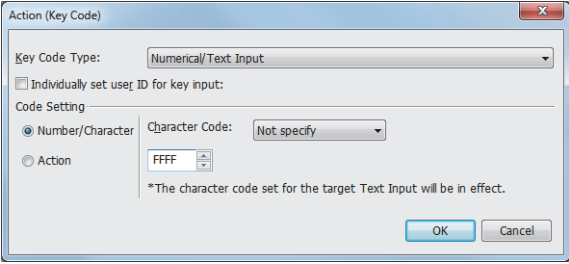

Item	Description

Item	Description
[Sound Output] button	<p>Not available to GT2505-V and GT25HS-V. Set the sound output function for the switch in the [Action (Sound Output)] dialog.</p>  <p>When [Play] is selected for [Action Type]</p> <p>When [Stop] is selected for [Action Type]</p> <p>When [Mute] is selected for [Action Type]</p> <ul style="list-style-type: none"> <li>• <b>[Action Type]</b> Select an action of the sound output. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· [Play]</li> <li>· [Stop]</li> <li>· [Mute]</li> </ul> </li> <li>• <b>[File No.]</b> Set this item when selecting [Play] for [Action Type]. Set the sound file to play. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· [Fixed]: Select this item to specify a sound file number. After selecting this item, specify the file number of a registered sound file in the [Sound File List] dialog. The setting range is [1] to [500].</li> <li>· [Device] Select this item to specify a sound file number with the value of a specified device. After selecting this item, specify a device.</li> </ul> </li> <li>• <b>[Detail Setting]</b> Set this item when selecting [Stop] or [Mute] for [Action Type]. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· [Stop currently playing sound]: Stops the current playback. The standby sound file plays subsequently.</li> <li>· [Stop all sound]: Stops the current playback and cancels all standby sound files.</li> <li>· [Mute]</li> <li>· [Unmute]</li> <li>· [Mute/unmute]</li> </ul> </li> </ul>

### 3) [Utilize] button

Select an action to be utilized from [Action List] and then click the [Utilize] button, the selected action is copied and added to [Action List].

### 4) [Edit] button

Select an action to be edited from [Action List] and then click the [Edit] button, the set action is edited.

### 5) [Delete] button

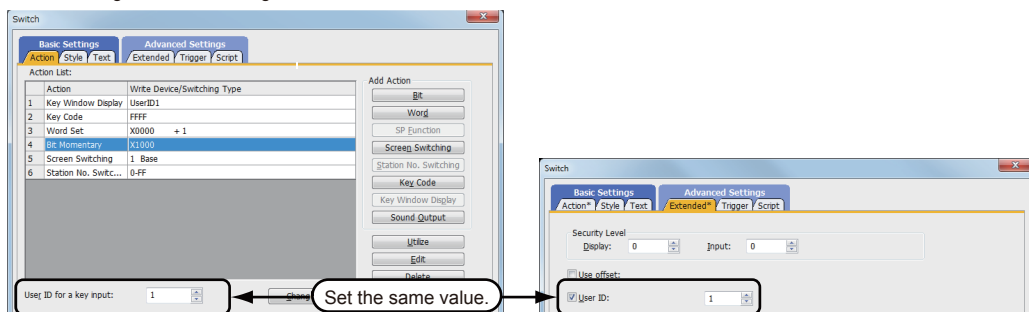

Select an action to be deleted from [Action List] and then click the [Delete] button, the set action is deleted.

### 6) [User ID for a key input]

To operate the alarm or historical trend graph by the key code, set the ID to specify the object for the key code input. The setting range is [0] to [65535].

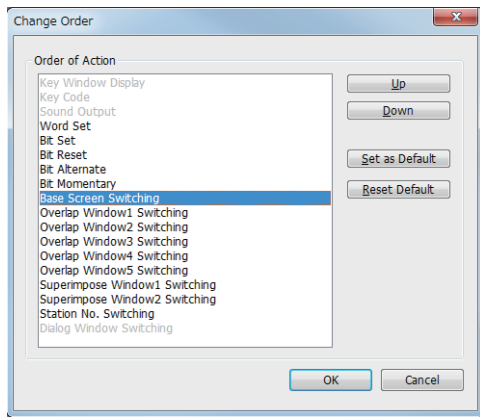

Set [User ID for a key input] of the switch and [User ID] of each object to be the same.

Switch setting and alarm setting

### 7) [Change Order] button

Changes the action order in the [Change Order] dialog.

• **[Order of Action]**

The actions are executed in the order from the top. The key code is executed first. Therefore the action order cannot be changed.

You can change the order of the third and subsequent actions.

- [Up] button: Places the order of the selected action to one earlier.
- [Down] button: Places the order of the selected action to one later.
- [Set as Default] button: Sets the order changed by the [Up] button or the [Down] button as the default. (This item cannot be used if an operation panel is set.)
- [Reset Default] button: Returns the order changed by the [Up] button or [Down] button to the default. (This item cannot be used if the operation panel is set.)

8) **[Lamp (Timing to change shape/text)]**

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation  
Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device  
Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

⇒8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. ⇒6.1.1 How to set devices

Item	Description
[Word Range]	<p>When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings.</p> <ul style="list-style-type: none"> <li>[Device]: Set the word device. →6.1.1 How to set devices</li> <li>[Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real]</li> <li>[ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. →6.2.2 Setting Trigger Types</li> </ul>

## 9) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 10) [Convert to Lamp] button

Converts the object type to the lamp.

→8.2.2 How to use touch switch

## 2 [Style] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

When [None] is selected for [Shape]

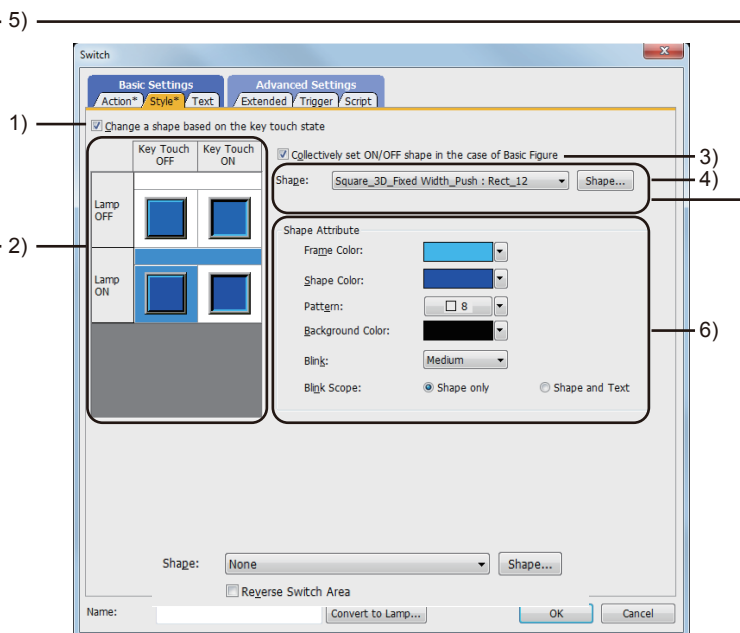

When [Key Touch State] is selected for [Lamp (Timing to change shape/text)]

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

([Change a shape based on the key touch state] is not selected)

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

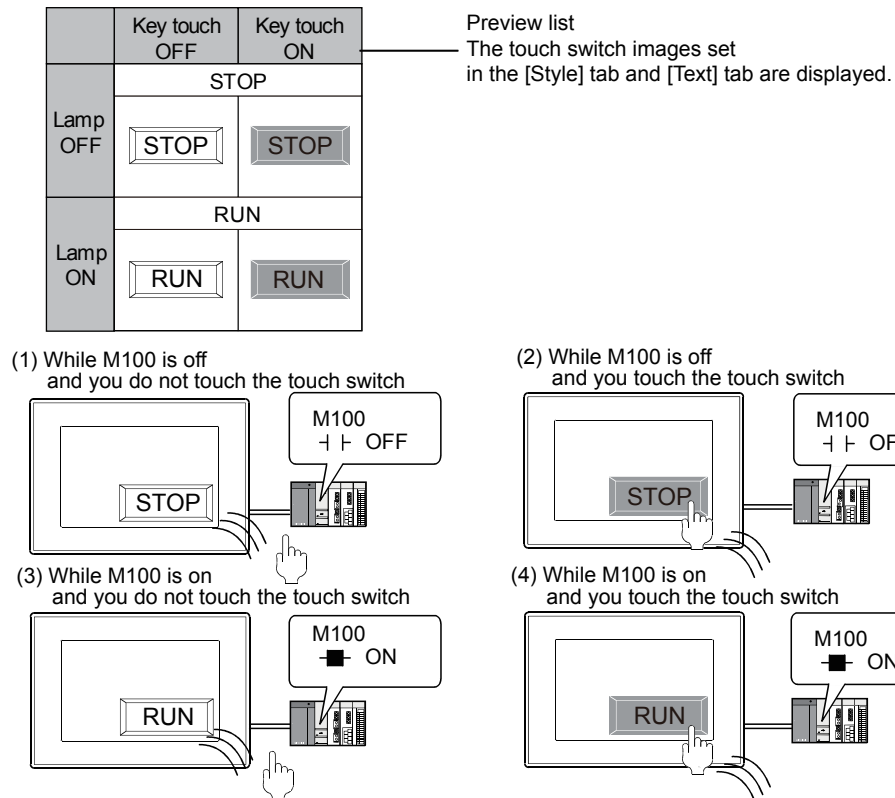

([Change a shape based on the key touch state] is selected)

### 1) [Change a shape based on the key touch state]

This item is available when [Bit-ON/OFF] or [Word Range] is selected for [Lamp (Timing to change shape/text)]. You can set four different images using the lamp on and lamp off status in combination with the key touch on and key touch off status.

According to the key touch on and key touch off status, the shape can be switched. However, the text cannot be switched.

The following shows an example of the combination of image switching by the device status with shape switching by key touch status.

## 2) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extend] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extend] tab.

## 3) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

## 4) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

→6.5.5 ■ 1 Setting object shapes

## 5) [Reverse switch area]

### **GOT Graphic Ver.1**

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

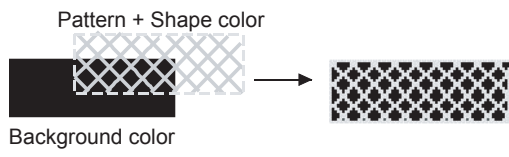

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

## 6) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.

Item	Description
[Pattern], [Background Color]	<p>Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.</p> <p>Example) Shape color:  Pattern:  Background color:  </p>
[Blink]	<p>Select the blinking speed of the touch switch. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	<p>Select an area to be blinked. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Shape and Text]</li> <li>• [Shape only]</li> </ul>

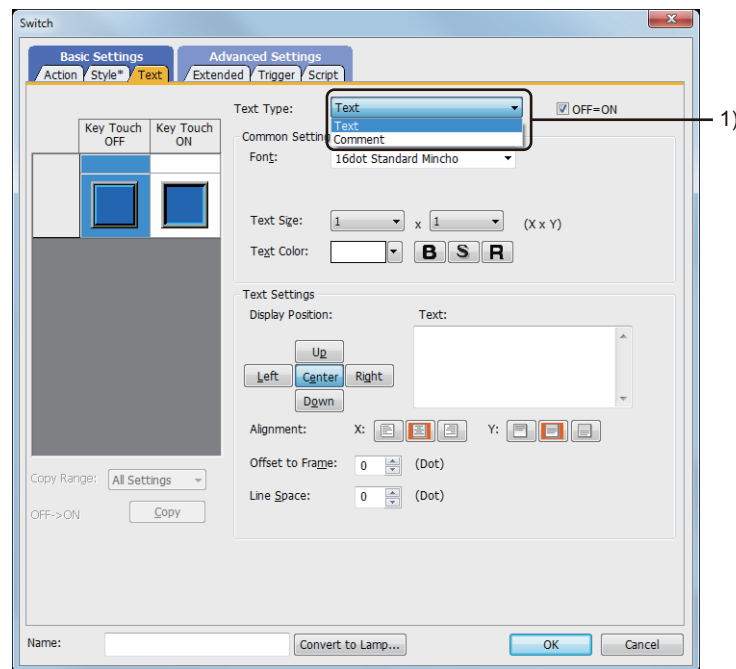

### ■ 3 [Text] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	<p>Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. → 5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group</p>
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→ 5.8 Comment Setting ([Comment])

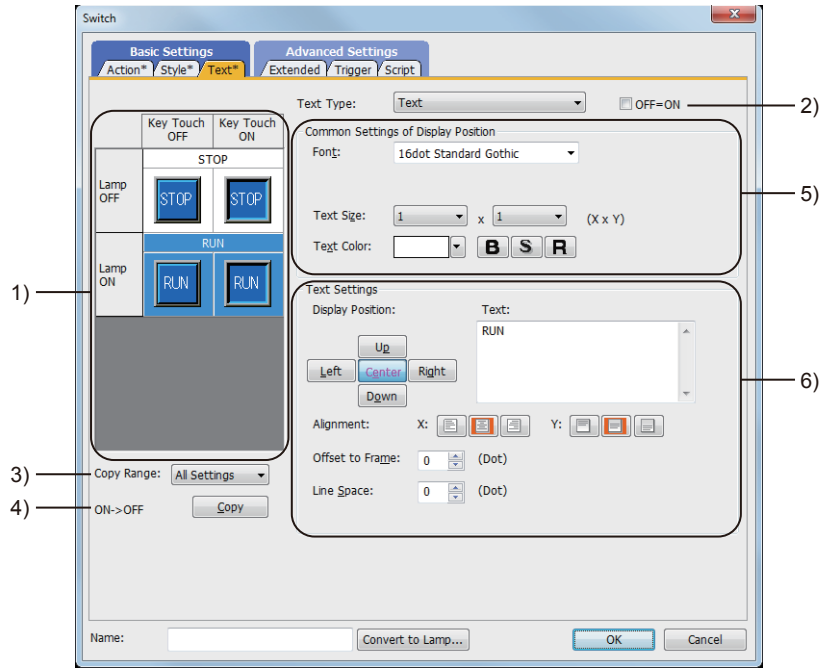

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→ (1) [Text]

(2) Comment

(1) [Text]

1) **Preview list**

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

2) **[OFF=ON]**

Selecting this item applies the same setting to both when the switch is on and off.

3) **[Copy Range]**

Set a range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

4) **[OFF → ON], [ON → OFF]**

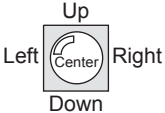

Copies the text setting.

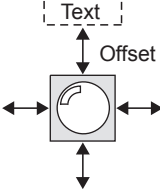

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Common Setting of Display Position]

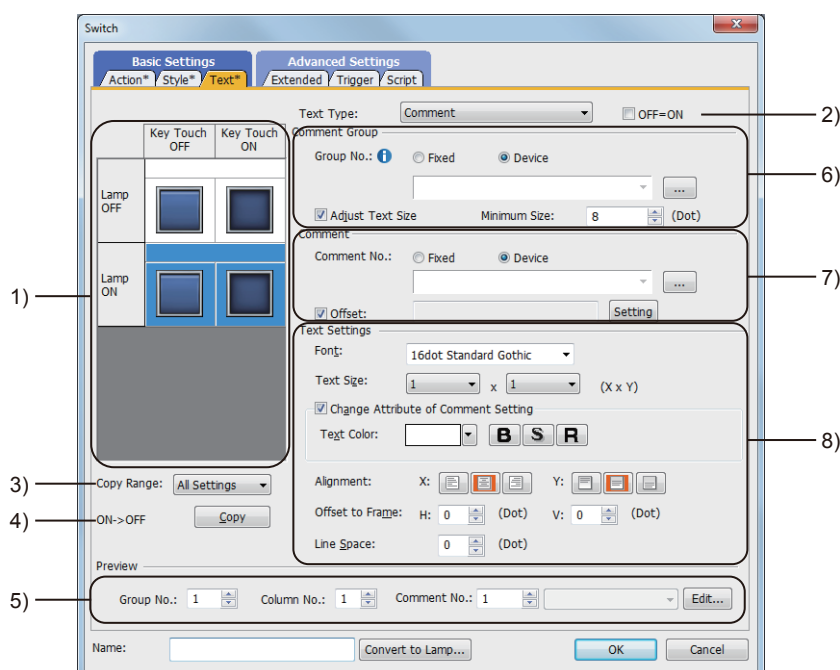

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <p>[Underline] button [Italic] button</p> <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. ⇒1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <p>[Raised] button [Solid] button [Bold] button</p> <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. ⇒6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

### 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set a vertical or horizontal position of the text.
[Offset to Frame]	Set an offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set a space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab.

The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

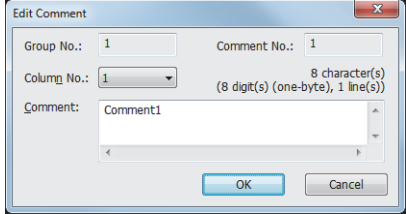

## 5) [Preview]

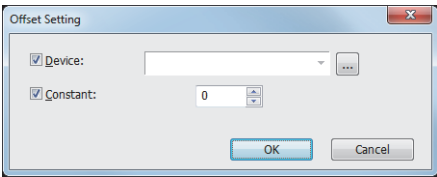

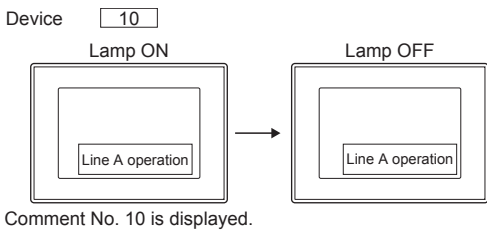

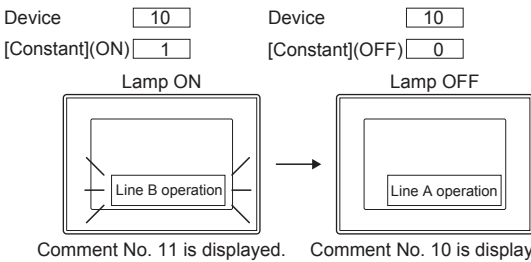

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

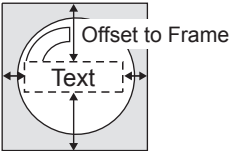

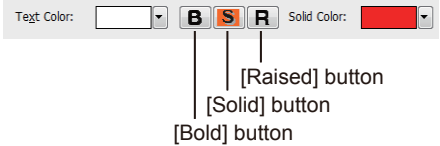

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description
[Offset]	<p>Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices</p> <p>This setting is available only when [Device] is selected for [Comment No.].            Click the [Setting] button, and set the offset in the [Offset Setting] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Device]</b>            Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices</li> <li>• <b>[Constant]</b>            Set this item to add another value to the value of [Device] according to the indication status (on or off) of the lamp. After selecting this item, set the value to be added in the lamp on and off status.           <ul style="list-style-type: none"> <li>• When only [Device] is set                The comment of the same number as the value of [Device] is displayed regardless of the lamp status.</li> </ul> </li> </ul>  <ul style="list-style-type: none"> <li>• When [Device] and [Constant] are set            When the lamp is on, the comment of the same number as the value derived from the addition of [Device] + [Constant](ON) is displayed.            When the lamp is off, the comment of the same number as the value derived from the addition of [Device] + [Constant](OFF) is displayed.</li> </ul> 

## 8) [Text Settings]

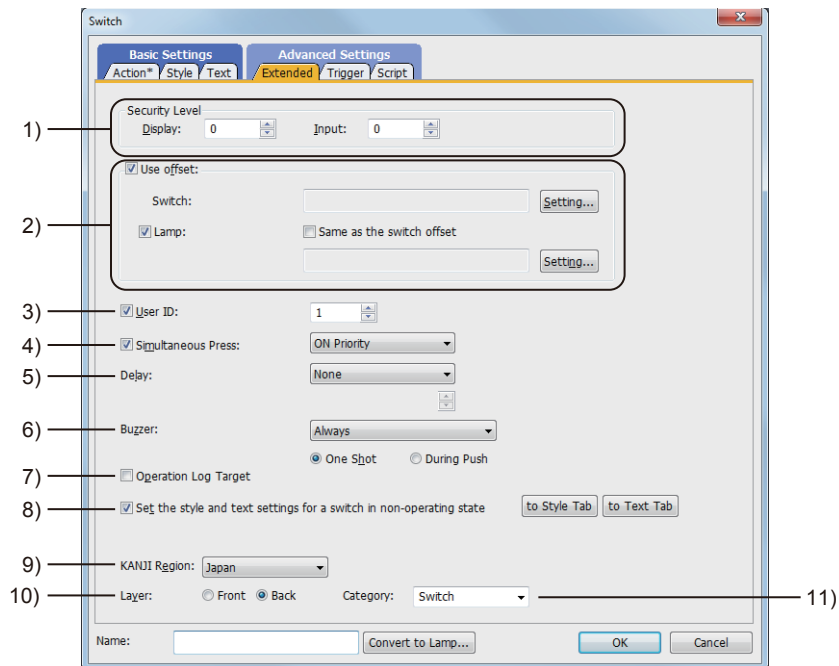

Item	Description
[Font]	<p>Select the font of the displayed text.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>This item is selectable when [Group No.] is set to [Fixed]. [Line Space]	<p>Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).</p>
[Change comment attributes]	<p>Select this item to change the comment attribute. Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• <b>[Text Color]</b> Set the text color. →6.4 Color Settings</li> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> <li>• <b>[Solid Color]</b> When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

→6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. →6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. →6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [User ID]

Select this item to set a user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

### 4) [Simultaneous Press]

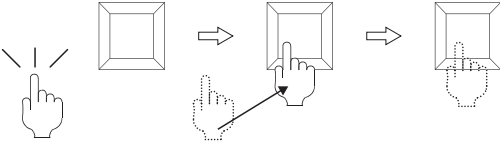

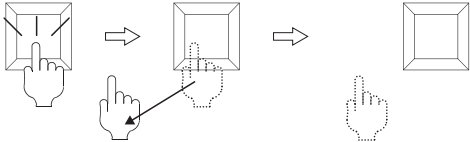

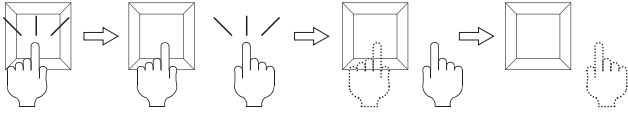

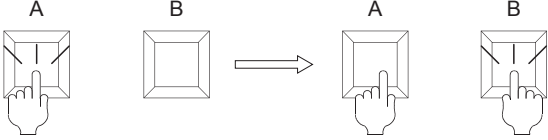

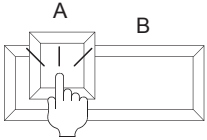

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
<ol style="list-style-type: none"> <li>1. Touch the touch invalid area of the touch switch.</li> <li>2. Slide the finger to the touch valid area of the touch switch.</li> <li>3. Release the finger from the touch switch.</li> </ol> 	<p>At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.</p>	<p>At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch valid area of the touch switch.</li> <li>2. Slide the finger to the touch invalid area of the touch switch.</li> <li>3. Release the finger from the GOT screen.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch.</li> <li>2. Touch the area where no object is arranged.</li> <li>3. Release the finger from the touch switch.</li> <li>4. Release the finger from the area where no object is arranged.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch A for which the simultaneous press is disabled.</li> <li>2. Touch the touch switch B.</li> </ol> <p>(The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.)</p> 	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>
<p>Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other.</p> 	<p>Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.</p>	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.

The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.

Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.

Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

Touch the valid area and invalid area of the touch key simultaneously.

Slide the finger across the valid area to/from the invalid area of the touch key.

## 5) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off.  
The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.  
After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab.  
Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.  
After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

## 6) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

## 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

## 8) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

- [To Style tab] button: Displays the [Style] tab.  
Set the shape displayed when the touch switch does not function.  
⇒8.2.4 ■ 2 [Style] tab
- [To Text tab] button: Displays the [Text] tab.  
Set the text displayed when the touch switch does not function.  
⇒8.2.4 ■ 3 [Text] tab

## 9) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

## 10) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- 6.5.5 ■ 3 Superimposition

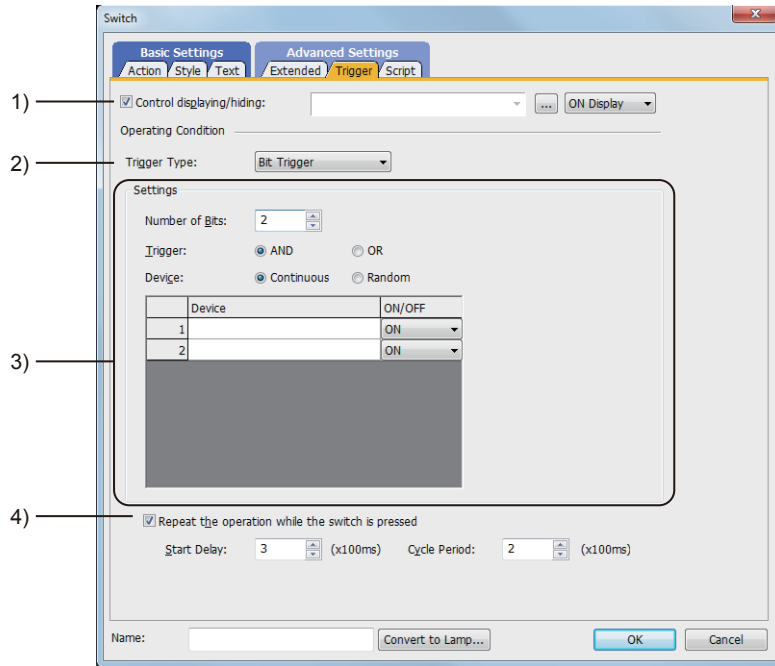

### 11) [Category]

Select the category to assign the object.  
→11.7 Managing figures and objects by category

## ■5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.  
When the set device is in either the ON or OFF status, select whether or not to display the object.  
The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.  
The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.  
→6.2.2 Setting Trigger Types

### 4) [Repeat the operation while the switch is pressed]

Select this item to allow the switch to repeat the same operation while you touch the touch switch.  
For operations for which [Repeat the operation while the switch is pressed] can be set, refer to the following.  
→8.2.3 Precautions for a touch switch

Item	Description
[Start Delay]	Set the time period from when you touch the touch switch to when the operation repeat starts. The setting range is [1] to [20].

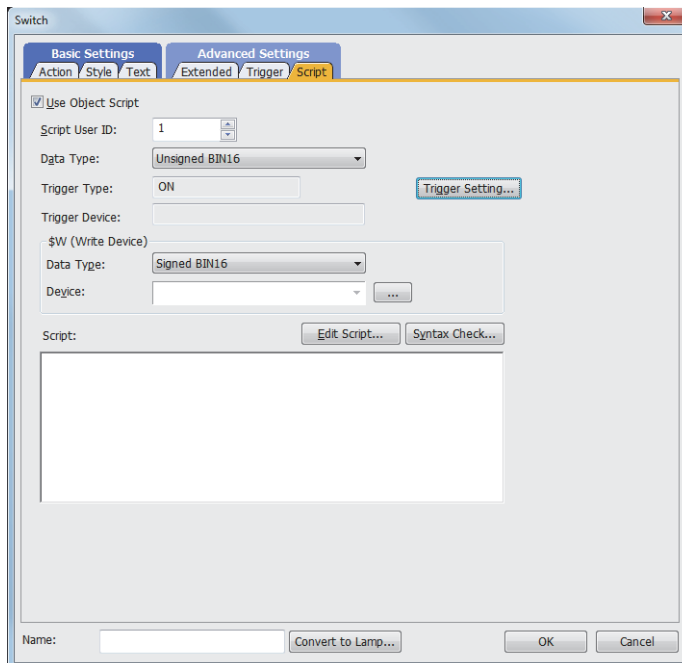

Item	Description
[Cycle Period]	Set the cycle for the operation repeat. The setting range is [1] to [10].

## 6 [Script] tab

For the settings of scripts, refer to the following.

⇒9.8 Controlling Operations with Scripts ([Script])

### (1) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Extended]	[Security Level] (display)	security	○	○	Upon the setting change	When the screen is updated
	[Security Level] (input)	input_security	○	○	When the object performs the specified action	Upon the setting change
	[Delay]	delay	○	○	When the screen is updated	When the screen is updated
	[Buzzer](One Shot, During Push)	beep	○	○	When the object performs the specified action	When the object performs the specified action

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

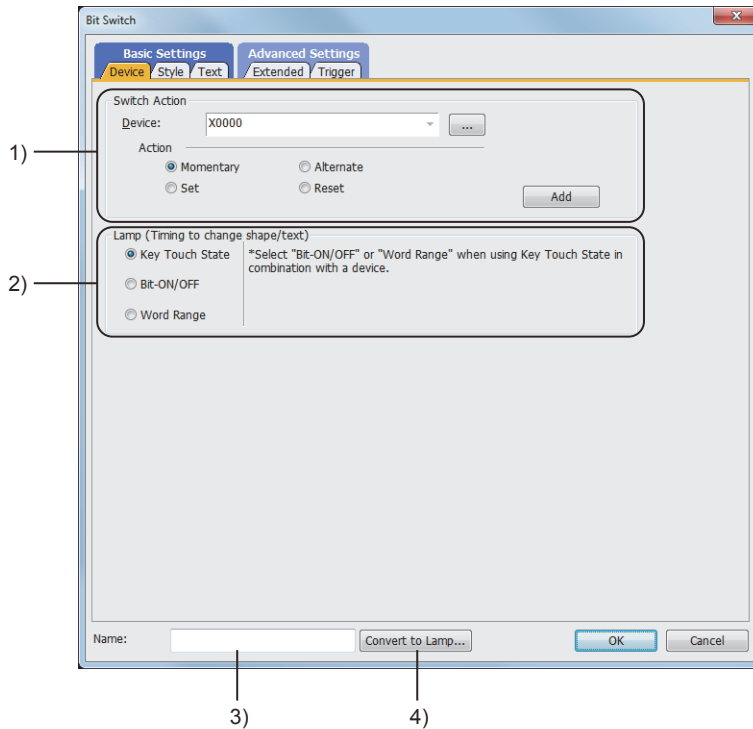

**8.2.5 [Bit Switch] dialog**

A bit switch turns on and off a bit device.

- Step 1** Select [Object] → [Switch] → [Bit Switch] from the menu.
- Step 2** Click the position where you arrange the bit switch.
- Step 3** Double-click the arranged bit switch to display the setting dialog.
  - ■ 1 [Device] tab
  - 2 [Style] tab
  - 3 [Text] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab

**■ 1 [Device] tab**

**1) [Switch Action]**

Item	Description
[Device]	Set the bit device to which the value is written. →6.1.1 How to set devices
[Action]	Select the function to be performed for the bit device as the destination when you touch the switch. <ul style="list-style-type: none"> <li>• [Momentary]: Keeps the bit device on only while you touch the switch.</li> <li>• [Alternate]: Switches the on or off status of the bit device every time you touch the switch.</li> <li>• [Set]: Turns on the bit device when you touch the switch.</li> <li>• [Reset]: Turns off the bit device when you touch the switch.</li> </ul>
[Add] button	Adds actions to the bit switch. →8.2.4 ■ 1 [Action] tab

## 2) [Lamp (Timing to change shape/text)]

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation  
Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device  
Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

→8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. →6.1.1 How to set devices
[Word Range]	When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings. • [Device]: Set the word device. →6.1.1 How to set devices • [Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real] • [ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. →6.2.2 Setting Trigger Types

## 3) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 4) [Convert to Lamp] button

Converts the object type to the lamp.

→8.2.2 How to use touch switch

## Touch switch action with the bit momentary

### (1) The bit device remains on.

If the following events occur while you touch the touch switch for which the bit momentary is set, the bit device may remain on even after you release the finger from the switch.

- Hardware failure of the GOT
- Power-off of the GOT
- Communication error with controllers

As appropriate, set the timeout period of the on-status duration for the bit device, and set the operating condition so that the controller forcibly turns off the bit device in the case of the timeout.

### (2) Switching to the base screen or window screen

If the base screen switching is requested while you touch the touch switch for which the bit momentary is set, the currently displayed base screen is switched to another base screen or window screen when you release the finger from the switch.

### (3) When the operating condition of a touch switch being touched becomes unsatisfied

If the following cases occur while a touch switch is being touched, the set bit device turns off upon releasing the switch.

- The touch switch operating condition specified using [Operating Condition] becomes unsatisfied.
- The touch switch operating condition specified using [Control displaying/hiding] becomes unsatisfied.

### (4) When the operating condition of a touch switch is unsatisfied

While the set device of a touch switch is on, if you touch the switch when its operating condition is unsatisfied, the device turns off upon touching the switch.

(Even if you select [Clear the input object] in the [Environmental Setting] window or the [Screen Property] dialog, touching the location of the hidden switch turns off the device.)

## 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

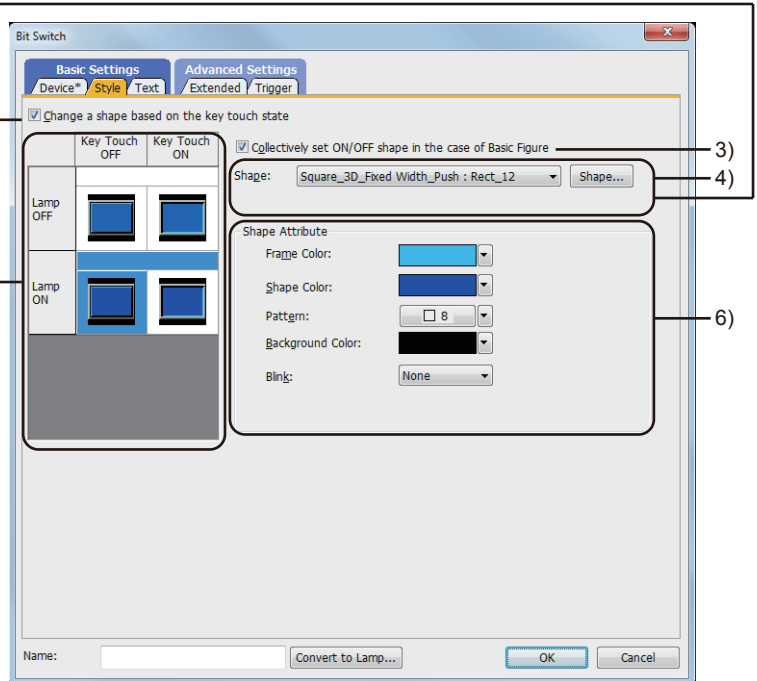

When [None] is selected for [Shape]

When [Key Touch State] is selected for [Lamp (Timing to change shape/text)]

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]  
 ([Change a shape based on the key touch state] is not selected)

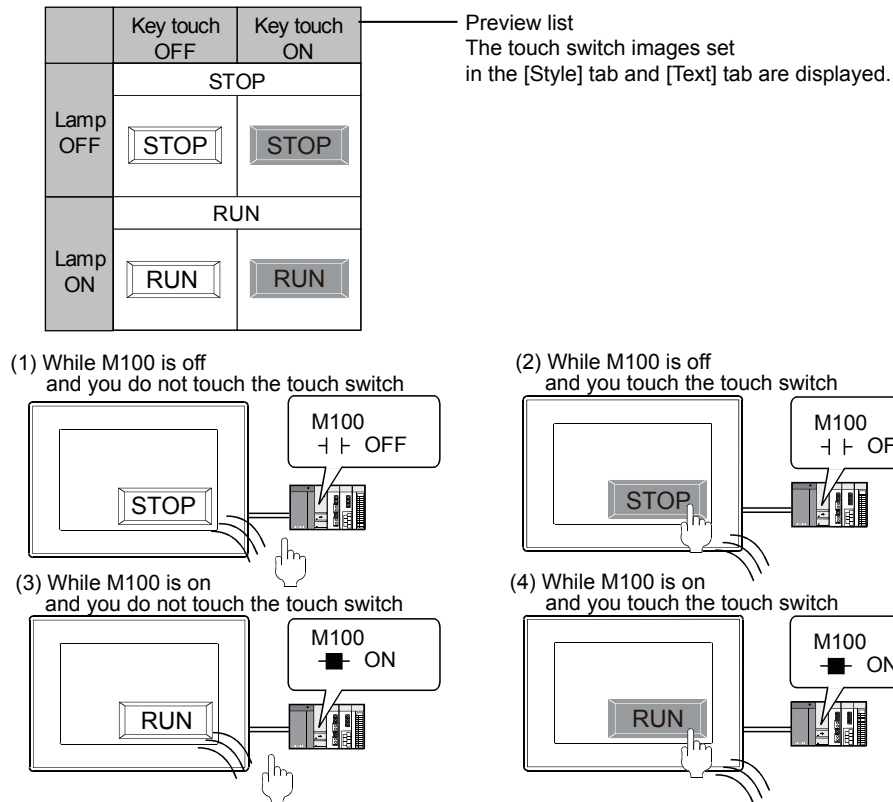

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]  
 ([Change a shape based on the key touch state] is selected)

### 1) [Change a shape based on the key touch state]

This item is available when [Bit-ON/OFF] or [Word Range] is selected for [Lamp (Timing to change shape/text)]. You can set four different images using the lamp on and lamp off status in combination with the key touch on and key touch off status.

According to the key touch on and key touch off status, the shape can be switched. However, the text cannot be switched.

The following shows an example of the combination of image switching by the device status with shape switching by key touch status.

### 2) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 3) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape]. Select this item to collectively change the shapes of the touch switches except [Press Twice].

### 4) [Shape]

Set the shape of the touch switch. To select a shape other than those in the list box, click the [Shape] button.  
→6.5.5 ■ 1 Setting object shapes

### 5) [Reverse switch area]

#### **GOT Graphic Ver.1**

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

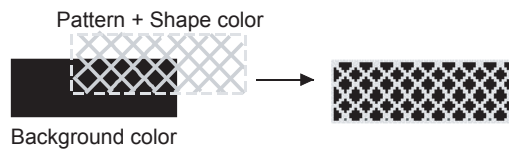

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

### 6) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.

Item	Description
[Pattern], [Background Color]	<p>Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.</p> <p>Example ) Shape color:  Pattern:  Background color:  </p>
[Blink]	<p>Select the blinking speed of the touch switch. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	<p>Select an area to be blinked. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Shape and Text]</li> <li>• [Shape only]</li> </ul>

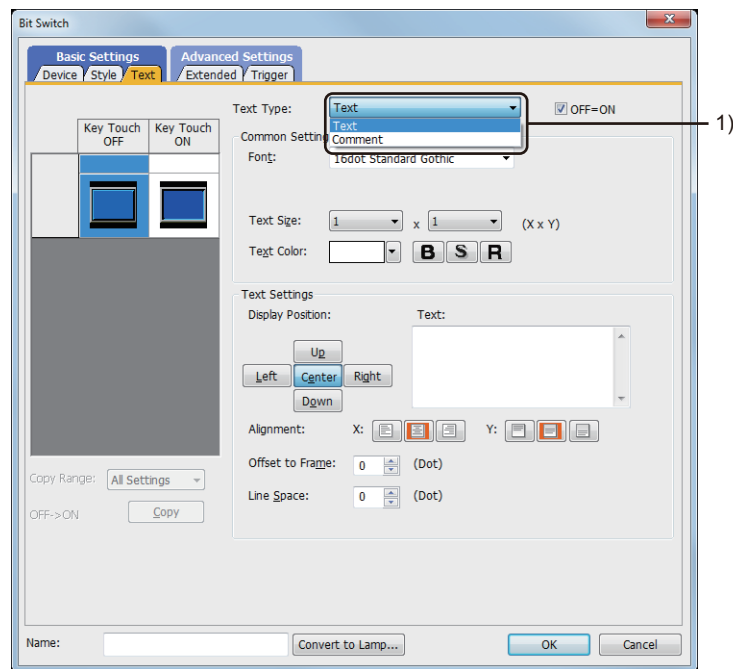

### ■3 [Text] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	<p>Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. → 5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group</p>
[Comment]	<p>Set the comment in the comment group as the text.</p>

For the setting of the comment group, refer to the following.

→ 5.8 Comment Setting ([Comment])

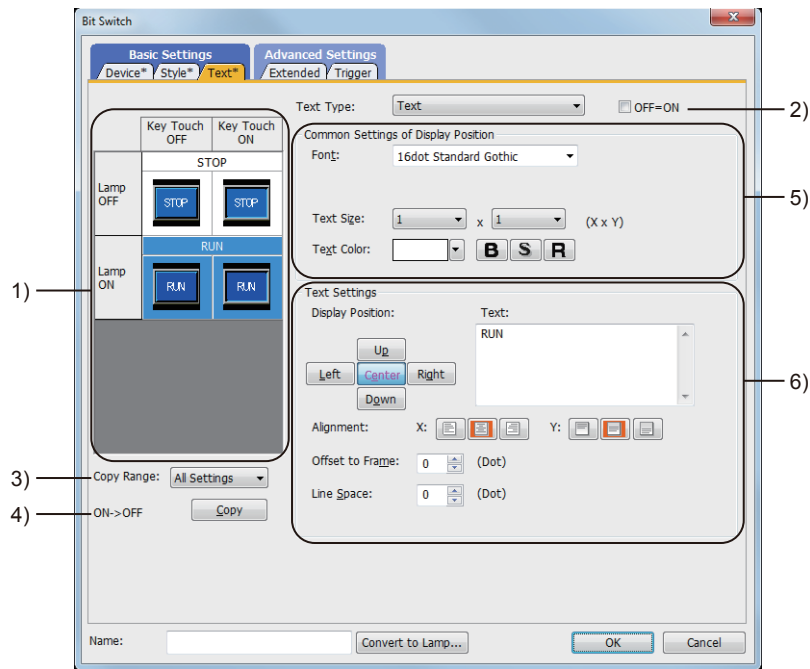

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→ (1) [Text]

(2) Comment text

(1) [Text]

1) **Preview list**

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

2) **[OFF=ON]**

Selecting this item applies the same setting to both when the switch is on and off.

3) **[Copy Range]**

Set the range to be copied.

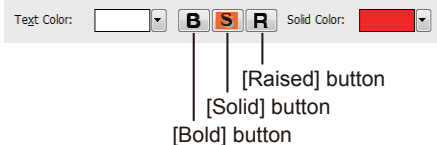

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

4) **[OFF → ON], [ON → OFF]**

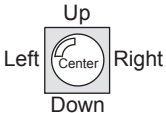

Copies the text setting.

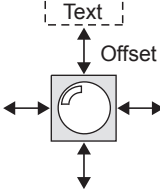

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Common Setting of Display Position]

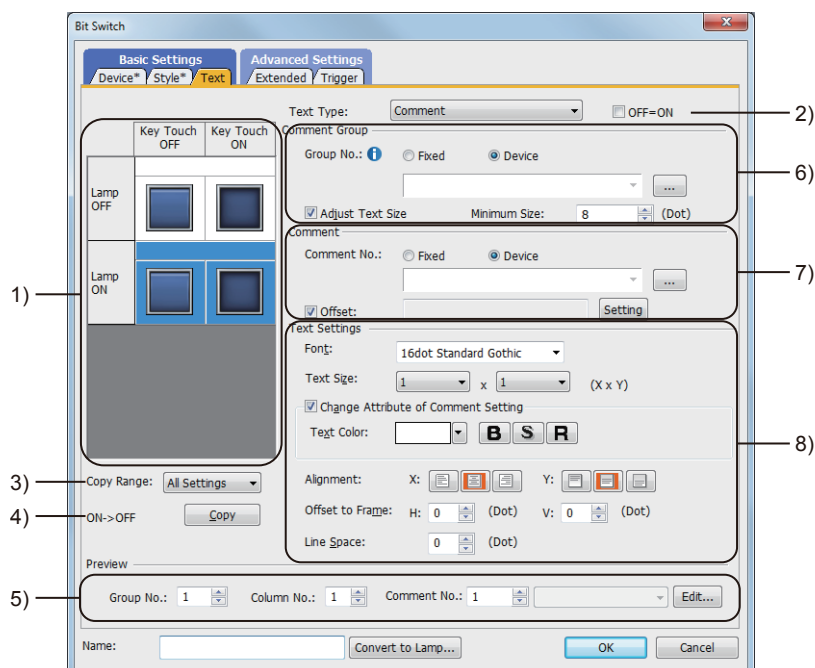

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

### 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

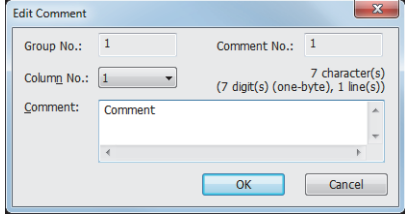

## 5) [Preview]

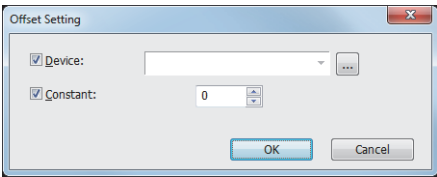

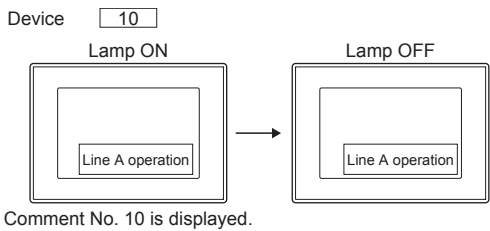

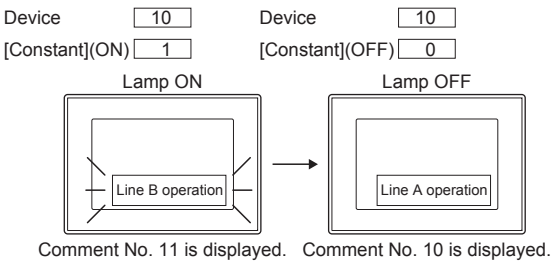

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

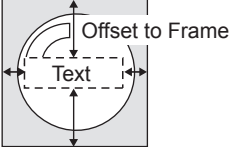

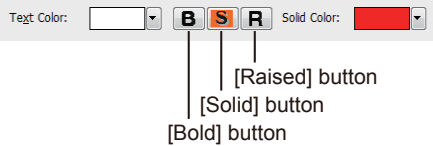

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description
[Offset]	<p>Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices</p> <p>This setting is available only when [Device] is selected for [Comment No.].            Click the [Setting] button, and set the offset in the [Offset Setting] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Device]</b>            Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices</li> <li>• <b>[Constant]</b>            Set this item to add another value to the value of [Device] according to the indication status (on or off) of the lamp. After selecting this item, set the value to be added in the lamp on and off status.           <ul style="list-style-type: none"> <li>• When only [Device] is set                The comment of the same number as the value of [Device] is displayed regardless of the lamp status.</li> </ul> </li> </ul>  <ul style="list-style-type: none"> <li>• When [Device] and [Constant] are set            When the lamp is on, the comment of the same number as the value derived from the addition of [Device] + [Constant](ON) is displayed.            When the lamp is off, the comment of the same number as the value derived from the addition of [Device] + [Constant](OFF) is displayed.</li> </ul>

## ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

→6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. →6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. →6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [User ID]

Select this item to set a user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

### 4) [Simultaneous Press]

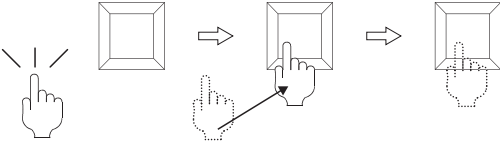

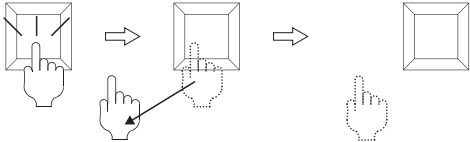

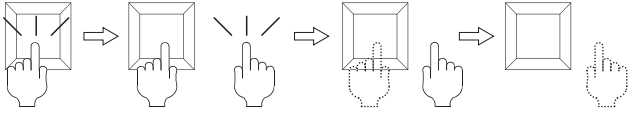

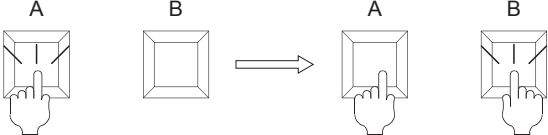

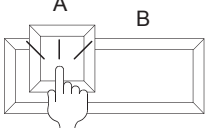

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
<ol style="list-style-type: none"> <li>1. Touch the touch invalid area of the touch switch.</li> <li>2. Slide the finger to the touch valid area of the touch switch.</li> <li>3. Release the finger from the touch switch.</li> </ol> 	<p>At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.</p>	<p>At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch valid area of the touch switch.</li> <li>2. Slide the finger to the touch invalid area of the touch switch.</li> <li>3. Release the finger from the GOT screen.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch.</li> <li>2. Touch the area where no object is arranged.</li> <li>3. Release the finger from the touch switch.</li> <li>4. Release the finger from the area where no object is arranged.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch A for which the simultaneous press is disabled.</li> <li>2. Touch the touch switch B.</li> </ol> <p>(The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.)</p> 	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>
<p>Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other.</p> 	<p>Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.</p>	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously. The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers. Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously. Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

## 5) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off.  
The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.  
After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab.  
Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.  
After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

## 6) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

## 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

## 8) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

## 9) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

## 10) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

11) [Category]

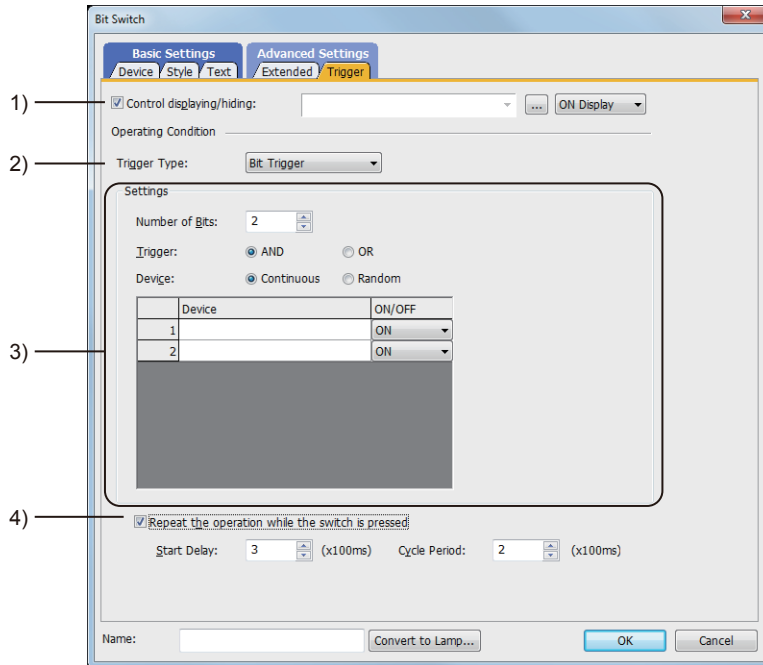

Select the category to assign the object.

→11.7 Managing figures and objects by category

■5 [Trigger] tab

Set conditions for displaying the object.

1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

3) [Setting]

For details of each item, refer to the following.

→6.2.2 Setting Trigger Types

4) [Repeat the operation while the switch is pressed]

Select this item to allow the switch to repeat the same operation while you touch the touch switch.

For operations for which [Repeat the operation while the switch is pressed] can be set, refer to the following.

→8.2.3 Precautions for a touch switch

Item	Description
[Start Delay]	Set the time period from when you touch the touch switch to when the operation repeat starts. The setting range is [1] to [20].
[Cycle Period]	Set the cycle for the operation repeat. The setting range is [1] to [10].

## 8.2.6 [Word Switch] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

A word switch changes the value of a word device.

- Step 1** Select [Object] → [Switch] → [Word Switch] from the menu.
- Step 2** Click the position where you arrange the word switch.
- Step 3** Double-click the arranged word switch to display the setting dialog.

- ■ 1 [Device] tab
- 2 [Style] tab
- 3 [Text] tab
- 4 [Extended] tab
- 5 [Trigger] tab

### ■ 1 [Device] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

1) Switch Action

2) Lamp (Timing to change shape/text)

3) Name:

4) Convert to Lamp... OK Cancel

When [Mode] is set to [Data Addition] or [Data Subtraction]

When [Mode] is set to [Custom]

#### 1) [Switch Action]

Item	Description
[Device]	Set the word device to which a value is written. →6.1.1 How to set devices
[Data Type]	Select the data type for the values set in [Setting Value]. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>
[Mode]	Set the writing mode for the specified word device. <ul style="list-style-type: none"> <li>• [Data Addition]: Select this item to add the value set in [Variation] to the value stored in the specified word device.</li> <li>• [Data Subtraction]: Select this item to subtract the value set in [Variation] from the value stored in the specified word device.</li> <li>• [Custom]: Select this item to write the value set in [Setting Value] to the specified word device.</li> </ul>

Item	Description
[Variation]	Set this item when [Mode] is set to [Data Addition] or [Data Subtraction]. When [Mode] is set to [Data Addition], touching the word switch adds the set value to the value stored in the specified word device. When [Mode] is set to [Data Subtraction], touching the word switch subtracts the set value from the value stored in the specified word device.
[Setting Value]	Set the value to be written to the specified word device. The setting is required when [Mode] is set to [Custom]. <ul style="list-style-type: none"> <li>[Constant]: Set the constant for the specified word device. The setting range is [-32768] to [32767].</li> <li>[Indirect Device]: Set the indirect device for the specified word device. →6.1.1 How to set devices</li> </ul> When [Constant] and [Indirect Device] are both selected, the value [Constant] + [Indirect Device] is written into the word device.
[Initial Value Condition]	This setting is available when both [Constant] and [Indirect Device] in [Setting Value] are set. This setting is also available with [Data Addition] or [Data Subtraction] in [Mode]. When the value set in the specified word device and the value set in [Condition Value] are the same, the value set in [Reset Value] is written to the specified word device. <ul style="list-style-type: none"> <li>[Condition Value]: Set the condition value that is the trigger to write [Reset Value] to the specified word device.</li> <li>[Reset Value]: Set the value to be written to the specified word device when the value in [Condition Value] is satisfied.</li> </ul>
[Add] button	Adds actions to the word switch. →8.2.4 ■ 1 [Action] tab

## 2) [Lamp (Timing to change shape/text)]

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation

Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device

Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

→8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. →6.1.1 How to set devices

Item	Description
[Word Range]	<p>When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings.</p> <ul style="list-style-type: none"> <li>[Device]: Set the word device. →6.1.1 How to set devices</li> <li>[Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real]</li> <li>[ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. →6.2.2 Setting Trigger Types</li> </ul>

### 3) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

### 4) [Convert to Lamp] button

Converts the object type to the lamp.

→8.2.2 How to use touch switch

## 2 [Style] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

5)

When [None] is selected for [Shape]

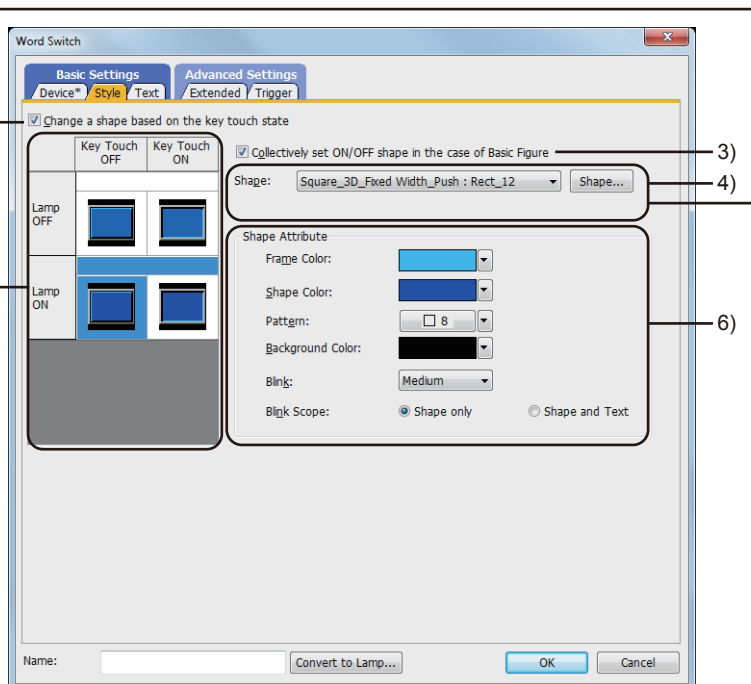

1)

When [Key Touch State] is selected for [Lamp (Timing to change shape/text)]

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

((Change a shape based on the key touch state) is not selected)

3)

4)

2)

6)

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

((Change a shape based on the key touch state) is selected)

### 1) [Change a shape based on the key touch state]

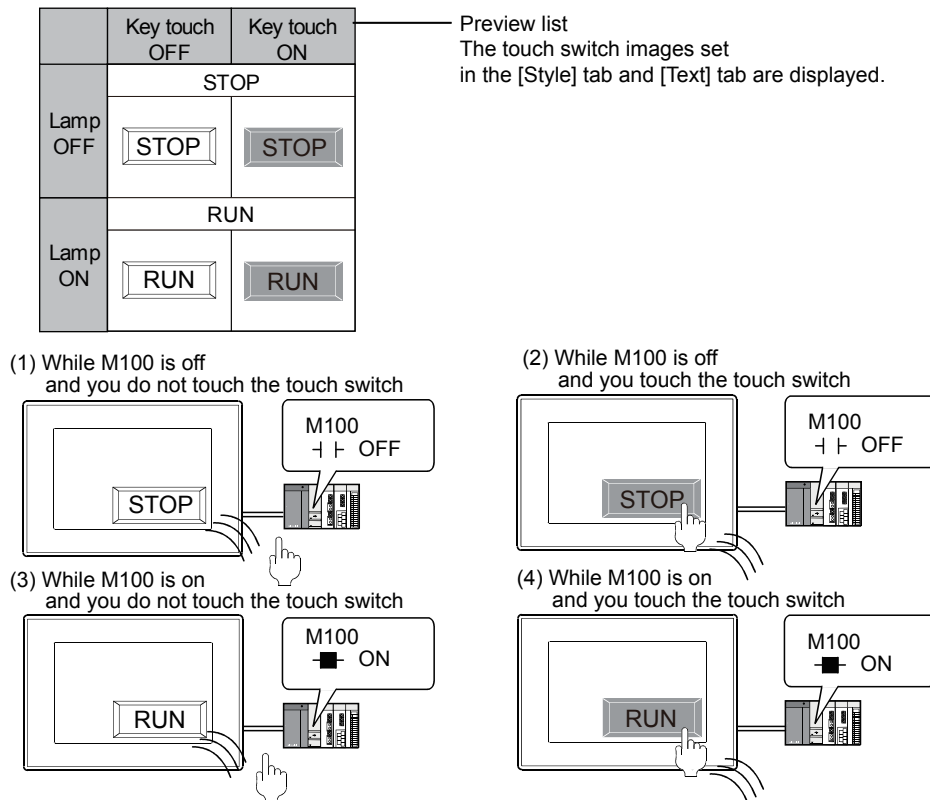

This item is available when [Bit-ON/OFF] or [Word Range] is selected for [Lamp (Timing to change shape/text)].

You can set four different images using the lamp on and lamp off status in combination with the key touch on and

key touch off status.

According to the key touch on and key touch off status, the shape can be switched. However, the text cannot be switched.

The following shows an example of the combination of image switching by the device status with shape switching by key touch status.

## 2) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

## 3) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

## 4) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

→6.5.5 ■ 1 Setting object shapes

## 5) [Reverse switch area]

### **GOT Graphic Ver.1**

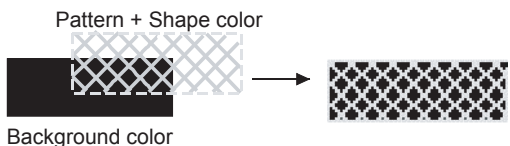

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

## 6) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.

Item	Description
[Pattern], [Background Color]	<p>Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.</p> <p>Example ) Shape color:  Pattern:  Background color:  </p>
[Blink]	<p>Select the blinking speed of the touch switch. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	<p>Select an area to be blinked. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Shape and Text]</li> <li>• [Shape only]</li> </ul>

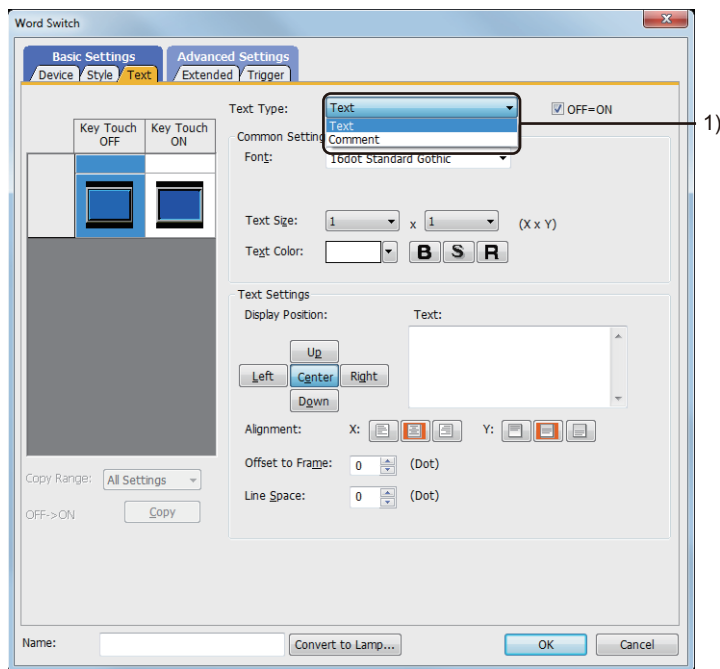

### 3 [Text] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	<p>Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group</p>
[Comment]	<p>Set the comment in the comment group as the text.</p>

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

Setting items differ depending on the selected text type.

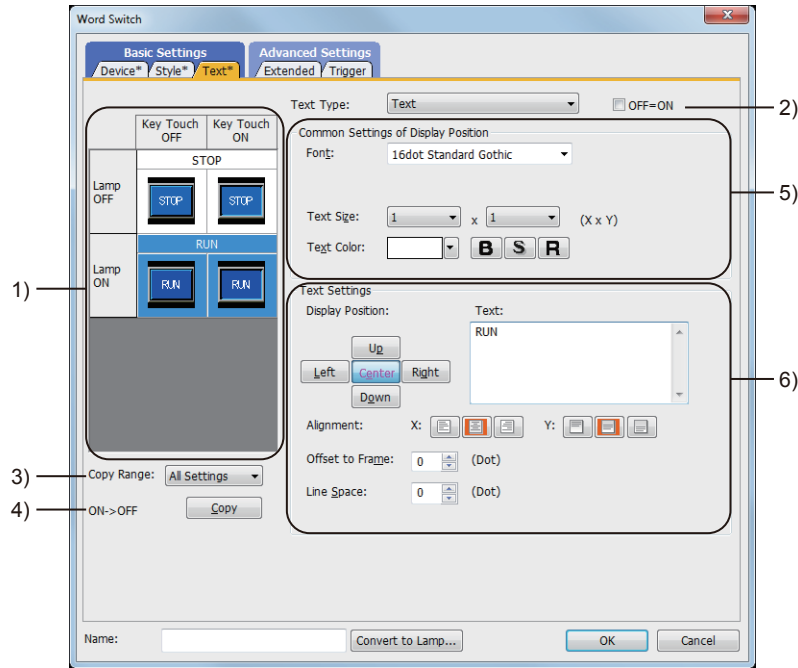

For the setting items for each text type, refer to the following.

→(1) [Text]

(2) Comment text

(1) [Text]

#### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

#### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

#### 3) [Copy Range]

Set the range to be copied.

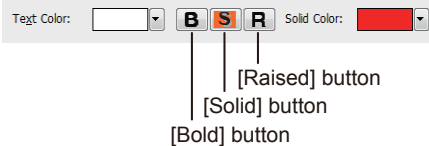

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

#### 4) [OFF → ON], [ON → OFF]

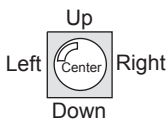

Copies the text setting.

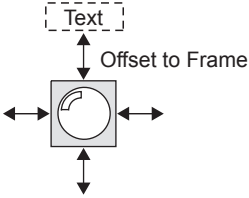

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

## 5) [Common Setting of Display Position]

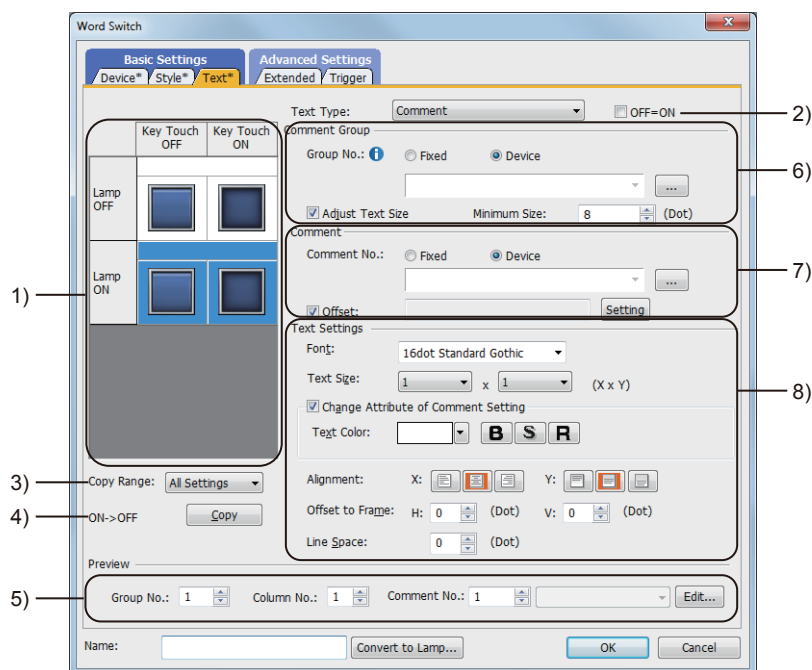

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

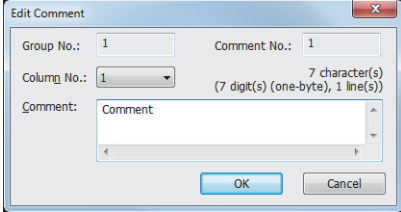

## 5) [Preview]

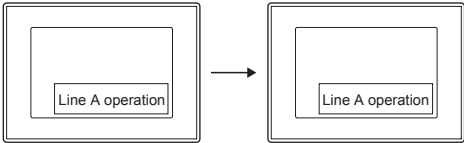

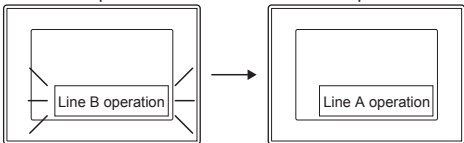

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

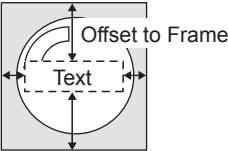

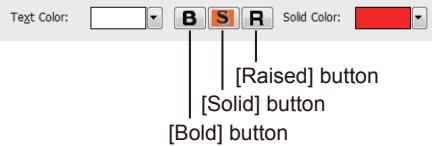

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• <b>[Fixed]:</b> Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> <li>• <b>[Device]:</b> Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description
[Offset]	<p>Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices            This setting is available only when [Device] is selected for [Comment No.].            Click the [Setting] button, and set the offset in the [Offset Setting] dialog.</p> <div data-bbox="794 271 1235 443" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;"> <p>Offset Setting</p> <p><input checked="" type="checkbox"/> Device: <input type="text" value=""/> ...</p> <p><input checked="" type="checkbox"/> Constant: <input type="text" value="0"/></p> <p style="text-align: right;"><input type="button" value="OK"/> <input type="button" value="Cancel"/></p> </div> <ul style="list-style-type: none"> <li>• <b>[Device]</b>              Set this item to change the text display of the touch switch according to the device value.              →6.1.1 How to set devices</li> <li>• <b>[Constant]</b>              Set this item to add another value to the value of [Device] according to the indication status (on or off) of the lamp. ## 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

→ 6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. → 6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. → 6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→ 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

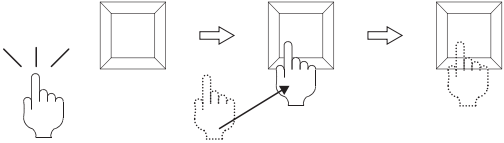

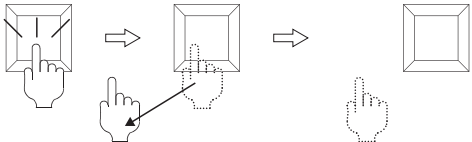

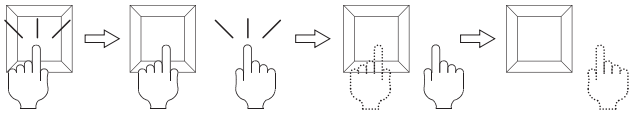

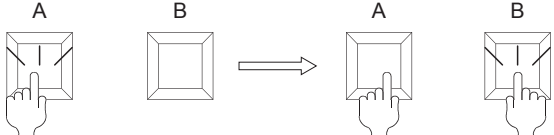

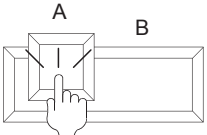

### 4) [Simultaneous Press]

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
<ol style="list-style-type: none"> <li>1. Touch the touch invalid area of the touch switch.</li> <li>2. Slide the finger to the touch valid area of the touch switch.</li> <li>3. Release the finger from the touch switch.</li> </ol> 	<p>At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.</p>	<p>At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch valid area of the touch switch.</li> <li>2. Slide the finger to the touch invalid area of the touch switch.</li> <li>3. Release the finger from the GOT screen.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch.</li> <li>2. Touch the area where no object is arranged.</li> <li>3. Release the finger from the touch switch.</li> <li>4. Release the finger from the area where no object is arranged.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch A for which the simultaneous press is disabled.</li> <li>2. Touch the touch switch B.</li> </ol> <p>(The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.)</p> 	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>
<p>Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other.</p> 	<p>Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.</p>	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.

The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.

Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.

Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

Touch the valid area and invalid area of the touch key simultaneously.

Slide the finger across the valid area to/from the invalid area of the touch key.

## 5) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off. The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time. After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab. Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list. After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

#### 6) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch. Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

#### 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

#### 8) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

#### 9) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 10) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒6.5.5 ■ 3 Superimposition

### 11) [Category]

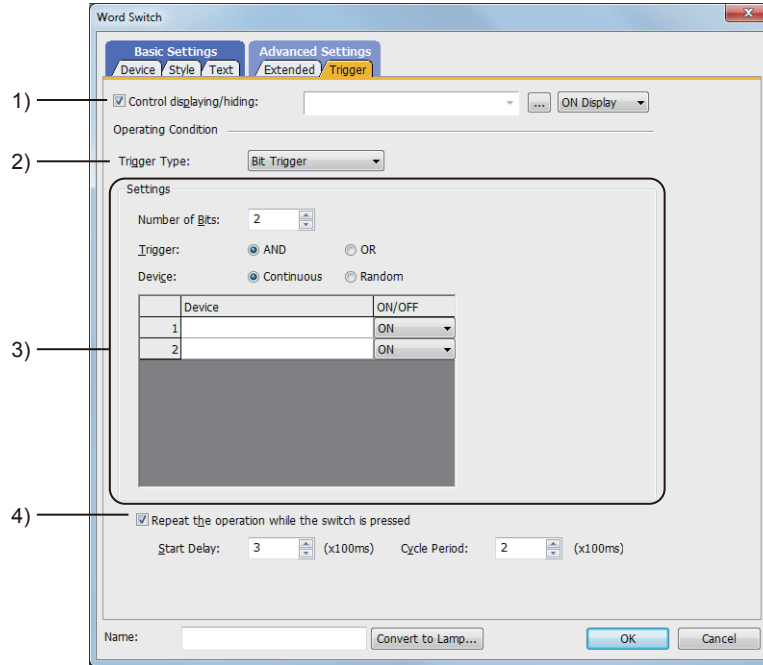

Select the category to assign the object.

⇒ 11.7 Managing figures and objects by category

## 5 [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

⇒ 6.2.2 Setting Trigger Types

### 4) [Repeat the operation while the switch is pressed]

Select this item to allow the switch to repeat the same operation while you touch the touch switch.

For operations for which [Repeat the operation while the switch is pressed] can be set, refer to the following.

⇒ 8.2.3 Precautions for a touch switch

Item	Description
[Start Delay]	Set the time period from when you touch the touch switch to when the operation repeat starts. The setting range is [1] to [20].
[Cycle Period]	Set the cycle for the operation repeat. The setting range is [1] to [10].

## 8.2.7 [Go To Screen Switch] dialog

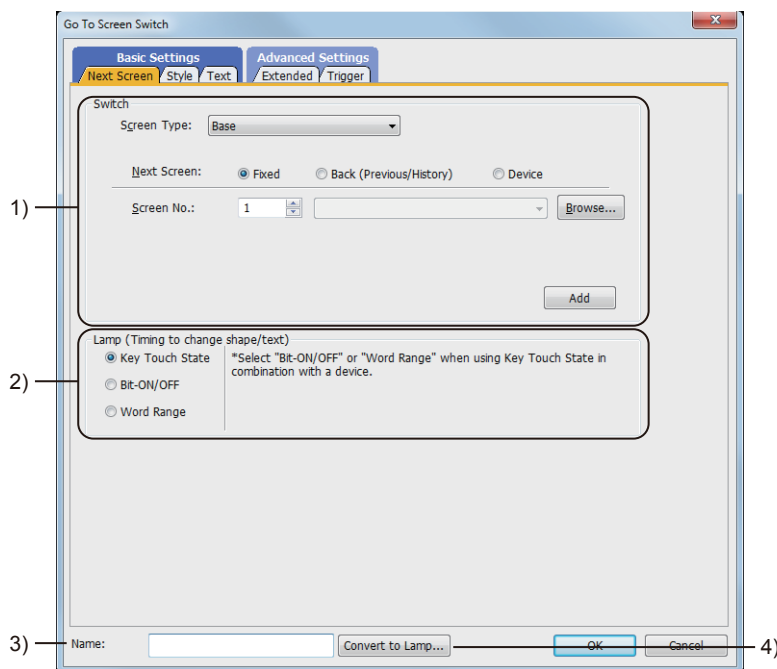

GT27 GT25 GT23 GT21 SoftGOT2000 GS

A Go To Screen switch switches base screens and window screens.

- Step 1** Select [Object] → [Switch] → [Go To Screen Switch] from the menu.
- Step 2** Click the position where you arrange the Go To Screen switch.
- Step 3** Double-click the arranged Go To Screen switch to display the setting dialog.
- ■ 1 [Next Screen] tab
  - 2 [Style] tab
  - 3 [Text] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab

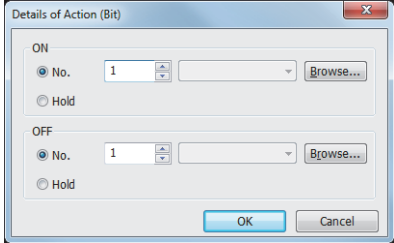

### ■ 1 [Next Screen] tab

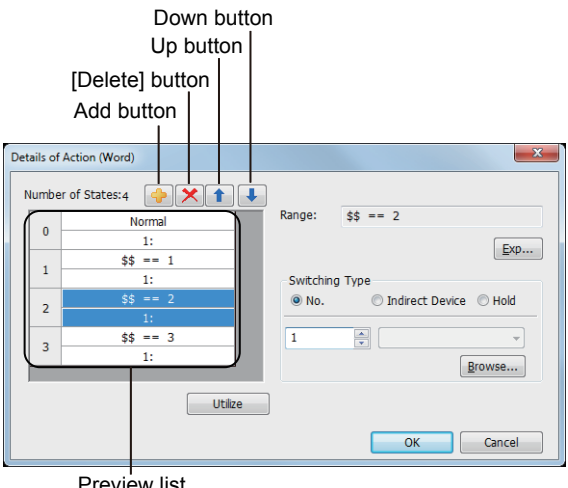

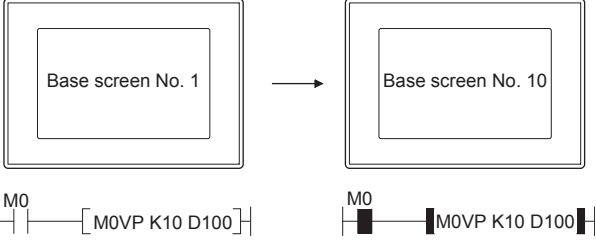

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Switch Action]

Item	Description
[Screen Type]	<p>Select the type of the screen to be switched to. The following shows the items to be selected.</p> <p>For setting this touch switch on a mobile screen, the selection is fixed to [Mobile].</p> <ul style="list-style-type: none"> <li>• [Base Screen]</li> <li>• [Overlap Window1]</li> <li>• [Overlap Window2]</li> <li>• [Overlap Window3]</li> <li>• [Overlap Window4]</li> <li>• [Overlap Window5]</li> <li>• [Superimpose Window1]</li> <li>• [Superimpose Window2]</li> <li>• [Dialog Window]</li> </ul> <p>For [Overlap Window1] to [Overlap Window5], [Superimpose Window1], and [Superimpose Window2], the following setting is applicable.</p> <p>If [Close the window when switching base screens] is selected in [Screen Switching/Window] in the [Environmental Setting] dialog, [(*)] is appended to the name of the target screen type.</p>

Item	Description
[Next Screen]	<p>Select an action for screen switching.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to switch to the screen having the specified base screen number or window screen number. After selecting this item, set the number of the base screen or window screen as the destination screen in [Screen No.]. Clicking the [Browse] button displays the [Image List(Screen)] dialog. Check the screen image on the dialog before setting.</li> <li>• [Back (Previous/History)]: Select this item to switch to the screen having the base screen number previously displayed. You can select this item only when the screen type is the base screen. The GOT stores the numbers of the previously displayed base screens. A maximum of 10 previous screens can be selected from the history.</li> <li>• [Device]: Select this item to switch to the base screen or window screen having the specified screen number according to the on status, off status, or the current value of the specified device. After selecting [Data Type], specify [Device]. After specifying [Device], click the [Detail Setting] button and configure the action settings for screen switching.</li> </ul> <p>Bit device</p>  <ul style="list-style-type: none"> <li>• [ON/OFF]</li> <li>• [No.]: Select this item to switch to the base screen or window screen having the specified screen number according to the on or off status of the specified bit device. Set the destination screen number.</li> <li>• [Hold]: Select this item so as not to switch the screens when the specified bit device is on or off.</li> </ul>

Item	Description
	<p>Word device</p>  <p>Down button Up button [Delete] button Add button</p> <p>Preview list</p> <ul style="list-style-type: none"> <li>• Preview list Displays set conditions.</li> <li>• Add button Adds a new condition.</li> <li>• Delete button Deletes a selected condition.</li> <li>• Up button, down button Changes the order of priority of the selected condition.</li> <li>• [Utilize] button Creates a new condition utilizing the selected condition.</li> <li>• [Exp] button Set the range of the word device value for screen switching using a conditional expression.</li> <li>• [Switching Type] <ul style="list-style-type: none"> <li>• [No.]: If the value of the specified word device satisfies the set conditional expression, the screen switches to the base screen or window screen having the specified screen number. Set the destination screen number in the spin box. [Clicking the [Browse] button displays the [Image List(Screen)] dialog. Check the image on the window, and set it as the screen image.</li> <li>• [Indirect Device]: If the value of the specified word device satisfies the set conditional expression, the screen switches to the screen having the number equal to the value of the word device.</li> <li>• [Hold]: Even if the value of the specified word device satisfies the set conditional expression, the screens are not switched.</li> </ul> </li> </ul> <p>Switching screens with a sequence program In the sequence program, the value of the destination screen number is written as the value of the screen switching device. Base screens and window screens can be switched without using the screen switching function of the touch switch.</p>  <p>However, if the screen switching device for the base screen or window screen is the GOT internal device (GB, GD, GS), the screens cannot be switched with the sequence program.</p>
[Screen No.]	Specify the screen number for the destination screen. You can set this item only when the screen type is the base screen.
[Add] button	Adds actions to the switch. →8.2.4 ■ 1 [Action] tab

## 2) [Lamp (Timing to change shape/text)]

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation  
Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device  
Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

⇒8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. ⇒6.1.1 How to set devices
[Word Range]	When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings. • [Device]: Set the word device. ⇒6.1.1 How to set devices • [Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real] • [ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. ⇒6.2.2 Setting Trigger Types

### 3) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

### 4) [Convert to Lamp] button

Converts the object type to the lamp.

⇒8.2.2 How to use touch switch

## ■ 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

When [None] is selected for [Shape]

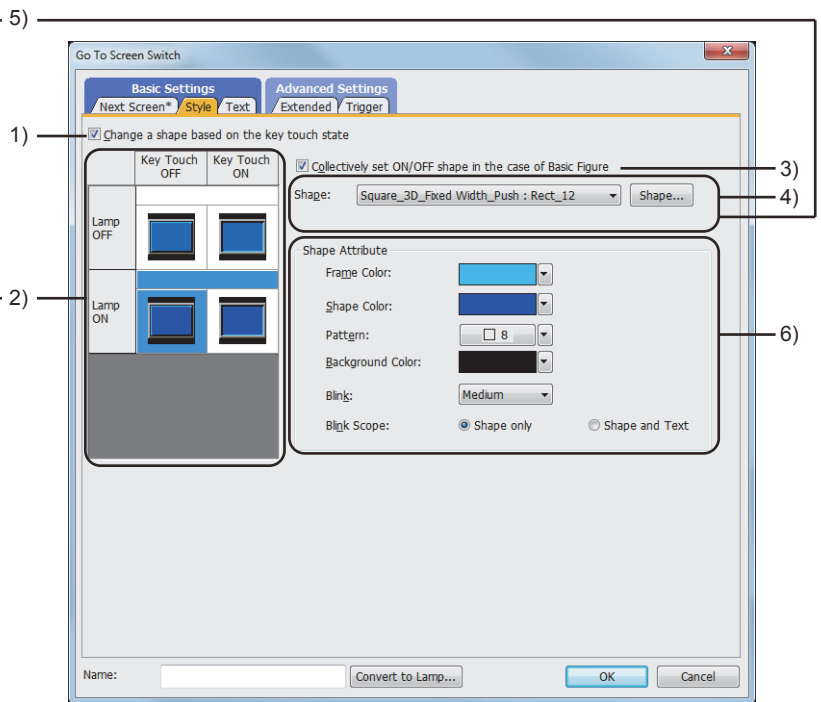

When [Key Touch State] is selected for [Lamp (Timing to change shape/text)]

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

([Change a shape based on the key touch state] is not selected)

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

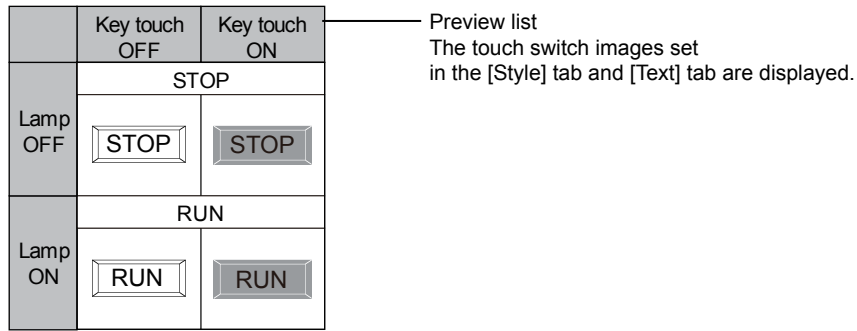

([Change a shape based on the key touch state] is selected)

### 1) [Change a shape based on the key touch state]

This item is available when [Bit-ON/OFF] or [Word Range] is selected for [Lamp (Timing to change shape/text)]. You can set four different images using the lamp on and lamp off status in combination with the key touch on and key touch off status.

According to the key touch on and key touch off status, the shape can be switched. However, the text cannot be switched.

The following shows an example of the combination of image switching by the device status with shape switching by key touch status.

(1) While M100 is off and you do not touch the touch switch

(2) While M100 is off and you touch the touch switch

(3) While M100 is on and you do not touch the touch switch

(4) While M100 is on and you touch the touch switch

## 2) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

## 3) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

## 4) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

⇒6.5.5 ■ 1 Setting object shapes

## 5) [Reverse switch area]

### GOT Graphic Ver.1

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

## 6) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.
[Pattern], [Background Color]	<p>Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.</p> <p>Example) Shape color:  Pattern:  Background color:  → </p> <p>Pattern + Shape color</p> <p>Background color</p>

Item	Description
[Blink]	Select the blinking speed of the touch switch. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	Select an area to be blinked. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Shape and Text]</li> <li>• [Shape only]</li> </ul>

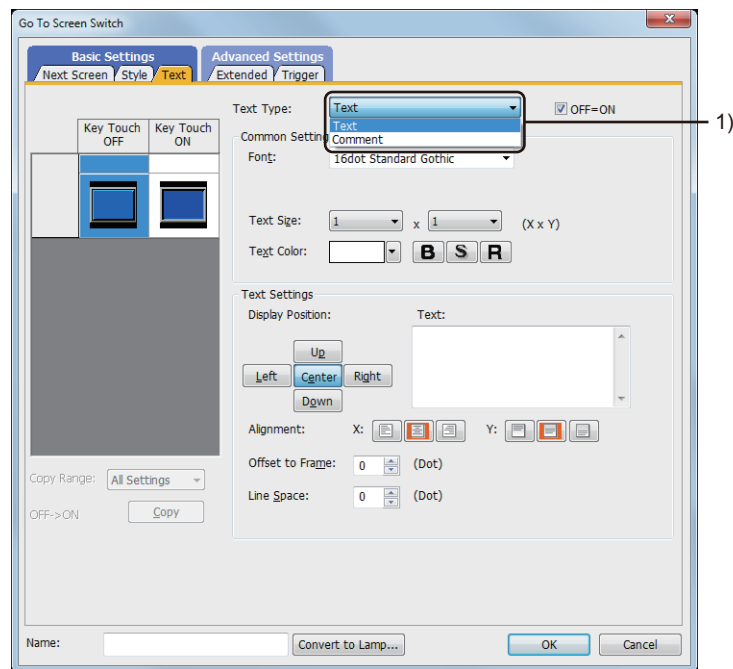

### ■ 3 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. ⇒ 5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

⇒ 5.8 Comment Setting ([Comment])

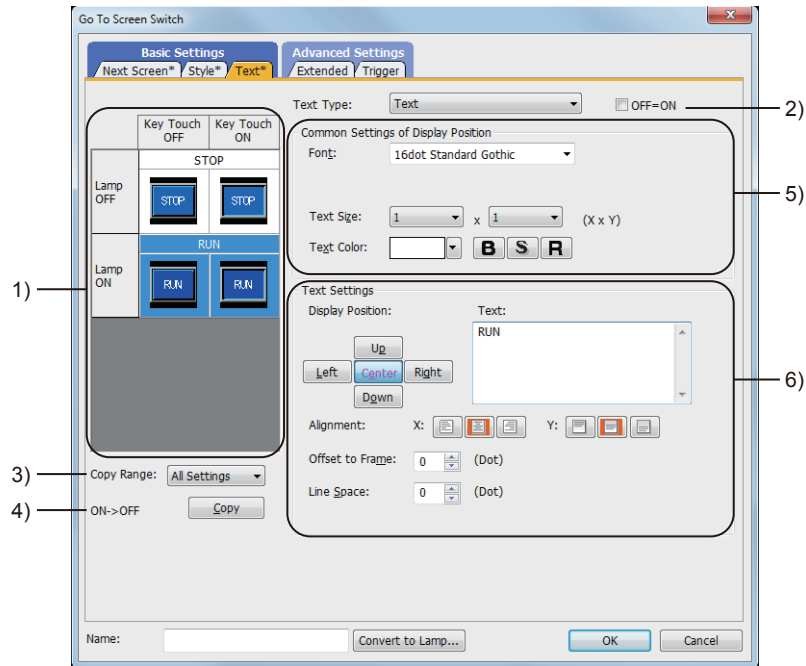

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

⇒ (1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

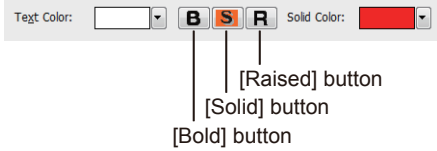

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

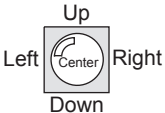

Copies the text setting.

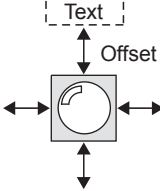

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Common Setting of Display Position]

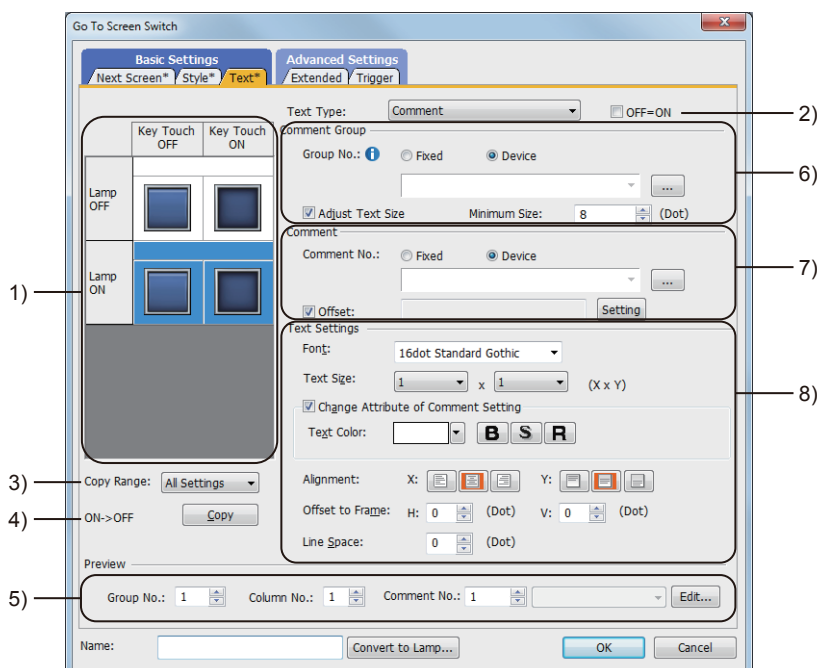

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

### 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

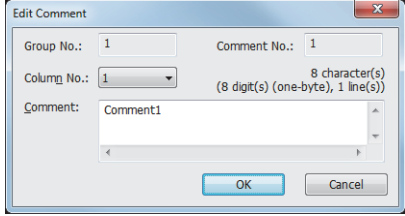

## 5) [Preview]

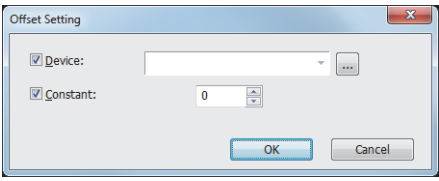

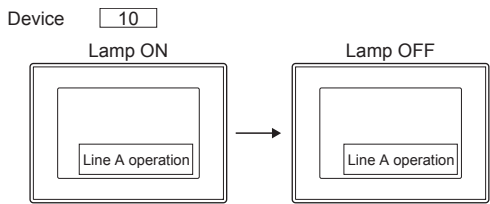

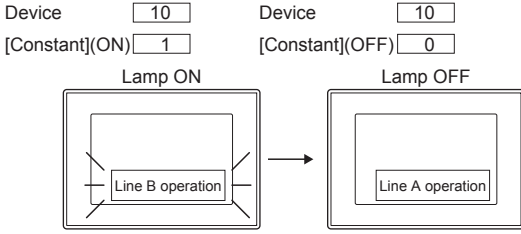

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

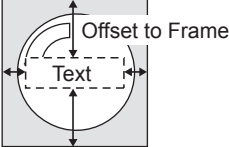

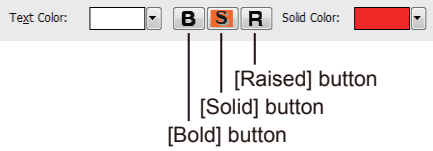

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. ## ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

→6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. →6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. →6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

### 4) [Simultaneous Press]

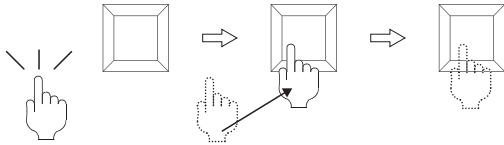

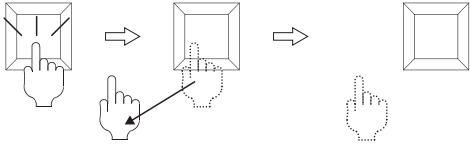

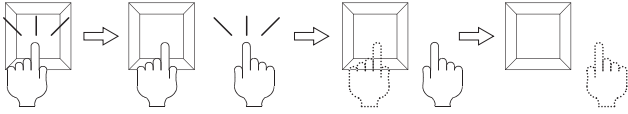

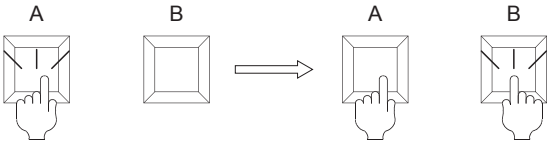

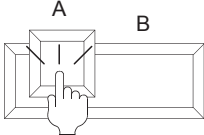

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
<ol style="list-style-type: none"> <li>1. Touch the touch invalid area of the touch switch.</li> <li>2. Slide the finger to the touch valid area of the touch switch.</li> <li>3. Release the finger from the touch switch.</li> </ol> 	<p>At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.</p>	<p>At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch valid area of the touch switch.</li> <li>2. Slide the finger to the touch invalid area of the touch switch.</li> <li>3. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>
<p>Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other.</p> 	<p>Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.</p>	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.  
The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.  
Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.  
Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

Touch the valid area and invalid area of the touch key simultaneously.

Slide the finger across the valid area to/from the invalid area of the touch key.

## 5) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off.  
The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.  
After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab.  
Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.  
After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

#### 6) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

#### 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

#### 8) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

#### 9) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 10) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒6.5.5 ■ 3 Superimposition

## 11) [Category]

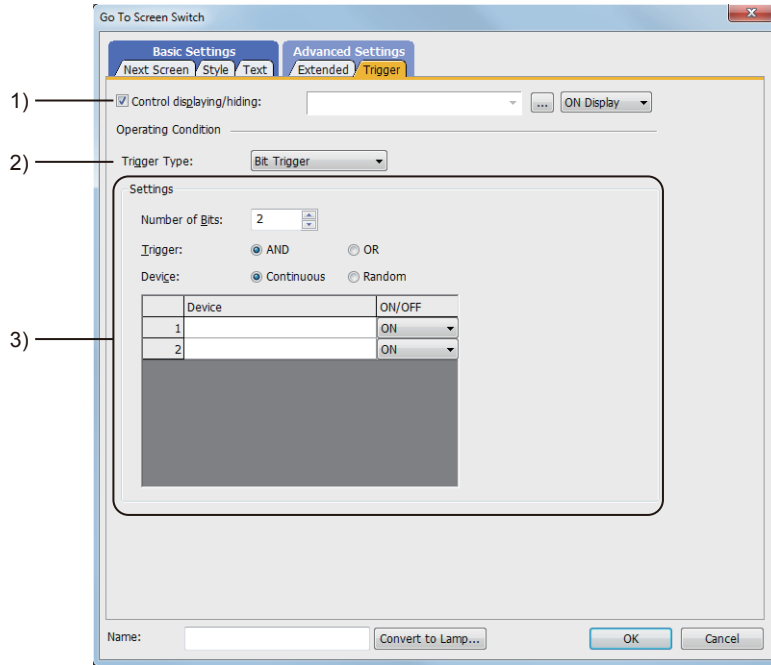

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

→ 6.2.2 Setting Trigger Types

## 8.2.8 [Change Station No. Switch] dialog

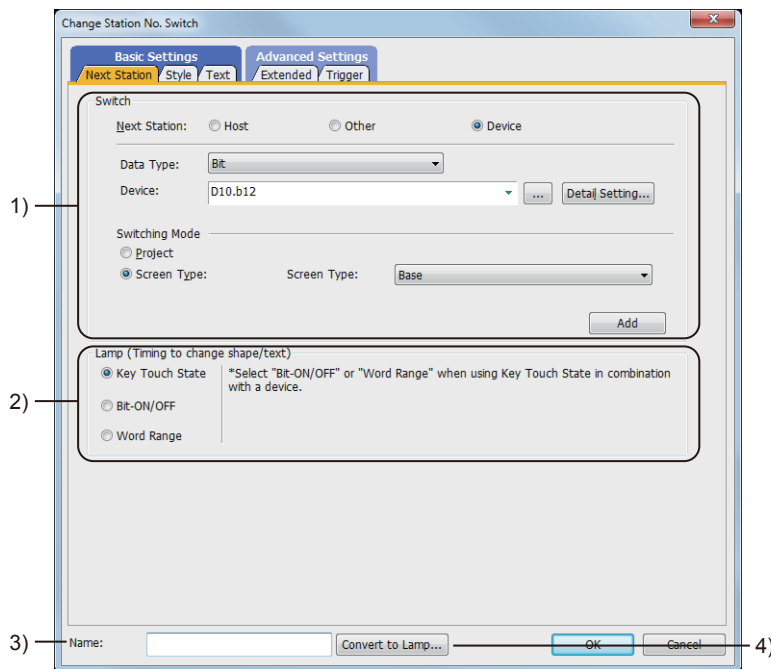

The Change Station No. switch switches the device of the currently monitored object to the same device with another station number.

- Step 1** Select [Object] → [Switch] → [Change Station No. Switch] from the menu.
- Step 2** Click the position where you arrange the Change Station No. switch.
- Step 3** Double-click the Change Station No. switch to display the setting dialog.

- ■ 1 [Next Station] tab
  - 2 [Style] tab
  - 3 [Text] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab

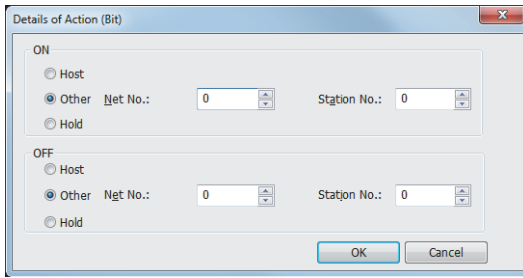

### ■ 1 [Next Station] tab

#### 1) [Switch Action]

Item	Description
[Next Screen]	Select an action for station No. switching. <ul style="list-style-type: none"> <li>• [Host]: Select this item to monitor the station connected with the GOT.</li> <li>• [Other]: Select this item to switch the monitor target to another station. Set the destination network No. in [Net No.] and the station No. in [Station No.] in decimal.</li> <li>• [Device]: Select this item to switch to the base screen or window screen having the specified screen number according to the on status, off status, or the current value of the specified device. After selecting [Data Type], specify [Device]. After specifying [Device], click the [Detail Setting] button and configure the action settings for screen switching.<sup>*1*2</sup></li> </ul>
[Switching Mode]	<ul style="list-style-type: none"> <li>• [Project]: Select this item to switch the whole project by the station number.</li> <li>• [Screen Type]: Select this item to switch only the specified screen by the station number.</li> </ul>
[Add] button	Adds actions to the switch. →8.2.4 ■ 1 [Action] tab

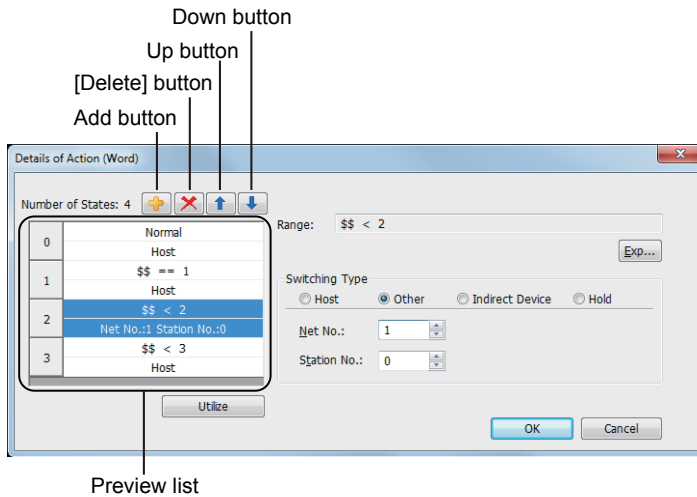

\*1 Bit device

• [ON/OFF]

- [Host]:  
Select this item to monitor the controller connected with the GOT according to the on or off status of the specified bit device.
- [Other]:  
Select this item to switch the monitor target to another station according to the on or off status of the specified bit device.  
Set the destination network No. in [Net No.] and the station No. in [Station No.] in decimal.
- [Hold]:  
Select this item so as not to switch the monitor target according to the on or off status of the specified bit device.

\*2 Word device

- **Preview list**  
Displays set conditions.
- **Add button**  
Adds a new condition.
- **Delete button**  
Deletes a selected condition.
- **Up button, down button**  
Changes the order of priority of the selected condition.
- **[Utilize] button**  
Creates a new condition utilizing the selected condition.
- **[Exp] button**  
Set the range of the word device value for screen switching using a conditional expression.
- **[Switching Type]**  
Select the switching type to switch the station number when the value of the specified word device satisfies the conditional expression set in [Exp].  
→6.1.1 How to set devices
- [Host]:  
If the value of the specified word device satisfies the set conditional expression, the monitor target is the controller connected with the GOT.
- [Other]:  
If the value of the specified word device satisfies the set conditional expression, the monitor target is switched to another station. Set the destination network number in [Net No.] and the station number in [Station No.] in decimal.
- [Indirect Device]:  
If the value of the specified word device satisfies the set conditional expression, the monitor target is switched to the one having the number equal to the value of the word device.
- [Hold]:  
Even if the value of the specified word device satisfies the set conditional expression, the monitor target is not switched.

2) [Lamp (Timing to change shape/text)]

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation  
Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device  
Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

⇒8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. ⇒6.1.1 How to set devices
[Word Range]	When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings. ⇒6.1.1 How to set devices <ul style="list-style-type: none"> <li>• [Device]: Set the word device. ⇒6.1.1 How to set devices</li> <li>• [Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real]</li> <li>• [ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. ⇒6.2.2 Setting Trigger Types</li> </ul>

### 3) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

### 4) [Convert to Lamp] button

Converts the object type to the lamp.

⇒8.2.2 How to use touch switch

## 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When [None] is selected for [Shape]

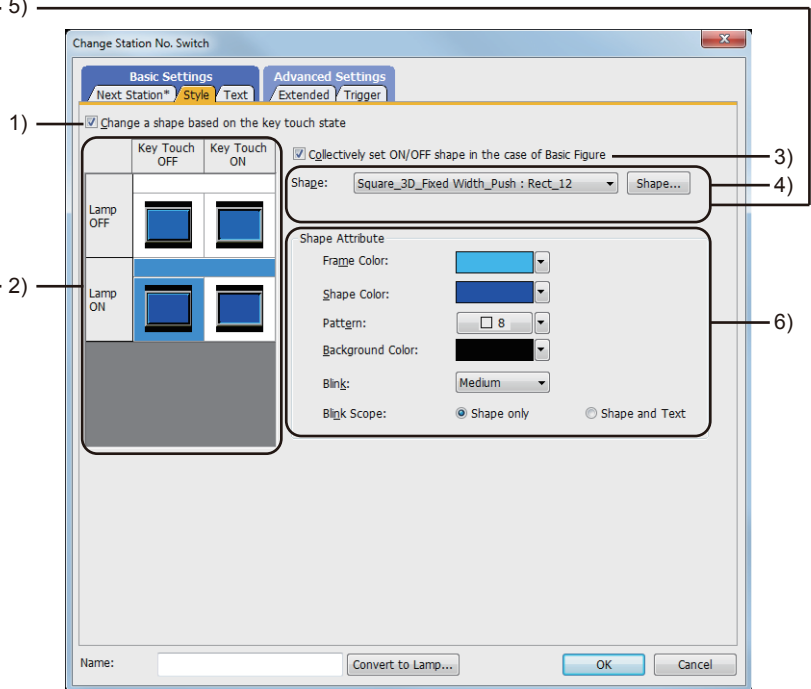

When [Key Touch State] is selected for [Lamp (Timing to change shape/text)]

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

(([Change a shape based on the key touch state] is not selected)

When [Bit-ON/OFF]/[Word Range] is selected for [Lamp (Timing to change shape/text)]

(([Change a shape based on the key touch state] is selected)

### 1) [Change a shape based on the key touch state]

This item is available when [Bit-ON/OFF] or [Word Range] is selected for [Lamp (Timing to change shape/text)]. You can set four different images using the lamp on and lamp off status in combination with the key touch on and key touch off status.

According to the key touch on and key touch off status, the shape can be switched. However, the text cannot be switched.

The following shows an example of the combination of image switching by the device status with shape switching by key touch status.

	Key touch OFF	Key touch ON
	STOP	
Lamp OFF		
	RUN	
Lamp ON		

Preview list  
The touch switch images set in the [Style] tab and [Text] tab are displayed.

(1) While M100 is off and you do not touch the touch switch

(2) While M100 is off and you touch the touch switch

(3) While M100 is on and you do not touch the touch switch

(4) While M100 is on and you touch the touch switch

## 2) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

## 3) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

## 4) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

→6.5.5 ■ 1 Setting object shapes

## 5) [Reverse switch area]

### GOT Graphic Ver.1

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

## 6) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.
[Pattern], [Background Color]	Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.  Example) Shape color:  Pattern:  Background color: Pattern + Shape color  →

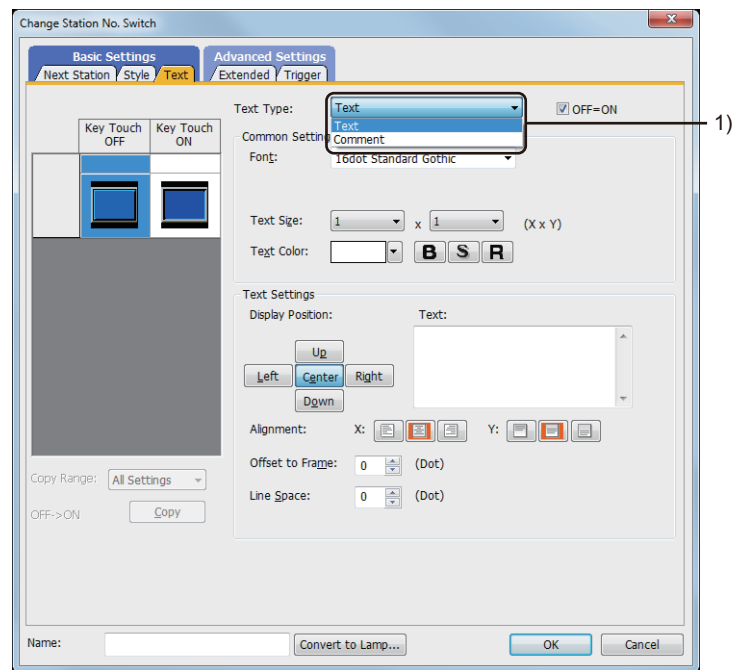

Item	Description
[Blink]	Select the blinking speed of the touch switch. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	Select an area to be blinked. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Shape and Text]</li> <li>• [Shape only]</li> </ul>

### ■ 3 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

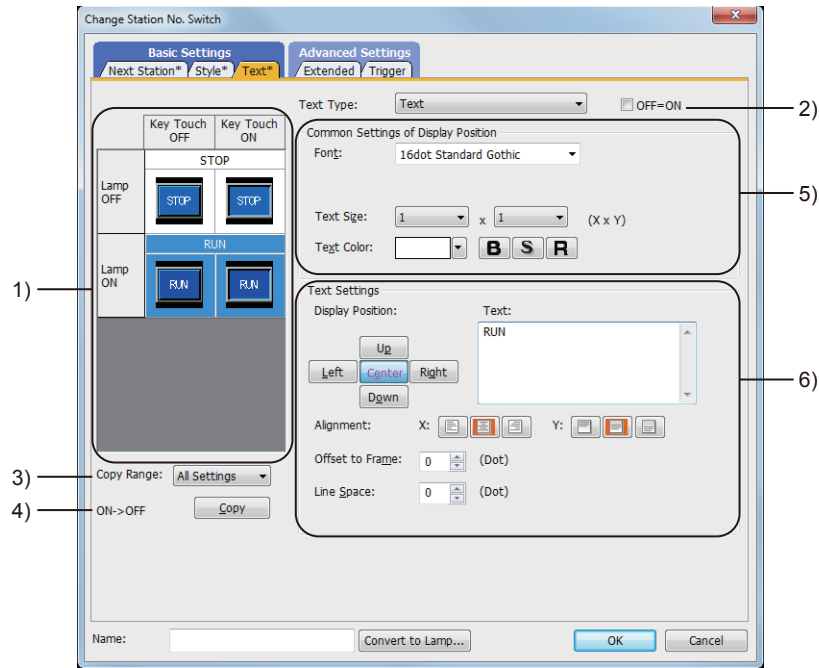

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→(1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

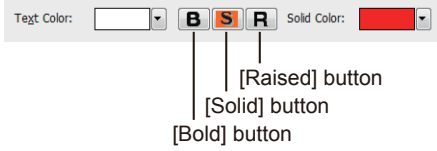

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

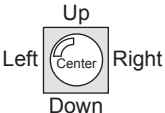

Copies the text setting.

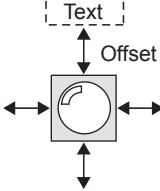

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

## 5) [Common Setting of Display Position]

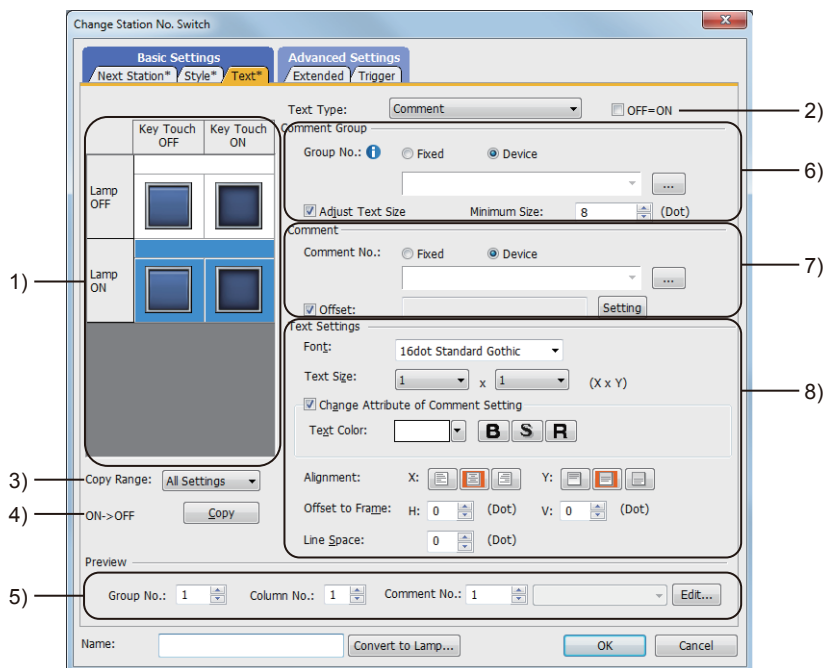

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.

[Change comment attributes]	<p>Select this item to change the comment attribute. Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

→6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. →6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. →6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

### 4) [Simultaneous Press]

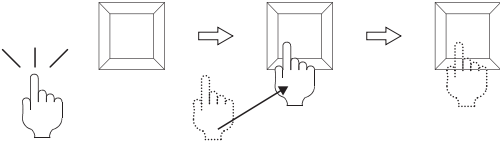

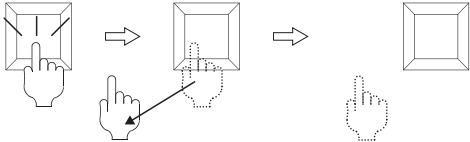

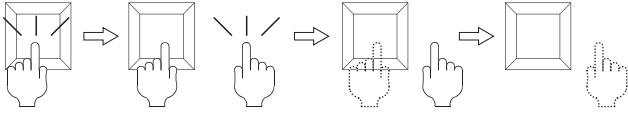

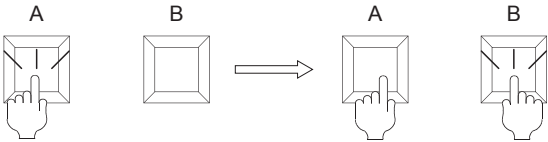

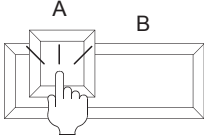

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
<ol style="list-style-type: none"> <li>1. Touch the touch invalid area of the touch switch.</li> <li>2. Slide the finger to the touch valid area of the touch switch.</li> <li>3. Release the finger from the touch switch.</li> </ol> 	<p>At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.</p>	<p>At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch valid area of the touch switch.</li> <li>2. Slide the finger to the touch invalid area of the touch switch.</li> <li>3. Release the finger from the GOT screen.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch.</li> <li>2. Touch the area where no object is arranged.</li> <li>3. Release the finger from the touch switch.</li> <li>4. Release the finger from the area where no object is arranged.</li> </ol> 	<p>At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.</p>	<p>At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.</p>
<ol style="list-style-type: none"> <li>1. Touch the touch switch A for which the simultaneous press is disabled.</li> <li>2. Touch the touch switch B.</li> </ol> <p>(The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.)</p> 	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>	<p>Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.</p>
<p>Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other.</p> 	<p>Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.</p>	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.

The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.

Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.

Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

Touch the valid area and invalid area of the touch key simultaneously.

Slide the finger across the valid area to/from the invalid area of the touch key.

## 5) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off.  
The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.  
After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab.  
Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.  
After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

#### 6) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

#### 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

#### 8) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

#### 9) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 10) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

⇒6.5.5 ■ 3 Superimposition

### 11) [Category]

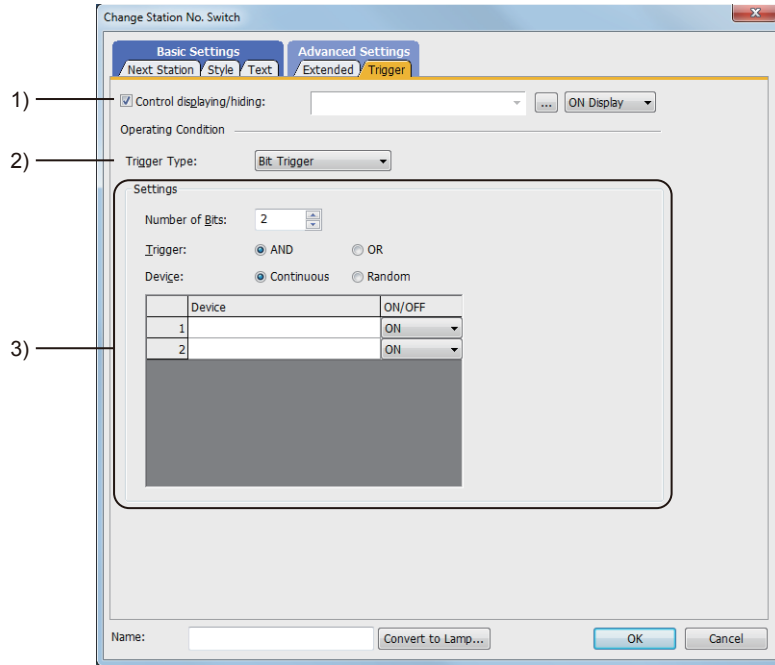

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 5 [Trigger] tab

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

→ 6.2.2 Setting Trigger Types

## 8.2.9 [Special Function Switch] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The special function switch switches the screen to the utility screen, the extended function screen, or other screens.

- Step 1** Select [Object] → [Switch] → [Special Function Switch] from the menu.
- Step 2** Click the position where you arrange the special function switch.
- Step 3** Double-click the arranged special function switch to display the setting dialog.
  - ⇒ ■ 1 [SP Function] tab
    - 2 [Style] tab
    - 3 [Text] tab
    - 4 [Extended] tab
    - 5 [Trigger] tab

### ■ 1 [SP Function] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

#### 1) [Switch Action]

Item	Description
[Action]	Select the type of the extended function screen to be displayed. For the setting range, refer to the following. → 8.2.9 ■ 1 (1) Operation settings Some functions are unavailable even those are set. For details, refer to the following manuals. → GT SoftGOT2000 Version1 Operating Manual → GOT2000 Series User's Manual (Monitor)

#### 2) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

#### 3) [Convert to Lamp] button

Converts the object type to the lamp.

⇒ 8.2.2 How to use touch switch

## (1) Operation settings

The following shows selectable items.

Operation setting	Description	Supported model
[Utility]	Displays the utility.	  <b>SoftGOT2000</b>
[Key Windows]	Displays the key window used for the numerical input function and the text input function.	  <b>SoftGOT2000</b>
[Start Hard Copy]	Starts the hard copy function (starts collecting the screen data). →8.2.9 ■ 1 (2) (a) Setting for [Start Hard Copy]	  <b>SoftGOT2000</b>
[Abort Hard Copy]	Aborts the hard copy function (aborts collecting the screen data).	  <b>SoftGOT2000</b>
[Test Window]	Displays the window for the test function.	  <b>SoftGOT2000</b>
[PX Developer Function Call]	Starts PX Developer. →8.2.9 ■ 1 (2) (b) Setting for [PX Developer Function Call]	  <b>SoftGOT2000</b>
[GOT Basic Setting Menu]	Displays the setup screen.	  <b>SoftGOT2000</b>
[Brightness Adjustment]	Displays the intensity adjustment screen.	  <b>SoftGOT2000</b>
[Password (Security Level)]	Displays the security level change screen. This setting is available only when the level authentication is selected. →2.13 Protecting a Project by Registering Users	  <b>SoftGOT2000</b>
[Time]	Displays the time setting screen.	  <b>SoftGOT2000</b>
[Data Control]	Displays the data control screen.	  <b>SoftGOT2000</b>
[Clean/Display Screen]	Displays the screen for cleaning the GOT screen.	  <b>SoftGOT2000</b>

Operation setting	Description	Supported model
[Multimedia]	Not available to GT2705-V. Displays the multimedia screen. →8.2.9 ■ 1 (2) (c) Setting for [Multimedia]	
[Display]	Displays the [Display] screen of the utility.	
[Operation]	Displays the [Operation] screen of the utility.

[File Manager]	Displays the file manager screen.	  
[File Print]	Displays the print file list display screen for the file print function. →(z) Settings for [File Print]	  

## (2) Detail setting for the actions whose setting must be configured

### (a) Setting for [Start Hard Copy]

Set the hard copy output destination.

Configure the setting of the selected output destination in the [Hard Copy] dialog.

Otherwise, the hard copy cannot be output.

For the details of the hard copy function, refer to the following.

⇒9.7 Capturing the Operating Screen of the GOT ([Hard Copy])

- [Specify the destination to output hard copies]
- [Destination]
  - Set the hard copy output destination.
  - The following shows selectable items.
  - [File]
  - [Printer]

### (b) Setting for [PX Developer Function Call]

Set the PX Developer function to be called by interaction with GT SoftGOT2000.

For the interaction between GT SoftGOT2000 and PX Developer, refer to the following.

⇒GT SoftGOT2000 Version1 Operating Manual

- [No.]
    - Set the number corresponding to the PX Developer function set in the [PX Developer Function Call Setting] dialog.
  - [Browse] button
    - Set the PX Developer function to be called in the [PX Developer Function Call Setting] dialog.
    - For how to set the [PX Developer Function Call Setting] dialog, refer to the following manual.
- ⇒GT SoftGOT2000 Version1 Operating Manual

### (c) Setting for [Multimedia]

Set the multimedia screen to be displayed.

For the details of the multimedia function, refer to the following.

→ 10.8 Recording or Playing Images Taken by a Video Camera on the GOT (Multimedia Function)

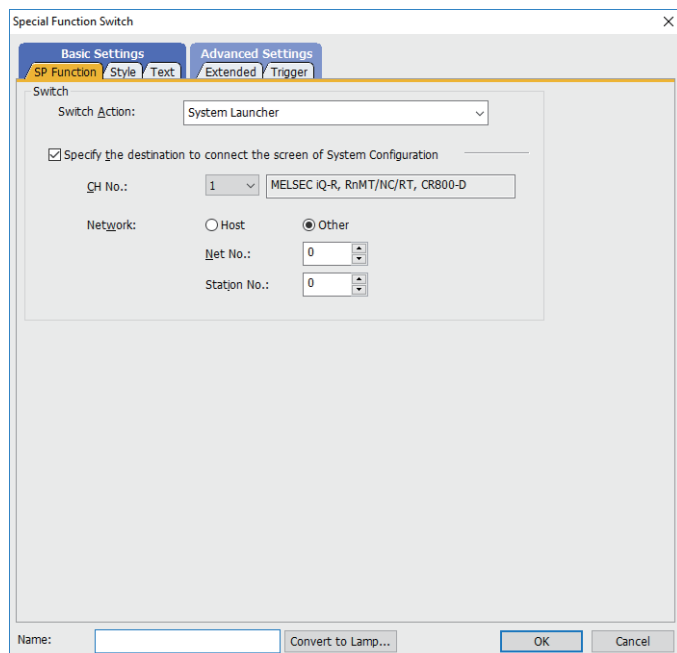

- [Initial Display Screen]
  - Select the multimedia screen to be displayed when you touch the switch.
  - [File Menu]: Select this item to display the file menu screen.
  - [Video Image]: Select this item to display the video image screen.
  - [Video Playback]: Select this item to display the video playback screen.
- [File Name]
  - Set the name and the extension (3GP or MP4) of the video file to be played.
  - Set them only when [Video Playback] is selected for [Initial Display Screen].
  - Set the file name with 70 alphanumeric characters or less.
- [Add date to playback files]
  - The device value set for [Playback File Time Specification Device] in the [Multimedia] dialog ([Playback/External Notification] tab) of [Peripheral Setting] is added to the name of the video file to be played as the date and time of recording.
- [To Multimedia] button
  - Displays the [Multimedia] dialog.
  - For how to set the [Multimedia] dialog, refer to the following.
  - 10.8.6 [Multimedia] dialog

### (d) Setting for [System Launcher]

Set a controller connected when the system configuration screen of the system launcher is called up with a special function switch.

For the details of the system launcher function, refer to the following.

→ GOT2000 Series User's Manual (Monitor)

- [Specify the destination to connect the screen of System Configuration]
- [CH No.]:
  - Select the channel No. of the controller to be monitored.
  - The setting range is [1] to [4].
  - Only the channel No. whose controller is any of the following models can be selected.
  - [MELSEC iQ-R, RnMT/NC/RT, CR800-D]
  - [MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]
  - [MELSEC-L]
  - [MELIPC]
- [Network]:
  - Configure the network setting of the controller to be monitored.
  - Select [Host] to monitor the controller of the host station.
  - Select [Other] to monitor the controller of another station.
- [Net No.]:
  - When [Other] is selected for [Network], set the network No. of the controller to be monitored.
  - The setting range is [0] to [255].
- [Station No.]
  - When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.
  - The setting range is [0] to [120].

### (e) Setting for [Device Monitor]

Set a controller connected when the device monitor screen is called up with a special function switch.  
For the details of the device monitor function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

The screenshot shows the 'Special Function Switch' dialog box with the 'Device Monitor' option selected. The 'Switch Action' is set to 'Device Monitor'. A checkbox 'Specify the destination to connect the screen of Device Monitor' is checked. The 'CH No.' is set to 1. The 'Network' section has 'Other' selected, with 'Net No.', 'Station No.', and 'CPU Machine' all set to 0. The dialog includes 'Name', 'Convert to Lamp...', 'OK', and 'Cancel' buttons.

- [Specify the destination to connect the screen of Device Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC iQ-R, RnMT/RT, CR800-D]  
[MELSEC iQ-F]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700]  
[MELSEC-QnA, MELDAS C6\*]  
[MELSEC-L]  
[MELSEC-FX]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored. The setting range is [0] to [4].

### (f) Setting for [Network Monitor]

Set a controller connected when the network monitor screen is called up with a special function switch.  
For the details of the network monitor function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

The screenshot shows the 'Special Function Switch' dialog box with the 'Network Monitor' option selected. The 'Switch Action' is set to 'Network Monitor'. A checkbox 'Specify the destination to connect the screen of Network Monitor' is checked. The 'CH No.' is set to 1. The dialog includes 'Name', 'Convert to Lamp...', 'OK', and 'Cancel' buttons.

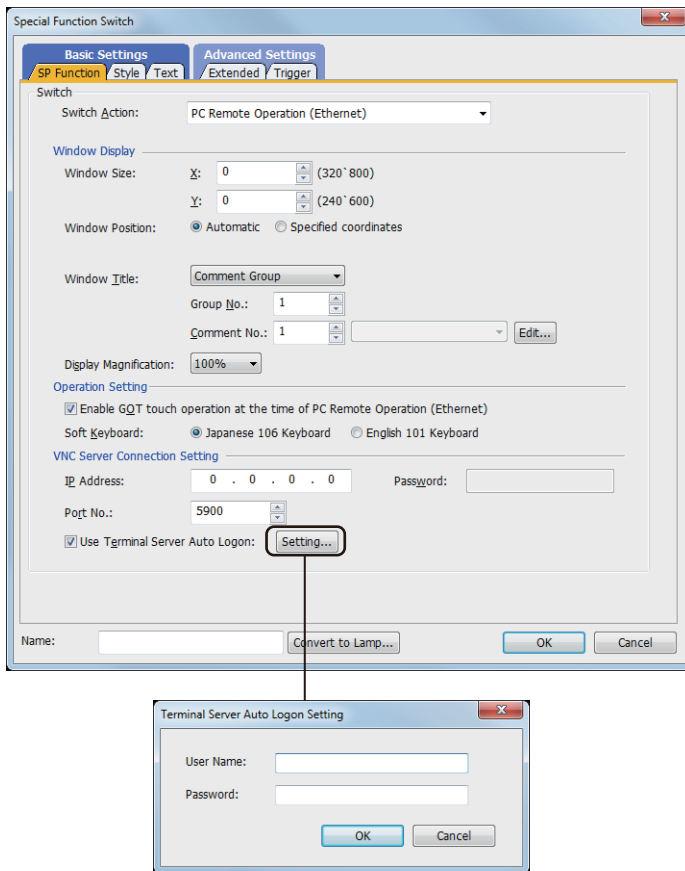

- [Specify the destination to connect the screen of Network Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-L]  
[MELIPC]

## (g) Setting for [PC Remote Operation (Ethernet)]

Set the personal computer screen on the GOT to be displayed.

For the details of the remote personal computer operation function (Ethernet), refer to the following.

→ 10.3 Operating a Personal Computer by Using the GOT (Remote Personal Computer Operation (Ethernet))

- [Window Display]
- [Window Size]
  - Set the display size of the personal computer screen on the GOT.
  - [X]: The setting range is [320] to [Horizontal resolution of GOT].
  - [Y]: The setting range is [240] to [Vertical resolution of GOT].
- [Window Position]
  - When [Automatic] is selected, the position of the overlap window displayed on the screen is automatically set as the window position of the remote personal computer operation (Ethernet). Set the top-left coordinate of the window position of the remote personal computer operation (Ethernet) in [Specified coordinates]. If the window is arranged beyond the screen, the coordinate is adjusted so that the whole window is displayed on the screen.
- [Window Title]
  - Select the title to be displayed in the title bar of the personal computer screen on the GOT.
  - The following shows the items to be selected.
  - [Standard]
  - [IP Address]
  - [Comment Group]
  - The following shows the details of each setting.
  - Select [Standard] to display [PC Remote Operation (Ethernet)].
  - Select [IP Address] to display the IP address of the connected personal computer.
  - Select [Comment Group] to display the comment with the specified comment number.
  - Click the [Edit] button to edit the comment with the specified comment number.
- [Display Magnification]:
  - Select the display magnification of the personal computer screen on the GOT. The following shows the items to be selected.
  - [100%]
  - [50%]
  - [33%]
  - [25%]
- [Operation Setting]
  - [Enable GOT touch operation at the time of PC Remote Operation (Ethernet)]:
    - Select this item to enable the touch operation on the GOT while the personal computer screen is displayed.
  - [Soft Keyboard]:
    - Select the soft keyboard type used in the personal computer screen from [Japanese 106 Keyboard] or [English 101 Keyboard].
- [VNC Server Setting]
  - [IP Address]
    - Set the IP address of the VNCserver. The setting range is [0.0.0.0] to [255.255.255.255].
  - [Password]:
    - Set the password for connection with the VNC server.
    - Set the password with 31 characters or less.
    - One-byte alphanumeric characters, one-byte space, and the following symbols are available for the password.
    - ! " # \$ % & ' ( ) \* + , - . / : ; < = > ? @ [ ] ^ \_ { | } ~
- [Port No.]
  - Set the port number for connection with the VNC server.
  - The setting range is [1024] to [65535]. Set the port number to 5923 to use the terminal server.
- [Use Terminal Server Auto Logon]
  - Click the [Setting] button to display the [Use Terminal Server Auto Logon] dialog.
  - Set the user name and password to log on to the terminal server automatically.

## (h) Setting for [Sequence Program Monitor (Ladder)]

Set the ladder search method by the one-touch ladder jump function.

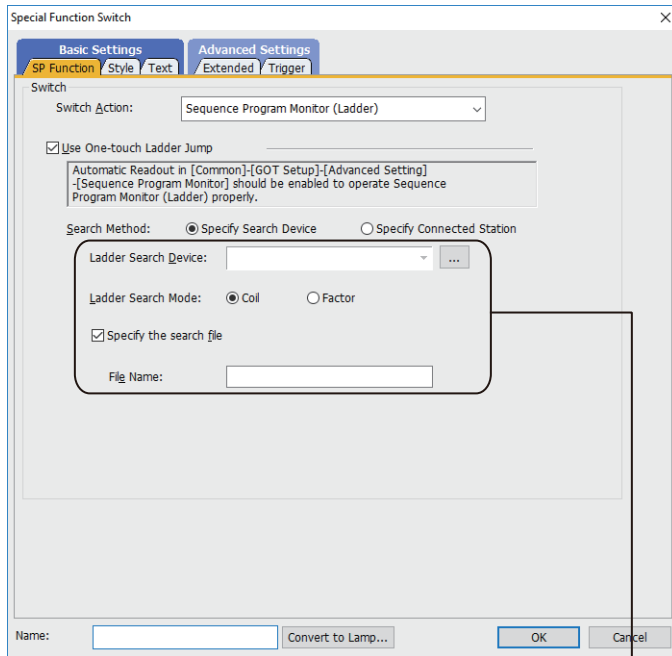

Before the ladder search setting, configure the following setting.

- Select [Common] → [GOT Setup] → [Advanced Setting] → [Sequence Program Monitor] from the menu.
- Select [Update the sequence program monitor setting], and then select [Automatically read out a sequence program] of [Display the operational state in a pop-up window].

⇒5.3.10 ■ 1 [Sequence Program Monitor]

For the details of the sequence program monitor (ladder) function, refer to the following.

⇒GOT2000 Series User's Manual (Monitor)

Select [Specify Search Device] for the search method.

Select [Specify Connected Station] for the search method.

- [Use One-touch Ladder Jump]
- [Search Method]
  - Select the search method at the sequence program monitor (ladder) startup.
  - Select [Specify Search Device] to search for files and devices.
  - Select [Specify Connected Station] to search for controllers and files.
- [Ladder Search Device]
  - When [Specify Search Device] is selected for [Search Method], set a device to be searched for at the sequence program monitor (ladder) startup.
- ⇒6.1.1 How to set devices
- [Ladder Search Mode]
  - When [Specify Search Device] is selected for [Search Method], select the search mode from [Coil] or [Factor].
- [CH No.]:
  - When [Specify Connected Station] is selected for [Search Method], set a channel No. to be searched.
  - Only the channel No. whose controller is any of the following models can be selected.
  - [MELSEC iQ-R, RnMT/NC/RT, CR800-D]
  - [MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]
  - [MELSEC-QnA, MELDAS C6\*]
  - [MELSEC-L]
  - [MELSEC-A]
  - [MELSEC-FX]
  - [MELIPC]
- [Network]:
  - When [Specify Connected Station] is selected for [Search Method], set the controller to be searched.
  - Select [Host] to search for the controller of the host station.
  - Set the CPU No.
  - Select [Other] to search for the controller of another station.
  - Set the network No., PC station No., and the CPU No. of the station connected with the GOT.
- [Specify the search file]
  - Select this item to specify the name of the program file to be searched.
  - Up to 8 characters can be set for the file name.
  - A file whose name includes both two-byte and one-byte characters can also be searched for.

### (i) Setting for [Sequence Program Monitor (iQ-R Ladder)]

Set the ladder search method by the one-touch ladder jump function.

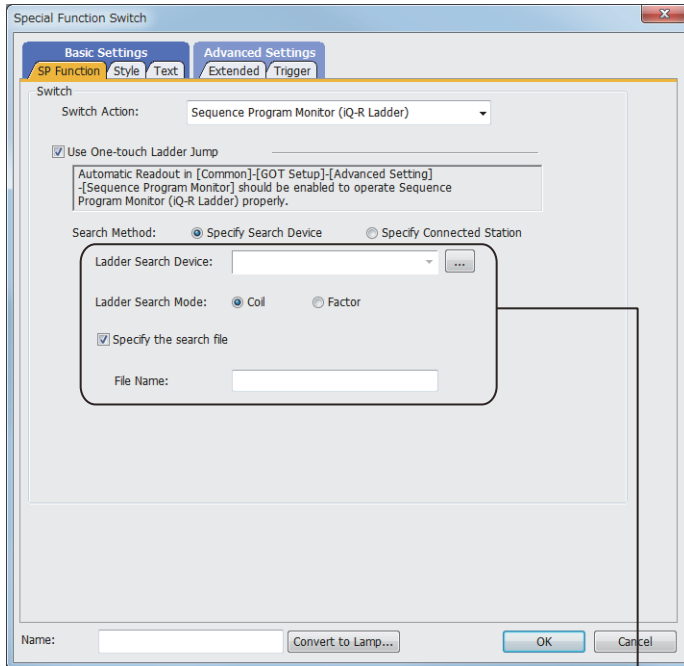

Before the ladder search setting, configure the following setting.

- Select [Common] → [GOT Setup] → [Advanced Setting] → [Sequence Program Monitor] from the menu.
- Select [Update the sequence program monitor setting], and then select [Automatically read out a sequence program] of [Display the operational state in a pop-up window].

→5.3.10 ■ 1 [Sequence Program Monitor]

For the details of the sequence program monitor (iQ-R ladder) function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

Select [Specify Search Device] for the search method.

Select [Specify Connected Station] for the search method.

- [Use One-touch Ladder Jump]
- [Search Method]
  - Select a search method used at the sequence program monitor (iQ-R ladder) startup.
  - Select [Specify Search Device] to search for files and devices.
  - Select [Specify Connected Station] to search for controllers and files.
- [Ladder Search Device]
  - When [Specify Search Device] is selected for [Search Method], set a device to be searched for at the sequence program monitor (iQ-R ladder) startup.
  - 6.1.1 How to set devices
- [Ladder Search Mode]
  - When [Specify Search Device] is selected for [Search Method], select the search mode from [Coil] or [Factor].
- [CH No.]:
  - When [Specify Connected Station] is selected for [Search Method], set a channel No. to be searched.
  - Only the channel No. whose controller is any of the following models can be selected.
  - [MELSEC iQ-R, RnMT/NC/RT, CR800-D]
  - [MELIPC]
- [Network]:
  - When [Specify Connected Station] is selected for [Search Method], set the controller to be searched.
  - Select [Host] to search for the controller of the host station.
  - Set the CPU No.
  - Select [Other] to search for the controller of another station.
  - Set the network No., PC station No., and the CPU No. of the station connected with the GOT.
- [Specify the search file]
  - Select this item to specify the name of the program file to be searched.
  - This setting is available only when RCPU is used.
  - A file whose name is up to 60 characters long can be searched for.
  - A file whose name includes both two-byte and one-byte characters can also be searched for.
  - A file whose name includes one-byte spaces or any symbol below cannot be searched for.
  - (" \ / ; : ? < > | + = [ ] . , )

## (j) Setting for [Sequence Program Monitor (SFC)]

Configure the setting for the SFC program display on the block list screen or the SFC diagram monitor screen.  
For the details of the sequence program monitor (SFC) function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

- [Use Block List/SFC Diagram display function]  
Select this item to set the SFC program displayed on the block list screen or the SFC diagram monitor screen at the sequence program monitor (SFC) startup.
- [Display Screen]  
Select the screen displayed at the sequence program monitor (SFC) startup.  
Select [Block List] to display the block list monitor screen. Select [SFC Diagram] to display the SFC diagram monitor screen.
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-QnA, MELDAS C6\*]  
[MELSEC-L]  
[MELIPC]
- [Network]  
Configure the network setting of the controller to be monitored.  
Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].
- [File Name]:  
Specify the name of the SFC program file to be read from the controller.  
Up to 8 characters can be set for the file name.
- [Block No.]:  
When [SFC Diagram] is selected for [Display Screen], set the block No. of the block to be displayed at the SFC monitor startup.  
The setting range is [0] to [319].

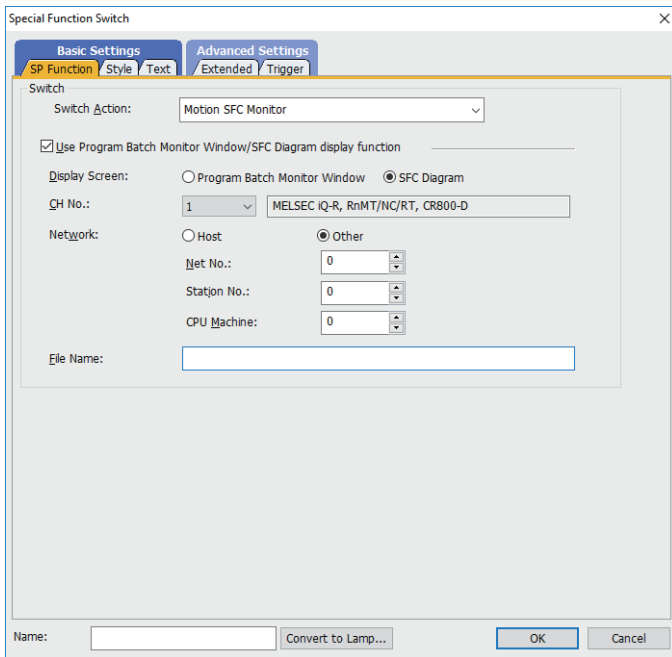

### (k) Setting for [Motion SFC Monitor]

Configure the setting for the SFC program display by the program batch monitor window or the SFC diagram display function.

For the details of the motion SFC monitor function, refer to the following manual.

→ GOT2000 Series User's Manual (Monitor)

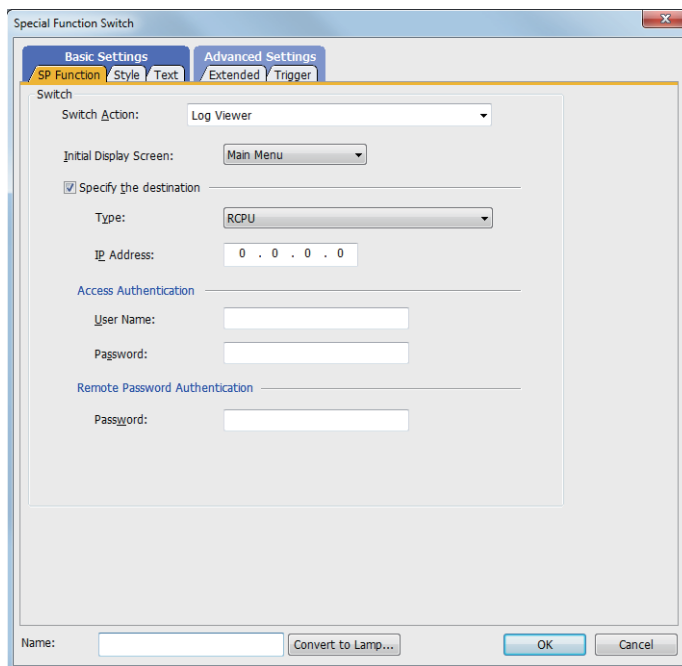

- [Use Program Batch Monitor Window/SFC Diagram display function]  
Select this item to set the SFC program displayed on the program batch monitor window or the SFC diagram monitor screen at the motion SFC monitor startup.
- [Display Screen]:  
Select the screen displayed at the motion SFC monitor startup. Select [Program Batch Monitor Window] to display the program batch monitor window. Select [SFC Diagram] to display the SFC diagram monitor screen.
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [PC Station No.]  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored. The setting range is [0] to [4].
- [File Name]:  
Specify the name of the SFC program file to be read from the controller. Up to 16 characters can be set for the file name.

### (l) Setting for [Log Viewer]

Set the initial screen and a controller connected when the log viewer is started with a special function switch.

For the details of the log viewer, refer to the following.

→ GOT2000 Series User's Manual (Monitor)

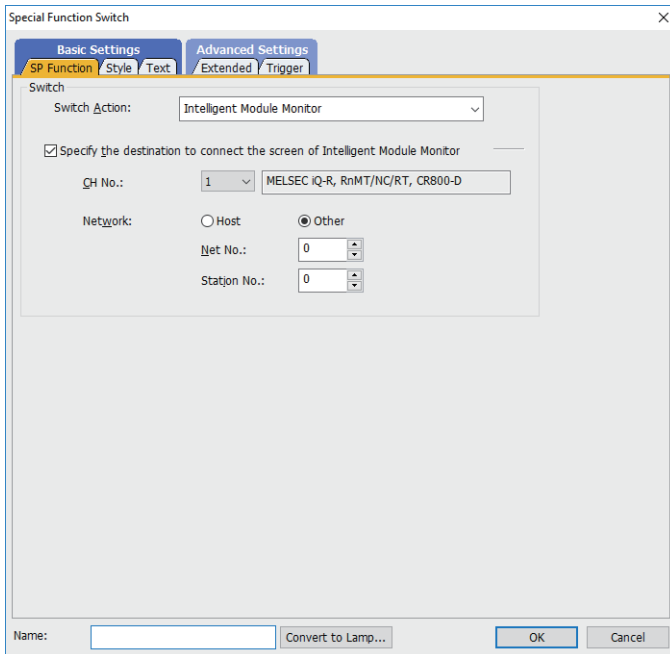

- [Initial Display Screen]  
Select the initial screen to be displayed at the log viewer startup. The following shows selectable items.  
[Main Menu]  
[File Selection Screen]
- [Specify the destination]  
• [Type]  
Select a controller. The following shows selectable items.  
[High Speed Data Logger/BOX Data Logger]  
[RCPU]  
[QnUDV/LCPU]
- [IP Address]  
Set the IP address of the controller. The setting range is [0].[0].[0].[0] to [255].[255].[255].[255].
- [Access Authentication]  
• [User Name]  
Set the user name for access authentication. Up to 32 one-byte alphanumeric characters are settable.
- [Password]  
Set the password for access authentication. Up to 32 one-byte alphanumeric characters are settable.
- [Remote Password Authentication]  
• [Password]  
Set the password for remote password authentication. Up to 32 one-byte alphanumeric characters are settable.

### (m) Setting for [Intelligent Module Monitor]

Set a controller connected when the intelligent module monitor is started with a special function switch.  
For the details of the intelligent module monitor function, refer to the following manual.

⇒GOT2000 Series User's Manual (Monitor)

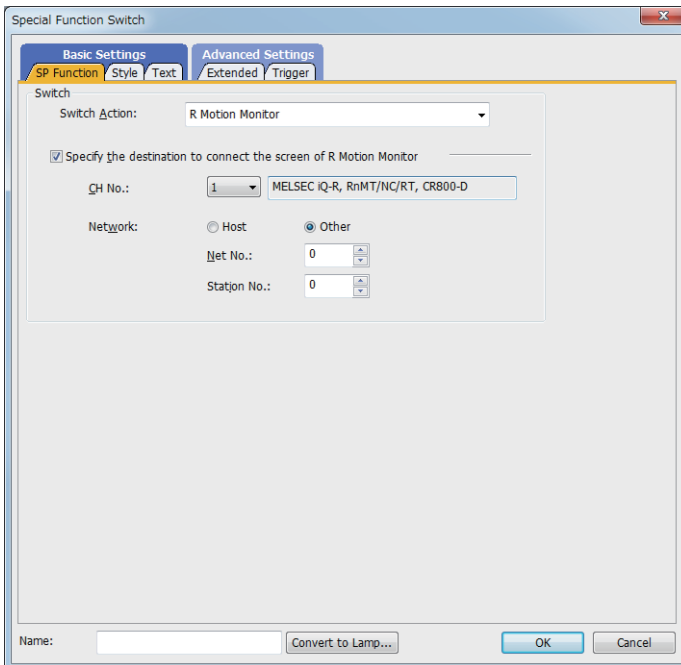

- [Specify the destination to connect the screen of Intelligent Module Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-L]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].

### (n) Setting for [R Motion Monitor]

Set a controller connected when the R motion monitor is started with a special function switch.  
For the details of the R motion monitor function, refer to the following.

⇒GOT2000 Series User's Manual (Monitor)

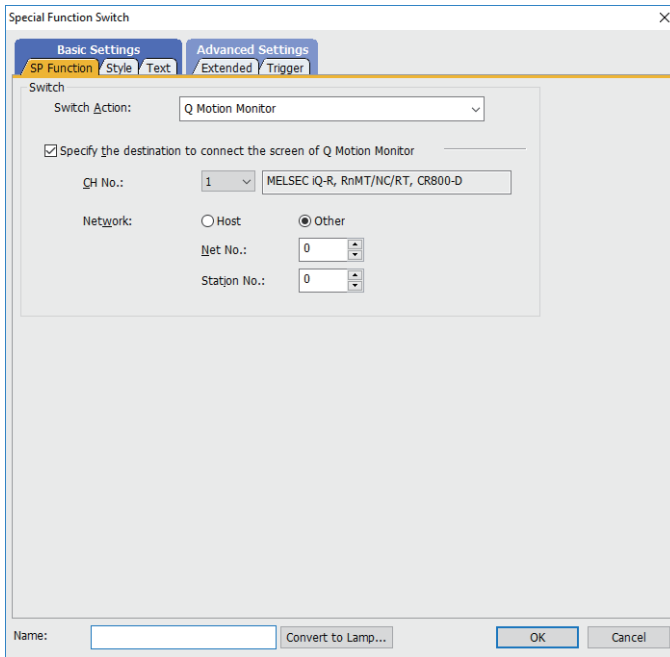

- [Specify the destination to connect the screen of R Motion Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].

### (o) Setting for [Q Motion Monitor]

Set a controller connected when the Q motion monitor is started with a special function switch.  
For the details of the Q motion monitor function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

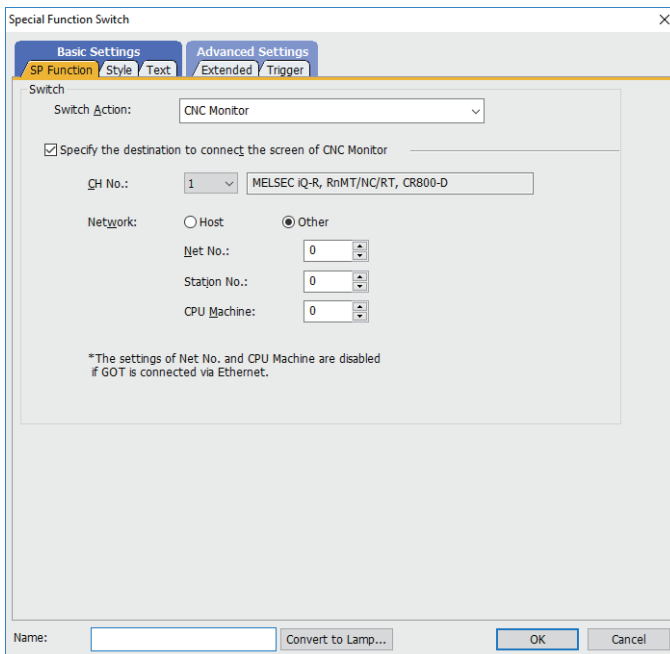

- [Specify the destination to connect the screen of Q Motion Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored.  
Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].

### (p) Setting for [CNC Monitor]

Set the CNC connected when the CNC monitor is started with a special function switch.  
For the details of the CNC monitor function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

- [Specify the destination to connect the screen of CNC Monitor]
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored.  
Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].

### (q) Setting for [CNC Data I/O]

Set the CNC connected when the CNC data I/O screen is called up with a special function switch.

For the details of the CNC data I/O function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

- [Specify the destination to connect the screen of CNC Data Input/ Output]
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].

### (r) Setting for [CNC Manufacturing Program Editor]

Set the CNC connected when the CNC machining program edit screen is called up with a special function switch.

For the details of the CNC machining program edit function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

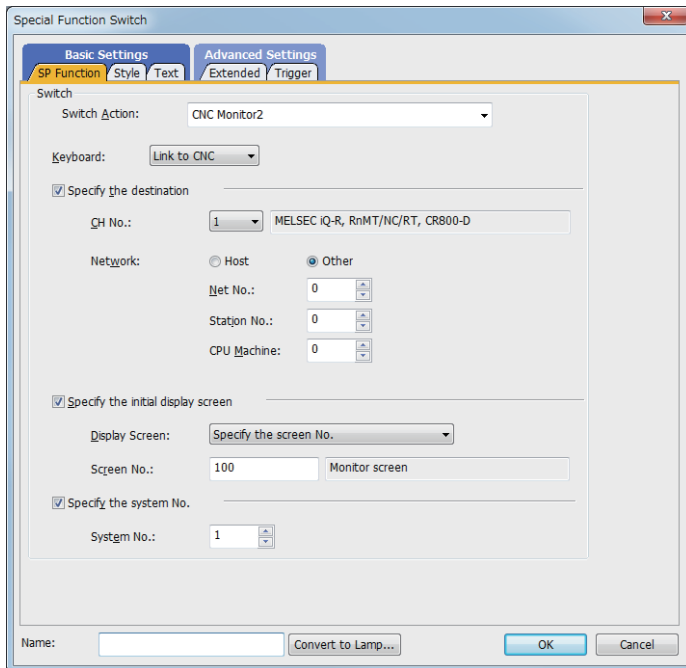

- [Specify the destination to connect the screen of CNC Manufacturing Program Editor]
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].

### (s) Setting for [CNC Monitor 2]

Set the screen display method and connection destination for the CNC monitor 2 that is started with a special function switch.

For the details of the CNC monitor 2, refer to the following.

→GOT2000 Series User's Manual (Monitor)

- [Keyboard]  
Available to GT27-S and GT25-S.  
Select the type of the software keyboard to be displayed on the CNC monitor 2 screen.
- [Link to CNC]:  
Switches between software keyboards according to the type of the connected CNC.
- [Not displayed]:  
Hides the software keyboard.
- [M system]:  
Displays the software keyboard applicable to machining centers.
- [L system]:  
Displays the software keyboard applicable to lathes.
- [Specify the destination]
  - [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELIPC]
  - [Network]:  
Configure the network setting of the controller to be monitored.  
Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
  - [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
  - [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
  - [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].
- [Specify the initial display screen]  
Set the initial screen to be displayed at the startup of CNC monitor 2.  
Specify a CNC screen name or screen number.
- [Display Screen]:  
Select the name of the initial screen.  
To use a screen number to specify the initial screen, select [Specify the screen No.].  
The following shows the items to be selected.  
[Monitor screen]  
[Setup screen (Tool offset)]  
[Edit screen]  
[Diagnosis screen (System Configuration)]  
[Alarm]  
[Maintenance screen]  
[Parameter]  
[Input/Output (Maintenance screen)]  
[Menu list]  
[Specify the screen No.]
- [Screen No.]:  
This item appears when [Specify the screen No.] is selected for [Display Screen].  
Specify the screen number of the initial screen.  
If the specified screen has a name, the screen name is displayed.
- [Specify the system No.]  
Set the initial system to be displayed at the startup of CNC monitor 2.
- [System No.]:  
Specify the number of the initial system.  
The setting range is [1] to [7].

## (t) Setting for [iQSS Utility]

Set a controller connected when the iQSS utility screen is called up with a special function switch.

For the details of the iQSS utility function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

Special Function Switch

Basic Settings | Advanced Settings

SP Function | Style | Text | Extended\* | Trigger

Switch

Switch Action: iQSS Utility

Specify the destination to connect the screen of iQSS Utility

CH No.: 1 MELSEC iQ-R, RnMT/NC/RT, CR800-D

Network:  Host  Other

Net No.: 0

Station No.: 0

CPU Machine: 0

Name: Convert to Lamp... OK Cancel

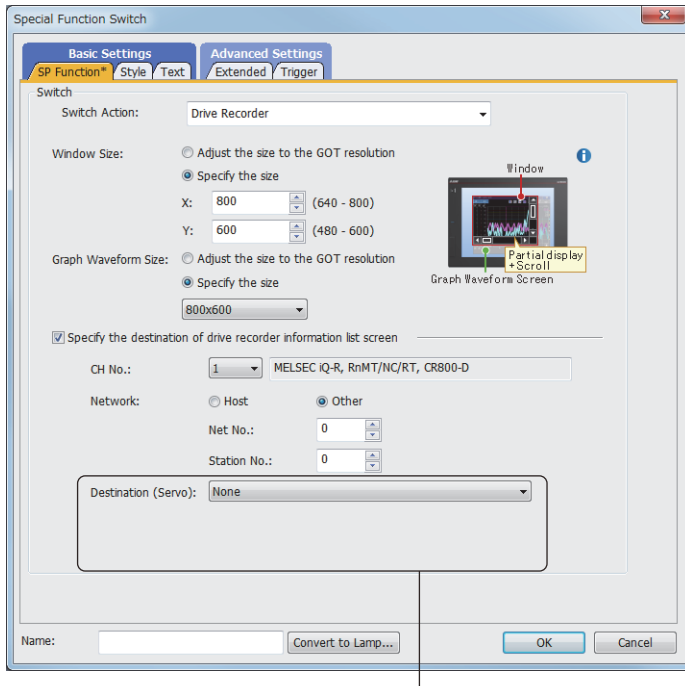

- [Specify the destination to connect the screen of iQSS Utility]
- [CH No.]:  
Select the channel No. of the controller to be monitored.  
The setting range is [1] to [4].  
Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-L]  
[MELIPC]
- [Network]:  
Configure the network setting of the controller to be monitored.  
Select [Host] to monitor the controller of the host station.  
Select [Other] to monitor the controller of another station.
- [Net No.]:  
When [Other] is selected for [Network], set the network No. of the controller to be monitored.  
The setting range is [0] to [255].
- [Station No.]:  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored.  
The setting range is [0] to [120].
- [CPU Machine]:  
Set the CPU No. of the controller to be monitored.  
The setting range is [0] to [4].

### (u) Setting for [Drive Recorder]

Set the screen display size and the connection destination for the drive recorder that is started with a special function switch.

For the details of the drive recorder, refer to the following.

→ GOT2000 Series User's Manual (Monitor)

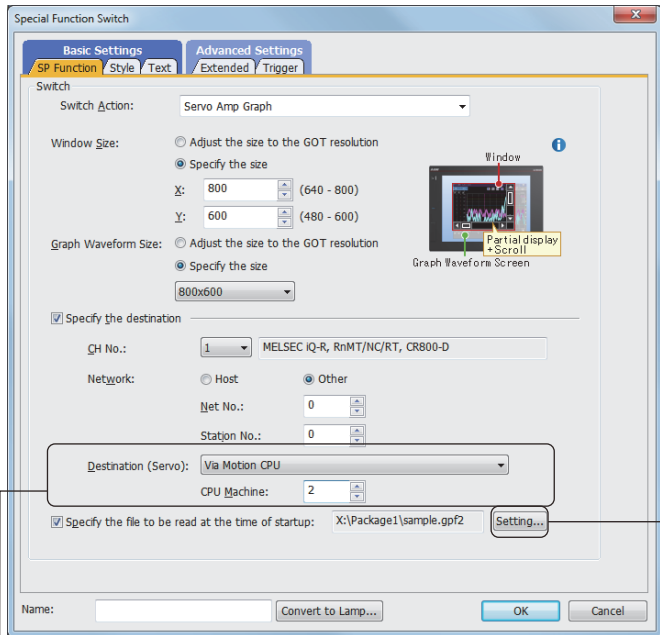

- [Window Size]
  - This item is settable for GT27-X, GT27-S, GT25-W, and GT25-S. Set the window size of the graph waveform screen.
  - [Adjust the size to the GOT resolution]: Adjusts the window size of the graph waveform screen to the GOT resolution.
  - [Specify the size]: Specify the window size directly. The setting range depends on the GOT model.
- [Graph Waveform Size]
  - This item is settable for GT27-X, GT27-S, GT25-W, and GT25-S. Set the size of the graph display area on the graph waveform screen.
  - [Adjust the size to the GOT resolution]: Adjusts the graph display area size to the GOT resolution. This item is selectable when [Specify the size] is selected for [Window Size].
  - [Specify the size]: Select the graph display area size. The setting range depends on the GOT model.
- [Specify the destination]
  - [CH No.]: Select the channel No. of the controller to be monitored. The setting range is [1] to [4].
  - [Network]: Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
  - [Net No.]: When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [Station No.]
  - When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].
- [Destination (Servo)]: Select the controller through which a servo amplifier is monitored. The following shows selectable items.
  - [None]
  - [Via Motion CPU]
  - [Via Simple Motion (SSCNET III/H)]
  - [Via Simple Motion (CC-Link IE Field Network)]
  - [Via CC-Link IE Field Network Communication Module]
  - To specify a controller upon startup of the drive recorder, select [None].
- [CPU Machine]: Specify the CPU number of a motion controller CPU through which a servo amplifier is monitored. The setting range is [2] to [4].
- [First I/O]: Specify the start I/O number of a simple motion module or CC-Link IE Field Network communication module through which a servo amplifier is monitored. The setting range varies with the controller. When the controller is set to [MELSEC iQ-F] and [Network] is set to [Host], the setting range is [01] to [10]. In other cases, the setting range is [00] to [FF].
- [Target Axis No.]: Specify the number of an axis from which data is read. The setting range is [1] to [64].
- [Target Station No.]: Specify the station number of a controller from which data is read. The setting range is [0] to [120].

## (v) Settings for [Servo Amp Graph]

Set the screen display size and the connection destination for the servo amplifier graph that is started with a special function switch.

For the details of the servo amplifier graph, refer to the following.

→GOT2000 Series User's Manual (Monitor)

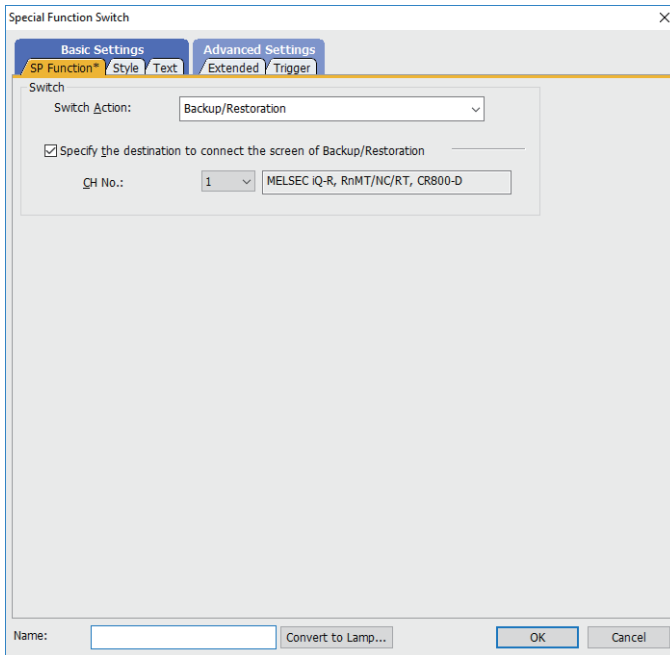

- [Window Size]
  - This item is settable for GT27-X, GT27-S, GT25-W, and GT25-S. Set the window size of the graph waveform screen.
  - [Adjust the size to the GOT resolution]:
    - Adjusts the window size of the graph waveform screen to the GOT resolution.
  - [Specify the size]:
    - Specify the window size directly.
    - The setting range depends on the GOT model.
- [Graph Waveform Size]
  - This item is settable for GT27-X, GT27-S, GT25-W, and GT25-S. Set the size of the graph display area on the graph waveform screen.
  - [Adjust the size to the GOT resolution]:
    - Adjusts the graph display area size to the GOT resolution. This item is selectable when [Specify the size] is selected for [Window Size].
  - [Specify the size]:
    - Select the graph display area size.
    - The setting range depends on the GOT model.
- [Specify the destination]
  - [CH No.]:
    - Select the channel No. of the controller to be monitored. The setting range is [1] to [4].
  - [Network]:
    - Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
  - [Net No.]:
    - When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
  - [Station No.]
    - When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].
  - [Destination (Servo)]:
    - Select a controller through which a servo amplifier is monitored. The following shows selectable items.
    - [None]
    - [Via Motion CPU]
    - [Via Simple Motion (SSCNET III/H)]
    - To connect the controller specified on the PLC side upon startup of the servo amplifier graph, select [None].
  - [CPU Machine]:
    - Specify the CPU number of a motion controller CPU through which a servo amplifier is monitored. The setting range is [2] to [4].
  - [First I/O]:
    - Specify the start I/O number of a simple motion module through which a servo amplifier is monitored. The setting range varies with the controller.
    - When the controller is set to [MELSEC iQ-F] and [Network] is set to [Host], the setting range is [01] to [10].
    - In other cases, the setting range is [00] to [FF].
  - [Specify the file to be read at the time of startup]:
    - Specify a waveform data file (\*.gpf2) to be read upon startup of the servo amplifier graph.
  - [Setting] button:
    - Displays the [gpf2 File Setting] dialog.
    - Set [Drive Name], [Folder Name], and [File Name] to specify the path of the file to be read.

### (w) Setting for [Backup/Restoration]

Set a controller connected when the backup/restoration screen is called up with a special function switch.  
For the details of the backup/restoration function, refer to the following.

→GOT2000 Series User's Manual (Monitor)

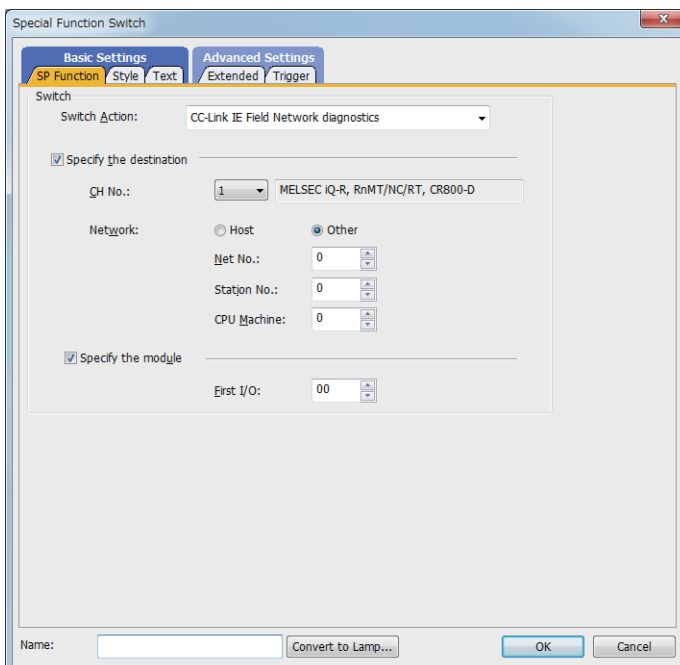

- [Specify the destination to connect the screen of Backup/Restoration]
- [CH No.]:  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC iQ-R, RnMT/RT, CR800-D]  
[MELSEC iQ-F]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-Q, Q17nD/M/DR/DSR, CRnD-700]  
[MELSEC-QnA, MELDAS C6\*]  
[MELSEC-L]  
[MELSEC-FX]  
[MELIPC]

### (x) Setting for [CC-Link IE Field Network diagnostics]

Set a controller connected when the screen for the CC-Link IE Field Network diagnostics is called up with a special function switch.

For the details of the CC-Link IE Field Network diagnostics, refer to the following.

→GOT2000 Series User's Manual (Monitor)

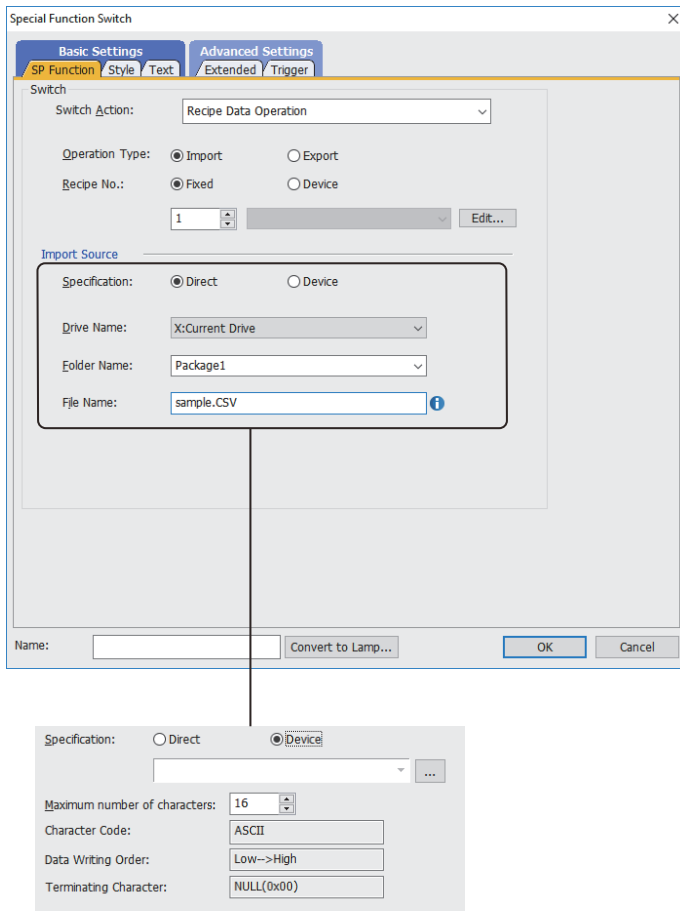

- [Specify the destination]
- [CH No.]  
Select the channel No. of the controller to be monitored. The setting range is [1] to [4]. Only the channel No. whose controller is any of the following models can be selected.  
[MELSEC iQ-R, RnMT/NC/RT, CR800-D]  
[MELSEC iQ-F]  
[MELSEC-Q/QS, Q17nD/M/NC/DR/DSR, CRnD-700]  
[MELSEC-L]  
[MELIPC]
- [Network]  
Configure the network setting of the controller to be monitored. Select [Host] to monitor the controller of the host station. Select [Other] to monitor the controller of another station.
- [Net No.]  
When [Other] is selected for [Network], set the network No. of the controller to be monitored. The setting range is [0] to [255].
- [Station No.]  
When [Other] is selected for [Network], set the PC station No. of the controller to be monitored. The setting range is [0] to [120].
- [CPU Machine]  
Set the CPU No. of the controller to be monitored. The setting range is [0] to [4].
- [Specify the module]
- [First I/O]  
Set the start I/O number of a controller to be monitored. The setting range is [00] to [FF].

## (y) Settings for [Recipe Data Operation]

Set the detailed settings to import or export recipe data.

For the details of the recipe function, refer to the following.

⇒9.3.3 How to use the recipe

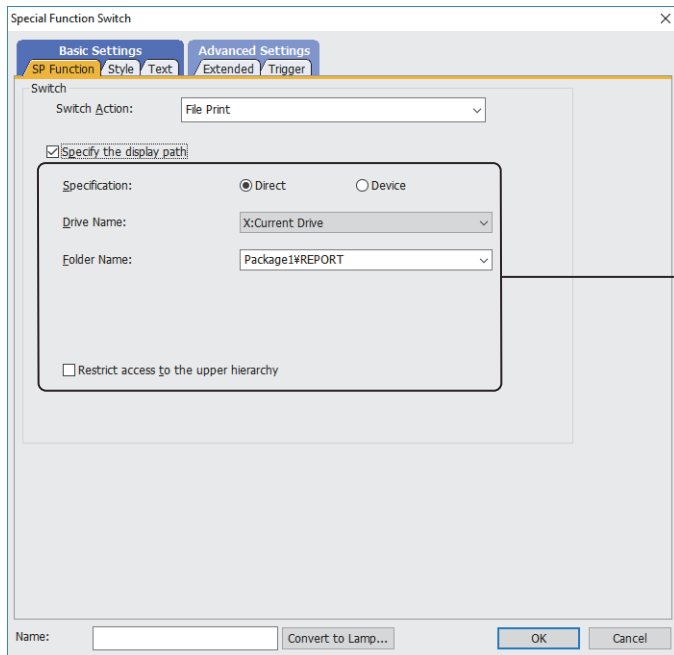

- [Operation Type]
  - Set the operation to be performed when the touch switch is touched.
- [Import]:
  - Imports data from the recipe file specified with [Import Source] into the recipe data specified with [Recipe No.].
- [Export]:
  - Exports the recipe data specified with [Recipe No.] to the recipe file specified with [Export Destination].
- [Recipe No.]
  - [Fixed]:
    - Specifies the target recipe data with a specific recipe number. Select this item, and then specify the recipe number of the recipe data to be imported or exported. The setting range is [1] to [32767]. If recipe names are set for each recipe data, the target recipe data is selectable from among the recipe names as well. Click the [Edit] button to display the [Recipe] dialog. Configure the settings of recipe data as necessary.
  - [Device]:
    - Specifies the target recipe data with a device value. Select this item, and then specify a device. You can specify an unsigned 16-bit binary word device or word-specified bit device.
- [Import Source] and [Export Destination]
  - When selecting [Import] for [Operation Type], set the import source file.
  - When selecting [Export] for [Operation Type], set the export destination file.
- [Specification]
  - Select the method of specifying a recipe file as the import source or export destination.
  - When selecting [Direct] for [Specification], specify the path to the recipe file.
  - When selecting [Device] for [Specification], specify the start device of consecutive devices that store the full path of the recipe file. You can specify an unsigned 16-bit binary word device.
- [Drive Name]
  - Set this item when selecting [Direct] for [Specification]. Select the drive in which the import source file or export destination file is stored. The following shows selectable items. [A:Standard SD Card] [B:USB Drive] [E:USB Drive] [F:USB Drive] [G:USB Drive] [X:Current Drive] For the available drives by GOT model, refer to the following. ⇒1.2.7 Drive configuration of the target GOT for data transfer
- [Folder Name]
  - Set this item when selecting [Direct] for [Specification]. Specify the path to the import source folder or export destination folder.
- [File Name]
  - Set the file name of the import source file or export destination file. The file must be in the binary format (\*.G2P), Unicode text format (\*.TXT), or CSV format (\*.CSV).
- [Maximum number of characters]
  - Set this item when selecting [Device] for [Specification]. Specify the maximum number of characters for the full path of the recipe file. The setting range is [8] to [78].

## (z) Settings for [File Print]

Set the folder to be displayed when the print file list display screen is called up with a special function switch. For the details of the file print function, refer to the following.

→GOT2000 Series User's Manual (Utility)

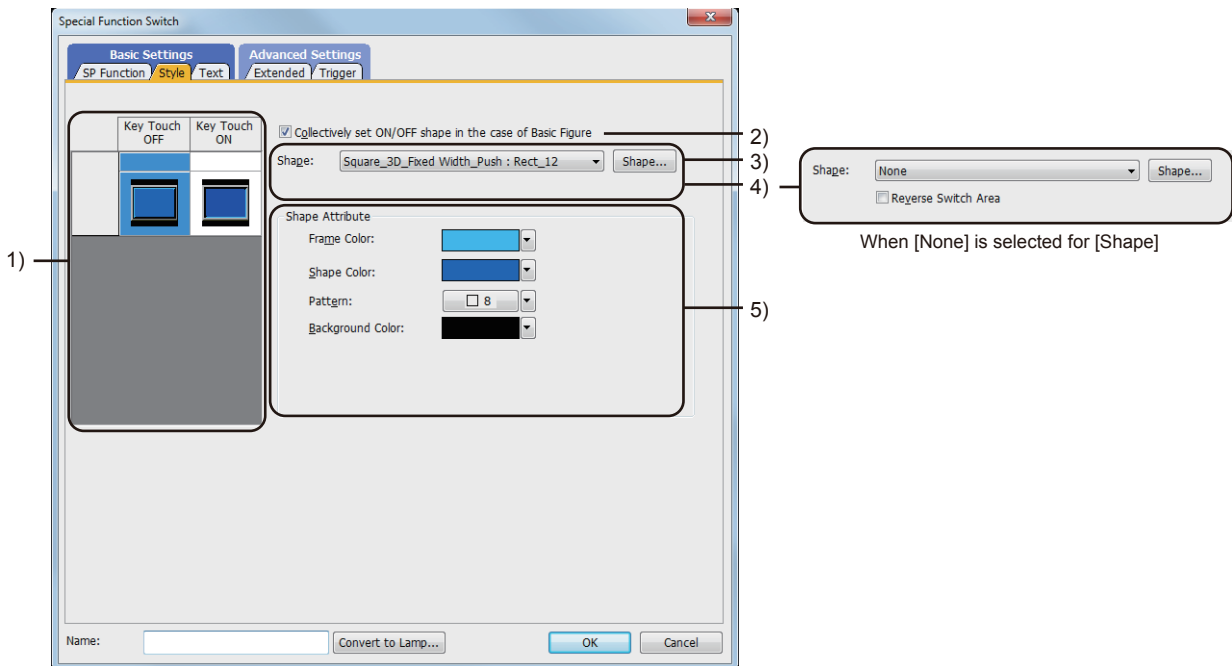

- [Specify the display path]  
Specify the folder to be displayed when the print file list display screen is called up.
- [Specification]  
Select a method of specifying the folder to be displayed. When selecting [Direct], specify the folder path directly. When selecting [Device], specify the start device of consecutive devices that store the full path of the folder. The number of the consecutive devices equals half of the set value of [Maximum number of characters].
- [Drive Name]  
Set this item when selecting [Direct] for [Specification]. The following shows selectable items.  
[A:Standard SD Card]  
[B:USB Drive]  
[E:USB Drive]  
[F:USB Drive]  
[G:USB Drive]  
[N:Network Drive]  
[X:Current Drive]  
For the available drives by GOT model, refer to the following.  
→1.2.7 Drive configuration of the target GOT for data transfer
- [Folder Name]  
Set this item when selecting [Direct] for [Specification]. Specify the folder path.
- [Maximum number of characters]  
Set this item when selecting [Device] for [Specification]. Specify the maximum number of characters for the folder path. The setting range is [1] to [75].
- [Restrict access to the upper hierarchy]  
Disables the access to a parent folder from the folder that is displayed when the print file list display screen is called up.

## ■ 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

### 3) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

→ 6.5.5 ■ 1 Setting object shapes

### 4) [Reverse switch area]

#### **GOT Graphic Ver.1**

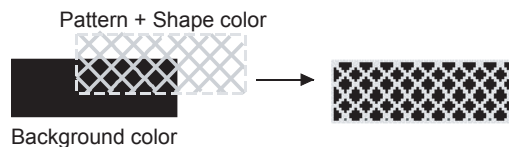

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

### 5) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.

Item	Description
[Pattern], [Background Color]	<p>Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.</p> <p>Example) Shape color:  Pattern:  Background color:  </p>

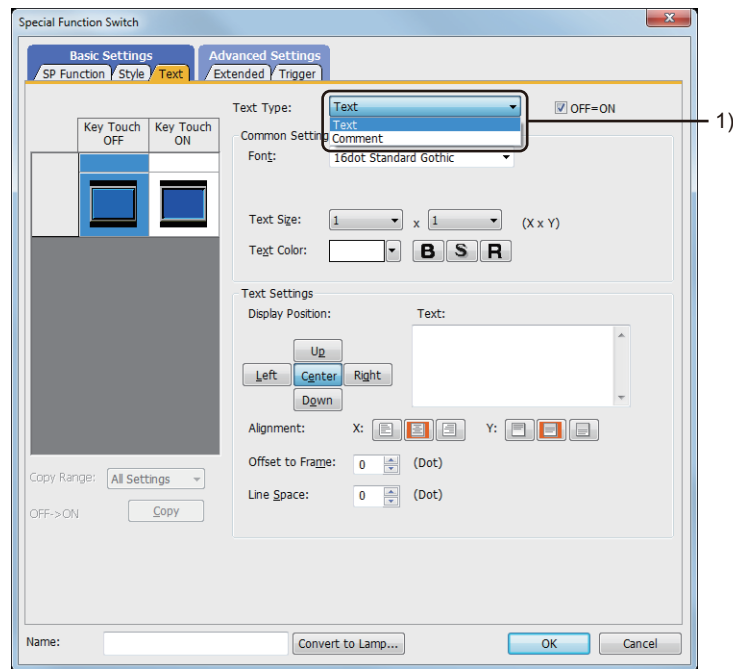

### ■3 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	<p>Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group</p>
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

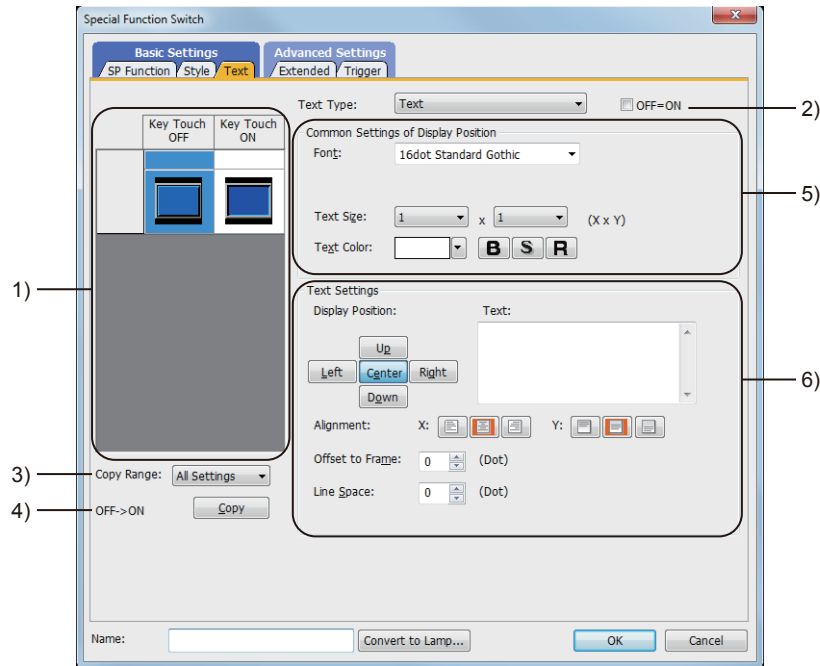

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→(1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

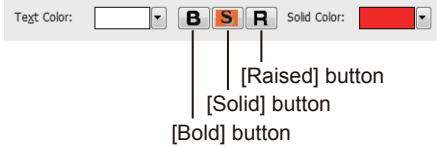

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

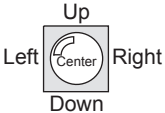

Copies the text setting.

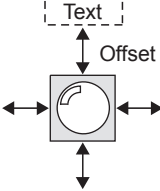

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

## 5) [Common Setting of Display Position]

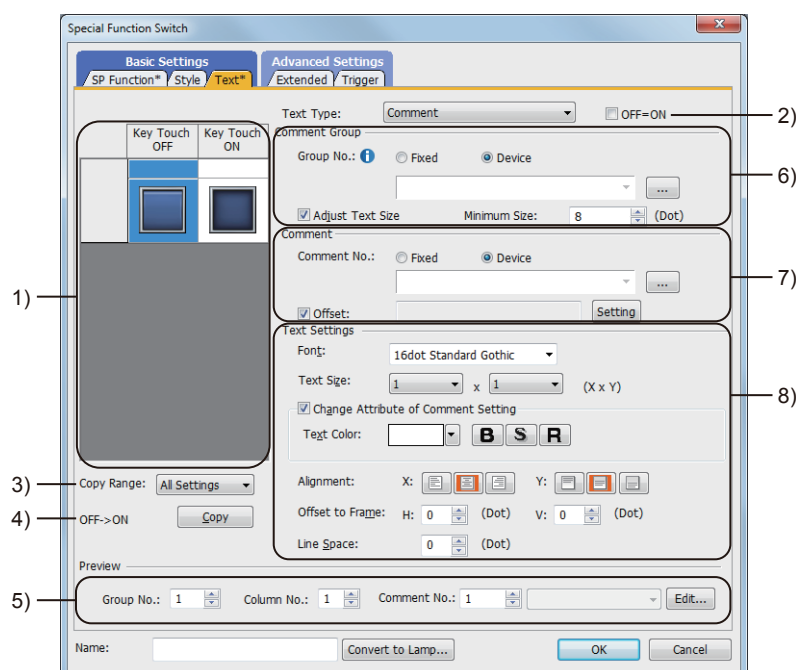

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. ⇒1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. ⇒6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

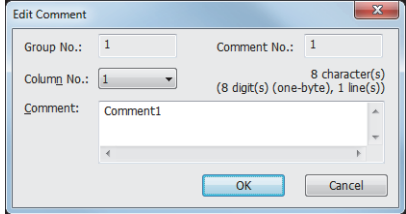

## 5) [Preview]

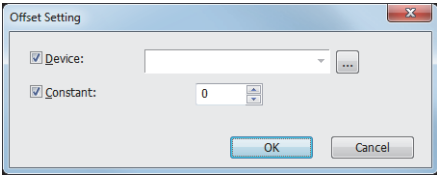

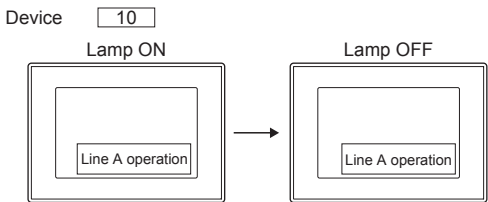

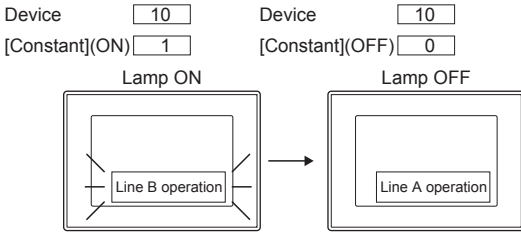

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

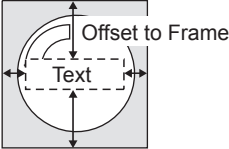

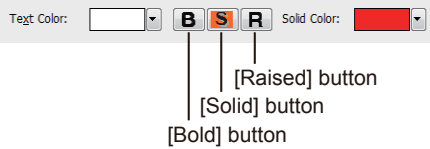

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• [Column No.] Select the column No. of the comment to be edited.</li> <li>• [Comment] Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field.</li> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description
[Offset]	<p>Set this item to change the text display of the touch switch according to the device value.  →6.1.1 How to set devices</p> <p>This setting is available only when [Device] is selected for [Comment No.].  Click the [Setting] button, and set the offset in the [Offset Setting] dialog.</p>  <ul style="list-style-type: none"> <li>• [Device]  Set this item to change the text display of the touch switch according to the device value.  →6.1.1 How to set devices</li> <li>• [Constant]  Set this item to add another value to the value of [Device] according to the indication status (on or off) of the lamp. After selecting this item, set the value to be added in the lamp on and off status.</li> <li>• When only [Device] is set  The comment of the same number as the value of [Device] is displayed regardless of the lamp status.</li> </ul>  <p>Comment No. 10 is displayed.</p> <ul style="list-style-type: none"> <li>• When [Device] and [Constant] are set  When the lamp is on, the comment of the same number as the value derived from the addition of [Device] + [Constant](ON) is displayed. ## ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

Setting the user ID enables identifying the object by the operation log.

→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

When multiple objects are set on the same screen editor, the target object may not operate.

To make sure that the target object operates, match the user ID with the user ID of the target object.

### 3) [Simultaneous Press]

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The special function switch is [ON Priority] (fixed).

### 4) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off. The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time. After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab. Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list. After selecting the delay, set the delay time.
- [Delay Time]: The setting range is [1] to [5].

**5) [Buzzer]**

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

**6) [Operation Log Target]**

Select this item to target the object for the operation log.

⇒5.2.11 ■ 1 Specifications of the operation log

**7) [Set the style and text settings for a switch in non-operating state]**

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

**8) [KANJI Region]**

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows selectable items.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

**9) [Layer]**

Select the layer to arrange the object on.

The following shows selectable items.

- [Front]
- [Back]

⇒6.5.5 ■ 3 Superimposition

**10) [Category]**

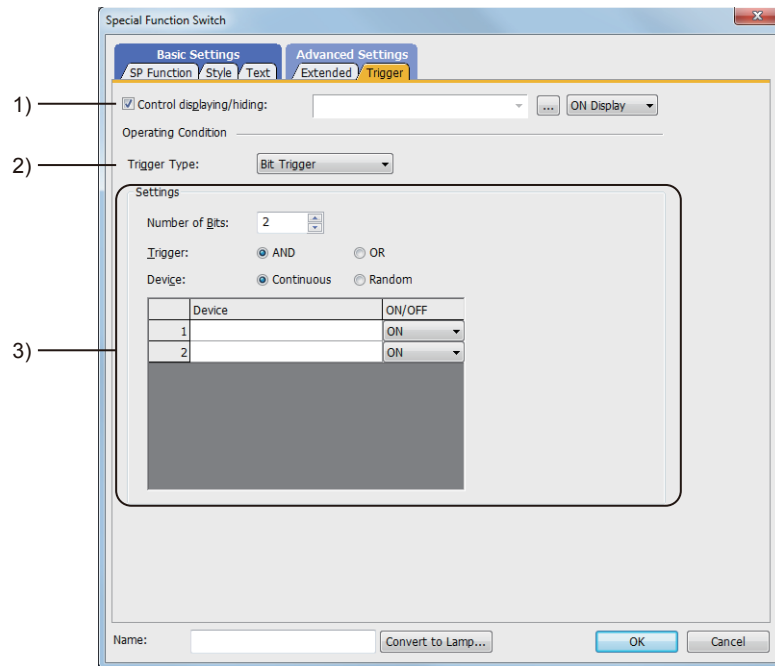

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows selectable items.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows selectable items.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

⇒ 6.2.2 Setting Trigger Types

## 8.2.10 [Key Window Display Switch] dialog

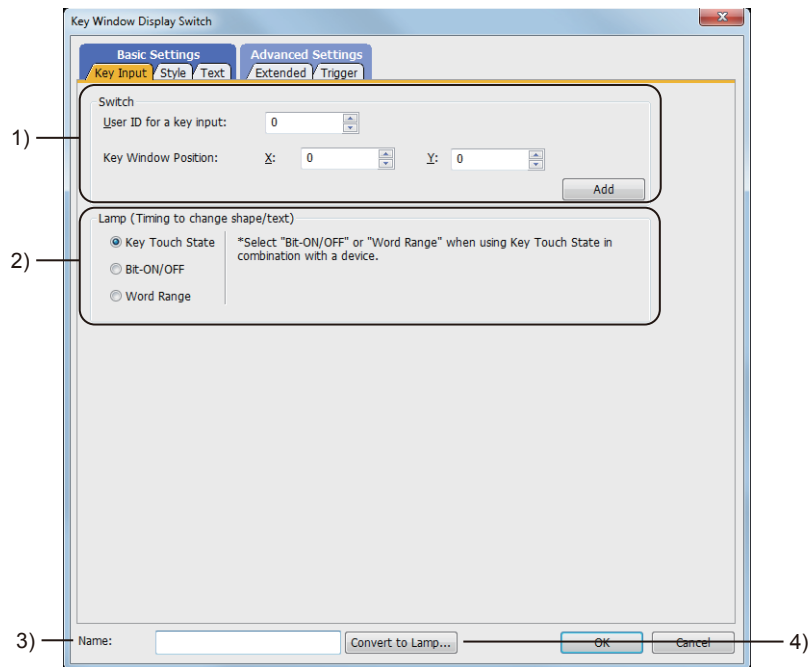

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The key window display switch displays a specified key window at a specified position, or displays a cursor on a specified object.

- Step 1** Select [Object] → [Switch] → [Key Window Display Switch] from the menu.
- Step 2** Click the position where you arrange the key window display switch.
- Step 3** Double-click the arranged key window display switch to display the setting dialog.
- ■ 1 [Key Input] tab
    - 2 [Style] tab
    - 3 [Text] tab
    - 4 [Extended] tab
    - 5 [Trigger] tab

### ■ 1 [Key Input] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Switch Action]

Item	Description
[User ID for a key input]	Set the user ID for the object on which the cursor is displayed when you touch the key window display switch. The setting range is [0] to [65535].
[Key Window Position]	Specify the position (coordinate) where the key window is displayed.
[Add] button	Adds actions to the switch. →8.2.4 ■ 1 [Action] tab

#### 2) [Lamp (Timing to change shape/text)]

Select how to switch touch switch images (shapes of on status and off status).

- Switching the touch switch image according to the touch operation
  - Select [Key Touch State].

The shape of on status is displayed while you touch the touch switch.

The shape of off status is displayed regardless of the device status while you do not touch the touch switch.

- Switching the touch switch image according to the status of the corresponding device  
Select [Bit-ON/OFF] or [Word Range].

Example) Bit: When M100 is set

The shape of on status is displayed when M100 is on.

The shape of off status is displayed when M100 is off.

To switch the touch switch image using the lamp on and lamp off status in combination with the key touch on and key touch off status, refer to the following.

⇒8.2.4 ■ 2 [Style] tab

Item	Description
[Key Touch State]	The shape of the key touch on status is displayed while you touch the touch switch. The shape of the key touch off status is displayed while you do not touch the touch switch.
[Bit-ON/OFF]	When the bit device set in [Device] turns on, the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the device. ⇒6.1.1 How to set devices
[Word Range]	When the word device set in [Device] is within the range specified in [ON Range], the shape of the lamp off status is switched to the shape of the lamp on status. After selecting this item, set the followings. • [Device]: Set the word device. ⇒6.1.1 How to set devices • [Data Type]: Select the data type of the word device. The following shows the items to be selected. [Signed BIN16] [Unsigned BIN16] [Signed BIN32] [Unsigned BIN32] [BCD16] [BCD32] [Real] • [ON Range]: After setting the specified word device, click the [Exp] button to set the switching range between the shape of the lamp on status and the shape of the lamp off status. ⇒6.2.2 Setting Trigger Types

### 3) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

### 4) [Convert to Lamp] button

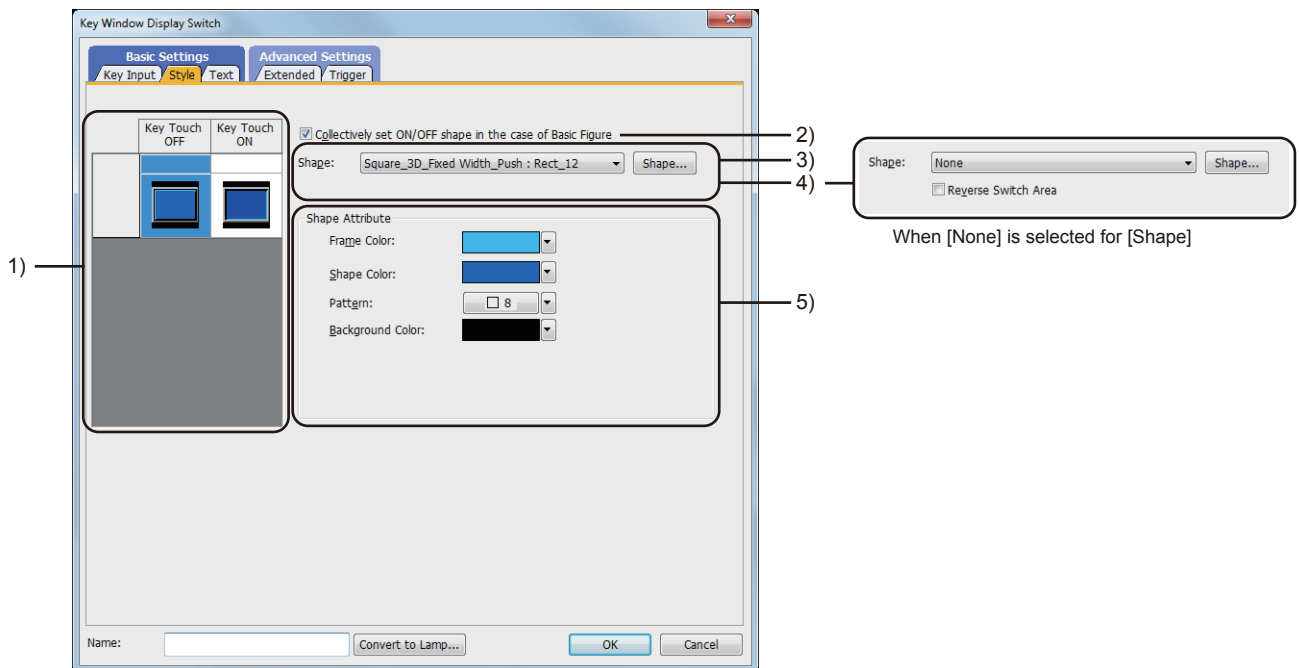

Converts the object type to the lamp.

⇒8.2.2 How to use touch switch

## ■2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].  
Select this item to collectively change the shapes of the touch switches except [Press Twice].

### 3) [Shape]

Set the shape of the touch switch.  
To select a shape other than those in the list box, click the [Shape] button.  
→6.5.5 ■ 1 Setting object shapes

### 4) [Reverse switch area]

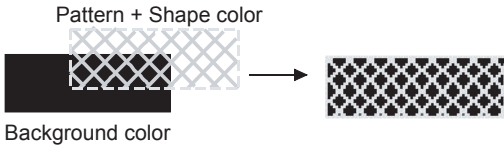

#### **GOT Graphic Ver.1**

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

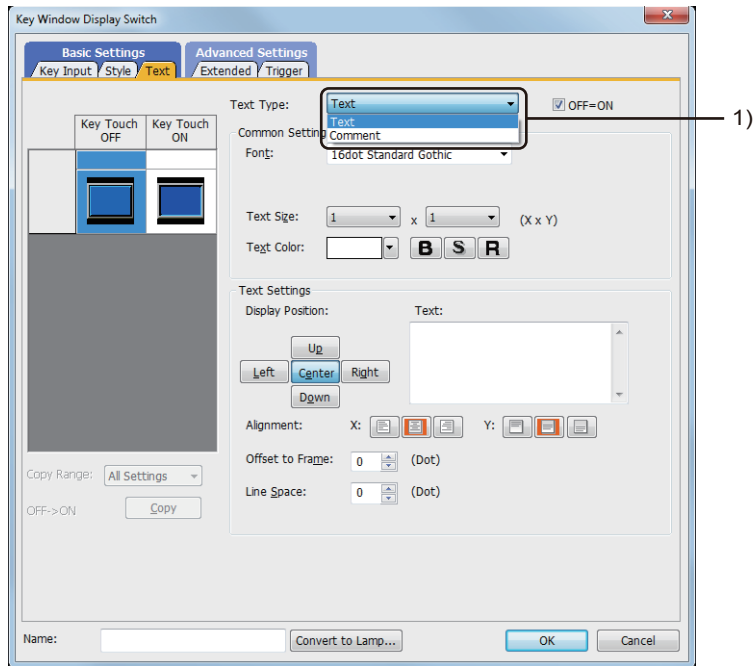

### 5) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.
[Pattern], [Background Color]	Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.  Example) Shape color:  Pattern:  Background color:  

### ■ 3 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

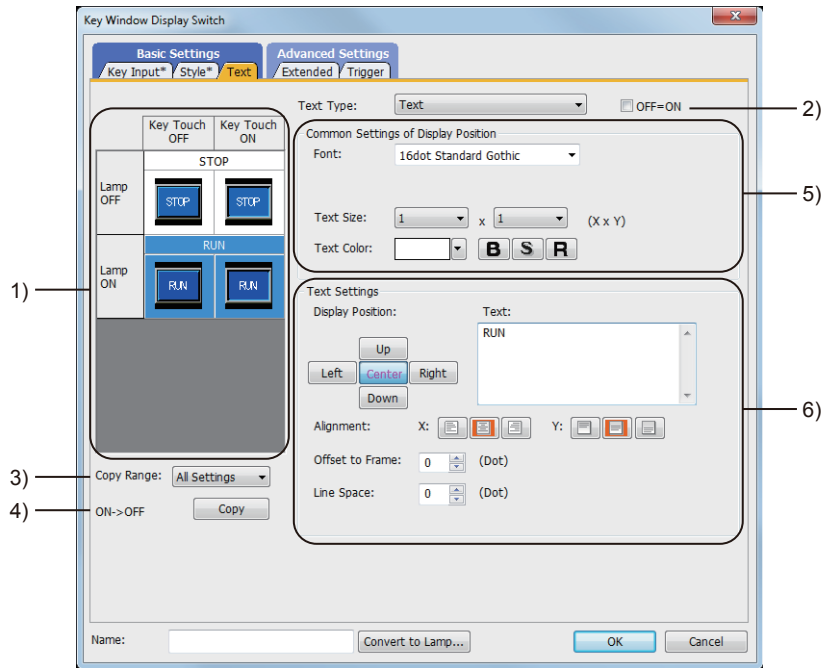

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→(1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

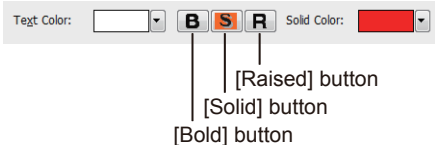

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

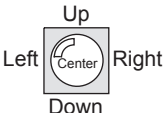

Copies the text setting.

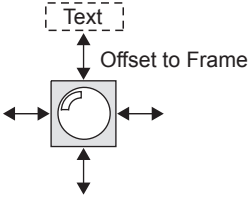

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

## 5) [Common Setting of Display Position]

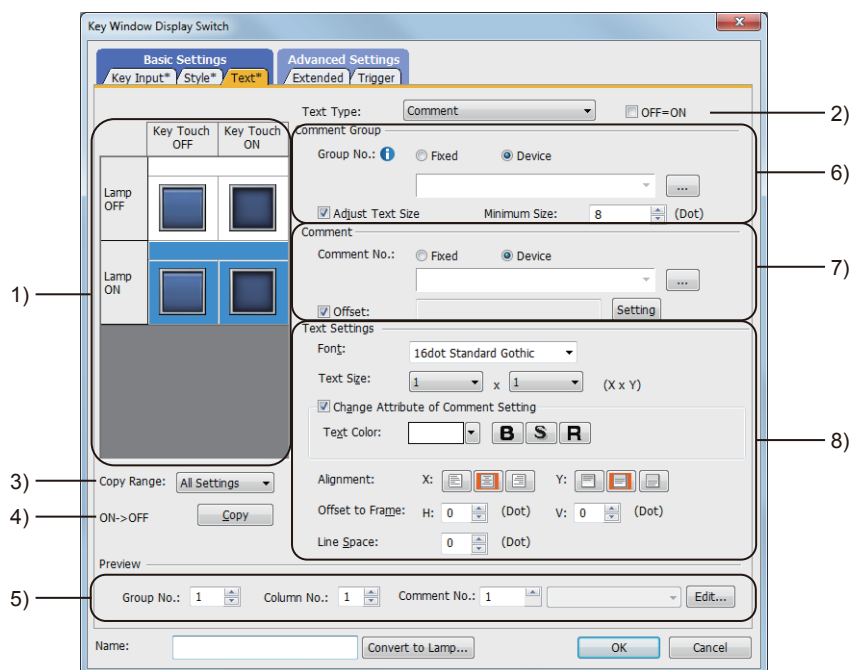

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. → 1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. → 6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

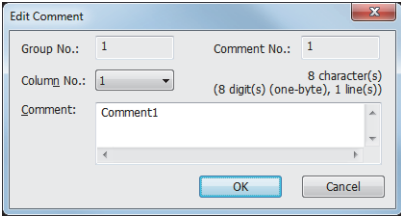

## 5) [Preview]

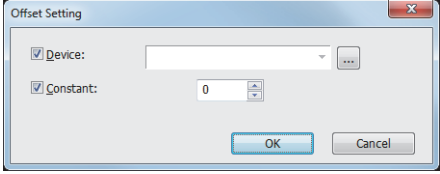

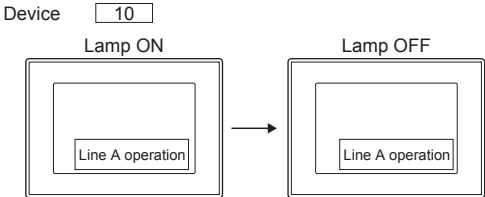

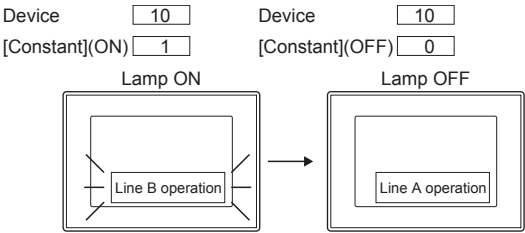

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

## 6) [Comment Group]

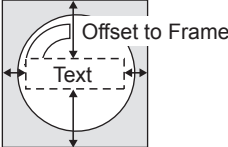

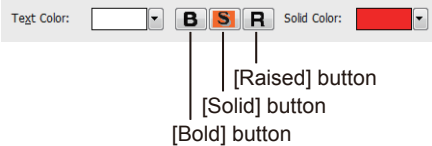

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• [Column No.] Select the column No. of the comment to be edited.</li> <li>• [Comment] Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field.</li> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description

## 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

### 2) [Use offset]

Monitors multiple devices by switching between them.

⇒6.1.9 Offset

Item	Description
[Switch]	Set the offset device for the switch function. ⇒6.1.1 How to set devices
[Lamp]	Set the offset device for the lamp function. ⇒6.1.1 How to set devices • [Same as the switch offset] Uses the offset device set for [Switch].

### 3) [Simultaneous Press]

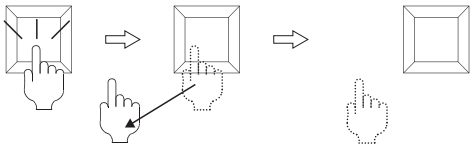

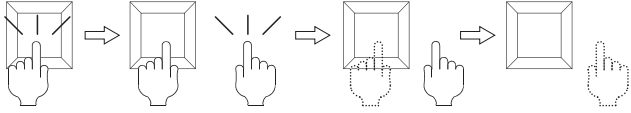

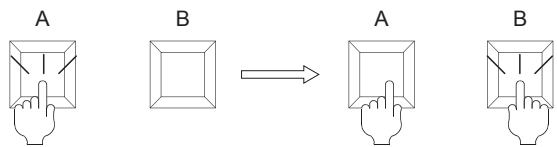

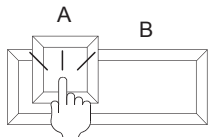

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
1. Touch the touch invalid area of the touch switch. 2. Slide the finger to the touch valid area of the touch switch. 3. Release the finger from the touch switch. 	At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.	At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
1. Touch the touch valid area of the touch switch. 2. Slide the finger to the touch invalid area of the touch switch. 3. Release the finger from the GOT screen. 	At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.	At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.
1. Touch the touch switch. 2. Touch the area where no object is arranged. 3. Release the finger from the touch switch. 4. Release the finger from the area where no object is arranged. 	At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.	At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.
1. Touch the touch switch A for which the simultaneous press is disabled. 2. Touch the touch switch B. (The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.) 	Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.	Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.
Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other. 	Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.

The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.

Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.

Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

Touch the valid area and invalid area of the touch key simultaneously.

Slide the finger across the valid area to/from the invalid area of the touch key.

#### 4) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off. The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.

After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab. Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.

After selecting the delay, set the delay time.

- [Delay Time]: The setting range is [1] to [5].

#### 5) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

#### 6) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

#### 7) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 8) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒6.5.5 ■ 3 Superimposition

#### 9) [Category]

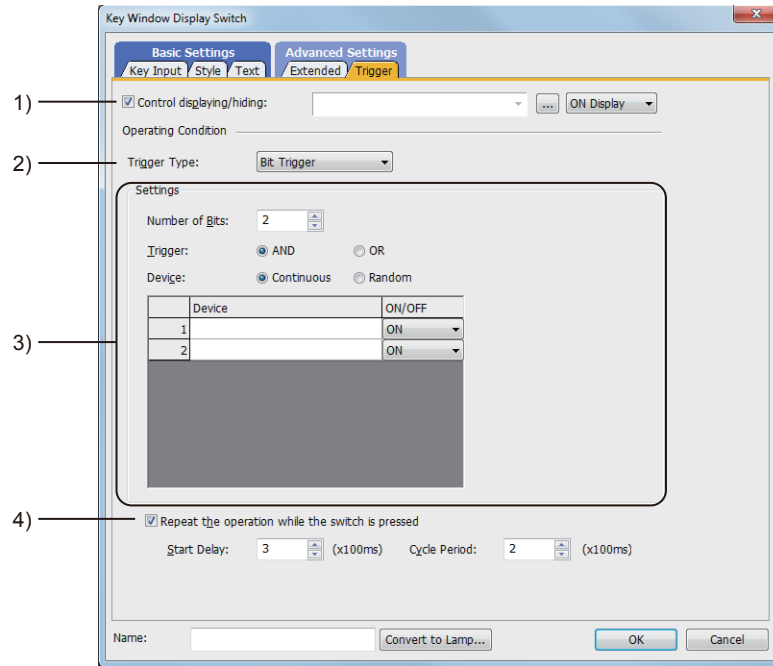

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## 5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

⇒6.2.2 Setting Trigger Types

### 4) [Repeat the operation while the switch is pressed]

Select this item to allow the switch to repeat the same operation while you touch the touch switch.

For operations for which [Repeat the operation while the switch is pressed] can be set, refer to the following.

⇒8.2.3 Precautions for a touch switch

Item	Description
[Start Delay]	Set the time period from when you touch the touch switch to when the operation repeat starts. The setting range is [1] to [20].
[Cycle Period]	Set the cycle for the operation repeat. The setting range is [1] to [10].

## 8.2.11 [Key Code Switch] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The key code switch enables key input into numerical input and text input, alarm display, data list display, and alarm control.

- Step 1 Select [Object] → [Switch] → [Key Code Switch] from the menu.
- Step 2 Click the position where you arrange the key code switch.
- Step 3 Double-click the arranged key code switch to display the setting dialog.
  - ➔ ■ 1 [Key Code] tab
  - 2 [Style] tab
  - 3 [Text] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab

### ■ 1 [Key Code] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

➔ 10.18.2 ■ 2 Usable functions

#### 1) [Key Code Type]

Specify the key code type.

- [Numerical/Text Input]: Inputs a key code for the numerical input or text input.
- [Alarm Display]: Inputs a key code for the alarm display (user), alarm display (system), or simple alarm display.
  - ➔ 9.1.5 Viewing alarm events (Alarm display)
  - 8.13.2 How to use the system alarm display
- [Recipe Display (Record List)]: Inputs a key code for the recipe display (record list).
  - ➔ 8.14.1 Specifications of the recipe display (record list)
- [Historical Trend Graph/Historical Data List]: Inputs a key code for the historical trend graph or historical data list display.
  - ➔ 8.21.1 Specifications of the historical trend graph
- [Document Display]: Inputs a key code for the document display.
  - ➔ 8.26.3 How to use the document display (for Document Converter output files)
- [Screen Gesture]: Inputs a key code for the screen gesture.

## 2) [Code Setting]

Item	Description
[Numerical/Text]	<p>Inputs a numerical value or a character in its key code.            Select an item for [Character Code], enter a numerical value or character in the selected character code, and click the [Convert to Key Code] button. The entered value or character is automatically converted to its key code.            The following shows the items to be selected for [Character Code].</p> <ul style="list-style-type: none"> <li>• [ASCII]</li> <li>• [Unicode]</li> <li>• [S-JIS]</li> <li>• [GB]</li> <li>• [KS] (for GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Big5]</li> <li>• [Not specify]</li> </ul> <p>When [Not specify] is selected for [Character Code], no character code conversion is executed and the key code switch operates using the character code set in the linked text input.</p>
[Action]	<p>Sets an action using its key code.            Selecting [Switch window screens for text (screen no. specification)] displays a spin box.            Specify the screen to be displayed.            The setting range is [1] to [10].</p>

### 3) [User ID for a key input]

Set the user ID for the object on which the cursor is displayed when you touch the key code switch.  
 The setting range is [0] to [65535].

### 4) [Add] button

Adds actions to the switch.  
 ⇒ 8.2.4 ■ 1 [Action] tab

### 5) [Name]

Set the object name.  
 The name is displayed in the [Data View] window, property sheet, and others.  
 The name is changeable on the other tabs as well.  
 Up to 100 characters can be set.

### 6) [Convert to Lamp] button

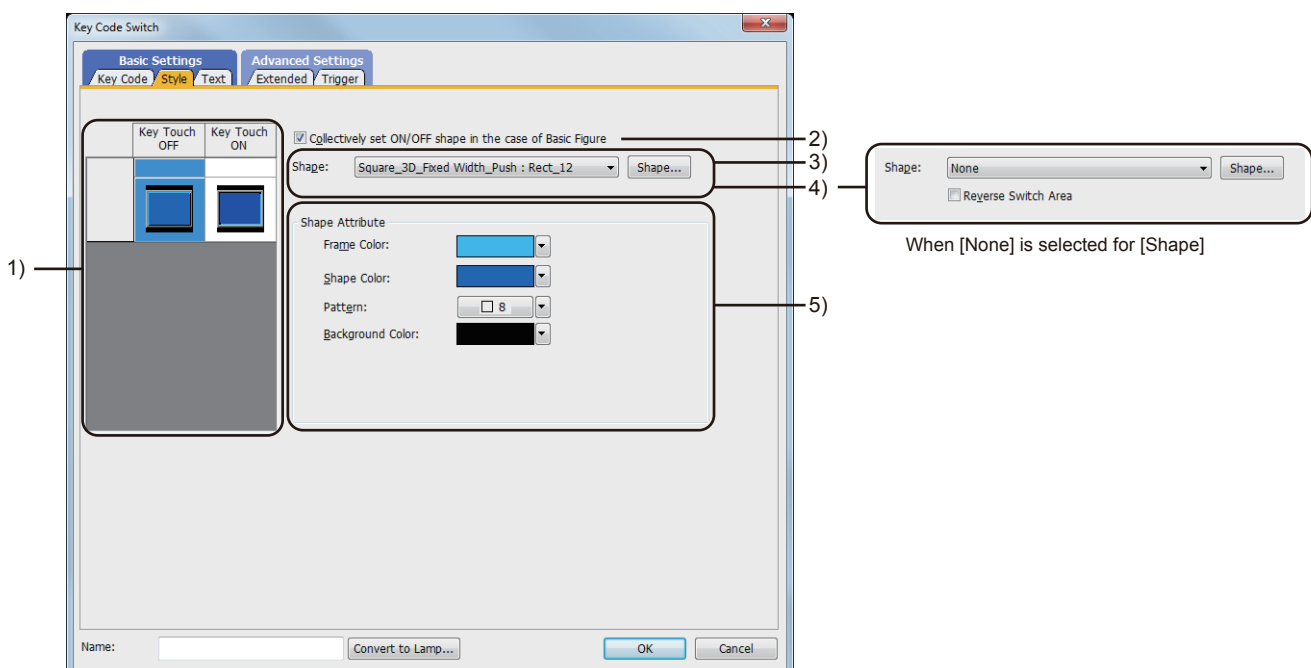

Converts the object type to the lamp.  
 ⇒ 8.2.2 How to use touch switch

## ■ 2 [Style] tab

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [Collectively set ON/OFF shape in the case of basic figure]

This item is available when [Basic Figure] is selected for [Shape].

Select this item to collectively change the shapes of the touch switches except [Press Twice].

### 3) [Shape]

Set the shape of the touch switch.

To select a shape other than those in the list box, click the [Shape] button.

→6.5.5 ■ 1 Setting object shapes

### 4) [Reverse switch area]

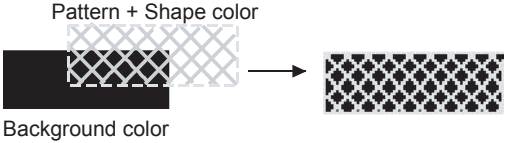

#### **GOT Graphic Ver.1**

This item is settable when an image in a state other than [Press Twice] and [When switch does not work] is selected in the preview list and [Shape] is set to [None].

Inverts the color of the touch switch.

When [Change a shape based on the key touch state] is selected, the touch switch is reversely displayed by switching between the key touch on and key touch off status.

### 5) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the touch switch shape.
[Shape Color]	Select the lamp color of the touch switch shape.
[Pattern], [Background Color]	Select the background color and the pattern for the touch switch shape. The selected pattern in the shape color is displayed on the background color.  Example ) Shape color:  Pattern:  Background color:    Background color

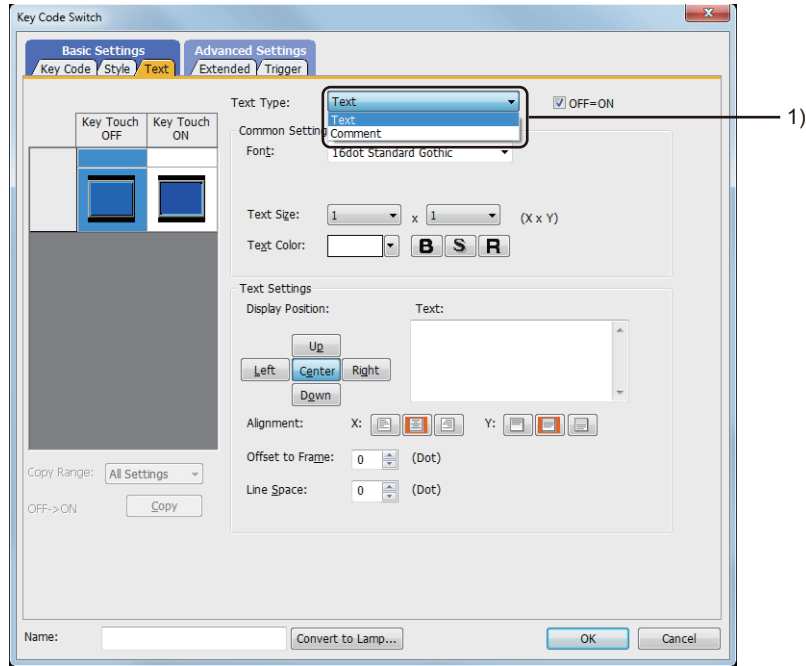

### ■ 3 [Text] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

#### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. → 5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→ 5.7.3 5.8 Comment Setting ([Comment])

Setting items differ depending on the selected text type.

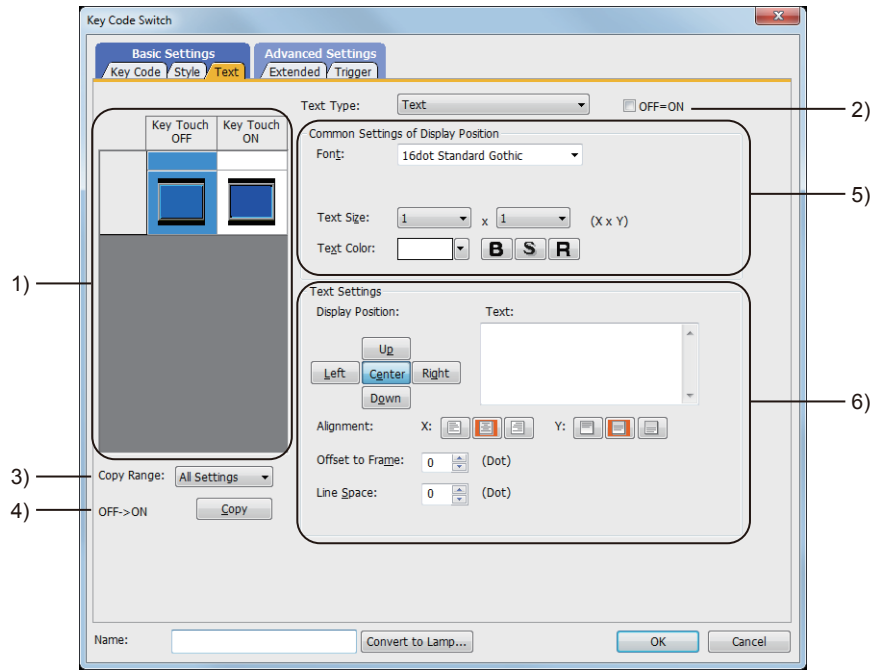

For the setting items for each text type, refer to the following.

→ (1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

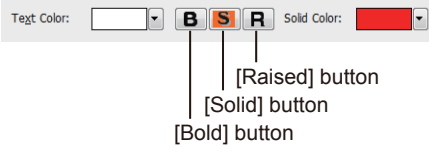

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

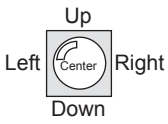

Copies the text setting.

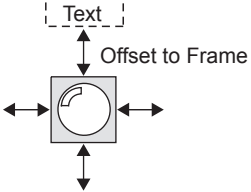

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Common Setting of Display Position]

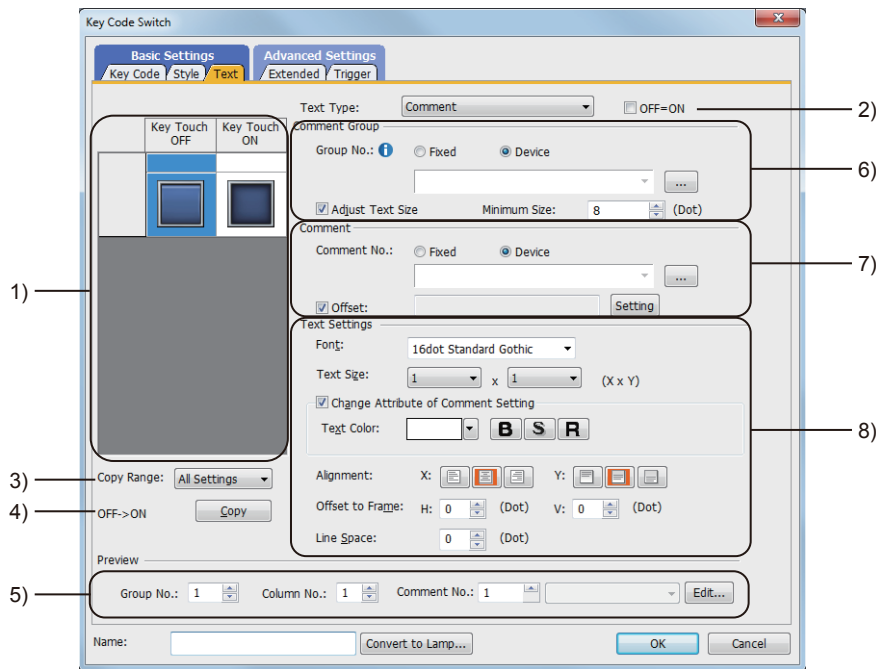

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

### 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). <div style="text-align: center; margin: 10px 0;">  </div>
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the status when the device turns on or off, the switch is pressed twice, and the switch does not function. The status of [Press Twice] is displayed only when [Press Twice] is set in [Delay] in the [Extended] tab. The status of when the switch does not function is displayed only when [Set the style and text settings for a switch in non-operating state] is set in the [Extended] tab.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Preview]

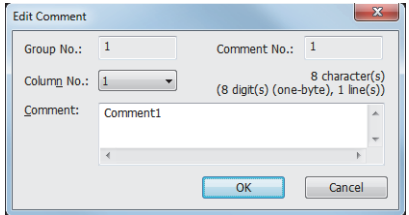

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

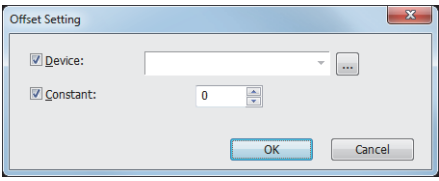

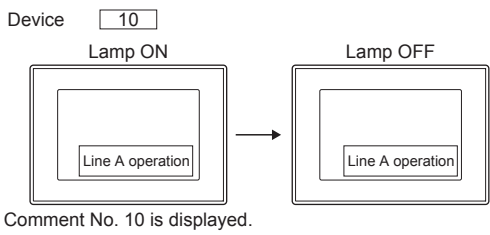

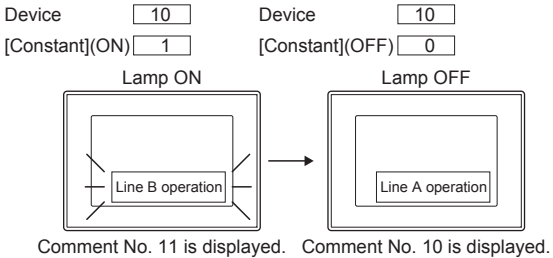

### 6) [Comment Group]

Item	Description
[Fixed]	Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.
[Device]	Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices

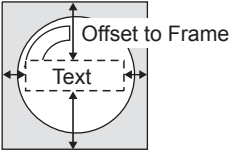

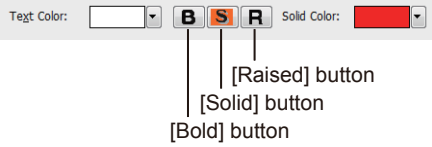

Item	Description
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• [Column No.] Select the column No. of the comment to be edited.</li> <li>• [Comment] Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>

Item	Description
[Offset]	<p>Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices            This setting is available only when [Device] is selected for [Comment No.].            Click the [Setting] button, and set the offset in the [Offset Setting] dialog.</p>  <ul style="list-style-type: none"> <li>• [Device]            Set this item to change the text display of the touch switch according to the device value.            →6.1.1 How to set devices</li> <li>• [Constant]            Set this item to add another value to the value of [Device] according to the indication status (on or off) of the lamp. After selecting this item, set the value to be added in the lamp on and off status.</li> <li>• When only [Device] is set            The comment of the same number as the value of [Device] is displayed regardless of the lamp status.</li> </ul>  <ul style="list-style-type: none"> <li>• When [Device] and [Constant] are set            When the lamp is on, the comment of the same number as the value derived from the addition of [Device] + [Constant](ON) is displayed.            When the lamp is off, the comment of the same number as the value derived from the addition of [Device] + [Constant](OFF) is displayed.</li> </ul> 

## 8) [Text Settings]

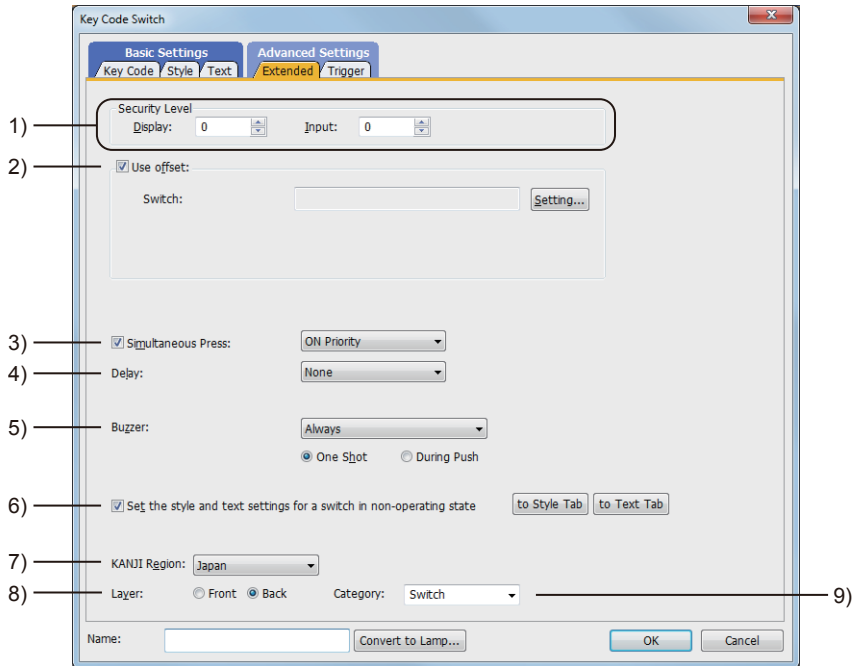

Item	Description
[Font]	<p>Select the font of the displayed text.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>This item is selectable when [Group No.] is set to [Fixed]. #### ■ 4 [Extended] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→6.1.9 Offset

#### 3) [Simultaneous Press]

Select this item to disable the simultaneous press for the switch and to set the action having a higher priority.

The following shows the items to be selected.

- [ON Priority]
- [OFF Priority]

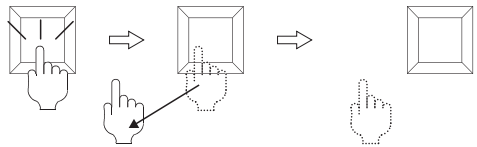

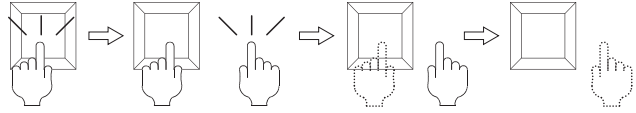

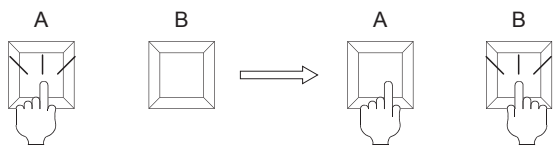

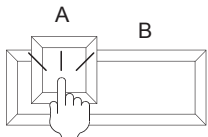

[ON Priority] is fixed when [Alarm] is selected for [Key Code Type] in the [Key Code] tab and the following is set for [Action].

- [Displaying ladder]
- [Displaying ladder] (Ladder editor)

The following lists the actions of the touch switch for which the simultaneous press is disabled.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
1. Touch the touch invalid area of the touch switch. 2. Slide the finger to the touch valid area of the touch switch. 3. Release the finger from the touch switch.  	At operation 1.: Remains off. At operation 2.: Turns on. At operation 3.: Turns off.	At operation 1.: Remains off. At operation 2.: Remains off. At operation 3.: Remains off.

Touch switch operation	Touch switch action	
	ON priority	OFF priority
1. Touch the touch valid area of the touch switch. 2. Slide the finger to the touch invalid area of the touch switch. 3. Release the finger from the GOT screen. 	At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Turns off.	At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off.
1. Touch the touch switch. 2. Touch the area where no object is arranged. 3. Release the finger from the touch switch. 4. Release the finger from the area where no object is arranged. 	At operation 1.: Turns on. At operation 2.: Remains on. At operation 3.: Remains on. At operation 4.: Turns off.	At operation 1.: Turns on. At operation 2.: Turns off. At operation 3.: Remains off. At operation 4.: Remains off.
1. Touch the touch switch A for which the simultaneous press is disabled. 2. Touch the touch switch B. (The touch switch action is the same regardless of whether the simultaneous press is disabled for the touch switch B or not.) 	Action of touch switch A At operation 1.: Turns on. At operation 2.: Remains on. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.	Action of touch switch A At operation 1.: Turns on. At operation 2.: Turns off. Action of touch switch B At operation 1.: Remains off. At operation 2.: Remains off.
Arrange the touch switch A for which the simultaneous press is disabled on the front layer and the touch switch B for which the simultaneous press is enabled on the back layer. Then, touch the area where the touch switches overlap with each other. 	Action of touch switch A At operation 1.: Remains off. Action of touch switch B At operation 1.: Turns on.	

When you slide the finger from the touch key invalid area to the touch key valid area, the GOT recognizes the operation as touching multiple areas simultaneously.

The GOT cannot distinguish between sliding the finger across multiple areas and touching multiple areas simultaneously using two fingers.

Therefore, the GOT recognizes sliding the finger from the touch key invalid area to the touch key valid area as touching multiple areas simultaneously.

Due to the same reason, the GOT recognizes sliding the finger from the touch key valid area to the touch key invalid area as the simultaneous press.

#### 4) [Delay]

Select the delay.

- [None]: Select this item to set no delay.
- [ON]: Select this item to allow the switch to turn to the on status by pressing the touch switch for the set time. This setting can prevent incorrect operation.
- [OFF]: Select this item to allow the switch to turn to the off status after the set time passes since the touch switch is turned off. The switch is on during the set time.
- [Press Twice]: Select this item to allow the switch to function after you touch the touch switch once and then touch again within the set time.

After selecting this item, configure the settings for [Press Twice] in the [Style] tab and the [Text] tab.  
Click the [To Style tab] and [To Text tab] buttons, and set [Press Twice] in the preview list.  
After selecting the delay, set the delay time.

- [Delay Time]: The setting range is [1] to [5].

#### 5) [Buzzer]

Select the timing of the buzzer when you touch the touch switch.

- [Always]: The buzzer is sounded every time you touch the touch switch.
- [Only if conditions are met]: The buzzer is sounded only when you touch the touch switch with the operating condition satisfied.
- [None]: The buzzer is not sounded even when you touch the touch switch.  
Set the following items when [Always] or [Only if conditions are met] is selected.
- [One Shot]: Select this item to sound the buzzer only at the moment you touch the touch switch.
- [During Push]: Select this item to keep sounding the buzzer while you touch the touch switch.

#### 6) [Set the style and text settings for a switch in non-operating state]

Select this item to set how the touch switch is displayed when the operating condition in the [Trigger] tab is not satisfied or when the touch switch does not function due to the unsatisfied security level.

[To Style tab] button: Displays the [Style] tab. Set the shape displayed when the touch switch does not function.

⇒8.2.4 ■ 2 [Style] tab

[To Text tab] button: Displays the [Text] tab. Set the text displayed when the touch switch does not function.

⇒8.2.4 ■ 3 [Text] tab

#### 7) [KANJI Region]

Select a KANJI region of the displayed text.

⇒1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 8) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

⇒6.5.5 ■ 3 Superimposition

#### 9) [Category]

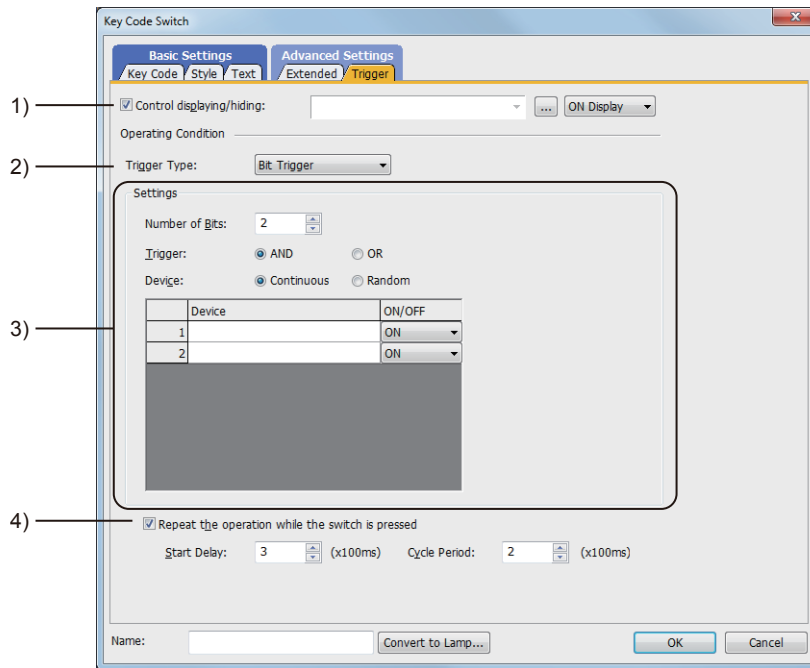

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## 5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Setting]

For details of each item, refer to the following.

⇒6.2.2 Setting Trigger Types

### 4) [Repeat the operation while the switch is pressed]

Select this item to allow the switch to repeat the same operation while you touch the touch switch.

For operations for which [Repeat the operation while the switch is pressed] can be set, refer to the following.

⇒8.2.3 Precautions for a touch switch

Item	Description
[Start Delay]	Set the time period from when you touch the touch switch to when the operation repeat starts. The setting range is [1] to [20].
[Cycle Period]	Set the cycle for the operation repeat. The setting range is [1] to [10].

## 8.2.12 Relevant settings

Set the relevant settings other than the specific settings for the touch switch as required.  
The following shows the functions that are available by the relevant settings.

### 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.  
⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### 2 GOT environmental settings ([Screen Switching/Windows])

Select [Common] → [GOT Environmental Setting] → [Screen Switching/Windows] from the menu to display the [Environmental Setting] window.  
⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])

Function	Setting item
Setting the timing for the screen switching when you touch the Go To Screen switch. (ON synchronous/OFF synchronous)	[Operation Timing] (Not available to GT21.)

### 3 GOT environmental settings (key window), screen property

Set the following functions for each project (GOT environmental settings) or for each screen (screen property).  
⇒5.2.4 Setting key windows ([Key Window])

- Settings for each project (GOT environmental settings)  
Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display the [Environmental Setting] window.
- Settings for each screen (screen property)  
Select the screen editor on which the key window is to be set and select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog.

Function	Setting item
Displaying the key window when the operating condition is satisfied.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window]
Displaying the key window when the screen is switched.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the key window]
Displaying the cursor when the screen is switched.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the cursor]
Displaying the cursor when the operating condition is satisfied.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Cursor]
Deleting the key window and cursor when the operating condition is not satisfied.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Clear the key window and the cursor] in [When operating conditions are not satisfied]

#### ■4 GOT type settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information...] from the menu to display the [Environmental Setting] window.

→5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Notifying the key codes set to the input keys when the keys are input to text input, touch switch, or other objects. (Write device)	[Key Code Input]
Disabling the key input. (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]

#### ■5 Sound file settings

Select [Common] → [Sound] → [Sound File Setting] from the menu to display the setting dialog.

→10.12.8 [Touch Key Sound Setting] dialog

Function	Setting item
Using a sound file for the sound generated when you touch the touch switch. (The sound file must be registered.)	[Use a sound file for touch key tone] (Not available to GT21.)
Canceling the currently output sound and outputs the sound of the touch switch in priority to the canceled sound when you touch the touch switch.	[Give top priority to sound output of a switch] (Not available to GT21.)

#### ■6 GOT internal device

→12.1 GOT Internal Device

Function	Setting item
Setting the operation timing of the touch switch in which the bit alternate, bit set, or bit reset action and the screen switching or station No. switching action are set.	GS450.b12 (Not available to GT21.)
Saving the history of screen transitions to the memory card.	GS450.b13 (Not available to GT21.)
Switching the operation when the screen is switched to the previous screen by using the touch switch. (Hierarchy/Historical)	GS450.b14 (Not available to GT21.)

## 8.3 Placing a Lamp

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■ 1 Bit lamp

Turns on or off according to the status of the bit device.

⇒ 8.3.4 [Bit Lamp] dialog

### ■ 2 Word lamp

Changes the lamp color according to the value of the word device.

⇒ 8.3.5 [Word Lamp] dialog

### ■ 3 Lamp area

**GOT Graphic Ver.1**

Switches two colors of the figure and object within the specified area in units of dots according to the status of the bit device.

⇒ 8.3.6 [Lamp Area] dialog

### ■ 4 Difference between the lamp and the figure to which a lamp attribute is set

When the lamp attribute is set to the figure, the color of the figure can also be changed like the lamp by turning on the bit device.

⇒ 7. FIGURES

For the figure with the lamp attribute, only the color can be changed by turning on the bit device. To set layers or texts to the object, use the lamp.

## 8.3.1 Specifications of lamps

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the lamp.

### ■1 Maximum number of objects arrangeable on one screen

Up to 1024 objects can be arranged on one screen. Maximum number of lamps is calculated by subtracting the number of objects other than lamps including objects with the lamp attribute from 1024.

### ■2 Minimum size of lamp

The minimum size of the lamp is 2 dots (height) × 2 dots (width).

## 8.3.2 How to use lamp

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the lamp.

### ■1 Arranging the lamp

Arrange the lamp on the screen editor.

⇒6.5.1 Placing figures and objects

### ■2 Editing the lamp

Edit the lamp arranged on the screen editor.

⇒6.5.3 Editing figures and objects

### ■3 Setting the lamp

Configure the settings for the lamp arranged on the screen editor.

- Common setting of objects
  - ⇒6.5.5 Common setting for objects
- Settings of lamps
  - ⇒8.3.4 [Bit Lamp] dialog
  - 8.3.5 [Word Lamp] dialog
  - 8.3.6 [Lamp Area] dialog

## 8.3.3 Precautions for a lamp

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for lamps.

### ■1 Precautions for drawing

#### (1) Reducing basic figures in size

When the basic figure is set on the lamp, reducing the lamp in size may not display the figure properly.

#### (2) Reading GT Designer2 format file for GOT-F900 series

When the GT Designer2 format file for GOT-F900 series is read into GT Designer3, the bit lamp area is converted into the lamp area.

⇒2.3.2 ■ 3 Opening a project for GOT900

To set the actions of the lamp area to be the same as those of the bit lamp area, the display order of the objects must be configured.

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.

Select [Adjust object display order in GOT to the one in GT Designer3].

#### (3) Converting the lamp to the touch switch

##### (a) Settings to be deleted

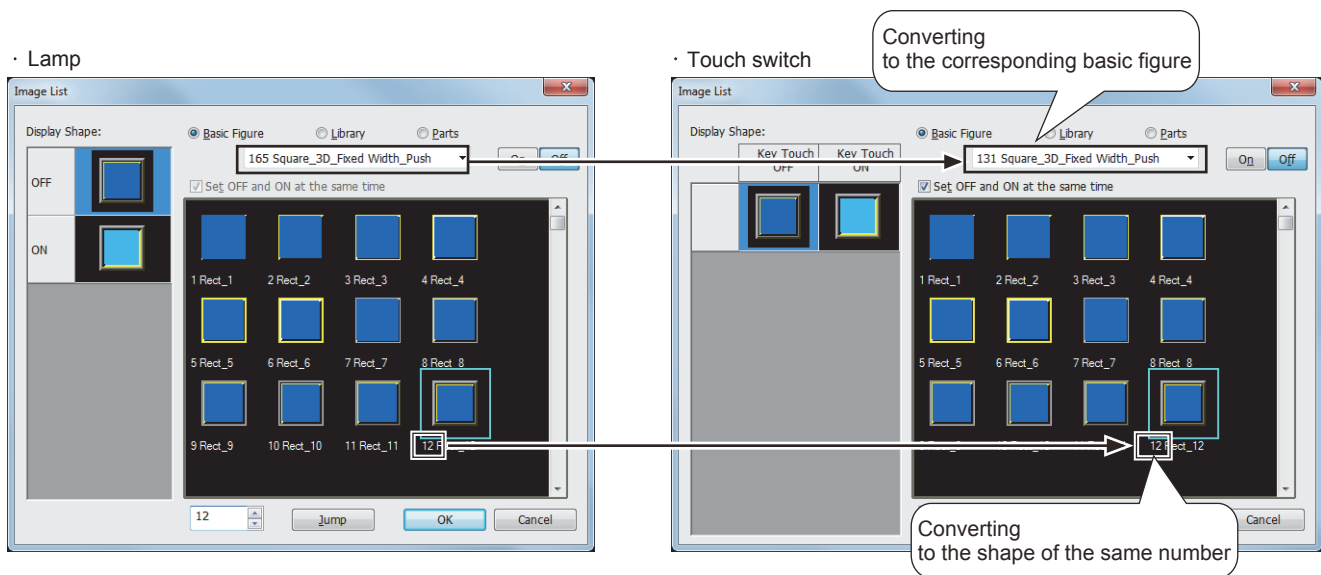

When the lamp is converted to the touch switch, some of the settings are deleted.

The deleted settings are applied as the default setting for the touch switch.

##### (b) Converting basic figures

For converting the basic figure from the lamp to the touch switch, the figure of the lamp is converted to the corresponding figure with the same number on the switch.

Example: Converting the lamp to the touch switch when the basic figure [Square\_3D\_Fixed Width \_Push] is set for the lamp

Even if the shapes have the same reference number, there may be difference between the lamp and the touch switch. Check the shape after the conversion to see if it can be properly used.

**(c) Object size at conversion**

If the lamp with the object size incompatible with the touch switch is converted, the converted touch switch is adjusted to have the applicable size.

**(d) Restoring the touch switch to the lamp after the conversion**

To restore the touch switch to the lamp after conversion, select [Edit] → [Undo] from the menu.

Even if the touch switch has been converted back to the lamp, the previous settings cannot be restored.

If the [OK] button is not clicked, clicking the [Cancel] button cancels the conversion even after the [Convert to Switch] button is clicked.

**(e) Types of the touch switch to be converted to**

Both the bit lamp and word lamp are converted to the switch.

### 8.3.4 [Bit Lamp] dialog

A bit lamp turns on or off according to the status of the bit device.

- Step 1** Select [Object] → [Lamp] → [Bit Lamp] from the menu.
- Step 2** Click the position where you arrange the bit lamp.
- Step 3** Double-click the arranged bit lamp to display the setting dialog.

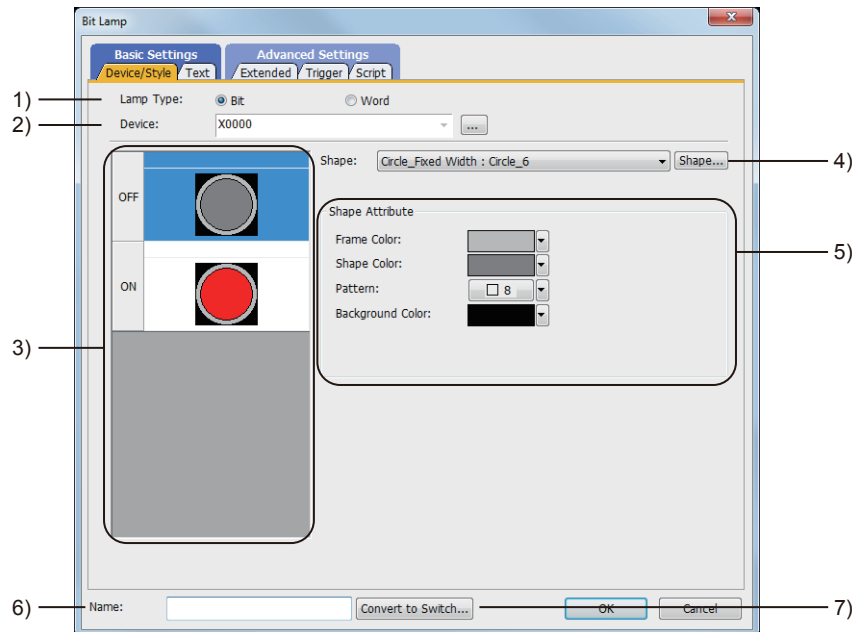

- ■ 1 [Device/Style] tab
- 2 [Text] tab
- 3 [Extended] tab
- 4 [Trigger] tab
- 5 [Script] tab

## ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the lamp shape (figure and color) for the on and off status of the device.

### 1) [Lamp Type]

Select the lamp type.

The following shows the items to be selected.

- [Bit]
- [Word]

### 2) [Device]

Set the device to be monitored.

→ 6.1.1 How to set devices

### 3) Preview list

Displays the shapes for the on and off status.

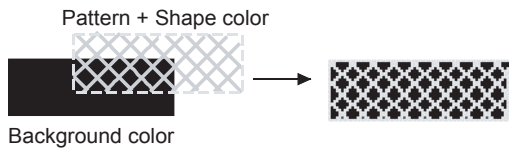

### 4) [Shape]

Set the lamp shape.

To select a shape other than those in the list box, click the [Shape] button.

→ 6.5.5 ■ 1 Setting object shapes

### 5) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame color of the lamp shape.
[Shape Color]	Select the lamp color of the lamp shape. When the shape in the library (other than the favorite) is selected for [Shape], changing the lamp color sets the selected shape in the different color.
[Pattern], [Background Color]	Select the pattern and background color of the lamp shape. The selected pattern in the shape color is displayed on the background color.  Example) Shape color:  Pattern:  Background color:  
[Blink]	Select the blinking speed of the lamp. The following shows the items to be selected. • [None] • [Low] • [Medium] • [High]

Item	Description
[Blink Scope]	Select an area to be blinked. The following shows the items to be selected. • [Shape and Text] • [Shape only]

## 6) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 7) [Convert to Switch] button

Converts the object type to the touch switch.

⇒8.3.2 How to use lamp

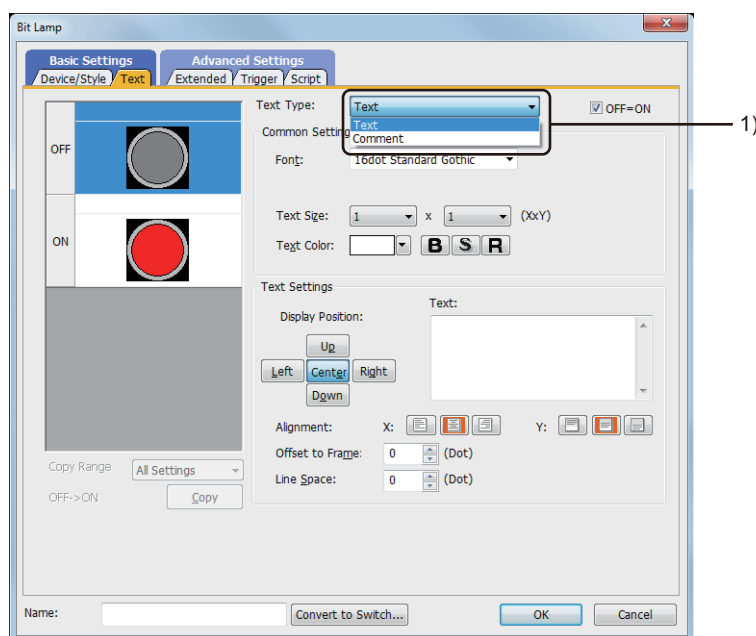

## ■ 2 [Text] tab

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

## 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. ⇒5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

⇒5.8 Comment Setting ([Comment])

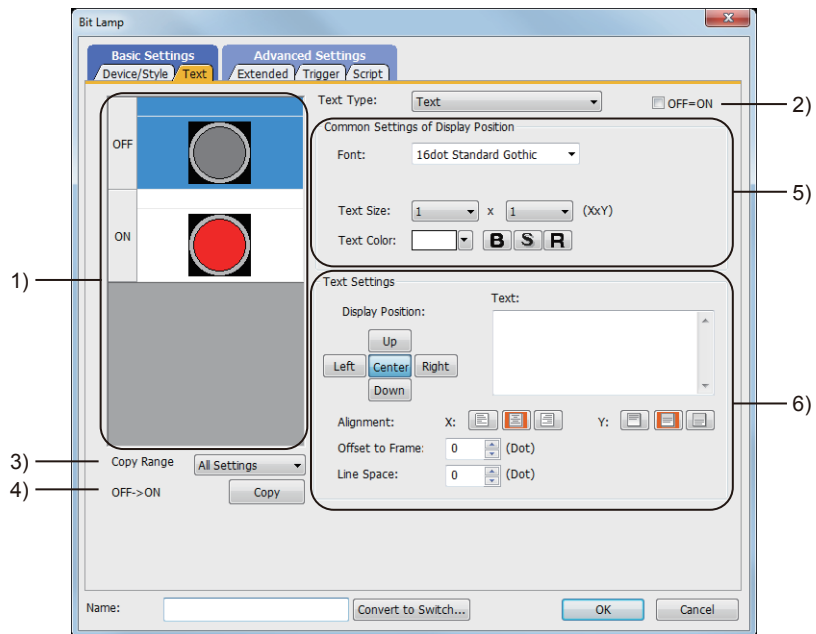

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

⇒(1) [Text]

(2) Comment text

## (1) [Text]

### 1) Preview list

Displays the shapes for the on and off status.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

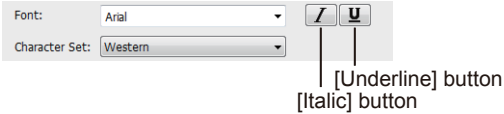

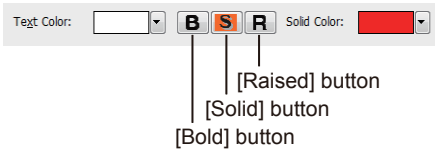

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

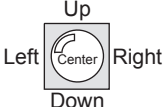

Copies the text setting.

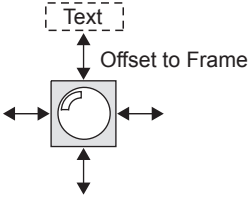

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

## 5) [Common Setting of Display Position]

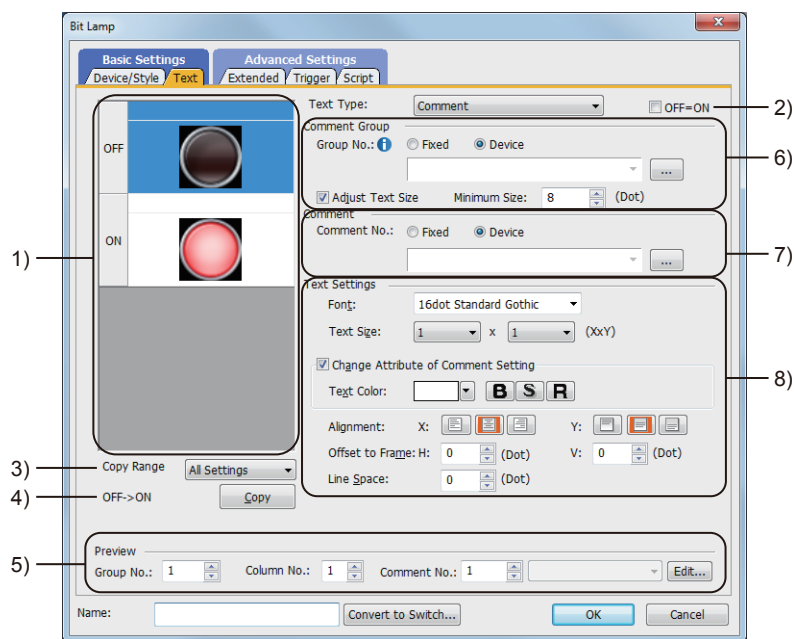

Item	Description
[Font]	<p>Select the font of the displayed text. [Character Set]	When a Windows font is selected, select a character set.
[Text Size]	For the settable text sizes by font, refer to the following. →1.2.5 Font specifications
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 6) [Text Settings]

Item	Description
[Display Position]	<p>Set the position of the text to be displayed on the object. The text is displayed at each position (Center, Up, Down, Left, Right).</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 

Item	Description
[Text]	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Alignment]	Set the vertical or horizontal position of the text.
[Offset to Frame]	Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s). 
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).

## (2) Comment text

### 1) Preview list

Displays the shapes for the on and off status.

### 2) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 3) [Copy Range]

Set the range to be copied.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.
- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

### 5) [Preview]

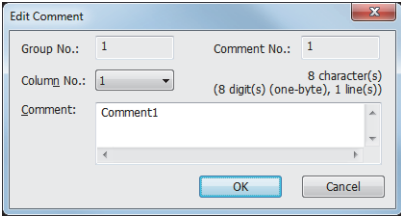

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.

Item	Description
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

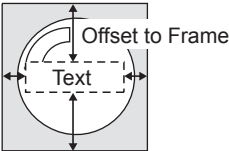

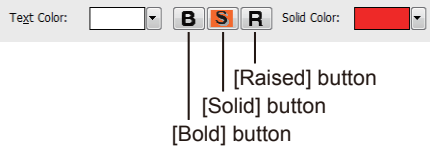

## 6) [Comment Group]

Item	Description
[Group No.]	Set the comment group No. to be used. <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.</li> <li>• [Device]: Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices</li> </ul>
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

## 7) [Comment]

Item	Description
[Comment No.]	<p>Set the comment No. of the comment to be used.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. ### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Set the security level, offset, layer, category, and KANJI region.

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→6.1.9 Offset

#### 3) [KANJI Region]

Select the KANJI region of the displayed text.

→1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 4) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- 6.5.5 ■ 3 Superimposition

#### 5) [Category]

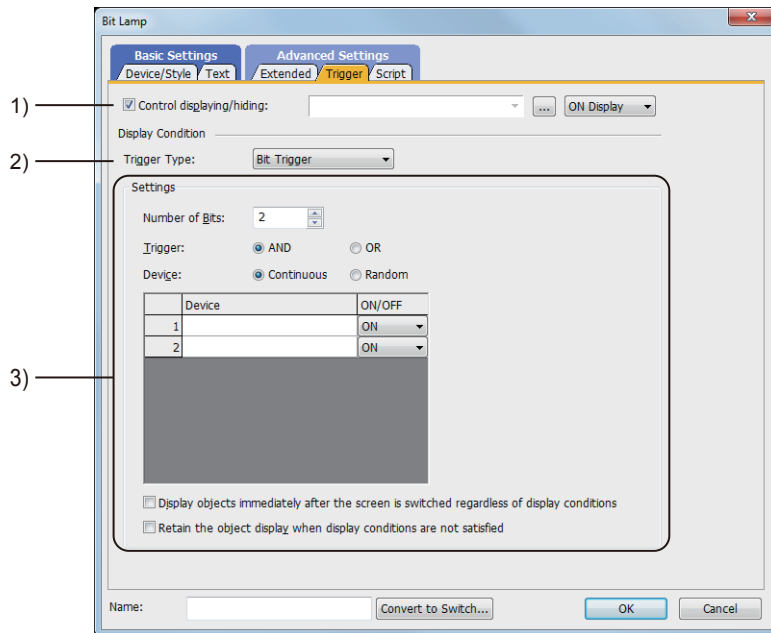

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

### ■ 4 [Trigger] tab

Set conditions for displaying the object.

#### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

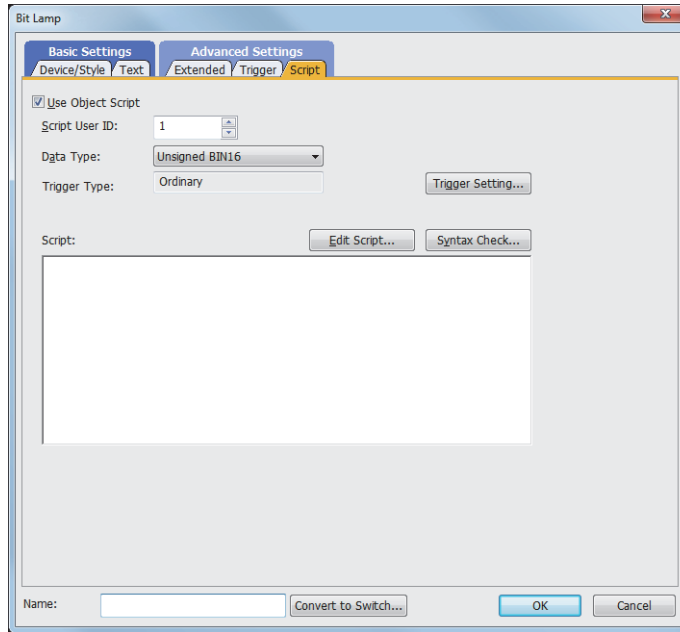

⇒6.2.2 Setting Trigger Types

### ■ 5 [Script] tab

For the settings of scripts, refer to the following.

⇒9.8 Controlling Operations with Scripts ([Script])

#### (1) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.3.5 [Word Lamp] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

A word lamp changes its color according to the value of the target word device.

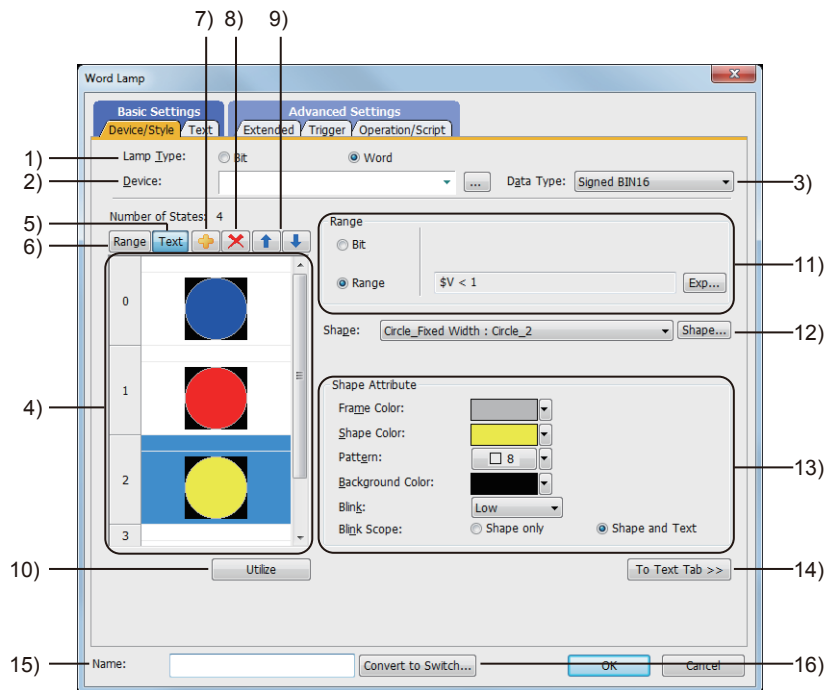

- Step 1** Select [Object] → [Lamp] → [Word Lamp] from the menu.
- Step 2** Click the position where you arrange the word lamp.
- Step 3** Double-click the arranged word lamp to display the setting dialog.

- ■ 1 [Device/Style] tab
  - 2 [Text] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab
  - 5 [Operation/Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the lamp shape (figure and color) corresponding to the device value.

#### 1) [Lamp Type]

Select the lamp type.  
The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Device]

Set the device to be monitored.  
→ 6.1.1 How to set devices

#### 3) [Data type]

Select the data type of the word device.  
The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [BCD16]

#### 4) Preview list

Displays set conditions.

#### 5) [Text] button

Displays the preview list in text.

6) **[Range] button**

Displays the preview list in range.

7) **Add button**

Adds a new condition.

8) **Delete button**

Deletes a selected condition.

9) **Up button, down button**

Changes the order of priority of the selected condition.

10) **[Utilize] button**

Creates a new condition utilizing the selected condition.

11) **[Range]**

Set a condition which changes the display property of the lamp. When setting the value of the word device as the condition, click the [Exp] button to display the [Edit Range] dialog, and then set the conditional expression. For the details of conditions, refer to the following.

⇒6.5.5 ■ 2 Setting conditions

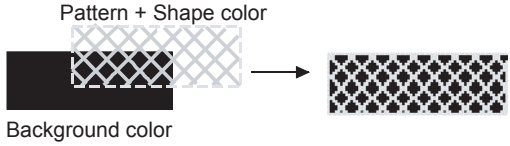

12) **[Shape]**

Set the lamp shape.

To select a shape other than those in the list box, click the [Shape] button.

⇒6.5.5 ■ 1 Setting object shapes

13) **[Shape Attribute]**

Item	Description
[Frame Color]	Select the frame color of the lamp shape.
[Shape Color]	Select the lamp color of the lamp shape. When the shape in the library (other than the favorite) is selected for [Shape], changing the lamp color sets the selected shape in the different color.
[Pattern], [Background Color]	Select the pattern and background color of the lamp shape. The selected pattern in the shape color is displayed on the background color.  Example) Shape color:  Pattern:  Background color:   Background color
[Blink]	Select the blinking speed of the lamp. The following shows the items to be selected. • [None] • [Low] • [Medium] • [High]
[Blink Scope]	Select an area to be blinked. The following shows the items to be selected. • [Shape and Text] • [Shape only]

14) **[To Text Tab] button**

Displays the [Text] tab.

15) **[Name]**

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

16) **[Convert to Switch] button**

Converts the object type to the touch switch.

⇒8.3.2 How to use lamp

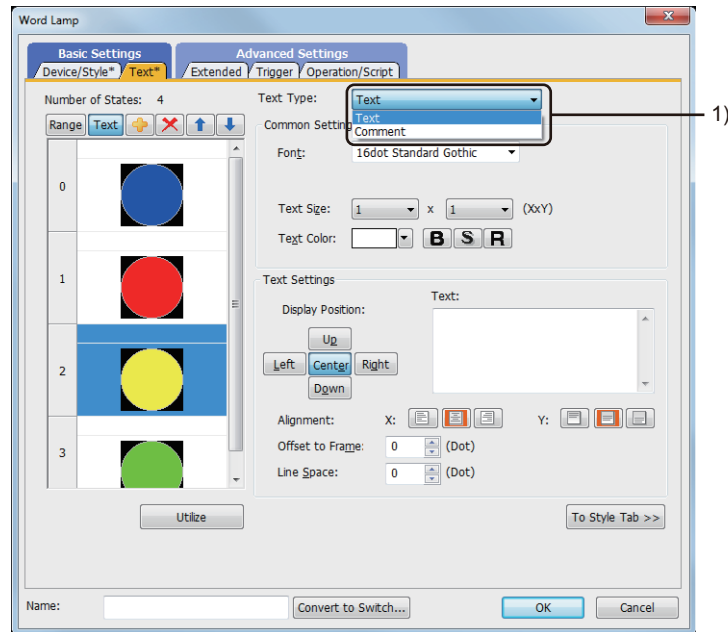

## ■2 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■2 Usable functions

Select the text type to use the directly input texts or the comments set in a comment group as a text.

### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

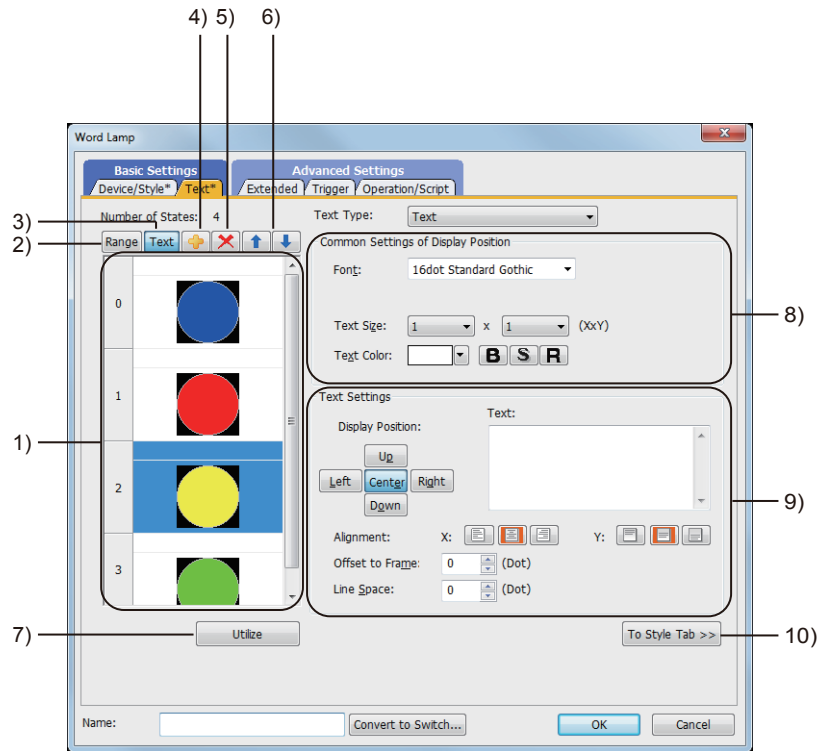

Setting items differ depending on the selected text type.

For the setting items for each text type, refer to the following.

→(1) [Text]

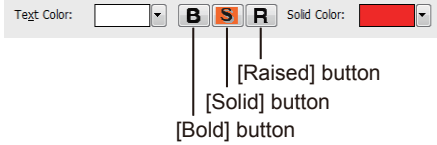

(2) Comment text

## (1) [Text]

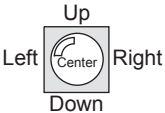

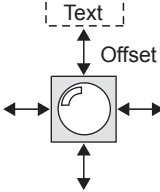

- 1) **Preview list**  
Displays set conditions.
- 2) **[Range] button**  
Displays the preview list in range.
- 3) **[Text] button**  
Displays the preview list in text.
- 4) **Add button**  
Adds a new condition.
- 5) **Delete button**  
Deletes the selected condition.
- 6) **Up button, down button**  
Changes the order of priority of the selected condition.
- 7) **[Utilize] button**  
Creates a new condition utilizing the selected condition.

## 8) [Common Setting of Display Position]

Item	Description
[Font]	<p>Select the font of the displayed text. Displays the preview list in range.

#### 3) [Text] button

Displays the preview list in text.

#### 4) Add button

Adds a new condition.

#### 5) Delete button

Deletes the selected condition.

#### 6) Up button, down button

Changes the order of priority of the selected condition.

#### 7) [Utilize] button

Creates a new condition utilizing the selected condition.

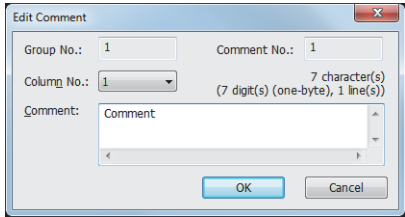

### 8) [Preview]

Item	Description
[Group No.]	Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.
[Column No.]	Set the column No. of the comment to be displayed on the screen of GT Designer3.
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

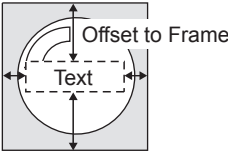

### 9) [Comment Group]

Item	Description
[Group No.]	Set the comment group No. to be used. <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment group. After selecting this item, directly enter the comment group No. to be used.</li> <li>• [Device]: Select this item to display the comment group No. corresponding to the value of the device to be set. After selecting this item, set the device. →6.1.1 How to set devices</li> </ul>
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dot(s).

### 10) [Comment]

Item	Description
[Comment No.]	Set the comment No. of the comment to be used. <ul style="list-style-type: none"> <li>• [Fixed]: Select this item to use the specified comment. After selecting this item, set the comment No. to be used. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment.</li> </ul>  <ul style="list-style-type: none"> <li>• [Column No.] Select the column No. of the comment to be edited.</li> <li>• [Comment] Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>· Number of characters: The line feed is counted as two characters.</li> <li>· Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>· Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> <li>• [Device]: Select this item to display the comment No. corresponding to the value of the device to be set. After selecting this item, set the device.</li> </ul>
[To Style Tab ] button	Moves to the [Device/Style] tab.

## 11) [Text Settings]

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>This item is selectable when [Group No.] is set to [Fixed]. Displays text in the font specified with [Windows Font] in the [Comment Group Property] dialog.</p>  <ul style="list-style-type: none"> <li>• [Windows Font Setting] button Displays the [Comment Group Property] dialog to list the properties of the comment group specified with [Group No.]. Set [Windows Font] and [Character Set] for the target column of the comment group. →5.8.4 ■ 2 (1) [Comment Group Property] dialog</li> </ul>
[Text Size]	<p>For the settable text sizes by font, refer to the following. →1.2.5 Font specifications</p>
[Alignment]	<p>Set the vertical or horizontal position of the text.</p>
[Offset to Frame]	<p>Set the offset between the frame of the object and the text in units of dots. The setting range is [0] to [100] dot(s).</p> 
[Line Space]	<p>Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).</p>
[Change comment attributes]	<p>Select this item to change the comment attribute. Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <p>[Bold] button [Solid] button [Raised] button</p> <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 12) [To Style Tab] button

Moves to the [Device/Style] tab.

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

The value of [Input] must be greater than that of [Display].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→ 6.1.9 Offset

#### 3) [KANJI Region]

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

This setting is available only when any of the following fonts is selected in the [Text Settings] tab.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 4) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒6.5.5 ■ 3 Superimposition

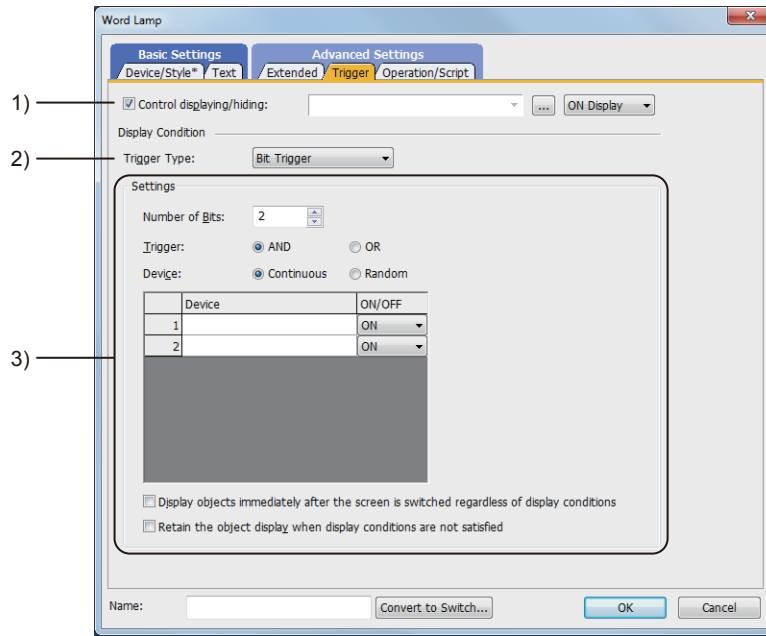

### 5) [Category]

Select the category to assign the object.  
 ⇒11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.  
 When the set device is in either the ON or OFF status, select whether or not to display the object.  
 The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select the condition of displaying the object.  
 The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.  
 For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.  
 ⇒6.2.2 Setting Trigger Types

■ 5 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

1) [Operation Type]

Item	Description
[None]	Select this item if the data operation function and script function is unnecessary.
[Data Operation]	Set the expression used for the data operation function.
[Script]	Set the expression used for the script function. (Not available to GT21.)

The setting items differ depending on which function to select.

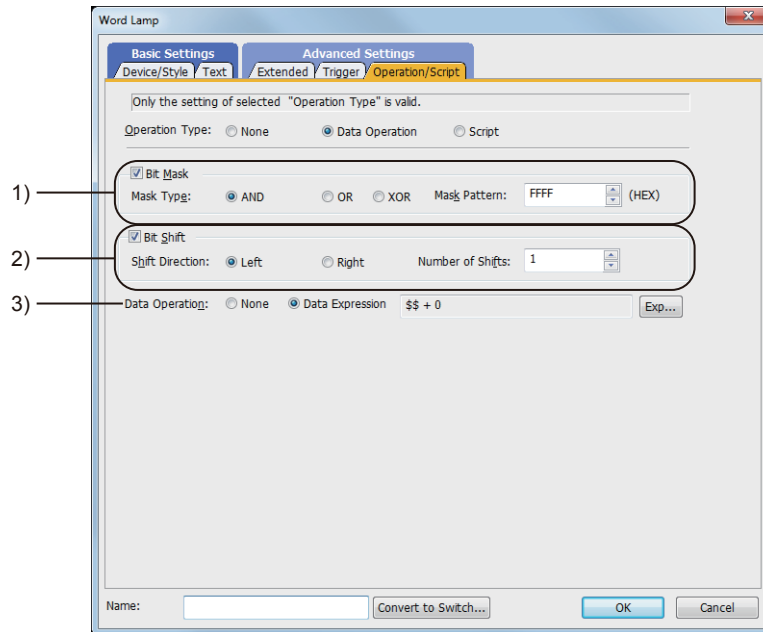

The next page shows the setting items for each function.

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

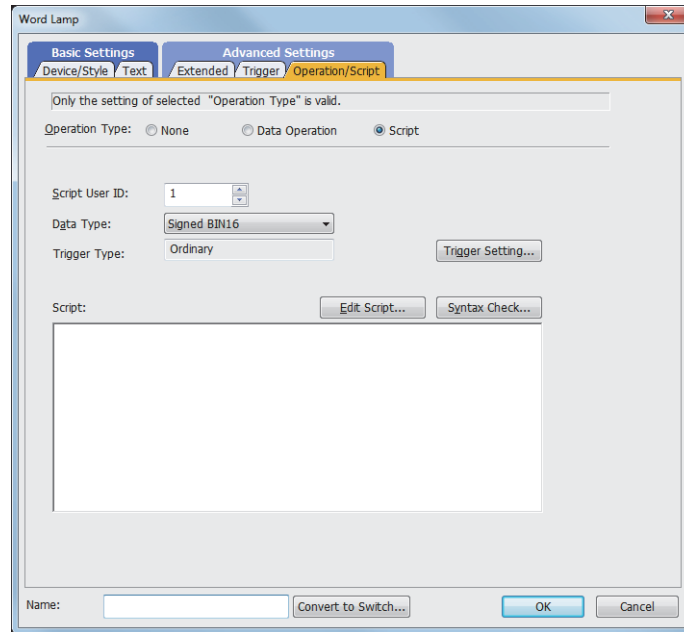

Set the format of the expression.

Item	Description
[None]	Select this item not to perform the data operation by using the expression.
[Edit Data Expression]	Select this item to perform the data operation by using the expression.
[Exp] button	This button appears only when [Data Expression] is selected for [Data Operation]. Click the [Exp] button to set the format of the expression in the [Edit Data Expression] dialog. →6.5.5 ■ 4 Setting data operations

## (2) Script

For the settings of the data operation function, refer to the following.  
 ⇒9.8 Controlling Operations with Scripts ([Script])

### (a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

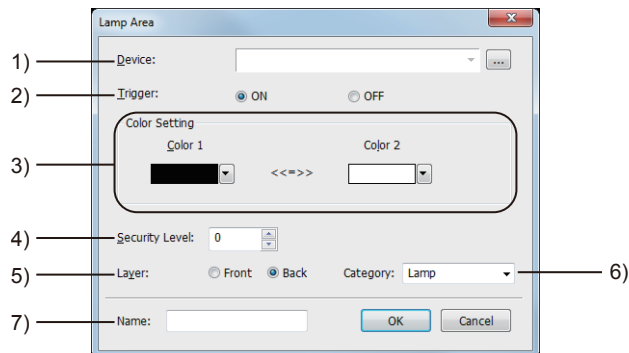

## 8.3.6 [Lamp Area] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### GOT Graphic Ver.1

In a specified lamp area, two colors of the figure and object are switched in units of dots according to the status of the bit device.

- Step 1 Select [Object] → [Lamp] → [Lamp Area] from the menu.
- Step 2 Click the position where you arrange the lamp area.
- Step 3 Adjust the dotted frame to specify the applicable lamp area.
- Step 4 Double-click the arranged lamp area to display the setting dialog.

#### 1) [Device]

Set the device to be monitored.  
⇒6.1.1 How to set devices

#### 2) [Trigger]

Select the on or off status of the bit device as the condition for the colors to be switched.  
The following shows the items to be selected.

- [ON]
- [OFF]

#### 3) [Color Setting]

Set [Color 1] and [Color 2] as the two target colors to be switched when the condition is satisfied.  
The set colors are switched every time the condition is satisfied.

#### 4) [Security Level]

Set the security level when using the security function.  
The setting range is [1] to [15]. Set the level to [0] when the security function is not used.  
⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 5) [Layer]

Not available to GT21.  
Select the layer to arrange the object on.  
The following shows the items to be selected.

- [Front]
- [Back]

Select the same layer as that of the figure and object to which the lamp area is applied.  
⇒6.5.5 ■ 3 Superimposition

#### 6) [Category]

Select the category to assign the object.  
⇒11.7 Managing figures and objects by category

#### 7) [Name]

Set the object name.  
The name is displayed in the [Data View] window, property sheet, and others.  
Up to 100 characters can be set.

(1) Applying the lamp area

When using the lamp area, set the following items for the lamp area, and the figure and object to which the lamp area is applied.

(a) Applicable area

The colors are switched within the lamp area regardless of the shape of the figure and object. When a part of the figure or object is outside the lamp area, the area is not applied to the part. Specify the applicable lamp area so that the figure and object are within the dotted frame of the lamp area.

Example) When  and  are set for [Color Setting] of the lamp area

(b) Layer

Not available to GT21.

Arrange the lamp area, and the figure and object to which the lamp area is applied on the same layer.

(c) Arrangement order

Arrange the figure and object to which the lamp area is applied behind the lamp area.

(If the figure and object are arranged before the lamp area, they are arranged behind the lamp area.)

To change the arrangement order, right-click on the selected figure or object and select [Stacking Order].

(d) Display order

Set the display order of the objects in the applied lamp area.

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.

Select [Adjust object display order in GOT to the one in GT Designer3].

(2) Setting the same color for the switching color of the lamp area as the transparent color of the front layer

Not available to GT21.

On the front layer to which the lamp area is applied, when either [Color 1] or [Color 2] in [Color Setting] is set to the same color as [Front Layer Transparent], the transparent color (The back layer is displayed.) and the other color are switched.

The colors are switched not only for the figure or object, but also for the whole lamp area.

For the details of [Front Layer Transparent], refer to the following.

→2.5.1 ■ 1 Creating a base screen

Example) When  and  are set for [Color Setting] of the lamp area and  is set for [Front Layer Transparent]

(3) Checking action of the lamp area in the preview window and screen editor

The preview window and screen editor cannot check that the colors are switched for the lamp area.

## 8.3.7 Relevant settings

---

Set the relevant settings other than the specific settings for the lamp as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

# 8.4 Placing a Numerical Display and Numerical Input

GT27 GT25 GT23 GT21 SoftGOT2000 GS

## 1 Numerical display

With this function, the data stored in devices are displayed numerically on the GOT.

## 2 Numerical Input

With this function, values entered into the GOT are written into devices.

### (1) Entering values with keys for entries

As keys for entries, a key window and touch switches to which key codes are assigned are available.

#### (a) Entering with touch switches placed on the screen

#### (b) Entering from a key window

→ 5.2.4 Setting key windows ([Key Window])

### (2) Inputting values with a barcode reader or RFID

→ 10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

## 8.4.1 Specifications of the numerical display and numerical input

### ■ 1 Maximum number of objects arrangeable on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 1024 numerical displays and numerical inputs can be placed on one screen.
- For GT21  
Up to 1024 numerical displays can be placed on one screen.  
Up to 100 numerical inputs can be placed on one screen.

### ■ 2 Display when a data operation error occurs

For the data operation, if a BCD-BIN conversion error or a division by zero error occurs, the object displays hyphens corresponding to the number of displayed digits.

For the numerical input, while the object displays hyphens, touching its input value area enters the input mode. Then, the area displays the value before the error occurrence (or 0 if hyphens have been displayed at the GOT power-on).

#### (1) Display of a value containing a symbol or decimal point

A symbol and a decimal point, which are contained in a value, are also displayed as hyphens.

Example) When the settings are configured as follows: display format: real, number of displayed digits: 8 (fractional portion: 5), and right alignment

Normal display

Display at an error occurrence

#### (2) Display when characters and numerics are displayed together

Of a character string specified as [Format String], numerics are displayed as hyphens, and characters are displayed as they are.

Example) When the settings are configured as follows: display format: decimal, specified character string: ##m##cm, and right alignment

Normal display

Display at an error occurrence

### ■ 3 Displaying with level objects superimposed

A numerical display or numerical input can be superimposed on a level object.

For restrictions imposed on displaying with level objects superimposed, refer to the following.

⇒ 8.23 Placing a Level Object

## 8.4.2 How to use the numerical display and numerical input

### ■ 1 Placing the numerical display and numerical input

Place numerical displays and numerical inputs on the screen editor.

→ 6.5.1 Placing figures and objects

### ■ 2 Editing numerical displays and numerical inputs

Edit numerical displays and numerical inputs that have been placed on the screen editor.

→ 6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■ 3 Setting numerical displays and numerical inputs

Set numerical displays and numerical inputs that have been placed on the screen editor.

- Common setting of objects  
→ 6.5.5 Common setting for objects
- Numerical display settings  
→ 8.4.4 [Numerical Display] dialog
- Numerical input settings  
→ 8.4.5 [Numerical Input] dialog

### ■ 4 Using numerical inputs on base screens and window screens

If numerical inputs are displayed on both a base screen and an overlap window simultaneously, the cursor for entries is displayed on the overlap window by the operations other than a touch operation (such as the display of the key window with the special function switch).

To display the cursor for the numerical input on the base screen, touch the numerical input on the base screen.

### ■ 5 Inputting a value with a key code switch on a base screen

When key code switches are placed on a base screen and are used, values can be entered without the display of a key window.

For key code switches, refer to the following.

→ 8.2.11 [Key Code Switch] dialog

### ■ 6 Inputting a value with a barcode reader or RFID

Numerical values can be input using a barcode reader or RFID.

When inputting numerical values from a barcode reader or RFID, set the barcode function or RFID function.

→ 10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

### ■ 7 Specifying the destination to which the cursor moves after the confirmation of a numerical value entry

When [User ID] is set, the destination to which the cursor moves after the confirmation of a numerical value entry can be specified.

[User ID] can be set only when numerical inputs are used.

→ 8.4.5 ■ 4 [Extended] tab

#### (1) About [User ID]

When [User ID] is set, the following setting and operations are enabled.

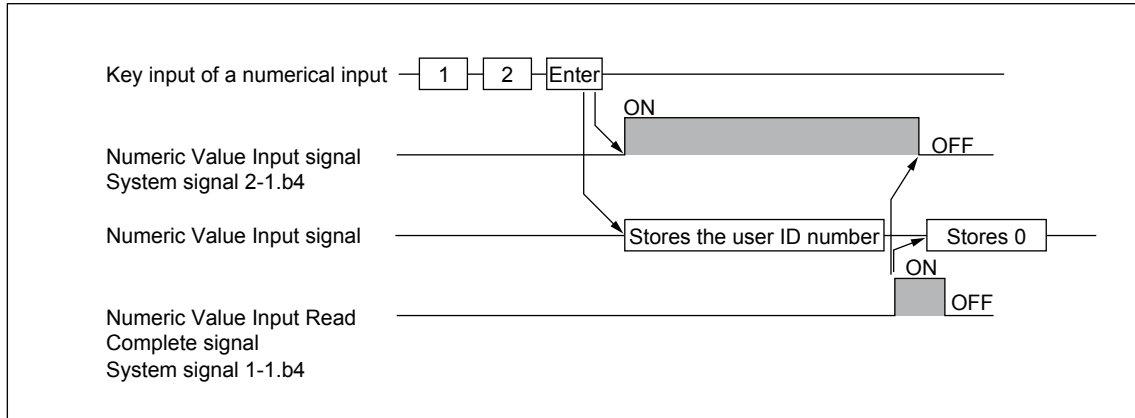

- Setting the position where the cursor is displayed at screen switching  
→ 5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])
- Storing in a device the timing with which an entered numerical value is confirmed  
→ (a) The timing with which numerical value entries are confirmed (system information)
- Moving the cursor in ascending or descending order of user ID number  
→ (b) Moving the cursor in ascending or descending order of user ID number

#### (a) The timing with which numerical value entries are confirmed (system information)

When a numerical value entry is confirmed with the numerical input function, the corresponding user ID number is written in [Numeric Value Input Number] of [System Information], and the Numeric Value Input signal (System signal 2-1.b4) turns on.

When deleting the user ID written in the numeric value input number (System signal 2-1.b4) and turning off the Numeric

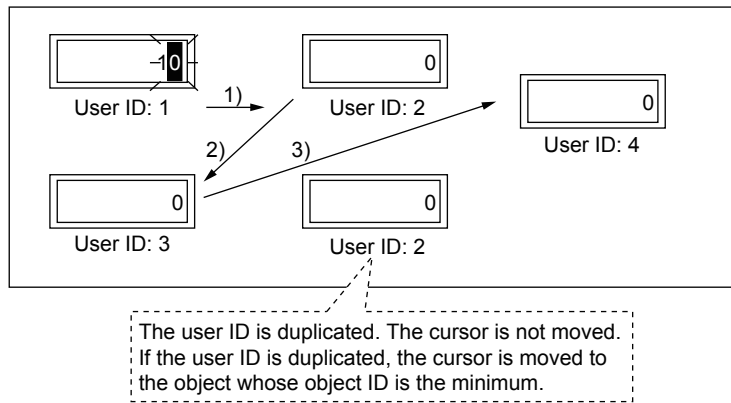

Value Input signal (System signal 2-1.b4), turn on the Numeric Value Input Read Complete signal. (After clearing, turn off the Numeric Value Input Read Complete signal (System signal 1-1.b4).) Otherwise user ID numbers cannot be stored and bit devices cannot turn on even when numerical value entries are confirmed.

### (b) Moving the cursor in ascending or descending order of user ID number

When the following key code switches are used, the cursor can be moved in ascending or descending order of user ID number.

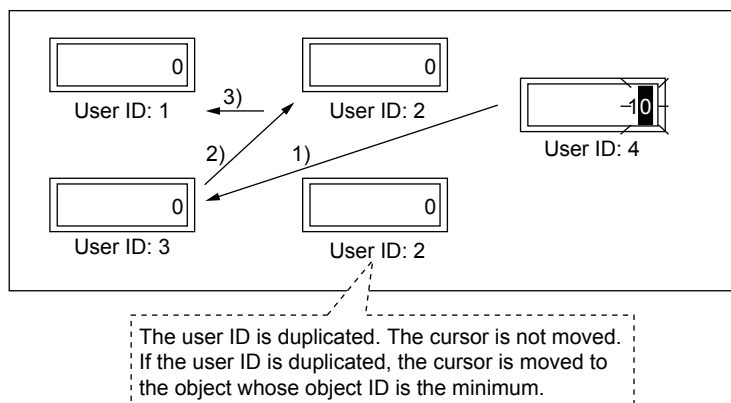

- User ID ascending order movement of cursor (key code: 0092h)

The cursor is moved in order of 1) → 2) → 3).

After 3), the cursor does not move because the destination user ID number does not exist.

- User ID descending order movement of cursor (key code: 0093h)

The cursor is moved in order of 1) → 2) → 3).

After 3), the cursor does not move because the destination user ID number does not exist.

### (2) User ID setting

When controlling the cursor using user ID numbers, assign different user ID numbers to each object.

Also, when using overlay screens or superimpose windows, set screens in a way that different user ID numbers are assigned to each object.

When the same user ID number is assigned to different objects, the cursor operation may not perform normally.

- When assigning different user ID numbers to each object  
Even when overlay screens or superimpose windows are used, the cursor operation using user ID numbers is performed normally.

- When assigning the same user ID number  
If objects which have the same user ID exist on the screen (including set overlay screens and superimpose windows), the cursor operation using user ID numbers may not perform normally.

### (3) The relation between user ID and destination ID

The destination ID number is the user ID number of the numerical input where the cursor is moved next.

→ 8.4.5 ■ 4 [Extended] tab

Example) Moving the cursor using the destination ID number

Numerical Input	User ID	Destination ID
A	1	2
B	2	3
C	3	4
D	4	1

### 8.4.3 Precautions for a numerical display object and a numerical input object

#### ■ 1 Precautions for use

##### (1) Space or symbol entry

If you enter only a space or symbol and then touch the [Enter] key, the entry is cancelled.  
To enter only a space or symbol as a device value, use the text input.

→8.5.2 How to use the text display and text input

##### (2) Operations when a key window is called up with a special function switch (Key windows)

The following shows the operations when a key window is called up with a special function switch in which [Key Windows] is set for the switch action, while no cursor appears on the numerical input.

- When using the standard key window  
The standard key window for decimal numbers is displayed.
- When using a key window a user created  
Screens set for [Window Screen No.] for decimal numbers are displayed.  
When [Window Screen No.] for decimal values is not set (or set to 0), the standard key window for decimal numbers is displayed.

#### ■ 2 When setting [ON and OFF] for [Write Check Device]

The setting of [Write Check Device] (write completion device) is available for a text input object as well.  
If you specify a common write completion device for a numerical input object and a text input object, or for multiple numerical input objects, note the following points.

##### (1) Number of write completion devices that turn on simultaneously

Do not turn on 21 or more write completion devices simultaneously.  
Otherwise the write completion devices that turn on 21st and later do not turn off automatically.

##### (2) When specifying a common write completion device for multiple numerical input objects

Set trigger conditions in a way that prevents numerical values from being entered while the same write completion device is on.

Example) Setting [Write Check Device] to M10 and [Trigger Type] to [OFF]

If you enter data into a target input object while the common write completion device is on for another target input object, the common write completion device does not turn off at the appropriate time.

Example) When entering data into numerical input A while the common write completion device is on for numerical input B

##### (3) Operations performed at screen switching

Even when screen switching (including switching to utilities) occurs while a write completion device is on, the write completion device does not turn off.

The device remains on until a set time elapses.

### ■3 Checking the input range while entering numerical values

This following describes the precautions taken when designing and operating screens.

#### (1) When designing screens

##### (a) Number of conditions that can be set

Set only one condition.

If two or more conditions are set, the input range is checked when the entry is confirmed.

##### (b) Range expressions set for conditions

Set either of the following patterns.

If setting with a pattern other than following patterns, the input range is checked when the entry is confirmed.

- $\$W < A$ ,  $\$W \leq A$

$\$W$ : Device set with a numerical input

A: Constant, another device (positive value (+) only)

- $A < \$W < B$ ,  $A \leq \$W < B$ ,  $A < \$W \leq B$ ,  $A \leq \$W \leq B$

$\$W$ : Device set with a numerical input

A: Constant, another device

B: Constant, another device (positive value (+) only)

##### (c) When the input range and display range are set individually

Only the input range is checked.

##### (d) Device whose [Data Type] is [Real]

For a device whose [Data Type] is [Real], the GOT and a controller handle the device value a little differently.

If you set a precise input condition using [=] or [!], the input range may not be checked properly.

When checking the input range with such a device, do not use [=] and [!] to set the input condition.

For the data type specifications, refer to the following.

→ 1.2.6 ■ 2 Data type of devices

#### (2) In operation

##### (a) Inputting minus (-)

Input minus (-) then enter a numerical value.

##### (b) Lower limit check

The lower limit is checked when the entry is confirmed.

##### (c) Comparing with devices

In a case where comparison with a device is made, a message is displayed when the device value cannot be read.

##### (d) Moving the cursor

When the cursor in the object is moved while a numerical value is entered, the range is not checked while the numerical value is entered.

The input range is checked when the entry is confirmed.

To have the range checked while entering a numerical value, hide the cursor (cancel the input status of the numerical input), and then execute the numerical input again.

### ■4 Displaying the input confirmation message

#### (1) Number of the digits of a numerical value which can be displayed on the message

When the number of displayed digits exceeds 35, the values are not displayed on the message.

Do not input over 35 digits.

#### (2) Display position of the message

The display position of the message depends on the type of the key window.

- When using the standard key window

The message is displayed on the key window.

- When using a user-created key window or using no key window

The message is displayed in the center of the screen.

### ■5 Blink

The blink of the text display is paused when the input cursor is displayed.

### ■6 When using a barcode reader or RFID

**(1) Reading data from a barcode reader or RFID while entering a numerical value in a key window**

Depending on the operation, the read data may or may not be input numerically.

- While displaying dialog windows  
The data read from a barcode reader or RFID cannot be input numerically.
- While not displaying dialog windows  
The value being input in the key window is abandoned and the data read from a barcode reader or RFID is numerically input.

**(2) Performing key touch operations while the data read from a barcode reader or RFID is in the process of being input**

While the data read from a barcode reader or RFID is in the process of being input, key touch operations are invalid and the data read from a barcode reader or RFID is input.

**(3) When data is not numerical values or insufficient for the specified start position**

When the data read from a barcode reader or RFID is applicable to the following cases, the numerical value input is not executed for the data.

- Other than numerical values
- The format of the data is different from the setting of [Format]
- The data is insufficient for the setting of [Start Position]

## 8.4.4 [Numerical Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

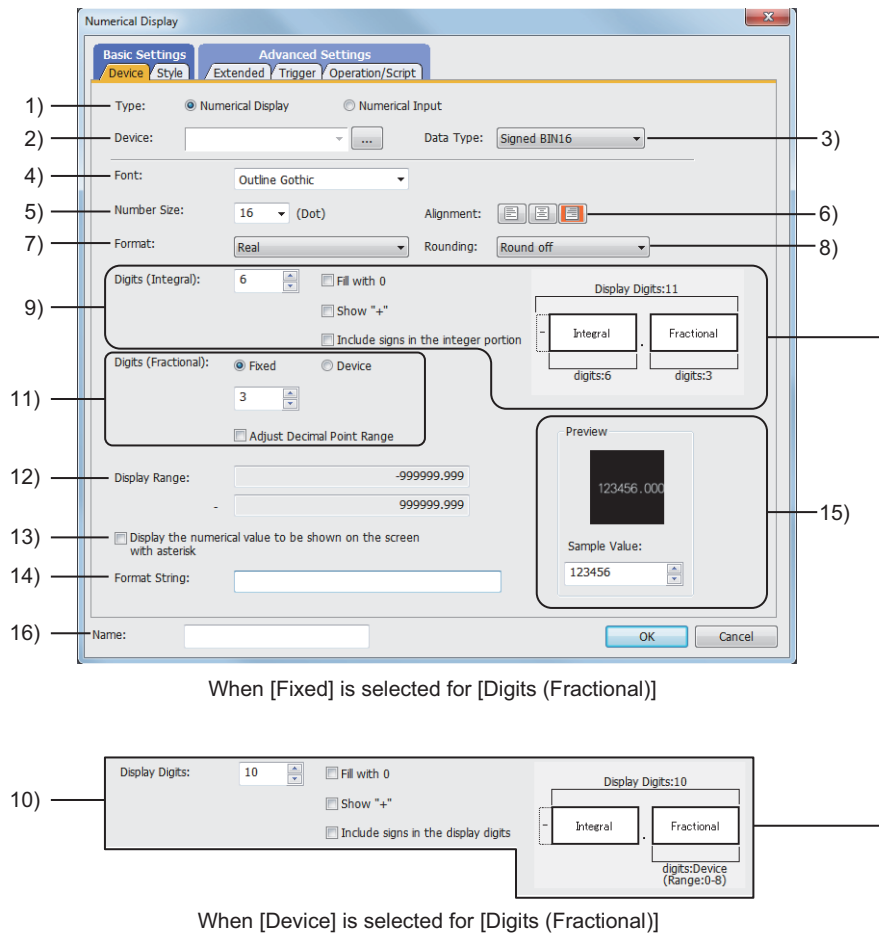

- Step 1** Select [Object] → [Numerical Display/Input] → [Numerical Display] from the menu.
- Step 2** Click the position where you place the numerical display. Placing the numerical display is complete.
- Step 3** Double-click the numerical display which has been placed to display the setting dialog.
- ■ 1 [Device] tab
    - 2 [Style] tab
    - 3 [Extended] tab
    - 4 [Trigger] tab
    - 5 [Operation/Script] tab

### ■ 1 [Device] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Item]

Select the function to be used.  
The following shows the items to be selected.

- [Numerical Display]
- [Numerical Input]

#### 2) [Device]

Set the device to be monitored.  
→ 6.1.1 How to set devices

#### 3) [Data type]

Select the data type of the device to be set.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

#### 4) [Font]

Select the font of the numerical value to be displayed.

The following shows the items to be selected.

- [6x8dot]
- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Gothic]
- [16dot HQ Gothic]
- [TrueType Numerical Gothic]
- [TrueType Numerical 7seg]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 5) [Number Size]

Set the size of the numerical value to be displayed.

⇒ 1.2.5 Font specifications

#### 6) [Alignment]

Set the horizontal position of the numerical value.

#### 7) [Format]

Select the display type of the device to be monitored.

The following shows the items to be selected.

- [Signed Decimal]
- [Unsigned Decimal]
- [Hexadecimal]
- [Octal]
- [Binary]
- [Real]

[Octal] can be set only when [Data Type] is [Signed BIN16], [Unsigned BIN16], or [BCD16].

#### 8) [Rounding]

If there is a numerical value that have digits to the right of the digit set for [Digits (Fractional)], select the processing method.

The following shows the items to be selected.

- [Round off]
- [Round down]
- [Round up]

#### 9) [Digits (Integral)]

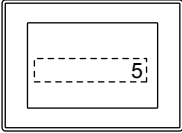

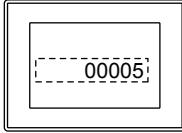

This item is displayed when [Fixed] is selected for [Digits (Fractional)].

Set the number of digits of the integer part to be displayed.

The number of the digits that can be set depends on the setting for [Format].

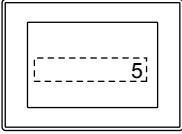

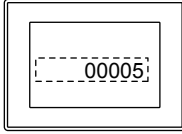

- [Signed Decimal] or [Unsigned Decimal]: The setting range is [1] to [13].
- [Hexadecimal]: The setting range is [1] to [8].
- [Octal]: The setting range is [1] to [6].

- [Binary] or [Real]: The setting range is [1] to [32].

Item	Description
[Fill with 0]	<p>When the right justification is set for [Alignment], 0 is prefixed to the numerical value. Example): When setting [5] for [Digits (Integral)]</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>If not prefixed with 0</p>  </div> <div style="text-align: center;"> <p>If prefixed with 0</p>  </div> </div> <p>When [Format] is set to [Binary], the GOT displays the numerical value prefixed with 0, regardless of the setting of [Fill with 0].</p>
[Show "+"]	<p>When the numerical value is positive number, [+] is prefixed to the numerical value. This item can be set only when [Format] is either [Signed Decimal] or [Real].</p>
[Include signs in the integer portion]	<p>A sign is included as one digit in the number of digits of the integer part. This item can be set only when [Format] is either [Signed Decimal] or [Real].</p>

### 10) [Display Digits]

This item is displayed when [Real] is selected for [Format] and [Device] is selected for [Digits (Fractional)].  
Set the total number of digits of the integer part and fractional part to be displayed.  
The setting range is [1] to [32].

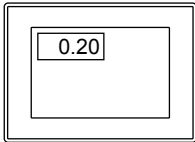

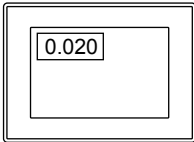

Item	Description
[Fill with 0]	<p>When the right justification is set for [Alignment], 0 is prefixed to the numerical value. Example) When setting [5] for [Display Digits]</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>If not prefixed with 0</p>  </div> <div style="text-align: center;"> <p>If prefixed with 0</p>  </div> </div>
[Show "+"]	<p>When the numerical value is positive number, [+] is prefixed to the numerical value.</p>
[Include signs in the display digits]	<p>Includes a sign as one digit in the number of digits displayed.</p>

### 11) [Digits (Fractional)]

This item is displayed when [Real] is selected for [Format].  
Select a method to specify the number of decimal places, and specify the number of decimal places to be displayed.  
The following shows selectable items.

- [Fixed]:  
Enter the number of decimal places.  
The setting range is [0] to [30].
- [Device]:  
Set a device to specify the number of decimal places.  
The number of decimal places changes based on the device value.  
The data type of the device is unsigned 16-bit binary.  
Set the device value as follows.  
 $X > Y + 1$   
X: Value set for [Display Digits]  
Y: Device value to specify the number of decimal places

If the device value is outside the valid range, 0 is assumed.

Item	Description
[Adjust Decimal Point Range]	<p>(When a value other than binary floating values is held in the monitor target device) the integer device value is displayed as a value with the decimal point. This item can be set when [Format] is [Real] and [Data Type] is set to one other than [Real].</p> <p>Example) Number of the digits to the right of the decimal point: 2 Controller device value: 20</p>  <p>The value is displayed as 0.20 in the GOT.</p> <p>Example) Number of the digits to the right of the decimal point: 3 Controller device value: 20</p>  <p>The value is displayed as 0.020 in the GOT.</p> <p>In addition to the device to be monitored, an automatic adjustment for the following targets is made.</p> <ul style="list-style-type: none"> <li>• Display range: \$V (monitor device value or result value of data operation), value of the specified device</li> <li>• Data operation: \$\$ (monitor device value), value of the specified device</li> </ul>

## 12) [Display Range]

Displays the maximum/minimum value which can be displayed on the screen.

## 13) [Display the numerical value to be shown on the screen with asterisk]

Displays the numerical value, sign, and decimal point to be displayed on the screen in asterisk.

This item can be set when [Font] is set to one other than [TrueType Numerical Gothic] and [TrueType Numerical 7seg].

The character string (except #) set for [Format String] is not displayed in asterisk.

When saved as an operation log, the text is saved not as an asterisk but as a numerical value.

## 14) [Format String]

Displays characters (such as alphanumeric characters, kanji, or symbols) in the numerical display

This item can be set when [Font] is set to one other than [TrueType Numerical Gothic] and [TrueType Numerical 7seg].

Enter #s to the positions where the digits of a numerical value are to be displayed.

The #s entered in setting this item are replaced with the digits of the device value.

Each # is replaced with the digit of the value in the same position counted from the right. If the number of the digits of the device value is larger than that of #s, the digits overflowing from the left are not displayed.

The digits of a real number to the right of the decimal point are processed according to the setting for [Rounding].

The sign included in the device value is also processed in the same way that processes the numerical value.

The following shows examples of displays.

Example 1) When the setting for [Format] is not [Real]

[Format String]	[Digits (Fractional)]	Device value	Display
##m##cm	-	1234	12m34cm
		123	1m23cm
		12345	23m45cm
		-123	-1m23cm

Example 2) When setting [Real] for [Format] and [Round off] for [Rounding]

[Format String]	[Digits (Fractional)]	Device value	Display	Description
##m##cm	0	12.345	m12cm	Since [Digits (Fractional)] is 0, only the integer part is displayed.
	2		12m35cm	Since [Digits (Fractional)] is 2, the digits from the integer part to the second decimal place are displayed. The device value is rounded off to the third decimal place.
####cm	2	12.344	1234cm	Since [Digits (Fractional)] is 2, the device value is rounded off to the third decimal place.
		12.345	1235cm	
##.##cm	2	12.344	12.34cm	
		12.345	12.35cm	

### 15) [Preview]

Displays the preview of the screen.

Item	Description
[Sample Value]	Set the numerical value to be displayed in the preview.

### 16) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## Point

#### (1) Items whose settings are invalid when the format text is used

- The settings of [Digits (Integral)] and [Display Digits] in the [Device] tab become invalid.
- The setting of [Alignment] in the [Device] tab becomes invalid and the right justification is performed.

#### (2) Characters which cannot be displayed in the format text

When [6x8dot] is set for [Font], and a character other than the ASCII cords (0x20 to 0x7E) is included in the format text, the character and all the following characters are not displayed.

In such a case, the cursor may not appear in its default position.

⇒ 12.3 ASCII Code List

## 2 [Style] tab

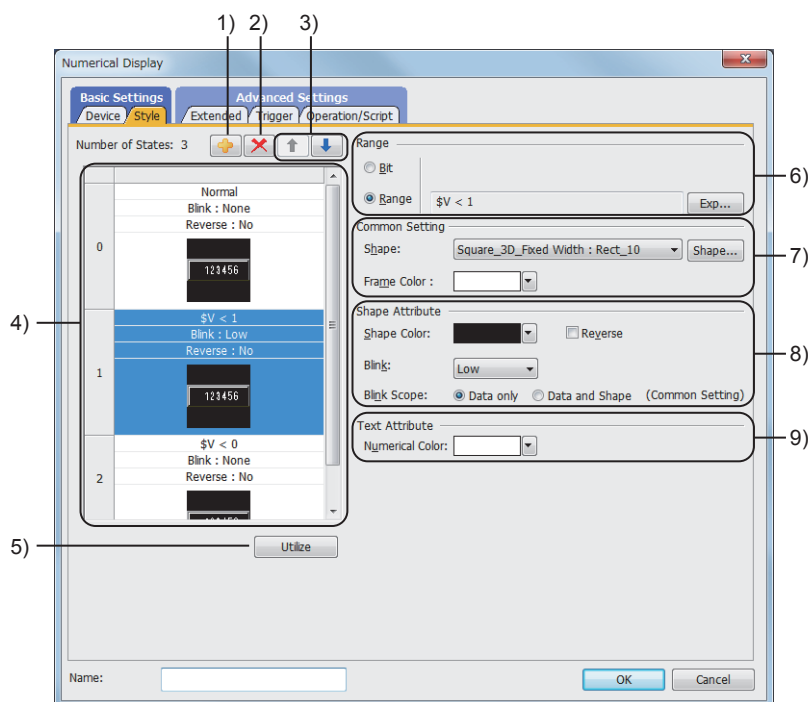

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

For the conditions, refer to the following.

⇒ 6.5.5 ■ 2 Setting conditions

#### 1) Add button

Adds a new condition.

#### 2) Delete button

Deletes the selected condition.

#### 3) Up button, down button

Changes the order of priority of the selected condition.

4) **Preview list**

Displays set conditions.

5) **[Utilize] button**

Creates a new condition utilizing the selected condition.

6) **[Range]**

Set a device of the condition under which a display is changed.

→6.5.5 ■ 2 Setting conditions

- [Bit]  
Set the value of the bit device.
- [Range]  
Set the word device value using a conditional expression.

7) **[Common Setting]**

These settings are applied to all the conditions to be set.

Item	Description
[Shape]	<p>Select the shape to be set for the object from the list or with the [Shape] button.                      →6.5.5 ■ 1 Setting object shapes                      When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally.                      Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.</p> <div style="text-align: center;"> <p>View in GT Designer3      View in the GOT</p> <p>↑ Frame shape area</p> <p>Characters which overlap with the frame shape area are not displayed.</p> </div>
[Frame Color]	<p>Select the frame color of the shape.                      →6.4 Color Settings</p>

8) **[Shape Attribute]**

Item	Description
[Shape Color]	<p>Select the color of the shape.                      →6.4 Color Settings</p>
[Reverse]	<p>Inverts the color of the numerical value.</p>
[Blink]	<p>Select the blinking speed of the numerical value and shape.                      The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	<p>Select the area to be blinked.                      The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Data only]</li> <li>• [Data and Shape]</li> </ul> <p>These settings are applied to all the conditions to be set.</p>

9) **[Text Attribute]**

Item	Description
[Numerical Color]	<p>Set the color of the numerical value.                      →6.4 Color Settings</p>

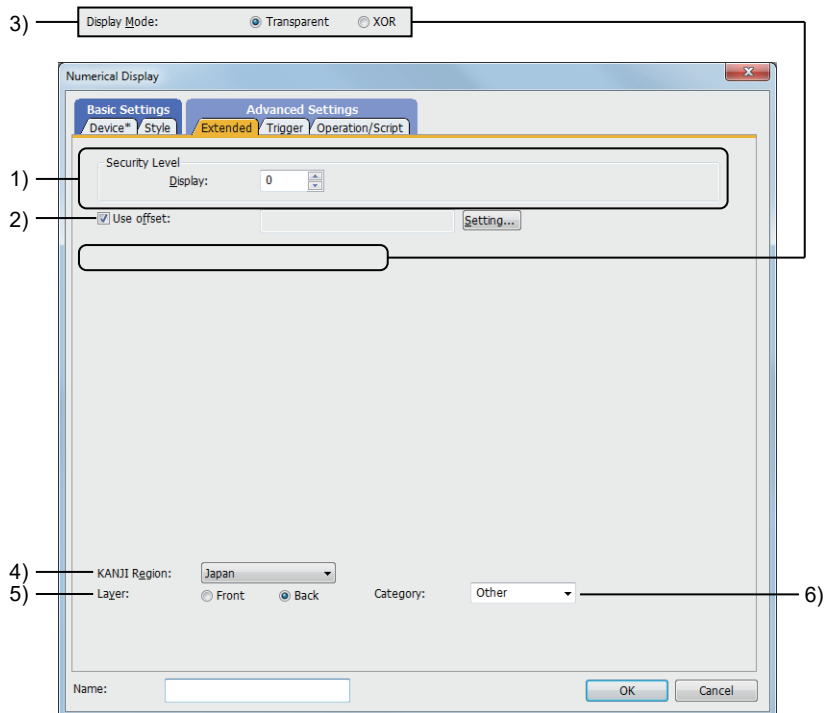

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

→ 6.1.9 Offset

#### 3) [Display Mode]

Display mode when the numerical display is superimposed on a level object.

- [Transparent]: Displays the numerical value on the level object.

- [XOR]: The numerical value in a numerical display is integrated into the XOR synthesis with a level color, to be able to be distinguished from the level object.

#### **GOT Graphic Ver.2**

As the setting is fixed to [Transparent], no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

The following shows the items to be selected.

- [Transparent]
- [XOR]

#### 4) [KANJI region]

Select the KANJI region of the displayed text.

This item can be set only when [Format String] is set in the [Device] tab.

⇒ 1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

#### 5) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

#### 6) [Category]

Select the category to assign the object.

⇒ 11.7 Managing figures and objects by category

### ■ 4 [Trigger] tab

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒ 6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]

- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

→6.2 Setting Trigger Types

## ■ 5 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Depending on the selection for [Operation Type], the setting items are different.

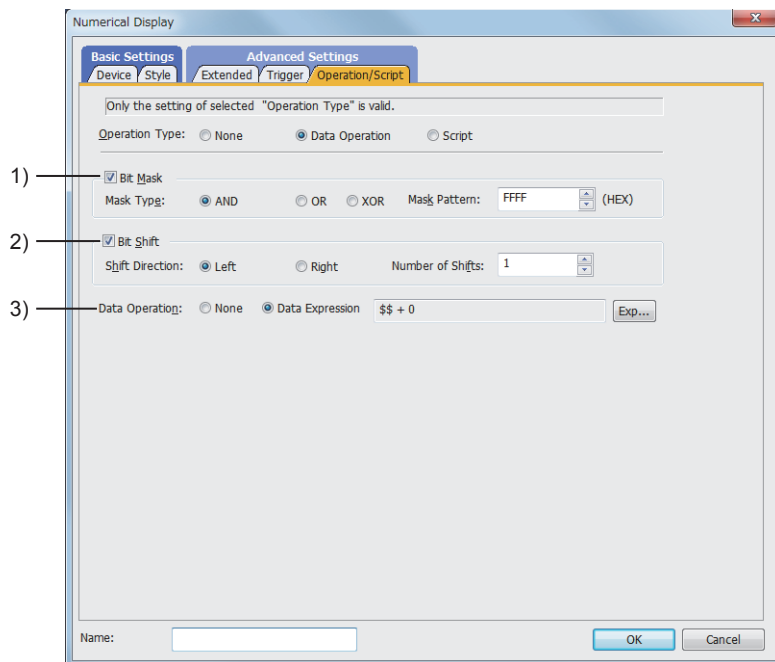

### (1) [Data Operation]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This item can be set only when [Operation Type] is [Data Operation].

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

This item can be set when [Format] in the [Device] tab is set to one other than [Real].

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range differs depending on the unit of the device set for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [0000] to [FFFF]</li> <li>• 32 bits: [00000000] to [FFFFFFFF]</li> </ul>

## 2) [Bit Shift]

Set the operation of shift processing.

This item can be set when [Format] in the [Device] tab is set to one other than [Real].

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. <ul style="list-style-type: none"><li>• [Left]</li><li>• [Right]</li></ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range differs depending on the unit of the device set for [Data Type] in the [Device] tab. <ul style="list-style-type: none"><li>• 16 bits: [1] to [15]</li><li>• 32 bits: [1] to [31]</li></ul>

## 3) [Data Operation]

Select the format of the expression operating with the data operation.

The following shows the items to be selected.

- [None]
- [Data Expression]

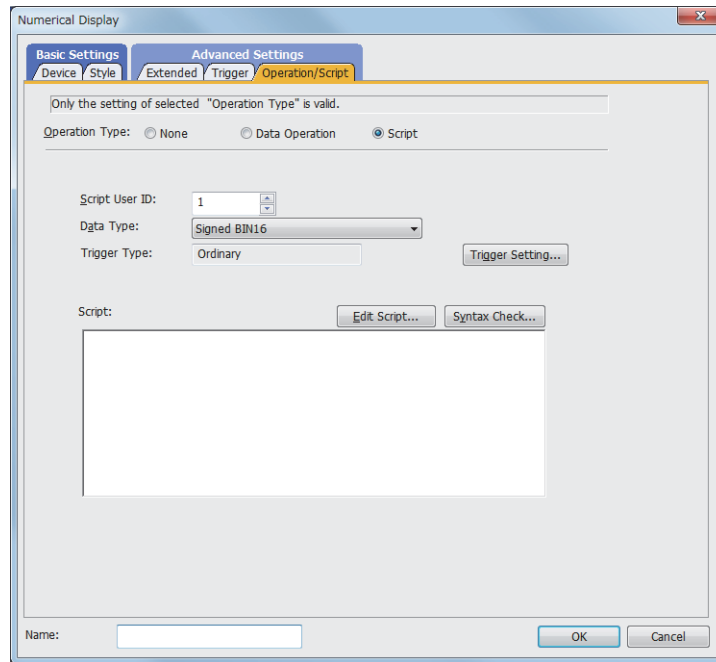

## (2) [Script]

This item can be set only when [Operation Type] is [Script].

For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

× : Not available

- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Device]	[Number Size] (width)	text_width	○	○	Upon the setting change	When the object is updated
	[Number Size] (length)	text_height	○	○	Upon the setting change	When the object is updated
	[Alignment]	arrange	○	○	Upon the setting change	When the object is updated
	[Digits (Fractional)]	decimal_point	○ <sup>*3</sup>	○ <sup>*3</sup>	Upon the setting change	When the object is updated
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated
	[Reverse]	highlight	○	○	Upon the setting change	When the object is updated
	[Blink]	blink	○	○	Upon the setting change	When the object is updated
	[Blink Scope]	blink	○	○	Upon the setting change	When the object is updated
	[Numerical Color]	text_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated
	[Display Mode]	draw_mode	○	○	Upon the setting change	When the object is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

\*3 Not available when [Device] is selected for [Digits (Fractional)].

## 8.4.5 [Numerical Input] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Object] → [Numerical Display/Input] → [Numerical Input] from the menu.
- Step 2 Click the position where you place the numerical input. Placing the numerical input is complete.
- Step 3 Double-click the numerical input which has been placed to display the setting dialog.

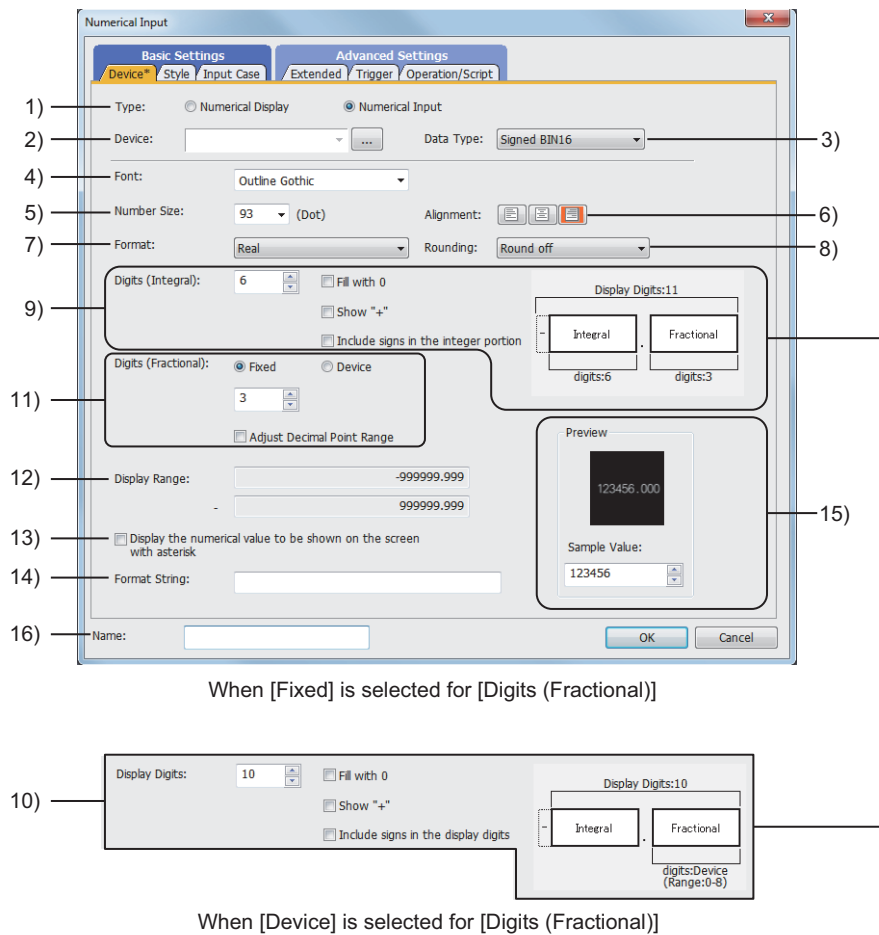

- ■ 1 [Device] tab
  - 2 [Style] tab
  - 3 [Input case] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab
  - 6 [Operation/Script] tab

### ■ 1 [Device] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

- 10.18.2 ■ 2 Usable functions

#### 1) [Item]

Select the function to be used.  
The following shows the items to be selected.

- [Numerical Display]
- [Numerical Input]

#### 2) [Device]

Set the device to be monitored.  
→ 6.1.1 How to set devices

#### 3) [Data Type]

Select the data type of the device to be set.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

#### 4) [Font]

Select the font of the numerical value to be displayed.

The following shows the items to be selected.

- [6x8dot]
- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Gothic]
- [16dot HQ Gothic]
- [TrueType Numerical Gothic]
- [TrueType Numerical 7seg]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 5) [Number Size]

Set the size of the numerical value to be displayed.

⇒ 1.2.5 Font specifications

#### 6) [Alignment]

Set the horizontal position of the numerical value.

#### 7) [Format]

Select the display type of the device to be monitored.

The following shows the items to be selected.

- [Signed Decimal]
- [Unsigned Decimal]
- [Hexadecimal]
- [Octal]
- [Binary]
- [Real]

[Octal] can be set only when [Data Type] is [Signed BIN16], [Unsigned BIN16], or [BCD16].

#### 8) [Rounding]

If there is a numerical value that have digits to the right of the digit set for [Digits (Fractional)], select the processing method.

The following shows the items to be selected.

- [Round off]
- [Round down]
- [Round up]

#### 9) [Digits (Integral)]

This item is displayed when [Fixed] is selected for [Digits (Fractional)].

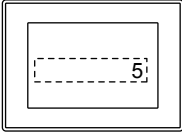

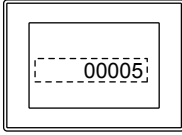

Set the number of digits of the integer part to be displayed.

The number of the digits that can be set depends on the setting for [Format].

- [Signed Decimal] or [Unsigned Decimal]: The setting range is [1] to [13].
- [Hexadecimal]: The setting range is [1] to [8].
- [Octal]: The setting range is [1] to [6].

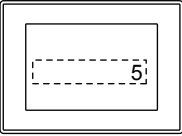

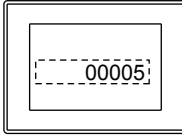

- [Binary] or [Real]: The setting range is [1] to [32].

Item	Description
[Fill with 0]	<p>When the right justification is set for [Alignment], 0 is prefixed to the numerical value. Example): When setting [5] for [Digits (Integral)]</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>If not prefixed with 0</p>  </div> <div style="text-align: center;"> <p>If prefixed with 0</p>  </div> </div> <p>When [Format] is set to [Binary], the GOT displays the numerical value prefixed with 0, regardless of the setting of [Fill with 0].</p>
[Show "+"]	<p>When the numerical value is positive number, [+] is prefixed to the numerical value. This item can be set only when [Format] is either [Signed Decimal] or [Real].</p>
[Include signs in the integer portion]	<p>A sign is included as one digit in the number of digits of the integer part. This item can be set only when [Format] is either [Signed Decimal] or [Real].</p>

### 10) [Display Digits]

This item is displayed when [Real] is selected for [Digits] and [Device] is selected for [Digits (Fractional)].  
Set the total number of digits of the integer part and fractional part to be displayed.  
The setting range is [1] to [32].

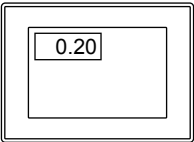

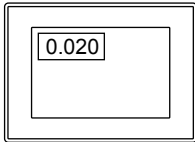

Item	Description
[Fill with 0]	<p>When the right justification is set for [Alignment], 0 is prefixed to the numerical value. Example): When setting [5] for [Display Digits]</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>If not prefixed with 0</p>  </div> <div style="text-align: center;"> <p>If prefixed with 0</p>  </div> </div>
[Show "+"]	<p>When the numerical value is positive number, [+] is prefixed to the numerical value.</p>
[Include signs in the display digits]	<p>Includes a sign as one digit in the number of digits displayed.</p>

### 11) [Digits (Fractional)]

This item is displayed when [Real] is selected for [Format].  
Select a method to specify the number of decimal places, and specify the number of decimal places to be displayed.  
The following shows selectable items.

- [Fixed]:  
Enter the number of decimal places.  
The setting range is [0] to [30].
- [Device]:  
Set a device to specify the number of decimal places.  
The number of decimal places changes based on the device value.  
The data type of the device is unsigned 16-bit binary.  
Set the device value as follows.  
 $X > Y + 1$   
X: Value set for [Display Digits]  
Y: Device value to specify the number of decimal places

If the device value is outside the valid range, 0 is assumed.

Item	Description
[Adjust Decimal Point Range]	<p>(When a value other than binary floating values is held in the monitor target device) the integer device value is displayed as a value with the decimal point. This item can be set when [Format] is [Real] and [Data Type] is set to one other than [Real].</p> <p>Example) Number of the digits to the right of the decimal point: 2 Controller device value: 20</p>  <p>The value is displayed as 0.20 in the GOT.</p> <p>Example) Number of the digits to the right of the decimal point: 3 Controller device value: 20</p>  <p>The value is displayed as 0.020 in the GOT.</p> <p>In addition to the device to be monitored, an automatic adjustment for the following targets is made.</p> <ul style="list-style-type: none"> <li>• Display range: \$V (monitor device value or result value of data operation), value of the specified device</li> <li>• Data operation: \$\$ (monitor device value), value of the specified device</li> </ul>

## 12) [Display Range]

Displays the maximum/minimum value which can be displayed on the screen.

## 13) [Display the numerical value to be shown on the screen with asterisk]

Displays the numerical value, sign, and decimal point to be displayed on the screen in asterisk.

This item can be set when [Font] is set to one other than [TrueType Numerical Gothic] and [TrueType Numerical 7seg].

The character string (except #) set for [Format String] is not displayed in asterisk.

When saved as an operation log, the text is saved not as an asterisk but as a numerical value.

## 14) [Format String]

Displays characters (such as alphanumeric characters, kanji, or symbols) in the numerical display

This item can be set when [Font] is set to one other than [TrueType Numerical Gothic] and [TrueType Numerical 7seg].

Enter #s to the positions where the digits of a numerical value are to be displayed.

The #s entered in setting this item are replaced with the digits of the device value.

Each # is replaced with the digit of the value in the same position counted from the right. If the number of the digits of the device value is larger than that of #s, the digits overflowing from the left are not displayed.

The digits of a real number to the right of the decimal point are processed according to the setting for [Rounding].

The sign included in the device value is also processed in the same way that processes the numerical value.

The following shows examples of displays.

Example 1) When the setting for [Format] is not [Real]

[Format String]	[Digits (Fractional)]	Device value	Display
##m##cm	-	1234	12m34cm
		123	1m23cm
		12345	23m45cm
		-123	-1m23cm

Example 2) When setting [Real] for [Format] and [Round off] for [Rounding]

[Format String]	[Digits (Fractional)]	Device value	Display	Description
##m##cm	0	12.345	m12cm	Since [Digits (Fractional)] is 0, only the integer part is displayed.
	2		12m35cm	Since [Digits (Fractional)] is 2, the digits from the integer part to the second decimal place are displayed. The device value is rounded off to the third decimal place.
####cm	2	12.344	1234cm	Since [Digits (Fractional)] is 2, the device value is rounded off to the third decimal place.
		12.345	1235cm	
##.##cm	2	12.344	12.34cm	
		12.345	12.35cm	

### 15) [Preview]

Displays the preview of the screen.

Item	Description
[Sample Value]	Set the numerical value to be displayed in the preview.

### 16) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

#### Point

#### (1) Items whose settings are invalid when the format text is used

- The settings of [Digits (Integral)] and [Display Digits] in the [Device] tab become invalid.
- The setting of [Alignment] in the [Device] tab becomes invalid and the right justification is performed.

#### (2) Characters which cannot be displayed in the format text

When [6x8dot] is set for [Font], and a character other than the ASCII cords (0x20 to 0x7E) is included in the format text, the character and all the following characters are not displayed.

→ 12.3 ASCII Code List

#### (3) Operations performed when an input value is displayed at the input object position

When [Display input value on destination object location] is selected in the [Extended] tab, the input value of the key window is reflected on the object, according to the setting of [Format String].

However, in the following cases, the setting of [Format String] is not reflected to the display on the object while a value is being entered. Consequently, the value is displayed on the object in the set digits (the number of the pound signs [#]). (The decimal point is not counted as one digit.)

- The [Format] is set to [Binary] in the [Device] tab, and GS450.b6 is off.
- The [Format] is set to [Octal] in the [Device] tab, and GS450.b7 is off.
- The [Format] is set to [Real] in the [Device] tab.

To display the value on the object according to the setting of [Format String], confirm the entry.

## ■ 2 [Style] tab

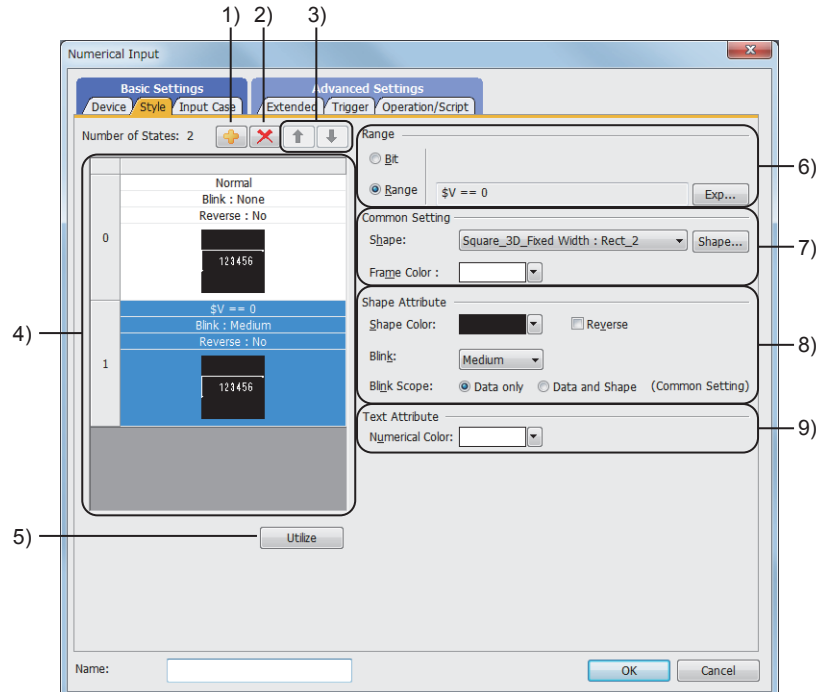

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

For the conditions, refer to the following.

→6.5.5 Common setting for objects

### 1) Add button

Adds a new condition.

### 2) Delete button

Deletes the selected condition.

### 3) Up button, down button

Changes the order of priority of the selected condition.

### 4) Preview list

Displays set conditions.

### 5) [Utilize] button

Creates a new condition utilizing the selected condition.

### 6) [Range]

Set a device of the condition under which a display is changed.

→6.5.5 ■ 2 Setting conditions

- [Bit]

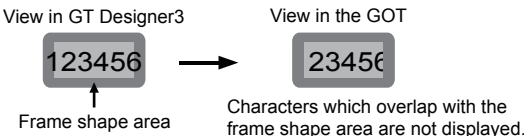

Set the value of the bit device.

- [Range]

Set the word device value using a conditional expression.

### 7) [Common Setting]

These settings are applied to all the conditions to be set.

Item	Description
[Shape]	<p>Select the shape to be set for the object from the list or with the [Shape] button.            ⇒6.5.5 Common setting for objects            When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally.            Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.</p> 
[Frame Color]	<p>Select the frame color of the shape.            ⇒6.4 Color Settings</p>

## 8) [Shape Attribute]

Item	Description
[Shape Color]	<p>Select the color of the shape.            ⇒6.4 Color Settings</p>
[Reverse]	<p>Inverts the color of the numerical value.</p>
[Blink]	<p>Select the blinking speed of the numerical value and shape.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	<p>Select the area to be blinked.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Data only]</li> <li>• [Data and Shape]</li> </ul> <p>These settings are applied to all the conditions to be set.</p>

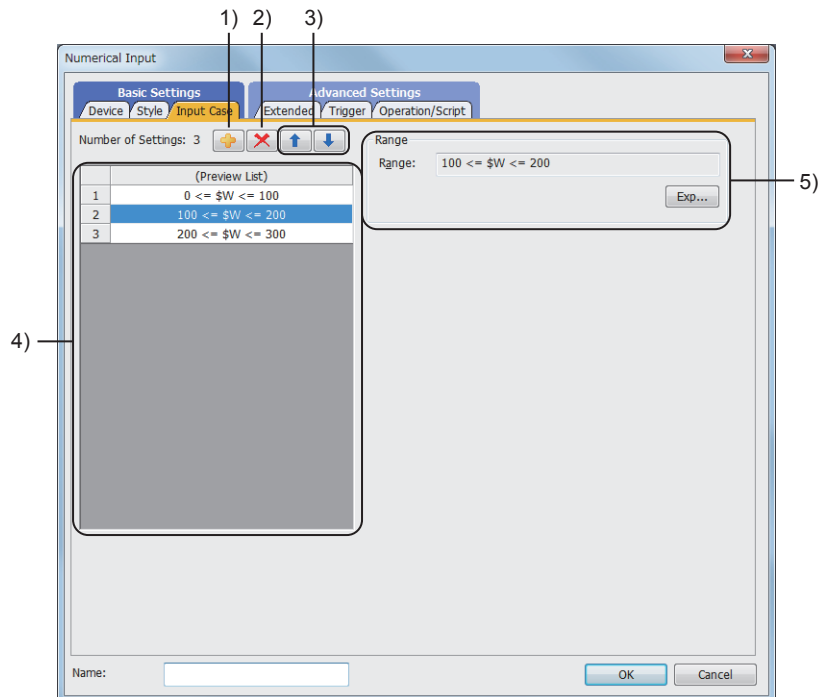

## 9) [Text Attribute]

Item	Description
[Numerical Color]	<p>Set the color of the numerical value.            ⇒6.4 Color Settings</p>

### ■ 3 [Input case] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

→6.5.5 ■ 2 Setting conditions

#### 1) Add button

Adds a new condition.

#### 2) Delete button

Deletes the selected condition.

#### 3) Up button, down button

Changes the order of priority of the selected condition.

#### 4) Setting list

Displays the status set for each condition.

#### 5) [Range]

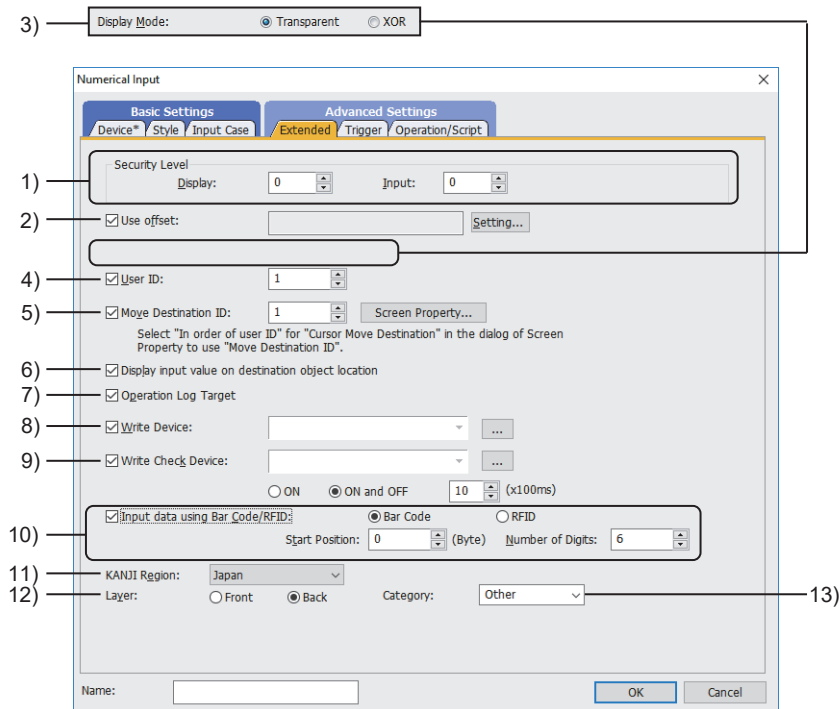

Item	Description
[Range]	Set the range of the word device value for screen switching using a conditional expression.

## 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

Set a value greater than [Display] for [Input].

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

→ 6.1.9 Offset

### 3) [Display Mode]

Display mode when the numerical input is superimposed on a level object.

- [Transparent]: Displays the numerical value on the level object.

- [XOR]: The numerical value in a numerical display is integrated into the XOR synthesis with a level color, to be able to be distinguished from the level object.

### GOT Graphic Ver.2

As the setting is fixed to [Transparent], no additional setting is required accordingly.

### GOT Graphic Ver.1

The following shows the items to be selected.

- [Transparent]

- [XOR]

#### 4) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

The following operations can be performed when user ID numbers are set.

- Setting the position where the cursor is displayed at screen switching
  - ⇒5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])
- Checking the numerical input function that is displaying the cursor
  - ⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])
- Specifying objects that were used with operation logs
  - ⇒5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

For the details of this setting, refer to the following.

- ⇒8.4.2 ■ 7 Specifying the destination to which the cursor moves after the confirmation of a numerical value entry

#### 5) [Move Destination ID]

Set the user ID of a numerical input to which the cursor moves upon inputting a value.

To move the cursor by specifying a user ID, a cursor movement setting must also be configured.

Configure one of the following settings to enable the cursor movement per project or per screen.

- To enable the cursor movement per project
 

Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display the [Environmental Setting] window ([Key Window]), and select the [Advanced Setting] tab.

  - ⇒5.2.4 ■ 4 (2) [Advanced Setting] tab

Select [Control the cursor] for [Defined key action], and select one of the following items for [Cursor Move Destination].

  - [In order of user ID]
  - [Subsequently valid user ID] (Not available to GT21)
- To enable the cursor movement only on the screen having a target numerical input
 

Click the [Screen Property] button to display the [Screen Property] dialog, and select the [Key Window Advanced Setting] tab.

(The [Screen Property] dialog corresponds to the screen having a target numerical input.)

  - ⇒2.7.1 Property of base screens
  - 2.7.2 Properties of window screens

Select [Prioritize screen setting over project setting] in [Key Window/Cursor Movement].

Select [Control the cursor] for [Defined key action], and select one of the following items for [Cursor Move Destination].

  - [In order of user ID]
  - [Subsequently valid user ID] (Not available to GT21)

#### 6) [Display input value on destination object location]

Reflects the numerical values entered with the key window in the object on the screen immediately.

Write the value to a device after touching the enter key.

#### 7) [Operation Log Target]

Not available to GT21.

Select this item to target the object for the operation log.

- ⇒5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

#### 8) [Write Device]

Set the target device where an input numerical value is to be written.

When the data operation is set, the data before the execution of the data operation can be stored.

#### 9) [Write Check Device]

Set a bit device to turn on upon completion of a numerical input.

- [ON]
 

Turns on a set bit device upon completion of a numerical input.
- [ON and OFF]
 

Turns on a set bit device upon completion of a numerical input, and then turns off the bit device after a specified time period.

The setting range of the time period for which a set bit device is on is [5] x 100 ms to [30] x 100 ms.

#### 10) [Input data using Bar Code/Rfid]

Inputs the numerical value read from a barcode reader or RFID.

→ 10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

The following shows the items to be selected.

- [Bar Code]
- [RFID]

Item	Description
[Start Position]	Set the position of the byte from which a read value is input. <ul style="list-style-type: none"> <li>• [Bar Code]: [0] to [3997] byte(s)</li> <li>• [RFID]: [0] to [19997] byte(s)</li> </ul>
[Digits]	Set the number of digits for inputting the read data. The same number of digits as that set for [Digits (Integral)] in the [Device] tab or smaller can be set.

### 11) [KANJI region]

Select the KANJI region of the displayed text.

This item can be selected only when [Format String] is set in the [Device] tab.

→ 1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

### 12) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 13) [Category]

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## 5 [Trigger] tab

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
  - [OFF Display]
- ⇒6.1.1 How to set devices

## 2) [Trigger Type]

Select the condition of displaying the object.  
The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

For details of each item, refer to the following.  
⇒6.2 Setting Trigger Types

## ■ 6 [Operation/Script] tab

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

Depending on the selection for [Operation Type], the setting items are different.

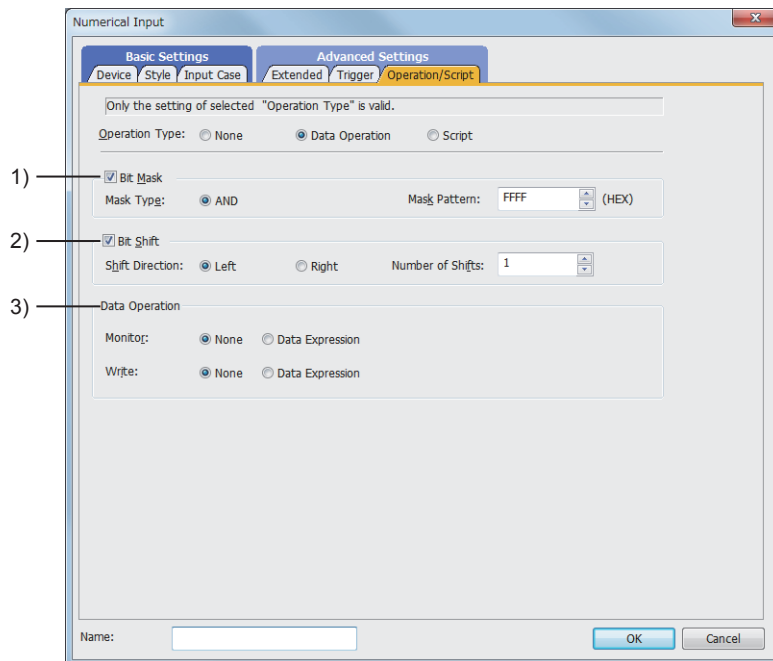

### (1) Data operation

This item can be set only when [Operation Type] is [Data Operation].

For the settings of the data operation function, refer to the following.

⇒6.5.5 Common setting for objects

#### 1) [Bit Mask]

Set the operation of mask processing.

This item can be set when [Format] in the [Device] tab is set to one other than [Real].

Item	Description
[Mask Type]	Select a type of mask processing. • [AND]: Logical AND

Item	Description
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range differs depending on the unit of the device set for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [0000] to [FFFF]</li> <li>• 32 bits: [00000000] to [FFFFFFFF]</li> </ul>

## 2) [Bit Shift]

Set the operation of shift processing.

This item can be set when [Format] in the [Device] tab is set to one other than [Real].

Item	Description
[Shift Direction]	Select a shifting direction. The setting range is [Left] and [Right].
[Number of Shifts]	Set the number of bits to be shifted. The setting range differs depending on the unit of the device set for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [1] to [15]</li> <li>• 32 bits: [1] to [31]</li> </ul>

## 3) [Data Operation]

Select the format of the expression operating with the data operation.

Item	Description
[Monitor]	Select the expression used when devices are monitored. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Data Expression]</li> </ul>
[Write]	Select the expression used when values are written to devices. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Data Expression]</li> </ul>

## (2) Script (display)

When the [Script] and [Display] buttons are clicked, [Operation Type] can be set. For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Device]	[Number Size] (width)	text_width	○	○	Upon the setting change	When the object is updated
	[Number Size] (length)	text_height	○	○	Upon the setting change	When the object is updated
	[Alignment]	arrange	○	○	Upon the setting change	When the object is updated
	[Digits (Fractional)]	decimal_point	○ <sup>*3</sup>	○ <sup>*3</sup>	Upon the setting change	When the object is updated
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated
	[Reverse]	highlight	○	○	Upon the setting change	When the object is updated
	[Blink]	blink	○	○	Upon the setting change	When the object is updated
	[Blink Scope]	blink	○	○	Upon the setting change	When the object is updated
	[Numerical Color]	text_color	○	○	Upon the setting change	When the object is updated

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change* <sup>1</sup>	
					Object stacking order adjustment enabled* <sup>2</sup>	Object stacking order adjustment disabled* <sup>2</sup>
[Extended]	[Security Level] ([Display])	security	○	○	Upon the setting change	When the screen is updated
	[Security Level] ([Input])	input_security	○	○	When the object performs the specified action	When the object performs the specified action
	[Display Mode]	draw_mode	○	○	Upon the setting change	When the object is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

\*3 Not available when [Device] is selected for [Digits (Fractional)].

### (3) Script (input)

When the [Script] and [Input] buttons are clicked, [Operation Type] can be set.  
For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property

	[Security Level] (input)	input_security	○	○	When the object performs the specified action	When the object performs the specified action
	[Display Mode]	draw_mode	○	○	Upon the setting change	When the object is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

\*3 Not available when [Device] is selected for [Digits (Fractional)].

### 8.4.6 Relevant settings

Set the relevant settings other than the specific settings for the numerical display/input as required.

The following shows the functions that are available by the relevant settings.

#### 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

#### 2 GOT environmental settings (key window), screen property

Set the following functions for each project (GOT environmental settings) or for each screen (screen property).

→5.2.4 Setting key windows ([Key Window])

- Settings for each project (GOT environmental settings)  
Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display the [Environmental Setting] window.
- Settings for each screen (screen property)  
Select the screen editor on which the key window is to be set and select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog.

Function	Setting item
While entering a numerical value, checking the input range	<p>Not available to GT21.</p> <p>Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item.</p> <ul style="list-style-type: none"> <li>• [Check the input range while entering numerical values]</li> </ul>

Function	Setting item
Displaying the allowable input range as a message when entering a numerical value outside the input range	Not available to GT21. Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Display the valid input range when an invalid value is input in Numerical Input]
Displaying the cursor when the operating condition is satisfied.	Not available to GT21. Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Cursor]
Deleting the key window and cursor when the operating condition is not satisfied.	Not available to GT21. Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Clear the key window and the cursor] of [When operating conditions are not satisfied]
Setting whether to move the display of the key window or not by screen	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window Position Correction]
Selecting when displaying the value being entered in the key window	Not available to GT21. Set the following item in the [Basic Setting] tab or [Key Window Basic Setting] tab. • [Display value during input]
Selecting when displaying the input range of data in the key window	Not available to GT21. Set the following item in the [Basic Setting] tab or [Key Window Basic Setting] tab. • [Display input function range]
Setting whether to display or hide the cursor when hiding the cursor and pressing the enter key or an arrow key	Not available to GT21. Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Display the cursor with a touch on the Enter/arrow key when the cursor is hidden]
When entering a value in a numerical input or text input, displaying a dialog for checking the input at a key touch operation on the enter key	Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Display the input confirmation dialog when setting the function of Numerical/ASCII Input]
Displaying the key window when the operating condition is satisfied.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window]
Displaying the key window when the screen is switched	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the key window]
Displaying the cursor when the screen is switched.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the cursor]
Selecting the method of displaying the cursor when entering a value with a numerical input or text input	Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Cursor Type]
Displaying the key window at a touch input or deleting the key window by touching the enter key	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window] • [Defined key action]
When multiple numerical inputs or text inputs exist, setting the order of input After an entry is complete, moving the cursor to the next destination automatically	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Defined key action] • [Reference for determining cursor destination]
Setting the window screen to be used as a key window for numerical inputs (decimal or hexadecimal) and text inputs	Set the following item in the [Basic Setting] tab or [Key Window Basic Setting] tab. • [Key Window]

### ■3 GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] window.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
When deleting the cursor, clearing the cursor information, such as the cursor display object ID and cursor display user ID	[Clear the cursor information when deleting the cursor]
Notifying the value (32 bits) before a change with the numerical input function (Write device)	[Previous Numeric Value Input(32bit)]
Notifying the value (32 bits) confirmed with the numerical input function (Write device)	[Current Numeric Value Input(32bit)]
Notifying the confirmation of an entry from a numerical input (Write device: System signal 2-1.b4)	[System Signal 2-1]
Notifying the user ID of the numerical input to which an entry is confirmed (Write device)	[Numeric Value Input Number]
Notifying the object ID No. of the object for which the cursor was previously displayed (Write device)	[Previous Cursor Display Object ID]
Notifying the user ID No. of the object for which the cursor had been displayed previously (Write device)	[Previous Cursor Display User ID]
Notifying the key codes set to the input keys when the keys are input to text input, touch switch, or other objects (Write device)	[Key Code Input] (Not available to GT21.)
Notifying that the key window is being displayed (Write device: System signal 2-1.b11)	[System Signal 2-1]
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Turning off the Numeric Value Input signal (Read device: System signal 1-1.b4)	[System Signal 1-1]
Notifying the object ID No. of the object for which the cursor is currently being displayed (Write device)	[Current Cursor Display Object ID]
Notifying the user ID No. of the object for which the cursor is being displayed currently (Write device)	[Current Cursor Display User ID]
Notifying the cursor is being displayed in a numerical value or text input (Write device: System signal 2-2.b11)	[System Signal 2-2]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]
Notifying a value out of the input range is stored (Write device: System signal 2-1.b14)	Not available to GT21. [System Signal 2-1]

### ■4 GOT Internal Device

⇒12.1.3 GOT special register (GS)

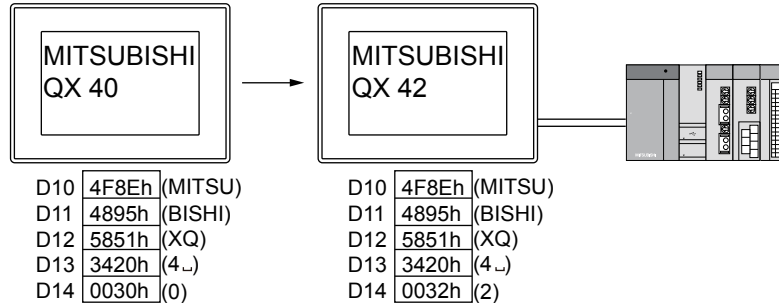

Function	Setting item
When entering a value in a numerical input or text input, displaying a dialog for checking the input at a key touch operation on the enter key (Read device)	GS450.b0 (Not available to GT21.)
While entering a numerical value, checking the input range (Read device)	GS450.b1 (Not available to GT21.)
When deleting the cursor, storing 0 in the current cursor position of the system information (Read device)	GS450.b3 (Not available to GT21.)
Displaying the key window for inputting binary values when the format of the numerical input is binary	GS450.b6 (Not available to GT21.)
Displaying the key window for inputting octal values when the format of the numerical input is octal	GS450.b7 (Not available to GT21.)
Notifying that the object is in the ready state for the data read by the barcode reader and the RFID to be directly input. (Write device)	GS243.b15 (Not available to GT21.)

## 8.5 Placing a Text Display and Text Input

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Text Display

Data in a word device is handled in a specified character code (ASCII code, Unicode, Shift JIS code, GB code, KS code, or Big5 code) and displayed as text.

### 2 Text Input

An entered character is written to a word device in a specified character code (ASCII code, Unicode, Shift JIS code, GB code, KS code, or Big5 code).

#### (1) Entering characters with keys for entries

As keys for entries, a key window and touch switches to which key codes are assigned are available.

##### (a) Entering with touch switches placed on the screen

##### (b) Entering from a key window

→5.2.4 Setting key windows ([Key Window])

Entering characters

Enter the input characters by the character code using the input key (key code: 000Dh).

D10	0000h
D11	0000h

D10	4241h	(BA)
D11	4443h	(DC)

#### (2) Inputting text with a barcode reader or RFID

→10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

Barcode reader

Text is input in the touched text input.

## 8.5.1 Specifications of the text display and text input

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Maximum number of objects arrangeable on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 1024 text displays and text inputs can be placed on one screen.
- For GT21  
Up to 1024 text displays can be placed on one screen.  
Up to 100 text inputs can be placed on one screen.

### ■2 KANA-KANJI Conversion

Not available to GT21.

You can convert characters input by text input into Kanji characters.

For the KANA-KANJI conversion, refer to the following.

- ⇒5.2.12 Configuring the settings for converting the text to Kanji character on the GOT ([KANA KANJI Conversion])

## 8.5.2 How to use the text display and text input

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Placing the text display and text input

Place text displays and text inputs on the screen editor.

- ⇒6.5.1 Placing figures and objects

### ■2 Editing text displays and text inputs

Edit text displays and text inputs that have been placed on the screen editor.

- ⇒6.5.2 Selecting figures and objects on the screen editor
- 6.5.3 Editing figures and objects

### ■3 Setting text displays and text inputs

Set text displays and text inputs that have been placed on the screen editor.

- Common setting of objects  
⇒6.5.5 Common setting for objects
- Text display settings  
⇒8.5.4 [Text Display] dialog
- Text input settings  
⇒8.5.5 [Text Input] dialog

### ■4 Entering with a key window placed on a base screen.

When key code switches are placed on a base screen and are used, text can be entered without the display of a key window.

For key code switches, refer to the following.

- ⇒8.2.11 [Key Code Switch] dialog

### ■5 Actions of text displays and text inputs

#### (1) Devices to be used and the number of displayed digits

The device for one word is used for the text display and text input per two displayed digits.

Example)

Setting device (start device): D1

Number of displayed digits: 3

↓

The devices for two words of D1 and D2 are used.

#### (2) Reading or writing order for character code

The reading or writing order of the character codes can be selected according to the specifications of a controller to be monitored.

**(a) Reading or writing in order of lower byte to upper byte**

The character code is read or written with the reversed order on 8-bit basis.

Example) Displaying shift JIS code 8E4h (MITSU) in the text display

**(b) Reading or writing in order of upper byte to lower byte**

(Select [Display in order of High -> Low] in the [Extended] tab to set.)

Example) Displaying shift JIS code 8E4h (MITSU) in the text display

**(3) Action example**

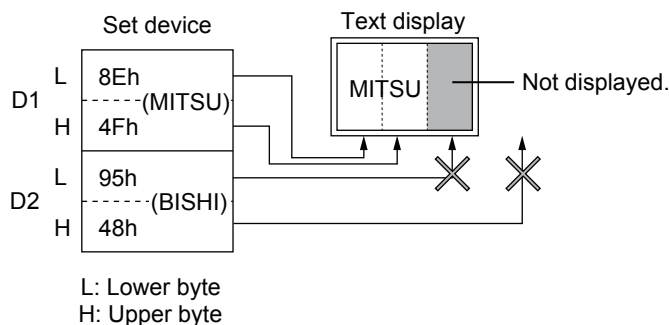

The following shows the examples of displaying and inputting the shift JIS code 8E4h (MITSU) and 9548 (BISHI).

Example 1)

When the shift JIS code 8E4h (MITSU) and 9548 (BISHI) are displayed in the order of lower byte to upper byte in the text display

Setting device: D1

Number of displayed digits: 3

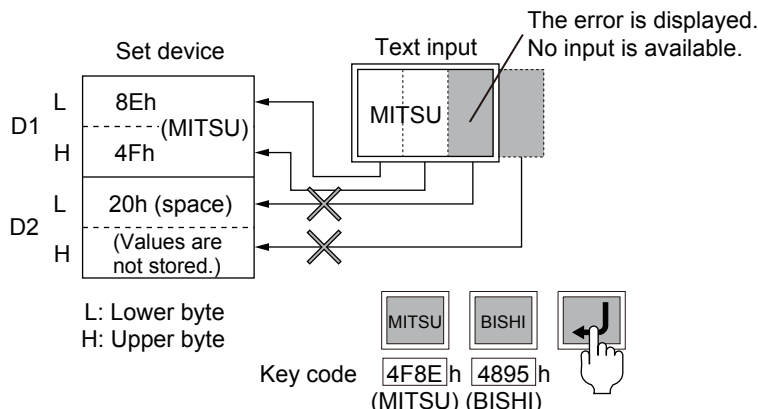

Example 2)

When the shift JIS code 8E4h (MITSU) and 9548 (BISHI) are written in the order of lower byte to upper byte in the text input

Setting device: D1

Number of displayed digits: 3

**6 Inputting texts using a barcode reader or RFID**

Texts can be input using a barcode reader or RFID.

When inputting texts from a barcode reader or RFID, set the barcode function or RFID function.

→10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

**7 Specifying the destination to which the cursor moves after the confirmation of a text entry**

When [User ID] is set, the destination to which the cursor moves after the confirmation of a text entry can be specified.

[User ID] can be set only when texts are used.

→8.5.5 ■ 2 [Extended] tab

**(1) About [User ID]**

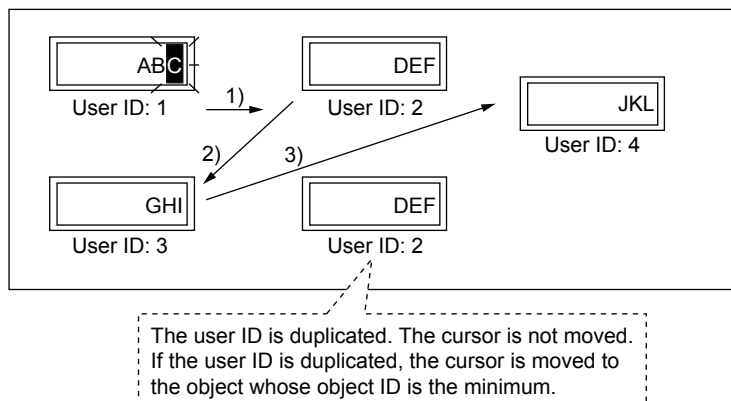

When [User ID] is set, the following setting and operations are enabled.

- Setting the position where the cursor is displayed at screen switching
  - 5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])
- Specifying objects that were used with operation logs
  - Not available to GT21.
  - 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])
- Moving the cursor in ascending or descending order of user ID number
  - (b) Moving the cursor in ascending or descending order of user ID number

**(a) Moving the cursor in ascending order of user ID number**

When the following key code switches are used, the cursor can be moved in ascending or descending order of user ID number.

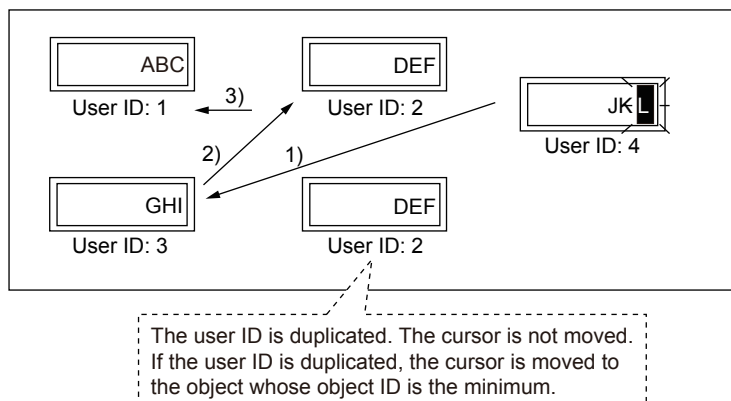

- User ID ascending order movement of cursor (key code: 0092h)

The cursor is moved in order of 1) → 2) → 3).

After 3), the cursor does not move because the destination user ID number does not exist.

- User ID descending order movement of cursor (key code: 0093h)

The cursor is moved in order of 1) → 2) → 3).

After 3), the cursor does not move because the destination user ID number does not exist.

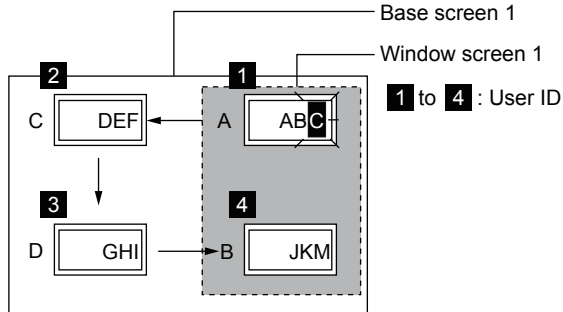

**(2) User ID setting**

When controlling the cursor using user ID numbers, assign different user ID numbers to each object. Also, when using overlay screens or superimpose windows, set screens in a way that different user ID numbers are assigned to each object.

When the same user ID number is assigned to different objects, the cursor operation may not perform normally.

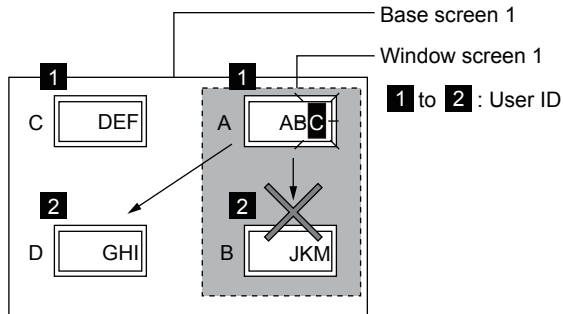

- When assigning different user ID numbers to each object

Even when overlay screens or superimpose windows are used, the cursor operation using user ID numbers is performed normally.

- When assigning the same user ID number

If objects which have the same user ID exist on the screen (including set overlay screens and superimpose windows), the cursor operation using user ID numbers may not perform normally.

**(3) The relation between user ID and destination ID**

The destination ID number indicates the user ID number of the text input where the cursor is moved next.

⇒8.5.5 ■ 2 [Extended] tab

Example) Moving the cursor using the destination ID number

Numerical input	User ID	Destination ID
A	1	2
B	2	3
C	3	4
D	4	1

## 8.5.3 Precautions for a text display object and a text input object

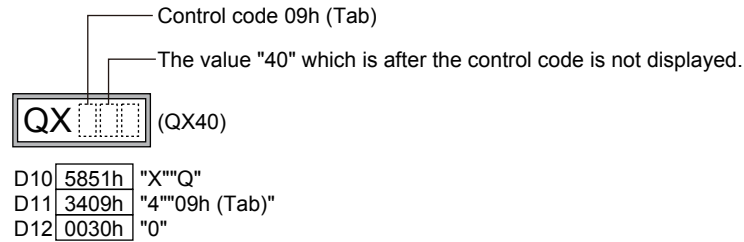

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 When the unavailable ASCII code is stored

If the following ASCII code is included in the target data of the text display, the text that is after the ASCII code is not displayed.

- 0000h to 001Fh
- 0080h
- 00F0h to 00FFh

Example) When the control code 09h (Tab) is included

### ■2 About system message and text display and text input

Depending on the language set in the system message, the character code to be displayed is different.

- Other than English: shift JIS code
- English: ASCII code

The Kana character or others are not displayed for ASCII code.

### ■3 Blink

The blink of the text display is paused when the input cursor is displayed.

### ■4 Characters displayable in the HQ fonts

The following characters are displayable in the HQ fonts on the text display or the text input.

- HQ font characters that are registered in a comment group
- HQ font characters to be displayed on an object when [Text Type] is set to [Text]
- HQ font characters that are set for a text figure
- Alphanumeric characters
- Symbols (! " # \$ % & ' ( ) : + , - . / ; < = > ? @ [ \ ] ^ \_ ` { | } ~)

If the text set to be displayed in an HQ font includes any character other than the above, the text is displayed in the corresponding standard font.

### ■5 When using a barcode reader or RFID

#### (1) Reading data from a barcode reader or RFID while entering texts in the key window

Depending on the operation, the read data may or may not be input as texts.

- While displaying dialog windows  
The data read from a barcode reader or RFID cannot be input texts.
- While not displaying dialog windows  
The text being input in the key window is dropped, and the data read from a barcode reader or RFID is input as text.

#### (2) Performing key touch operations while the data read from a barcode reader or RFID is in the process of being input

While the data read from a barcode reader or RFID is in the process of being input, key touch operations are invalid and the data read from a barcode reader or RFID is input.

#### (3) Under the specified start position

When the data read from a barcode reader or RFID is under [Start Position], the text input is not executed for the data.

## ■ 6 When setting [ON and OFF] for [Write Check Device]

The setting of [Write Check Device] (write completion device) is available for a numerical input object as well.

If you specify a common write completion device for a numerical input object and a text input object, or for multiple text input objects, note the following points.

### (1) Number of write completion devices that turn on simultaneously

Do not turn on 21 or more write completion devices simultaneously.

Otherwise the write completion devices that turn on 21st and later do not turn off automatically.

### (2) When specifying a common write completion device for multiple text input objects

Set trigger conditions to prevent data entry into a target input object while the common write completion device is on for another target input object.

Example) Setting [Write Check Device] to M10 and [Trigger Type] to [OFF]

If you enter data into a target input object while the common write completion device is on for another target input object, the common write completion device does not turn off at the appropriate time.

Example) When entering data into text input A while the common write completion device is on for text input B

### (3) Operations performed at screen switching

Even when screen switching (including switching to utilities) occurs while a write completion device is on, the write completion device does not turn off.

The device remains on until a set time elapses.

## ■ 7 Character code setting when using a string-type label or tag

If you set a label or tag for the device of an object, set the character code according to the type of the label or tag.

- System label Ver.1: ASCII code or Shift JIS code
- System label Ver.2 and global label: ASCII code, Unicode, or Shift JIS code
- OMRON NJ/NX tag: Unicode
- AB native tag: ASCII code

## 8.5.4 [Text Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

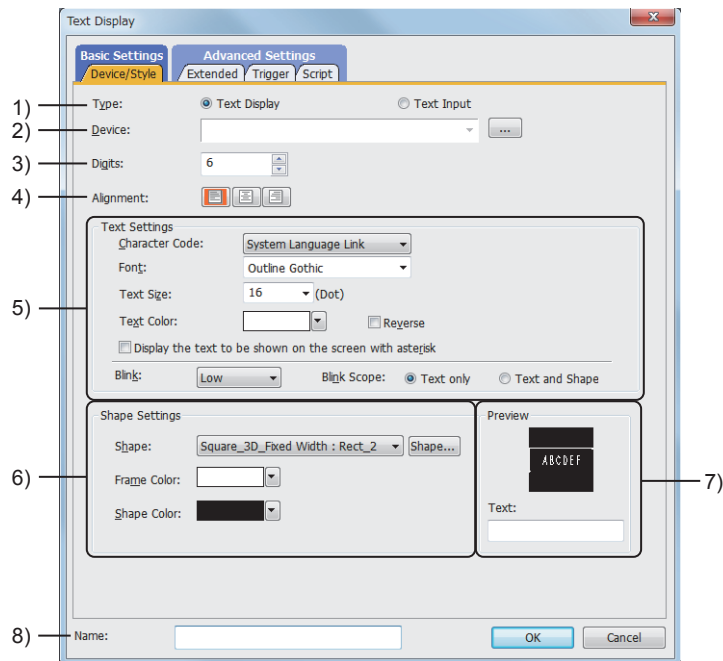

- Step 1** Select [Object] → [Text Display/Input] → [Text Display] from the menu.
- Step 2** Click the position where you place the text display. Placing the text display is complete.
- Step 3** Double-click the text display which has been placed to display the setting dialog.
- ■ 1 [Device/Style] tab
    - 2 [Extended] tab
    - 3 [Trigger] tab
    - 4 [Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Item]

Select the function to be used.

The following shows the items to be selected.

- [Text Display]
- [Text Input]

#### 2) [Device]

Set the start device to be monitored.

→ 6.1.1 How to set devices

The number of monitored devices depends on the settings of [Character Code] and [Digits].

- When [Unicode] is selected for [Character Code]
  - Consecutive word devices are monitored. The number of monitored devices equals the value set for [Digits].
- When an item other than [Unicode] is selected
  - Consecutive word devices are monitored. The number of monitored devices equals the value set for [Digits] divided by 2. If an odd number is set for [Digits], the odd number is incremented by 1 and then divided by 2. When an odd number is set for [Digits] and [Display in order of High -> Low] is selected, the lower-order bytes of the last device are not monitored.
  - When an odd number is set for [Digits] and [Display in order of High -> Low] is not selected, the higher-order bytes of the last device are not monitored.

→ ■ 2 [Extended] tab

### 3) [Digits]

Set the text digits to be displayed.

The setting range is [1] to [100].

A one-byte character is counted as one digit, and a two-byte character is counted as two digits.

### 4) [Alignment]

Set the horizontal position of the text.

### 5) [Text Settings]

Item	Description
[Character Code]	<p>Select the character code of the text to be displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"><li>• [System Language Link]</li><li>• [ASCII]</li><li>• [Unicode]</li><li>• [S-JIS]</li><li>• [GB]</li><li>• [KS] (for GT27, GT25, GT23, and GT SoftGOT2000)</li><li>• [Big5]</li></ul> <p>When [System Language Link] is selected, the text is displayed by the following character codes according to the system language.</p> <ul style="list-style-type: none"><li>• When the system language is English ASCII code is used.</li><li>• When the system language is other than English S-JIS code is used.</li></ul>

[Display the text to be shown on the screen with asterisk]	<p>Displays the text to be displayed on the screen with asterisk. When saved as an operation log, the text is saved not as an asterisk but as a text.</p>
[Blink]	<p>Select the blinking speed of the text and shape. The following shows the items to be selected.</p> <ul style="list-style-type: none"><li>• [None]</li><li>• [Low]</li><li>• [Medium]</li><li>• [High]</li></ul>
[Blink Scope]	<p>Select the area to be blinked. The following shows the items to be selected.</p> <ul style="list-style-type: none"><li>• [Text only]</li><li>• [Text and Shape]</li></ul>

## 6) [Shape Settings]

Item	Description
[Shape Settings]	<p>Select the shape to be set for the object from the list or with the [Shape] button.            →6.5.5 ■ 1 Setting object shapes            When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally.            Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.</p> <div style="text-align: center;"> <p>View in GT Designer3 → View in the GOT</p> <p>↑ Frame shape area</p> <p>Characters which overlap with the frame shape area are not displayed.</p> </div>
[Frame Color]	<p>Select the frame color of the shape.            →6.4 Color Settings</p>
[Shape Color]	<p>Select the color of the shape.            →6.4 Color Settings</p>

## 7) [Preview]

Displays the preview of the screen.

Item	Description
[Text]	Set the text to be displayed in the preview.

## 8) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

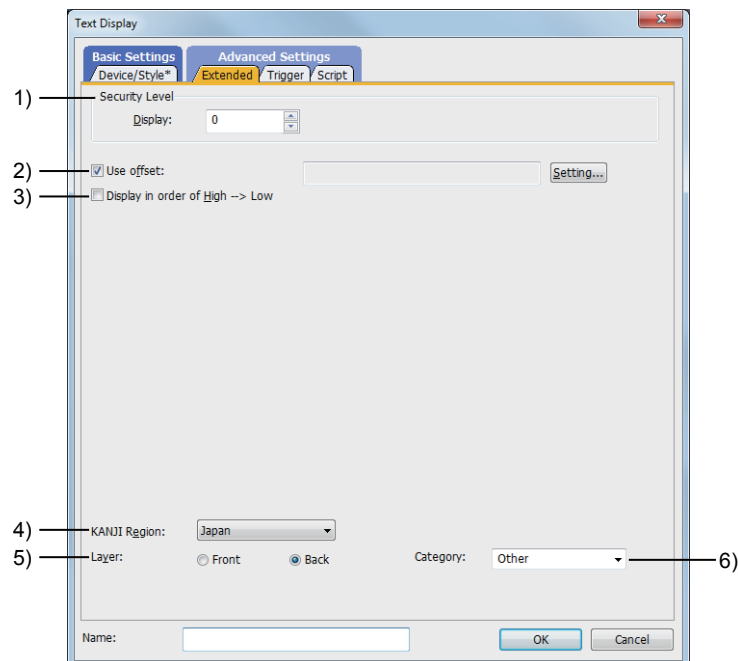

Up to 100 characters can be set.

## ■ 2 [Extended] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

## 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Sets the offset device with the [Setting] button.

⇒6.1.9 Offset

## 3) [Display in order of High -> Low]

Select this item to display the character code in order of lower byte to upper byte.

## 4) [KANJI Region]

When [Unicode] is selected for [Character Code], select a KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

## 5) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

## 6) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

## 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

## 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]

- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

⇒6.2 Setting Trigger Types

#### ■ 4 [Script] tab

GT25

GT23

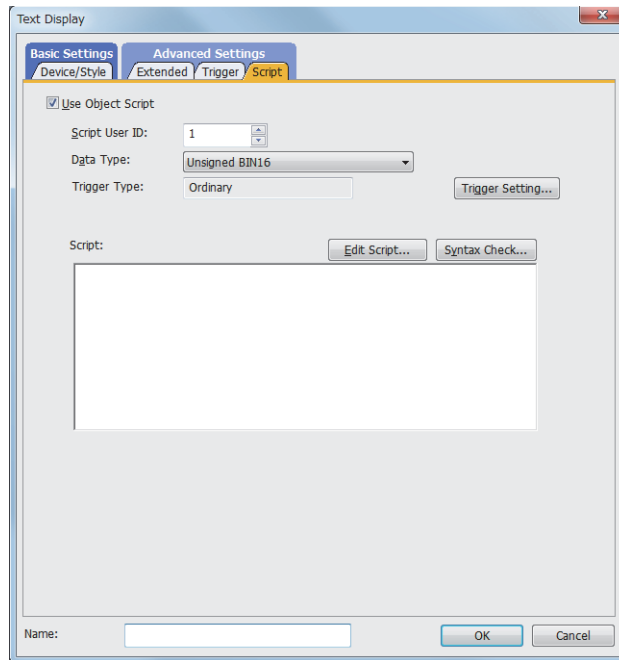

GT21

SoftGOT2000

GS

For the settings of scripts, refer to the following.

→9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script.

The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Device/Style]	[Alignment]	arrange	○	○	Upon the setting change	When the object is updated
	[Text Size] (width)	text_width	○	○	Upon the setting change	When the object is updated
	[Text Size] (height)	text_height	○	○	Upon the setting change	When the object is updated
	[Text Color]	text_color	○	○	Upon the setting change	When the object is updated
	[Reverse]	highlight	○	○	Upon the setting change	When the object is updated
	[Blink]	blink	○	○	Upon the setting change	When the object is updated
	[Blink Scope]	blink	○	○	Upon the setting change	When the object is updated
	[Frame Color]	frame_color	○	×	×	×
[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated	
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

- 9.10.2 (5) Timing at which the setting change of an object property is reflected
- \*2 The setting to enable the object stacking order adjustment varies by graphics mode.

### GOT Graphic Ver.2

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

- 5.1.4 [Type Setting] dialog

## 8.5.5 [Text Input] dialog

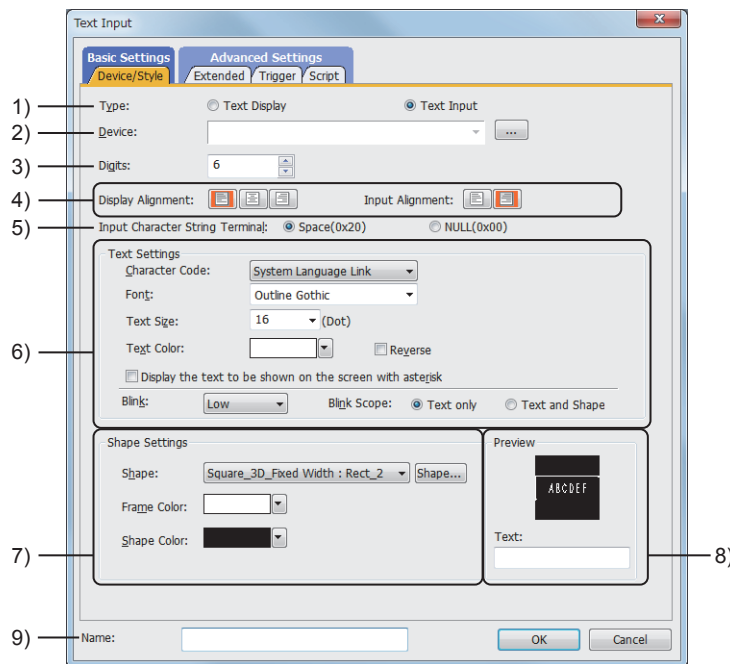

- Step 1** Select [Object] → [Text Display/Input] → [Text Input] from the menu.
- Step 2** Click the position where you place the text input. Placing the text input is complete.
- Step 3** Double-click the text input which has been placed to display the setting dialog.
  - ■ 1 [Device/Style] tab
    - 2 [Extended] tab
    - 3 [Trigger] tab
    - 4 [Script] tab

### ■ 1 [Device/Style] tab

For mobile screens, some setting items are not available.

- 10.18.2 ■ 2 Usable functions

#### 1) [Item]

Select the function to be used.  
The following shows the items to be selected.

- [Text Display]
- [Text Input]

#### 2) [Device]

Set the start device to be monitored.

- 6.1.1 How to set devices

The number of monitored devices depends on the settings of [Character Code] and [Digits].

- When [Unicode] is selected for [Character Code]

Consecutive word devices are monitored. The number of monitored devices equals the value set for [Digits].

- When an item other than [Unicode] is selected  
Consecutive word devices are monitored. The number of monitored devices equals the value set for [Digits] divided by 2. If an odd number is set for [Digits], the odd number is incremented by 1 and then divided by 2.  
When an odd number is set for [Digits], a null or space selected for [Input Character String Terminal] is inserted to the lower-order or higher-order bytes of the last device.

### 3) [Digits]

Set the text digits to be displayed.

The setting range is [1] to [100].

A one-byte character is counted as one digit, and a two-byte character is counted as two digits.

### 4) Alignment

Item	Description
[Display Alignment]	Select the horizontal position of the text to be displayed.
[Input Alignment]	Select the horizontal position of the text to be entered.

### 5) [Input Character String Terminal]

If the number of input characters is less than the number of characters specified in [Digits] of the [Device/Style] tab, you can select the ASCII code to be inserted to the lacked part.

The following shows the items to be selected.

- [Space (0x20)]:

Insert the space (0x20) to reserve it as a space.

Reentering text deletes the inserted space, and confirming the entry inserts a space.

This item can be selected only when the left alignment is selected in [Display Alignment].

Example) When the entered text has three digits with [7] set in [Digits]

Text	A	B	C	(SP)	(SP)	(SP)	(SP)
ASCII code	(0x41)	(0x42)	(0x43)	(0x20)	(0x20)	(0x20)	(0x20)

- [NULL (0x00)]:

Insert NULL(0x00) as the first character of the lacked part.

The characters before NULL are enabled, and the characters after NULL are ignored because they are indefinite.

The controller is enabled to detect the text end.

Example) When the entered text has three digits with [7] set in [Digits]

Text	A	B	C	(NULL)	-	-	-
ASCII code	(0x41)	(0x42)	(0x43)	(0x0)	-	-	-

### 6) [Text Settings]

Item	Description
[Character Code]	<p>Select the character code of the text to be displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [System Language Link]</li> <li>• [ASCII]</li> <li>• [Unicode]</li> <li>• [S-JIS]</li> <li>• [GB]</li> <li>• [KS] (for GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Big5]</li> </ul> <p>When [System Language Link] is selected, the text is displayed by the following character codes according to the system language.</p> <ul style="list-style-type: none"> <li>• When the system language is English ASCII code is used.</li> <li>• When the system language is other than English S-JIS code is used.</li> </ul>

Item	Description
[Font]	Select the font of the displayed text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Text Size]	Set the text size to be displayed. ⇒1.2.5 Font specifications
[Text Color]	Set the text color. ⇒6.4 Color Settings
[Reverse]	Inverts the text.
[Display the text to be shown on the screen with asterisk]	Displays the text and control character (other than NULL) to be displayed on the screen with asterisk. The control character is also displayed with asterisk. Depending on the setting of [Input Character String Terminal], the number of displayed asterisks is different. *1 When saved as an operation log, the text is saved not as an asterisk but as a text. When this item is set, the KANA-KANJI conversion cannot be used. Even is GS450.b4 is turned on, KANA-KANJI conversion does not operate. ⇒12.1.3 GOT special register (GS)
[Blink]	Select the blinking speed of the text and shape. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Blink Scope]	Select the area to be blinked. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Text only]</li> <li>• [Text and Shape]</li> </ul>

\*1 The following shows the number of asterisks to be displayed.

Setting of Input Character String Terminal	Display without display setting of asterisk	Display with display setting of asterisk
Space (0x20)	ABCD uu	*****
NULL (0x00)	ABCD	****

## 7) [Shape Settings]

Item	Description
[Shape Settings]	Select the shape to be set for the object from the list or with the [Shape] button. ⇒6.5.5 Common setting for objects When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally. Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.  <div style="text-align: center;"> </div>
[Frame Color]	Select the frame color of the shape. ⇒6.4 Color Settings
[Shape Color]	Select the color of the shape. ⇒6.4 Color Settings

## 8) [Preview]

Displays the preview of the screen.

Item	Description
[Text]	Set the text to be displayed in the preview.

### 9) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

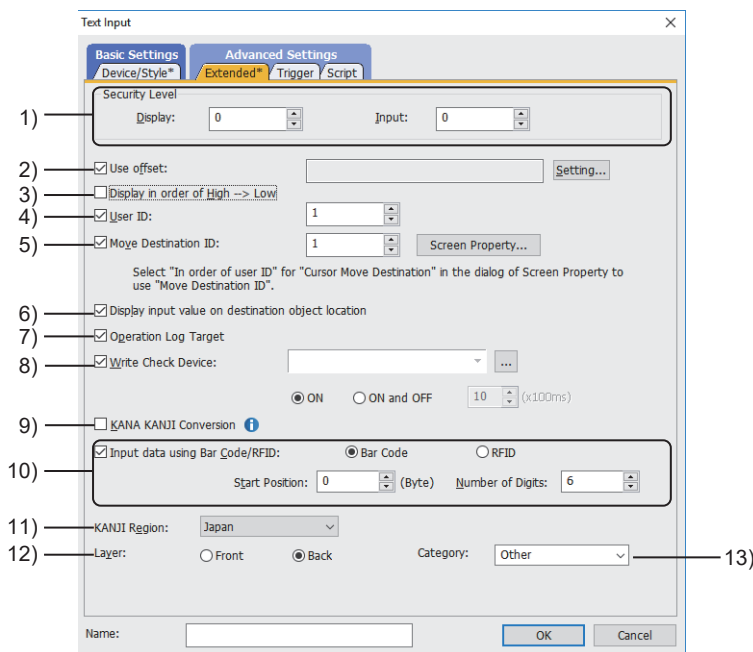

Up to 100 characters can be set.

## ■ 2 [Extended] tab

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

Set a value greater than [Display] for [Input].

⇒ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Sets the offset device with the [Setting] button.

⇒ 6.1.9 Offset

### 3) [Display in order of High -> Low]

Select this item to display the character code in order of lower byte to upper byte.

### 4) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

The following operations can be performed when user ID numbers are set.

- Setting the position where the cursor is displayed at screen switching  
⇒ 5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])
- Specifying objects that were used with operation logs  
⇒ 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])
- Moving the cursor in ascending or descending order of user ID number  
⇒ 8.4.2 ■ 7 Specifying the destination to which the cursor moves after the confirmation of a numerical

value entry

#### 5) [Move Destination ID]

Set the user ID of a text input to which the cursor moves upon inputting text.

To move the cursor by specifying a user ID, a cursor movement setting must also be configured.

Configure one of the following settings to enable the cursor movement per project or per screen.

- To enable the cursor movement per project

Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display the [Environmental Setting] window ([Key Window]), and select the [Advanced Setting] tab.

⇒5.2.4 ■ 4 (2) [Advanced Setting] tab

Select [Control the cursor] for [Defined key action], and select one of the following items for [Cursor Move Destination].

- [In order of user ID]
  - [Subsequently valid user ID] (Not available to GT21)
- To enable the cursor movement only on the screen having a target text input

Click the [Screen Property] button to display the [Screen Property] dialog, and select the [Key Window Advanced Setting] tab.

(The [Screen Property] dialog corresponds to the screen having a target numerical input.)

⇒2.7.1 Property of base screens

2.7.2 Properties of window screens

Select [Prioritize screen setting over project setting] in [Key Window/Cursor Movement].

Select [Control the cursor] for [Defined key action], and select one of the following items for [Cursor Move Destination].

- [In order of user ID]
- [Subsequently valid user ID] (Not available to GT21)

#### 6) [Display input value on destination object location]

Reflects the texts entered with the key window in the object on the screen immediately.

Write the value to a device after touching the enter key.

#### 7) [Operation Log Target]

Select this item to target the object for the operation log.

⇒5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

#### 8) [Write Check Device]

Set a bit device to turn on upon completion of a text input.

- [ON]

Turns on a set bit device upon completion of a text input.

- [ON and OFF]

Turns on a set bit device upon completion of a text input, and then turns off the bit device after a specified time period.

The setting range of the time period for which a set bit device is on is [5] x 100 ms to [30] x 100 ms.

#### 9) [KANJI Conversion]

The KANA-KANJI conversion can be used.

When [Display the text to be shown on the screen with asterisk] is set in the [Device/Style] tab, this function cannot be set.

#### 10) [Input data using Bar Code/RFID]

Inputs the text read from a barcode reader or RFID.

⇒10.1 Using a Barcode Reader with the GOT (Barcode Function)

10.2 Using an RFID with the GOT (RFID Function)

The following shows the items to be selected.

- [Bar Code]
- [RFID]

Item	Description
[Start Position]	Set the position of the byte from which a read value is input. <ul style="list-style-type: none"><li>• [Bar Code]: [0] to [3997] byte(s)</li><li>• [RFID]: [0] to [19997] byte(s)</li></ul>
[Number of Digits]	Set the number of digits for inputting the read data. The same number of digits as that set for [Digits (Integral)] in the [Device] tab or smaller can be set.

#### 11) [KANJI Region]

When [Unicode] is selected for [Character Code], select a KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

### 12) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

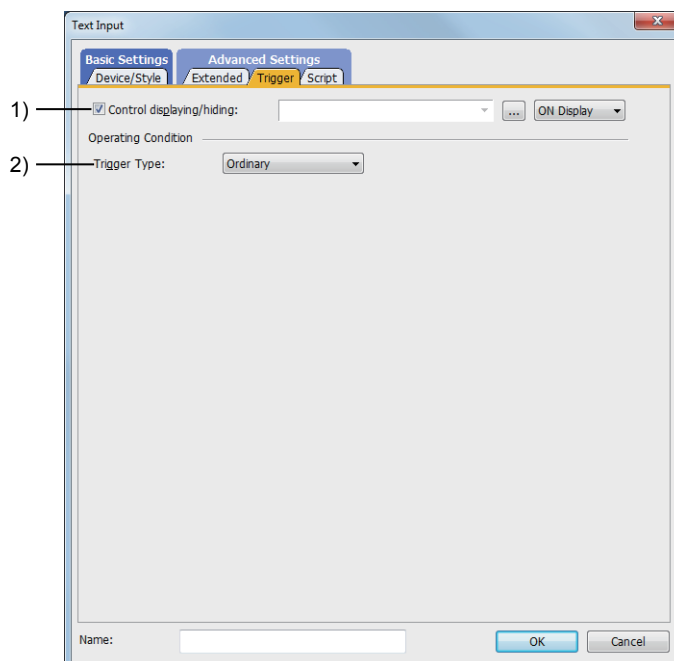

- [Front]
- [Back]

### 13) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]

- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

→6.2 Setting Trigger Types

#### ■ 4 [Script] tab

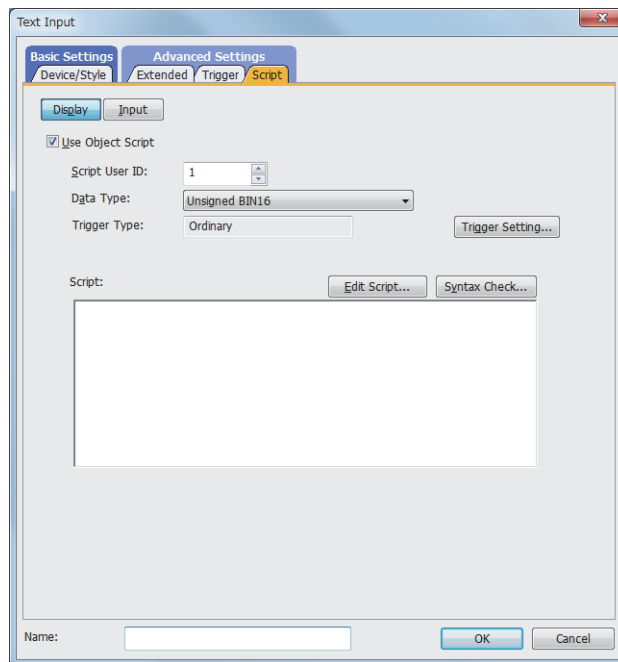

##### (1) Script (display)

This item can be set when the [Display] button is clicked.

For the settings of scripts, refer to the following.

→9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script.

The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

× : Not available

- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
[Device/Style]	[Alignment]	arrange	○	○	Upon the setting change	When the object is updated
	[Text Size] (width)	text_width	○	○	Upon the setting change	When the object is updated
	[Text Size] (height)	text_height	○	○	Upon the setting change	When the object is updated
	[Text Color]	text_color	○	○	Upon the setting change	When the object is updated
	[Reverse]	highlight	○	○	Upon the setting change	When the object is updated

[Extended]	[Security Level]	security	○	○	When the screen is updated	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### **GOT Graphic Ver.1**

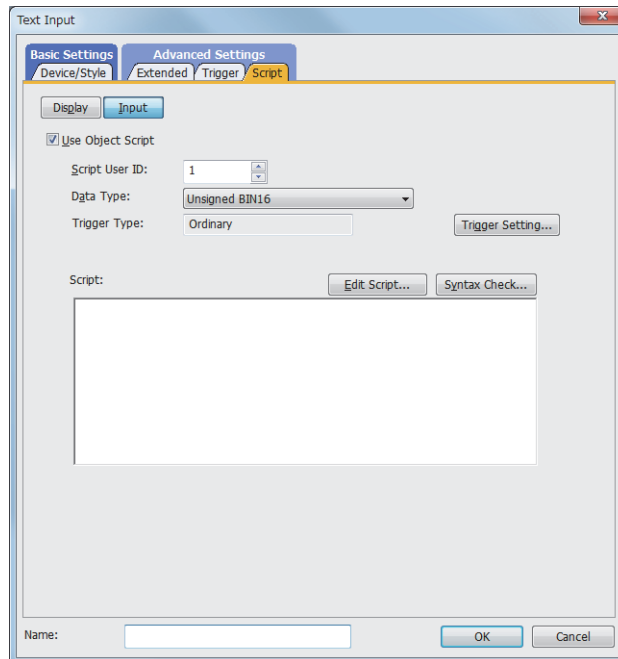

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

## (2) Script (input)

This item can be set when the [Input] button is clicked.  
For the settings of scripts, refer to the following.

→9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

×: Not available

-: No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×

	[Security Level] (input)	input_security	○	○	When the object performs the specified action	When the object performs the specified action

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

- 9.10.2 (5) Timing at which the setting change of an object property is reflected
- \*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

- 5.1.4 [Type Setting] dialog

## 8.5.6 Relevant settings

Set the relevant settings other than the specific settings for the text display and text input as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### ■ 2 GOT environmental settings (key window), screen property

Set the following functions for each project (GOT environmental settings) or for each screen (screen property).

- 5.2.4 Setting key windows ([Key Window])

- Settings for each project (GOT environmental settings)
  - Select [Common] → [GOT Environmental Setting] → [Key Window] from the menu to display the [Environmental Setting] window.
- Settings for each screen (screen property)
  - Select the screen editor on which the key window is to be set and select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog.

Function	Setting item
Displaying the key window when the operating condition is satisfied.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window]
Displaying the key window when the screen is switched	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the key window]
Displaying the cursor when the screen is switched.	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Display the cursor]
Displaying the cursor when the operating condition is satisfied.	Not available to GT21. Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Cursor]
Deleting the key window and cursor when the operating condition is not satisfied.	Not available to GT21. Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Clear the key window and the cursor] of [When operating conditions are not satisfied]

Function	Setting item
Selecting the method of displaying the cursor when entering a value with a numerical input or text input	Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Cursor Type]
Displaying the key window at a touch input or deleting the key window by touching the enter key	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window] • [Defined key action]
When multiple numerical inputs or text inputs exist, setting the order of input After an entry is complete, moving the cursor to the next destination automatically	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Defined key action] • [Reference for determining cursor destination]
Setting the window screen to be used as a key window for numerical inputs (decimal or hexadecimal) and text inputs	Set the following item in the [Basic Setting] tab or [Key Window Basic Setting] tab. • [Key Window]
Setting whether to move the display of the key window or not by screen	Set this function in the following item in the [SP Function] tab and [Key Window Advanced Setting] tab. • [Key Window Position Correction]
Setting whether to display or hide the cursor when hiding the cursor and pressing the enter key or an arrow key	Not available to GT21. Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Display the cursor with a touch on the Enter/arrow key when the cursor is hidden]
When entering a value in a numerical input or text input, displaying a dialog for checking the input at a key touch operation on the enter key	Display the [Display Detail Setting] dialog with the [Setting] button in the [Advanced Setting] tab or [Key Window Advanced Setting] tab to set this function with the following item. • [Display the input confirmation dialog when setting the function of Numerical/ASCII Input]

### ■ 3 GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] window.

⇒ 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Outputting the input signal, input number, or others to the system information when the text input is executed	[Output object ID of Text Input to the system information device]
When deleting the cursor, clearing the cursor information, such as the cursor display object ID and cursor display user ID	[Clear the cursor information when deleting the cursor]
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Turning off the Numeric Value Input signal (Read device: System signal 1-1.b4)	[System Signal 1-1]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]
Notifying the confirmation of an entry from a numerical input (Write device: System signal 2-1.b4)	[System Signal 2-1]
Notifying that the key window is being displayed (Write device: System signal 2-1.b11)	[System Signal 2-1]
Notifying the cursor is being displayed in a numerical value or text input (Write device: System signal 2-2.b11)	[System Signal 2-2]
Notifying the user ID of the numerical input to which an input is confirmed (Write device)	[Numeric Value Input Number]
Notifying the object ID No. of the object for which the cursor is currently being displayed (Write device)	[Current Cursor Display Object ID]
Notifying the object ID No. of the object for which the cursor was previously displayed (Write device)	[Previous Cursor Display Object ID]
Notifying the user ID No. of the object for which the cursor is being displayed currently (Write device)	[Current Cursor Display User ID]
Notifying the user ID No. of the object for which the cursor had been displayed previously (Write device)	[Previous Cursor Display User ID]
Notifying the key codes set to the input keys when the keys are input to text input, touch switch, or other objects (Write device)	[Key Code Input]

## ■4 GOT Internal Device

### →12.1.3 GOT special register (GS)

Function	Setting item
When entering a value in a numerical input or text input, displaying a dialog for checking the input at a key touch operation on the enter key (Read device)	GS450.b0 (Not available to GT21.)
When deleting the cursor, storing 0 in the current cursor position of the system information (Read device)	GS450.b3 (Not available to GT21.)
Converting the Kana character to Kanji character using the text input (Read device)	GS450.b4 (Not available to GT21.)
Notifying that the object is in the ready state for the data read by the barcode reader and the RFID to be directly input. (Write device)	GS243.b15 (Not available to GT21.)
Changing the character code to be used for the text display and text input (Read device)	GS456
Changing the KANJI region to be used for the text display and text input where [Character Code] is set to [Unicode] (Read device)	GS468

## 8.6 Placing a Date Display and Time Display

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

### ■1 Date Display

This function displays the date on the GOT.

### ■2 Time Display

This function displays the time on the GOT.

## 8.6.1 Specifications of the date display and time display

---

### ■ 1 Maximum number of objects arrangeable on one screen

The maximum number of objects on one screen depends on the screen type.

- For a base screen  
Up to 1024 date displays and time displays can be placed on one screen.
- For a window screen  
Up to 512 date displays and time displays can be placed on one screen.

### ■ 2 Date data and time data to be displayed

The date display and time display display the data of the GOT clock.

For the details of the GOT clock, refer to the following.

- ⇒5.3.5 Setting the GOT time setting method ([Time Setting])

## 8.6.2 How to use the date display and time display

---

### ■ 1 Placing the date display and time display

Place date displays and time displays on the screen editor.

- ⇒6.5.1 Placing figures and objects

### ■ 2 Editing date displays and time displays

Edit date displays and time displays that have been placed on the screen editor.

- ⇒6.5.2 Selecting figures and objects on the screen editor
- 6.5.3 Editing figures and objects

### ■ 3 Setting date displays and time displays

Set date displays and the time displays that have been placed on the screen editor.

- Common setting of objects
  - ⇒6.5.5 Common setting for objects
- Date display settings
  - ⇒8.6.3 [DateDisplay] dialog
- Time display settings
  - ⇒8.6.4 [Time Display] dialog

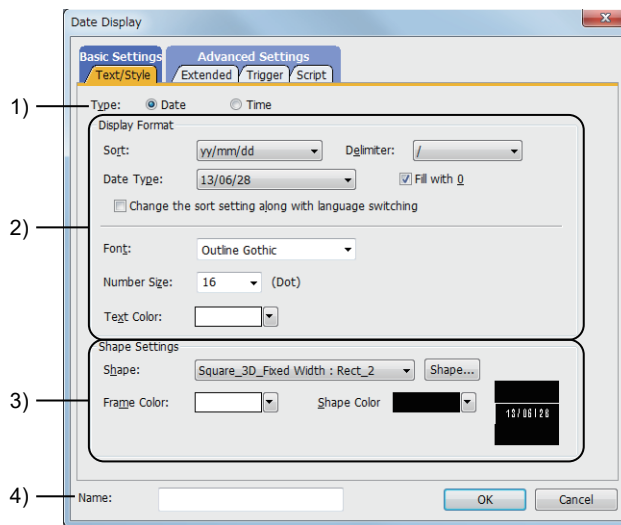

### 8.6.3 [DateDisplay] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Date/Time Display] → [DateDisplay] from the menu.
- Step 2** Click the position where you place the date display. Placing the date display is complete.
- Step 3** Double-click the date display which has been placed to display the setting dialog.
- ■ 1 [Text/Style] tab
  - 2 [Extended] tab
  - 3 [Trigger] tab
  - 4 [Script] tab

#### ■ 1 [Text/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Item]

Select the function to be used.  
The following shows the items to be selected.

- [Date]
- [Time]

#### 2) [Display Format]

Item	Description
[Sort]	Select a sorting order of year, month, and date. When [Change the sort setting along with language switching] is selected, a sorting order cannot be selected. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [yy/mm/dd]</li> <li>• [mm/dd/yy]</li> <li>• [dd/mm/yy]</li> </ul>
[Delimiter]	Select a delimiter used for separating the year, month, and date. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [/]</li> <li>• [-]</li> <li>• [.]</li> </ul>

Item	Description
[Date Type]	<p>Select the display type of the date. The items to be displayed differ depending on the selected item of [Delimiter] and [Fill with 0]. The following shows the default items to be selected. Example) To display Wednesday, December 25, 2013</p> <ul style="list-style-type: none"> <li>• [13/12/25]</li> <li>• [Dec/25]</li> <li>• [DEC/25]</li> <li>• [Dec/25(WED)]</li> <li>• [DEC/25(WED)]</li> <li>• [13/Dec/25]</li> <li>• [13/DEC/25]</li> <li>• [13/Dec/25(WED)]</li> <li>• [13/DEC/25(WED)]</li> <li>• [2013/Dec/25]</li> <li>• [2013/DEC/25]</li> <li>• [2013/Dec/25(WED)]</li> <li>• [2013/DEC/25(WED)]</li> <li>• [2013/12/25]</li> <li>• [2013/12/25(WED)]</li> <li>• [12/25]</li> <li>• [12/25(WED)]</li> <li>• [13/12/25(WED)]</li> <li>• [12月25日]</li> <li>• [12月25日(水)]</li> <li>• [13年12月25日]</li> <li>• [13年12月25日(水)]</li> <li>• [2013年12月25日]</li> <li>• [2013年12月25日(水)]</li> <li>• [12/25(水)]</li> <li>• [13/12/25(水)]</li> <li>• [2013/12/25(水)]</li> </ul>
[Fill with 0]	<p>When the month and/or date are/is in single digit, zero is displayed before the single-digit number.</p>
[Change the sort setting along with language switching]	<p>Changes a sorting order of the date associating with language switching. When the following items are selected in [Date Type], this function cannot be set.</p> <ul style="list-style-type: none"> <li>• [12月25日]</li> <li>• [12月25日(水)]</li> <li>• [13年12月25日]</li> <li>• [13年12月25日(水)]</li> <li>• [2013年12月25日]</li> <li>• [2013年12月25日(水)]</li> <li>• [12/25(水)]</li> <li>• [13/12/25(水)]</li> <li>• [2013/12/25(水)]</li> </ul> <p>To use this function, set [Region Setting] in [Language Switching] of [Environmental Setting]. →5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])</p>

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Numerical Gothic]</li> <li>• [TrueType Numerical 7seg]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Text Size]	<p>Set the text size to be displayed. ⇒1.2.5 Font specifications</p>
[Text Color]	<p>Set the text color. ⇒6.4 Color Settings</p>

### 3) [Shape Settings]

Item	Description
[Shape]	<p>Select the shape to be set for the object from the list or with the [Shape] button. ⇒6.4 Color Settings</p> <p>When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally. Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.</p> <div style="text-align: center;"> <p>View in GT Designer3 → View in the GOT</p> <p>↑ Frame shape area</p> <p>Characters which overlap with the frame shape area are not displayed.</p> </div>
[Frame Color]	<p>Select the frame color of the shape. ⇒6.4 Color Settings</p>
[Shape Color]	<p>Select the color of the shape. ⇒6.4 Color Settings</p>
Preview	<p>Displays the preview of the screen.</p>

### 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 3) [Category]

Select the category to assign the object.

→11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.  
The following shows the items to be selected.

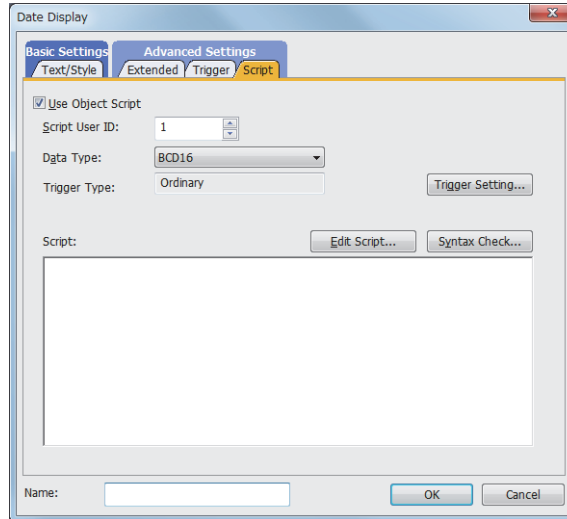

- [ON Display]
  - [OFF Display]
- ⇒6.1.1 How to set devices

#### ■4 [Script] tab

For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script.  
The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>2</sup>	Object stacking order adjustment disabled <sup>2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Text/Style]	[Text Size] (width)	text_width	○	○	Upon the setting change	When the object is updated
	[Text Size] (height)	text_height	○	○	Upon the setting change	When the object is updated
	[Text Color]	text_color	○	○	Upon the setting change	When the object is updated
	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

## GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

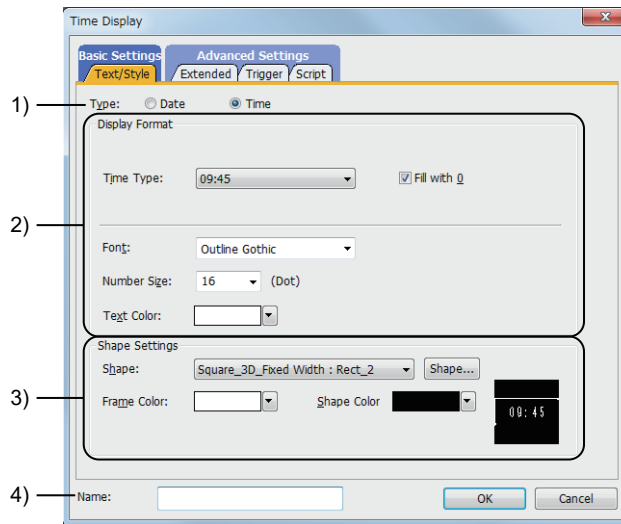

### 8.6.4 [Time Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Object] → [Date/Time Display] → [TimeDisplay] from the menu.
- Step 2 Click the position where you place the time display. Placing the time display is completed.
- Step 3 Double-click the time display which has been placed to display the setting dialog.
  - ■ 1 [Text/Style] tab
  - 2 [Extended] tab
  - 3 [Trigger] tab

#### ■ 1 [Text/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Item]

Select the function to be used.  
The following shows the items to be selected.

- [Date]
- [Time]

#### 2) [Display Format]

Item	Description
[Time Type]	Select the display type of the time. The display of the setting range differs depending on the selected item of [Fill with 0]. The following shows the default items to be selected. Example) To display 13:25:45 • [13:25] • [13:25:45] • [01:25(PM)] • [01:25:45(PM)] • [13時25分] • [13時25分45秒] • [午前01時25分] • [午前01時25分45秒]
[Fill with 0]	When the time, minute, and/or second are/is in single digit, 0 is displayed before the single-digit number.

Item	Description
[Font]	Select the font of the displayed text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Numerical Gothic]</li> <li>• [TrueType Numerical 7seg]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Text Size]	Set the text size to be displayed. ⇒1.2.5 Font specifications
[Text Color]	Set the text color. ⇒6.4 Color Settings

### 3) [Shape Settings]

Item	Description
[Shape]	Select the shape to be set for the object from the list or with the [Shape] button. ⇒6.4 Color Settings When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally. Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.  <div style="text-align: center;"> </div>
[Frame Color]	Select the frame color of the shape. ⇒6.4 Color Settings
[Shape Color]	Select the color of the shape. ⇒6.4 Color Settings
Preview	Displays the preview of the screen.

### 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 3) [Category]

Select the category to assign the object.

→11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

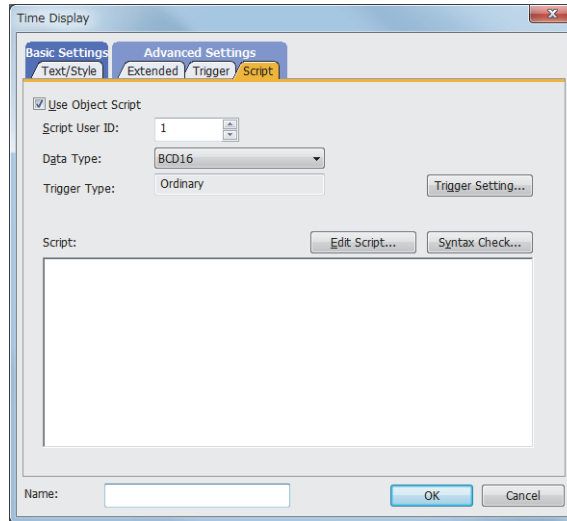

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.  
The following shows the items to be selected.

- [ON Display]
  - [OFF Display]
- ⇒6.1.1 How to set devices

#### ■4 [Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available

	[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### GOT Graphic Ver.2

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in

the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

## 8.6.5 Relevant settings

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the data display and time display as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.7 Placing a Comment Display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

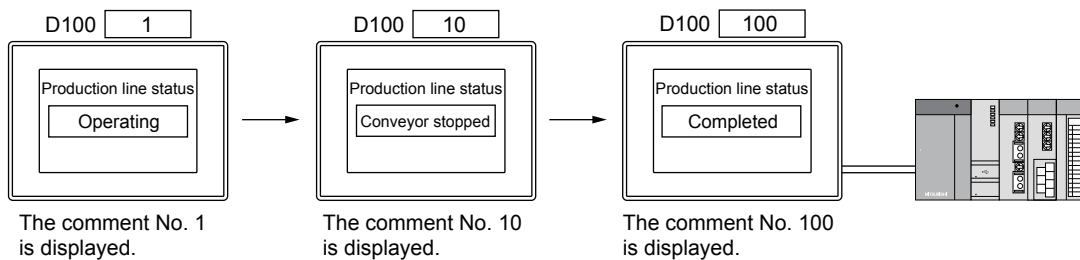

### ■1 Comment display (bit)

This function displays the comment corresponding to the on/off status of a bit device.

### ■2 Comment display (word)

This function displays the comment corresponding to the value of a word device.

### ■3 Comment display (simple)

This function displays comments without setting a device.

### 8.7.1 Specifications of the comment display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■1 Maximum number of objects arrangeable on one screen

Up to 1024 comment displays can be placed on each screen.

#### ■2 Comment to be used

The comment display uses the comment that is created in the comment group.

→5.8 Comment Setting ([Comment])

#### ■3 Superimposing a comment display on a level object

A comment display can be superimposed on a level object.

For restrictions on superimposing a comment display on a level object, refer to the following.

→8.23 Placing a Level Object

## 8.7.2 How to use the comment display

### ■ 1 Placing the comment display

Place comment displays on the screen editor.

⇒6.5.1 Placing figures and objects

### ■ 2 Editing comment displays

Edit comment displays that have been placed on the screen editor.

⇒6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■ 3 Setting comment displays

Set comment displays that have been placed on the screen editor.

Common setting of objects

⇒6.5.5 Common setting for objects

Comment display (bit) settings

⇒8.7.4 [Bit Comment Display] dialog

Comment display (word) settings

⇒8.7.5 [Word Comment Display] dialog

Comment display (simple) settings

⇒8.7.6 [Simple Comment Display] dialog

### ■ 4 How to adjust the display position of shapes set for objects

Select [Edit] → [Edit Touch Area] → [Manual Edit] from the menu to adjust the display position of touch areas and shapes.

⇒6.6.14 [Edit Touch Area]

### ■ 5 Displaying the comment that exceeds the display range

The display method for the comment that exceeds the display range can be set.

Select the comment display on the screen editor to display the numbers of digits and rows that are available for the object size in the status bar.

If the stroke font is used, the available numbers of digits and rows are not displayed in the status bar.

#### (1) Displaying the comment with the word wrap

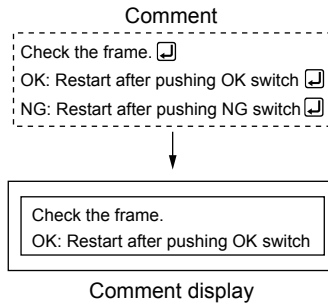

If a comment exceeds the display range horizontally, the comment is wrapped to the next line.

However, the word wrap is not applicable to the comment displayed in a Windows font.

If a comment exceeds the display range vertically, only the part of the comment within the range is displayed.

## (2) Displaying the comment without the word wrap

When [Adjust Text Size] is selected, the comment is resized automatically so that the entire comment fits on the display range.

→ 8.7.4 ■ 2 [Comment] tab

8.7.5 ■ 2 [Comment] tab

8.7.6 [Simple Comment Display] dialog

## 8.7.3 Precautions for a comment display object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Object size

Some comment cannot be displayed within the display range by language switching.

Set the display range of the object after considering the number of characters in the registered comment.

The display range of the comment can be checked on the screen of GT Designer3 by changing the preview column No.

→ 5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

### ■2 Setting the comment group

If the nonexistent value (column No.) is stored in the language switching device, the comment is not displayed.

## 8.7.4 [Bit Comment Display] dialog

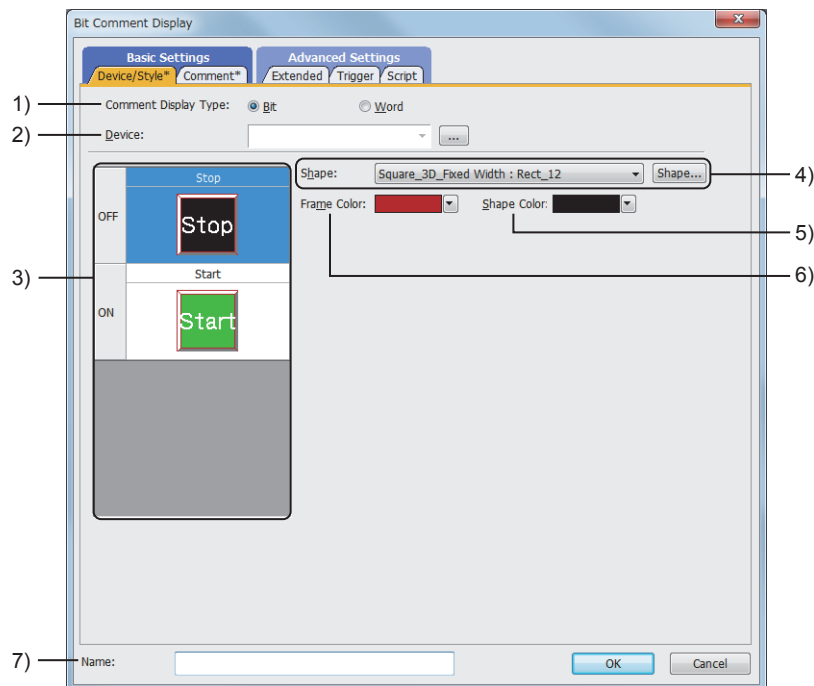

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Object] → [Comment Display] → [Bit Comment] from the menu.
- Step 2 Click the position where you place the comment display (bit). Placing the comment display (bit) is completed.
- Step 3 Double-click the comment display (bit) which has been placed to display the setting dialog.

- ⇒ ■ 1 [Device/Style] tab
  - 2 [Comment] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab
  - 5 [Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Comment Display Type]

Select the comment display type.  
The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Device]

Set the device to be monitored.  
⇒6.1.1 How to set devices

#### 3) Preview list

Displays the shapes for the on and off status.

#### 4) [Shape]

Select the shape to be set for the object from the list or with the [Shape] button.

⇒6.5.5 ■ 1 Setting object shapes

When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally.

Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.

### 5) [Shape Color]

Select the color of the shape.

### 6) [Frame Color]

Select the frame color of the shape.

→ 6.4 Color Settings

### 7) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

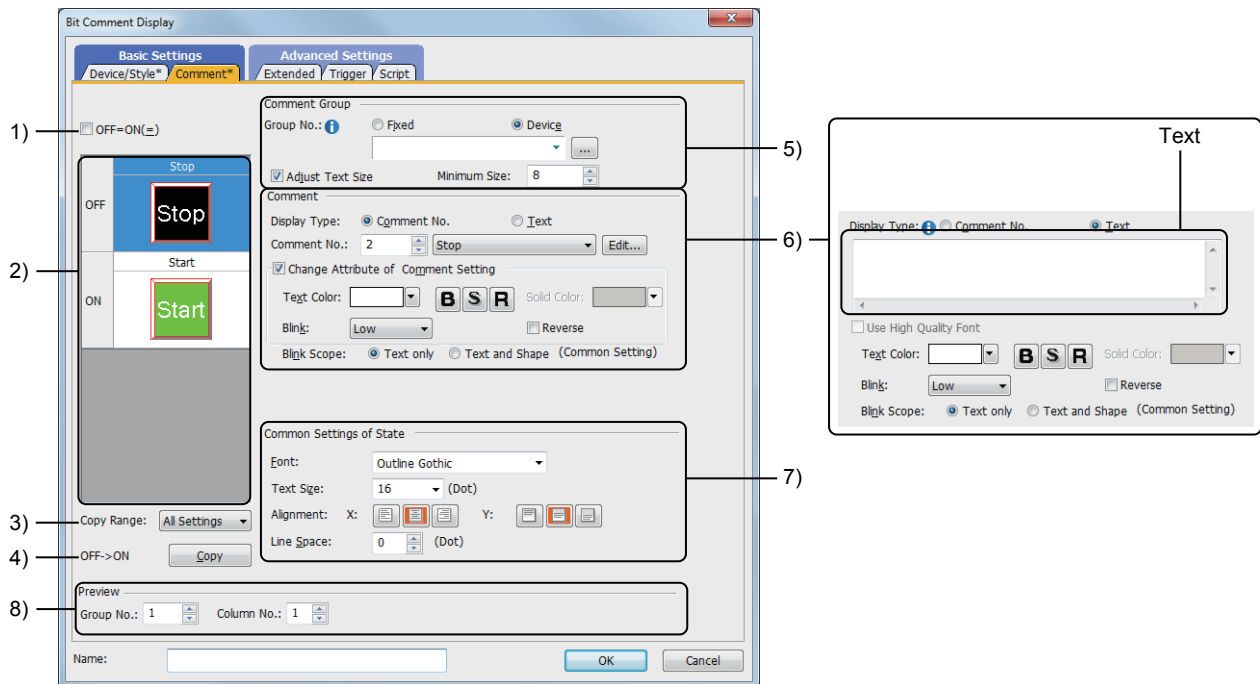

Up to 100 characters can be set.

## 2 [Comment] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [OFF=ON]

Selecting this item applies the same setting to both when the switch is on and off.

### 2) Preview list

Displays the shapes for the on and off status.

### 3) [Copy Range]

Set the range to be copied.

The following shows the items to be selected.

- [All settings]: Copies all the text settings.
- [Text only]: Copies the text only.

### 4) [OFF → ON], [ON → OFF]

Copies the text setting.

Depending on the selection in the preview list, the copy source and copy destination are different.

- [OFF → ON]: Copies the setting for when the switch is off to the setting for when the switch is on by clicking the [Copy] button.

- [ON → OFF]: Copies the setting for when the switch is on to the setting for when the switch is off by clicking the [Copy] button.

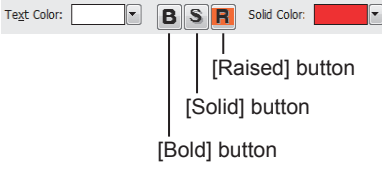

### 5) [Comment Group]

Item	Description
[Group No.]	Select the setting method of the comment group No. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Fixed]: Enter the comment group No. directly. The setting range is [1] to [500].</li> <li>• [Device]: Set the device which has the same value as the comment group No.</li> </ul>
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	This item can be set only when [Adjust Text Size] is set. Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dots.

### 6) [Comment]

Depending on the selection in [Display Type], the setting items are different.

Item	Description
[Display Type]	Select the setting method of the comment. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Comment No.]: Set the comment No.</li> <li>• [Text]: Enter the text directly.</li> </ul>
[Comment No.]	Set the comment No. to be display. The setting range is [0] to [32767]. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment. <div data-bbox="769 972 1169 1187" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> </ul>
Text	Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)
[Change Attribute of Comment Setting]	Set the comment attribute such as [Text Color] and [Blink].

## 7) [Common Settings of State]

Item	Description
[Font]	<p>Select the font of the displayed text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>This item is selectable when [Group No.] is set to [Fixed]. Displays text in the font specified with [Windows Font] in the [Comment Group Property] dialog.</p>  <ul style="list-style-type: none"> <li>• [Windows Font Setting] button Displays the [Comment Group Property] dialog to list the properties of the comment group specified with [Group No.]. Set [Windows Font] and [Character Set] for the target column of the comment group. →5.8.4 ■ 2 (1) [Comment Group Property] dialog</li> </ul>
[Text Size]	Set the text size to be displayed. →1.2.5 Font specifications
[Alignment]	Set the vertical or horizontal position of the text.
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128].

## 8) [Preview]

Set the comment to be previewed in the preview list.

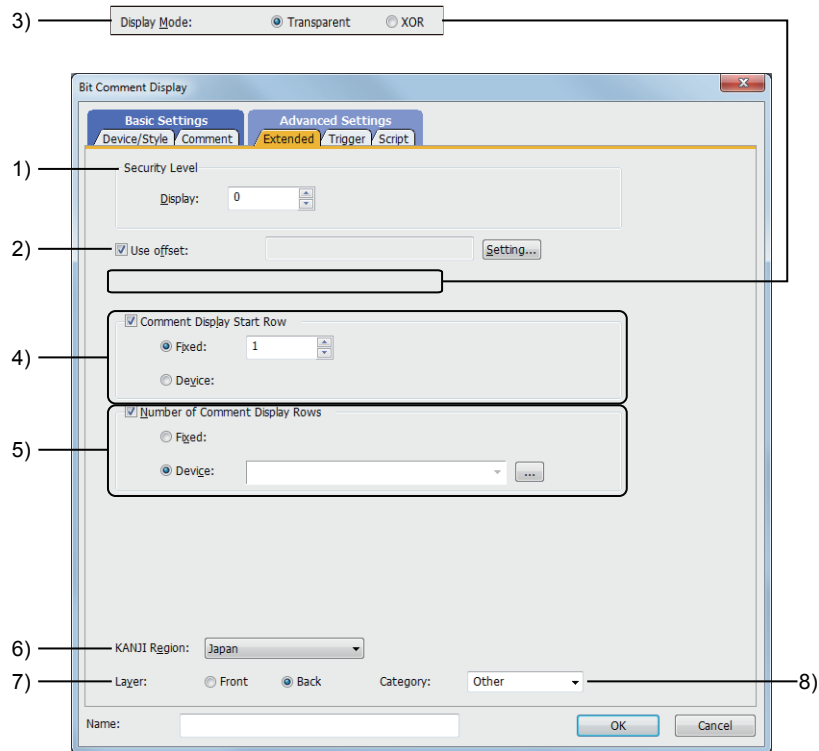

Item	Description
[Group No.]	Set the comment group No. to be previewed. This item can be set only when [Device] is set in [Group No.]. The setting range is [1] to [500].
[Column No.]	Set the column No. to be previewed. The setting range is [1] to [30].

### ■ 3 [Extended] tab

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

⇒6.1.9 Offset

#### 3) [Display Mode]

Display mode when the comment display is superimposed on a level object.

- [Transparent]: Displays the comment on the level object.

- [XOR]: The comment in a comment display is integrated into the XOR synthesis with a level color, to be able to be distinguished from the level object.

## GOT Graphic Ver.2

As the setting is fixed to [Transparent], no additional setting is required accordingly.

## GOT Graphic Ver.1

The following shows the items to be selected.

- [Transparent]
- [XOR]

### 4) [Comment Display Start Row]

When setting a comment having multiple rows, set the first row to be displayed.

If the value out of the number of created comment rows is set, the comment is displayed as blank.

If the comment is displayed as blank, check the number of rows of the specified comments.

Item	Description
[Fixed]	Enter the start row directly. The setting range is [1] to [32767].
[Device]	Set the device value as the start row to be displayed. →6.1.1 How to set devices Example) When [Device] is selected and [D10] is set  

### 5) [Number of Comment Display Rows]

When setting a comment having multiple rows, set the number of rows to be displayed.

Item	Description
[Fixed]	Enter the number of rows to be displayed directly . The setting range is [1] to [32767].
[Device]	Set the device value as the number of rows to be displayed. →6.1.1 How to set devices If the device value is zero, the comment is not displayed. Example) When [Device] is selected and [D20] is set  

### 6) [KANJI region]

Select the KANJI region of the displayed text.

→1.2.5 Font specifications

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

### 7) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 8) [Category]

Select the category to assign the object.

→11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

⇒6.2 Setting Trigger Types

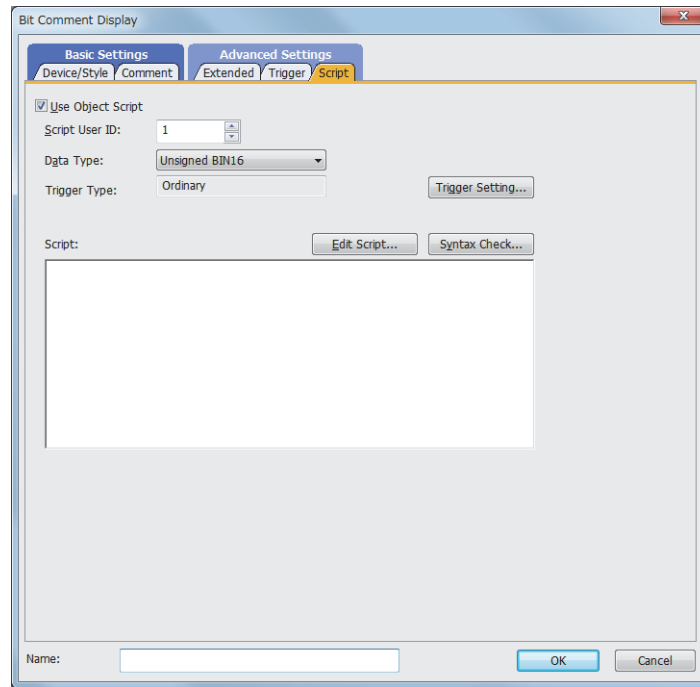

## 5 [Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For the settings of scripts, refer to the following.

→ 9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

× : Not available

- : No applicable setting item

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

### GOT Graphic Ver.2

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

## 8.7.5 [Word Comment Display] dialog

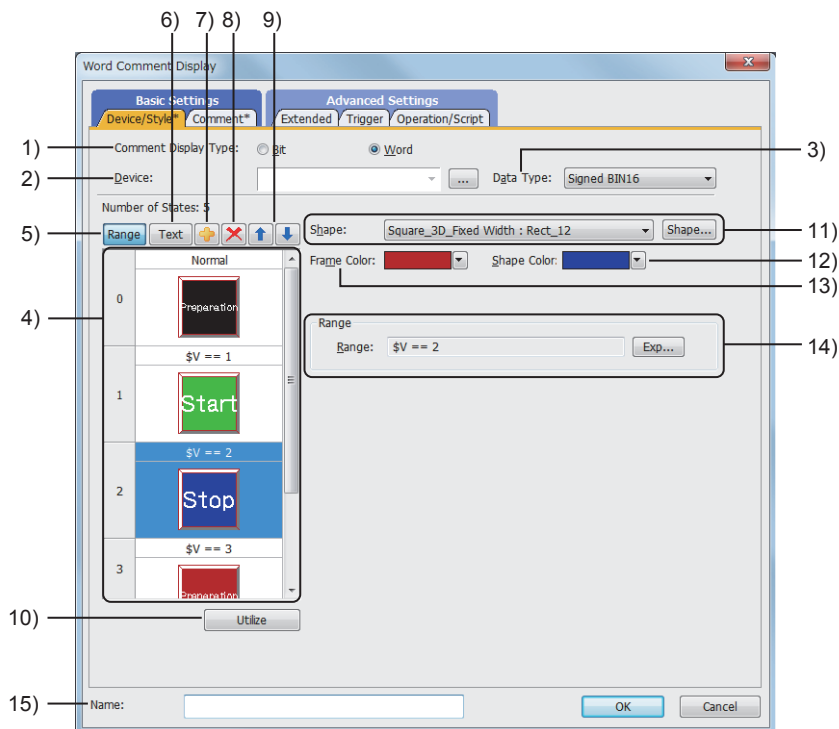

- Step 1** Select [Object] → [Comment Display] → [Word Comment] from the menu.
- Step 2** Click the position where you place the comment display (word). Placing the comment display (word) is completed.
- Step 3** Double-click the comment display (word) which has been placed to display the setting dialog.
- ■ 1 [Device/Style] tab
    - 2 [Comment] tab
    - 3 [Extended] tab
    - 4 [Trigger] tab
    - 5 [Operation/Script] tab

### ■ 1 [Device/Style] tab

For the conditions, refer to the following.

→6.5.5 ■ 2 Setting conditions

#### 1) [Comment Display Type]

Select the comment display type.

The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Device]

Set the device to be monitored.  
⇒6.1.1 How to set devices

### 3) [Data Type]

Select the data type of the device to be set.  
The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [BCD16]

### 4) Preview list

Displays set conditions.

### 5) [Range] button

Displays the preview list in range.

### 6) [Text] button

Displays the preview list in text.

### 7) Add button

Adds a new condition.

### 8) Delete button

Deletes the selected condition.

### 9) Up button, down button

Changes the order of priority of the selected condition.

### 10) [Utilize] button

Creates a new condition utilizing the selected condition.

### 11) [Shape]

Select the shape to be set for the object from the list or with the [Shape] button.

⇒6.5.5 ■ 1 Setting object shapes

When the characters to be displayed overlap with the shape frame area, the characters cannot be displayed normally.

Set the characters to be displayed and the shape frame area in a way that does not make them overlap each other.

### 12) [Shape Color]

Select the color of the shape.

⇒6.4 Color Settings

### 13) [Frame Color]

Select the frame color of the shape.

⇒6.4 Color Settings

### 14) [Range]

Set a condition which changes the display property of the lamp.

Click the [Exp] button, and set the conditional expression in the [Edit Range] dialog.

For the details of the [Edit Range] dialog, refer to the following.

⇒6.5.5 ■ 2 (3) [Edit Range] dialog

### 15) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

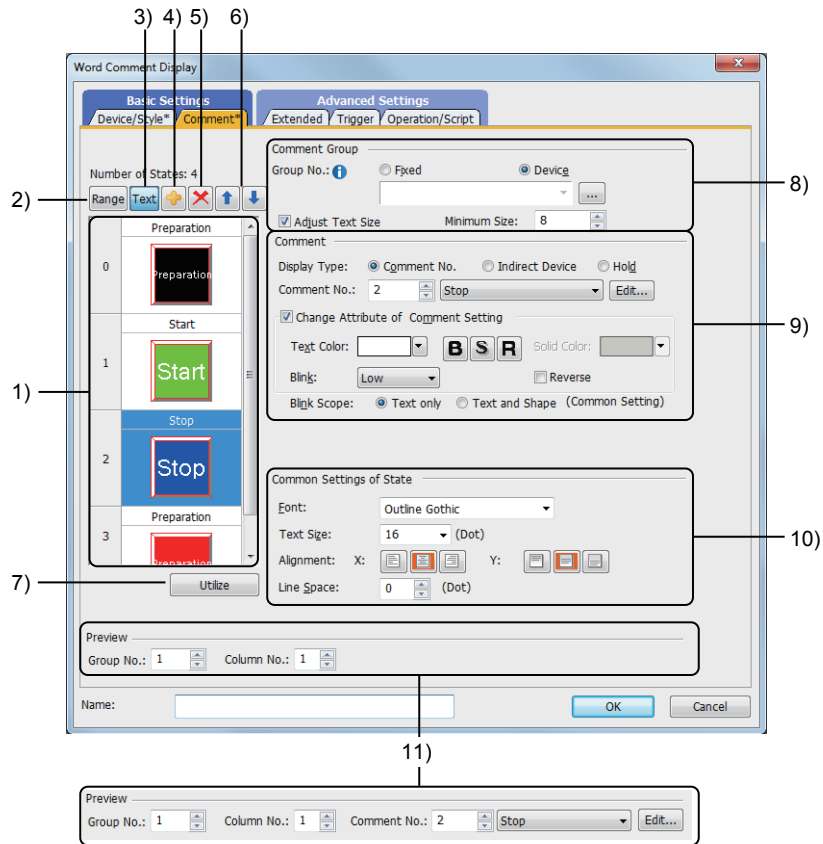

Up to 100 characters can be set.

## ■ 2 [Comment] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) Preview list

Displays set conditions.

### 2) [Range] button

Displays the preview list in range.

### 3) [Text] button

Displays the preview list in text.

### 4) Add button

Adds a new condition.

### 5) Delete button

Deletes the selected condition.

### 6) Up button, down button

Changes the order of priority of the selected condition.

### 7) [Utilize] button

Creates a new condition utilizing the selected condition.

### 8) [Comment Group]

Item	Description
[Group No.]	Select the setting method of the comment group No. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Fixed]: Enter the comment group No. directly. The setting range is [1] to [500].</li> <li>• [Device]: Set the device which has the same value as the comment group No.</li> </ul>
[Adjust Text Size]	The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.

Item	Description
[Minimum Size]	This item can be set only when [Adjust Text Size] is set. Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dots.

## 9) [Comment]

Depending on the selection in [Display Type], the setting items are different.

Item	Description
[Display Type]	Select the setting method of the comment. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Comment No.]: Set the comment No.</li> <li>• [Indirect Device]: Set the comment No. of the monitor device value.</li> <li>• [Hold]: Select this item to hold the comment being displayed on the current screen.</li> </ul>
[Comment No.]	Set the comment No. to be display. The setting range is [0] to [32767]. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog. If an unregistered comment group No. or comment No. is set, create a new comment. <div data-bbox="810 636 1217 853" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> </ul>
[Change Attribute of Comment Setting]	Set the comment attribute such as [Text Color] and [Blink].
[Text Color]	Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only. <div data-bbox="815 1406 1209 1570" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Text Color]</b> Set the text color. →6.4 Color Settings</li> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> <li>• <b>[Solid Color]</b> When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>
[Blink]	Select the blinking speed of the text and shape. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

Item	Description
[Reverse]	Inverts the text.
[Blink Scope]	Select the area to be blinked. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Text only]</li> <li>• [Text and Shape]</li> </ul> These settings are applied to all the conditions to be set.

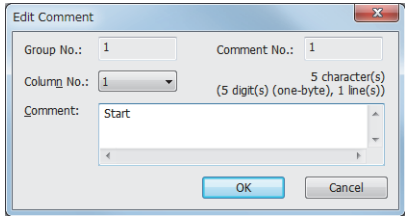

## 10) [Common Settings of State]

Item	Description
[Font]	Select the font of the displayed text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> This item is selectable when [Group No.] is set to [Fixed]. Displays text in the font specified with [Windows Font] in the [Comment Group Property] dialog. <div style="text-align: center; margin: 10px 0;">  </div> <ul style="list-style-type: none"> <li>• [Windows Font Setting] button Displays the [Comment Group Property] dialog to list the properties of the comment group specified with [Group No.]. Set [Windows Font] and [Character Set] for the target column of the comment group. →5.8.4 ■ 2 (1) [Comment Group Property] dialog</li> </ul>
[Text Size]	Set the text size to be displayed. →1.2.5 Font specifications
[Alignment]	Set the vertical or horizontal position of the text.
[Line Space]	Set the space between lines in units of dots. The setting range is [0] to [128].

## 11) [Preview]

Set the comment to be previewed in the preview list.

Item	Description
[Group No.]	Set the comment group No. to be previewed. This item can be set only when [Device] is set in [Group No.]. The setting range is [1] to [500].
[Column No.]	Set the column No. to be previewed. The setting range is [1] to [30].

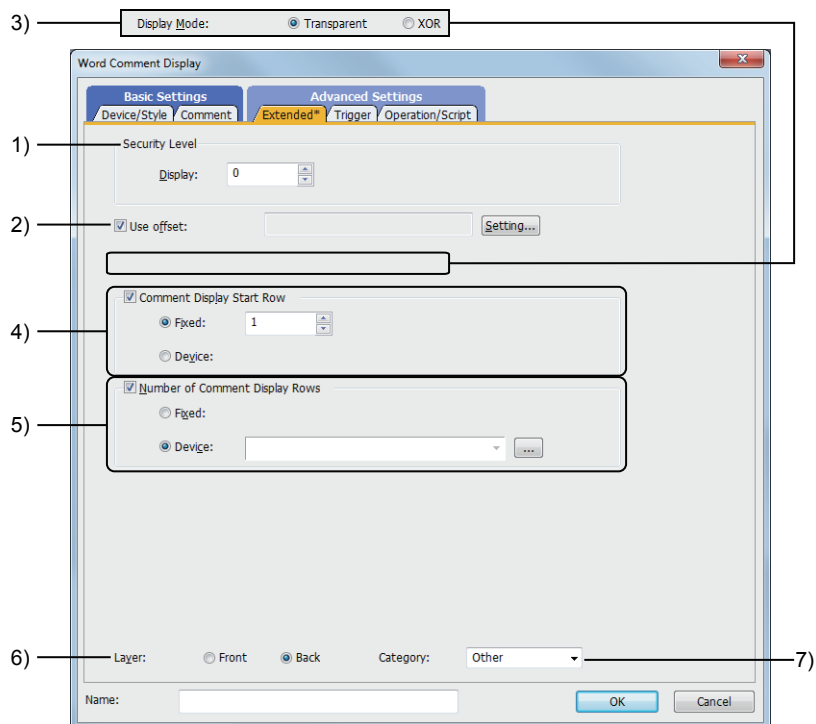

Item	Description
[Comment No.]	<p>Set the comment No. to be previewed. The setting range is [0] to [32767]. To edit the displayed comment, click the [Edit] button and edit the comment in the [Edit Comment] dialog.</p>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column No. of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the comment in the comment group. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field. <ul style="list-style-type: none"> <li>• Number of characters: The line feed is counted as two characters.</li> <li>• Number of digits: The number of digits of the row with the largest number of digits is displayed.</li> <li>• Number of rows: The number of rows of the comment is displayed. Even though a line feed is inserted without characters, the line feed is counted as one row.</li> </ul> </li> </ul>

### ■ 3 [Extended] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

⇒6.1.9 Offset

### 3) [Display Mode]

Display mode when the comment display is superimposed on a level object.

- [Transparent]: Displays the comment on the level object.

- [XOR]: The comment in a comment display is integrated into the XOR synthesis with a level color, to be able to be distinguished from the level object.

### GOT Graphic Ver.2

As the setting is fixed to [Transparent], no additional setting is required accordingly.

### GOT Graphic Ver.1

The following shows the items to be selected.

- [Transparent]
- [XOR]

### 4) [Comment Display Start Row]

When setting a comment having multiple rows, set the first row to be displayed.

If the value out of the number of created comment rows is set, the comment is displayed as blank.

If the comment is displayed as blank, check the number of rows of the specified comments.

Item	Description																
[Fixed]	Enter the start row directly. The setting range is [1] to [32767].																
[Device]	<p>Set the device value as the start row to be displayed. ⇒6.1.1 How to set devices Example) When [Device] is selected and [D10] is set</p> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p>Comment registered in GT Designer3</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Row 1</td><td>Inspection 1 <input type="checkbox"/></td></tr> <tr><td>Row 2</td><td>Conveyor inspection <input type="checkbox"/></td></tr> <tr><td>Row 3</td><td>Inspection 2 <input type="checkbox"/></td></tr> <tr><td>Row 4</td><td>Workpiece inspection <input type="checkbox"/></td></tr> <tr><td>Row 5</td><td>Inspection 3 <input type="checkbox"/></td></tr> <tr><td>Row 6</td><td>Line inspection <input type="checkbox"/></td></tr> </table> </div> <div style="width: 45%;"> <p>View in the GOT</p> <div style="display: flex; justify-content: space-between; align-items: flex-start;"> <div style="width: 45%;"> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Inspection 1</td></tr> <tr><td>Conveyor inspection</td></tr> </table> </div> <div style="width: 45%;"> <p>Device: D10 <input type="text" value="1"/></p> <p>The comment is displayed from the first row.</p> </div> </div> <p style="text-align: center;">↓ Change the device value from 1 to 3.</p> <div style="display: flex; justify-content: space-between; align-items: flex-start;"> <div style="width: 45%;"> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Inspection 2</td></tr> <tr><td>Workpiece inspection</td></tr> </table> </div> <div style="width: 45%;"> <p>Device: D10 <input type="text" value="3"/></p> <p>The comment is displayed from the third row.</p> </div> </div> </div> </div>	Row 1	Inspection 1 <input type="checkbox"/>	Row 2	Conveyor inspection <input type="checkbox"/>	Row 3	Inspection 2 <input type="checkbox"/>	Row 4	Workpiece inspection <input type="checkbox"/>	Row 5	Inspection 3 <input type="checkbox"/>	Row 6	Line inspection <input type="checkbox"/>	Inspection 1	Conveyor inspection	Inspection 2	Workpiece inspection

### 6) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

#### 7) [Category]

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

### ■ 4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

→ 6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

→6.2 Setting Trigger Types

## ■ 5 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Depending on the selection for [Operation Type], the setting items are different.

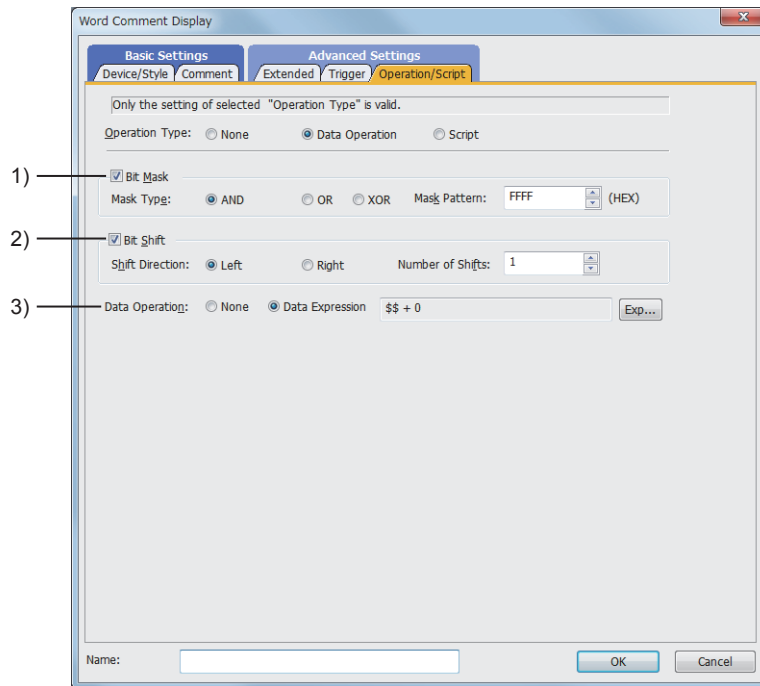

### (1) [Data Operation]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This item can be set only when [Operation Type] is [Data Operation].

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

#### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. • [AND]: Logical AND • [OR]: Logical OR • [XOR]: Exclusive OR
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

#### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. • [Left] • [Right]
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15].

#### 3) [Data Operation]

Select the format of the expression operating with the data operation.  
The following shows the items to be selected.

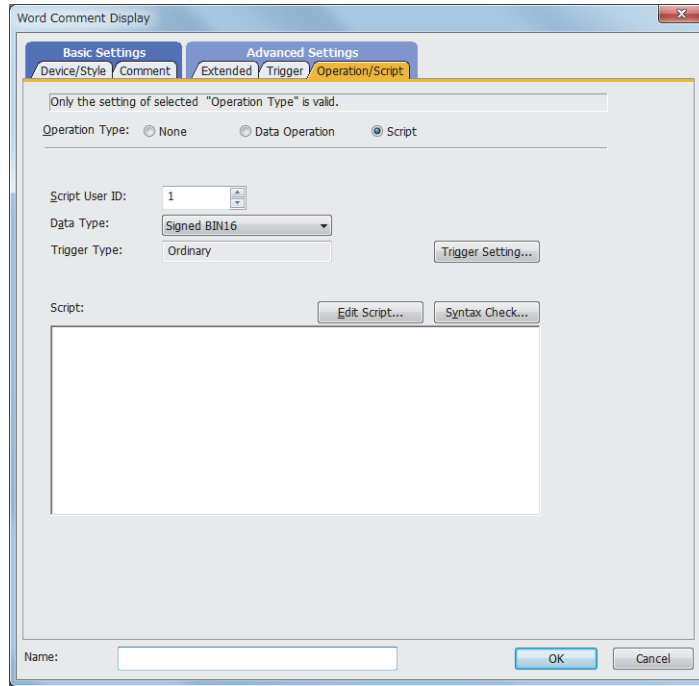

- [None]
- [Data Expression]

(2) [Script]

This item can be set only when [Operation Type] is [Script].  
For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script.  
The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Device/Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the object is updated

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change*1	
					Object stacking order adjustment enabled*2	Object stacking order adjustment disabled*2
[Extended]	[Text Color]	text_color	<input type="radio"/>	<input type="radio"/>	Upon the setting change	When the object is updated

	[Display Mode]	draw_mode	<input type="radio"/>	<input type="radio"/>	Upon the setting change	When the object is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

### GOT Graphic Ver.2

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

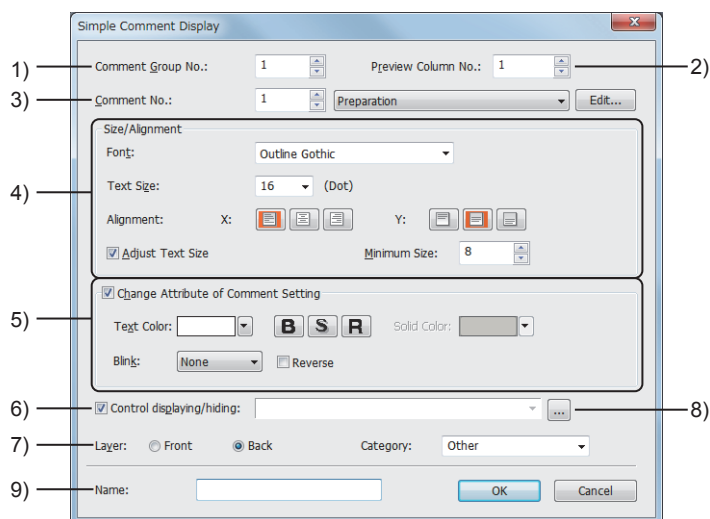

## 8.7.6 [Simple Comment Display] dialog

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

- Step 1** Select [Object] → [Comment Display] → [Simple Comment] from the menu.
- Step 2** Click the position where you place the comment display (simple). Placing the comment display (simple) is completed.
- Step 3** Double-click the comment display (simple) which has been placed to display the setting dialog.

### 1) [Comment Group No.]

Set the comment group number to be used.

The setting range is [1] to [500].

When the nonexistent comment group No. is set, the comment is not displayed.

### 2) [Preview Column No.]

Set the column No. to be displayed.

The setting range is [1] to [30].

### 3) [Comment No.]

Set the comment No. to be display.

The setting range is [0] to [32767].

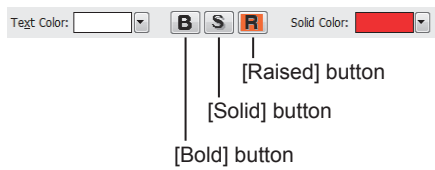

If [0] is set, the comment is not displayed.

### 4) [Size/Alignment]

Item	Description
[Font]	<p>Select the font of the displayed text.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>This item is selectable when [Group No.] is set to [Fixed]. Displays text in the font specified with [Windows Font] in the [Comment Group Property] dialog.</p>  <ul style="list-style-type: none"> <li>• [Windows Font Setting] button</li> </ul> <p>Displays the [Comment Group Property] dialog to list the properties of the comment group specified with [Group No.]. Set [Windows Font] and [Character Set] for the target column of the comment group. →5.8.4 ■ 2 (1) [Comment Group Property] dialog</p>
[Text Size]	<p>Set the text size to be displayed.</p> <p>→1.2.5 Font specifications</p>
[Alignment]	<p>Set the vertical or horizontal position of the text.</p>
[Adjust Text Size]	<p>The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.</p>
[Minimum Size]	<p>This item can be set only when [Adjust Text Size] is set. Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dots.</p>

### 5) [Change Attribute of Comment Setting]

Set the comment attribute such as [Text Color] and [Blink].

Item	Description
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• <b>[Text Color]</b> Set the text color. →6.4 Color Settings</li> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> <li>• <b>[Solid Color]</b> When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

Item	Description
[Blink]	Select the blinking speed of the text and shape. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>
[Reverse]	Inverts the text.

#### 6) [Control displaying/hiding]

Set the device that controls display/hide of all objects.

⇒6.1.1 How to set devices

#### 7) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

#### 8) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

#### 9) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

Up to 100 characters can be set.

### 8.7.7 Relevant settings

Set the relevant settings other than the specific settings for the comment display as required.

The following shows the functions that are available by the relevant settings.

#### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

## 8.8 Placing a Parts Display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

With this function, registered parts, base screens, and window screens can be displayed corresponding to the status of a device.

### ■1 How to switch the parts

#### (1) Parts display (bit)

⇒8.8.4 [Bit Parts Display] dialog

This object displays a part, base screen, or window screen corresponding to the ON or OFF status of a bit device.

#### (2) Parts display (word)

⇒8.8.5 [Word Parts Display] dialog

This object displays a part, base screen, or window screen corresponding to the value of a word device.

#### (3) Parts display (fixed)

⇒8.8.6 [Fixed Parts Display] dialog

This function displays the parts, base screen, and window screen corresponding to the rising edge or falling edge of a bit device.

Only one type of parts can be displayed. However, the parts can be displayed with another parts display superimposed on it.

## 8.8.1 Specifications of the parts display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Maximum number of objects arrangeable on one screen

Up to 1024 parts displays can be placed on each screen.

### 2 Parts displayed by parts displays

The following two types of parts can be displayed by the parts display, and the parts need to be registered in advance.

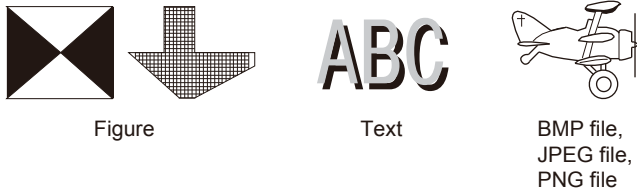

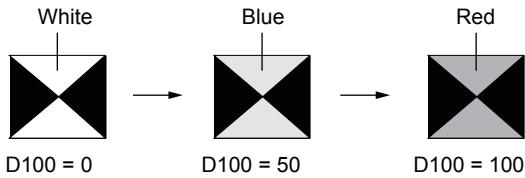

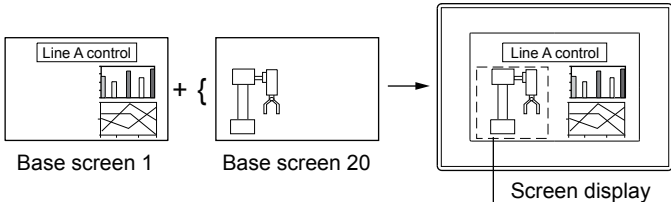

#### (1) The parts data registered as the parts in GT Designer3 (registered parts)

→5.9 Registering Parts ([Parts])

#### (2) BMP file, JPEG file, and PNG file (BMP file parts, JPEG file parts, PNG file parts) which are stored in the data storage

→5.9.3 ■ 6 Using the image file stored in the data storage as a part

### 3 Types of parts which can be displayed

Type	Description	Remarks
Parts	<p>Displays the figure registered as a part. Example) Registrable figures as parts</p>  <p>Figure                      Text                      BMP file, JPEG file, PNG file</p>	<ul style="list-style-type: none"> <li>The parts are required to be registered in advance.</li> <li>→5.9 Registering Parts ([Parts])</li> <li>5.9.3 ■ 6 Using the image file stored in the data storage as a part</li> </ul>
Mark	<p>Switches the figure colors which are registered as the parts corresponding to the change of device status. Because one part can display different images, the registration of multiple parts is not necessary and the capacity of the GOT memory can be saved.</p>  <p>The display color of the white space can be changed.</p>	<ul style="list-style-type: none"> <li>The parts with BMP format, JPEG format, or PNG format cannot be used.</li> <li>Draw the part whose color is to be switched in white.</li> <li>While fixed parts are being displayed, switching to multiple colors cannot be executed. The display is only in a single color.</li> </ul>
Base screen	<p>Displays the figure on a base screen and window screen.</p>	
Window screen	 <p>Screen display The figure of base screen 20 is displayed on base screen 1.</p>	<ul style="list-style-type: none"> <li>The object set on a base screen or window screen is not displayed.</li> </ul>

### 4 Setting the parts to be integrated into an XOR synthesis

**GOT Graphic Ver.1**

#### (1) BMP file parts, JPEG file parts, PNG file parts registered in GT Designer3

Set on the back layer. (Not available to GT21.)

#### (2) When superimposing multiple parts displays and integrating them into an XOR synthesis

- Among parts displays, only parts displays (fixed parts) can be superimposed.
- Set all the target parts displays for an XOR synthesis on the same layer. (Not available to GT21.)
- If they are set on the front layer, the part on which no parts are superimposed is integrated into an XOR synthesis with [Front Layer Transparent Color] of the screen.

(Not available to GT21.)

### (3) When integrating parts including characters into an XOR synthesis

In cases where the parts to be displayed includes an object whose character effect is set to [Bold], [Solid], or [Raised], the characters may be chipped or the character color may not be displayed normally when the parts are displayed.

### (4) Combining a user-registered logo text part with other parts or objects by XOR synthesis

To combine a user-registered logo text part with other parts or objects by XOR synthesis, select [Background Color] in the [Logo Text] dialog.

If [Background Color] is deselected, the logo text part cannot be combined with other parts or objects by XOR synthesis.

## 8.8.2 How to use the parts display

### ■ 1 Placing the parts display

Place parts displays on the screen editor.

→6.5.1 Placing figures and objects

### ■ 2 Editing parts displays

Edit parts displays that have been placed on the screen editor.

→6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■ 3 Setting parts displays

Set parts displays that have been placed on the screen editor.

Common setting of objects

→6.5.5 Common setting for objects

Parts display (bit) settings

→8.8.4 [Bit Parts Display] dialog

Parts display (word) settings

→8.8.5 [Word Parts Display] dialog

Parts display (fixed) settings

→8.8.6 [Fixed Parts Display] dialog

### ■ 4 Method of displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage

BMP file parts, the JPEG file parts, and the PNG file parts can be displayed by object or project.

#### (1) Method of displaying by object (in the use of image files)

##### (a) When using BMP file parts, JPEG file parts, and PNG file parts in the data storage

Specify a BMP file, JPEG file, or PNG file stored in the data storage at each object setting of the parts display to display as parts.

**Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.

For the storing method, refer to the following.

→5.9.3 ■ 6 Using the image file stored in the data storage as a part

**Step 2** When the display condition set for a parts display to display parts is satisfied, the specified BMP file part, JPEG file part, or PNG file part in the data storage is displayed.

Set the following items in the [Device/Style] tab of the parts display and use the parts display.

- Setting image files
- Setting image file numbers

##### (b) Display example

The following shows a display example of when a BMP file part is stored in the data storage.

Example) Displaying BMP images in the parts display (word)

Set image files and write parts numbers between 1 and 65536 in a word device to display the BMP images.

- Word device to display the parts: D100

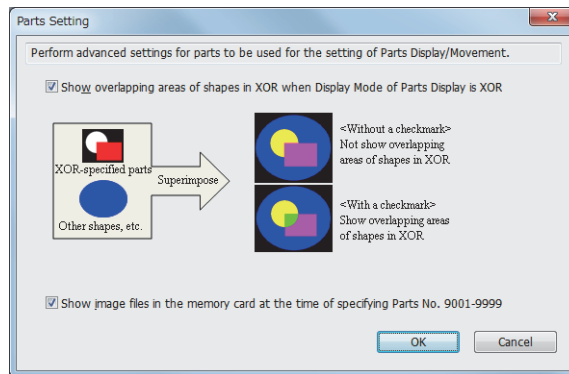

## (2) Method of displaying by project

To display BMP file parts, JPEG file parts, or PNG file parts in the data storage, specify the parts No. from 9001 to 9999. To display the BMP file parts, the JPEG file parts, or the PNG file parts in the data storage when the parts No. from 9001 to 9999 is specified, follow the following procedure.

### (a) When using BMP file parts, JPEG file parts, and PNG file parts in the data storage

This method is applied to display BMP files, JPEG files, or PNG files in the data storage when the parts number 9001 to 9999 is specified.

- Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.
  - 5.9.3 ■ 6 Using the image file stored in the data storage as a part
- Step 2** Enable [Show image files in the memory card at the time of specifying Parts No. 9001-9999] in the [Parts Setting] dialog and write the setting to the GOT.

- Step 3** When the display condition (parts number: 9001 to 9999) set for a parts display to display parts is satisfied, the BMP file part, JPEG file part, or PNG file part in the data storage is displayed. The settings of [Image File Setting] and [Image File No.] are unnecessary.

### (b) When displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage using GS450.b8

Not available to GT21.

This method is applied to switch between the parts registered in GT Designer3 and BMP files, JPEG files, or PNG files in the data storage when the parts number 9001 to 9999 is specified.

For settings of GT Designer3 involving GS450.b8, disable [Show image files in the memory card at the time of specifying Parts No. 9001-9999] in the [Parts Setting] dialog of GT Designer3 when GS450.b8 is used.

If the above setting is valid, BMP files, JPEG files, or PNG files in the data storage can be used as parts regardless of the status of GS450.b8.

Parts No.	GS450.b8: ON	GS450.b8: OFF
9001 to 9999	Displays BMP file parts, JPEG file parts, and PNG file parts in the data storage.	Displays the parts registered in GT Designer3

- Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.
  - 5.9.3 ■ 6 Using the image file stored in the data storage as a part
- Step 2** Turn on GS450.b8.
- Step 3** When the display condition (parts number: 9001 to 9999) set for a parts display to display parts is satisfied, the BMP file part, JPEG file part, or PNG file part in the data storage is displayed.

### (c) Display example

The following shows a display example of when a BMP file part is stored in the data storage.

Example) Displaying BMP file parts in a parts display (word part)

Write the parts numbers between 9001 and 9999 to a word device to display the BMP file parts.

- Word device to display the parts: D100

### Point

#### (1) When specifying a parts number other than 9001 to 9999

Even if BMP file parts, JPEG file parts, or PNG file parts in the data storage are set to be displayed, parts registered in GT Designer3 are displayed when a parts number out of the range between 9001 and 9999 is specified.

#### (2) When switching to BMP file parts, JPEG file parts, or PNG file parts in the data storage that are given the same parts number (only when using GS450.b8)

Not available to GT21.

To switch to a part (BMP file part, JPEG file part, or PNG file part) in the data storage that has been given the same parts number while a part registered in GT Designer3 whose parts number is one of 9001 to 9999 is displayed, follow the following procedure.

Step 1. Turn on GS450.b8.

Step 2. Specify either the parts number 0 or 9000 and hide the displayed part.

Step 3. Specify the parts number of BMP file parts, JPEG file parts, or PNG file parts in the data storage to be displayed.

#### (3) Example of cases where GS450.b8 is automatically turned on after the GOT is powered on

Not available to GT21.

The following shows an example of cases where GS450.b8 is automatically turned on after the GOT is powered on.

This method is useful when using GS450.b8 and displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage from the beginning of operation.

Step 1. As a trigger action, make the GOT internal device (device always on: GS0.b4) as a trigger condition and make settings that store 1 to GS450.b8 while the trigger is on.

Step 2. Store 1 in GS450.b8 with the trigger action after the GOT is powered on.

- Set in the [Project] tab of [Trigger Action].
- Set this trigger action in the first row of the list.  
This stores 1 in GS450.b8 immediately after the GOT is powered on.  
Parts of parts displays or parts movements at a GOT startup may not be switched to BMP file parts, JPEG file part, or PNG file parts.  
(When the screen is switched, the parts are switched.)  
Design screens under consideration for the above description.
- Select [Ordinary] for [Trigger Type].

## ■5 Parts No.

Depending on the parts number, the parts that can be displayed and operations are different.  
The following shows the relation between the parts numbers and the parts which can be displayed.

○ : Can be displayed ×: Cannot be displayed -: Display is deleted

Parts No.	When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are set to be displayed		When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are not set to be displayed	
	Parts registered in GT Designer3	BMP file parts, JPEG file parts, and PNG file parts in the data storage	Parts registered in GT Designer3	BMP file parts, JPEG file parts, and PNG file parts in the data storage
0	_ *1	_ *1	_ *1	×
1 to 8999	○	×	○	×
9000	×	_ *1	○	×
9001 to 9999	× *2	○	○	×
10000 to 32767	○	×	○	×

\*1 When [Indirect Device] is set for [Detail Settings of Parts] in the [Word Parts Display] dialog, the parts are not hidden.  
(The current display is held.)

For the method of hiding parts in the [Word Parts Display] dialog, refer to [Detail Settings of Parts] in the [Word Parts Display] dialog.

→8.9.5 ■ 1 [Device/Style] tab

\*2 Even if the parts registered in GT Designer3 are registered, they cannot be displayed.

Example) When a part registered in GT Designer3 is registered with the parts No. 9123

BMP file parts, JPEG file parts, and PNG file parts are displayed.

When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are set to be displayed.

The parts registered in GT Designer3 (parts No. 9123) are displayed.

When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are not set to be displayed.

## ■6 Setting the image data of parts to a transparent color

When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.  
The following shows the method of enabling a transparent color setting for parts.

- Set a transparent color for the image data.

(Transparent colors can be set only for the image data of BMP files and PNG files.)

- Register the image data for which the transparent color has been set as parts or into the library.
- Set the registered parts or library as the parts.  
 ↳6.5 Placing and Editing Figures and Objects

### 8.8.3 Precautions for a parts display object

#### ■1 Precautions for drawing

##### (1) Settings of parts displays

Set the display position in a way that does not make a part of BMP file parts, JPEG file parts, and PNG file parts extend off the screen.

Otherwise the parts are displayed as shown below.

Check the display position with the preview display by GT Designer3.

##### (a) BMP file parts, JPEG file parts, PNG file parts registered in the GOT

No part is displayed.

BMP file parts, JPEG file parts, and PNG file parts are not displayed.

##### (b) BMP file parts, JPEG file parts, and PNG file parts registered in the data storage

Only the part that can be displayed is displayed.

Only the part that can be displayed is displayed.

The display result of an XOR synthesis can be checked with the preview by GT Designer3.

For details of the layers, refer to the following.

↳6.5.5 ■ 3 Superimposition

##### (2) When a part overlaps with another object

Set the parts display in a way that does not make the part overlap with another object.

Otherwise, the overlapped object may not be displayed normally.

In such a case, set the parts display and the object in different layers.

This also applies to cases where an object overlaps with the display area as shown below.

• When [Parts Type] is [Parts Data]

Displayed on the parts display.

Parts display (displays parts No. 1)

Part No. 1:

• When [Parts Type] is [Base Screen]

Displayed on the parts display.

Parts display (displays base screen 10)

Base screen 10:

### (3) When specifying a screen for the parts type and XOR for the display type

#### **GOT Graphic Ver.1**

- When the base screen or window screen is specified as the parts type of a parts display (bit part/word part) and XOR is specified as the display type, the parts that have been displayed are deleted and then a new screen is displayed.
- The area to be deleted is the same as that of the base/window screen around the drawing point of the parts display (screen (center, top left)).
- When an object is included in the base/window screen area to be deleted, the object is also deleted.  
To prevent the object from being deleted, change the parts type from the screen to the parts and adjust the position in a way that does not make the parts overlap with an object or change the display type to overwrite when leaving the screen being specified as the parts type.  
Because the parts that were displayed previously are left when an overwrite operation is performed, the same size of parts is required.
- In cases where the parts, base screen, and window screen to be displayed include an object whose character effect is set to [Bold], [Solid], or [Raised], the characters may be chipped or the character color may not be displayed normally when the parts are displayed.

## ■ 2 Precautions for use

### (1) Deleting parts

Use [Mark Data] and [Parts Data] of [Parts Type] to delete parts.

When [Base Screen] or [Window Screen] of [Parts Type] is used, parts are not deleted even if the parts are specified to 0. (When the screen is redisplayed after being switched to another, the parts are deleted.)

### (2) While reading BMP files, JPEG files, and PNG files

While files are read, the monitor screen stops.

### (3) When BMP file parts, JPEG file parts, and PNG file parts are displayed halfway

When an error occurs while files are being on display step by step, the images may be displayed halfway. In this case, display the parts again or check the BMP file, JPEG file, or PNG file.

### (4) Displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage

Do not disconnect the data storage from the GOT while displaying BMP file parts, JPEG file parts or PNG file parts in the data storage.

### (5) When stopping using BMP file parts, JPEG file parts, and PNG file parts in the data storage

Carry out either of the following operations.

- Change [Parts Setting] of GT Designer3 and write the project.
- Turn off the GOT internal device (GS450.b8).

Even if disconnecting the data storage without carrying out the above operations, the BMP file parts, JPEG file parts, or PNG file parts may be displayed due to the following reasons.

BMP file parts, JPEG file parts, and PNG file parts displayed on the GOT are stored in the built-in memory of the GOT. (Only one of the BMP file parts, JPEG file parts, PNG file parts is retained.)

If the BMP file parts, JPEG file parts, and PNG file parts which have the same parts number are displayed successively, the parts registered with GT Designer3 are not displayed because the BMP file parts, JPEG file parts, and PNG file parts stored in the built-in memory of the GOT are displayed.

### (6) Priority of settings of GT Designer3 and GS450.b8

When the parts setting [Show image files in the memory card at the time of specifying Parts No. 9001-9999] is enabled, the BMP file parts, JPEG file parts, or PNG file parts in the data storage are displayed regardless of the status of GS450.b8.

## 8.8.4 [Bit Parts Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Object] → [Parts Display] → [Bit Parts] from the menu.

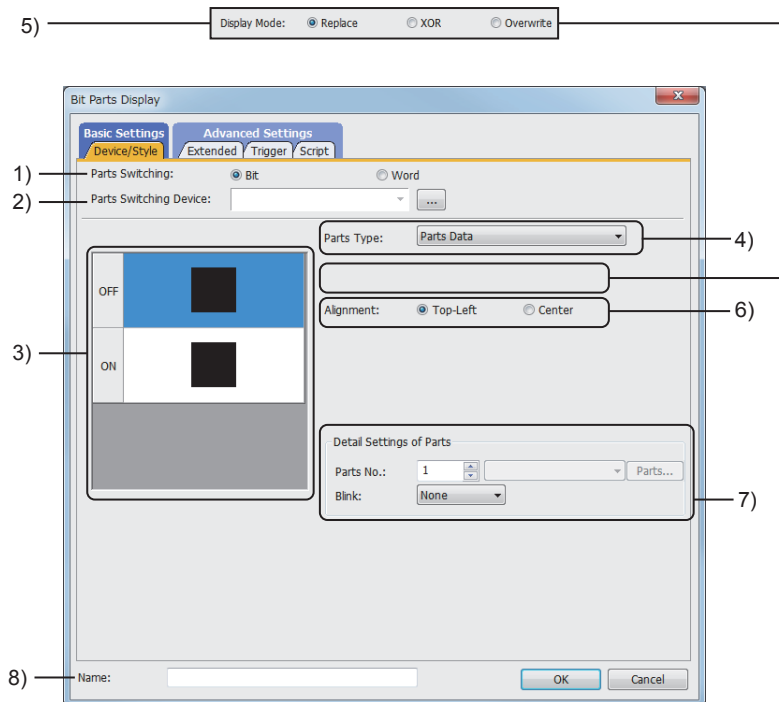

**Step 2** Click the position to place a bit parts display.

**Step 3** Double-click the bit parts display to display the setting dialog.

- ■ 1 [Device/Style] tab
- 2 [Extended] tab
- 3 [Trigger] tab
- 4 [Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Parts Switching]

Select the parts display type.

The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Parts Switching Device]

Set the device to be monitored.

→6.1.1 How to set devices

#### 3) Preview list

Displays the shapes for the on and off status.

#### 4) [Parts Type]

Select the type of the parts for the parts display.

Item	Description
[Parts]	Displays registered parts. When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color

Item	Description
[Mark Data]	<p>Switches the white area of the registered part to another display color according to the change of the device status.            After selecting, set [Parts No.] to be displayed.            The setting range is [0] to [32767].            Click the [Parts] button to check the type of the registered parts.            For the parts that can be displayed by mark, refer to the following.            →5.9 Registering Parts ([Parts])            When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.            For the method of enabling the transparent color setting of parts, refer to the following.            →8.8.2 ■ 6 Setting the image data of parts to a transparent color</p>
[Base Screen]	Displays the registered base screens as parts.
[Window Screen]	Displays the registered window screens as parts.

Item	Description
------	-------------

[Image File]

Selects an image file registered in the data storage and displays the image file registered in the data storage as parts. Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file.  
Displays the full path of the specified image file.

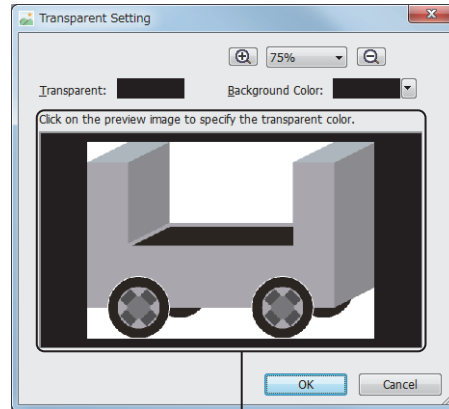

Image file path

- **Image file path**  
Displays the full path of the specified image file.  
When the image file number is set to 0, the pass is not displayed.  
Set the pass with 78 characters or less in total.
- **[Drive Name]**  
Select the drive to store the image file.  
The following shows the items to be selected.  
[A:Standard SD Card]  
[B:USB Drive]  
[E:USB Drive]  
[F:USB Drive]  
[G:USB Drive]  
[X:Current Drive]  
For the available drives by GOT model, refer to the following.  
→ 1.2.7 Drive configuration of the target GOT for data transfer
- **[Folder Name]**  
Specify the folder in which image files are stored.
- **[File Name]**  
Specify a part of the image file name (first character except the image file number).
- **[Digits]**  
Specify the number of digits of [Image File No.] for image files.  
The setting range is [1] to [5].
- **[Transparent Color]**  
Enables the transparent color of a specified image file.  
The transparent color can be set for BMP files and PNG files.  
Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set.  
After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.

Preview

- **[Transparent Color]**  
Displays the set transparent color.
- **[Background Color]**  
Change the background color of the preview.
- **[Preview]**  
Displays a selected image file.  
When a part of the image is clicked, the color of the parts is specified as the transparent color.  
When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.  
For the method of enabling the transparent color setting of parts, refer to the following.  
→ 8.8.2 ■ 6 Setting the image data of parts to a transparent color

5) [Display Mode]

Select a method of displaying at parts switching.

- [Replace]

Deletes the parts displayed previously and displays the new parts.

When [Parts Type] is [Base Screen] or [Window Screen], this item cannot be set.

- [XOR]

After deleting the parts displayed previously, the areas which overlap with the new part are displayed with an XOR synthesis.

For the combination of overlapped colors with an XOR synthesis, refer to the following

- [Overwrite]

Displays a new part, base screen, or window screen on the part that has been displayed.

### GOT Graphic Ver.2

As the setting is fixed to [Replace], no additional setting is required accordingly.

### GOT Graphic Ver.1

The following shows selectable items.

- [Replace]
- [XOR]
- [Overwrite]

#### 6) [Alignment]

Select the default display position of parts, base screens, and window screens.

- [Top-Left]

Sets the top left of parts, base screens, and window screens as the default display position.

- [Center]

Sets the center of parts, base screens, and window screens as the default display position.

## 7) [Detail Settings of Parts]

Item	Description
[Parts No.]	Set the number that has been assigned to the part, base screen, or window screen to be displayed. Click the [Parts Data] button to check the registered parts, base screen, and window screen. The setting range is [0] to [32767]. When 0 is set for [Parts No.], the part is deleted.
[Mark Color]	When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from white.
[Screen No.]	When selecting [Base Screen] or [Window Screen] for [Parts Type], specify the screen No. Click the [Screen] button to check the registered parts, base screen, and window screen.
[Image File No.]	Specify an image file number. The range which can be specified depends on [Digits] in the [Image File Setting] dialog. <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• [Digits] is [4]: [0001] to [9999]</li> <li>• [Digits] is [3]: [001] to [999]</li> <li>• [Digits] is [2]: [01] to [99]</li> <li>• [Digits] is [1]: [1] to [9]</li> </ul> When 0 is set for [Screen File No.], images are deleted. When displaying only images for the on status, set 0 for [Image File No.] for the off status.
[Blink]	Select the blinking speed of the parts. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

## 8) [Name]

Set the object name.

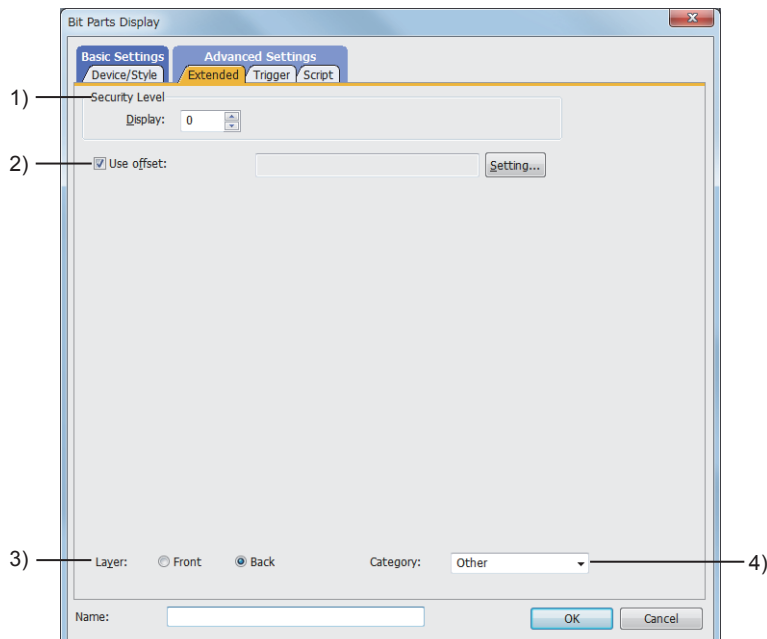

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

## 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

⇒6.1.9 Offset

## 3) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

## 4) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

## 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

## 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]

- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

→6.2 Setting Trigger Types

#### ■ 4 [Script] tab

For the settings of scripts, refer to the following.

→9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

×: Not available

-: No applicable setting item

	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

## GOT Graphic Ver.1

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

## 8.8.5 [Word Parts Display] dialog

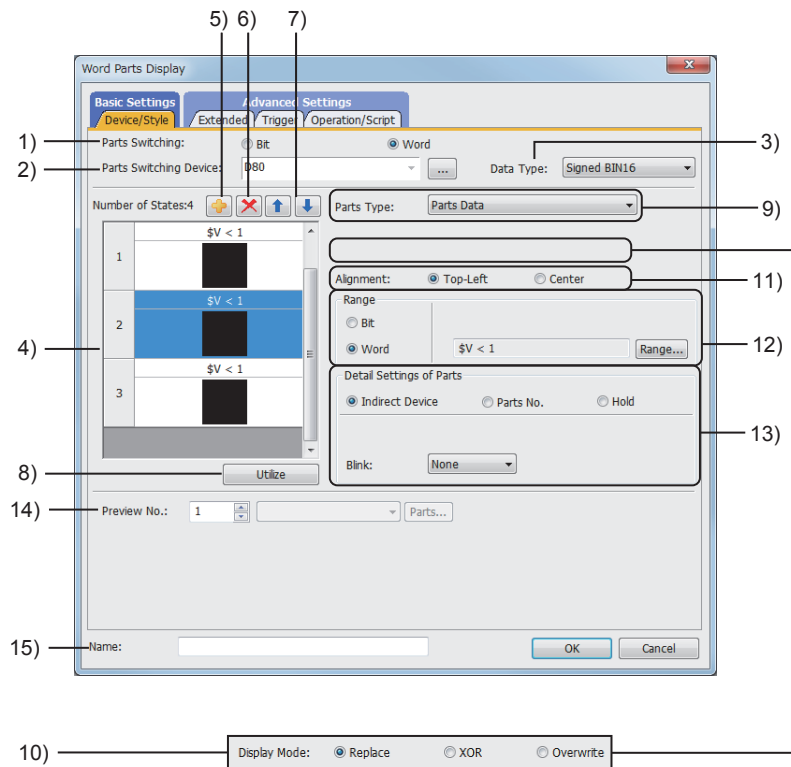

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Parts Display] → [Word Parts] from the menu.  
**Step 2** Click the position to place a word parts display.  
**Step 3** Double-click the word parts display to display the setting dialog.

- ■ 1 [Device/Style] tab  
 ■ 2 [Extended] tab  
 ■ 3 [Trigger] tab  
 ■ 4 [Operation/Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Parts Switching]

Select the parts display type.  
 The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Parts Switching Device]

Set the device to be monitored.  
 →6.1.1 How to set devices

#### 3) [Data Type]

Select the data type of the device to be set.  
 The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]

- [BCD16]
- 4) **Preview list**  
Displays set conditions.
- 5) **Add button**  
Adds a new condition.
- 6) **Delete button**  
Deletes the selected condition.
- 7) **Up button, down button**  
Changes the order of priority of the selected condition.
- 8) **[Utilize] button**  
Creates a new condition utilizing the selected condition.
- 9) **[Parts Type]**  
Select the type of the parts for the parts display.

Item	Description
[Parts]	Displays registered parts. When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color
[Mark Data]	Switches the white area of the registered part to another display color according to the change of the device status. After selecting, set [Parts No.] to be displayed. The setting range is [0] to [32767]. Click the [Parts] button to check the type of the registered parts. For the parts that can be displayed by mark, refer to the following. →5.9 Registering Parts ([Parts]) When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color
[Base Screen]	Displays the registered base screens as parts.
[Window Screen]	Displays the registered window screens as parts.

Item	Description
<p>[Image File]</p>	<p>Selects an image file registered in the data storage and displays the image file registered in the data storage as parts. Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file. Displays the full path of the specified image file.</p> <div data-bbox="724 264 1069 517" data-label="Image"> </div> <p>• Image file path Displays the full path of the specified image file. When the image file number is set to 0, the pass is not displayed. Set the pass with 78 characters or less in total.</p> <p>• [Drive Name] Select the drive to store the image file. The following shows the items to be selected. [A:Standard SD Card] [B:USB Drive] [E:USB Drive] [F:USB Drive] [G:USB Drive] [X:Current Drive] For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer</p> <p>• [Folder Name] Specify the folder in which image files are stored.</p> <p>• [File Name] Specify a part of the image file name (first character except the image file number).</p> <p>• [Digits] Specify the number of digits of [Image File No.] for image files. The setting range is [1] to [5].</p> <p>• [Transparent Color] Enables the transparent color of a specified image file. The transparent color can be set for BMP files and PNG files. Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set. After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.</p> <div data-bbox="751 1234 1203 1641" data-label="Image"> </div> <p>• [Transparent Color] Displays the set transparent color.</p> <p>• [Background Color] Change the background color of the preview.</p> <p>• [Preview] Displays a selected image file. When a part of the image is clicked, the color of the parts is specified as the transparent color. When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color</p>

## 10) [Display Mode]

Select a method of displaying at parts switching.

- [Replace]

Deletes the parts displayed previously and displays the new parts.

When [Parts Type] is [Base Screen] or [Window Screen], this item cannot be set.

- [XOR]

After deleting the parts displayed previously, the areas which overlap with the new part are displayed with an XOR synthesis.

For the combination of overlapped colors with an XOR synthesis, refer to the following

- [Overwrite]

Displays a new part, base screen, or window screen on the part that has been displayed.

**GOT Graphic Ver.2**

As the setting is fixed to [Replace], no additional setting is required accordingly.

**GOT Graphic Ver.1**

The following shows selectable items.

- [Replace]
- [XOR]
- [Overwrite]

11) **[Alignment]**

Select the default display position of parts, base screens, and window screens.

- [Top-Left]
 

Sets the top left of parts, base screens, and window screens as the default display position.
- [Center]
 

Sets the center of parts, base screens, and window screens as the default display position.

12) **[Range]**

- [Bit]

Select this item when changing the display according to the on and off status of the bit device.

After selecting, set the bit device and device status (ON, OFF).

- [Word]

Select this item when changing the display according to the value of a word device.

After selecting, set the conditional expression for the value of the word device with [Range] button.

### 13) [Detail Settings of Parts]

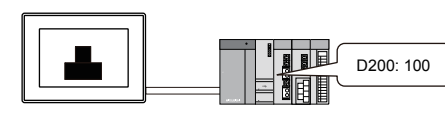

When the setting of [Detail Settings of Parts] is not [Indirect Device], conditions are required to be set.

The following shows how the parts are switched according to the setting of [Detail Settings of Parts] and set conditions.

[Detail Settings of Parts]	Condition setting	
	Enabled	None
Indirect device	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Depending on the value of the parts switching device, parts are switched and displayed.</li> </ul>	Set a condition as required. Depending on the monitor device value, parts are switched and displayed. Set a condition when switching parts according to the other conditions.
[Parts No.]	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Displays the parts set for [Detail Settings of Parts].</li> </ul>	Make sure to set a condition. Otherwise, only one type of parts is displayed continuously. Switching to another part cannot be performed.
[Mark Color]		
[Hold]	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Holds the display of the parts set for the condition.</li> </ul>	Make sure to set a condition. Without the setting of a condition, nothing is displayed.

For the details of conditions, refer to the following.

#### →6.5.5 ■ 2 Setting conditions

Item	Description
[Indirect Device]	Display the [Parts No.] corresponding to the value of the parts switching device. When the value of the parts switching device is 0, deleted the part. When deleting the parts, set \$V=0 for [Range]. <div style="text-align: center;">  <p>The parts of the part No. 100 are displayed.</p> <p>Monitor device value</p> </div>
[Parts No.]	Set the number that has been assigned to the part, base screen, or window screen to be displayed. Click the [Parts Data] button to check the registered parts, base screen, and window screen. The setting range is [0] to [32767]. When 0 is set for [Parts No.], the part is deleted.
[Mark Color]	When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from white.
[Screen No.]	When selecting [Base Screen] or [Window Screen] for [Parts Type], specify the screen No. Click the [Screen] button to check the registered parts, base screen, and window screen.
[Image File No.]	Specify an image file number. The range which can be specified depends on [Digits] in the [Image File Setting] dialog. <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• [Digits] is [4]: [0001] to [9999]</li> <li>• [Digits] is [3]: [001] to [999]</li> <li>• [Digits] is [2]: [01] to [99]</li> <li>• [Digits] is [1]: [1] to [9]</li> </ul> When 0 is set for [Screen File No.], images are deleted. When displaying only images for the on status, set 0 for [Image File No.] for the off status.

Item	Description
[Blink]	Select the blinking speed of the parts. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

#### 14) [Preview No.]

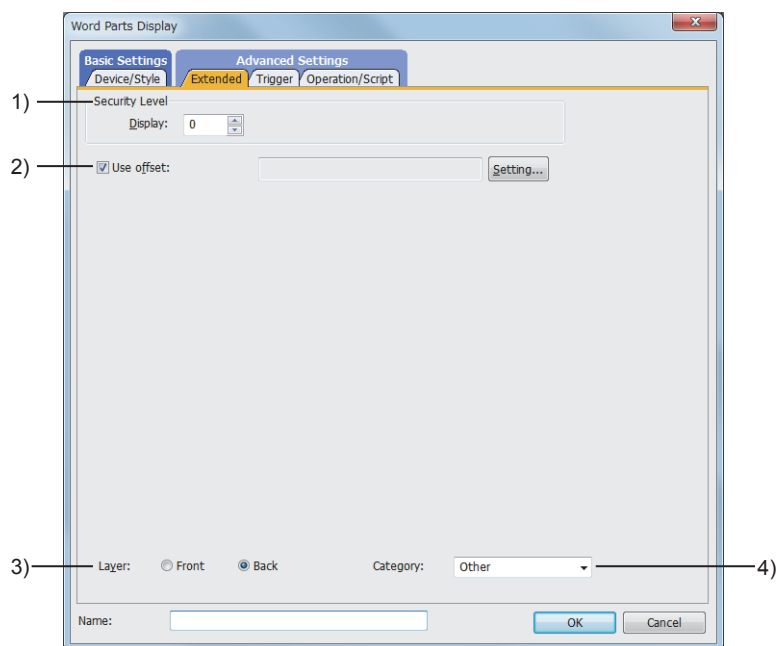

Displays the part of the specified parts number on the screen of GT Designer3.  
The setting range is [0] to [32767].

#### 15) [Name]

Set the object name.  
The name is displayed in the [Data View] window, property sheet, and others.  
The name is changeable on the other tabs as well.  
Up to 100 characters can be set.

## ■2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Security Level]

Set the security level when using the security function.  
The setting range is [1] to [15]. If you do not use the security function, select [0].

#### 2) [Use offset]

Select this item to monitor multiple devices by switching them.  
Set the offset device with the [Setting] button.

#### 3) [Layer]

Not available to GT21.  
Switches layers to be placed.  
The following shows the items to be selected.

- [Front]
- [Back]

#### 4) [Category]

Select the category to assign the object.  
→ 11.7 Managing figures and objects by category

### ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

⇒6.2 Setting Trigger Types

## ■ 4 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Depending on the selection for [Operation Type], the setting items are different.

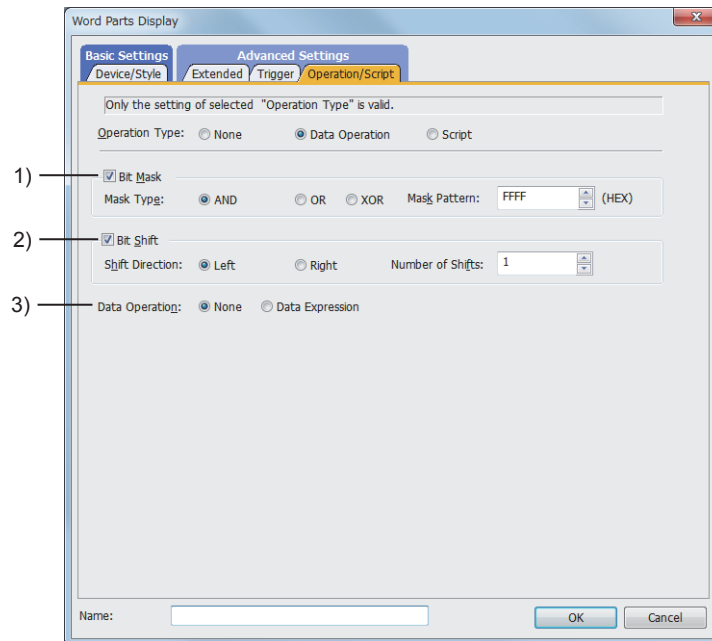

### (1) [Data Operation]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This item can be set only when [Operation Type] is [Data Operation].

For the settings of the data operation function, refer to the following.

→ 6.5.5 ■ 4 Setting data operations

#### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

#### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]</li> <li>• [Right]</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15].

#### 3) [Data Operation]

Select the format of the expression operating with the data operation.

The following shows the items to be selected.

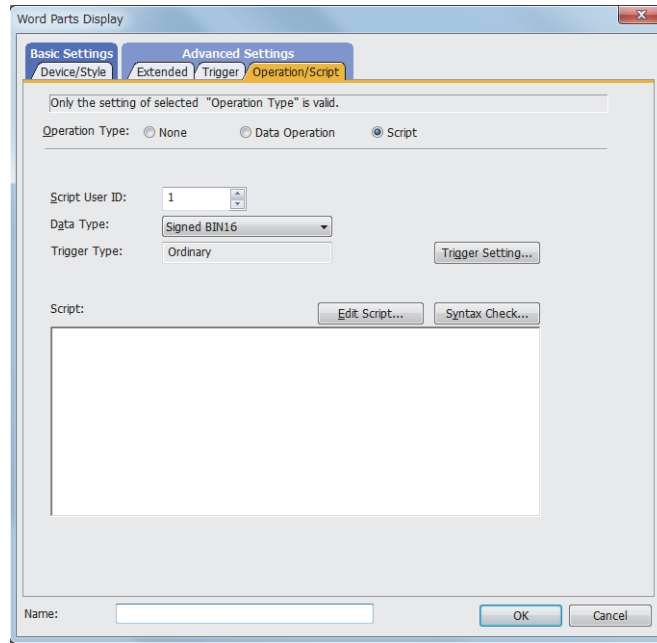

- [None]
- [Data Expression]

(2) [Script]

This item can be set only when [Operation Type] is [Script].  
 For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts  
 You can read the set value from an object setting or write a new value to the setting by using an object property in a script.  
 The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
[Device/Style]	[Display Mode]	draw_mode	○	○	Upon the setting change	When the object is updated
	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

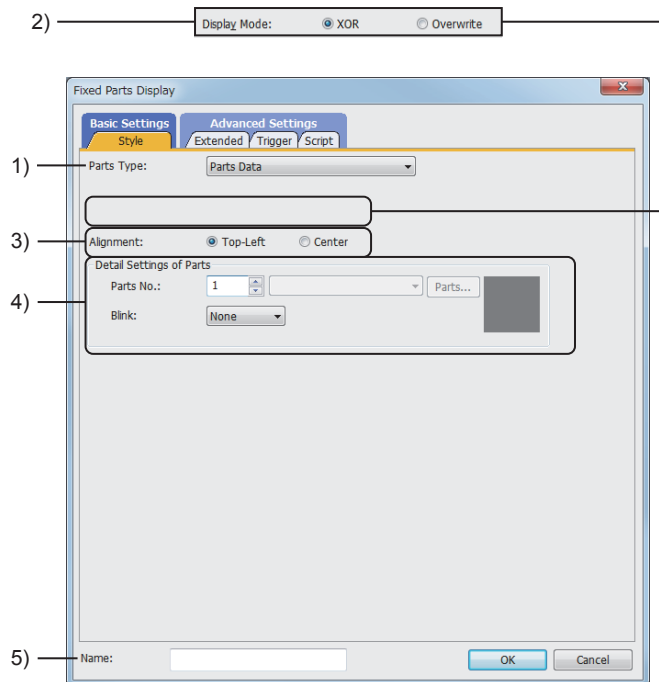

## 8.8.6 [Fixed Parts Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Parts Display] → [Fixed Parts] from the menu.
- Step 2** Click the position to place a fixed parts display.
- Step 3** Double-click the fixed parts display to display the setting dialog.
- ■ 1 [Style] tab
  - 2 [Extended] tab
  - 3 [Trigger] tab
  - 4 [Script] tab

### ■ 1 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Parts Type]

Select the type of the parts for the parts display.

Item	Description
[Parts]	Displays registered parts. When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color
[Mark Data]	Switches the white area of the registered part to the color set for [Mark Color]. After selecting, set [Parts No.] to be displayed. The setting range is [0] to [32767]. Click the [Parts] button to check the type of the registered parts. For the parts that can be displayed by mark, refer to the following. →5.9 Registering Parts ([Parts]) When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color
[Base Screen]	Displays the registered base screens as parts.
[Window Screen]	Displays the registered window screens as parts.

Item	Description
[Image File]	<p>Selects an image file registered in the data storage and displays the image file registered in the data storage as parts. Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file. Displays the full path of the specified image file.</p> <div data-bbox="722 264 1066 517" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>Image file path</b> Displays the full path of the specified image file. When the image file number is set to 0, the pass is not displayed. Set the pass with 78 characters or less in total.</li> <li>• <b>[Drive Name]</b> Select the drive to store the image file. The following shows the items to be selected. [A:Standard SD Card] [B:USB Drive] [E:USB Drive] [F:USB Drive] [G:USB Drive] [X:Current Drive] For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer</li> <li>• <b>[Folder Name]</b> Specify the folder in which image files are stored.</li> <li>• <b>[File Name]</b> Specify a part of the image file name (first character except the image file number).</li> <li>• <b>[Digits]</b> Specify the number of digits of [Image File No.] for image files. The setting range is [1] to [5].</li> <li>• <b>[Transparent Color]</b> Enables the transparent color of a specified image file. The transparent color can be set for BMP files and PNG files. Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set. After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.</li> </ul> <div data-bbox="748 1234 1201 1641" data-label="Image"> </div> <p style="text-align: center;">Preview</p> <ul style="list-style-type: none"> <li>• <b>[Transparent Color]</b> Displays the set transparent color.</li> <li>• <b>[Background Color]</b> Change the background color of the preview.</li> <li>• <b>[Preview]</b> Displays a selected image file. When a part of the image is clicked, the color of the parts is specified as the transparent color. When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. For the method of enabling the transparent color setting of parts, refer to the following. →8.8.2 ■ 6 Setting the image data of parts to a transparent color</li> </ul>

## 2) [Display Mode]

Select a method of displaying at parts switching.

- [Replace]

Deletes the parts displayed previously and displays the new parts.

When [Parts Type] is [Base Screen] or [Window Screen], this item cannot be set.

- [XOR]

Displays parts, base screens, and window screens with an XOR synthesis on figures or other parts displays.

When the display condition is not satisfied, the parts, base screens, and window screens are deleted.

Example) Display condition: While M100 is on

- [Overwrite]

Displays parts, base screens, and window screens on figures or other parts displays.

Even if the display condition is not satisfied, the display of the parts, base screens, and window screens are held.

Example) Display condition: While M100 is on

**GOT Graphic Ver.2**

As the setting is fixed to [Replace], no additional setting is required accordingly.

**GOT Graphic Ver.1**

The following shows selectable items.

- [XOR]
- [Overwrite]

3) [Alignment]

Select the default display position of parts, base screens, and window screens.

- [Top-Left]
 

Sets the top left of parts, base screens, and window screens as the default display position.
- [Center]
 

Sets the center of parts, base screens, and window screens as the default display position.

#### 4) [Detail Settings of Parts]

Item	Description
[Parts No.]	<p>Set the number that has been assigned to the part, base screen, or window screen to be displayed.</p> <p>Click the [Parts Data] button to check the registered parts, base screen, and window screen.</p> <p>The setting range is [0] to [32767].</p> <p>When 0 is set for [Parts No.], the part is deleted.</p> <p>When displaying only parts and screens for the on status, set 0 for [Parts No.] for the off status.</p>
[Mark Color]	<p>When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from white.</p>
[Screen No.]	<p>When selecting [Base Screen] or [Window Screen] for [Parts Type], specify the screen No.</p> <p>Click the [Screen] button to check the registered parts, base screen, and window screen.</p>
[Image File No.]	<p>Specify an image file number.</p> <p>The range which can be specified depends on [Digits] in the [Image File Setting] dialog.</p> <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• [Digits] is [4]: [0001] to [9999]</li> <li>• [Digits] is [3]: [001] to [999]</li> <li>• [Digits] is [2]: [01] to [99]</li> <li>• [Digits] is [1]: [1] to [9]</li> </ul> <p>When 0 is set for [Screen File No.], images are deleted.</p> <p>When displaying only images for the on status, set 0 for [Image File No.] for the off status.</p>
[Blink]	<p>Select the blinking speed of the parts.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

#### 5) [Name]

Set the object name.

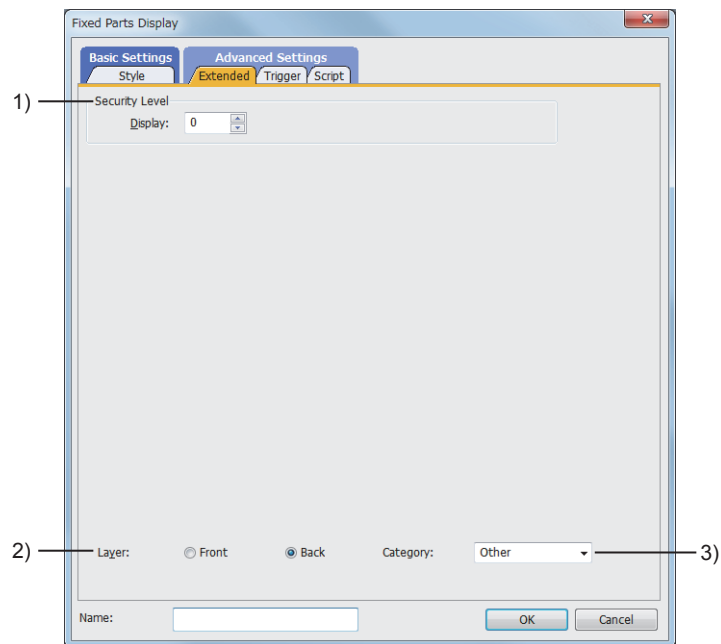

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15]. If you do not use the security function, select [0].

### 2) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 3) [Category]

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

### ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

For details of each item, refer to the following.

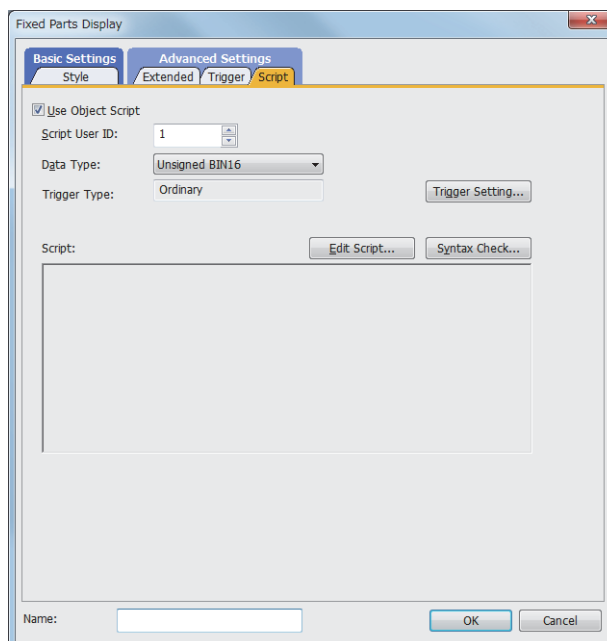

⇒6.2 Setting Trigger Types

#### ■4 [Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script.

The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

○ : Available

× : Not available

- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
[Style]	[Display Mode]	draw_mode	○	○	Upon the setting change	When the object is updated
	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.8.7 Relevant settings

Set the relevant settings other than the specific settings for the parts display as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

### ■ 2 Parts setting

Select [Common] → [Parts] → [Parts Setting] from the menu to display the [Parts Setting] dialog.

⇒5.9.6 [Parts Setting] dialog

Function	Setting item
When the display Mode of the parts display is XOR, integrating grouped figures into an XOR synthesis simultaneously	<b>GOT Graphic Ver.1</b> [Show overlapping areas of shapes in XOR when Display Mode of Parts Display is XOR]
Setting whether to use image files in the data storage for parts displays or parts movements	[Show image files in the memory card at the time of specifying Parts No. 9001-9999]

### ■ 3 GOT Internal Device

⇒12.1.3 GOT special register (GS)

Function	Setting item
Using image files in the data storage as parts for parts displays or parts movements (Read device)	GS450.b8

## 8.9 Placing a Parts Movement

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays the movement of parts by rearranging their positions based on the word device value. The parts movement is displayed by the following two types of devices.

- Position device  
This device stores the destinations of parts.  
⇒8.9.2 ■ 4 How to move the parts (control with the position device)
- Parts switching device  
This device switches the types of parts to be displayed.

### ■ 1 Switching method of parts (controlled by parts switching devices)

The following shows the methods of switching parts.

#### (1) Parts movement (bit)

⇒8.8.4 ■ 1 [Device/Style] tab

This object displays two parts by switching between them.

##### (a) Parts are switched according to the ON or OFF status of a bit device.

##### (b) A part is displayed or hidden according to the ON or OFF status of a bit device.

#### (2) Parts movement (word)

⇒8.8.5 ■ 1 [Device/Style] tab

This object displays three or more parts by switching between them.

##### (a) Parts are switched based on the value of the word device that stores a part number.

##### (b) The types of parts are switched based on the word device value.

- [Parts Switching Device]: D10
- [Trigger]

- |                                     |                               |  |
|-------------------------------------|-------------------------------|--|
| 1) $50 \leq D10 \leq 100$           | Part No. 1                    |  |
| 2) $100 < D10$                      | Part No. 2                    |  |
| 3) Normal<br>(other than the above) | Part No. 0<br>(not displayed) |  |

### (3) Parts movement (fixed)

⇒8.8.6 ■ 1 [Style] tab

Only one part is displayed.

The setting of [Parts Switching Device] is not required.

[Parts Switching Device]: No settings required

## 8.9.1 Specifications of the parts movement

### ■ 1 Maximum number of objects arrangeable on one screen

Up to 1024 parts movement can be placed on each screen.

### ■ 2 Parts displayed by the parts movement

The following two types of parts can be displayed by the parts movement, and the parts need to be registered in advance.

#### (1) The parts data registered as the parts in GT Designer3 (registered parts)

⇒5.9 Registering Parts ([Parts])

#### (2) BMP file, JPEG file, and PNG file (BMP file parts, JPEG file parts, PNG file parts) which are stored in the data storage

⇒5.9.3 ■ 6 Using the image file stored in the data storage as a part

### ■ 3 Types of parts which can be displayed

Type	Description	Remarks
Parts	<p>Displays the figure registered as a part. Example) Registrable figures as parts</p> <p>Figure                      Text                      BMP file, JPEG file, PNG file</p>	<ul style="list-style-type: none"> <li>The parts are required to be registered in advance.</li> <li>⇒5.9 Registering Parts ([Parts])</li> <li>5.9.3 ■ 6 Using the image file stored in the data storage as a part</li> </ul>
Mark	<p>Switches the figure colors which are registered as the parts corresponding to the change of device status. Because one part can display different images, the registration of multiple parts is not necessary and the capacity of the GOT memory can be saved.</p> <p>White                      Blue                      Red</p> <p>D100 = 0                      D100 = 50                      D100 = 100</p> <p>The display color of the white space can be changed.</p>	<ul style="list-style-type: none"> <li>The parts with BMP format, JPEG format, or PNG format cannot be used.</li> <li>Draw the part whose color is to be switched in white.</li> <li>While fixed parts are being displayed, switching to multiple colors cannot be executed. The display is only in a single color.</li> </ul>

## 8.9.2 How to use the parts movement

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■1 Placing the parts movement

Place the parts movement on the screen editor.

→6.5.1 Placing figures and objects

### ■2 Editing the parts movement

Edit the parts movement that has been placed on the screen editor.

→6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■3 Setting the parts movement

Set the parts movement that has been placed on the screen editor.

Common setting of objects

→6.5.5 Common setting for objects

Setting of the parts movement (bit)

→8.9.4 [Bit Parts Movement] dialog

Setting of the parts movement (word)

→8.9.5 [Word Parts Movement] dialog

Setting of the parts movement (fixed)

→8.9.6 [Fixed Parts Movement] dialog

Setting of the parts movement route

→8.9.7 [Parts Move Route] dialog

### ■4 How to move the parts (control with the position device)

The following three movement methods are available.

In every movement method, the locus display, which leaves the locus, can be set.

→8.8.4 ■ 1 [Device/Style] tab

8.8.5 ■ 1 [Device/Style] tab

8.8.6 ■ 1 [Style] tab

#### (1) Coordinate

Parts are displayed with the coordinates on one-dot basis.

For the coordinates, the values of two word devices are specified as X and Y.

By changing the value of the position device, the display position can be changed on one-dot basis.

	1)	2)	3)
Position device (X-axis coordinate): D100	30	200	130
Position device (Y-axis coordinate): D101	90	16	170

#### (a) Reference coordinate

For the parts which are displayed in an overlap window, the top left of the overlap window is the reference coordinate.

Example) For the overlap window

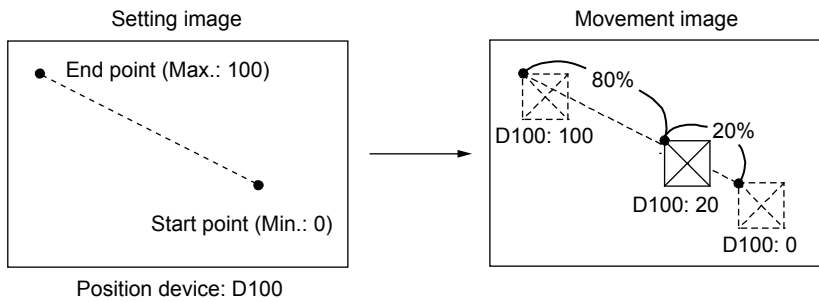

For other than the above (such as base screens and superimpose windows), the top left of the displayed base screen is the reference coordinate.

## (2) Line

The part is moved across the set start point and end point.

Set the minimum value to the start point and the maximum value to the end point. The part display position changes according to the position device value and is relative to the start and end points on the line across the two points.

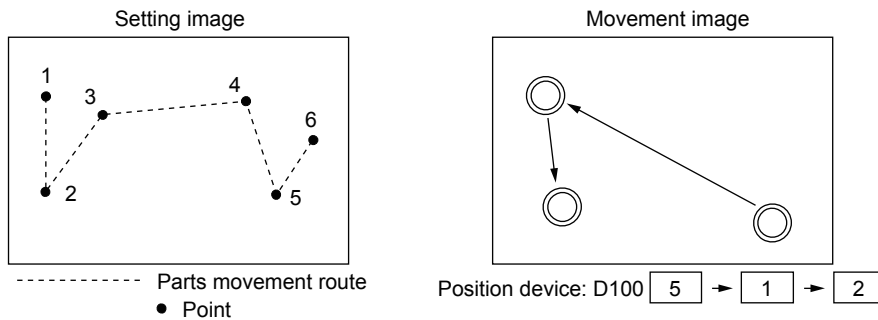

## (3) Point specification

Parts are displayed at the specified display position (point).

To set points, register a polygonal line having several points (parts movement route).

The part is displayed at the position with the same point No. as the position device value.

Set the parts movement route on screen basis. Up to 30 routes can be set for one screen.

One parts movement route can be used for multiple parts movements.

## ■5 Display example of the parts movement

Display the parts movement as follows using the position device and parts switching device.

1) [Device]: D10  
[Move Way]: [Point]

2) [Parts Switching Device]: [D15]  
[Parts Switching]: Parts movement (word)

Part No. 50:

Part No. 100:

Part No. 150:

1) [Device]: D10

2) [Parts Switching Device]: D15

## ■6 Setting procedure of the parts movement

To set an object for the parts movement, select [Parts Switching] and then [Move Way].

- Step 1** Select the switching method of parts in the [Device/Style] tab (for the fixed parts, select it in the [Style] tab).  
The switching method cannot be changed after an object for the parts movement.
- Step 2** Select the movement method of parts in the [Device/Style] tab (for the fixed parts, select it in the [Style] tab).  
The movement method can be changed after an object for the parts movement.

To operate the parts movement with the point specification, set [Parts Move Route] prior to the objects setting for the parts movement.

⇒8.9.7 [Parts Move Route] dialog

## ■7 Method of displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage

BMP file parts, the JPEG file parts, and the PNG file parts can be displayed by object or project.

### (1) Method of displaying by object (in the use of image files)

Specify a BMP file, JPEG file, or PNG file stored in the data storage at each object setting of the parts movement to display as parts.

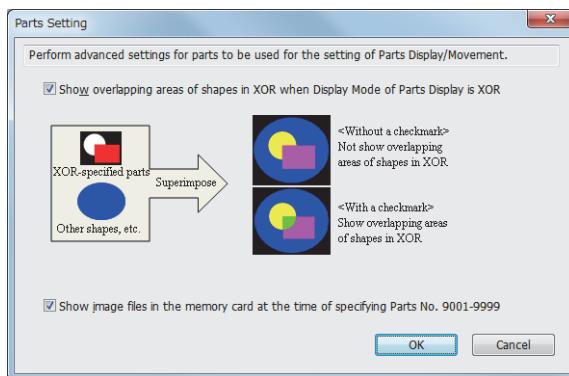

- Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.  
For the storing method, refer to the following.  
⇒5.9.3 ■ 6 Using the image file stored in the data storage as a part
- Step 2** When the display condition set for a parts movement to display parts is satisfied, the specified BMP file part, JPEG file part, or PNG file part in the data storage is displayed.  
Set the following items in each [Device/Style] tab and [Style] tab (fixed parts only) of the parts movement.
- Setting image files
  - Setting image file numbers

### (2) Method of displaying by project

To display BMP file parts, JPEG file parts, or PNG file parts in the data storage, specify the parts No. from 9001 to 9999. To display the BMP file parts, the JPEG file parts, or the PNG file parts in the data storage when the parts No. from 9001 to 9999 is specified, follow the following procedure.

#### (a) Displaying the parts according to the setting of GT Designer3

- Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.  
⇒5.9.3 ■ 6 Using the image file stored in the data storage as a part
- Step 2** Enable [Show image files in the memory card at the time of specifying Parts No. 9001-9999] in the [Parts Setting] dialog and write to the GOT.

**Step 3** When the display condition (parts number: 9001 to 9999) set for the parts movement to display parts is satisfied, the BMP file part, JPEG file part, or PNG file part in the data storage is displayed.

**(b) When displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage using GS450.b8**

Not available to GT21.

This method is applied to switch between the parts registered in GT Designer3 and BMP files, JPEG files, or PNG files in the data storage when the parts number 9001 to 9999 is specified.

For settings of GT Designer3 involving GS450.b8, disable [Show image files in the memory card at the time of specifying Parts No. 9001-9999] in the [Parts Setting] dialog of GT Designer3 when GS450.b8 is used.

If the above setting is valid, BMP files, JPEG files, or PNG files in the data storage can be used as parts regardless of the status of GS450.b8.

Parts No.	GS450.b8: ON	GS450.b8: OFF
9001 to 9999	Displays BMP file parts, JPEG file parts, and PNG file parts in the data storage.	Displays the parts registered in GT Designer3

**Step 1** Save the BMP file, the JPEG file, or the PNG file to be displayed as parts in the data storage.

→ 5.9.3 ■ 6 Using the image file stored in the data storage as a part

**Step 2** Turn on GS450.b8.

**Step 3** When the display condition (parts number: 9001 to 9999) set for the parts movement to display parts is satisfied, the BMP file part, JPEG file part, or PNG file part in the data storage is displayed.

**(c) Display example**

The following shows a display example of when a BMP file part is stored in the data storage.

Example) Displaying BMP file parts in the parts movement (word part)

Write the parts numbers between 9001 and 9999 to a word device to display the BMP file parts.

• Word device to display the parts: D100

**Point**

(1) When specifying a parts number other than 9001 to 9999

Even if BMP file parts, JPEG file parts, or PNG file parts in the data storage are set to be displayed, parts registered in GT Designer3 are displayed when a parts number out of the range between 9001 and 9999 is specified.

**(2) When switching to BMP file parts, JPEG file parts, or PNG file parts in the data storage that are given the same parts number (only when using GS450.b8)**

Not available to GT21.

To switch to a part (BMP file part, JPEG file part, or PNG file part) in the data storage that has been given the same parts number while a part registered in GT Designer3 whose parts number is one of 9001 to 9999 is displayed, follow the following procedure.

Step 1. Turn on GS450.b8.

Step 2. Specify either the parts number 0 or 9000 and hide the displayed part.

Step 3. Specify the parts number of BMP file parts, JPEG file parts, or PNG file parts in the data storage to be displayed.

**(3) Example of cases where GS450.b8 is automatically turned on after the GOT is powered on**

The following shows an example of cases where GS450.b8 is automatically turned on after the GOT is powered on.

This method is useful when using GS450.b8 and displaying BMP file parts, JPEG file parts, and PNG file parts in the data storage from the beginning of operation.

Step 1. As a trigger action, make the GOT internal device (device always on: GS0.b4) as a trigger condition and make settings that store 1 to GS450.b8 while the trigger is on.

Step 2. Store 1 in GS450.b8 with the trigger action after the GOT is powered on.

- Set in the [Project] tab of [Trigger Action].
- Set this trigger action in the first row of the list.  
This stores 1 in GS450.b8 immediately after the GOT is powered on.  
Parts of parts displays or parts movements at a GOT startup may not be switched to BMP file parts, JPEG file part, or PNG file parts.  
(When the screen is switched, the parts are switched.)  
Design screens under consideration for the above description.
- Select [Ordinary] for [Trigger Type].

**8 Parts No.**

Depending on the parts number, the parts that can be displayed and operations are different.

The following shows the relation between the parts numbers and the parts which can be displayed.

○ : Can be displayed × : Cannot be displayed - : Display is deleted

Parts No.	When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are set to be displayed		When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are not set to be displayed	
	Parts registered in GT Designer3	BMP file parts, JPEG file parts, and PNG file parts in the data storage	Parts registered in GT Designer3	BMP file parts, JPEG file parts, and PNG file parts in the data storage
0	_ *1	_ *1	_ *1	×
1 to 8999	○	×	○	×
9000	×	_ *1	○	×
9001 to 9999	× *2	○	○	×
10000 to 32767	○	×	○	×

\*1 When [Indirect Device] is set for [Detail Settings of Parts] in the [Word Parts Movement] dialog, the parts are not hidden. (The current display is held.)

For the method of hiding parts in the [Word Parts Movement] dialog, refer to [Detail Settings of Parts] in the [Word Parts Movement] dialog.

⇒8.9.5 ■ 1 [Device/Style] tab

\*2 Even if the parts registered in GT Designer3 are registered, they cannot be displayed.

Example) When a part registered in GT Designer3 is registered with the parts No. 9123

BMP file parts, JPEG file parts, and PNG file parts are displayed.

When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are set to be displayed.

The parts registered in GT Designer3 (parts No. 9123) are displayed.

When BMP file parts, the JPEG file parts, and PNG file parts in the data storage are not set to be displayed.

## ■9 Setting the image data of parts to a transparent color

When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled. The following shows the method of enabling a transparent color setting for parts.

- Set a transparent color for the image data.  
(Transparent colors can be set only for the image data of BMP files and PNG files.)
- Register the image data for which the transparent color has been set as parts or into the library.
- Set the registered parts or library as the parts.

⇒6.5 Placing and Editing Figures and Objects

### 8.9.3 Precautions for a parts movement object

#### ■1 Precautions for drawing

##### (1) When a part overlaps with another object

Set the parts movement in a way that does not make the part overlap with another object.

Otherwise, the overlapped object may not be displayed normally.

In such a case, set the parts movement and the object in different layers.

- When [Point] is set for [Move Way]

Parts movement (part No. 1 is displayed)

Part No. 1:

#### ■2 Precautions for use

##### (1) Values to be stored in the position devices

If the value stored in the position device is out of the available range (coordinate position, out of the range between the maximum value and minimum value, or the point No.), the part is not moved and the previous display is held.

## 8.9.4 [Bit Parts Movement] dialog

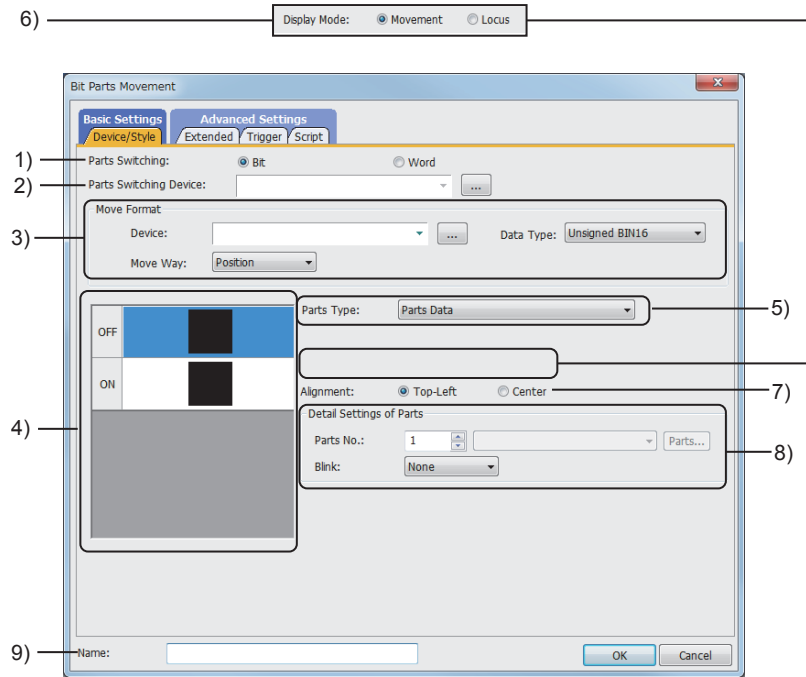

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Object] → [Parts Movement] → [Bit Parts] from the menu to display the setting dialog.

- ■ 1 [Device/Style] tab
- 2 [Extended] tab
- 3 [Trigger] tab
- 4 [Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Parts Switching]

Select the parts movement type.

The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Parts Switching Device]

Set the device to be monitored.

→6.1.1 How to set devices

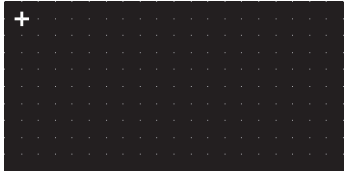

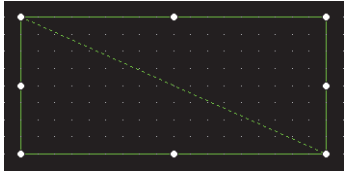

#### 3) [Move Format]

Select the type of the parts for the parts movement.

For the details of the parts movement type, refer to the following.

→8.9.2 ■ 4 How to move the parts (control with the position device)

Item	Description
[Device]	<p>After setting [Move Way], set the position device that stores the destination of the part. →6.1 Device Settings</p> <p>Depending on [Move Way], the setting items differ.</p> <ul style="list-style-type: none"> <li>• [Position] Set the device that stores the values of X-axis and Y-axis. The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis.)</li> <li>• [Line] Set a device that stores the relative value to the start point and end point.</li> <li>• [Point] Set a device that stores the display position (point).</li> </ul>

Item	Description
[Data Type]	<p>When selecting [Line] in [Move Way], select the data type of the word device. (When [Position] or [Point] is selected, the data type is fixed to [Unsigned BIN16]) The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN16]</li> </ul>
[Move Way]	<p>Select the movement method of the parts.</p> <ul style="list-style-type: none"> <li>• [Position] Select this item to use the values of two word devices as the coordinates of X-axis and Y-axis for the parts movement. After selecting this item, set the device that stores the coordinate position. The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis.)</li> <li>• 6.1 Device Settings</li> <li>• [Line] Select this item to display the parts movement on the line across the specified start point and end point. After selecting this item, set the minimum value for the start point and the maximum value for the end point. After the setting, perform the following operation on the screen editor. Click the start point on the drawing screen.</li> </ul>  <p>Move the cursor and click the end point. The line, which is the parts movement range, is set.</p>  <ul style="list-style-type: none"> <li>• [Point] Select this item to display the part at the specified display position (point). After selecting this item, set [Route No.] in the [Parts Move Route] dialog to display the parts movement. The setting range is [0] to [29]. Set the parts movement route on the screen prior to the operation. →8.9.7 [Parts Move Route] dialog</li> </ul>
[Route No.]	<p>Set [Route No.] in the [Parts Move Route] dialog to display the parts movement. The setting range is [0] to [29].</p>

#### 4) Preview list

Displays the shapes for the on and off status.

#### 5) [Parts Type]

Select the type of the parts for the parts movement.

When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.

For the method of enabling the transparent color setting of parts, refer to the following.

→8.9.2 ■ 9 Setting the image data of parts to a transparent color

- [Parts]

Displays registered parts.

- [Mark Data]

Deletes the parts displayed previously and displays the new parts.

Switches the white area of the part to another display color according to the change of the parts switching device status.

After selecting, set [Parts No.] to be displayed as a mark.

The setting range is [0] to [32767].

Click the [Parts] button to check the type of the registered parts.

For the parts that can be displayed by mark, refer to the following.

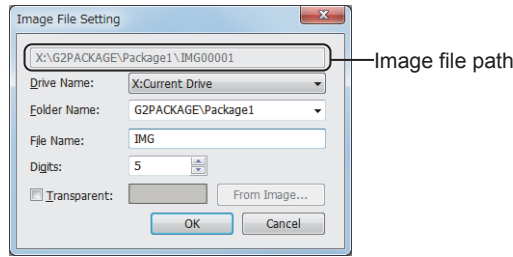

→5.9 Registering Parts ([Parts])

- [Image File]

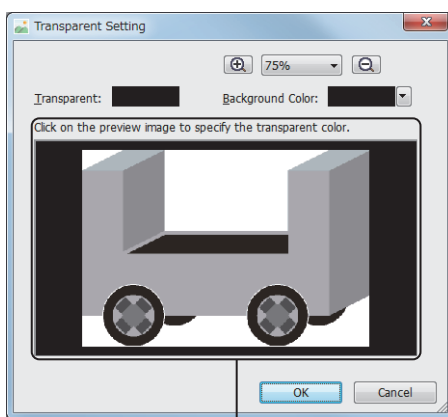

Selects an image file registered in the data storage and displays the image file registered in the data storage as parts.

Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file.  
Displays the full path of the specified image file.

- **Image file path**  
Displays the full path of the specified image file.  
When the image file number is set to 0, the pass is not displayed.  
Set the pass with 78 characters or less in total.
- **[Drive Name]**  
Select the drive to store the image file.  
The following shows the items to be selected.  
[A:Standard SD Card]  
[B:USB Drive]  
[E:USB Drive]  
[F:USB Drive]  
[G:USB Drive]  
[X:Current Drive]  
For the available drives by GOT model, refer to the following.  
→ 1.2.7 Drive configuration of the target GOT for data transfer
- **[Folder Name]**  
Specify the folder in which image files are stored.
- **[File Name]**  
Specify a part of the image file name (first character except the image file number).
- **[Digits]**  
Specify the number of digits of [Image File No.] for image files.  
The setting range is [1] to [5].
- **[Transparent Color]**  
Enables the transparent color of a specified image file.  
The transparent color can be set for BMP files and PNG files.  
Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set.  
After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.

Preview

- **[Transparent Color]**  
Displays the set transparent color.
- **[Background Color]**  
Change the background color of the preview.
- **[Preview]**  
Displays a selected image file.  
When a part of the image is clicked, the color of the parts is specified as the transparent color.

## 6) [Display Mode]

Select a display method for the parts movement.

- **[Movement]**  
Displays the parts movement deleting the displayed previously part.
- **[Locus]** (Not available to GT21)

Displays the parts movement without deleting the parts that have been displayed.  
Example)

**GOT Graphic Ver.2**

As the setting is fixed to [Movement], no additional setting is required accordingly.

**GOT Graphic Ver.1**

The following shows selectable items.

- [Movement]
- [Locus]

7) **[Alignment]**

Select the reference of the parts display position.

- [Top-Left]  
Displays the part using the top-left coordinate of the part as the reference.
- [Center]  
Displays the part using the center coordinate of the part as the reference.

Example)

When [Position] is selected in [Move Way] (X-axis coordinate device = 320, Y-axis coordinate device = 240)

When [Line] is selected in [Move Way] (Device: D100 = 50)

When [Point] is selected in [Move Way] (Device: D200 = 4)

8) **[Detail Settings of Parts]**

Select the type of the parts for the parts movement.

Item	Description
[Parts No.]	Set the parts number to be displayed. Click the [Parts] button to check the registered parts. The setting range is [0] to [32767]. When 0 is set for [Parts No.], the part is deleted.
[Mark Color]	When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from the white.
[Image File No.]	Specify an image file number. The range which can be specified depends on [Digits] in the [Image File Setting] dialog. <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• When [Digits] is [4]: [0001] to [9999]</li> <li>• When [Digits] is [3]: [001] to [999]</li> <li>• When [Digits] is [2]: [01] to [99]</li> <li>• When [Digits] is [1]: [1] to [9]</li> </ul> When 0 is set for [Screen File No.], images are deleted. When displaying only images for the on status, set 0 for [Image File No.] for the off status.
[Blink]	Select the blinking speed of the parts. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

### 9) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 2 [Extended] tab

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

→ 6.1.9 Offset

### 3) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 4) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

⇒6.2 Setting Trigger Types

#### ■4 [Script] tab

For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change*1	
					Object stacking order adjustment enabled*2	Object stacking order adjustment disabled*2
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
[Device/Style]	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.9.5 [Word Parts Movement] dialog

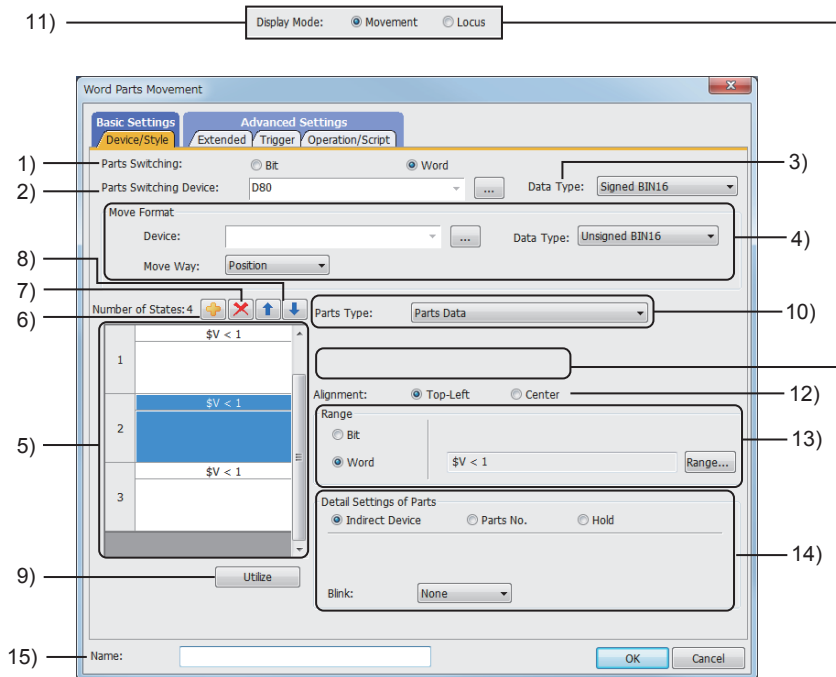

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Object] → [Parts Movement] → [Word Parts] from the menu to display the setting dialog.

- ■ 1 [Device/Style] tab
- 2 [Extended] tab
- 3 [Trigger] tab
- 4 [Operation/Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Parts Switching]

Select the switching method of parts.

The following shows the items to be selected.

- [Bit]
- [Word]

#### 2) [Parts Switching Device]

Set the device to be monitored.

→6.1.1 How to set devices

#### 3) [Data Type]

Select the data type of the device to be set.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [BCD16]

#### 4) [Move Format]

Select a movement type for parts movement.

For the details of the parts movement type, refer to the following.

→8.9.2 ■ 4 How to move the parts (control with the position device)

Item	Description
[Device]	<p>After setting [Move Way], set the position device that stores the destination of the part.            →6.1.1 How to set devices            Depending on [Move Way], the setting items differ.</p> <ul style="list-style-type: none"> <li>• [Position]                Set the device that stores the values of X-axis and Y-axis.                The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis.)</li> <li>• [Line]                Set a device that stores the relative value to the start point and end point.</li> <li>• [Point]                Set a device that stores the display position (point).</li> </ul>
[Data Type]	<p>When selecting [Line] in [Move Way], select the data type of the word device. (When [Position] or [Point] is selected, the data type is fixed to [Unsigned BIN16])            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN16]</li> </ul>
[Move Way]	<p>Select the movement method of the parts.</p> <ul style="list-style-type: none"> <li>• [Position]                Select this item to use the values of two word devices as the coordinates of X-axis and Y-axis for the parts movement.                After selecting this item, set the device that stores the coordinate position.                The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis.)                →6.1.1 How to set devices</li> <li>• [Line]                Select this item to display the parts movement on the line across the specified start point and end point.                After selecting this item, set the minimum value for the start point and the maximum value for the end point.                After the setting, perform the following operation on the screen editor.                Click the start point on the drawing screen. <div data-bbox="842 1003 1185 1173" data-label="Image"> </div> <p>Move the cursor and click the end point. The line, which is the parts movement range, is set.</p> <div data-bbox="842 1272 1185 1442" data-label="Image"> </div> <li>• [Point]                Select this item to display the part at the specified display position (point).                After selecting this item, set [Route No.] in the [Parts Move Route] dialog to display the parts movement.                The setting range is [0] to [29].                Set the parts movement route on the screen prior to the operation.                →8.9.7 [Parts Move Route] dialog</li> </li></ul>
[Route No.]	<p>Set [Route No.] in the [Parts Move Route] dialog to display the parts movement.            The setting range is [0] to [29].</p>

5) **Preview list**

Displays set conditions.

6) **Add button**

Adds a new condition.

7) **Delete button**

Deletes the selected condition.

8) **Up button, down button**

Changes the order of priority of the selected condition.

9) **[Utilize] button**

Creates a new condition utilizing the selected condition.

#### 10) [Parts Type]

Select the type of the parts for the parts movement.

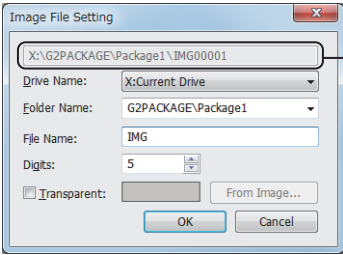

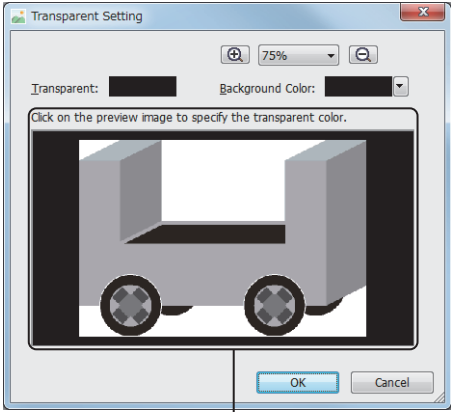

When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.

For the method of enabling the transparent color setting of parts, refer to the following.

→8.9.2 ■ 9 Setting the image data of parts to a transparent color

Item	Description
[Parts]	Displays registered parts.
[Mark Data]	Switches the white area of the registered part to another display color according to the change of the device status. After selecting, set [Parts No.] to be displayed. The setting range is [0] to [32767]. Click the [Parts] button to check the type of the registered parts. For the parts that can be displayed by mark, refer to the following. →5.9 Registering Parts ([Parts])

Item	Description
[Image File]	<p>Selects an image file registered in the data storage and displays the image file registered in the data storage as parts. Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file. Displays the full path of the specified image file.</p>  <ul style="list-style-type: none"> <li>• <b>Image file path</b> Displays the full path of the specified image file. When the image file number is set to 0, the pass is not displayed. Set the pass with 78 characters or less in total.</li> <li>• <b>[Drive Name]</b> Select the drive to store the image file. The following shows the items to be selected. [A:Standard SD Card] [B:USB Drive] [E:USB Drive] [F:USB Drive] [G:USB Drive] [X:Current Drive] For the available drives by GOT model, refer to the following. → 1.2.7 Drive configuration of the target GOT for data transfer</li> <li>• <b>[Folder Name]</b> Specify the folder in which image files are stored.</li> <li>• <b>[File Name]</b> Specify a part of the image file name (first character except the image file number).</li> <li>• <b>[Digits]</b> Specify the number of digits of [Image File No.] for image files. The setting range is [1] to [5].</li> <li>• <b>[Transparent Color]</b> Enables the transparent color of a specified image file. The transparent color can be set for BMP files and PNG files. Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set. After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>[Transparent Color]</b> Displays the set transparent color.</li> <li>• <b>[Background Color]</b> Change the background color of the preview.</li> <li>• <b>[Preview]</b> Displays a selected image file. When a part of the image is clicked, the color of the parts is specified as the transparent color.</li> </ul>

## 11) [Display Mode]

Select a display method for the parts movement.

- [Movement]

Displays the parts movement deleting the displayed previously part.

- [Locus] (Not available to GT21)

Displays the parts movement without deleting the parts that have been displayed.

Example)

**GOT Graphic Ver.2**

As the setting is fixed to [Movement], no additional setting is required accordingly.

**GOT Graphic Ver.1**

The following shows selectable items.

- [Movement]
- [Locus]

12) **[Alignment]**

Select the reference of the parts display position.

- [Top-Left]
 

Sets the display position using the top-left coordinate of the part as the reference.
- [Center]
 

Sets the display position using the center coordinate of the part as the reference.

Example)

When [Position] is selected in [Move Way] (X-axis coordinate device = 320, Y-axis coordinate device = 240)

When [Line] is selected in [Move Way] (Device: D100 = 50)

When [Point] is selected in [Move Way] (Device: D200 = 4)

### 13) [Range]

- [Bit]

Select this item when changing the display according to the on and off status of the bit device.  
After selecting, set the bit device and device status (ON, OFF).

- [Word]

Select this item when changing the display according to the value of a word device.  
After selecting, set the conditional expression for the value of the word device with [Range] button.

### 14) [Detail Settings of Parts]

When the setting of [Detail Settings of Parts] is not [Indirect Device], conditions are required to be set.

The following shows how the parts are switched according to the setting of [Detail Settings of Parts] and set conditions.

[Detail Settings of Parts]	Condition setting	
	Enabled	None
Indirect device	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Depending on the value of the parts switching device, parts are switched and displayed.</li> </ul>	Set a condition as required. Depending on the monitor device value, parts are switched and displayed. Set a condition when switching parts according to the other conditions.
[Parts No.]	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Displays the parts set for [Detail Settings of Parts].</li> </ul>	Make sure to set a condition. Otherwise, only one type of parts is displayed continuously. Switching to another part cannot be performed.
[Mark Color]		
[Hold]	Depending on a set condition, parts are displayed as follows. <ul style="list-style-type: none"> <li>• When a condition is satisfied Displays the parts set for the condition.</li> <li>• When a condition is not satisfied Holds the display of the parts set for the condition.</li> </ul>	Make sure to set a condition. Without the setting of a condition, nothing is displayed.

For the details of conditions, refer to the following.

#### ⇒6.5.5 ■ 2 Setting conditions

Item	Description
[Indirect Device]	Display the [Parts No.] corresponding to the value of the parts switching device. If the parts switching device value is 0 (0 or 9000 for the BMP file parts, JPEG file parts, PNG file parts in the data storage), the current display is held. When deleting the parts, set \$V==0 for [Range]. <div style="text-align: center;"> </div>
[Parts No.]	Set the parts to be displayed. Click the [Parts] button to check the registered parts. The setting range is [0] to [32767]. When 0 is set for [Parts No.], the part is deleted.
[Mark Color]	When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from the white.
[Image File No.]	Specify an image file number. The range which can be specified depends on [Digits] in the [Image File Setting] dialog. <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• When [Digits] is [4]: [0001] to [9999]</li> <li>• When [Digits] is [3]: [001] to [999]</li> <li>• When [Digits] is [2]: [01] to [99]</li> <li>• When [Digits] is [1]: [1] to [9]</li> </ul> When 0 is set for [Screen File No.], images are deleted.
[Hold]	Select this item to hold the current display of the parts.

Item	Description
[Blink]	Select the blinking speed of the parts. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

### 15) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15]. If you do not use the security function, select [0].

### 2) [Use offset]

Select this item to monitor multiple devices by switching them.

Set the offset device with the [Setting] button.

### 3) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

### 4) [Category]

Select the category to assign the object.

⇒ 11.7 Managing figures and objects by category

### ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

→ 6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

→ 6.2 Setting Trigger Types

## ■ 4 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Depending on the selection for [Operation Type], the setting items are different.

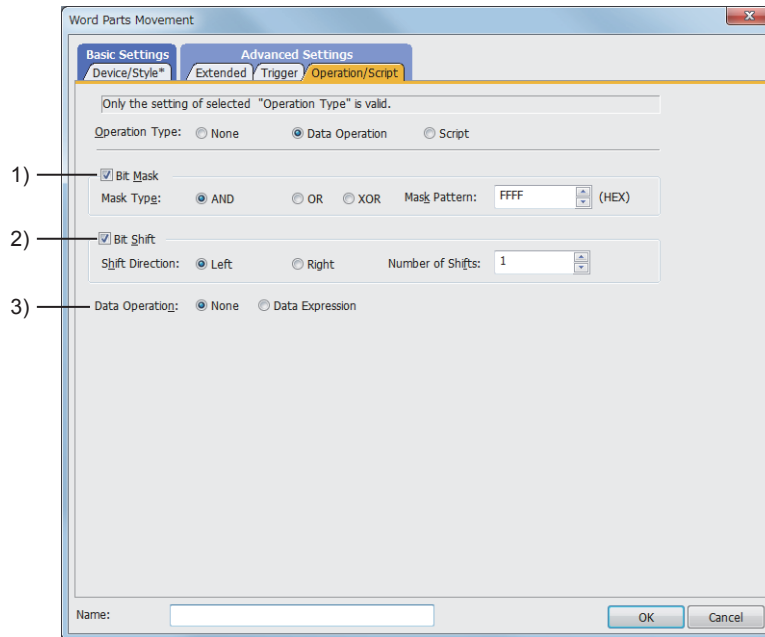

### (1) [Data Operation]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This item can be set only when [Operation Type] is [Data Operation].

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

#### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

#### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]</li> <li>• [Right]</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15].

#### 3) [Data Operation]

Select the format of the expression operating with the data operation.

The following shows the items to be selected.

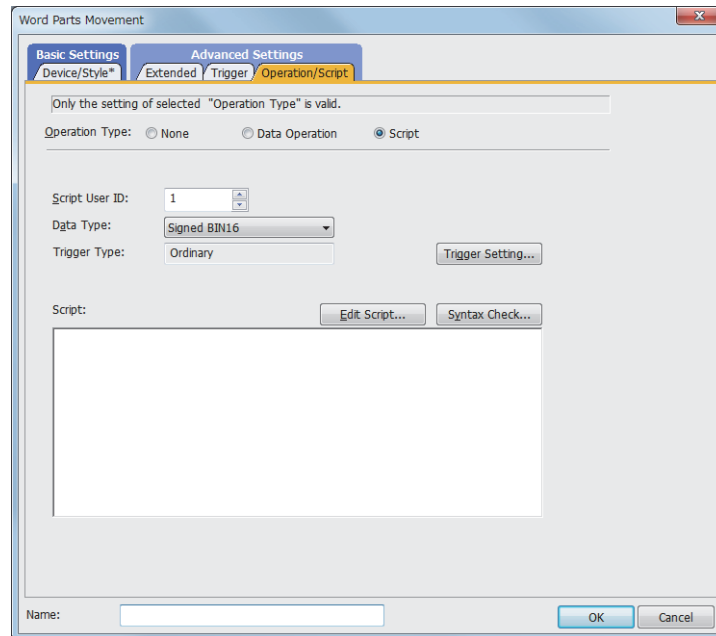

- [None]
- [Data Expression]

(2) [Script]

This item can be set only when [Operation Type] is [Script].  
 For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change*1	
					Object stacking order adjustment enabled*2	Object stacking order adjustment disabled*2
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
[Device/Style]	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

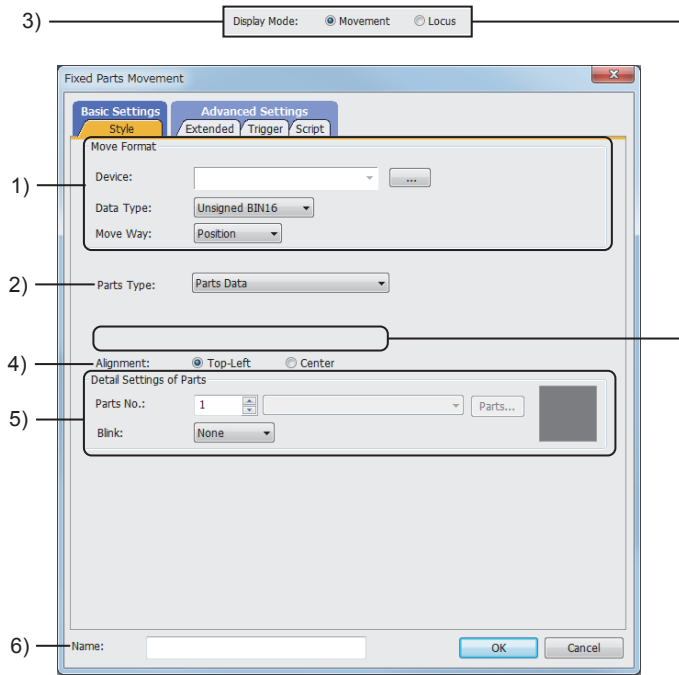

## 8.9.6 [Fixed Parts Movement] dialog

Select [Object] → [Parts Movement] → [Fixed Parts] from the menu to display the setting dialog.

- ■ 1 [Style] tab
- 2 [Extended] tab
- 3 [Trigger] tab
- 4 [Script] tab

### ■ 1 [Style] tab

#### 1) [Move Format]

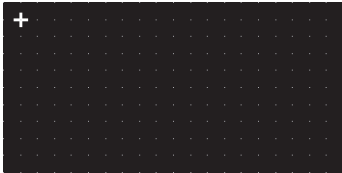

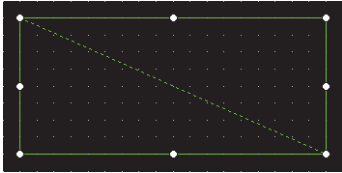

Select a movement type for parts movement.

For the details of the parts movement type, refer to the following.

- 8.9.2 ■ 4 How to move the parts (control with the position device)

Item	Description
[Device]	<p>After setting [Move Way], set the position device that stores the destination of the part.            → 6.1.1 How to set devices            Depending on [Move Way], the setting items differ.</p> <ul style="list-style-type: none"> <li>• [Position] Set the device that stores the values of X-axis and Y-axis. The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis)</li> <li>• [Line] Set a device that stores the relative value to the start point and end point.</li> <li>• [Point] Set a device that stores the display position (point).</li> </ul>
[Data Type]	<p>When selecting [Line] in [Move Way], select the data type of the word device. (When [Position] or [Point] is selected, the data type is fixed to [Unsigned BIN16])            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN16]</li> </ul>

Item	Description
[Move Way]	<p>Select the movement method of the parts.</p> <ul style="list-style-type: none"> <li>• [Position] Select this item to use the values of two word devices as the coordinates of X-axis and Y-axis for the parts movement. After selecting this item, set the device that stores the coordinate position. The set device and the following device are set to store the coordinates of X-axis and Y-axis. (The set device is for storing the coordinate of X-axis) ⇒6.1.1 How to set devices</li> <li>• [Line] Select this item to display the parts movement on the line across the specified start point and end point. After selecting this item, set the minimum value for the start point and the maximum value for the end point. After the setting, perform the following operation on the screen editor. Click the start point on the drawing screen.</li> </ul>  <p>Move the cursor and click the end point. The line, which is the parts movement range, is set.</p>  <ul style="list-style-type: none"> <li>• [Point] Select this item to display the part at the specified display position (point). After selecting this item, set [Route No.] in the [Parts Move Route] dialog to display the parts movement. The setting range is [0] to [29]. Set the parts movement route on the screen prior to the operation. ⇒8.9.7 [Parts Move Route] dialog</li> </ul>
[Route No.]	<p>Set [Route No.] in the [Parts Move Route] dialog to display the parts movement. The setting range is [0] to [29].</p>

## 2) [Parts Type]

Select the type of the parts for the parts movement.

When a transparent color is set for the image data of set parts, the setting of the transparent color is enabled.

For the method of enabling the transparent color setting of parts, refer to the following.

⇒8.9.2 ■ 9 Setting the image data of parts to a transparent color

Item	Description
[Parts]	Displays registered parts.
[Mark Data]	<p>Switches the white area of the registered part to the color set for [Mark Color]. After selecting, set [Parts No.] to be displayed. The setting range is [0] to [32767]. Click the [Parts] button to check the type of the registered parts. For the parts that can be displayed by mark, refer to the following. ⇒5.9 Registering Parts ([Parts])</p>

Item	Description
<p>[Image File]</p>	<p>Selects an image file registered in the data storage and displays the image file registered in the data storage as parts. Click the [Setting] button to display the [Image File Setting] dialog after selecting the image file. Displays the full path of the specified image file.</p> <div data-bbox="724 264 1067 517" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>Image file path</b> Displays the full path of the specified image file. When the image file number is set to 0, the pass is not displayed. Set the pass with 78 characters or less in total.</li> <li>• <b>[Drive Name]</b> Select the drive to store the image file. The following shows the items to be selected. [A:Standard SD Card] [B:USB Drive] [E:USB Drive] [F:USB Drive] [G:USB Drive] [X:Current Drive] For the available drives by GOT model, refer to the following. →1.2.7 Drive configuration of the target GOT for data transfer</li> <li>• <b>[Folder Name]</b> Specify the folder in which image files are stored.</li> <li>• <b>[File Name]</b> Specify a part of the image file name (first character except the image file number).</li> <li>• <b>[Digits]</b> Specify the number of digits of [Image File No.] for image files. The setting range is [1] to [5].</li> <li>• <b>[Transparent Color]</b> Enables the transparent color of a specified image file. The transparent color can be set for BMP files and PNG files. Click the [From Image] button to display the [Open] dialog and select a file for which the transparent color is set. After selecting a file, the [Transparent Setting] dialog appears. Specify the transparent color.</li> </ul> <div data-bbox="748 1234 1203 1641" data-label="Image"> </div> <ul style="list-style-type: none"> <li>• <b>[Transparent Color]</b> Displays the set transparent color.</li> <li>• <b>[Background Color]</b> Change the background color of the preview.</li> <li>• <b>[Preview]</b> Displays a selected image file. When a part of the image is clicked, the color of the parts is specified as the transparent color.</li> </ul>

### 3) [Display Mode]

Select a display method for the parts movement.

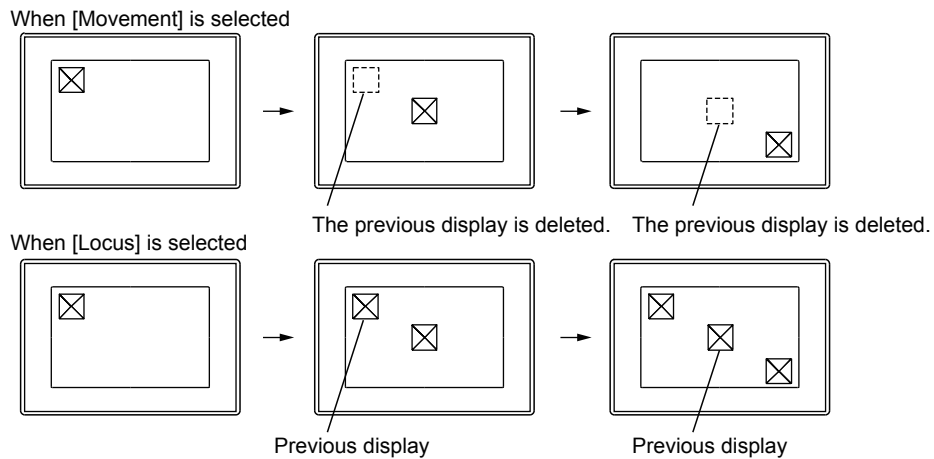

- [Movement]

Displays the parts movement deleting the displayed previously part.

- [Locus]

Displays the parts movement without deleting the parts that have been displayed.

Example)

**GOT Graphic Ver.2**

As the setting is fixed to [Movement], no additional setting is required accordingly.

**GOT Graphic Ver.1**

The following shows selectable items.

- [Movement]
- [Locus]

4) **[Alignment]**

Select the reference of the parts display position.

- [Top-Left]

Displays the part using the top-left coordinate of the part as the reference.

- [Center]

Displays the part using the center coordinate of the part as the reference.

Example)

When [Position] is selected in [Move Way] (X-axis coordinate device = 320, Y-axis coordinate device = 240)

When [Line] is selected in [Move Way] (Device: D100 = 50)

When [Point] is selected in [Move Way] (Device: D200 = 4)

## 5) [Detail Settings of Parts]

Item	Description
[Parts No.]	Set the parts number to be displayed. Click the [Parts] button to check the registered parts. The setting range is [0] to [32767]. When 0 is set for [Parts No.], the part is deleted. When displaying only parts and screens for the on status, set 0 for [Parts No.] for the off status.
[Mark Color]	When selecting [Mark Data] for [Parts Type], select the color of the area of the part to be switched from the white.
[Image File No.]	Specify an image file number. The range which can be specified depends on [Digits] in the [Image File Setting] dialog. <ul style="list-style-type: none"> <li>• When [Digits] is [5]: [00001] to [65535]</li> <li>• When [Digits] is [4]: [0001] to [9999]</li> <li>• When [Digits] is [3]: [001] to [999]</li> <li>• When [Digits] is [2]: [01] to [99]</li> <li>• When [Digits] is [1]: [1] to [9]</li> </ul> When 0 is set for [Screen File No.], images are deleted. When displaying only images for the on status, set 0 for [Image File No.] for the off status.
[Blink]	Select the blinking speed of the parts. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Low]</li> <li>• [Medium]</li> <li>• [High]</li> </ul>

## 6) [Name]

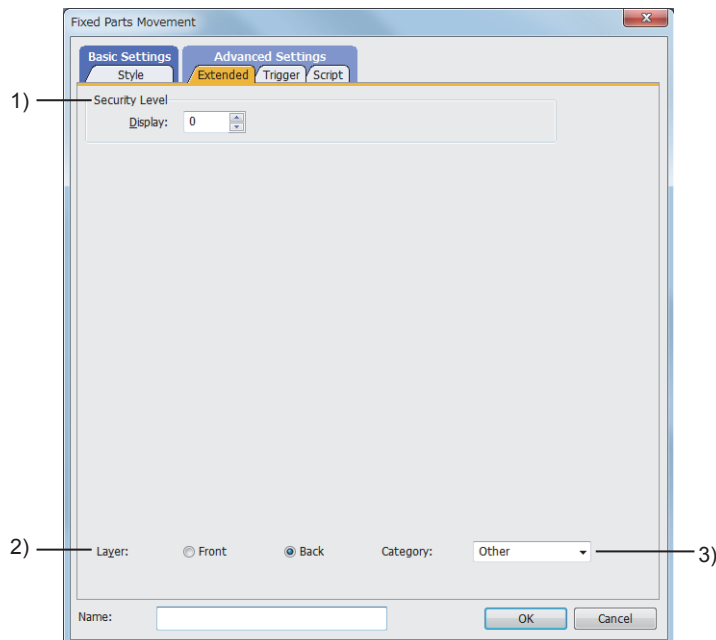

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Extended] tab

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15]. If you do not use the security function, select [0].

### 2) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

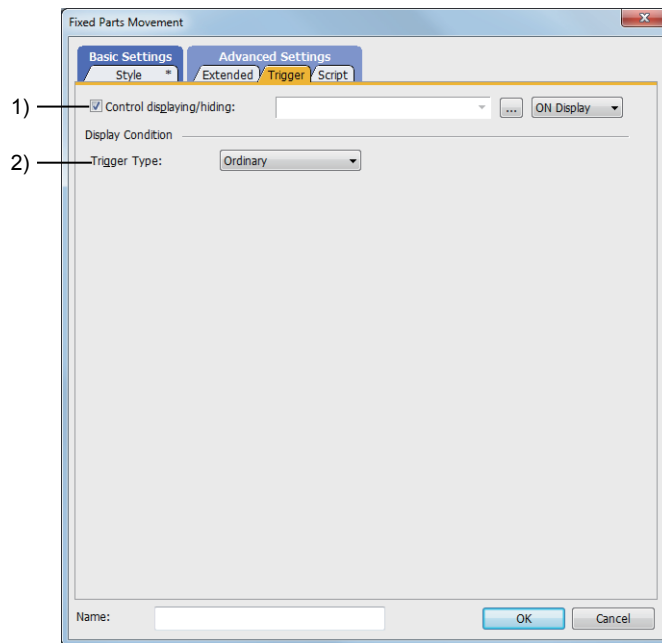

### 3) [Category]

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 3 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

→ 6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

For details of each item, refer to the following.

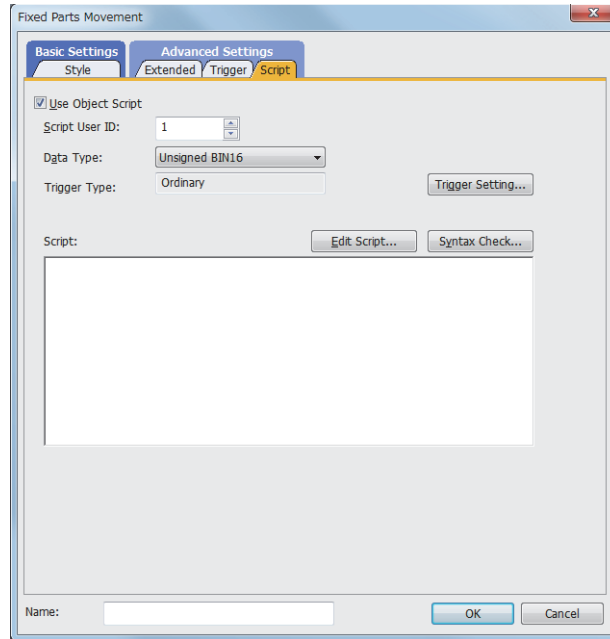

→ 6.2 Setting Trigger Types

#### ■ 4 [Script] tab

For the settings of scripts, refer to the following.

⇒9.10 Object Script

Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
[Style]	[Parts No.]	part_no	○	○	Upon the setting change	Upon the setting change
	[Mark Color]	mark_color	○	○	Upon the setting change	Upon the setting change
	[Blink]	blink	○	○	Upon the setting change	Upon the setting change
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.9.7 [Parts Move Route] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

To operate [Move Way] using [Point], set the parts movement route, in which the parts are displayed.  
Up to 30 routes can be set for one screen.  
One parts movement route can be used for multiple parts movements.

- Step 1** Select [Object] → [Parts Movement] → [Parts Move Route] from the menu.
- Step 2** The [Parts Move Route] dialog appears.  
→ ■ 1 [Parts Move Route] dialog
- Step 3** Click the mark (+) which is displayed on the drawing screen to place point 1.  
Click the mark to finish creating the necessary points.

- Step 4** When the setting is completed, the point numbers are displayed on the set positions.

- Changing the point position  
Click the parts movement route and select [Edit Points] from the right-click menu.  
In the vertex edit mode, drag the point to change its position.

- Changing the number of points and the route No.  
Double-click the parts movement route to display the setting dialog. Change [Points] and [Route No.].

## ■ 1 [Parts Move Route] dialog

### 1) [Route No.]

Set [Route No.] of [Parts Move Route] to be created.  
The setting range is [0] to [29].

### 2) [Points]

Set the number of points of the movement position (the position to display the parts).  
The setting range is [1] to [100].

### 3) [Arrange in a line]

The parts are moved on a line.  
Points are automatically placed for the number of points set in [Points] by specifying the start point and end point.

Example) Number of points: 5

Specify the start point and end point.  
(Point 2 to point 4 are automatically placed.)

### 4) [Name]

Set the object name.  
The name is displayed in the [Data View] window, property sheet, and others.  
Up to 100 characters can be set.

## 8.9.8 Relevant settings

Set the relevant settings other than the specific settings for the parts movement as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 Parts setting

Select [Common] → [Parts] → [Parts Setting] from the menu to display the [Parts Setting] dialog.  
⇒ 5.9.6 [Parts Setting] dialog

Function	Setting item
Setting whether to use image files in the data storage for parts displays or parts movements	[Show image files in the memory card at the time of specifying Parts No. 9001-9999] (Not available to GT21.)

### ■ 2 GOT Internal Device

⇒ 12.1.3 GOT special register (GS)

Function	Setting item
Using image files in the data storage as parts for parts displays or parts movements (Read device)	GS450.b8 (Not available to GT21.)

## 8.10 Placing a Historical Data List Display

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

With this function, device data can be displayed in a list in chronological order.

→ 9.2 Collecting Device Data ([Logging])

Usually displays the latest data.

Displays past data.

Displays the latest data.

Data collected with the logging function

## 8.10.1 Specifications of the historical data list display

### ■ 1 Maximum number of objects on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to eight historical data list displays can be placed on one screen.
- For GT21  
One historical data list display, trend graph, scatter graph, or historical trend graph can be placed on one screen.

### ■ 2 Relation between historical data list displays and logging

For the logging, refer to the following.

⇒9.2 Collecting Device Data ([Logging])

#### (1) Contents displayed by historical data list displays

The data collected or accumulated in buffering areas or data storage by the logging is displayed as a list with this function. As the accumulated data are available, current and past information can be displayed as a list.

Displays accumulated data in a list.

#### (2) Logging data which can be displayed with historical data list displays

One historical data list display corresponds to only one logging ID number for the display of data. To display multiple logging ID numbers, set the same number of historical data list displays.

#### (3) A logging setting required when historical data list displays are used

When using historical data list displays, set [Number of Logs a file] of the logging to the same number as that set for [Display Columns] of historical data list displays or more to secure the performance.

⇒8.10.4 ■ 1 [Display] tab

#### (4) Consistency check

The consistency between the setting of a historical data list display and the corresponding logging setting is checked at the following timing.

- When the dialog for a historical data list display is opened
- When devices of a historical data list are enabled and a data check is conducted

### ■ 3 Display when a data operation error occurs

For the data operation, if a BCD-BIN conversion error or a division by zero error occurs, the object displays hyphens corresponding to the number of displayed digits.

#### (1) Display of a value containing a symbol or decimal point

A symbol and a decimal point, which are contained in a value, are also displayed as hyphens.

Example) When the settings are configured as follows: display format: real, number of displayed digits: 5 (fractional portion: 2), and right alignment

Date	No.1	No.2
2014/09/05 22:00	11.11	12.34
2014/09/05 22:00	22.22	56.78
2014/09/05 22:00	33.33	90.12

Normal display

2014/09/05 22:00	-----	-----
2014/09/05 22:00	-----	-----

Display at an error occurrence

## 8.10.2 How to use the historical data list display

### 1 Placing the historical data list display

Place historical data list displays on the screen editor.

→ 6.5.1 Placing figures and objects

### 2 Editing historical data list displays

Edit historical data list displays that have been placed on the screen editor.

→ 6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### 3 Setting historical data list displays

Set historical data list displays that have been placed on the screen editor.

Common setting of objects

→ 6.5.5 Common setting for objects

Setting historical data list displays

The following outlines the procedure for setting a historical data list display.

Example)

A historical data list display that displays target figures and actual figures

D10, D20, and D30 are logged in a trigger sampling cycle of 300000 ms.

→ 8.10.4 [Historical Data List Display] dialog

9.2 Collecting Device Data ([Logging])

1) Date and time	2) Target figure	3) Actual figure	4) Production rate (%)	5) Number of defective products	6) Defect rate (%)
Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4
Oct. 8, 2013 11:40:00	100	55	55.0	3	5.5
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0
Oct. 8, 2013 12:20:00	100	66	66.0	5	7.6
Oct. 8, 2013 12:25:00	100	57	57.0	3	5.3

1) Date and time: Displays the date and time when the logging data is obtained.

2) Target figure: Monitors the value in D10.

3) Actual figure: Monitors the value in D20.

4) Production rate: Displays the value that derives from "Actual figure ÷ Target figure × 100". (0 to 100.0%)

5) Number of defective products: Monitors the value in D30.

6) Defect rate: Displays the value that derives from "Number of defective products ÷ Actual figure × 100". (0 to 100.0%)

**Step 1** Set the number of rows and columns to be displayed, the device to be monitored, and the items to be monitored in the [Display] tab.

Old logging data	A		B			
	Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
↓ New logging data	Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4
	Oct. 8, 2013 11:40:00	100	55	55.0	3	5.5
	Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
	Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
	Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
	Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5

Oct. 8, 2013 12:25:00	100	57	57.0	3	5.3

**Step 3** Set the security level, time of the cursor position, and time of the display position in the [Extended] tab if necessary.

The time in the cursor position can be stored in a device and the display position time can be specified and displayed.

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4
Oct. 8, 2013 11:40:00	100	55	55.0	3	5.5
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0
Oct. 8, 2013 12:20:00	100	66	66.0	5	7.6
Oct. 8, 2013 12:25:00	100	57	57.0	3	5.3

#### ■ 4 Displaying and moving the cursor

The cursor can be displayed and moved in the list with a key code switch.

With the setting of [Single Touch Operation], the cursor can be displayed directly on and moved to a touched position.

When [Time Device] in the [Extended] tab of [Historical Data List Display] is set, a selected date and time are stored in a set device.

⇒ 8.10.4 ■ 3 [Extended] tab

[Time Device]  
Device value: Oct. 8, 2013 12:00:00

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0

#### ■ 5 Displaying data obtained at a specified time

The data obtained at a specified time can be displayed with a key code switch.

When [Display Position Time Device] in the [Extended] tab of the [Historical Data List Display] dialog is set, the data of a specified time is displayed in the center of the list of the historical data list display.

⇒ 8.10.4 ■ 3 [Extended] tab

When the data of a specified time is displayed, the update of the list stops.

Time to be specified  
Oct. 8, 2010 12:00:00

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0

The data obtained at the specified time can be displayed in the center of the list.

## 6 Conjunction with historical trend graphs

By setting the same device to [Time Device] of historical data list displays and [Display Position Time] of historical trend graphs, the data obtained at time specified with a historical data list display can be displayed in a historical trend graph.

→ 8.10.4 ■ 3 [Extended] tab

### 8.16 Placing a Trend Graph

Example) Displaying the data obtained at time specified with a historical data list display in a historical trend graph  
Make the following settings.

- Set [D1000] for [Time Device] of the [Historical Data List Display] dialog.
- Set [D1000] for [Display Position Time] of the [Historical Trend Graph].

**Step 1** Display the cursor in the historical data list display and move the cursor to the data to be displayed in the historical trend graph.

The time is stored in the time device (D1000). (Device value: specified time)

Historical Data List Display

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4
Oct. 8, 2013 11:40:00	100	55	55.0	3	5.5
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0
Oct. 8, 2013 12:20:00	100	66	66.0	5	7.6
Oct. 8, 2013 12:25:00	100	57	57.0	3	5.3

Time data is stored in the time storage device.

D1000  
Oct. 8, 2010  
12:00:00

Historical Trend Graph

**Step 2** Enter the key code of the display position time specification jump (FFD4h) with a touch switch. The data obtained at the time stored in [Display Position Time Device] (D1000) is displayed in the historical trend graph.

Historical Data List Display

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4
Oct. 8, 2013 11:40:00	100	55	55.0	3	5.5
Oct. 8, 2013 11:45:00	100	72	72.0	6	8.3
Oct. 8, 2013 11:50:00	100	66	66.0	6	9.1
Oct. 8, 2013 11:55:00	100	81	81.0	6	7.4
Oct. 8, 2013 12:00:00	100	55	55.0	3	5.5
Oct. 8, 2013 12:05:00	100	64	64.0	5	7.8
Oct. 8, 2013 12:10:00	100	68	68.0	4	5.9
Oct. 8, 2013 12:15:00	100	75	75.0	6	8.0
Oct. 8, 2013 12:20:00	100	66	66.0	5	7.6
Oct. 8, 2013 12:25:00	100	57	57.0	3	5.3

Oct. 8, 2010  
12:00:00

Historical Trend Graph

Displays the time stored in the display position time specification device.

## Point

### Displaying data of historical trend graphs in historical data list displays

By setting the same device to [Time Device] of historical trend graphs and [Display Position Time Device] of historical data list displays, the data obtained at time specified with a historical trend graph can be displayed in a historical data list display.

→ 8.10.4 ■ 3 [Extended] tab

### 8.16 Placing a Trend Graph

## 7 Touch switches for historical data list displays

Touch switches for the historical data list display are available by reading from the library of GT Designer3.

The characters and shapes on the touch switches can be changed by a user.

When key codes are set for touch switches, touch switches for the historical data list display can be created by a user.

Date and time	Target figure	Actual figure	Production rate (%)	Number of defective products	Defect rate (%)
Oct. 8, 2013 11:35:00	100	68	68.0	5	7.4

Show Cursor	Cursor Up	List Up	Page Up	Top	Latest Data
Hide Cursor	Cursor Down	List Down	Page Down	Bottom	Specified Jump

Touch switches for the historical data list display

Touch switch	Key code	Description
Show cursor 	FFF0h	Displays or deletes the cursor. Displays the cursor in the center of the list.
Hide cursor 	FFF1h	
List Cursor Up 	FFF2h	Moves the cursor upward or downward.
List Cursor Down 	FFF3h	
List Displacement Scroll Up 	FFF4h	Scrolls the cursor to the row a specified number of rows below or above. By setting [Up/Down Scroll List Displacement], the number of the rows between the original position and destination can be changed. →8.10.4 ■ 2 [Text/Style] tab
List Displacement Scroll Down 	FFF5h	
List Page Scroll Up 	FFF6h	Scrolls the cursor to the row a specified number of rows displayed in the list below or above.
List Page Scroll Down 	FFF7h	
Jump to the top of the list 	FFD0h	Moves the cursor to the top of the list.
Jump to the bottom of the list 	FFD1h	Moves the cursor to the bottom of the list.

Touch switch	Key code	Description
Latest Data 	FFEFh	Displays the latest data.
Move display position to the specified time 	FFD4h	Displays in the center the data obtained at the time stored in the display position time specification device. (Time specification jump function)

## ■8 Operations performed using the object gesture function

The display of objects can be operated using gestures.

For operations with gestures, refer to the following.

→ 11.13 Operating Objects by the Gesture (Object Gesture Function)

### 8.10.3 Precautions for a historical data list display object

#### ■1 When changing the logging devices of the logging settings or utilizing data of another project for logging

If the logging devices of the logging settings are changed or the data of another project for logging is utilized after a historical data list display is set, the device of the logging setting may not match the device of the historical data list display.

In this case, set the device of the historical data list display again.

When the device type does not match, the historical data list display is not displayed.

#### ■2 Placing historical data list displays when setting the single touch operation

When setting [Single Touch Operation] in the [Extended] tab of the [Historical Data List Display] dialog, set the size of the part displayed in the list to a multiple of 16.

If a set size is not a multiple of 16, or a point not in the succession of a multiple of 16 is touched, the following irregularities may occur.

- The cursor is displayed in a position away from a touched point.
- Touches do not receive any response.

#### ■3 Display viewed when the bit is selected for the device type

When the bit is selected for the device type, the screen editor always displays the off status even if the display is switched to on.

In the GOT, the monitor device is displayed correctly.

#### ■4 Displaying data which cannot be processed as real numbers

When [Real] is set for [Display Format] and the data to be displayed cannot be processed as real numbers, what are displayed depends on the values.

- If all the values are 0: [Inf] is displayed.
- If values are not 0: [NaN] is displayed.

For how to set [Display Format], refer to the following.

→ 8.10.4 ■ 1 [Display] tab

## ■5 Displaying an integer as a real number

For a device capable of storing an integer only, configure the following settings to display the device value as a real number.

Item	Settings
[Device Type] in the logging setting	Select one of the following items. <ul style="list-style-type: none"><li>• [Signed BIN 16]</li><li>• [Unsigned BIN 16]</li><li>• [Signed BIN 32]</li><li>• [Unsigned BIN 32]</li></ul>
[Display Format] in the [Display Setting] dialog	Select [Real].
[Data Operation]	Set the operational expression: $$$/(10 \text{ to the } n\text{-th power})$ . The symbol \$\$ represents a device value, and the letter n represents the number of decimal places.

Example) When the number of decimal places is 2

In [Data Operation], set the operational expression:  $$$/100$ .

When the target device stores 12345, the displayed value is 123.45.

## ■6 Precautions for the use of the time specification jump function

### (1) When using the time specification jump function

If the time specification jump function is used, the update processing of the list stops.

To resume the update processing, touch a touch switch for which the key code (FFEFh) is set.

### (2) When carrying out another operation while a time specification jump is performed

While the data obtained at a specified time is searched with the time specification jump function, the operations with functions other than the historical data list display cannot be performed.

### (3) When multiple values of logging data are obtained around a specified time

If logging data are not obtained at a specified time, the data obtained at the nearest time is searched.

When the multiple values are obtained at the nearest time, the first detected value is displayed.

### (4) When displaying the data obtained at the start of logging and the data obtained around the time when the latest data is obtained

When the logging data obtained at a specified time is the one obtained at the start of the logging or the data obtained around the time when the latest data is obtained, the data to be displayed may not be displayed in the center of the historical data list display.

### (5) When performing a time specification jump without specifying time

When performing a time specification jump without specifying time (all the settings of [Display Position Time Device] are 0), the update processing stops and the latest data is displayed.

To resume the update processing, touch a touch switch for which the key code (FFEFh) is set.

### (6) When there is no logging data that can be displayed in historical data list displays

When there is no logging data that can be displayed in a historical data list display, no time specification jump is performed.

### (7) When the logging data to be displayed are not shown in chronological order

When the logging data to be displayed are not shown in chronological order due to a time change of the GOT's clock, the data obtained at the time the nearest to a specified time may not be displayed.

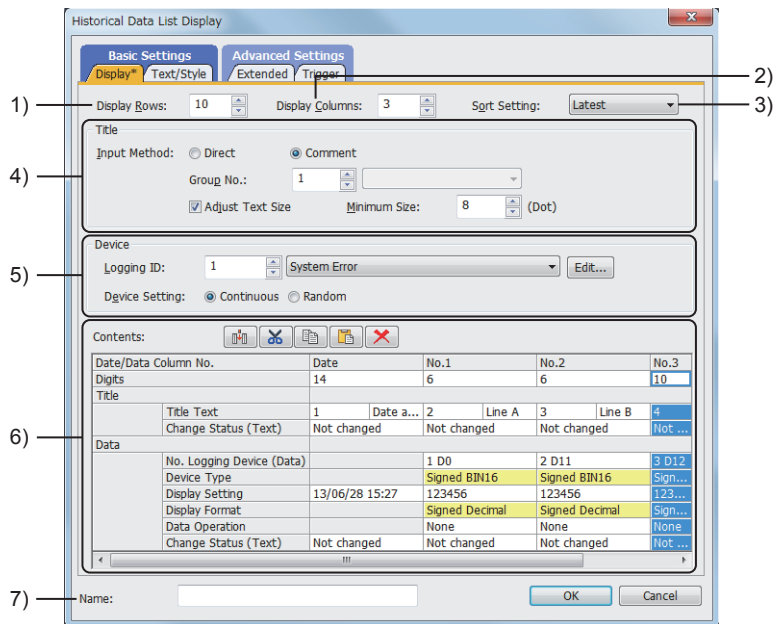

## 8.10.4 [Historical Data List Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Historical Data List Display] from the menu.
- Step 2** Click the position where you place the historical data list display. Placing the historical data list display is complete.
- Step 3** Double-click the historical data list display which has been placed to display the setting dialog.
- ■ 1 [Display] tab
  - 2 [Text/Style] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab

### ■ 1 [Display] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 1) [Display Rows]**  
Set the number of rows excluding the title row.  
The setting range is [1] to [47].
- 2) [Display Columns]**  
Set the number of the data columns.  
The setting range is [1] to [32].
- 3) [Sort Setting]**  
Select the method of sorting out the rows to be displayed.  
The following shows the items to be selected.
- [Latest]
  - [Oldest]
- 4) [Title]**

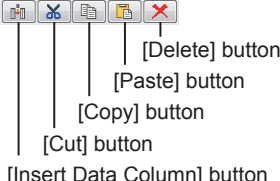

Item	Description
[Input Method]	Select the method of setting the text to be displayed in the title. The following shows the items to be selected.
[Group No.]	Only when [Comment] is selected for [Input Method], this item can be set. Set the comment group number to be used. The setting range is [1] to [500].

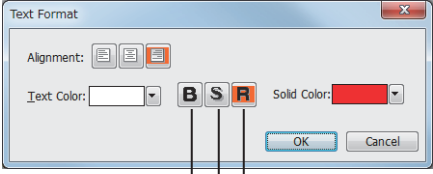

Item	Description
[Adjust Text Size]	Only when [Comment] is selected for [Input Method], this item can be set. The text size is automatically adjusted so that it fits the object size. When this item is not selected, the line feed is automatically applied to the text.
[Minimum Size]	This item can be set only when [Adjust Text Size] is set. Set the minimum text size for when [Adjust Text Size] is enabled. The setting range is [8] to [240] dots.

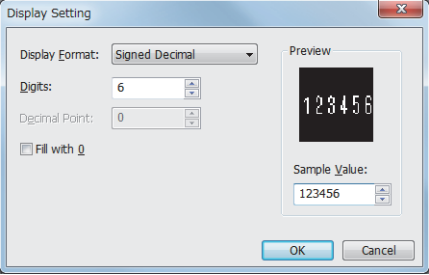

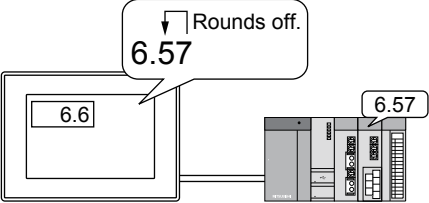

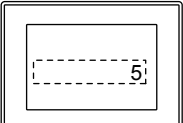

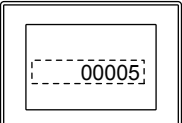

## 5) [Device]

Item	Description
[Logging ID]	Set the logging ID number to be displayed. The setting range is [1] to [32767]. When the [Edit] button is clicked, the [Logging] dialog appears and the logging ID number can be edited. →9.2 Collecting Device Data ([Logging])
[Device Setting]	Select the setting method for [No. Logging Device]. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous]: Set the number of successive devices counted from a set first device. The number of successive devices is the same as that of logging blocks.</li> <li>• [Random]: Set the number of devices one by one.</li> </ul>

## 6) [Display]

Item	Description
Edit button	Edits display columns or others. <div style="text-align: center;">  </div> <ul style="list-style-type: none"> <li>• [Insert Data Column] button Inserts a new column on the left of a selected data column.</li> <li>• [Cut] button Cuts a selected data column.</li> <li>• [Copy] button Copies a selected data column or character string.</li> <li>• [Paste] button Pastes a cut or copied data column or character string.</li> <li>• [Delete] button Deletes a selected data column.</li> </ul>
[Date/Data Column No.]	Displays the data column numbers of the number of the columns set for [Date] and [Display Columns].
[Digits]	Set the number of the digits displayed in each column. The following shows the setting range. <ul style="list-style-type: none"> <li>• [Date]: [5] to [100]</li> <li>• Data column No.: [1] to [100]</li> </ul>
[Title Text]	Set the title of each column. Depending on the selection in [Input Method], the setting items are different. <ul style="list-style-type: none"> <li>• If [Direct] is selected for [Input Method]: Enter the title in the text box directly.</li> <li>• If [Comment] is selected for [Input Method]: Set a comment No. or a comment. The setting range is [1] to [32767].</li> </ul>

Item	Description
<p>[Change Status (Text)]</p>	<p>Changes the text color of texts. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Changed]</li> <li>• [Not changed]</li> </ul> <p>When you select [Changed], the [Text Format] dialog appears.</p>  <ul style="list-style-type: none"> <li>• [Alignment] Set the vertical or horizontal position of the text.</li> <li>• [Text Color] Set the text color.</li> <li>→6.4.2 Color settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>
<p>[No. Logging Device]</p>	<p>In the [Device List] dialog, select a logging device of a selected logging ID number. When a logging device is selected in the [Device List] dialog, the order of the logging device and the device are displayed.</p>  <p>Setting order of the logging device ———— Logging device</p>
<p>[Device Type]</p>	<p>Displays the device type selected for [No. Logging Device].</p>

Item	Description
[Display Setting]	<p>Depending on the column to be set, the setting item differs.</p> <ul style="list-style-type: none"> <li>If the [Date] column is set: <ul style="list-style-type: none"> <li>Set the display format of the date and time for [Date/Time Setting].</li> </ul> </li> <li>→6.3 Date/Time Format Settings</li> <li>If a data column is set: <ul style="list-style-type: none"> <li>Set the display format of the device and numerical value in the [Display Setting] dialog.</li> </ul> </li> </ul>  <ul style="list-style-type: none"> <li><b>[Display Format]</b> <p>Select the display type of the device to be monitored. The setting range differs depending on the setting of [Device Type]. The setting range is [0] to [30]. This item can be set only when [Format] is [Real]. If there are digits to the right of a set rightmost digit, the value is rounded off and displayed. When 0 is set, the value is rounded off to the first decimal place. Example) Device value: 6.57 [Decimal Point]: 1</p>  </li> <li><b>[Fill with 0]</b> <p>Prefixed a numerical value with 0 and displays it. Example): When setting [5] for [Digits]</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="774 1848 965 2004"> <p>If not prefixed with 0</p>  </div> <div data-bbox="997 1848 1189 2004"> <p>If prefixed with 0</p>  </div> </div> </li> </ul>

Item	Description
[Display Setting]	<ul style="list-style-type: none"> <li>• [Preview] Displays the preview of the numerical value.</li> <li>• [Sample Value] Set the numerical value to be displayed in the preview.</li> </ul>
[Display Format]	Displays the setting of [Display Format] in the [Display Setting] dialog.
[Data Operation]	<p>Set an expression in the [Edit Data Expression] dialog.  →6.5.5 ■ 4 Setting data operations  When no expression is set, [None] is displayed.  For a device capable of storing an integer only, refer to the following to display the device value as a real number.  →8.10.3 ■ 5 Displaying an integer as a real number</p>
[Change Status (Text)]	<p>Change the text color of the data column.  The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Changed]</li> <li>• [Not changed]</li> </ul> <p>When you select [Changed], the [Text Format] dialog appears.</p> <div data-bbox="794 618 1230 790" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;"> </div> <p style="text-align: center;"> <span style="margin-right: 40px;">[Raised] button</span>  <span style="margin-right: 40px;">[Solid] button</span>  <span>[Bold] button</span> </p> <ul style="list-style-type: none"> <li>• [Alignment] Set the vertical or horizontal position of the text.</li> <li>• [Text Color] Set the text color. →6.4.2 Color settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

## 7) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

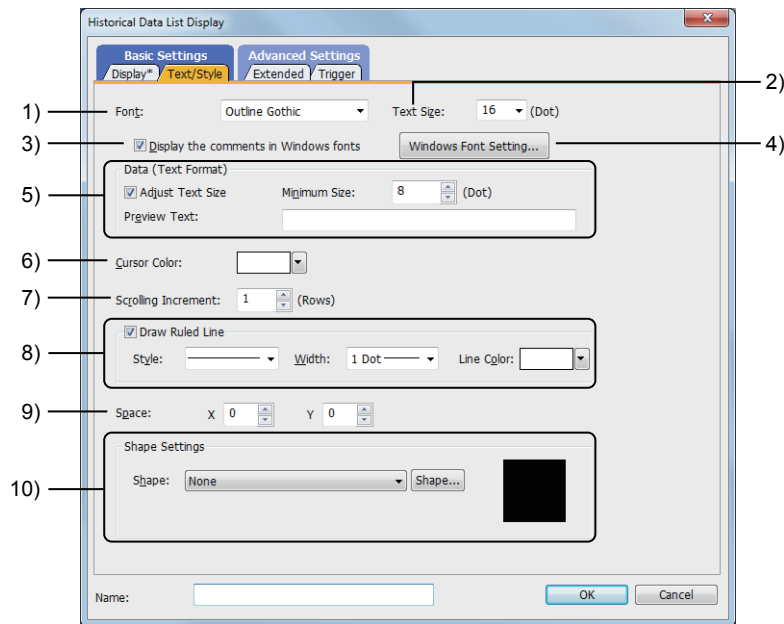

Up to 100 characters can be set.

## ■ 2 [Text/Style] tab

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

### 1) [Font]

Select the font of the displayed text.

The following shows the items to be selected.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

### 2) [Text Size]

Set the text size to be displayed.

⇒ 1.2.5 Font specifications

### 3) [Display the comments in Windows fonts]

Displays the following registered comments in Windows fonts.

- Comments set for the titles in the [Display] tab (when [Comment] is selected for [Specification])

### 4) [Windows Font Setting]

Displays the [Comment Group Property] dialog to list the properties of the comment group specified with [Group No.] in the [Display] tab.

Set [Windows Font] and [Character Set] for the target column of the comment group.

⇒ 5.8.4 ■ 2 (1) [Comment Group Property] dialog

### 5) [Data (Text Format)]

This item is settable only when [String] is selected for [Device Type] in any column on the [Display] tab.

Item	Description
[Adjust Text Size]	Automatically adjusts the text size according to the object size. When this item is not selected, a line feed is automatically added to the text.

Item	Description
[Minimum Size]	Set the minimum text size applied when the text size is automatically adjusted. The setting range is [8] dots to [240] dots.
[Preview Text]	Set the text to be previewed on the screen editor.

#### 6) [Cursor Color]

Select the color of the cursor used for selecting logging data.

→6.4.2 Color settings

#### 7) [Scrolling Increment]

Set the number of the rows for scroll operations on the list performed when the key cords for scrolling the list (up/down) (FFF4h, FFF5h) are entered.

The setting range is [1] to [27].

#### 8) [Draw Ruled Line]

Item	Description
[Style]	Select the style of ruled lines. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul>
[Width]	Select the width of ruled lines. <ul style="list-style-type: none"> <li>• [1Dot]</li> <li>• [2Dot]</li> <li>• [3Dot]</li> <li>• [4Dot]</li> <li>• [5Dot]</li> <li>• [7Dot]</li> </ul>
[Line Color]	Set the ruled line color. →6.4.2 Color settings

#### 9) [Space]

Set the space between the text or time display to be displayed and the ruled line of the table.

The setting range is [0] to [32].

The actually displayed space is defined by the setting of [Text Size] as follows.

Setting value of [Text Size] × setting value of [Space]

Example)

When setting [Text Size] to [2] and [Space] to [8]

#### 10) [Shape Settings]

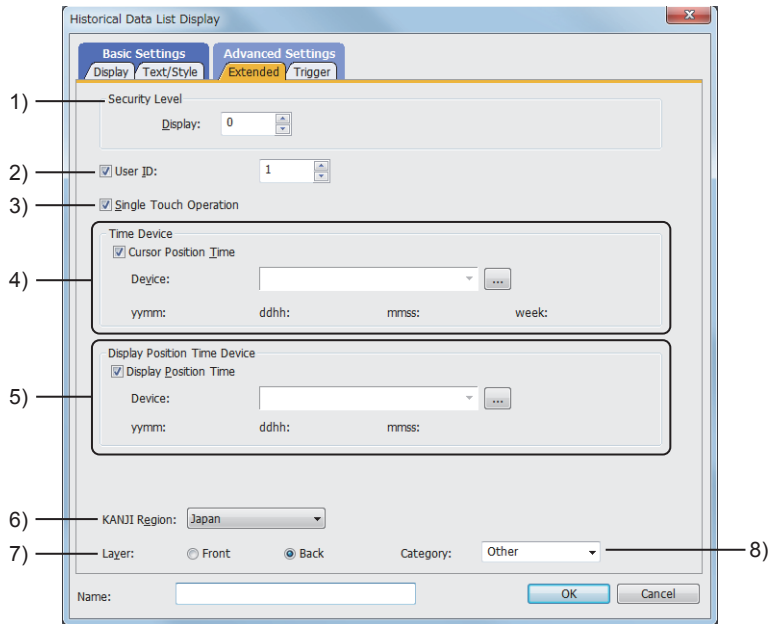

Item	Description
[Shape]	Select the shape to be set for the object from the list or with the [Shape] button. →6.5.5 ■ 1 Setting object shapes
[Frame Color]	Select the frame color of the shape. →6.4.2 Color settings
[Shape Color]	Select the color of the shape. →6.4.2 Color settings

### ■ 3 [Extended] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

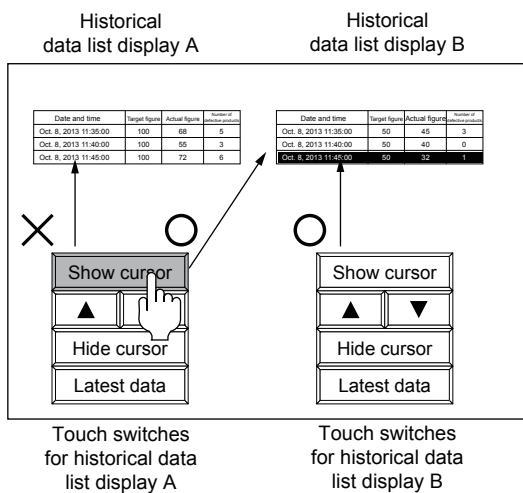

#### 2) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

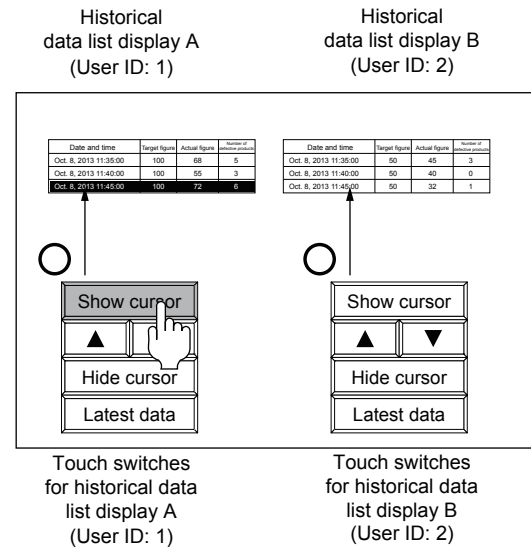

With the setting of user ID, each object can have an ID number (user ID) and the target ID (object) for an operation can be specified with a touch switch. Hence touch switch operations can be performed as required.

If user ID is not set

The touch switches for historical data list display A work for historical data list display B.

If user ID is set

Although the same key codes are used, the target for an operation can be specified with ID numbers. Hence operations can be performed as required.

To specify the user ID of the object to be operated with a touch switch, set [User ID for a key input] or [Individually set user ID for key input].

For touch switches, refer to the following.

⇒ 8.2.4 [Switch] dialog

8.2.11 [Key Code Switch] dialog

### 3) [Single Touch Operation]

Displays the cursor in the touched position directly.

### 4) [Time Device]

Item	Description
[Cursor Position Time]	Writes the date and time displayed in the position where the cursor is displayed to a device as BCD data. Set a device for [Device] in which the date and time are stored.
[Device]	Set a device in which the date and time are stored.*1*2*3*4Set a GOT internal device for this item. When a controller device is used, the monitor speeds may become slow. ⇒ 6.1.1 How to set devices 12.1 GOT Internal Device

\*1 Method of storing in devices

Time is stored in the upper eight bits and lower eight bits of a set device.

Example) When setting D100

D100	b15 to b8 (Year)	b7 to b0 (Month)
D101	b15 to b8 (Day)	b7 to b0 (Time)
D102	b15 to b8 (Minute)	b7 to b0 (Second)
D103	b15 to b8 Not used	b7 to b0 (Day of the week)

(0: Sunday, 1: Monday, 2: Tuesday, 3: Wednesday, 4: Thursday, 5: Friday, 6: Saturday)

\*2 Monitoring set devices

When monitoring a device with a numerical display, select [BDC16] or [BCD32] for [Data Type], and set [Bit Mask] and [Bit Shift] of [Data Operation] as follows.

Example) Example of numerical display settings

When displaying the year (upper 8 bits)

Lower 8 bits of D100 (b7 to b0): Masked

Upper 8 bits of D100 (b15 to b8): Shifted to the right by 8 bits

When displaying the Month (Lower 8 bits)

Upper 8 bits of D100 (b15 to b8): Masked

\*3 Timing with which data is stored in devices

With the following timings, data is stored.

- When the cursor is displayed in the list
- When the displayed cursor is moved

· When the cursor is displayed and the historical data list display is operated with a touch switch

\*4 Values to be stored in devices

If the cursor is displayed in the list, the update processing of the list stops.

Into a device, the value of the data and time displayed in the position where the cursor is displayed at the processing stop is stored.

Example) Storing a date and time into a device

Example) Storing time in the device

Show cursor

Stores the time displayed where the cursor is placed.

Date and time	Target figure	Actual figure	Number of defective products
Oct. 8, 2013 11:35:00	100	68	5
Oct. 8, 2013 11:40:00	100	55	3
Oct. 8, 2013 11:45:00	100	72	6
Oct. 8, 2013 11:50:00	100	66	6
Oct. 8, 2013 11:55:00	100	81	6
Oct. 8, 2013 12:00:00	100	55	3
Oct. 8, 2013 12:05:00	100	64	5

Stores the time displayed where the cursor is placed.

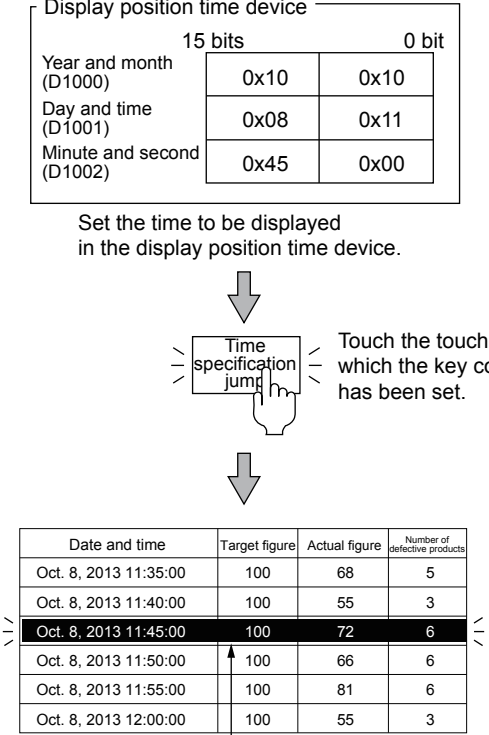

Cursor move

Date and time	Target figure	Actual figure	Number of defective products
Oct. 8, 2013 11:35:00	100	68	5
Oct. 8, 2013 11:40:00	100	55	3
Oct. 8, 2013 11:45:00	100	72	6
Oct. 8, 2013 11:50:00	100	66	6
Oct. 8, 2013 11:55:00	100	81	6
Oct. 8, 2013 12:00:00	100	55	3
Oct. 8, 2013 12:05:00	100	64	5

Data displayed where the cursor is placed at the instant when a draw processing stops is stored with the timing that the cursor is displayed/moved.

5) [Display Position Time Device]

Item	Description
[Display Position Time]	Displays the data of a specified date and time. (Time specification jump function) Set a device for [Device] in which a specified date and time are stored.

Item	Description
[Device]	<p>Set a device in which a specified date and time are stored.            →6.1.1 How to set devices</p> <p>The successive devices from a set device are set to store the data of year and month, day and hour, and minute and second.            By using [Display Position Time Device] and a touch switch, the logging data obtained at a specified date and time can be displayed in the center of the historical data list display. (The cursor is displayed in the position of the logging data obtained at a specified time.)            If logging data are not obtained at a specified date and time, the logging data obtained at the nearest date and time is displayed.</p> <ul style="list-style-type: none"> <li>• Specification of the time which can be set                Data type: BCD16 (binary coded decimal)                Data range: Jan.1, 2000 to Dec.31, 2099</li> <li>• Required settings*1</li> <li>• Operation example</li> </ul> <p>The following shows an example of a time specification jump function operation.            Example) When setting D1000 as the display position time specification device and displaying the data of Oct.8, 2010 11:45:00</p> <div style="text-align: center;">  <p style="text-align: center;">Set the time to be displayed in the display position time device.</p> <p style="text-align: center;">Touch the touch switch for which the key code (FFD4h) has been set.</p> <p style="text-align: center;">The data obtained at the specified time (Oct. 8, 2010 11:45:00) can be displayed in the center of the list.</p> </div> <p>For precautions of the time specification jump function, refer to the following.            →8.10.3 Precautions for a historical data list display object</p>

\*1 Place the following objects on the screen and set them.

Object	Settings
Switch, key code switch	Read from the library of GT Designer3 or create them. →8.10.2 ■ 5 Displaying data obtained at a specified time When creating the objects, set [Action] of [Code Setting] to [Display Position Time Device] for each object. →8.2 Placing a Touch Switch
Historical Data List Display	Select [Display Position Time] in the [Extended] tab and set a device. → ■ 3 [Extended] tab

### 6) [KANJI region]

Select the KANJI region of the displayed text.  
 The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

### 7) [Layer]

Not available to GT21.  
 Switches layers to be placed.  
 The following shows the items to be selected.

- [Front]
- [Back]

#### 8) [Category]

Select the category to assign the object.  
 ⇒ 11.7 Managing figures and objects by category

### ■ 4 [Trigger] tab

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.  
 When the set device is in either the ON or OFF status, select whether or not to display the object.  
 The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒ 6.1.1 How to set devices

### 8.10.5 Relevant settings

#### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
 ⇒ 5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.11 Placing an Alarm Display

---

For how to place and set the alarm display, refer to the following.

→9.1.5 Viewing alarm events (Alarm display)

## 8.12 Placing a Simple Alarm Display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

With this function, a user-created comment can be displayed as an alarm message when an alarm occurs. When multiple devices turn on, a comment is displayed in the order in which comments are set.

For details of alarms, refer to the following.

→9.1 Collecting Alarms by Monitoring Devices or the System ([Alarm])

### 8.12.1 Specifications of the simple alarm display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■1 Maximum number of objects arrangeable on one screen

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 24 objects can be placed.
- For GT21  
One object can be placed.

#### ■2 Displaying the time of occurrences

For the time of occurrences, the clock data of the GOT is used.

If you switch the screen having no simple alarm display object to another screen having a simple alarm display object, the time of screen switching is displayed as the time of occurrence of an alarm event.

To collect the event occurrence time data regardless of the displayed screen, use an alarm display (user) object.

→9.1 Collecting Alarms by Monitoring Devices or the System ([Alarm])

For the precautions and restrictions of the clock function which manages the GOT clock data, refer to the following.

→5.3.5 Setting the GOT time setting method ([Time Setting])

#### ■3 Comments displayed in simple alarm displays

For the comments to be displayed, use a comment group.

For details of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

## 8.12.2 How to use the simple alarm display

### ■1 Placing the simple alarm display

Place simple alarm displays on the screen editor.

→6.5.1 Placing figures and objects

### ■2 Editing simple alarm displays

Edit simple alarm displays that have been placed on the screen editor.

→6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■3 Setting simple alarm displays

Set simple alarm displays that have been placed on the screen editor.

Common setting of objects

→6.5.5 Common setting for objects

Simple alarm display settings

→8.12.4 [Simple Alarm Display] dialog

### ■4 Number of alarms on display

Select whether to display just one of alarms that have occurred or display more.

→8.12.4 ■ 1 [Device] tab

- Displaying multiple alarms

One alarm is displayed in one row.

The part that cannot be displayed within a row is not displayed.

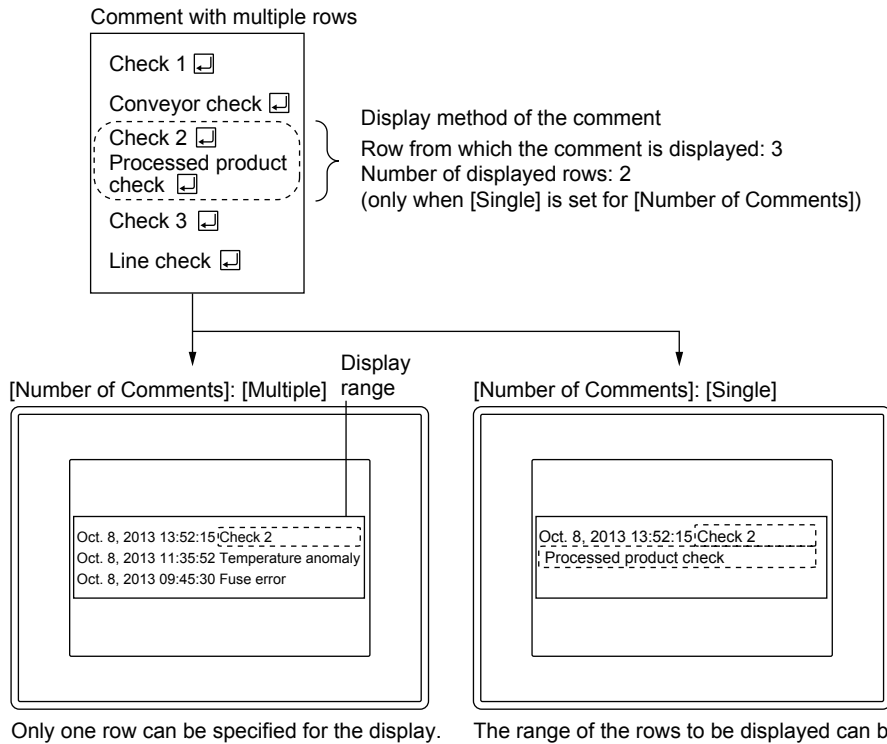

A comment that involves multiple rows cannot be displayed from its second row.

[Number of Comments]: [Multiple] Display range

When multiple alarms are displayed, any one of multiple rows that a comment involves can be set as the target for the display.

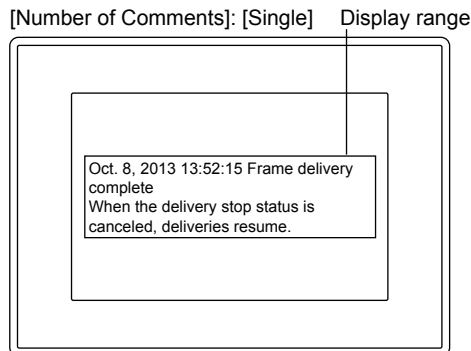

Example) Displaying any one of six rows that a registered comment involves

• Displaying one alarm

The part that overflows from the first row goes down to the next line.

A comment that involves multiple rows is displayed in more than two rows as long as the comment length is within the display range.

■ 5 Display order

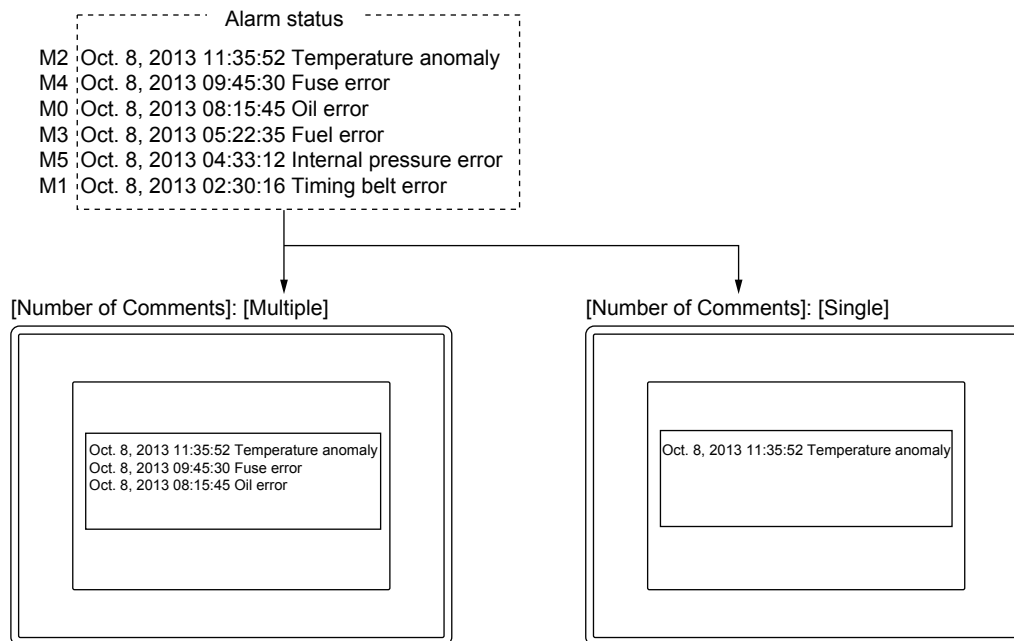

Set the type of the order in which multiple alarms are displayed.

By the setting, alarms can be displayed in order of time of their occurrences or device number.

⇒ 8.12.4 ■ 2 [Style] tab

Example) When displaying alarms in order of time of occurrences from the latest

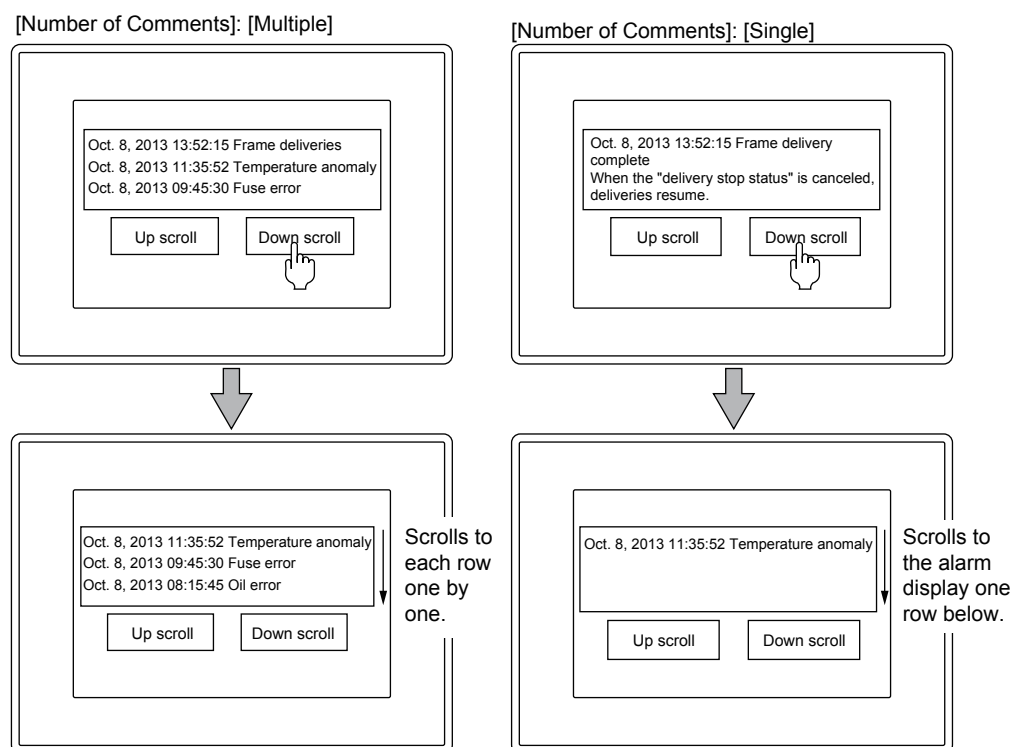

## ■6 Scroll

The part of a comment that extends off the display range can be checked by scrolling the simple alarm to the part. To perform scrolling, create a touch switch for the system alarm.

→ ■9 Touch switches for simple alarm displays

## ■7 About the detail display

The detail display can be set only when [Multiple] is selected for [Number of Comments] in the [Device] tab.

→8.12.4 ■1 [Device] tab

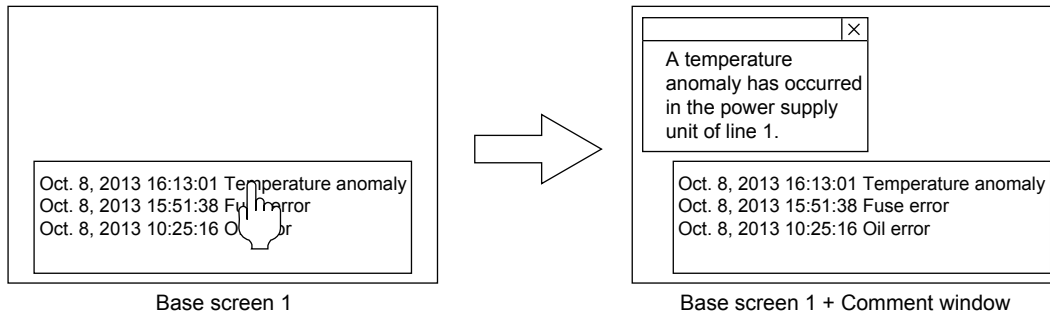

### (1) Available screens

When setting the causes of alarms and corrective actions as the target for the detail display, the screen used for the display can be selected from three types.

#### (a) Comment window

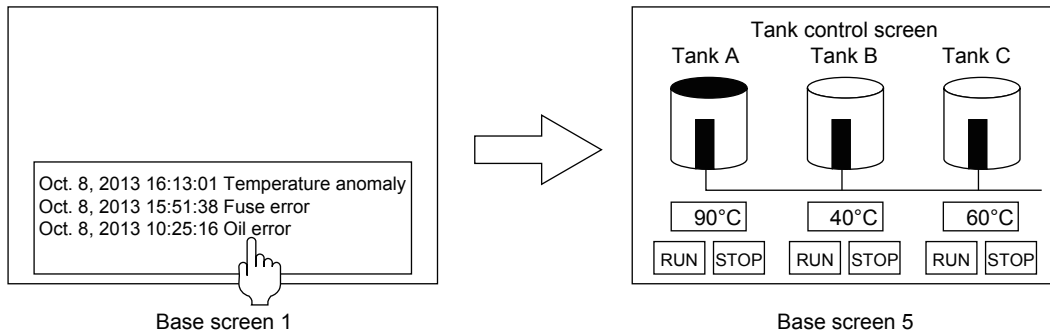

Displays a comment a user registers.

In the detail display, a comment different from the one for the simple alarm can be displayed.

**(b) Base screen**

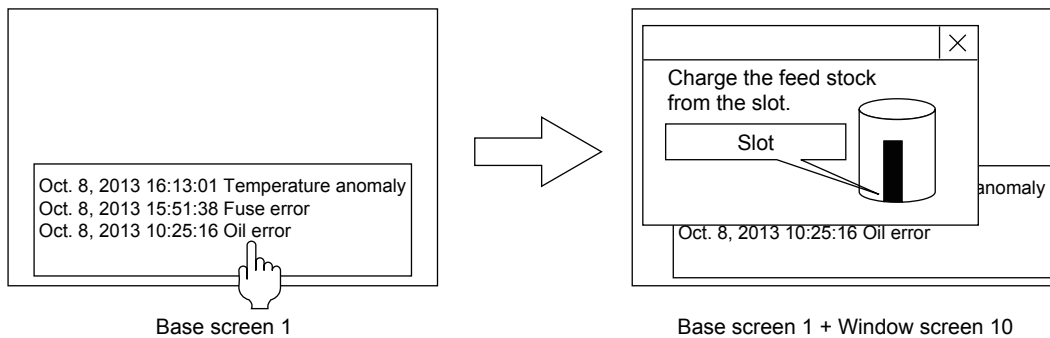

Displays a specified base screen.

**(c) Window screen**

Displays a specified window screen.

A specified window screen can be displayed using overlap window 1.

**(2) Relation between the screen where the simple alarm is set and the screen used for the detail display**

Switching: Switches the screen where the simple alarm is set to the screen used for the detail display.

Simultaneous display: Leaves displayed the screen where the simple alarm is set and displays the screen used for the detail display.

Screen for which the simple alarm is set	Screen for the detail display		
	Comment window	Window screen	Base screen
Base screen	Simultaneous display	Simultaneous display	Switching
Overlap window 1		Switching	Simultaneous display
Overlap window 2		Simultaneous display	
Overlap window 3			
Overlap window 4			
Overlap window 5			
Superimpose window 1			
Superimpose window 2			

### (3) Specify the comment number to be displayed or the offset value of the screen number

When [Detail No. Offset] in the [Device] tab is set, the offset value for the detail display can be specified.

⇒ 8.12.4 ■ 1 [Device] tab

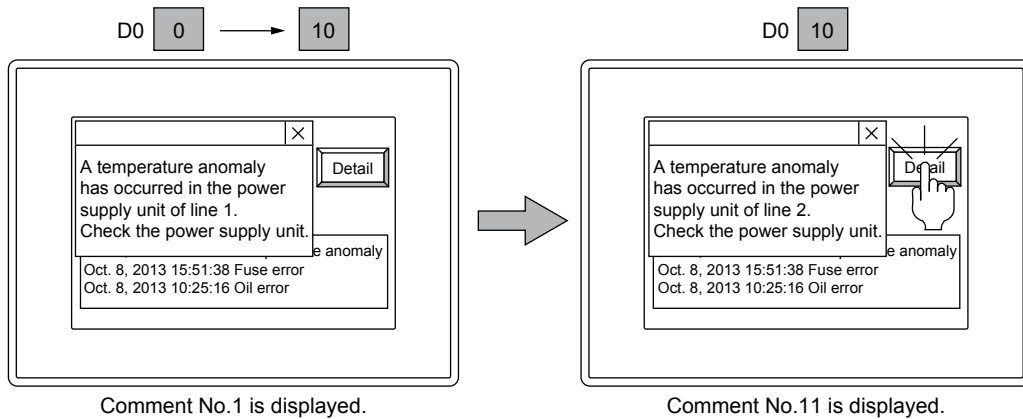

The targets which can be specified by the offset value for the detail display are as follows.

- Comment number to be displayed in the comment window
- Base screen numbers and window screen numbers

While monitoring with the GOT, you can switch the comment number or screen number with a device.

Example) When setting D0 for [Detail No. Offset] and registering comments as follows.

Comment No.	Comment
1	A temperature anomaly has occurred in the power supply unit of line 1. Check the power supply unit.
2	Replace the fuse of the power supply unit of line 1.
⋮	⋮
⋮	⋮
11	A temperature anomaly has occurred in the power supply unit of line 2. Check the power supply unit.
12	Replace the fuse of the power supply unit of line 2.

#### Point

#### Changing comments of the simple alarm

Comments of the simple alarm cannot be changed in [Detail No. Offset].

When changing a comment of the simple alarm with an offset device, set [Comment No. Offset] in the [Extended] tab.

⇒ 8.12.4 ■ 3 [Extended] tab

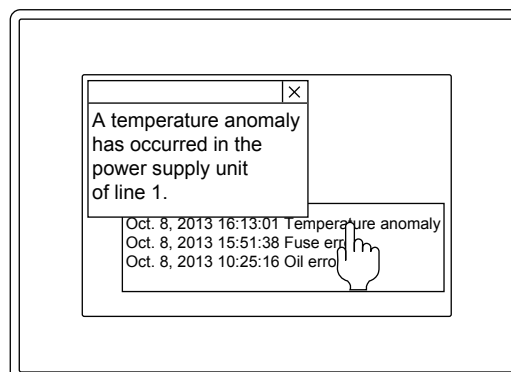

### (4) Display method

Select the method of displaying the detail display from the following two types.

#### (a) Touch operation

Touch the simple alarm directly to display the detail display.

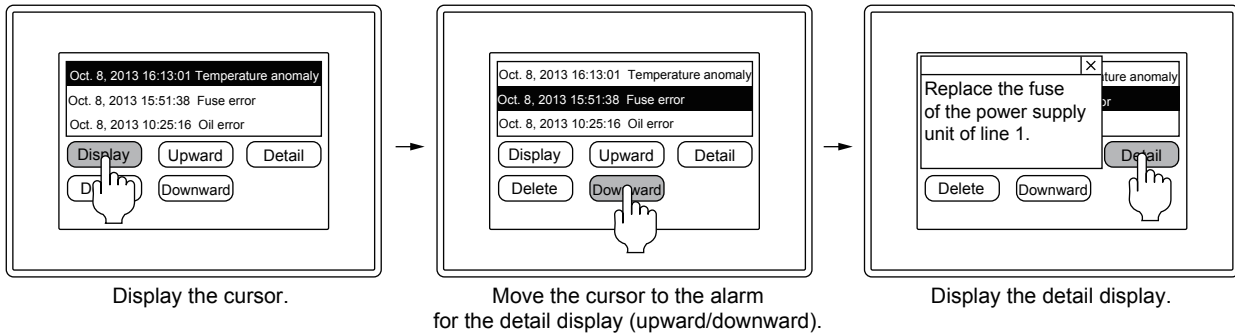

⇒ ■ 8 Operating by touching the simple alarm directly

## (b) Touch switch

Create a touch switch for the detail display to display the detail display.

⇒ ■ 9 Touch switches for simple alarm displays

## ■ 8 Operating by touching the simple alarm directly

By setting [Touch Mode] in the [Device] tab, the following operations can be performed.

⇒ 8.12.4 ■ 1 [Device] tab

- Selecting [Selection] for [Touch Mode].

An alarm can be selected at the direct touch of the simple alarm display.

The touched alarm is selected.

When the alarm is touched again, the selection of the alarm is canceled.

- Selecting [Operation] for [Touch Mode]

The detail display can be displayed at the direct touch of the simple alarm display.

The touched alarm is selected.

When the alarm again is touched again, the detail display is displayed.

## ■9 Touch switches for simple alarm displays

Touch switches for the simple alarm display is available by reading from the library of GT Designer3.

The characters and shapes on the touch switches can be changed by a user.

When key codes are set for touch switches, touch switches for the simple alarm display can be created by a user.

→8.2.4 [Switch] dialog

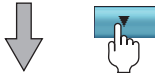

8.2.11 [Key Code Switch] dialog

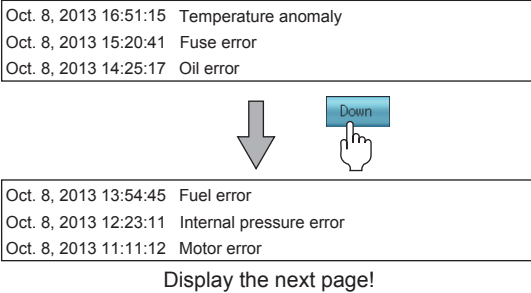

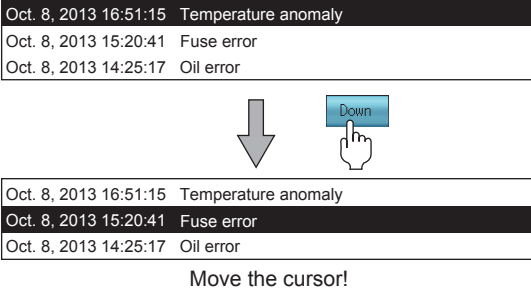

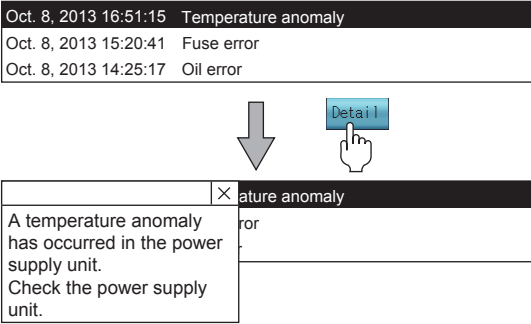

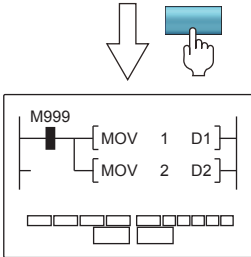

Application example 1

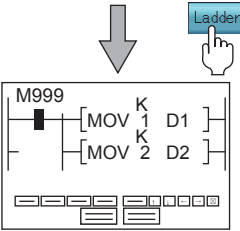

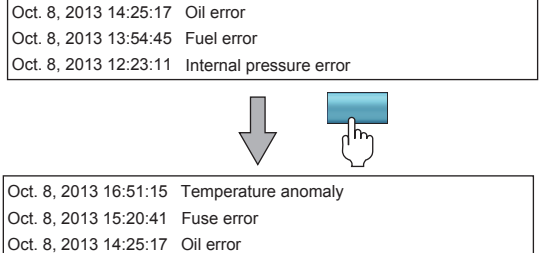

Application example 2

Touch switch	Key code	Description
Scroll up by one line 	00F2h	Switches the display between one row above and one row below. This function is available only when the cursor is hidden.  <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">             Oct. 8, 2013 16:51:15 Temperature anomaly              Oct. 8, 2013 15:20:41 Fuse error              Oct. 8, 2013 14:25:17 Oil error           </div> <div style="text-align: center;">  </div> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">             Oct. 8, 2013 15:20:41 Fuse error              Oct. 8, 2013 14:25:17 Oil error              Oct. 8, 2013 13:54:45 Fuel error           </div> <p style="text-align: center;">Scroll to the one row below!</p>
Scroll down by one line 	00F3h	
Show cursor 	FFB0h	Displays or deletes the cursor.  <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">             Oct. 8, 2013 16:51:15 Temperature anomaly              Oct. 8, 2013 15:20:41 Fuse error              Oct. 8, 2013 14:25:17 Oil error           </div> <div style="text-align: center;">  </div> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> <div style="background-color: black; color: white; padding: 2px;">             Oct. 8, 2013 16:51:15 Temperature anomaly           </div>             Oct. 8, 2013 15:20:41 Fuse error              Oct. 8, 2013 14:25:17 Oil error           </div> <p style="text-align: center;">Display the cursor!</p>
Hide cursor 	FFB1h

Example) When [Latest] is selected for [Sort]</p> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">             Oct. 8, 2013 14:25:17 Oil error              Oct. 8, 2013 13:54:45 Fuel error              Oct. 8, 2013 12:23:11 Internal pressure error           </div> <div style="text-align: center;">  </div> <p style="text-align: center;">Display the first alarm!</p>

**Point**

**Touch switches working differently depending on the display status**

There are touch switches working differently depending on the display status.

When the cursor is hidden, the move cursor upward (FFB2h) and move cursor downward (FFB3h) display the previous page and next page respectively by page. When the cursor is hidden, they move the cursor upward and downward respectively by row.

**10 Operations performed using the object gesture function**

The display of objects can be operated using gestures.

For operations with gestures, refer to the following.

- 11.13 Operating Objects by the Gesture (Object Gesture Function)

## 8.12.3 Precautions for a simple alarm display object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■ 1 Text display in the row where the cursor is inserted

If the pattern of the background color of the screen or [Shape Color] in the [Style] tab is set to white, the text color and cursor color are shown in the same color, and the text in the row where the cursor is inserted becomes invisible. To display the text in the row where the cursor is inserted, set the background color of the screen or [Shape Color] in the [Style] tab to a color other than white.

- ⇒ 8.12.4 ■ 2 [Style] tab
- 2.5.1 Creating a screen

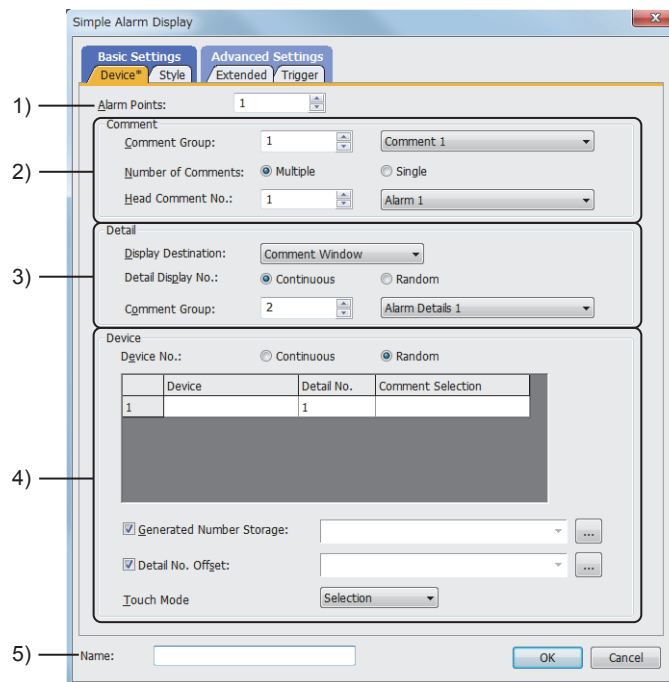

## 8.12.4 [Simple Alarm Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Alarm Display] → [Simple Alarm Display] from the menu.
- Step 2** Click the position where you place the simple alarm display. Placing the simple alarm display is complete.
- Step 3** Double-click the simple alarm display which has been placed to display the setting dialog.
  - ⇒ ■ 1 [Device] tab
  - 2 [Style] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab

### ■ 1 [Device] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Alarm Points]

Set the number of devices to be monitored.

The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000

The setting range is [1] to [8192].

- For GT21

When [Continuous] is selected for [Device No.], the setting range is [1] to [1024].

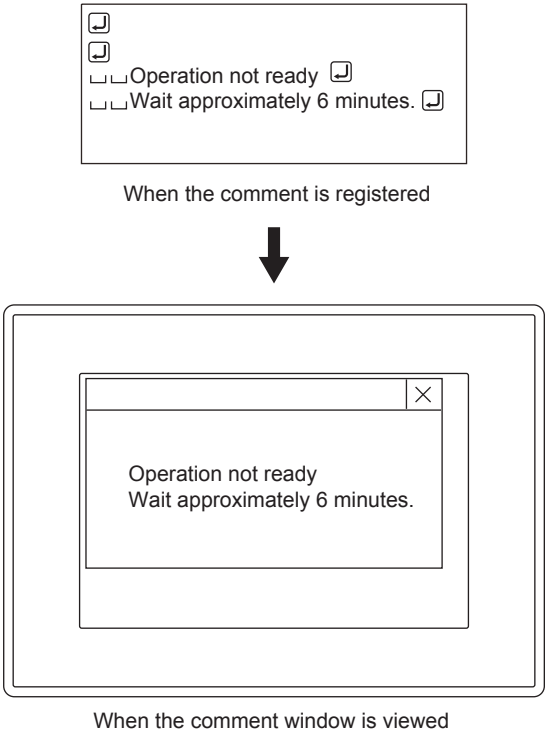

When [Random] is selected for [Device No.], the setting range is [1] to [512].

## 2) [Comment]

Item	Description																		
[Comment Group]	Set the comment group number to be used. The setting range is [1] to [500].																		
[Number of Comments]	Select the number of comments to be displayed in the display frame. The following shows the items to be selected. • [Multiple] • [Single]																		
[Head Comment No.]	<p>Set the comment number displayed when an alarm occurs. The setting range is [1] to [32767]. The comment number set for this item is assigned to the start device in the device tab. From the number set for this item, numbers are set successively. The number of the set successive numbers is the same as that of the devices to be monitored. Example) Start device: M100 [Head Comment No.]: 1</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 30%;"></td> <td style="width: 30%; text-align: center;">Monitored device</td> <td style="width: 30%; text-align: center;">Comment No. (basic comment)</td> <td style="width: 10%;"></td> <td style="width: 10%;"></td> </tr> <tr> <td></td> <td>M100 .....</td> <td>1 Temperature anomaly</td> <td style="text-align: center;">—————</td> <td>Head comment No.</td> </tr> <tr> <td></td> <td>M101 .....</td> <td>2 Fuse error</td> <td rowspan="2" style="font-size: 2em; vertical-align: middle;">}</td> <td rowspan="2">The comments that have given the successive Nos. counted from the head comment No. are set.</td> </tr> <tr> <td></td> <td>M102 .....</td> <td>3 Oil error</td> </tr> </table>		Monitored device	Comment No. (basic comment)				M100 .....	1 Temperature anomaly	—————	Head comment No.		M101 .....	2 Fuse error	}	The comments that have given the successive Nos. counted from the head comment No. are set.		M102 .....	3 Oil error
	Monitored device	Comment No. (basic comment)																	
	M100 .....	1 Temperature anomaly	—————	Head comment No.															
	M101 .....	2 Fuse error	}	The comments that have given the successive Nos. counted from the head comment No. are set.															
	M102 .....	3 Oil error																	

3) [Detail]

Item	Description
[Display Destination]	<p>This item can be selected only when [Multiple] is selected for [Comment].            Select the setting method of the detail display.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Not Display]: Does not display the detail display.</li> <li>• [Comment Window]: Displays the detail display in the window for the detail display. In the comment window, registered comments are displayed.</li> <li>• [Base Screen] Displays a base screen for the detail display.</li> <li>• [Window Screen] Displays a window screen for the detail display. The window screen is displayed using overlap window 1.</li> </ul> <p>The following shows the method of displaying the comment window.</p> <ul style="list-style-type: none"> <li>• Number of characters that can be displayed in a comment window               <ul style="list-style-type: none"> <li>• For GT27, GT25, GT23, and GT SoftGOT2000 Up to 429 one-byte characters (11 lines of 39 characters) are displayed. Up to 209 one-byte characters (11 lines of 19 characters) are displayed.</li> <li>• For GT2107-W, GT2105-Q, and GT2104-R Up to 161 one-byte characters (7 lines of 23 characters) are displayed. Up to 77 two-byte characters (7 lines of 11 characters) are displayed.</li> <li>• For GT21-P Up to 203 one-byte characters (7 lines of 29 characters) are displayed. Up to 98 two-byte characters (7 lines of 14 characters) are displayed.</li> </ul> </li> <li>• Display position of the comment window A comment window is displayed on the base screen. The window can be moved and closed in the same way that operates window screens.</li> <li>• Display of comments Text size is fixed to one time high and one time wide. Regardless of the settings made when comments are registered, a blink and HQ characters are not displayed.</li> <li>• Display of comment rows From the top left of the comment window, the registered comments are displayed. When a comment is longer than the display range of the comment window, the comment is wrapped around to be displayed. To display the comment in the center of the comment window, adjust the position of the comment by inserting line feeds.</li> </ul> <div style="text-align: center; margin-top: 20px;">  <p>When the comment is registered</p> <p>↓</p> <p>When the comment window is viewed</p> </div>

Item	Description
[Detail]	When [Comment Window], [Base Screen], or [Window Screen] is selected for [Display Destination], this item can be selected. Select the method of setting comment numbers, window screen numbers, or base screen numbers. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous]: Sets successive comment numbers, window screen numbers, or base screen numbers starting from a set comment number, window screen number, or base screen number.</li> <li>• [Random] Sets numbers one by one.</li> </ul>
[Comment Group]	This item can be selected only when [Comment Window] is selected for [Display Destination]. Set the comment group assigned to the comment to be displayed in the comment window. The setting range is [1] to [500].

#### 4) [Device]

Item	Description
[Device No.]	Select the display method of the device to be monitored. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous]: Sets successive devices starting from a set device.</li> <li>• [Random]: set device numbers one by one.</li> </ul>
[Device]	Set the device to be monitored. ⇒6.1.1 How to set devices
[Detail]	When [Comment Window], [Base Screen], or [Window Screen] is selected for [Display Destination], this item can be selected. Set a comment number, window screen number, and base screen number. The setting range is [1] to [32767].
[Comment Selection]	Displays the comment and screen title set for [Detail No.] of [Device]. A comment number, window screen number, or base screen number can be set by selecting a comment or screen title for this item.
[Generated Number Storage]	Set a device in which the number of alarms that have occurred (number of devices that have turned on) is stored. ⇒6.1.1 How to set devices
[Detail No. Offset]	When [Comment Window], [Base Screen], or [Window Screen] is selected for [Display Destination], this item can be set. The display of the detail display can be switched with a single device value. The data length of the set device is fixed to 16 bits. The device value set for this item is added to the comment number, base screen number, or window screen number set for [Detail No.] of [Device]. ⇒6.1.9 Offset
[Touch Mode]	This item can be selected only when [Multiple] is selected for [Comment]. Select the operation performed when the simple alarm display is touched. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [None] Disables touch operations.</li> <li>• [Selection] Selects a touched alarm.</li> <li>• [Operation] Displays the detail screen of a touched alarm.</li> </ul>

#### 5) [Name]

Set the object name.

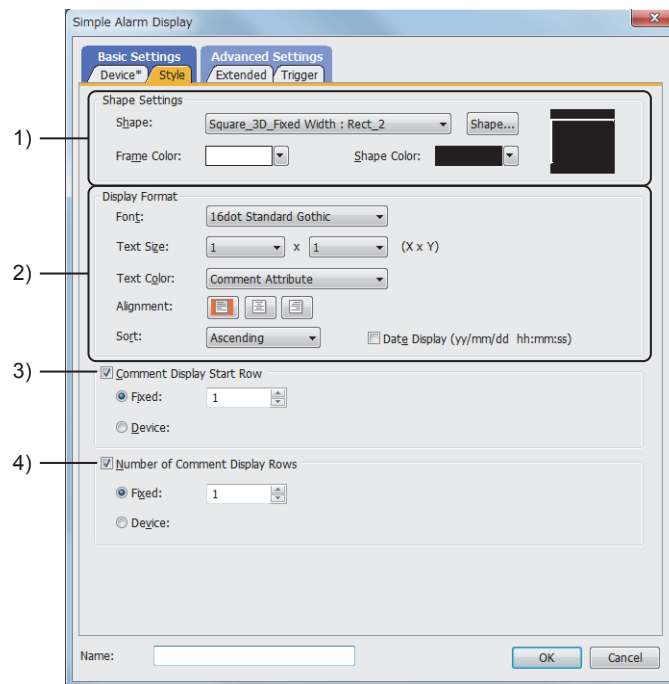

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Shape Settings]

Item	Description
[Shape]	Select the shape to be set for the object from the list or with the [Shape] button. →6.5.5 ■ 1 Setting object shapes
[Frame Color]	Select the frame color of the shape. →6.4 Color Settings
[Shape Color]	Select the color of the shape. →6.4 Color Settings
Preview	Displays the preview of the screen.

### 2) [Display Format]

Item	Description
[Font]	Select the font of the displayed text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> When displaying a comment in HQ character, set [High Quality Font] for the comment group and set an even multiple of the text size. If an odd multiple of the text size is set, the comment is not displayed in HQ character.
[Text Size]	Set the text size to be displayed. →1.2.5 Font specifications
[Text Color]	Set the text color. →6.4 Color Settings The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Fixed]: Displays comments only in the color set as a text color.</li> <li>• [Comment Attribute] Applies colors of comments according to the character attribute set for the comment group, and displays the comments.</li> </ul>
[Alignment]	Set the horizontal position of the text.

Item	Description
[Sort]	<p>Select the type of the order in which alarms are displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Ascending]</li> <li>• [Descending]</li> <li>• [Oldest]</li> <li>• [Latest]</li> </ul> <p>When the devices to be monitored are set randomly and [Ascending] or [Descending] is selected, alarms are displayed in the order in which the devices are set.</p>
[Date Display (yy/mm/dd hh:mm:ss)]	<p>Displays the date and time of the occurrences of alarms in the simple alarm display. For the year, the lower 2 digits are displayed. The time is displayed in the 24-hour time format.</p>

### 3) [Comment Display Start Row]

When setting a comment involving multiple rows, set the row from which the comment is displayed. Depending on the selection, the method of setting the row from which the comment is displayed varies.

- [Fixed]

Set by entering directly.  
The setting range is [1] to [32767].

- [Device]:

Set the device value as the start row to be displayed.

→6.1.1 How to set devices

If the comment is displayed in blank characters, check if the row from which the comment is display is set outside the range of the comment rows.

### 4) [Number of Comment Display Rows]

The item can be set only when [Single] is selected for [Number of Comments] in the [Device] tab. When setting a comment involving multiple rows, set the number of the rows to be displayed.

Depending on the selection, the method of setting the number of the rows to be displayed varies.

- [Fixed]

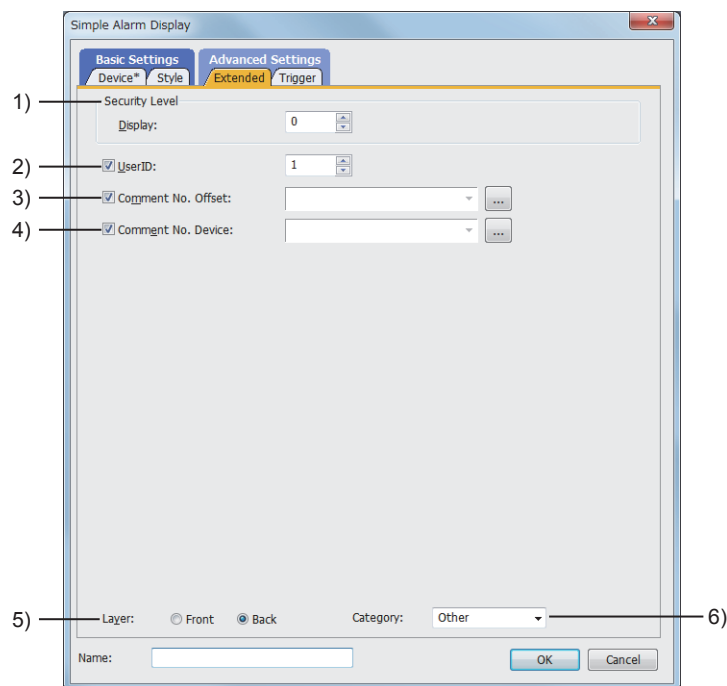

Set by entering directly.  
The setting range is [1] to [32767].

- [Device]:

Set the device value as the number of rows to be displayed.

→6.1.1 How to set devices

## ■ 3 [Extended] tab

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

## 2) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

With the setting of user ID, the target ID (object) for an operation can be specified with a touch switch. Hence touch switch operations can be performed as required.

For secure operations of the touch switches for system alarm displays, set user ID.

To specify the user ID of the object to be operated with a touch switch, set [User ID for a key input] or [Individually set user ID for key input].

For touch switches, refer to the following.

⇒8.2.4 [Switch] dialog

8.2.11 [Key Code Switch] dialog

## 3) [Comment No. Offset]

Comments displayed in the simple alarm can be switched with a single device value.

The device value set for this item is added to the comment number set for [Head Comment No.] of [Device].

⇒6.1.9 Offset

## 4) [Comment No. Device]

Set a device that stores the comment number of an alarm.

Depending on the selection for [Number of Comments], the comment number assigned to the alarm to be stored in the device differs.

- If [Number of Comments] is [Multiple]

The comment number assigned to the alarm with which the cursor is displayed is stored.

- If [Number of Comments] is [Single]

The comment number assigned to the alarm on display is stored.

When displaying the cursor, make the following settings.

- Select [Selection] for [Touch Mode].
- Place the touch switches for the simple alarm display

⇒8.2.4 [Switch] dialog

8.2.11 [Key Code Switch] dialog

## 5) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

## 6) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.  
When the set device is in either the ON or OFF status, select whether or not to display the object.  
The following shows the items to be selected.

- [ON Display]
- [OFF Display]

→6.1.1 How to set devices

### 2) [Trigger Type]

Select the condition of displaying the object.  
The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

→6.2 Setting Trigger Types

## 8.12.5 Relevant settings

Set the relevant settings other than the specific settings for the simple alarm display as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### ■ 2 GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Notifying the key codes set to the input keys when the keys are input to text input, touch switch, or other objects (Write device)	[Key Code Input]
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]

## 8.13 Placing a System Alarm Display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

With this function, error codes and error messages can be displayed when errors occur in the GOT, controllers, and networks.

The status an error causes and the cause of the error can be checked.

The registration of the comments to be displayed in the system alarm is not necessary. (They are registered in the GOT)

For details of alarms, refer to the following.

→9.1 Collecting Alarms by Monitoring Devices or the System ([Alarm])

### 8.13.1 Specifications of the system alarm display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■1 Maximum number of objects arrangeable on one screen

One system alarm display can be placed on one screen.

#### ■2 Types of system alarms

There are the following three types of system alarms.

- CPU error  
Indicates an error of a controller.
- GOT error  
Indicates an error of the GOT.  
A GOT Mobile error, which occurs on a GOT Mobile function client, is categorized as a GOT error.
- Network error  
Indicates an error of the communication unit mounted on the GOT.

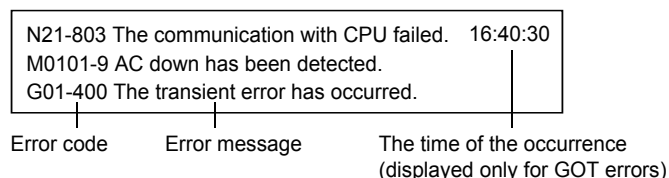

#### ■3 How to collect data

The data of alarm status is always collected in the cycle of 3 seconds and retained in the GOT, even if a screen on which no system alarm is placed is displayed.

#### ■4 Contents displayed in the system alarm

In the system alarm, error codes, error messages, and the time of occurrence are displayed.

The error codes and the error messages to be displayed are registered in the GOT as the default, so creating by a user is not necessary.

#### ■5 Displaying the time of occurrences of alarms

For the time of occurrences, the clock data of the GOT is used.

For the precautions and restrictions of the clock function which manages the GOT clock data, refer to the following.

→5.3.5 Setting the GOT time setting method ([Time Setting])

## 8.13.2 How to use the system alarm display

### ■ 1 Placing the system alarm display

Place the system alarm display on the screen editor.

⇒6.5.1 Placing figures and objects

### ■ 2 Editing the system alarm display

Edit the system alarm display that has been placed on the screen editor.

⇒6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■ 3 Setting the system alarm display

Set the system alarm display that has been placed on the screen editor.

Common setting of objects

⇒6.5.5 Common setting for objects

System alarm display settings

⇒8.13.4 [System Alarm Display] dialog

### ■ 4 How to display alarms

#### (1) Maximum number of the alarms that can be displayed

The system alarm displays three types of alarms in different rows for each type, and up to three rows can be displayed.

When a new alarm is detected, the alarm display being displayed is updated.

Example) When a controller detects a new alarm (parameter error)

G01-400	The communication with CPU failed.	16:40:30
M0101-9	AC down has been detected.	
N21-803	The transient error has occurred.	

G01-400	The communication with CPU failed.	16:40:30
M0101-104	A parameter error has occurred.	
N21-803	The transient error has occurred.	

The error display of controllers is updated.  
(M0101-9→M0101-104)

#### (2) Order of priority in which alarms are displayed

If the display range is two rows or less, alarms are displayed in the following order of priority.

- 1) GOT error
- 2) CPU error
- 3) Network error

When the number of the occurrences of alarms exceeds the display range, low-priority alarms cannot be displayed.

Also, an error code, error message, or time that cannot be displayed in one row of the display range is not displayed.

### ■ 5 How to adjust the display range

To set a display range in which alarm messages are fully displayed, adjust the range as shown below.

If the screen size of the GOT is smaller than the size with the following values, decrease the text size.

G01-400	The communication with CPU failed.	16:40:30
M0101-9	AC down has been detected.	
N21-803	The transient error has occurred.	

Set three rows for the display.  
(If the text size is 1 × 1, 48 dots are used for the vertical size in three rows.)

Error message (a maximum of 64 digits)

The time of occurrences (fixed to eight digits)

If the text size is 1 × 1, alarms are displayed with 576 dots.

Enlarge the size until the time of occurrences on the right is displayed.

### ■ 6 Corrective actions on the cause of the alarm of each type and error codes

For details, refer to the following manuals.

⇒The instruction manual of the GOT to be used

## 8.13.3 Precautions for a system alarm display object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Precautions for use

#### (1) Controllers for which system alarms are not displayed in the GOT

Errors which occur in the following controllers cannot be displayed in the system alarm of the GOT.  
Check the errors with the software for the controllers.

- SIEMENS PLC CPU
- AZBIL equipment
- RKC temperature controller
- Inverter

#### (2) Deleting system alarms in the GOT

##### (a) How to delete the messages of GOT errors

GOT errors are not deleted from the system alarm even if the cause of the alarms is eliminated.  
To delete the messages, turn on the following device for the system information function.

- GOT Error Reset signal (System signal 1-1.b13)  
    ⇒ 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

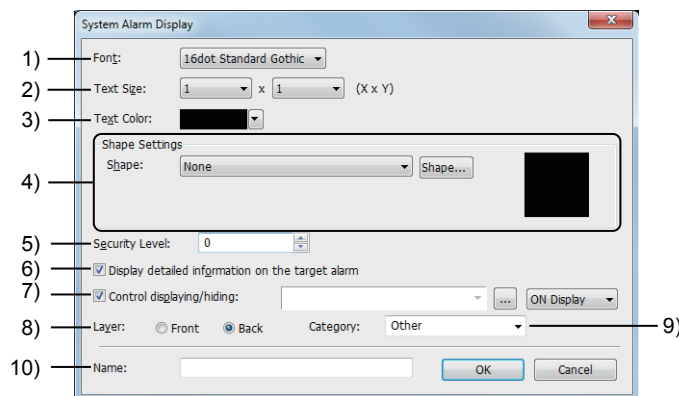

##### (b) How to delete the messages of network errors

The messages of network errors that occur in the CC-Link communication unit, MELSECNET/10 communication unit, and MELSECNET/H communication unit are not deleted even if the cause of the alarms is eliminated until the GOT is powered off or reset.

## 8.13.4 [System Alarm Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Alarm Display] → [System Alarm Display] from the menu.
- Step 2** Click the position to place a system alarm display.
- Step 3** Double-click the system alarm display to display the setting dialog.

#### 1) [Font]

Select the font of the displayed text.

The following shows the items to be selected.

- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)
- [16dot Standard] (GT23 and GT21 only)

#### 2) [Text Size]

Set the text size to be displayed.

⇒ 1.2.5 Font specifications

#### 3) [Text Color]

Set the text color.

⇒ 6.4 Color Settings

#### 4) [Shape Settings]

Item	Description
[Shape]	Set a shape for an object. When [None] is selected, no figure is displayed. Click the [Shape] button to select shapes other than those in the list box. →6.5.5 ■ 1 Setting object shapes
[Frame Color], [Shape Color]	Select the color of the frame of the shape and shape. 

#### 5) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

#### 6) [Display detailed information on the target alarm]

Displays detailed information added to system alarms.

#### 7) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

#### 8) [Layer]

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

#### 9) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

#### 10) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

Up to 100 characters can be set.

## 8.13.5 Relevant settings

Set the relevant settings other than the specific settings for the system alarm display as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

→ 5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT]
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled.</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3]</p>

### ■ 2 GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

→ 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Resetting system alarms and system information (GOT error code, GOT Error Detection signal) (Read device: System signal 1-1.b13)	[System Signal 1-1]

### ■ 3 GOT Internal Device

→ 12.1.3 GOT special register (GS)

Function	Setting item
Storing the channel No. that has been assigned to the channel where a system alarm (GOT error) occurs (Write device)	GS262
Storing the channel No. that has been assigned to the channel where a system alarm (CPU error) occurs (Write device)	GS263
Storing the channel No. that has been assigned to the channel where a system alarm (network error) occurs (Write device)	GS264

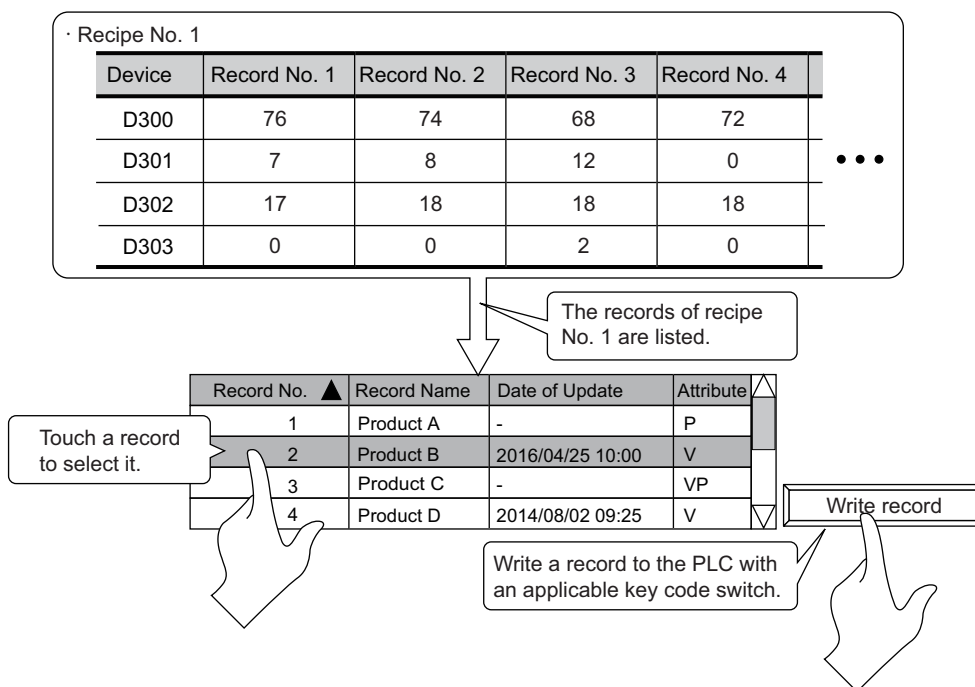

## 8.14 Placing a Recipe Display (Record List)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The recipe display (record list) object lists the records of a recipe on the GOT.

You can perform the following manipulations on the records listed on the object by using applicable key code switches.

- Renaming a record
- Reading a record
- Writing a record
- Verifying a record
- Deleting a record

This object function must be used in combination with the recipe function.

For the details of the recipe function, refer to the following.

→9.3 Executing the Batch Write or Batch Read on Multiple Devices ([Recipe])

## 8.14.1 Specifications of the recipe display (record list)

The following shows the specifications of the recipe display (record list).

### ■1 System application (extended function)

To use the recipe display (record list), a system application (extended function) of [Recipe Display (Record List)] is required.

Placing the recipe display (record list) incorporates the application into the package data automatically.

→8.14.4 [Recipe Display (Record List)] dialog

To use the function on GT SoftGOT2000, the application is not required.

### ■2 Maximum number of objects on one screen

One recipe display (record list) object can be placed on one screen.

### ■3 Maximum number of objects displayed at one time

One recipe display (record list) object can be displayed at one time.

Multiple recipe display (record list) objects cannot operate simultaneously.

When a recipe display (record list) object is displayed on the GOT, even if you call up a screen having another recipe display (record list) object, the object does not appear on the GOT.

### ■4 Maximum numbers of recipes and record rows displayed on the object

The records of one recipe can be displayed on the recipe display (record list) object.

When the recipe number is specified using a device value, switching between recipes is available.

Up to 64 record rows can be displayed on the object.

### ■5 Key code switch

The recipe display (record list) is operable using key code switches.

Place the following key code switches on the screen as necessary.

Key code	Operation	Description
FFF0h	Show cursor	Display the cursor on a record row to select the row.
FFF1h	Hide cursor	Hide the cursor.
FFEFh	Update list	Update the list.
FFF4h	List Displacement Scroll Up	Scroll the list up the specified number of rows.
FFF5h	List Displacement Scroll Down	Scroll the list down the specified number of rows.
FFF6h	List Page Scroll Up	Scroll the list up one page.
FFF7h	List Page Scroll Down	Scroll the list down one page.
FFF2h	Move cursor upward	Move the cursor up one row.
FFF3h	Move cursor downward	Move the cursor down one row.
FFCAh	Rename record	Rename a record.
FFCBh	Save record	Read a record from the PLC.
FFCCh	Load record	Write a record to the PLC.
FFCDh	Verify record	Verify the device values of a record against those of the PLC.
FFB6h	Delete record	Delete a record.
FFCEh	Cancel recipe operation	Cancel the reading, writing, or verifying of a record.

## 8.14.2 How to use the recipe display (record list)

### ■ 1 Setting the recipe function

To use the recipe display (record list), the recipe function must be set.

⇒9.3.3 How to use the recipe

### ■ 2 Placing a recipe display (record list)

The following shows the procedure for setting a recipe display (record list).

**Step 1** Place a recipe display (record list) on the screen editor.

⇒6.5.1 Placing figures and objects

**Step 2** Upon placement of the recipe display (record list), key code switches are also placed.

The user ID of the recipe display (record list) is assigned to each key code switch.

Optionally delete unnecessary key code switches and place the necessary ones.

⇒8.2.11 [Key Code Switch] dialog

**Step 3** Configure the settings of the recipe display (record list).

⇒8.14.4 [Recipe Display (Record List)] dialog

For the settings common to the objects, refer to the following.

⇒6.5.5 Common setting for objects

### ■ 3 Operating a recipe display (record list)

The following shows how to operate a recipe display (record list).

#### (1) List layout

The following shows the list layout of the recipe display (record list).

No.	Record Name	Date of Update	Attribute
1	Record 1	-	VP
2	Record 2	16/04/11 15:27	V
3		-	-
4	Record 4	16/04/11 15:27	V
5	Record 5	-	-

#### 1) [No.]

Displays the record numbers.

#### 2) [Record Name]

Displays the record names.

If the name of a record is unspecified, the relevant cell is left blank.

#### 3) [Date of Update]

Displays the update date and time of each record.

If a record is not read from the PLC, a hyphen [-] is displayed.

#### 4) [Attribute]

Displays the record attributes that indicate whether each record is readable or writable.

V: The record can be written to a PLC.

P: The record cannot be overwritten with the data read from a PLC. (Overwriting prohibited record)

VP: The record can be written to a PLC, but cannot be overwritten with the data read from a PLC.

-: The devices of the record store no values, and the record can be overwritten with the data read from a PLC.

#### 5) Title row

Displays the column headers.

Touch a column header to sort the record list in ascending or descending order based on the column.

#### 6) Record rows

Each row displays one record.

Touch a record row to select the record, and touch the row again to deselect the record.

## (2) Reading, writing, or deleting a record

You can read, write, or delete a record selected on the recipe display (record list).

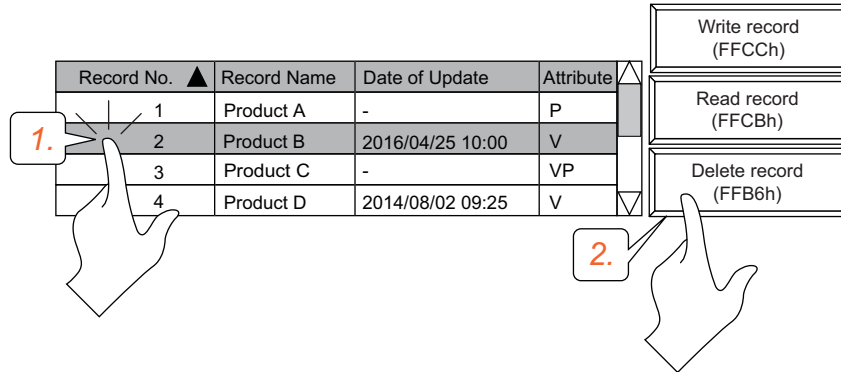

To perform these operations, use applicable key code switches.

Place the following key code switches in advance.

- FFCBh: Read record
- FFCh: Write record
- FFB6h: Delete record

**Step 1** Touch a target record on the recipe display (record list) to select it.

**Step 2** Touch an applicable key code switch to write, read, or delete the selected record.

You can specify the name of the target record by using specific devices. To do this, enable the setting for the Control Target Record Name devices.

For the details of the Control Target Record Name devices, refer to the following.

⇒8.14.2 ■ 4 (1) Specifying the name of a manipulation target record by using specific devices

## (3) Renaming a record

You can rename a record selected on the recipe display (record list).

Up to 32 ASCII or Unicode characters are usable for a record name.

To specify a new record name, use the Control Target Record Name devices.

Set the Control Target Record Name devices in advance.

⇒8.14.4 ■ 5 [Extended] tab

8.14.2 ■ 4 (1) Specifying the name of a manipulation target record by using specific devices

To perform the rename operation, use an applicable key code switch.

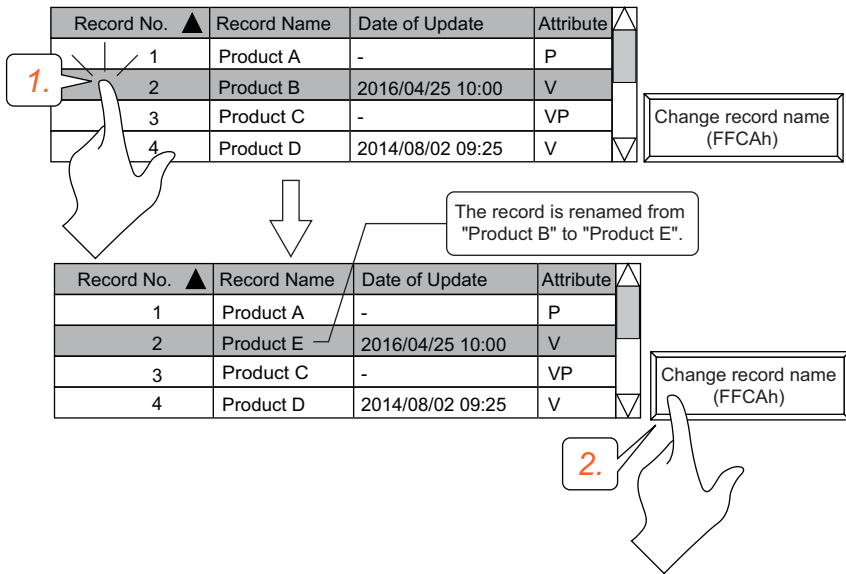

Place the following key code switch in advance.

- FFCAh: Change record name

**Step 1** Touch a target record on the recipe display (record list) to select it.

**Step 2** Touch the applicable key code switch to rename the selected record.

Control Target Record Name devices: D500 to D531  
 Stored character string: Product E

#### (4) Verifying a record

You can verify the device values of a record selected on the recipe display (record list) against those of the PLC.

To perform verification, use an applicable key code switch.

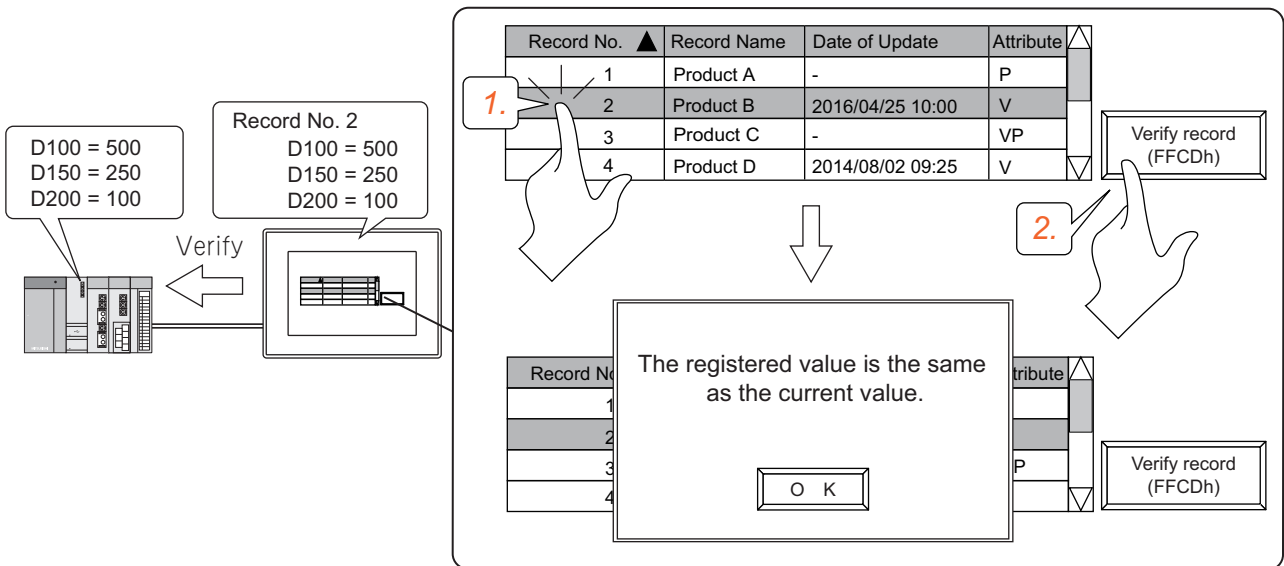

Place the following key code switch in advance.

- FFCDh: Verify record
- FFCDh: Verify record

**Step 1** Touch a target record on the recipe display (record list) to select it.

**Step 2** Touch an applicable key code switch to verify the device values of the selected record against those of the PLC.

The verification results are shown in a dialog.

You can specify the name of the target record by using specific devices. To do this, enable the setting for the Control Target Record Name devices.

For the details of the Control Target Record Name devices, refer to the following.

→8.14.2 ■ 4 (1) Specifying the name of a manipulation target record by using specific devices

#### ■ 4 Notification and control by using specific devices

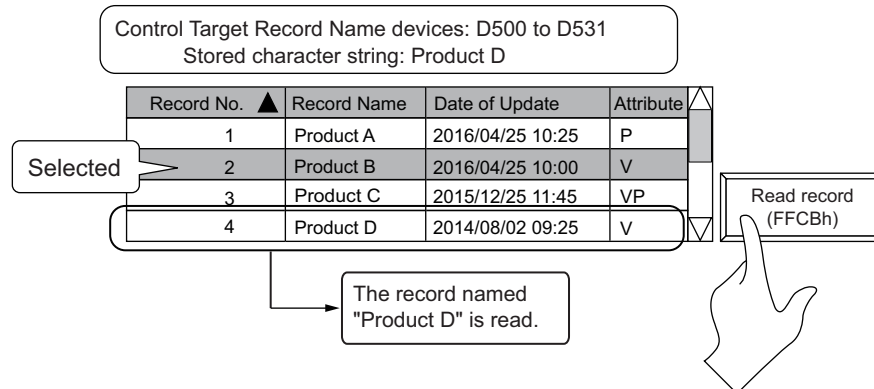

The following shows how to make notification or exercise control relevant to the recipe display (record list) by using specific devices.

## (1) Specifying the name of a manipulation target record by using specific devices

To use specific devices to specify the name of a record targeted for manipulation with key code switches, enable the setting for the Control Target Record Name devices.

The record whose name is specified using the Control Target Record Name devices always becomes the manipulation target even if another record is selected on the recipe display (record list).

Example) Reading a record

To specify the Control Target Record Name devices, set [Control target record name] on the [Extended] tab in the [Recipe Display (Record List)] dialog.

→ 8.14.4 ■ 5 [Extended] tab

You can specify a word device or word-specified bit device.

Specify the target record name within 32 ASCII or Unicode characters.

For storing ASCII characters as the record name, the number of consecutive devices to be used is half of the maximum number of characters set for [Control target record name].

For storing Unicode characters as the record name, the number of consecutive devices to be used equals to the maximum number of characters set for [Control target record name].

### (a) Reading a record

The GOT reads the device values from the PLC to a target record when the applicable key code switch is touched. The character string stored in the Control Target Record Name devices is compared with the names of records in the target recipe. Consequently, the GOT reads the device values from the PLC to the record that has the exact match name.

If multiple records have the exact match name, the GOT reads the device values from the PLC to the lowest numbered record.

If no record has the exact match name, the GOT reads the device values from the PLC to the lowest numbered blank record (that has no name and device value).

In this case, the record is named with the character string stored in the Control Target Record Name devices.

If the Control Target Record Name devices store no character string, the GOT reads the device values from the PLC to the record selected on the recipe display (record list).

If no record is selected, the GOT does not perform record reading.

### (b) Writing a record

The GOT writes the device values of a target record to the PLC when the applicable key code switch is touched. The character string stored in the Control Target Record Name devices is compared with the names of records in the target recipe. Consequently, the GOT writes the device values to the PLC from the record that has the exact match name.

If multiple records have the exact match name, the GOT writes the device values to the PLC from the lowest numbered record.

If the record selected on the recipe display (record list) has the exact match name, the GOT writes the device values to the PLC from the selected record.

If no record has the exact match name, the GOT does not perform record writing.

If the Control Target Record Name devices store no character string, the GOT writes the device values to the PLC from the record selected on the recipe display (record list).

If no record is selected, the GOT does not perform record writing.

### (c) Verifying a record

The GOT verifies the device values of a target record against those of the PLC when the applicable key code switch is touched. The character string stored in the Control Target Record Name devices is compared with the names of records in the target recipe. Consequently, the GOT verifies the device values of the record that has the exact match name.

If multiple records have the exact match name, the GOT verifies the device values of the lowest numbered record.

If the record selected on the recipe display (record list) has the exact match name, the GOT verifies the device values of

the selected record.

If no record has the exact match name, the GOT does not perform record verification.

If the Control Target Record Name devices store no character string, the GOT verifies the device values of the record selected on the recipe display (record list).

If no record is selected, the GOT does not perform record verification.

**(d) Deleting a record**

The GOT deletes the contents of a target record when the applicable key code switch is touched. The character string stored in the Control Target Record Name devices is compared with the names of records in the target recipe. Consequently, the GOT deletes the contents of the record that has the exact match name.

If multiple records have the exact match name, the GOT deletes the contents of the lowest numbered record.

If the record selected on the recipe display (record list) has the exact match name, the GOT deletes the contents of the selected record.

If no record has the exact match name, the GOT does not perform record deletion.

If the Control Target Record Name devices store no character string, the GOT deletes the contents of the record selected on the recipe display (record list).

If no record is selected, the GOT does not perform record deletion.

**(e) Renaming a record**

The GOT renames the record selected on the recipe display (record list) when the applicable key code switch is touched. The record is renamed with the character string stored in the Control Target Record Name devices.

The record rename is not performed in the following cases.

- The Control Target Record Name devices are not set.
- The Control Target Record Name devices store no character string.

**(2) Narrowing down the records to be displayed**

To narrow down the records to be displayed on the recipe display (record list) by specifying a character string included in the record names, enable the setting for the Narrow Down Record Names devices.

• Example

Narrow Down Record Names devices: D600 to D631  
 Stored character string: Bolt

Recipe display (record list)

No. ▲	Record Name	Date of Update	Attribute ▼
1	Bolt M3	-	VP
2	Nut M3	-	VP
3	Flange Bolt M3	-	VP
4	Flange Nut M3	-	VP
5	Bolt M8	-	VP
6	Nut M8	-	VP
7	Flange Bolt M8	-	VP
8	Flange Nut M3	-	VP

Recipe display (record list)

No. ▲	Record Name	Date of Update	Attribute ▼
1	Bolt M3	-	VP
3	Flange Bolt M3	-	VP
5	Bolt M8	-	VP
7	Flange Bolt M8	-	VP

The object lists the record names that include the character string specified using the Narrow Down Record Names devices.

To specify the Narrow Down Record Names devices, set [Narrow down record names] on the [Extended] tab in the [Recipe Display (Record List)] dialog.

→8.14.4 ■ 5 [Extended] tab

You can specify a word device or word-specified bit device.

Specify the character string (narrowing criteria) within 32 ASCII or Unicode characters.

For storing ASCII characters as the narrowing criteria, the number of consecutive devices to be used is half of the maximum number of characters set for [Narrow down record names].

For storing Unicode characters as the narrowing criteria, the number of consecutive devices to be used equals the maximum number of characters set for [Narrow down record names].

### (3) Notifying the selected record name

To notify the name of a record selected on the recipe display (record list), enable the setting for the Cursor Row Record Name devices.

The Cursor Row Record Name devices store the name of a record selected on the recipe display (record list).

If you deselect the selected record on the recipe display (record list), the values of the Cursor Row Record Name devices are cleared.

To specify the Cursor Row Record Name devices, set [Cursor row record name] on the [Extended] tab in the [Recipe Display (Record List)] dialog.

⇒8.14.4 ■ 5 [Extended] tab

You can specify a word device or word-specified bit device.

The record name is notified within 32 ASCII or Unicode characters.

- For the record name using ASCII characters

The number of consecutive devices to be used is half of the maximum number of characters set for [Cursor row record name].

If the number of the stored characters is less than the maximum number of characters, the stored characters are padded with NULL characters.

If the consecutive devices store an odd number of characters from lower-order bytes, 0 is stored in the higher-order bytes of the device that stores the last character.

If the consecutive devices store an odd number of characters from higher-order bytes, 0 is stored in the lower-order bytes of the device that stores the last character.

- For the record name using Unicode characters

The number of consecutive devices to be used equals the maximum number of characters set for [Cursor row record name].

If the number of the stored characters is less than the maximum number of characters, the stored characters are padded with NULL characters.

### (4) Notifying the record manipulation status

To notify the execution status of the manipulation performed on the recipe display (record list), enable the setting for the Notify Recipe Status device.

The Notify Recipe Status device notifies the execution status as shown below.

Bit number	Description
b0	Turns on when the GOT writes a record to the PLC by using the recipe display (record list). Turns off after the record writing is complete.
b1	Turns on when the GOT reads a record from the PLC by using the recipe display (record list). Turns off after the record reading is complete.
b2	Turns on when the GOT verifies the device values of a record selected on the recipe display (record list) against those of the PLC. Turns off after the record verification is complete.
b3	Turns on when the GOT acquires the records to be displayed on the recipe display (record list). Turns off after the record acquisition is complete.
b4 to b15	Use prohibited

To specify the Notify Recipe Status device, set [Notify the recipe status] on the [Extended] tab in the [Recipe Display (Record List)] dialog.

⇒8.14.4 ■ 5 [Extended] tab

You can specify a signed 16-bit binary word device or word-specified bit device.

### (5) Notifying the number of displayable records

To notify the number of records displayable on the recipe display (record list), enable the setting for the Number of Currently Displayed Records device.

To specify the Number of Currently Displayed Records device, set [Number of currently displayed records] on the [Extended] tab in the [Recipe Display (Record List)] dialog.

⇒8.14.4 ■ 5 [Extended] tab

You can specify a signed 16-bit binary word device or word-specified bit device.

## 8.14.3 Precautions for a recipe display (record list) object

The following shows the precautions for the recipe display (record list).

### ■ 1 Precautions for drawing

#### (1) User ID assigned to the key code switches

Upon placement of the recipe display (record list) on the screen editor, key code switches are also placed.

The user ID of the recipe display (record list) is automatically assigned to each key code switch ([User ID for a key input]). If you change the user ID of the recipe display (record list), also change the set value of [User ID for a key input] for each switch.

Otherwise, the recipe display (record list) is inoperable using the switches.

→8.2.11 [Key Code Switch] dialog

#### (2) Record used for record reading

When you use the Control Target Record Name devices to read a record, preset a blank record that has no name and device value.

If the record specified with the Control Target Record Name devices is nonexistent, the read data is written to the blank record.

If a blank record is nonexistent, a system alarm occurs in the above case.

Moreover, the number of records in the recipe is unchangeable on the GOT.

However, if you preset several blank records, you can write the read data to the blank records on the GOT.

→9.3.3 How to use the recipe

Blank record with no name and device value

· Recipe No. 1

Device	Record No. 1	Record No. 2	Record No. 3	Record No. 4
	Product A	Product B		
D300	76	74		
D301	7	8		
D302	17	18		
D303	0	0		

Record No.  
Record name

#### (3) Precautions for placing a recipe display (record list) by operation in the [Recipe] dialog

If you place a recipe display (record list) by using the [Create a new recipe display (record list)] button in the [Recipe] dialog, the settings of the following items in the [Options] dialog are not applied.

- Place figures/objects sequentially
- Deselect figures/objects once they are placed
- Display the setting dialog once figures/objects are placed

→9.3.7 [Recipe] dialog

11.10.4 Customizing the settings related to editing operations

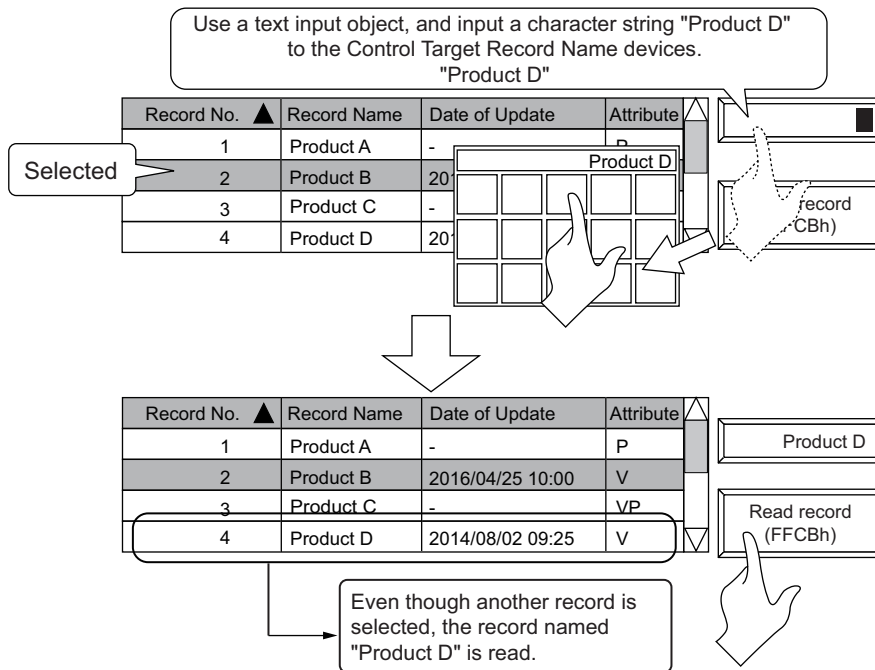

### ■ 2 Precautions for use

#### (1) Changing the values of the Control Target Record Name devices

When the record name selected on the recipe display (record list) differs from the one specified using the Control Target Record Name devices, the latter is always targeted for manipulation using the key code switches.

To manipulate a record selected on the recipe display (record list), clear the values of the Control Target Record Name devices first.

Example) When reading a record

**(2) Precautions while the recipe operation window is being displayed**

While the recipe operation window is being displayed, the recipe display (record list) is inoperable and displayed incorrectly.  
Close the recipe operation window, and then operate the recipe display (record list).

**(3) Precautions for specifying a record name with Control Target Record Name devices**

You cannot specify a record name ending with a one-byte space by using Control Target Record Name devices. (The one-byte space is deleted.)  
When you set a record name in the [Recipe] dialog on GT Designer3 or the recipe operation window on the GOT, do not append a one-byte space to the record name.

## 8.14.4 [Recipe Display (Record List)] dialog

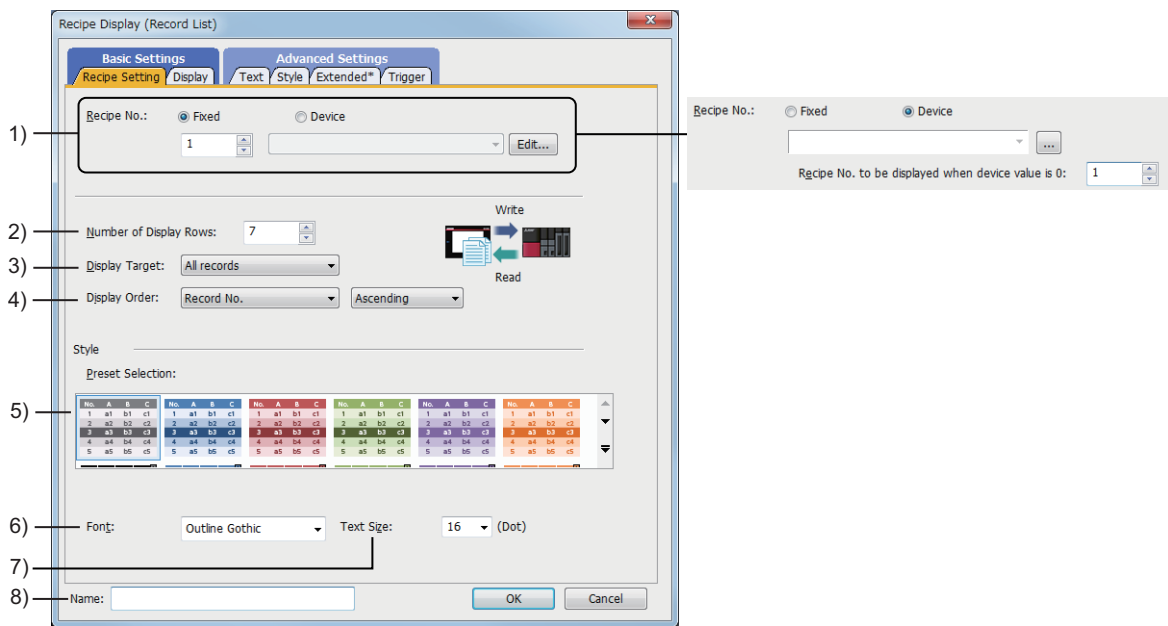

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Object] → [Recipe Display (Record List)] from the menu.
- Step 2 Click the position to place a recipe display (record list).
- Step 3 Double-click the recipe display (record list) to display the setting dialog.

- ➔ ■ 1 [Recipe Setting] tab
- 2 [Display] tab
- 3 [Text] tab
- 4 [Style] tab
- 5 [Extended] tab
- 6 [Trigger] tab

### ■ 1 [Recipe Setting] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Recipe No.]

Set the method of specifying a recipe number to display records on the recipe display (record list).

Item	Description
[Fixed]	Displays the records of a recipe with a fixed recipe number. Select this item and enter a recipe number. The setting range is [1] to [32767].
[Device]	Displays the records of a recipe whose recipe number is specified with a device value. Select this item and set a device. ➔6.1.1 How to set devices
[Recipe No. to be displayed when device value is 0]	When selecting [Device] for [Recipe No.], set this item. Specify a recipe number to display target records when the set device stores 0. The setting range is [1] to [32767].

#### 2) [Number of Display Rows]

Set the maximum number of record rows to be displayed.

The setting range is [1] row to [64] rows.

#### 3) [Display Target]

Select the records targeted for display.

- [All records]: Displays all records of a recipe.
- [Writable records]: Displays the writable records of a recipe.
- [Readable records]: Displays the readable records of a recipe.

#### 4) [Display Order]

Set the order in which records are displayed for the first time.

The selectable sort criteria are [Record No.], [Record Name], [Date of Update], and [Attribute].

The selectable sort orders are [Ascending] and [Descending].

#### 5) [Preset Selection]

Select the design of the recipe display (record list).

Click the pull-down menu button to display all designs.

Pull-down menu button

#### 6) [Font]

Select a font of the displayed text.

The following shows the items to be selected.

- [6x8dot]
- [12dot Standard]
- [16dot Standard Mincho]
- [16dot Standard Gothic]
- [16dot Standard]
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

#### 7) [Text Size]

For the details of each font and size, refer to the following.

→ 1.2.5 Font specifications

#### 8) [Name]

Set the object name.

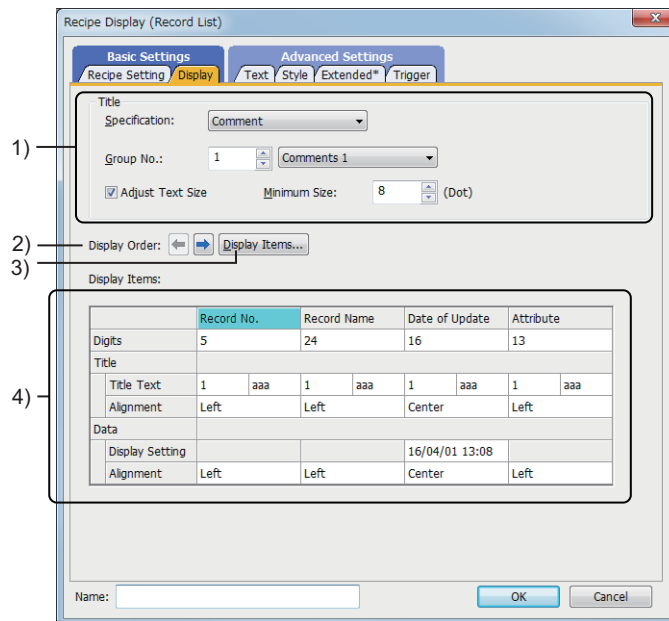

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Display] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

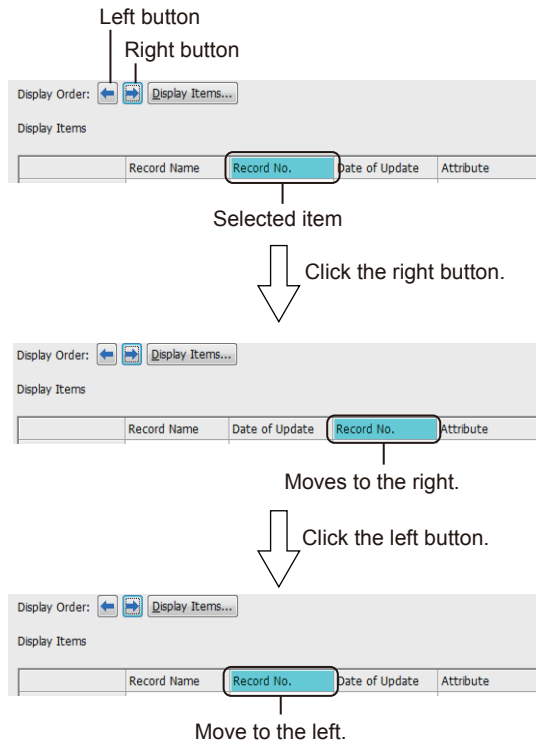

### 1) [Title]

Item	Description
[Specification]	Select the method of specifying the text to be displayed in the title. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Direct]: Select this item to input the text to be displayed in the title directly into [Title] in [Contents].</li> <li>• [Comment]: Select this item to display the text to be displayed in the title using the comment in the comment group.</li> <li>• [None]: Select this item not to display the title.</li> </ul>
[Group No.]	Only when [Comment] is selected for [Specification], this item can be set. Set the comment group in which the text to be displayed in the title is registered.
[Adjust Text Size]	The text size is adjusted according to the width of the title. When [Adjust Text Size] is not selected, the text size is adjusted by inserting a line feed.
[Minimum Size]	Only when [Comment] is selected for [Specification] and [Adjust Text Size] is selected, this item can be set. Set the minimum text size for adjustment. The setting range is [8] to [240] dot(s).

### 2) [Display Order]

Set the order in which the columns of [Display Items] are displayed.  
Click the right or left arrow button to move the selected column.

### 3) [Display Items] button

Displays the [Display Items] dialog.

Select an item to be displayed on the recipe display (record list).

- [Record No.]  
Lists the record numbers.
- [Record Name]  
Lists the record names.
- [Date of Update]  
Lists the update date and time of each record.
- [Attribute]  
Displays the record attributes that indicate whether each record is readable or writable.

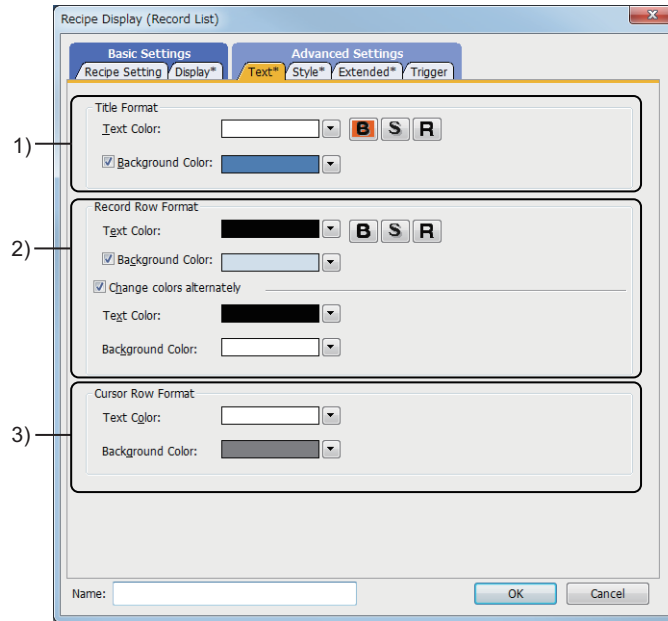

### 4) [Display Items]

Set the details of the display items.

Item		Description
[Digits]		Set the number of digits to be displayed in each column. The setting range is [1] digit to [128] digits.
[Title]	[Title Text]	Set the column headers to be displayed in the title row. This setting depends on the selection for [Specification]. <ul style="list-style-type: none"> <li>• [Direct] Enter text directly. The number of the characters must be within the set value of [Digits].</li> <li>• [Comment] Set a comment No. or comment.</li> <li>• [None] Not settable</li> </ul>
	[Alignment]	Select the horizontal position to align the text to be displayed in the title row. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]</li> <li>• [Center]</li> <li>• [Right]</li> </ul>
[Data]	[Display Setting]	Set the display format of the update date and time. Click the [...] button to set the date and time format in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings
	[Alignment]	Select the horizontal position to align the text to be displayed in the record rows. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]</li> <li>• [Center]</li> <li>• [Right]</li> </ul>

### ■ 3 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

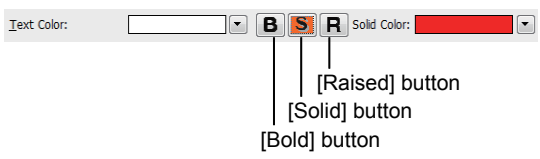

#### 1) [Title Format]

Set the format of the title row.

Item	Description
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <p style="margin-left: 150px;">             [Raised] button              [Solid] button              [Bold] button         </p> <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4.2 Color settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow. →6.4.2 Color settings</li> </ul>
[Background Color]	Set the background color of the title row.

#### 2) [Record Row Format]

Set the format of the record rows.

Item	Description
[Text Color]	<p>Set the color and style of the text to be displayed in the record rows. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <p>• [Text Color] Set the text color. →6.4.2 Color settings</p> <p>• [Bold] button Displays the text in bold.</p> <p>• [Solid] button Displays the text with a shadow.</p> <p>• [Raised] button Displays the text embossed.</p> <p>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow. →6.4.2 Color settings</p>
[Background Color]	Set the background color of the record rows.
[Change colors alternately]	Set [Text Color] and [Background Color] for the even-numbered record rows. →6.4.2 Color settings

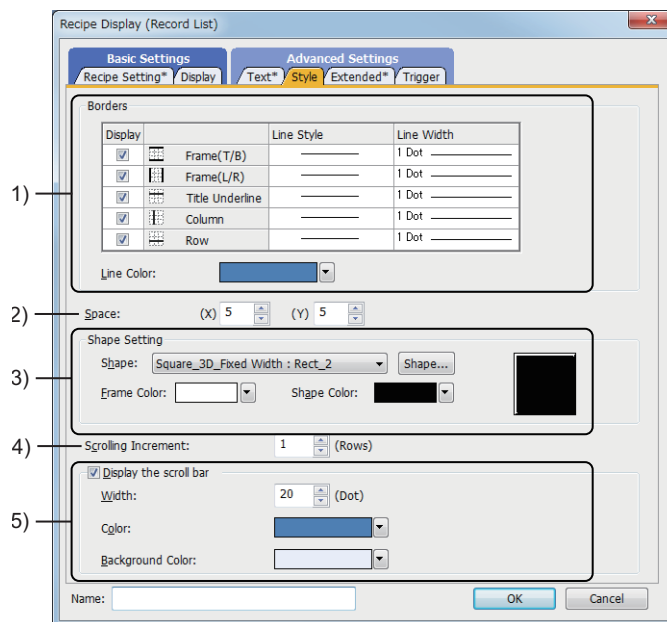

### 3) [Cursor Row Format]

Set the format of the selected row.

Item	Description
[Text Color]	Set the color of the text to be displayed in the selected row. →6.4.2 Color settings
[Background Color]	Set the background color of the selected row. →6.4.2 Color settings

## 4 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

## 1) [Borders]

Item	Description
[Display]	Select a border. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Frame (T/B)]</li> <li>• [Frame (L/R)]</li> <li>• [Title Underline]</li> <li>• [Column]</li> <li>• [Row]</li> </ul>
[Line Style]	Select the style of ruled lines. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Straight line</li> <li>• Fine broken line</li> <li>• Coarse broken line</li> <li>• Speck chain line</li> <li>• Two-dot long and two short dashes line</li> </ul>
[Line Width]	Set the ruled line color. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1Dot]</li> <li>• [2Dot]</li> <li>• [3Dot]</li> <li>• [4Dot]</li> <li>• [5Dot]</li> <li>• [7Dot]</li> </ul>
[Line Color]	Select the color of the frame. →6.4.2 Color settings

## 2) [Space]

Set the space between the text to be displayed and the ruled lines of the table.

The setting range is [0] to [32].

The following illustrates the space [X] and [Y].

## 3) [Shape Setting]

Item	Description
[Shape]	Select the shape to be set for the object from the list or with the [Shape] button. →6.5.5 ■ 1 Setting object shapes
[Frame Color]	Select the frame color of the shape. →6.4.2 Color settings
[Shape Color]	Select the color of the shape. →6.4.2 Color settings

## 4) [Scrolling Increment]

Set the number of rows to be scrolled in the recipe display (record list) when an arrow key on the scroll bar or a key code switch (FFF4h or FFF5h) is touched.

The setting range is [1] row to [64] rows.

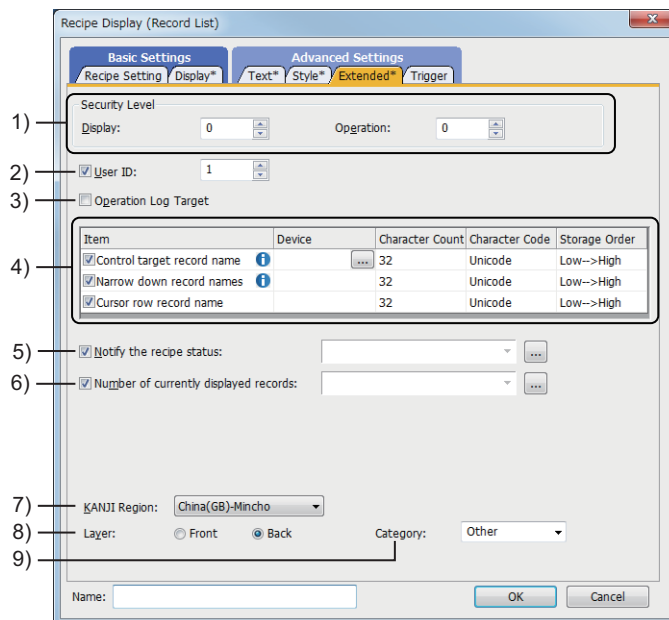

## 5) [Display the scroll bar]

Displays the scroll bar.

Item	Description												
[Width]	<p>Specify the width of the scroll bar. The up or down button on the scroll bar is a square. Accordingly, the width and height of the button equal the width of the scroll bar. The setting range is [16] dots to [64] dots.</p> <div style="text-align: right; margin-right: 50px;">Width of the scroll bar</div> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>No. ▲</th> <th>Record Name</th> <th>Date of Update</th> <th>Attribute</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Product A</td> <td>2016/04/25 10:25</td> <td>P</td> </tr> <tr> <td>2</td> <td>Product B</td> <td>2016/04/25 10:00</td> <td>V</td> </tr> </tbody> </table> <div style="text-align: right; margin-right: 50px;">Height of the up and down buttons (equal to the width of the scroll bar)</div>	No. ▲	Record Name	Date of Update	Attribute	1	Product A	2016/04/25 10:25	P	2	Product B	2016/04/25 10:00	V
No. ▲	Record Name	Date of Update	Attribute										
1	Product A	2016/04/25 10:25	P										
2	Product B	2016/04/25 10:00	V										
[Color]	<p>Set the color of the scroll bar. →6.4.2 Color settings</p>												
[Background Color]	<p>Set the background color of the scroll bar. →6.4.2 Color settings</p>												

## ■ 5 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

The value of [Operation] must be greater than the value of [Display].

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

The following operations can be performed when user ID numbers are set.

- Identifying the object that is operated with a key code switch  
→8.2.11 [Key Code Switch] dialog
- Setting the position where the cursor is displayed at screen switching  
→5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])
- Identifying the object that is targeted for the operation log function  
→5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

### 3) [Operation Log Target]

Not available to GT21.

Select this item to target the object for the operation log.

⇒5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

#### 4) Setting the devices for control and notification

Set the control and notification devices for the recipe display (record list).

Item	Description
[Item]	<p>Select necessary items for control or notification.</p> <ul style="list-style-type: none"> <li>• [Control target record name] Enables the setting for the Control Target Record Name devices. ⇒8.14.2 ■ 4 (1) Specifying the name of a manipulation target record by using specific devices</li> <li>• [Narrow down record names] Enables the setting for the Narrow Down Record Names devices. ⇒8.14.2 ■ 4 (2) Narrowing down the records to be displayed</li> <li>• [Cursor row record name] Enables the setting for the Cursor Row Record Name devices. ⇒8.14.2 ■ 4 (3) Notifying the selected record name</li> </ul>
[Device]	<p>Set the first device of consecutive devices to be used for control or notification. You can specify a word device or word-specified bit device. The number of the consecutive devices varies with the settings of [Character Count] and [Character Code]. When [Character Code] is set to [ASCII], the number of the consecutive devices equals half of the set value of [Character Count]. When [Character Code] is set to [Unicode], the number of the consecutive devices equals the set value of [Character Count]. ⇒6.1.1 How to set devices</p>
[Character Count]	<p>Set the maximum number of characters to be stored in the devices for control or notification. The setting range is [1] to [32].</p>
[Character Code]	<p>Select the character code of the character string to be stored in the devices for control. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [ASCII]</li> <li>• [Unicode]</li> </ul>
[Storage Order]	<p>Select the order in which character codes are stored. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Low--&gt;High]</li> <li>• [High--&gt;Low]</li> </ul>

#### 5) [Notify the recipe status]

Enables the setting for the Notify Recipe Status device.

⇒8.14.2 ■ 4 (4) Notifying the record manipulation status

Select this item and specify the Notify Recipe Status device.

⇒6.1.1 How to set devices

#### 6) [Number of currently displayed records]

Enables the setting for the Number of Currently Displayed Records device.

⇒8.14.2 ■ 4 (5) Notifying the number of displayable records

Select this item and specify the Number of Currently Displayed Records device.

⇒6.1.1 How to set devices

#### 7) [KANJI region]

Select the KANJI region of the displayed text.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

#### 8) [Layer]

Not available to GT21.

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

#### 9) [Category]

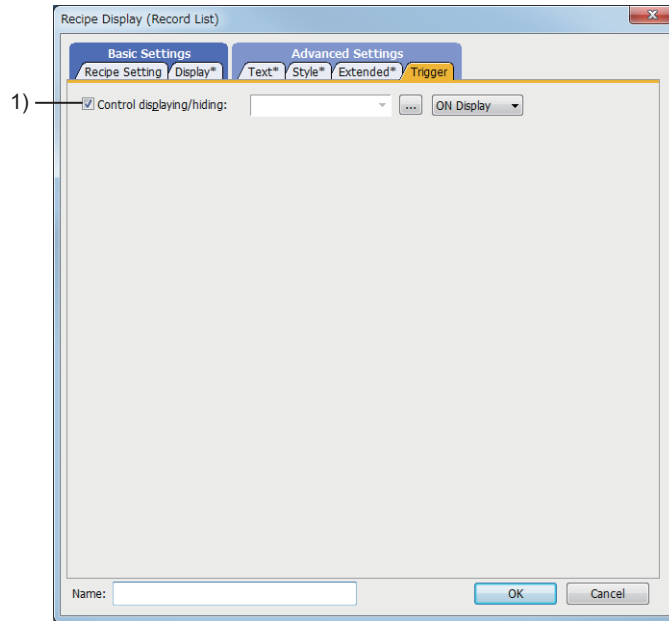

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 6 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

## 8.14.5 Relevant settings

Set the relevant settings other than the specific settings for the recipe display (record list) as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT]
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b> Always enabled.</p> <p><b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3]</p>

### ■ 2 GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Notifying that the recipe process (reading or writing) is being executed (Write device: System signal 2-1.b10)	[System Signal 2-1]

### ■ 3 GOT Internal Device

⇒12.1.3 GOT special register (GS)

Function	Setting item
Notifying the recipe number for the records displayed on the recipe display (record list)* <sup>1</sup>	GS1013
Notifying the record number selected on the recipe display (record list)* <sup>1</sup>	GS1014

\*1 For information on how to link the recipe function with the recipe display (record list) by using GS1013 and GS1014, refer to the following.

⇒9.3.3 ■ 9 Link with the recipe display (record list) by using GOT special registers

## 8.15 Placing a Line Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function collects multiple word device values in a batch and displays the values in a line graph.

Application example) Displaying the production quantity of multiple lines

## 8.15.1 Specifications of the line graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the line graph.

### ■ 1 Number of line graphs that can be set

#### (1) Number of line graphs that can be placed

Up to 32 line graphs can be placed on one screen.

#### (2) Number of lines that can be displayed

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to eight lines can be displayed in one line graph.
- For GT21  
Up to four lines can be displayed in one line graph.

#### (3) Number of settable points

Up to 500 points can be set on one line.

## 8.15.2 How to use the line graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the line graph.

### ■ 1 Placing the line graph

The following shows how to place the line graph.

- Step 1** Select [Object] → [Graph] → [Line Graph] from the menu.
- Step 2** Click the position where you place the line graph. Placing the line graph is complete.
- Step 3** Adjust the frame size of the line graph.
- Step 4** Double-click the placed line graph to display the setting dialog.  
→ 8.15.4 [Line Graph] dialog
- Step 5** Display the [Data] tab.  
→ 8.15.4 ■ 1 [Data] tab
- Step 6** Set the number of lines and points.

- Step 7** Set a device to be monitored.  
→ 6.1.1 How to set devices
- Step 8** Set [Lower Limit] and [Upper Limit].
- Step 9** Set the scale and figure in the [Style] tab.  
→ 8.15.4 ■ 2 [Style] tab

Step 10 Click the [OK] button to complete the line graph settings.

## ■2 Setting [Collect data only when trigger conditions are satisfied]

Not available to GT21.

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced. Various graphs can be combined.

Step 1 Select [Object] → [Graph] → [Line Graph] from the menu.

Step 2 Click the position where you place the line graph. Placing the line graph is complete.

Step 3 Double-click the placed line graph to display the setting dialog.

⇒8.15.4 [Line Graph] dialog

Step 4 Display the [Trigger] tab.

⇒8.15.4 ■ 4 [Trigger] tab

Step 5 Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].

Step 6 Set [Collect data only when trigger conditions are satisfied].

Example) Combining the line graph and trend graph

Trigger type : Rise  
Collect data only when trigger conditions are satisfied : Enabled  
Object : Line graph

Displays the graph (communicates) only at startup.

Trigger type : Sampling (3 seconds)  
Collect data only when trigger conditions are satisfied : Disabled  
Object : Trend graph

Communicates in the set cycle and refreshes the display frequently.

The line graph can be used as the reference value and compared with the trend graph.

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.

However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).

The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

### 8.15.3 Precautions for a line graph

This section explains the precautions for the line graph.

#### ■ 1 When the monitored device value exceeds the upper or lower limit value

When the monitored device value exceeds the lower limit value, the display of the lower limit value is applied.  
When the monitored device value exceeds the upper limit value, the display of the upper limit value is applied.

#### ■ 2 Cause for when the graph display is not refreshed in the set cycle set and measure against it

Not available to GT21.

##### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

The graph display may not be refreshed in the set cycle.

###### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].  
If the condition is not satisfied at the timing of the check, the display is not refreshed.  
Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the line graph is refreshed at timing 1).
- The display of the line graph is refreshed at timing 2).
- At timing 3), the display of the line graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the line graph is not refreshed because the device condition is not satisfied.
- The display of the line graph is refreshed at timing 5).

###### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.  
(The sampling cycle does not change whether the device is turned on or off.)  
The following shows the setting procedure to start the cycle according to the device status.

- Step 1** Select [Rise] or [Fall] for [Trigger Type].
- Step 2** Create a sequence program that turns the device on or off when the display should be refreshed.

##### (2) Refresh timing when [Sampling], [ON Sampling], or [OFF Sampling] is selected

The sampling cycle count starts and is reset at the following timing.

- When the line graph is displayed (in screen switching, a security level change, or other possible cases)
- When the language switches
- When the security level changes

After the execution of any of the events, the display is refreshed at the start timing of the sampling cycle.

## 8.15.4 [Line Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

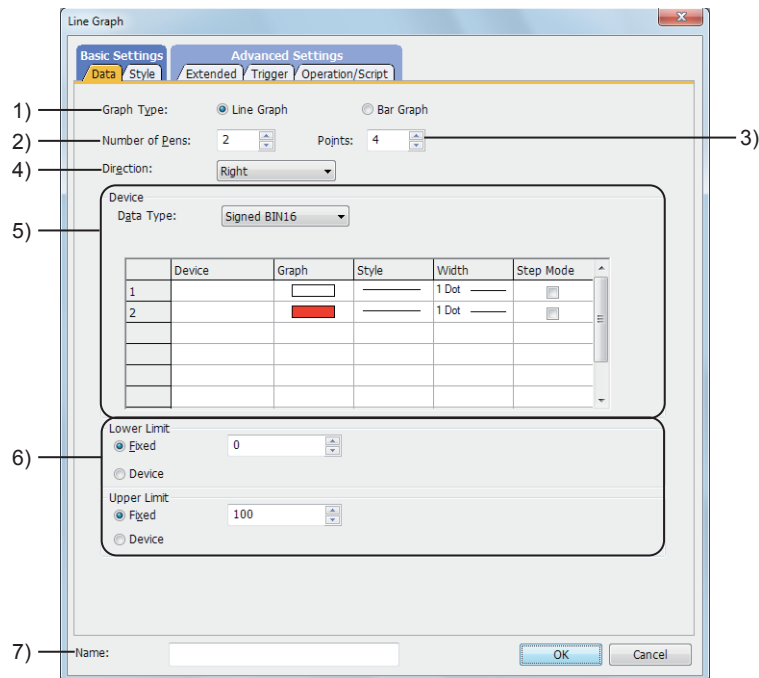

The line graph is an object that collects multiple word device values in a batch and displays the values in a graph.

- Step 1 Select [Object] → [Graph] → [Line Graph] from the menu.
- Step 2 Click the position where you place the line graph. Placing the line graph is complete.
- Step 3 Double-click the placed line graph to display the setting dialog.
  - 1 [Data] tab
  - 2 [Style] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab
  - 5 [Operation/Script] tab

### 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the device to be monitored and the line graph status corresponding to the device value.

#### 1) [Graph Type]

Select the graph to be set.  
The following shows the items to be selected.

- [Line Graph]
- [Bar Graph]

Select [Line Graph] in this section.

#### 2) [Number of Pens]

Set the number of lines to be displayed.  
The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
The setting range is [1] to [8].
- For GT21  
The setting range is [1] to [4].

#### 3) [Points]

Set the number of points to be displayed on a line (the number of devices to be monitored).  
The setting range is [2] to [500].

Depending on the number of points and X-axis display range, the interval between points is adjusted automatically.

#### 4) [Direction]

Select the display direction of the graph.

The following shows the items to be selected.

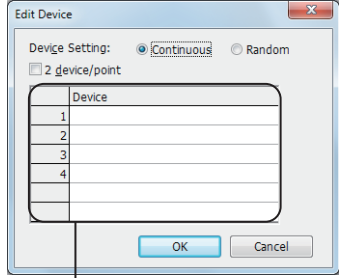

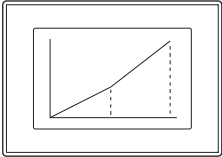

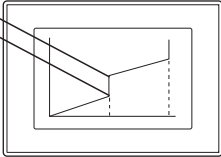

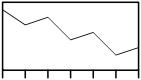

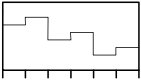

- [Right]
- [Left]

#### 5) [Device]

Item	Description
[Data Type]	<p>Select the data type of the word device.</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>

Item	Description
[Device]	<p>Click the [Edit] button to display the [Edit Device] dialog.</p>  <p style="text-align: center;">Device list</p> <ul style="list-style-type: none"> <li>• <b>[Device Setting]</b> Select how to set the device. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous] When a start device is set, inputs consecutive devices automatically in the table of [Device].</li> <li>• [Random] Not available to GT21. Select this item when setting devices one by one.</li> </ul> </li> <li>• <b>[2 Device/point]</b> Not available to GT21. Select this item when displaying two device values (placed on the vertical axis) on one point (placed on the horizontal axis). If this item is set, [Step Mode] cannot be set.</li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>1 device/point</p> </div> <div style="text-align: center;">  <p>2 devices/point</p> </div> </div> <p style="text-align: center;">→6.1.1 How to set devices</p>
[Graph]	Select the color of the line.
[Line Style]	<p>Select the style of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul>
[Width]	<p>Select the width of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
[Step Mode]	<p>Select this item to display the line by steps.</p> <div style="display: flex; justify-content: center; align-items: center;">   </div> <p style="text-align: center;">Displayed by no steps    Displayed by steps</p> <p>If this item is set, [2 Device/point] cannot be set.</p>

### 6) [Lower Limit] and [Upper Limit]

Select whether to specify the display range (lower and upper limit values) of the line graph with the fixed value or with the device value.

The following shows the items to be selected.

- [Fixed]:

Specify a constant.

- [Device]:

Specify a device value.

→ 6.1.1 How to set devices

The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].

## 7) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

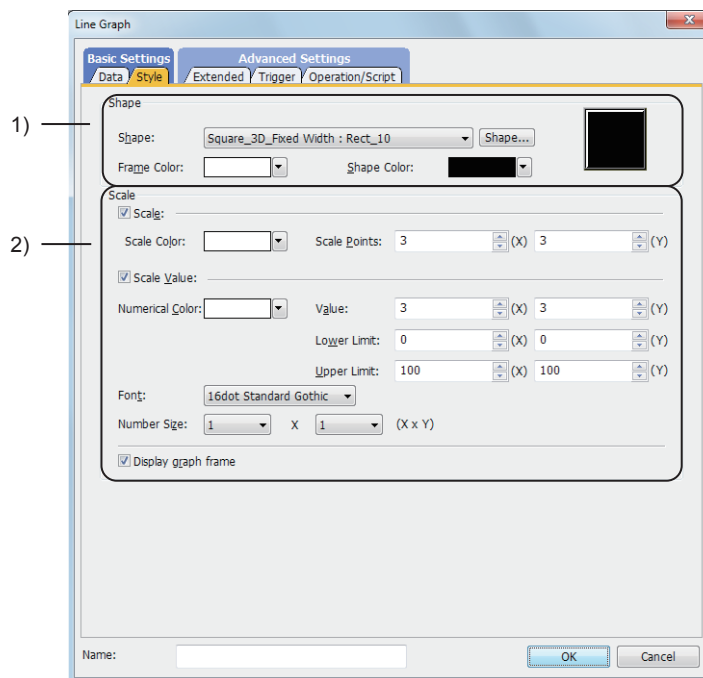

Up to 100 characters can be set.

## ■ 2 [Style] tab

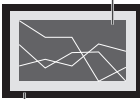

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

## 1) [Shape]

Item	Description
[Shape]	<p>Set the shape of the line graph.            When [None] is selected, no shape is displayed.            To select a shape other than those in the list box, click the [Shape] button.            →6.5.4 ■ 1 Lamp attribute setting            When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p> <div data-bbox="826 338 1201 443" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;">             Shape: <input type="text" value="Square_3D_Fixed Width : Rect_10"/> Shape...              Frame Color: <input type="text" value=""/> Shape Color: <input type="text" value=""/> </div> <p style="text-align: center; margin-left: 200px;">Preview</p> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul> <div data-bbox="930 595 1098 763" style="text-align: center; margin: 10px auto;">  </div> <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

## 2) [Scale Settings]

Displays the line or scale value in the line graph.

Line  
(X: 5)  
(Y: 5)

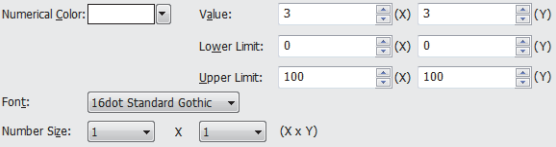

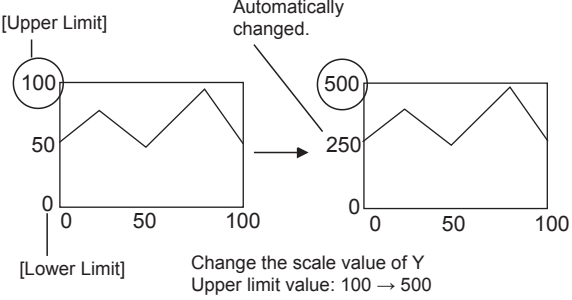

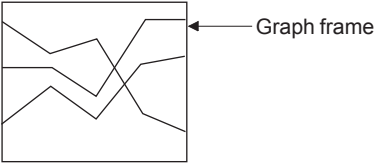

Scale value  
(X: 3)  
(Y: 3)

Displays both the lines  
and scale values.

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p> <div data-bbox="735 1294 1289 1323" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;">             Scale Color: <input type="text" value=""/> Scale Points: <input type="text" value="3"/> (X) <input type="text" value="3"/> (Y)           </div> <ul style="list-style-type: none"> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [2] to [101].</li> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> </ul>

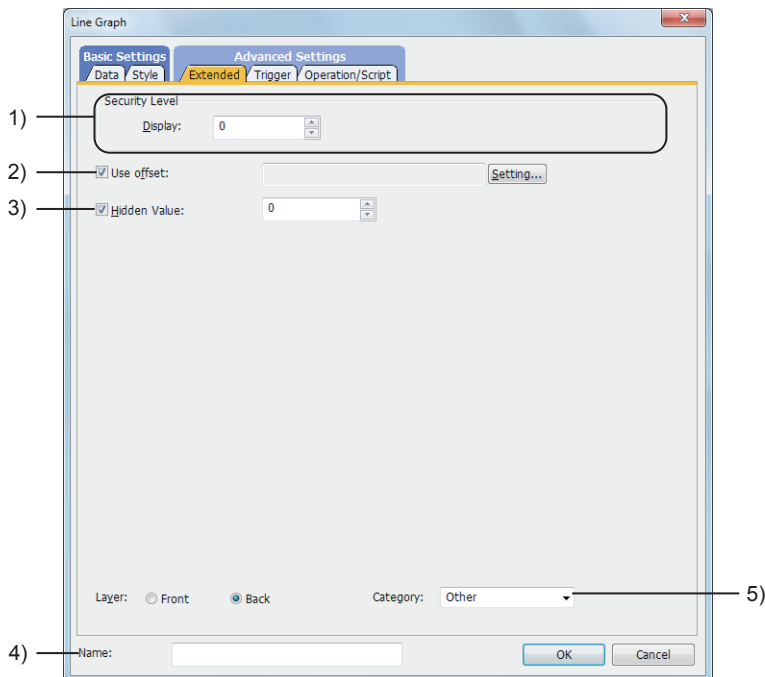

Item	Description
<p>[Scale Value]</p>	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value] ([Horizontal] and [Vertical])</b> Set the number of numeric characters. The setting range is [0] and [2] to [101].</li> <li>• <b>[Lower Limit] ([Horizontal] and [Vertical]) and [Upper Limit] ([Horizontal] and [Vertical])</b> Set the lower limit and upper limit of the numerical value. Changes in this setting are automatically applied to the display.</li> </ul>  <p>Depending on the item selected for [Data Type] in the [Data] tab, the setting range is different.</p> <ul style="list-style-type: none"> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. → 1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>
<p>[Display the graph frame]</p>	<p>Select this item to display the frame of the graph.</p> 

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→ 6.1.9 Offset

#### 3) [Hidden Value]

Select this item not to connect a specified device value with other values with the line during monitoring.

After selecting this item, set the device value.

When [Hidden Value] is not selected

When [300] is set for [Hidden Value]

#### 4) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

→ 6.5.5 ■ 3 Superimposition

#### 5) [Category]

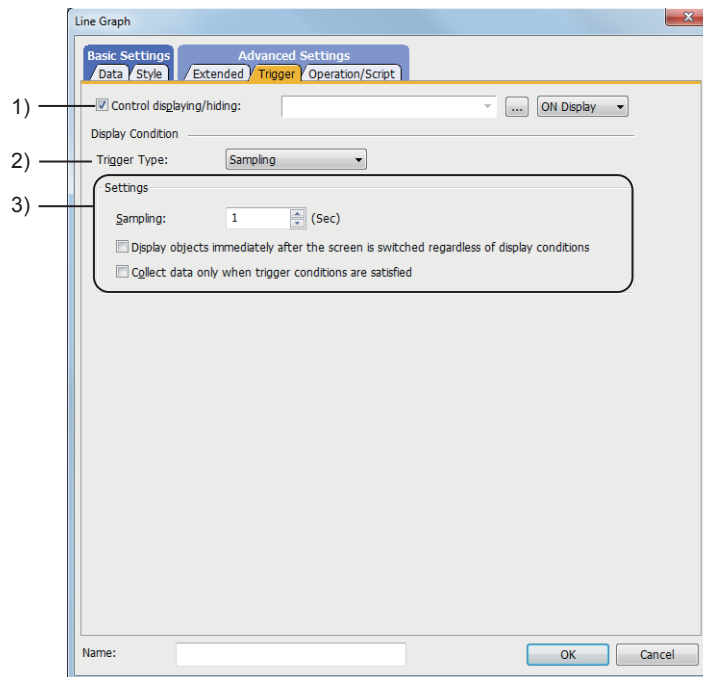

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

→6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	Not available to GT21. Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available. The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.

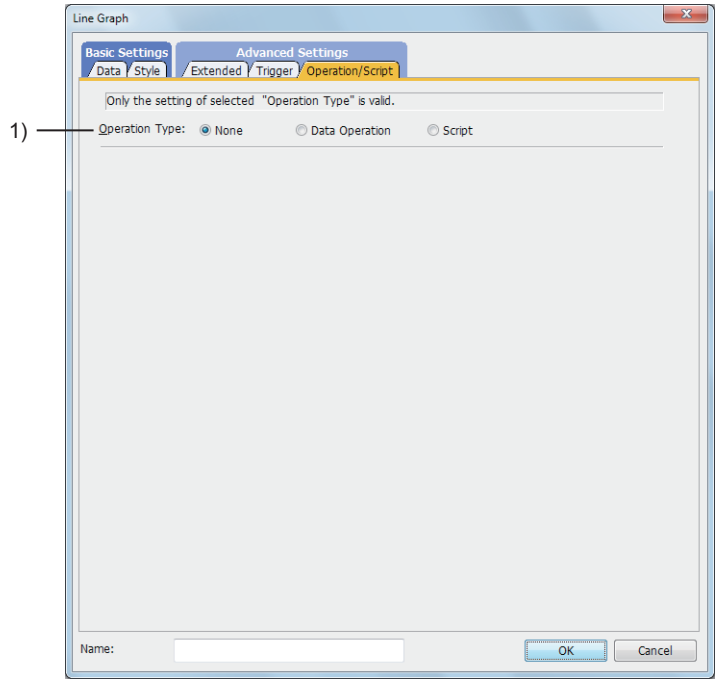

■5 [Operation/Script] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

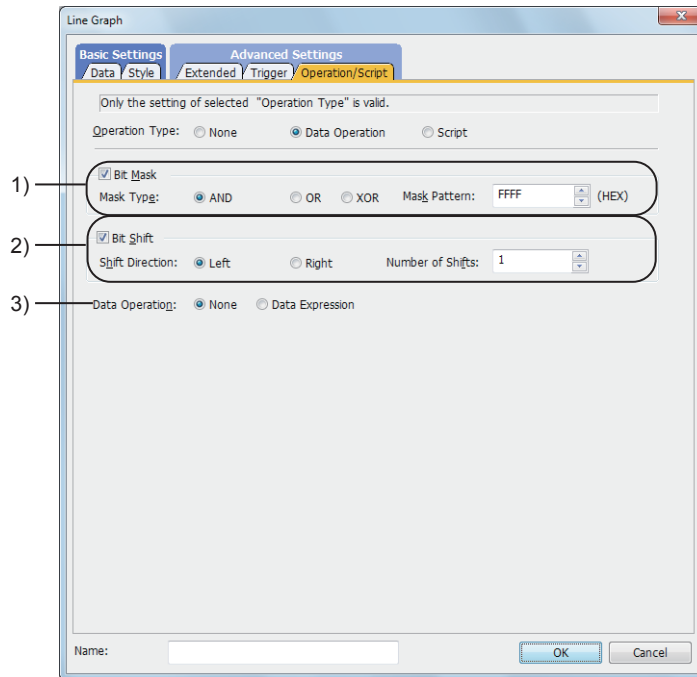

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→(1) [Data Operation]
- [Script]  
Not available to GT21.  
Set the expression used for the script function.  
→(2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

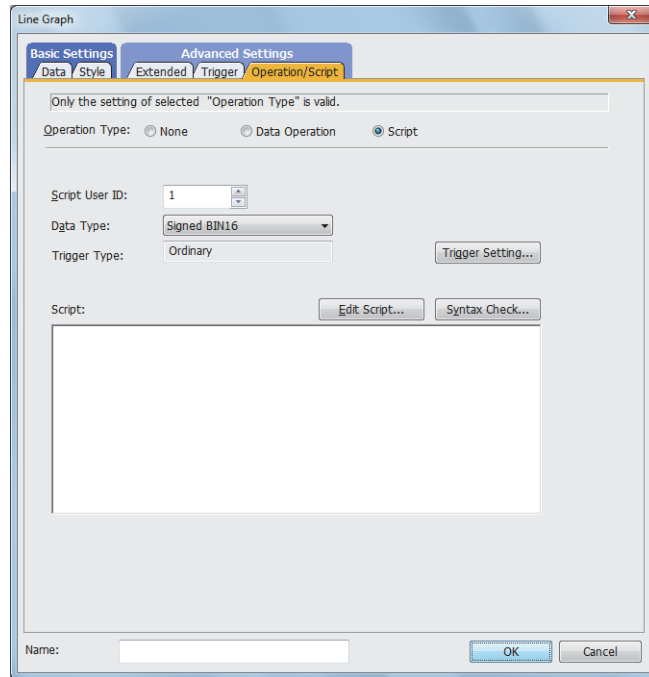

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Style]	[Frame Color]	frame_color	○	○	Upon the setting change	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (X)	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y)	scale_min[1]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (X)	scale_max[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y)	scale_max[1]	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

### 8.15.5 Relevant settings

Set the relevant settings other than the specific settings for the line graph as required.

The following shows the functions that are available by the relevant settings.

#### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

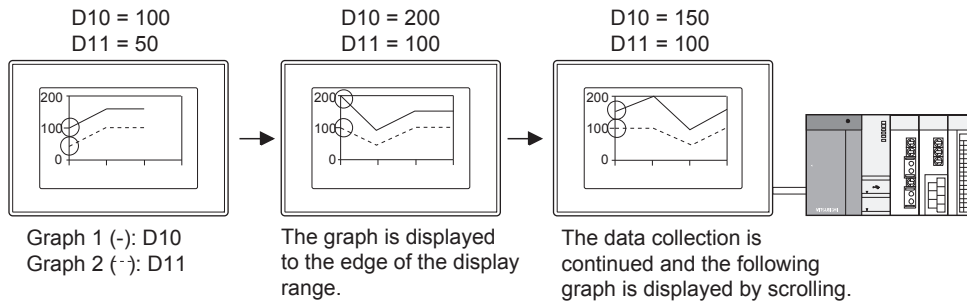

→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

## 8.16 Placing a Trend Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Data in a word device can be collected continuously and are displayed in a graph.

### 8.16.1 Specifications of the trend graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the trend graph.

#### ■1 Number of trend graphs that can be set

##### (1) Maximum number of trend graphs on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 32 trend graphs and/or historical trend graphs can be placed on one screen.
- For GT21  
One historical data list display, trend graph, scatter graph, or historical trend graph can be placed on one screen.

##### (2) Maximum number of lines in one trend graph

The maximum number of lines in one trend graph depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 32 lines are displayable in one graph.
- For GT21  
Up to four lines are displayable in one graph.

##### (3) Maximum number of points

The maximum number of points on one line of a trend graph depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 1024 points are displayable.
- For GT21  
Up to 500 points are displayable.

#### ■2 Difference between trend graphs and historical trend graphs

Historical trend graphs displays data collected and accumulated with logging as graphs.

To accumulate data, use historical trend graphs.

- 8.21 Placing a Historical Trend Graph
- 9.2 Collecting Device Data ([Logging])

Trend graphs do not accumulate collected data.

## 8.16.2 How to use the trend graph

The following shows how to use the trend graph.

### ■ 1 Placing the Trend Graph

The following shows how to place the trend graph.

- Step 1** Select [Object] → [Graph] → [Trend Graph] from the menu.
- Step 2** Click the position where you place the trend graph. Placing the trend graph is complete.
- Step 3** Adjust the frame size of the trend graph.
- Step 4** Double-click the placed trend graph to display the setting dialog.  
→ 8.16.4 [Trend Graph] dialog
- Step 5** Display the [Data] tab.  
→ 8.16.4 ■ 1 [Data] tab
- Step 6** Set the number of lines and points to be displayed in the trend graph.

- Step 7** Set a device to be monitored.  
→ 6.1.1 How to set devices
- Step 8** Set [Lower Limit] and [Upper Limit].
- Step 9** Set the scale and figure in the [Style] tab.  
→ 8.16.4 ■ 2 [Style] tab

- Step 10** Set the graph assistance line and cursor attribute in the [Auxiliary Line/Cursor] tab.  
→ 8.16.4 ■ 3 [Auxiliary Line/Cursor] tab

- Step 11** Click the [OK] button to complete the trend graph settings.

### ■ 2 Identifying multiple graphs (setting user IDs)

When multiple objects that are operated by the touch switch to which the key code are assigned placed on one screen, touching the touch switch may operate the object that is not the target.

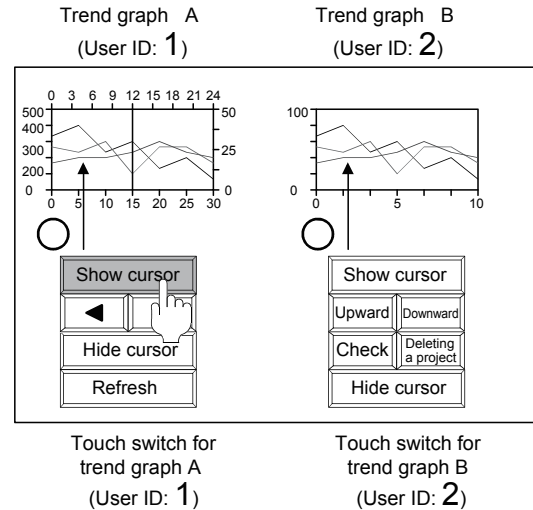

Setting a user ID limits the objects operated when the touch switch is touched.

When no user ID is set

The touch switches for trend graph A operate for trend graph B.

When the user ID is set

Although the same key codes are used, the target for an operation can be specified with ID numbers. Hence operations can be performed as required.

The following shows the setting procedure.

### (1) Setting of the trend graph

**Step 1** Double-click the trend graph placed on the screen editor.

The [Trend Graph] dialog appears.

→ 8.16.4 [Trend Graph] dialog

**Step 2** Enable [User ID] in the [Extended] tab, and specify the number.

→ 8.16.4 ■ 4 [Extended] tab

The number is used to define the target object as the object that operates when the touch switch is touched. Do not set [User ID] that is already used for other objects.

### (2) Settings of touch switches

**Step 1** Display the [Switch] dialog.

For the details of the switch, refer to the following.

→ 8.2 Placing a Touch Switch

**Step 2** Click the [Key Code] button in the [Action] tab.

**Step 3** Enable [Individually set user ID for a key input] and specify a number.

Set the same number as the number specified in [User ID] of [Trend Graph].

## ■ 3 Storing date data in devices

The time of the cursor display position, display range beginning position, and display range end position of the graph can be stored to the device by using the Time device.

### (1) How to store the data to the device

Data is stored in the upper eight bits and lower eight bits of set devices.

Numerical values are stored in BCD.

Example) When [Device] is set to [D100]

Item	Device	Description
[yymm]	D100	<ul style="list-style-type: none"> <li>• b15 to b8: The year is stored.</li> <li>• b7 to b0: The month is stored.</li> </ul>
[ddhh]	D101	<ul style="list-style-type: none"> <li>• b15 to b8: The day is stored.</li> <li>• b7 to b0: The time (hour) is stored.</li> </ul>
[mmss]	D102	<ul style="list-style-type: none"> <li>• b15 to b8: The time (minute) is stored.</li> <li>• b7 to b0: The time (second) is stored.</li> </ul>

Item	Device	Description
[Day]	D103	<ul style="list-style-type: none"> <li>• b15 to b8: None</li> <li>• b7 to b0: The day of the week is stored as a numerical value. The following shows the numerical values corresponding to the days. <ul style="list-style-type: none"> <li>• 0: Sunday</li> <li>• 1: Monday</li> <li>• 2: Tuesday</li> <li>• 3: Wednesday</li> <li>• 4: Thursday</li> <li>• 5: Friday</li> <li>• 6: Saturday</li> </ul> </li> </ul>

## (2) Storage timing and values stored to devices

### (a) Timing when the value is stored

With the following timings, values are stored to devices.

- When a cursor is displayed on a graph
- When a cursor is moved
- When a historical trend graph is operated with a touch switch with a cursor displayed

### (b) Values to be stored

When a cursor is displayed on the graph, the drawing processing of the graph stops. The values at the stop of the draw processing are stored to devices.

Example) Storing a time in the device

## (3) Displaying date data in the numerical display

Date data can be displayed in the numerical display.

The following shows the setting procedure.

**Step 1** Display the setting dialog for the placed numerical display ([Numerical Display] dialog).

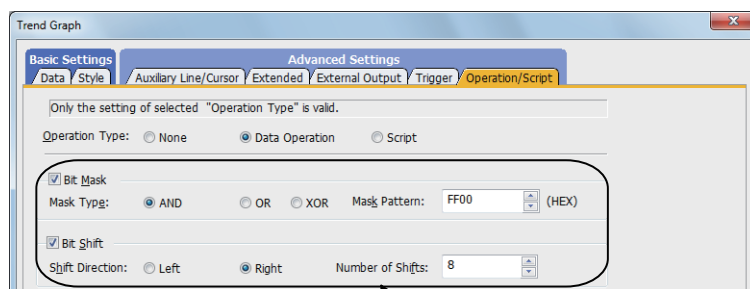

For the details of the numerical display, refer to the following.

→ 8.4 Placing a Numerical Display and Numerical Input

**Step 2** Select [BCD16] or [BCD32] in [Data Type] in the [Device] tab.

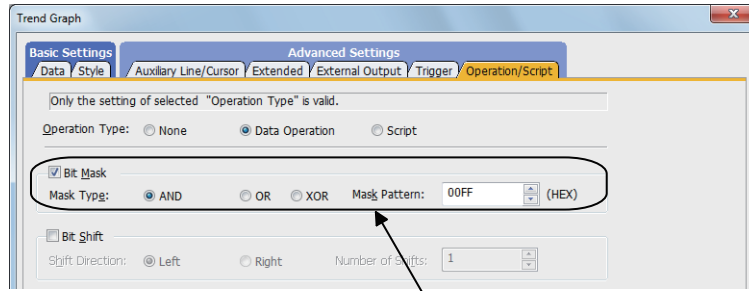

**Step 3** Set the mask processing and shift processing in the [Operation/Script] tab.

- When displaying upper 8 bits (year)

In the numerical display, set the lower 8 bits of D100 (b7 to b0) to be masked and the upper 8 bits of D100 (b15 to b8) to be shifted to the right by 8 bits.

- When displaying lower 8 bits (month)

In the numerical display, set the upper 8 bits of D100 (b15 to b8) to be masked.

#### ■4 Displaying the data obtained at specified time in the center (time specification jump function)

By using the display position time device and a touch switch, the data obtained at specified time can be displayed in the center of the trend graph.

When no data is obtained at the specified time, the data which has the nearest specified date is displayed.

When the multiple values are obtained at the nearest time, the first detected value is displayed.

##### (1) How to store the data to the device

Set a device to store the data in the upper eight bits and lower eight bits.

Numerical values are stored in BCD16.

Example) When [Device] is set to [D100]

Item	Device	Description
[yymm]	D100	<ul style="list-style-type: none"> <li>• b15 to b8: The year is stored.</li> <li>• b7 to b0: The month is stored.</li> </ul>
[ddhh]	D101	<ul style="list-style-type: none"> <li>• b15 to b8: The day is stored.</li> <li>• b7 to b0: The time (hour) is stored.</li> </ul>
[mmss]	D102	<ul style="list-style-type: none"> <li>• b15 to b8: The time (minute) is stored.</li> <li>• b7 to b0: The time (second) is stored.</li> </ul>

##### (2) Setting procedure

###### (a) Settings of touch switches

To use time specification jump function, the following touch switches are required.

- Touch switch for displaying the specified time
- Touch switch for restarting the drawing processing of the graph

If the time specification jump function is used, the drawing processing of the graph stops.

A touch switch for restarting the drawing processing of the graph is required.

The following shows the setting procedure.

- Step 1** Display the setting dialog for the placed switch ([Switch] dialog).  
For the details of the switch, refer to the following.  
    ⇒ 8.2 Placing a Touch Switch
- Step 2** Click the [Key Code] button in the [Action] tab.
- Step 3** Set the key cord according to the touch switch to be created.
  - When setting a touch switch for displaying the specified time  
Set [Code Setting] to [FF04].
  - When setting a touch switch for restarting the drawing processing of the graph  
Set [Code Setting] to [FFEF].

#### Point

##### Using the library data

Touch switches are registered in the library.

- ⇒ 8.1 Using Objects in the Library

## (b) Setting of the trend graph

**Step 1** Double-click the trend graph placed on the screen editor.

The [Trend Graph] dialog appears.

⇒8.16.4 [Trend Graph] dialog

**Step 2** Enable [Display Position Time] in the [Extended] tab, and specify a device.

⇒8.16.4 ■ 4 [Extended] tab

## (3) Operation example

The following shows the operation examples.

Example) When setting [D1000] in [Display Position Time Device] and displaying the data of Jun.29, 2013 21:05:30

## (4) Precautions

### (a) When date data is being searched for

When date data is being searched for, the historical trend graph cannot be operated.

### (b) When no data can be displayed on the trend graph

When no data can be displayed on the trend graph, the time specification jump function is not executed.

### (c) When displaying the data displayed near the start or end point

If the data obtained at specified time is near the start or end point, it may not be displayed in the center of the graph.

## ■ 5 Setting [Collect data only when trigger conditions are satisfied]

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced. Various graphs can be combined.

The following shows the setting procedure.

**Step 1** Select [Object] → [Graph] → [Trend Graph] from the menu.

**Step 2** Click the position where you place the trend graph. Placing the trend graph is complete.

**Step 3** Double-click the placed trend graph to display the setting dialog.

⇒8.16.4 [Trend Graph] dialog

**Step 4** Display the [Trigger] tab.

⇒8.16.4 ■ 6 [Trigger] tab

**Step 5** Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].

**Step 6** Set [Collect data only when trigger conditions are satisfied].

Example) Combining the line graph and trend graph

Trigger type : Rise  
Collect data only when trigger conditions are satisfied : Enabled  
Object : Line graph

Displays the graph (communicates) only at startup.

Trigger type : Sampling (3 seconds)  
Collect data only when trigger conditions are satisfied : Disabled  
Object : Trend graph

Communicates in the set cycle and refreshes the display frequently.

The line graph can be used as the reference value and compared with the trend graph.

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.

However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).

The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

### 8.16.3 Precautions for a trend graph

The following shows the precautions for the trend graph.

#### ■ 1 Cause for when the graph display is not refreshed in the set cycle set and measure against it

##### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

The graph display may not be refreshed in the set cycle.

##### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].

If the condition is not satisfied at the timing of the check, the display is not refreshed.

Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the trend graph is refreshed at timing 1).
- The display of the trend graph is refreshed at timing 2).
- At timing 3), the display of the trend graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the trend graph is not refreshed because the device condition is not satisfied.
- The display of the trend graph is refreshed at timing 5).

##### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.

(The sampling cycle does not change whether the device is turned on or off.)

The following shows the setting procedure to start the cycle according to the device status.

**Step 1** Select [Rise] or [Fall] for [Trigger Type].

**Step 2** Create a sequence program that turns the device on or off when the display should be refreshed.

#### ■ 2 Operation to clear the collected data

The following shows the operation to clear the display of the graph or the collected data (to clear the device value to 0).

- The screen is switched.
- The utility screen is displayed.
- The language is switched.
- The security level is switched.
- The station number is switched.
- When the trend graph is displayed in the superimpose window, the base screen is switched.

#### ■ 3 When the monitored device value is above the upper limit or below the lower limit

The trend graph does not display a device value that is above the upper limit or below the lower limit.

In such a case, the upper or lower limit symbol appears at the position where the device value is hidden from view.

To hide the upper and lower limit symbols, turn on GS450.b10.

⇒ 12.1.3 GOT special register (GS)

## 8.16.4 [Trend Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The trend graph is an object that constantly collects data in word devices and display it in a graph.

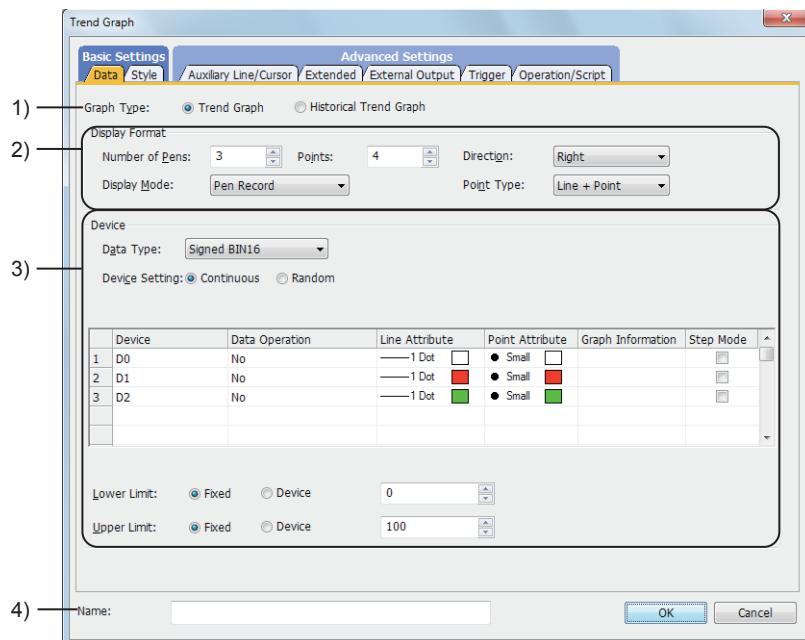

- Step 1** Select [Object] → [Graph] → [Trend Graph] from the menu.
- Step 2** Click the position where you place the trend graph. Placing the trend graph is complete.
- Step 3** Double-click the placed trend graph to display the setting dialog.

- ■ 1 [Data] tab
- 2 [Style] tab
- 3 [Auxiliary Line/Cursor] tab
- 4 [Extended] tab
- 5 [External Output] tab
- 6 [Trigger] tab
- 7 [Operation/Script] tab

### ■ 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the trend graph status corresponding to the device value.

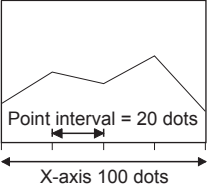

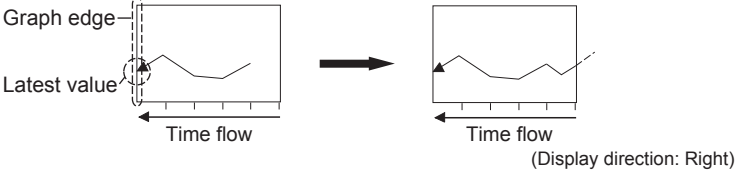

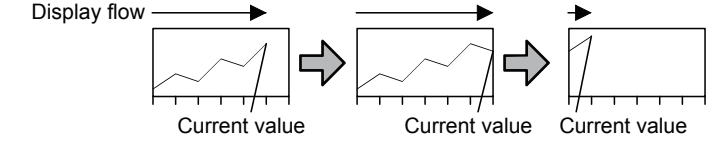

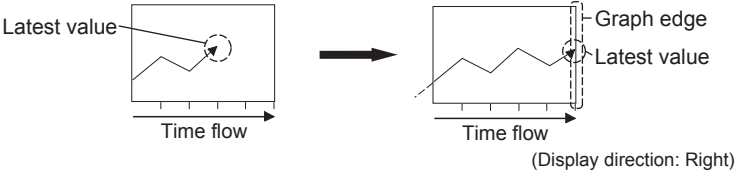

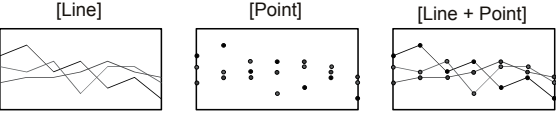

#### 1) [Graph Type]

Select the graph to be set.  
The following shows the items to be selected.

- [Trend Graph]
- [Historical Trend Graph]

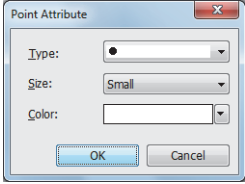

#### 2) [Display Format]

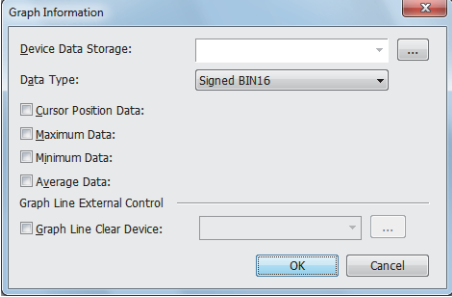

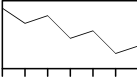

Item	Description
[Number of Pens]	<p>Set the number of lines to be displayed in the trend graph. The setting range depends on the GOT model.</p> <ul style="list-style-type: none"> <li>• For GT27, GT25, GT23, and GT SoftGOT2000 The setting range is [1] to [32].</li> <li>• For GT21 The setting range is [1] to [4].</li> </ul>

Item	Description
[Points]	<p>Set the number of points to be displayed on a line of the trend graph. The setting range depends on the GOT model.</p> <ul style="list-style-type: none"> <li>• For GT27, GT25, GT23, and GT SoftGOT2000 The setting range is [2] to [1024].</li> <li>• For GT21 The setting range is [2] to [500].</li> </ul> <p>Depending on the number of points and X-axis display range, the interval between points is adjusted automatically.</p> <p>Example) Number of points: 5 Point interval = 20 dots X-axis 100 dots</p> 
[Direction]	<p>Select the display direction of the graph. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Up]</li> <li>• [Right]</li> <li>• [Down]</li> <li>• [Left]</li> </ul>
[Display Mode]	<p>The following shows how to draw the trend graph. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Pen Record]: The line of the graph is drawn by moving the whole graph to [Direction]. The point indicating the latest value is always drawn at the graph edge.</li> </ul> <p>Graph edge Latest value</p>  <ul style="list-style-type: none"> <li>• [One by One] The current value is displayed in the display direction. When the graph is drawn fully in a display range, the graph being displayed is cleared and a new graph is drawn.</li> </ul> <p>Display flow</p>  <ul style="list-style-type: none"> <li>• [Next Point Movement] The line of the graph is drawn to [Direction]. The point indicating the latest value moves to the display direction. Once the point indicating the latest value reaches to the graph edge, the point is drawn at the graph edge constantly.</li> </ul> <p>Latest value</p> 
[Point Type]	<p>Select the point type. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Line]</li> <li>• [Point]</li> <li>• [Line + Point]</li> </ul> 

### 3) [Device]

Item	Description
[Data Type]	<p>Select the data type of the word device. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>
[Device Setting]	<p>Select how to set the device. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Continuous]: When a start device is set, inputs consecutive devices automatically in the table of [Device].</li> <li>• [Random]: Select this item when setting devices one by one.</li> </ul>
[Device]	<p>Set the device to be monitored. →6.1.1 How to set devices</p>
[Data Operation]	<p>Set this item to execute the data operation. →6.5.5 ■ 4 (3) [Edit Data Expression] dialog</p>
[Line Attribute]	<p>Set the attribute of the line. When [Line] or [Line + Point] is selected for [Point Type], set this item.</p> <div data-bbox="890 770 1139 954" style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• [Line Style] Select the style of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· Solid line</li> <li>· Dotted line</li> <li>· Broken line</li> <li>· One-dot chain line</li> <li>· Two-dot chain line</li> </ul> </li> <li>• [Width] Select the width of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· [1 Dot]</li> <li>· [2 Dot]</li> <li>· [3 Dot]</li> <li>· [4 Dot]</li> <li>· [5 Dot]</li> <li>· [7 Dot]</li> </ul> </li> <li>• [Line Color] Select the color of the line.</li> </ul>

Item	Description
[Point Attribute]	<p>Set the attribute of the points. When [Point] or [Line + Point] is selected for [Point Type], set this item</p>  <ul style="list-style-type: none"> <li>• [Type] Select the style of the point. The following shows the items to be selected.</li> </ul> <p style="text-align: center;"> 0: ●, 1: ■, 2: ▲, 3: +, 4: ○, 5: □  6: △, 7: ×, 8: ▼, 9: ◀, 10: ▶, 11: ◆  12: ▽, 13: ◁, 14: ▷, 15: ◇ </p> <ul style="list-style-type: none"> <li>• [Size] Select the size of the point. The following shows the items to be selected.</li> </ul> <ul style="list-style-type: none"> <li>· [Large]: 9 dots</li> <li>· [Medium]: 7 dots</li> <li>· [Small]: 5 dots</li> <li>· [Very small]: 3 dots</li> <li>· [Point]: 1 dot</li> </ul> <p>Only when [0] is selected for [Type], [Very small] or [Point] can be selected.</p> <ul style="list-style-type: none"> <li>• [Color] Set the color of the point.</li> </ul>

Item	Description
[Graph Information]	<p>Set the device in which the information displayed on the graph is stored or device that clears the line of the graph.</p>  <ul style="list-style-type: none"> <li>• [Device Data Storage] Set the device in which the graph information is stored. The successive devices following the device set in this item are assigned automatically to [Cursor Position Data] or later items. Set each item optionally. The device is assigned only to the set item.</li> <li>• [Data Type] Select the data type of the word device in which graph information is stored. The following shows the items to be selected. <ul style="list-style-type: none"> <li>· [Signed BIN16]</li> <li>· [Unsigned BIN16]</li> <li>· [Signed BIN32]</li> <li>· [Unsigned BIN32]</li> <li>· [BCD16]</li> <li>· [BCD32]</li> <li>· [Real]</li> </ul> </li> <li>• [Cursor Position Data] Select this item to store the value of device positioned by the cursor. The device is assigned automatically.</li> <li>• [Maximum Data] Select this item to store the maximum value of the device values displayed on the graph is to be stored. The device is assigned automatically.</li> <li>• [Minimum Data] Select this item to store the minimum value of the device values displayed on the graph. The device is assigned automatically.</li> <li>• [Average Data] Select this item to store the average value of the device values displayed on the graph. The device is assigned automatically.</li> <li>• [Graph Line External Control] <ul style="list-style-type: none"> <li>· [Graph Line Clear Device] Select this item to clear the line of the graph using a device. After selecting this item, set the device.</li> </ul> </li> </ul>
[Step Mode]	<p>Select this item to display the line of the trend graph by steps.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> <p style="text-align: center;">Displayed by no steps      Displayed by steps</p>
[Lower Limit] and [Upper Limit]	<p>Select whether to specify the display range (lower and upper limit values) of the trend graph with the fixed value or with the device value. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Specify a constant.</li> <li>• [Device]: Specify a device value. →6.1.1 How to set devices</li> </ul> <p>The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].</p>

#### 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

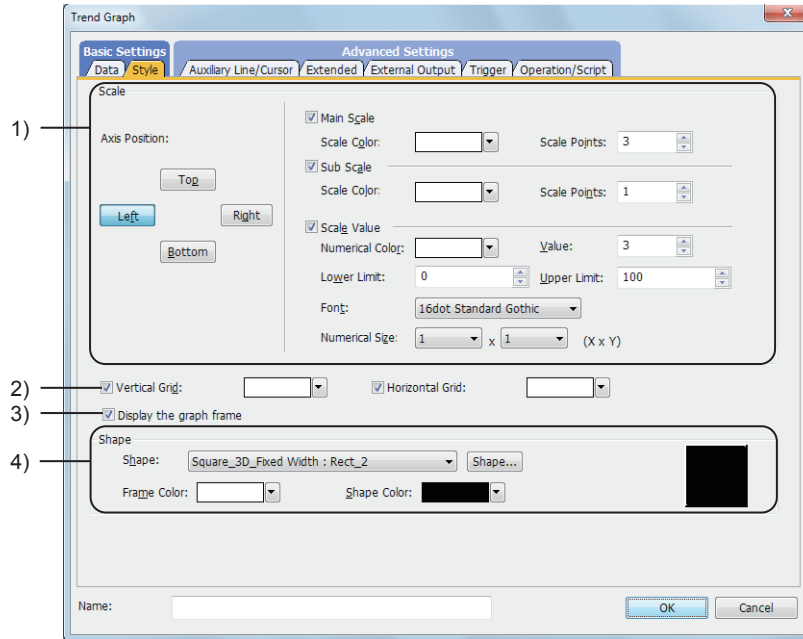

Up to 100 characters can be set.

## 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Scale Settings]

Displays the line or scale value in the trend graph.

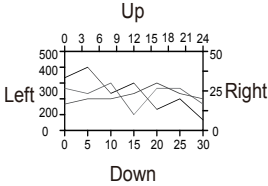

Line  
(X: 5)  
(Y: 5)

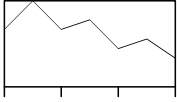

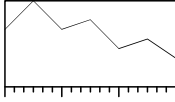

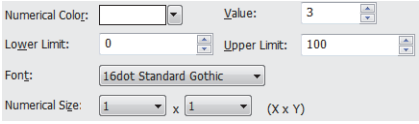

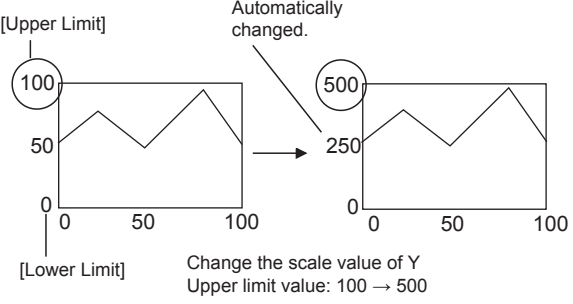

Scale value  
(X: 3)  
(Y: 3)

Displays both the lines  
and scale values.

Item	Description
[Axis Position]	<p>Select the position where the line or scale value is displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Left] button</li> <li>• [Right] button</li> <li>• [Top] button</li> <li>• [Bottom] button</li> </ul> <p>After selecting the position, set the line or scale value.</p> 
[Main Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [2] to [101].</li> </ul>

Item	Description
[Sub Scale]	<p>Set this item to place lines between the lines set in [Main Scale].</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Without [Sub Scale]</p>  </div> <div style="text-align: center;"> <p>With [Sub Scale]</p>  </div> </div> <div style="text-align: center; margin-top: 10px;">  </div> <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of sub lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of sub lines on the scale. The setting range is [1] to [9].</li> </ul>
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p> <div style="text-align: center; margin-bottom: 10px;">  </div> <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value]</b> Set the number of numeric characters. The setting range is [2] to [11].</li> <li>• <b>[Lower Limit] and [Upper Limit]</b> Set the lower limit and upper limit of the numerical value. Changes in this setting are automatically applied to the display.</li> </ul> <div style="text-align: center; margin-bottom: 10px;">  <p>Change the scale value of Y Upper limit value: 100 → 500</p> </div> <p>Depending on the item selected for [Data Type] in the [Data] tab, the setting range is different.</p> <ul style="list-style-type: none"> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. → 1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>

## 2) [Vertical Grid] and [Horizontal Grid]

Select this item to display the horizontal or vertical grid.

The number of grids is the same as the number set in [Scale Points] of [Main Scale] and [Sub Scale].

The bottom and left setting in [Axis Position] is prioritized.

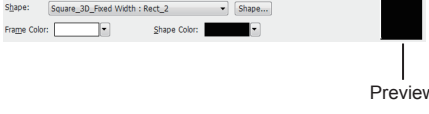

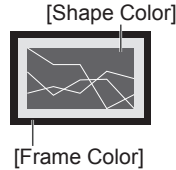

After setting this item, select the color of the grid.

### 3) [Display the graph frame]

Select this item to display the frame of the graph.

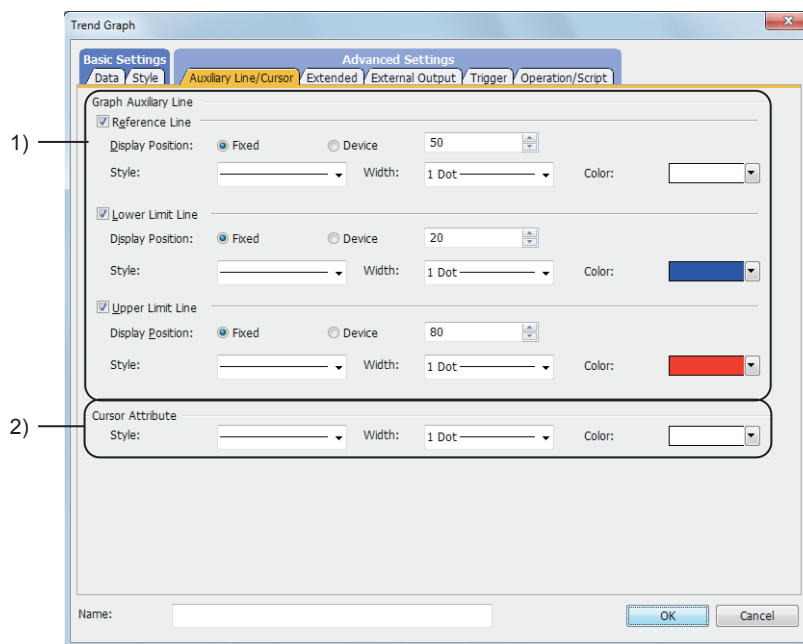

### 4) [Shape]

Item	Description
[Shape]	<p>Set the shape of the trend graph.                      When [None] is selected, no shape is displayed.                      To select a shape other than those in the list box, click the [Shape] button.                      →6.5.5 ■ 1 Setting object shapes                      When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p>  <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

### ■ 3 [Auxiliary Line/Cursor] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the auxiliary line and attribute of the cursor.

## 1) [Graph Auxiliary Line]

Item	Description
<p>[Reference Line], [Lower Limit Line], and [Upper Limit Line]</p>	<p>Set this item to place a reference line on the graph.</p>  <ul style="list-style-type: none"> <li>• <b>[Display Position]</b> Select whether to specify the line position using a fixed value or device value. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Fixed]: Specify a constant.</li> <li>• [Device]: Specify a device value. →6.1.1 How to set devices</li> </ul> </li> <li>• <b>[Line Style]</b> Select the style of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul> </li> <li>• <b>[Width]</b> Select the width of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul> </li> <li>• <b>[Line Color]</b> Select the color of the line.</li> </ul>

## 2) [Cursor Attribute]

Set the attribute of the cursor.

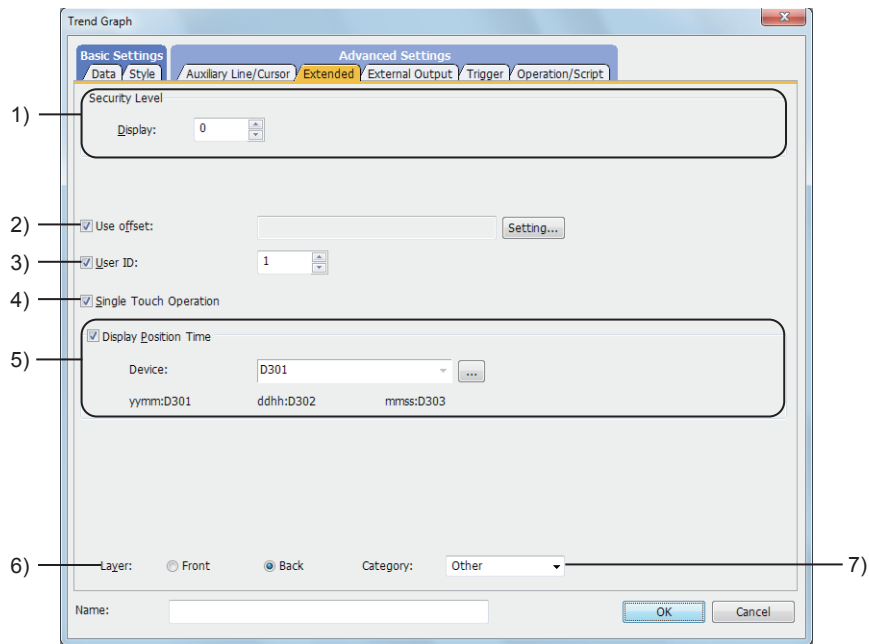

Item	Description
<p>[Line Style]</p>	<p>Select the style of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul>
<p>[Width]</p>	<p>Select the width of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
<p>[Line Color]</p>	<p>Select the color of the line.</p>

#### ■ 4 [Extended] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

##### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

##### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→6.1.9 Offset

##### 3) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

→8.16.2 ■ 2 Identifying multiple graphs (setting user IDs)

##### 4) [Single Touch Operation]

Select this item to display a cursor at the touched place.

##### 5) [Display Position Time]

Set this item to display the data obtained at specified time in the center of the graph when the touch switch is touched.

Item	Description
[Device]	<p>Set the device in which the date data is stored.</p> <p>The three successive devices following the device set in this item are automatically assigned to [yymm], [ddhh], and [mmss].</p> <p>The date data is stored in the upper eight bits and lower eight bits of each set device.</p> <p>The data type of the devices is BCD.</p> <p>→8.16.2 ■ 4 Displaying the data obtained at specified time in the center (time specification jump function)</p>

##### 6) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

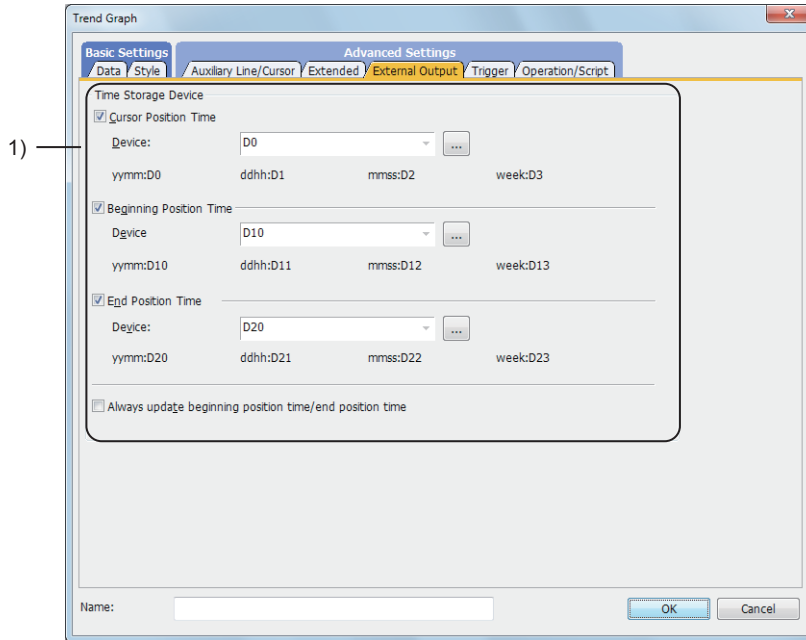

→6.5.5 ■ 3 Superimposition

7) [Category]

Select the category to assign the object.

→11.7 Managing figures and objects by category

■5 [External Output] tab

1) [Time Device]

Stores each date data.

The four successive devices following the device set in this item are automatically assigned to [yymm], [ddhh], [mmss], and [Day].

The date data is stored in the upper eight bits and lower eight bits of each set device.

The data type of the devices is BCD.

For how to display the date data stored in the device in the numerical display, refer to the following.

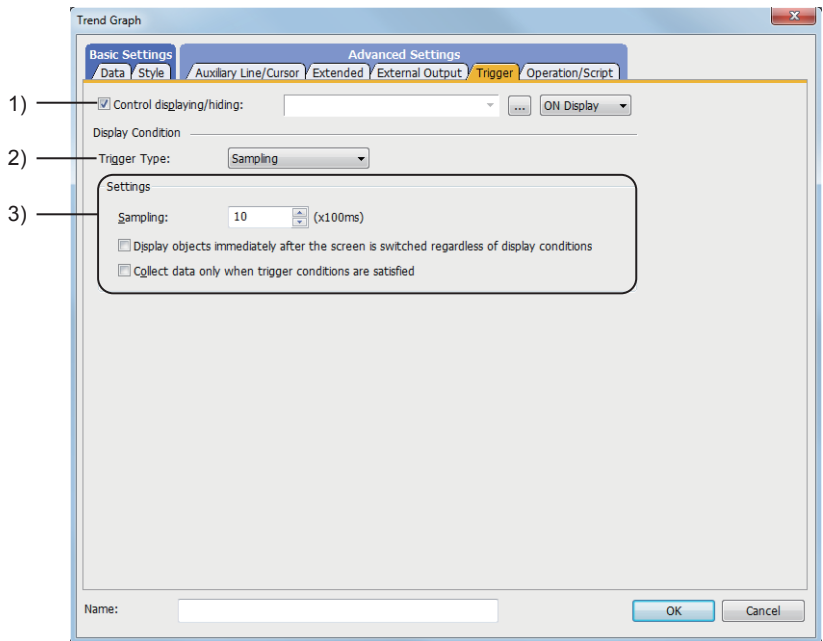

→8.16.2 ■ 3 Storing date data in devices

Item	Description
[Cursor Position Time]	Set this item to store the time of the cursor display position. After selecting this item, set the device.
[Beginning Position Time]	Set this item to store the time at the beginning position of the graph. After selecting this item, set the device.
[End Position Time]	Set this item to store the time at the end position of the graph. After selecting this item, set the device.
[Always update Beginning Position Time/End Position Time]	Select this item to constantly store the latest value in the Time device (beginning position time and end position time). New data obtained at specified time is stored every graph refresh.

## 6 [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

⇒6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available. The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.

## ■ 7 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

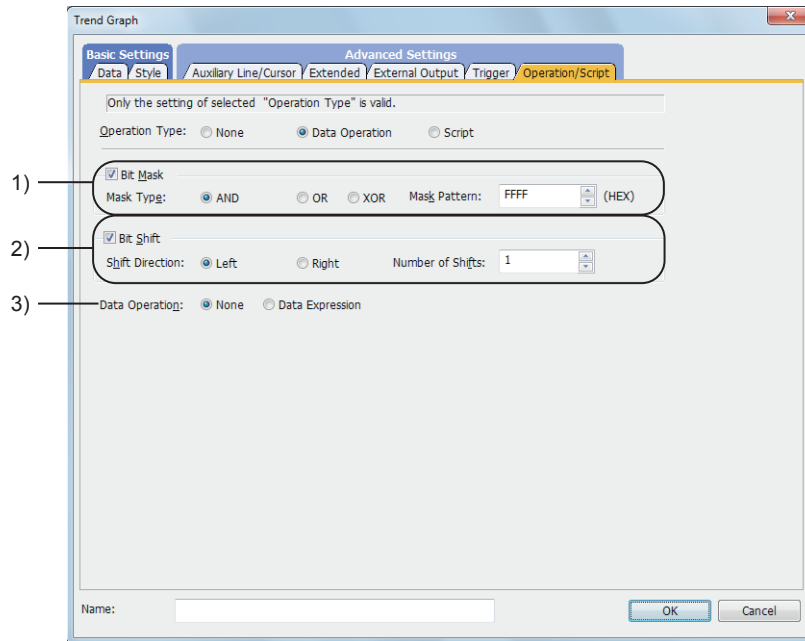

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→ (1) [Data Operation]
- [Script]  
Set the expression used for the script function.  
→ (2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Data]	[Lower Limit] (X (lower side))	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (left side))	scale_min[1]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (upper side))	scale_min[2]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (right side))	scale_min[3]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (X (lower side))	scale_max[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (left side))	scale_max[1]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (upper side))	scale_max[2]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (right side))	scale_max[3]	○	○	Upon the setting change	When the screen is updated

	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

- 9.10.2 (5) Timing at which the setting change of an object property is reflected
- \*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

- 5.1.4 [Type Setting] dialog

## 8.16.5 Relevant settings

Set the relevant settings other than the specific settings for the trend graph as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

### ■ 2 GOT Internal Device

- 12.1.3 GOT special register (GS)

Function	Setting item
Hiding the upper and lower limit symbols	GS450.b10

## 8.17 Placing a Bar Graph

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

This function collects multiple word device values in a batch and displays the values in a bar graph.

## 8.17.1 Specifications of the bar graph

The following shows the specifications of the bar graph.

### ■ 1 Number of bar graphs that can be set

#### (1) Number of bar graphs that can be placed

Up to 1024 bar graphs can be placed on one screen.

Up to 256 objects for which [Collect data only when trigger conditions are satisfied] is set can be placed for one project.

#### (2) Number of bars that can be displayed (number of word devices that can be monitored)

- For GT27, GT25, GT23, and GT SoftGOT2000

Up to 500 bars can be displayed in one bar graph.

- For GT21

Up to eight bars can be displayed in one bar graph.

## 8.17.2 How to use the bar graph

The following shows how to use the bar graph.

### ■ 1 Placing the bar graph

The following shows how to place the bar graph.

**Step 1** Select [Object] → [Graph] → [Bar Graph] from the menu.

**Step 2** Click the position where you place the bar graph. Placing the bar graph is complete.

**Step 3** Adjust the frame size of the bar graph.

**Step 4** Double-click the placed bar graph to display the setting dialog.

⇒ 8.17.4 [Bar Graph] dialog

**Step 5** Display the [Data] tab.

⇒ 8.17.4 ■ 1 [Data] tab

**Step 6** Set the number of bars (the number of monitored word devices).

**Step 7** Set a device to be monitored.

⇒ 6.1.1 How to set devices

**Step 8** Set [Lower Limit], [Upper Limit], and [Base Value].

**Step 9** Set the scale and figure in the [Style] tab.

⇒ 8.17.4 ■ 2 [Style] tab

**Step 10** Click the [OK] button to complete the bar graph settings.

## ■2 Setting [Collect data only when trigger conditions are satisfied]

Not available to GT21.

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced. Various graphs can be combined.

- Step 1** Select [Object] → [Graph] → [Bar Graph] from the menu.
- Step 2** Click the position where you place the bar graph. Placing the bar graph is complete.
- Step 3** Double-click the placed bar graph to display the setting dialog.
  - ⇒8.17.4 [Bar Graph] dialog
- Step 4** Display the [Trigger] tab.
  - ⇒8.17.4 ■ 4 [Trigger] tab
- Step 5** Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].
- Step 6** Set [Collect data only when trigger conditions are satisfied].

Example) Combining the line graph and trend graph

Trigger type : Rise  
 Collect data only when trigger conditions are satisfied : Enabled  
 Object : Line graph

Displays the graph (communicates) only at startup.

Trigger type : Sampling (3 seconds)  
 Collect data only when trigger conditions are satisfied : Disabled  
 Object : Trend graph

Communicates in the set cycle and refreshes the display frequently.

The line graph can be used as the reference value and compared with the trend graph.

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.

However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).

The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

## 8.17.3 Precautions for a bar graph

This section explains the precautions for the bar graph.

### ■ 1 When the monitored device value exceeds the upper or lower limit value

When the monitored device value exceeds the lower limit value, the display of the lower limit value is applied.  
When the monitored device value exceeds the upper limit value, the display of the upper limit value is applied.

### ■ 2 Cause for when the graph display is not refreshed in the set cycle set and measure against it

Not available to GT21.

#### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

The graph display may not be refreshed in the set cycle.

##### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].  
If the condition is not satisfied at the timing of the check, the display is not refreshed.  
Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the bar graph is refreshed at timing 1).
- The display of the bar graph is refreshed at timing 2).
- At timing 3), the display of the bar graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the bar graph is not refreshed because the device condition is not satisfied.
- The display of the bar graph is refreshed at timing 5).

##### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.  
(The sampling cycle does not change whether the device is turned on or off.)  
The following shows the setting procedure to start the cycle according to the device status.

**Step 1** Select [Rise] or [Fall] for [Trigger Type].

**Step 2** Create a sequence program that turns the device on or off when the display should be refreshed.

#### (2) Refresh timing when [Sampling], [ON Sampling], or [OFF Sampling] is selected

The sampling cycle count starts and is reset at the following timing.

- When the bar graph is displayed (in screen switching, a security level change, or other possible cases)
- When the language switches
- When the security level changes

After the execution of any of the events, the display is refreshed at the start timing of the sampling cycle.

## 8.17.4 [Bar Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The bar graph is an object that collects multiple word device values in a batch and displays the values in a graph.

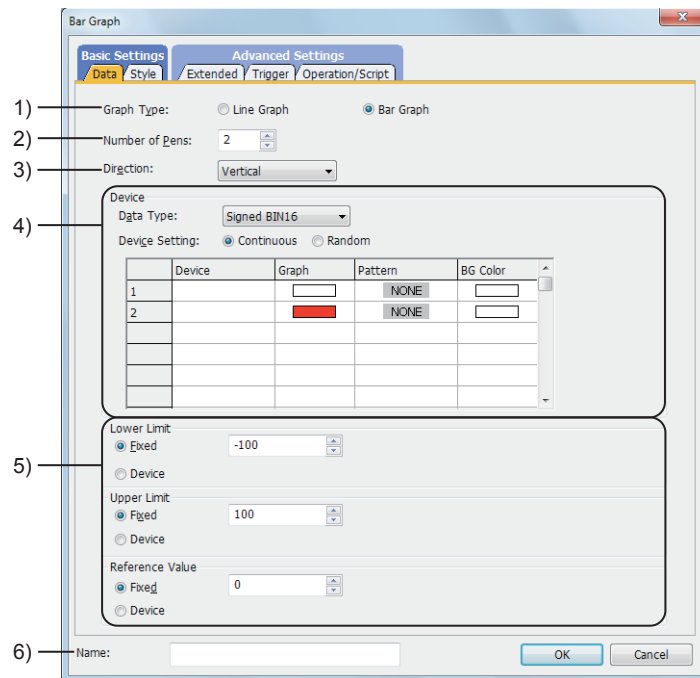

- Step 1 Select [Object] → [Graph] → [Bar Graph] from the menu.
- Step 2 Click the position where you place the bar graph. Placing the bar graph is complete.
- Step 3 Double-click the placed bar graph to display the setting dialog.

- ■ 1 [Data] tab
- 2 [Style] tab
- 3 [Extended] tab
- 4 [Trigger] tab
- 5 [Operation/Script] tab

### ■ 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the device to be monitored and the bar graph status corresponding to the device value.

#### 1) [Graph Type]

Select the graph to be set.  
The following shows the items to be selected.

- [Line Graph]
- [Bar Graph]

#### 2) [Number of Pens]

Set the number of bars to be displayed.  
The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
The setting range is [1] to [500].
- For GT21  
The setting range is [1] to [8].

#### 3) [Direction]

Select the display direction of the graph.  
The following shows the items to be selected.

- [Vertical]
- [Horizontal]

#### 4) [Device]

Item	Description
[Data Type]	Select the data type of the word device. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>
[Device Setting]	Select how to set the device. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous]: When a start device is set, inputs consecutive devices automatically in the table of [Device].</li> <li>• [Random]: Select this item when setting devices one by one.</li> </ul>
[Device]	Set the device to be monitored. ⇒6.1.1 How to set devices
[Graph]	Select the color of the bar.
[Pattern], [Background Color]	Select the pattern and the background color to be used for the bar.  Example) [Graph] : [Pattern] : [Background Color] : [Pattern] + [Graph] :

#### 5) [Lower Limit], [Upper Limit], and [Base Value]

Select whether to specify the display range (lower and upper limit values and a base value) of the line graph with the fixed value or with the device value.

The following shows the items to be selected.

- [Fixed]:  
Specify a constant.
- [Device]:  
Specify a device value.  
⇒6.1.1 How to set devices

The setting range of [Lower Limit], [Upper Limit], and [Base Value] differs depending on the item selected for [Data type].

#### 6) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

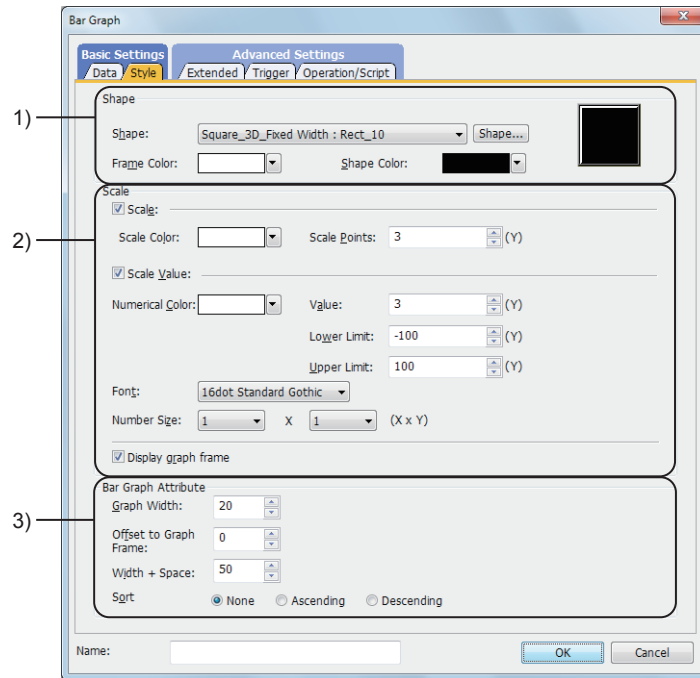

## ■ 2 [Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Shape]

Item	Description
[Shape]	<p>Set the shape of the bar graph. When [None] is selected, no shape is displayed. To select a shape other than those in the list box, click the [Shape] button. → 6.5.5 ■ 1 Setting object shapes When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p> <div data-bbox="826 1265 1189 1377" style="text-align: center;"> <p>Preview</p> </div> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul> <div data-bbox="938 1534 1093 1691" style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

### 2) [Scale Settings]

Displays the line or scale value in the bar graph.

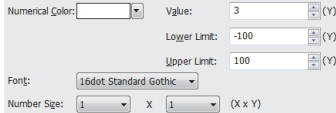

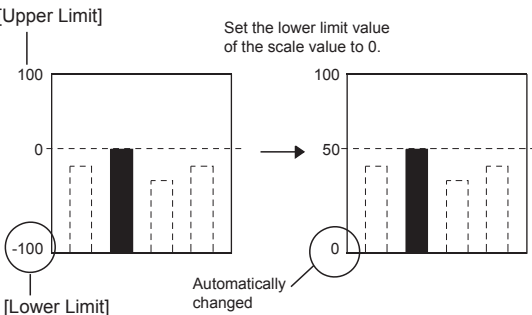

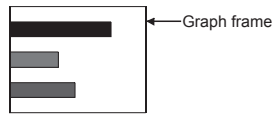

Line  
(X: 5)  
(Y: 5)

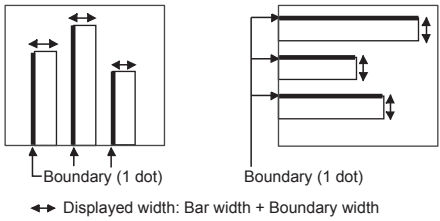

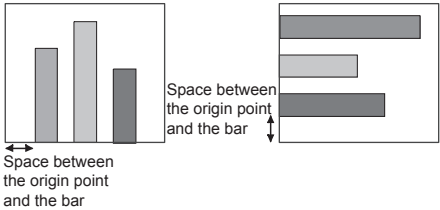

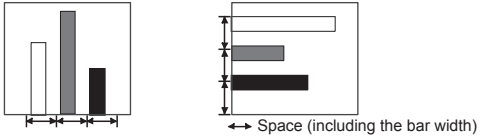

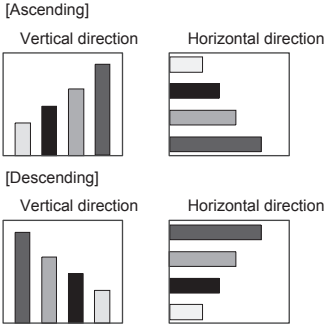

Scale value  
(X: 3)  
(Y: 3)

Displays both the lines  
and scale values.

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [2] to [101].</li> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> </ul>
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value] ([Horizontal] and [Vertical])</b> Set the number of numeric characters. The setting range is [0] and [2] to [101].</li> <li>• <b>[Lower Limit] ([Horizontal] and [Vertical]) and [Upper Limit] ([Horizontal] and [Vertical])</b> Set the lower limit and upper limit of the numerical value. Changes in this setting are automatically applied to the display.</li> </ul>  <p>Depending on the item selected for [Data Type] in the [Data] tab, the setting range is different.</p> <ul style="list-style-type: none"> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. → 1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>
[Display the graph frame]	<p>Select this item to display the frame of the graph.</p> 

### 3) [Bar Graph Attribute]

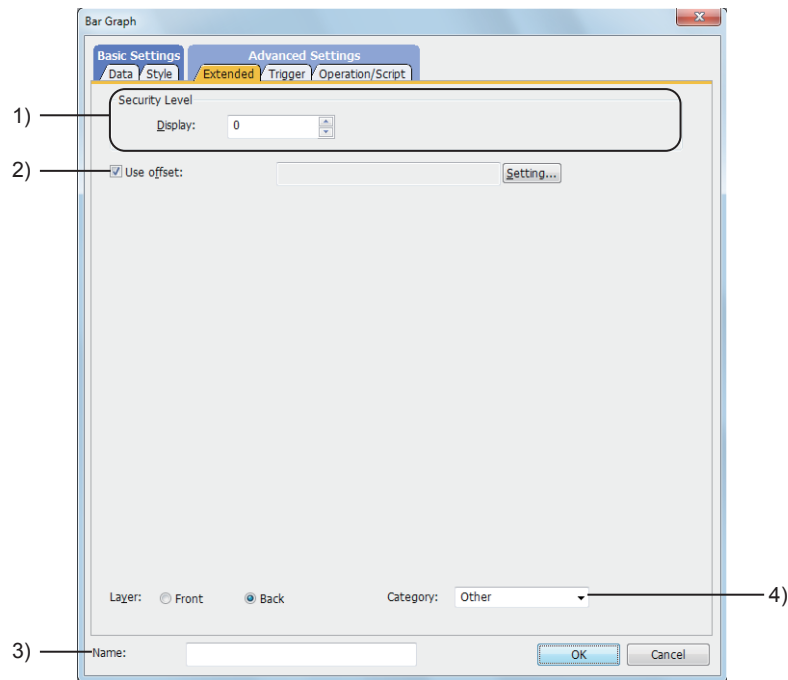

Item	Description
[Graph Width]	<p>Set the width of the bar.                      The setting range is [1] to [500] dot(s).                      In the actual display, one dot of the boundary width is added to the value set for this item.                      ([Vertical]: Left, [Horizontal]: Top)</p>  <p>← Boundary (1 dot)      ← Boundary (1 dot)</p> <p>↔ Displayed width: Bar width + Boundary width</p>
[Offset to Frame]	<p>Set the space between the origin point and the bar nearest to the origin point.                      The setting range is [0] to [100] dot(s).</p>  <p>Space between the origin point and the bar</p>
[Width + Space]	<p>Set the space between adjoining bars.                      The setting range is [1] to [500] dot(s).                      The setting value includes the displayed width.</p>  <p>Space (including the bar width)</p>
[Sort]	<p>Select the sorting order when sorting bars according to the device values.                      The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [None]</li> <li>• [Ascending]</li> <li>• [Descending]</li> </ul>  <p>[Ascending]      Vertical direction      Horizontal direction</p> <p>[Descending]      Vertical direction      Horizontal direction</p>

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→6.1.9 Offset

#### 3) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

→6.5.5 ■ 3 Superimposition

#### 4) [Category]

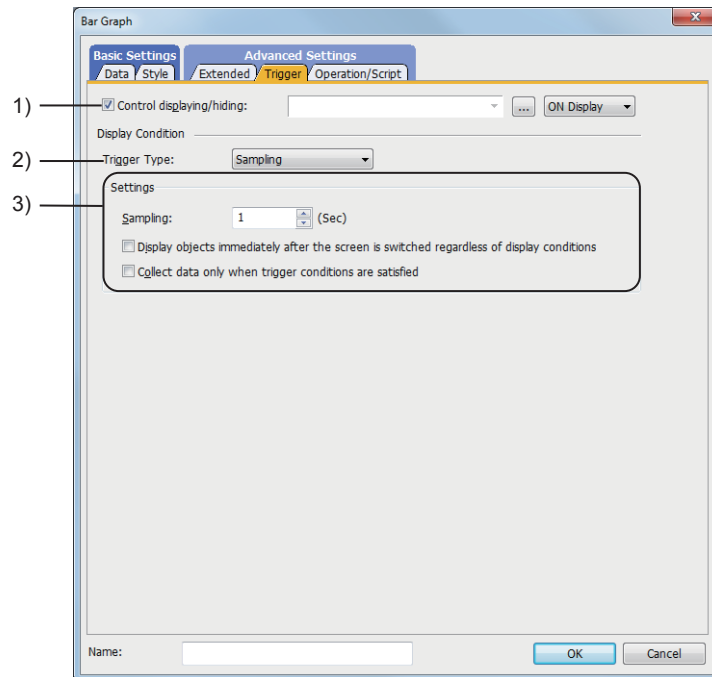

Select the category to assign the object.

→11.7 Managing figures and objects by category

## ■4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

## →6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	<p>Not available to GT21.</p> <p>Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available.</p> <p>The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.</p>

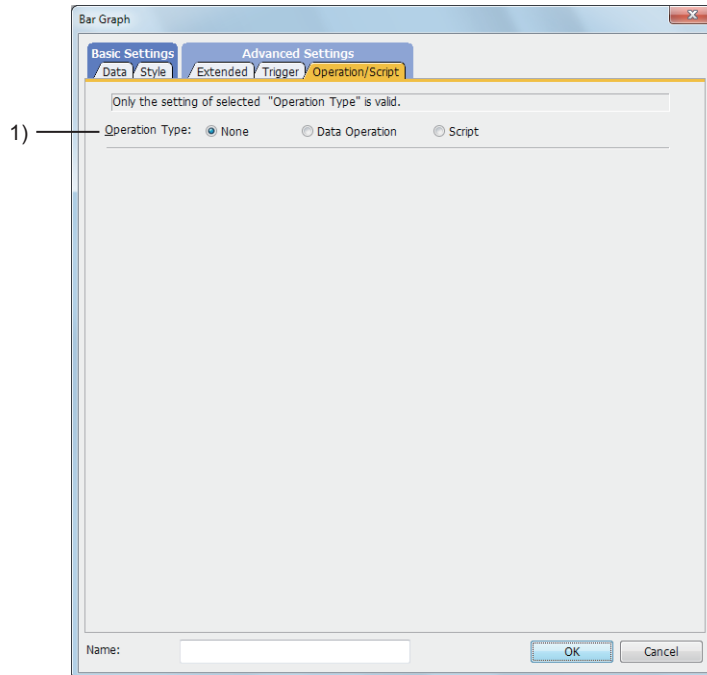

### ■ 5 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

#### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

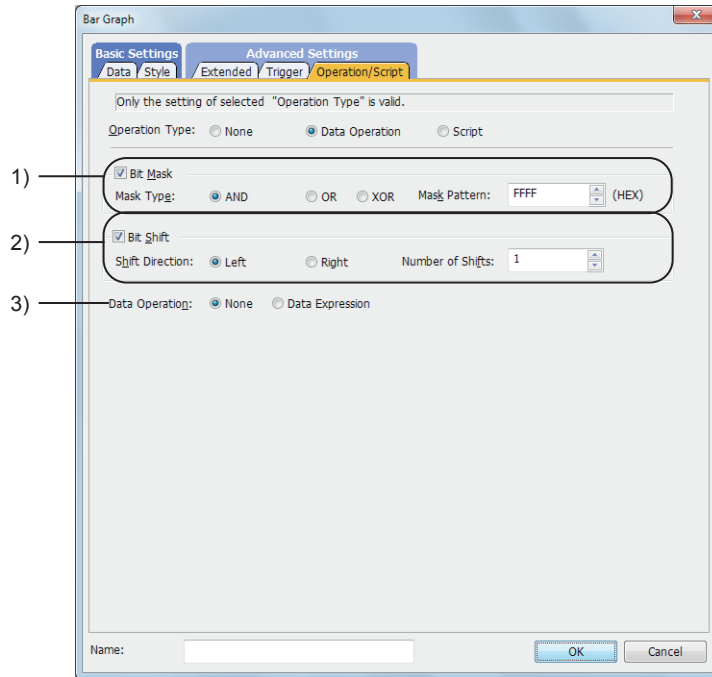

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→(1) [Data Operation]
- [Script]  
Not available to GT21.  
Set the expression used for the script function.  
→(2) [Script]

## (1) [Data Operation]

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

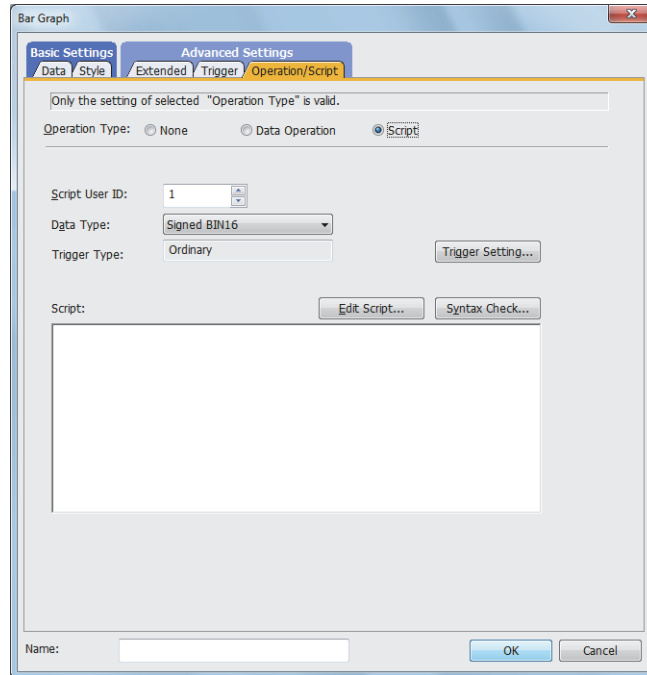

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 →9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (X)	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y)	scale_min[1]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (X)	scale_max[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y)	scale_max[1]	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.  
 →5.1.4 [Type Setting] dialog

### 8.17.5 Relevant settings

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the bar graph as required.  
 The following shows the functions that are available by the relevant settings.

#### ■1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
 →5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

## 8.18 Placing a Statistics Bar Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function collects multiple word device values in a batch and displays the ratio of each value to the total of all the collected values in a bar graph.

### 1 Application examples

#### (1) Displaying the graph on the same screen as the historical data list display

By displaying the graph on the same screen as the historical data list display, the device status can be described more effectively.

⇒8.10 Placing a Historical Data List Display

#### (2) Sorting the graph according to the device values

The graph can be sorted in ascending or descending order of the device values.

## 8.18.1 Specifications of the statistics bar graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the statistics bar graph.

### ■1 Number of statistics bar graphs that can be set

#### (1) Number of statistics bar graphs that can be placed

Up to 32 statistics bar graphs can be placed on one screen.

Up to 256 objects for which [Collect data only when trigger conditions are satisfied] is set can be placed for one project.

#### (2) Number of values that can be displayed (number of word devices that can be monitored)

Up to 32 values can be displayed in one statistics bar graph.

## 8.18.2 How to use the statistics bar graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the statistics bar graph.

### ■1 Placing the statistics bar graph

The following shows how to place the statistics bar graph.

**Step 1** Select [Object] → [Graph] → [Statistics Bar Graph] from the menu.

**Step 2** Click the position where you place the statistics bar graph. Placing the statistics bar graph is complete.

**Step 3** Adjust the frame size of the statistics bar graph.

**Step 4** Double-click the placed statistics bar graph to display the setting dialog.

→8.18.4 [Statistics Bar Graph] dialog

**Step 5** Set the number of divisions (number of the word device to be monitored), device to be monitored, and the color of the graph in the [Data] tab.

→8.18.4 ■ 1 [Data] tab

**Step 6** Set the scale and figure in the [Style] tab.

→8.18.4 ■ 2 [Style] tab

**Step 7** Click the [OK] button to complete the statistics bar graph settings.

### ■2 Setting [Collect data only when trigger conditions are satisfied]

Not available to GT21.

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced.

Various graphs can be combined.

**Step 1** Select [Object] → [Graph] → [Statistics Bar Graph] from the menu.

**Step 2** Click the position where you place the statistics bar graph. Placing the statistics bar graph is complete.

**Step 3** Double-click the placed statistics bar graph to display the setting dialog.

→8.18.4 [Statistics Bar Graph] dialog

**Step 4** Display the [Trigger] tab.

→8.18.4 ■ 4 [Trigger] tab

- Step 5 Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].
- Step 6 Set [Collect data only when trigger conditions are satisfied].

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.  
 However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).  
 The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

### 8.18.3 Precautions for a statistics bar graph

This section explains the precautions for the statistics bar graph.

#### ■ 1 When the monitored device value is minus

In the statistics bar graph, the absolute value is displayed when the monitored device value is minus.  
 Example) When D101 is -30

#### ■ 2 Cause for when the graph display is not refreshed in the set cycle set and measure against it

##### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

The graph display may not be refreshed in the set cycle.

##### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].  
 If the condition is not satisfied at the timing of the check, the display is not refreshed.  
 Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the statistics bar graph is refreshed at timing 1).
- The display of the statistics bar graph is refreshed at timing 2).
- At timing 3), the display of the statistics bar graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the statistics bar graph is not refreshed because the device condition is not satisfied.
- The display of the statistics bar graph is refreshed at timing 5).

##### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.  
 (The sampling cycle does not change whether the device is turned on or off.)  
 The following shows the setting procedure to start the cycle according to the device status.

- Step 1 Select [Rise] or [Fall] for [Trigger Type].
- Step 2 Create a sequence program that turns the device on or off when the display should be refreshed.

## (2) Refresh timing when [Sampling], [ON Sampling], or [OFF Sampling] is selected

The sampling cycle count starts and is reset at the following timing.

- When the statistics bar graph is displayed (in screen switching, a security level change, or other possible cases)
- When the language switches
- When the security level changes

After the execution of any of the events, the display is refreshed at the start timing of the sampling cycle.

### 8.18.4 [Statistics Bar Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The statistics bar graph is an object that collects multiple word device values in a batch and displays the ratio of each value to the total of the collected values in a bar graph.

**Step 1** Select [Object] → [Graph] → [Statistics Bar Graph] from the menu.

**Step 2** Click the position where you place the statistics bar graph. Placing the statistics bar graph is complete.

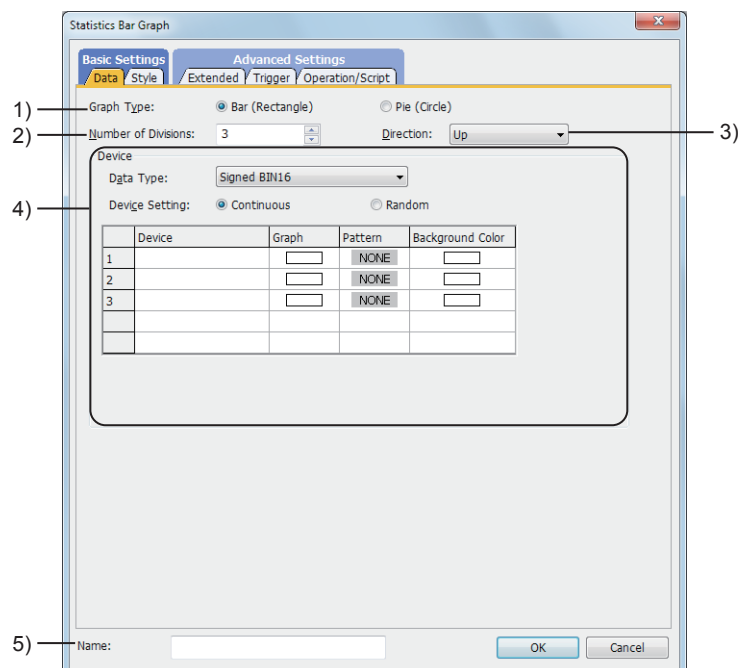

**Step 3** Double-click the placed statistics bar graph to display the setting dialog.

[Pattern], [Background Color]	<p>Select the pattern and the background color to be used for the bar.</p> <p>Example) [Graph] :  [Pattern] :  [Background Color]:  [Pattern] + [Graph] :  → </p>

#### 5) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

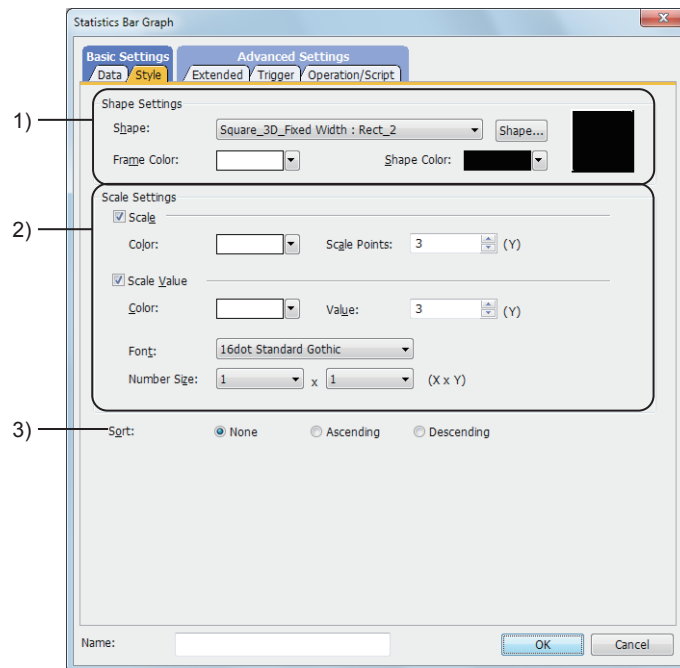

Up to 100 characters can be set.

## ■ 2 [Style] tab

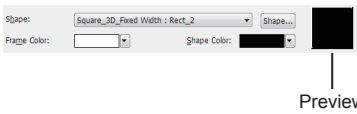

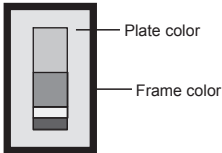

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

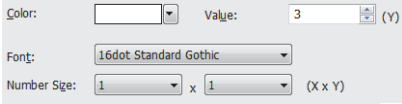

### 1) [Shape]

Item	Description
[Shape]	<p>Set the shape of the statistics bar graph.                      When [None] is selected, no shape is displayed.                      To select a shape other than those in the list box, click the [Shape] button.                      → 6.5.5 ■ 1 Setting object shapes                      When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p>  <p style="text-align: center;">Preview</p> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

## 2) [Scale Settings]

Displays the line or scale value in the statistics bar graph.

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [0] and [2] to [101].</li> </ul>
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value]</b> Set the number of numeric characters. The setting range is [0] and [2] to [101].</li> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. →1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>

## 3) [Sort]

Select the sorting order when sorting the graph in ascending or descending order of the device values.

The following shows the items to be selected.

- [None]
- [Ascending]
- [Descending]

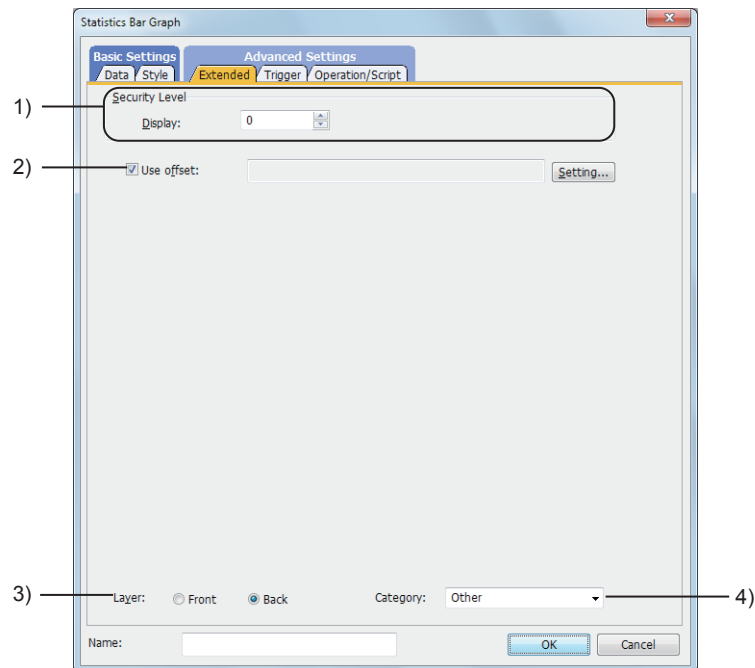

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→ 6.1.9 Offset

#### 3) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

→ 6.5.5 ■ 3 Superimposition

#### 4) [Category]

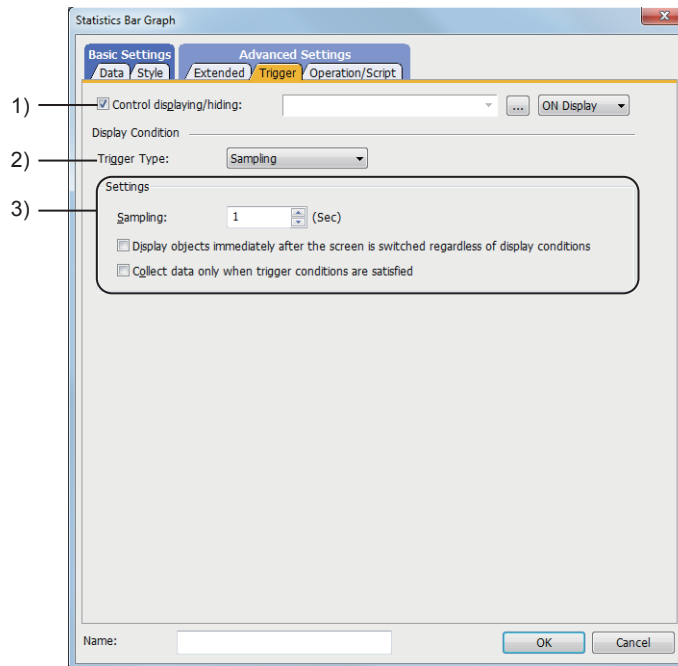

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

→6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	Not available to GT21. Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available. The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.

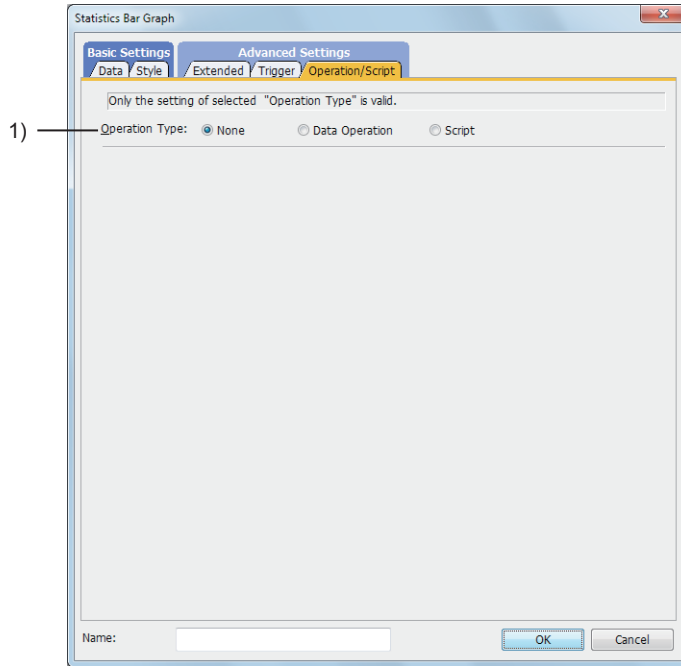

■5 [Operation/Script] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

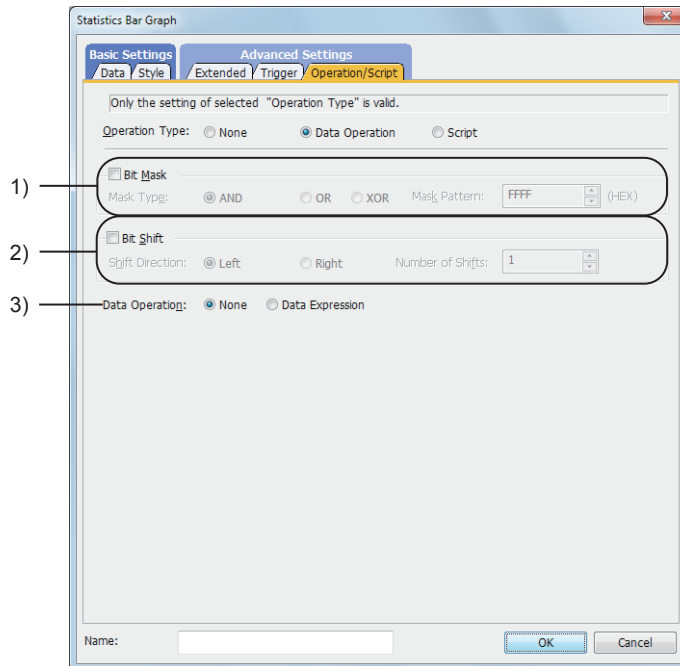

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→(1) [Data Operation]
- [Script]  
Set the expression used for the script function.  
→(2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range varies with the selection for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [0000] to [FFFF]</li> <li>• 32 bits: [00000000] to [FFFFFFFF]</li> </ul>

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range varies with the selection for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [1] to [15]</li> <li>• 32 bits: [1] to [31]</li> </ul>

### 3) [Data Operation]

Set the format of the expression.

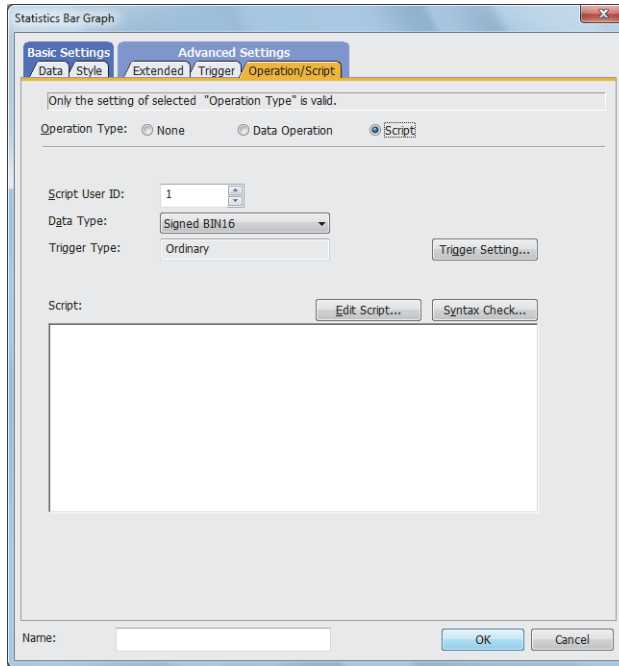

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.18.5 Relevant settings

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the statistics bar graph as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.19 Placing a Statistics Pie Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function collects multiple word device values in a batch and displays the ratio of each value to the total of all the collected values in a pie graph.

### 1 Application examples

#### (1) Displaying the graph on the same screen as the historical data list display

By displaying the graph on the same screen as the historical data list display, the device status can be described more effectively.

→ 8.10 Placing a Historical Data List Display

#### (2) Sorting the graph according to the device values

The graph can be sorted in ascending or descending order of the device values.

### 8.19.1 Specifications of the statistics pie graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the statistics pie graph.

#### 1 Number of statistics pie graphs that can be set

##### (1) Number of statistics pie graphs that can be placed

Up to 32 statistics pie graphs can be placed on one screen.

Up to 256 objects for which [Collect data only when trigger conditions are satisfied] is set can be placed for one project.

##### (2) Number of values that can be displayed (number of word devices that can be monitored)

Up to 32 values can be displayed on one statistics pie graph.

## 8.19.2 How to use the statistics pie graph

The following shows how to use the statistics pie graph.

### ■ 1 Placing the statistics pie graph

The following shows how to place the statistics pie graph.

- Step 1** Select [Object] → [Graph] → [Statistics Pie Graph] from the menu.
- Step 2** Click the position where you place the statistics pie graph. Placing the statistics pie graph is complete.
- Step 3** Adjust the frame size of the statistics pie graph.
- Step 4** Double-click the placed statistics pie graph to display the setting dialog.  
⇒ 8.19.4 [Statistics Pie Graph] dialog
- Step 5** Set the number of divisions (number of the word device to be monitored), device to be monitored, and the color of the graph in the [Data] tab.  
⇒ 8.19.4 ■ 1 [Data] tab

- Step 6** Set the scale and figure in the [Style] tab.  
⇒ 8.19.4 ■ 2 [Style] tab

- Step 7** Click the [OK] button to complete the statistics pie graph settings.

### ■ 2 Setting [Collect data only when trigger conditions are satisfied]

Not available to GT21.

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced. Various graphs can be combined.

- Step 1** Select [Object] → [Graph] → [Statistics Pie Graph] from the menu.
- Step 2** Click the position where you place the statistics pie graph. Placing the statistics pie graph is complete.
- Step 3** Double-click the placed statistics pie graph to display the setting dialog.  
⇒ 8.19.4 [Statistics Pie Graph] dialog
- Step 4** Display the [Trigger] tab.  
⇒ 8.19.4 ■ 4 [Trigger] tab
- Step 5** Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].
- Step 6** Set [Collect data only when trigger conditions are satisfied].

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.

However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).

The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

## 8.19.3 Precautions for a statistics pie graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for the statistics pie graph.

### ■1 When the monitored device value is minus

In the statistics pie graph, the absolute value is displayed when the monitored device value is minus.

Example) When D101 is -30

### ■2 Cause for when the graph display is not refreshed in the set cycle set and measure against it

Not available to GT21.

#### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

The graph display may not be refreshed in the set cycle.

##### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].

If the condition is not satisfied at the timing of the check, the display is not refreshed.

Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the statistics pie graph is refreshed at timing 1).
- The display of the statistics pie graph is refreshed at timing 2).
- At timing 3), the display of the statistics pie graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the statistics pie graph is not refreshed because the device condition is not satisfied.
- The display of the statistics pie graph is refreshed at timing 5).

##### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.

(The sampling cycle does not change whether the device is turned on or off.)

The following shows the setting procedure to start the cycle according to the device status.

**Step 1** Select [Rise] or [Fall] for [Trigger Type].

**Step 2** Create a sequence program that turns the device on or off when the display should be refreshed.

#### (2) Refresh timing when [Sampling], [ON Sampling], or [OFF Sampling] is selected

The sampling cycle count starts and is reset at the following timing.

- When the statistics pie graph is displayed (in screen switching, a security level change, or other possible cases)
- When the language switches
- When the security level changes

After the execution of any of the events, the display is refreshed at the start timing of the sampling cycle.

## 8.19.4 [Statistics Pie Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The statistics pie graph is an object that collects multiple word device values in a batch and displays the ratio of each value to the total of the collected values in a pie graph.

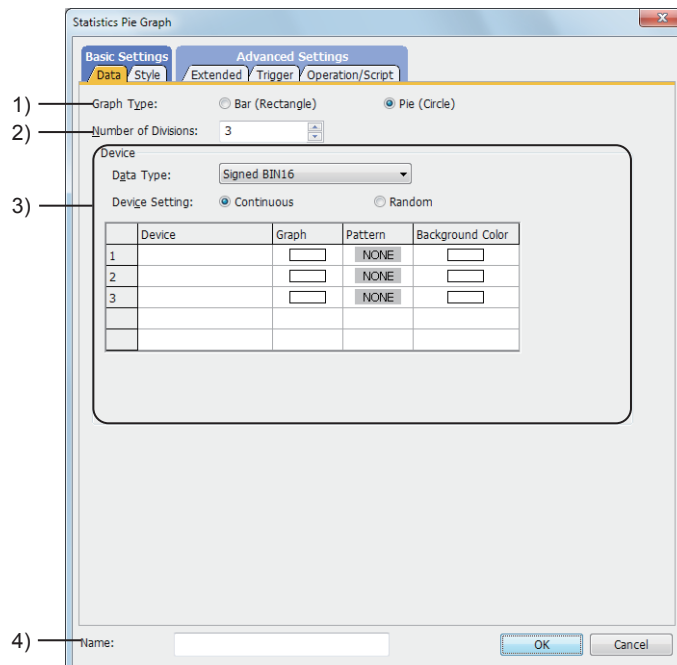

- Step 1** Select [Object] → [Graph] → [Statistics Pie Graph] from the menu.
- Step 2** Click the position where you place the statistics pie graph. Placing the statistics pie graph is complete.
- Step 3** Double-click the placed statistics pie graph to display the setting dialog.

- ■ 1 [Data] tab  
■ 2 [Style] tab  
■ 3 [Extended] tab  
■ 4 [Trigger] tab  
■ 5 [Operation/Script] tab

### ■ 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the statistics pie graph status corresponding to the device value.

#### 1) [Graph Type]

Select the graph to be set.

The following shows the items to be selected.

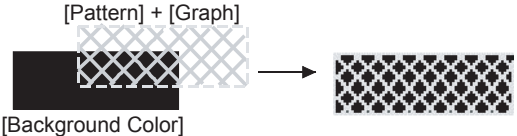

- [Bar (Rectangle)]
- [Pie (Circle)]

#### 2) [Number of Divisions]

Set the number of values that can be displayed (number of word devices that can be monitored).

The setting range is [2] to [32].

### 3) [Device]

Item	Description
[Data Type]	Select the data type of the word device. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>
[Device Setting]	Select how to set the device. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Continuous]: When a start device is set, inputs consecutive devices automatically in the table of [Device].</li> <li>• [Random]: Select this item when setting devices one by one.</li> </ul>
[Device]	Set the device to be monitored. ⇒6.1.1 How to set devices
[Graph]	Select the color of the pie.
[Pattern], [Background Color]	Select the pattern and the background color to be used for the pie.  Example) [Graph] :  [Pattern] :  [Background Color] :  

### 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

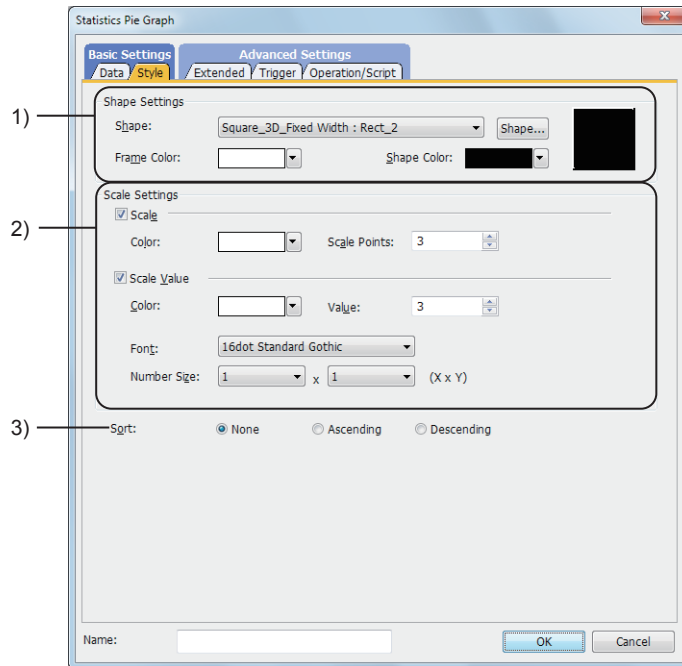

Up to 100 characters can be set.

## 2 [Style] tab

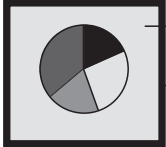

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

## 1) [Shape]

Item	Description
[Shape]	<p>Set the shape of the statistics pie graph.            When [None] is selected, no shape is displayed.            To select a shape other than those in the list box, click the [Shape] button.            →6.5.5 ■ 1 Setting object shapes            When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p> <div data-bbox="794 338 1161 450" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;">             Shape: <input type="text" value="Square_3D_Fixed_Width - Rect_2"/> <input type="button" value="Shape..."/>              Frame Color: <input type="text" value=""/> <input type="button" value="..."/> Shape Color: <input type="text" value=""/> <input type="button" value="..."/> </div> <p style="text-align: center; margin-left: 150px;">Preview</p> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul> <div data-bbox="831 607 1123 752" style="text-align: center; margin: 10px auto;">  <div style="display: flex; justify-content: center; gap: 20px; margin-top: 5px;"> <div style="text-align: right; width: 50px;">Plate color</div> <div style="border-bottom: 1px solid black; width: 100%;"></div> </div> <div style="display: flex; justify-content: center; gap: 20px; margin-top: 5px;"> <div style="text-align: right; width: 50px;">Frame color</div> <div style="border-bottom: 1px solid black; width: 100%;"></div> </div> </div> <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

## 2) [Scale Settings]

Displays the line or scale value in the statistics pie graph.

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p> <div data-bbox="786 1272 1166 1305" style="border: 1px solid gray; padding: 5px; width: fit-content; margin: 10px auto;">             Color: <input type="text" value=""/> <input type="button" value="..."/> Scale Points: <input type="text" value="3"/> <input type="button" value="OK"/> <input type="button" value="Cancel"/> </div> <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [0] and [2] to [101].</li> </ul>

Item	Description
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p> <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value]</b> Set the number of numeric characters. The setting range is [0] and [2] to [101].</li> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. → 1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>

### 3) [Sort]

Select the sorting order when sorting the graph in ascending or descending order of the device values.  
The following shows the items to be selected.

- [None]
- [Ascending]
- [Descending]

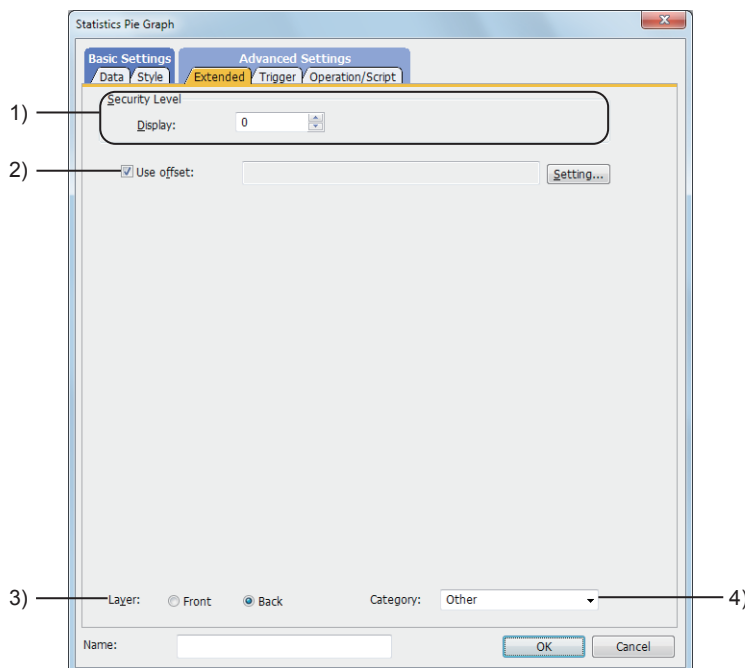

### ■ 3 [Extended] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

⇒6.1.9 Offset

### 3) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

⇒6.5.5 ■ 3 Superimposition

### 4) [Category]

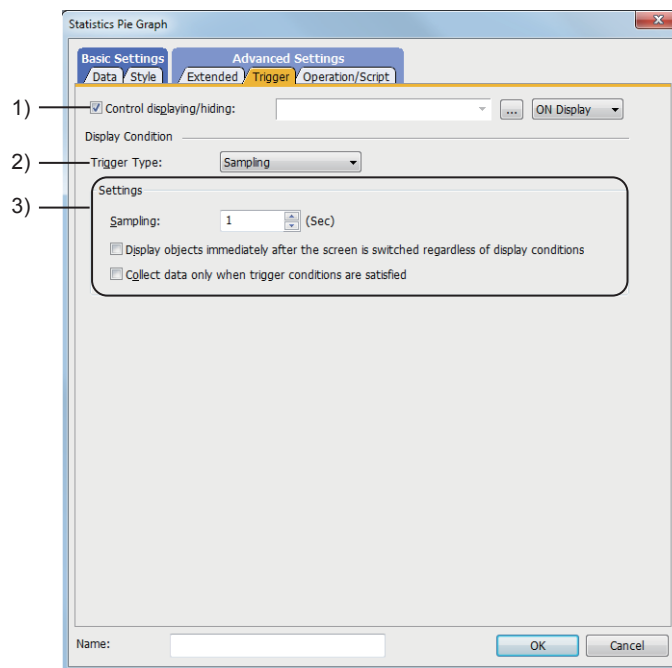

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

### 2) [Trigger type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]

- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

→ 6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available. The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.

## ■ 5 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→ (1) [Data Operation]
- [Script]  
Not available to GT21.

Set the expression used for the script function.

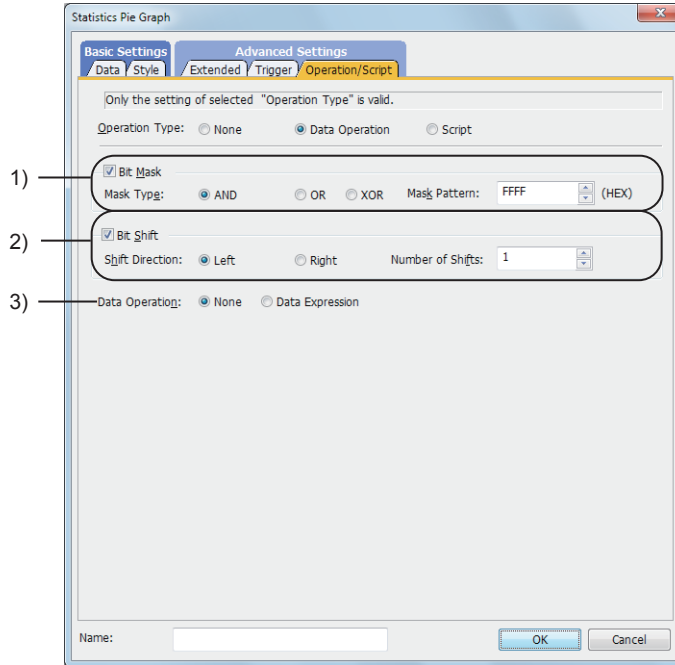

→(2) [Script]

### (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

#### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

#### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

#### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

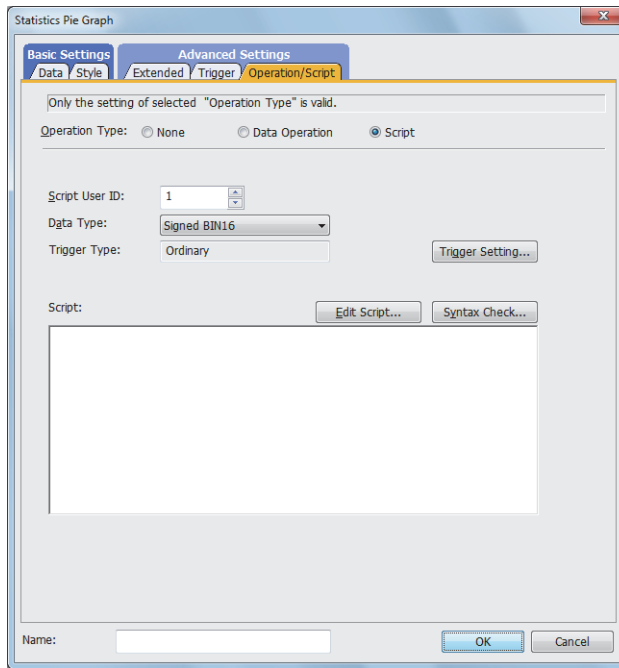

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.19.5 Relevant settings

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the statistics pie graph as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.20 Placing a Scatter Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays a graph using the values of two word devices as the coordinates of X-axis and Y-axis. The following two types of the scatter graph are available.

### 1 Sample

Collects two word device values and displays the values as a single point.

When the graph is refreshed, the new point is displayed with the previously displayed points. (Locus)

#### (1) When the display attribute is set to "point"

#### (2) When the display attribute is set to "line"

### 2 Batch display

Collects multiple sets of two word device values and displays them as multiple points.

You can select whether the points displayed previously are held or deleted when updating the display of the graph.

#### (1) When the display attribute is set to "point"

#### (2) When the display attribute is set to "line"

## 8.20.1 Specifications of the scatter graph

The following shows the specifications of the scatter graph.

### ■ 1 Number of scatter graphs that can be set

#### (1) Maximum number of scatter graphs on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000

Up to 24 scatter graphs can be placed on one screen.

Up to 16 scatter graphs for which [Store Memory] is set can be placed for one project.

Up to 256 objects for which [Collect data only when trigger conditions are satisfied] is set can be placed for one project.

- For GT21

One historical data list display, trend graph, scatter graph, or historical trend graph can be placed on one screen.

#### (2) Number of points that can be displayed (by two word device values)

Up to 500 points can be displayed on one scatter graph.

## 8.20.2 How to use the scatter graph

The following shows how to use the scatter graph.

### ■ 1 Placing the scatter graph

The following shows how to place the scatter graph.

- Step 1** Select [Object] → [Graph] → [Scatter Graph] from the menu.
- Step 2** Click the position where you place the scatter graph. Placing the scatter graph is complete.
- Step 3** Adjust the frame size of the scatter graph.
- Step 4** Double-click the placed scatter graph to display the setting dialog.
  - ⇒ 8.20.4 [Scatter Graph] dialog
- Step 5** Set the graph type, device, upper limit value, and lower limit value in the [Data] tab.
  - ⇒ 8.20.4 ■ 1 [Data] tab

- Step 6** Set the scale and figure in the [Style] tab.

⇒ 8.20.4 ■ 2 [Style] tab

**Step 7** Set the display type and attribute switching of the graph in the [Point/Line Attribute] tab.

→ 8.20.4 ■ 3 [Point/Line Attribute] tab

• Display type

• Attribute switching

**Step 8** Click the [OK] button to complete the scatter graph settings.

## ■2 Recognition timing of the clear trigger

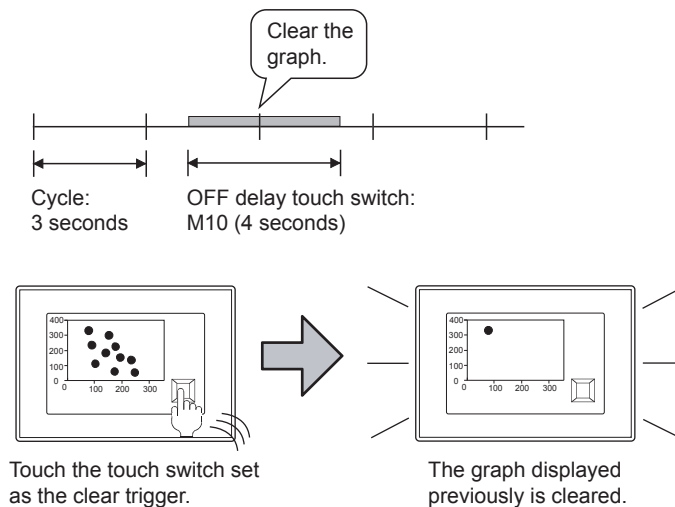

The timing of when the GOT recognizes the clear trigger is same as the timing set in [Trigger Type] in the [Trigger] tab. When [Sampling], [ON Sampling], or [OFF Sampling] is selected in [Trigger Type], hold the on and off status of the clear trigger longer than the interval set in [Trigger Type].

[ON Sampling] and [OFF Sampling] are not available to GT21.

Example)

- [Clear Trigger]: [Timing] is set to [Rise], and [Device] is set to [M10]
- [Trigger Type]: [Sampling] is selected and set to [3] seconds
- [Bit Switch]: [Device] is set to [M10], [Action] is set to [Momentary], and [OFF delay] is set to [4] seconds

By the time the clear trigger is turned off by the OFF delay after turned on by touching the touch switch, the GOT detects the trigger to clear the graph.

### ■3 Setting [Collect data only when trigger conditions are satisfied]

With the setting of [Collect data only when trigger conditions are satisfied], the number of communication can be reduced. Various graphs can be combined.

The following shows the setting procedure.

- Step 1** Select [Object] → [Graph] → [Scatter Graph] from the menu.
- Step 2** Click the position where you place the scatter graph. Placing the scatter graph is complete.
- Step 3** Double-click the placed scatter graph to display the setting dialog.  
The [Scatter Graph] dialog appears.  
→8.20.4 [Scatter Graph] dialog
- Step 4** Display the [Trigger] tab.  
→8.20.4 ■ 5 [Trigger] tab
- Step 5** Select either of [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] in [Trigger Type].
- Step 6** Set [Collect data only when trigger conditions are satisfied].

Example) Combining the line graph and trend graph

Trigger type : Rise  
Collect data only when trigger conditions are satisfied : Enabled  
Object : Line graph

Displays the graph (communicates) only at startup.

Trigger type : Sampling (3 seconds)  
Collect data only when trigger conditions are satisfied : Disabled  
Object : Trend graph

Communicates in the set cycle and refreshes the display frequently.

The line graph can be used as the reference value and compared with the trend graph.

[Collect data only when trigger conditions are satisfied] setting is effective for the graph that does not require frequent refresh.

However, when the graph is required to be refreshed or displayed frequently, [Collect data only when trigger conditions are satisfied] should not be set (device values are collected through constant communication).

The setting of [Collect data only when trigger conditions are satisfied] may cause the delay of the screen refresh or incorrect display of the screen.

## 4 Memory storage

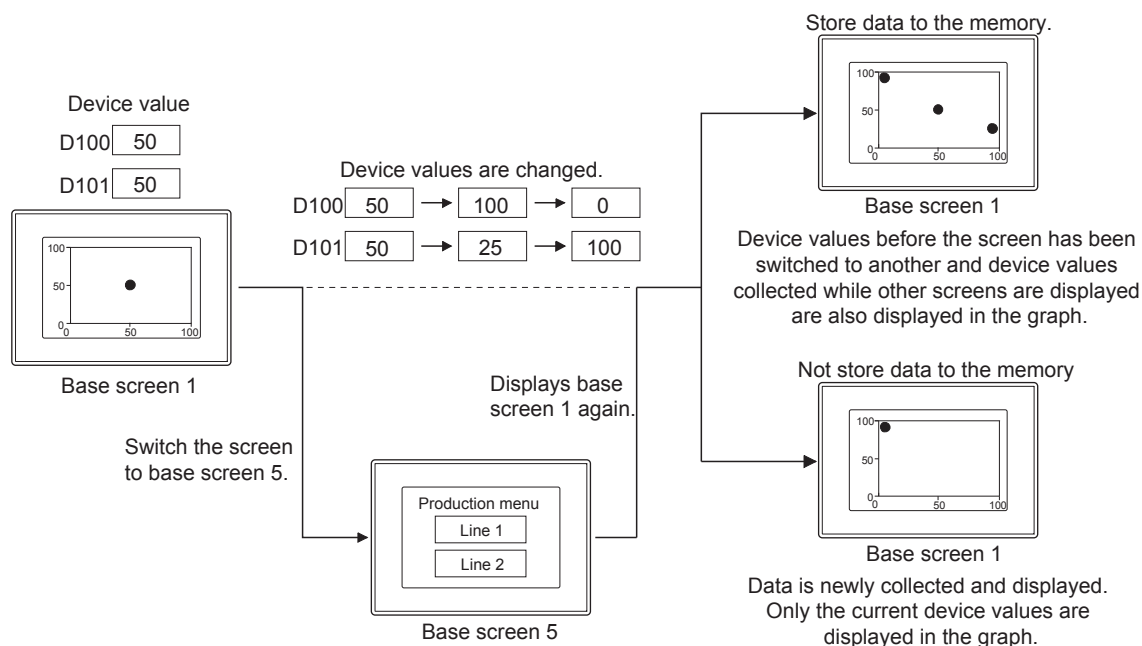

The following operations clear the display of the graph or data (device value: 0). To save the data, set [Store Memory]. Set [Store Memory] in the [Extended] tab.

Item		When [Store Memory] is set	When [Store Memory] is not set
Switching the screen or utility	Switching from the screen for which a scatter graph is set to the screen for which no scatter graph is set	The device value is held.	The device value is held.
	Switching from the screen for which no scatter graph is set to the screen for which a scatter graph is set		
Switching the language switching device		The display is cleared. The device value is cleared to 0.	The display is held. The device value is held.
Switching the base screen while a scatter graph is displayed on the superimpose window			
Switching the security level*1			
Switching the station No. switching device			

\*1 When the memory storage is not set, switching the security level by selecting [Common] → [GOT Environmental Setting] → [Security] from the menu or the value of the device set as a level device clears the display and the device value to 0.

Example) Action at screen switching

- [Graph Type]: [Sample]
- X-axis device: D100
- Y-axis device: D101

### (1) Maximum number of displayed points that can be saved to the memory

Up to 4096 points displayed in the scatter graph can be saved in the internal memory.

(For GT21, up to 500 displayed points of data are saved.)

The maximum number of data collections to the memory varies with the selection for [Graph Type] on the [Data] tab in the [Scatter Graph] dialog.

The following shows the maximum number of data collections.

- For GT27, GT25, GT23, and GT SoftGOT2000
  - When [Sample] is selected: 4096
  - When [Batch] is selected: 4096/Number of displayed points (The fractional portion is rounded off.)
- For GT21
  - When [Sample] is selected: 500
  - When [Batch] is selected: 500/Number of displayed points (The fractional portion is rounded off.)

In [Operation at frequency over time] on the [Extended] tab, set the operation to be executed when the number of displayed points exceeds the upper limit.

- [Interrupt]: Interrupts the data collection.
- [Initialize and Continue]: Clears the data in the internal memory and the display on the scatter graph, and resumes the data collection.

### Point

#### Using the system alarm

You can use the system alarm to display an error code and error message when the number of collections of device values saved in the memory exceeds the upper limit.

⇒9.1.3 Collecting alarms by monitoring the system

#### (2) Clear timing of the display contents stored in the memory

The following shows the clear timing of the display contents stored in the memory.

- The condition of the clear trigger is satisfied.
- When [Initialize and Continue] is selected in [Operation at frequency over time], the number of collected points that can be stored in the memory exceeds the maximum.
- The GOT is reset or turned off.
- Package data is written into the GOT.
- The drive information is displayed.
- An operation that causes the GOT reset at the setup of the utility is executed.

#### ■5 Writing the cumulative count and average value

The cumulative collection count and average value of the data, maximum value, and minimum value collected in the scatter graph can be written to a device.

The following shows an example.

- X-device (horizontal): D100
- Y-device (vertical): D200

Detail		Written value
Cumulative count		4
X-axis	Average value*1	200
	Maximum value*2	300
	Minimum value*2	50
Y-axis	Average value*1	187
	Maximum value*2	250
	Minimum value*2	100

\*1 The value rounded down after the decimal point is written to [Average Value Write].

When [Data Type] (in the [Data] tab) of the device to be monitored is a real number, a value including the decimal is written. An average value is calculated from the values collected at each collection, and an error may occur.

\*2 The device value exceeding the maximum value or minimum value of the scatter graph to be monitored is written as the maximum value or minimum value.

#### (1) Maximum number of collections that can be counted in the cumulative count or average value

Depending on [Data Type] (in the [Data] tab) of the device, the maximum number of collections that can be counted in the cumulative count or average value is different.

##### (a) [Data Type]

- [Signed BIN16], [Unsigned BIN16], [Signed BIN 32], [Unsigned BIN 32], [BCD32], [Real]: 65535
- [BCD16]: 9999

Set the operation that is executed when the cumulative count exceeds the maximum number of collections in [Operation at frequency over time] in the [Extended] tab.

- Interrupt: Data collection is interrupted.
- Initialize and continue: The internal memory and display of the scatter graph are initialized, and new data is collected.

### Using the system alarm

You can use the system alarm to display an error code and error message when the cumulative count exceeds the upper limit.

→9.1.3 Collecting alarms by monitoring the system

### (2) Initialization timing of the cumulative count, average value, maximum value, and minimum value

The value 0 is written to the cumulative count, average value, maximum value, and minimum value.

The following shows the initialization timing.

- The condition of the clear trigger (in the [Trigger] tab) is satisfied.
- When [Operation at frequency over time] is set to [Initialize and Continue], the cumulative count exceeds the limit.
- The screen is switched.

When the screen for which a scatter graph is placed (base screen or window screen) is switched, the cumulative count and average value are held. However, the cumulative count and average value is initialized when the screen is switched to the screen for which a scatter graph is placed.

The scatter graph placed on the superimpose window is initialized when the base screen is switched.

- The security level is switched.
- The station number is switched.

### (3) When the cumulative count and average value are written and the memory storage are used simultaneously

Use [Cumulative/Average] and [Store Memory] simultaneously to collect the cumulative count and average value continuously, regardless of the screen switching.

Up to the maximum number of collections for the memory storage, the cumulative count and average value can be written.

For the maximum number of collections for the memory storage, refer to the following.

→8.20.2 ■ 4 (1) Maximum number of displayed points that can be saved to the memory

## 8.20.3 Precautions for a scatter graph

This section explains the precautions for the scatter graph.

### ■1 When the monitored device value exceeds the upper or lower limit value

When the monitored device value exceeds the lower limit value, the display of the lower limit value is applied.

When the monitored device value exceeds the upper limit value, the display of the upper limit value is applied.

### ■2 When displaying the superimpose window

Place the superimpose window not to overlap with the scatter graph.

The area of the scatter graph overlapped with the superimpose window is hidden.

To display the scatter graph fully, set [Store Memory] for the scatter graph.

### ■ 3 Cause for when the graph display is not refreshed in the set cycle set and measure against it

#### (1) Refresh timing when [ON Sampling] or [OFF Sampling] is selected

Not available to GT21.

The graph display may not be refreshed in the set cycle.

##### (a) Cause

The device status is checked in the sampling cycles set for [Trigger Type].

If the condition is not satisfied at the timing of the check, the display is not refreshed.

Example) [Trigger Type] is set to [ON Sampling] and [Sampling] is set to [1] second

- The display of the scatter graph is refreshed at timing 1).
- The display of the scatter graph is refreshed at timing 2).
- At timing 3), the display of the scatter graph is not refreshed because the timing does not match the end of one cycle and thus the condition is not checked.
- At timing 4), the display of the scatter graph is not refreshed because the device condition is not satisfied.
- The display of the scatter graph is refreshed at timing 5).

##### (b) Measure

The sampling cycle set for [Trigger Type] does not depend on the device status.

(The sampling cycle does not change whether the device is turned on or off.)

The following shows the setting procedure to start the cycle according to the device status.

**Step 1** Select [Rise] or [Fall] for [Trigger Type].

**Step 2** Create a sequence program that turns the device on or off when the display should be refreshed.

#### (2) Refresh timing when [Sampling], [ON Sampling], or [OFF Sampling] is selected

[ON Sampling] and [OFF Sampling] are not available to GT21.

Depending on the setting of [Store Memory], the refresh timing is different.

##### (a) When the memory storage is to be executed

The following shows the start and reset timing of the count of the cycle.

- When the scatter graph is displayed (in screen switching, a security level change, or other possible cases)
- The language is switched.
- The station number is switched.
- The security level is switched.

After the execution of any of the events above, the display is refreshed at the start timing of the sampling cycle.

##### (b) When the memory storage is not to be executed

The following shows the start and reset timing of the count of the cycle.

- The GOT is started.
- Package data is written into the GOT.
- The drive information is displayed.
- An operation that resets the GOT is executed in the utility.

After the execution of any of the events above, the display is refreshed at the start timing of the sampling cycle.

### ■ 4 Number of the plotted points or lines

#### **GOT Graphic Ver.2**

Under the following conditions, if the number of the plotted points or lines exceeds 1000, the oldest point or line is deleted and a new one is plotted.

- [Graph Type] is set to [Sample], and [Store Memory] is deselected.
- [Graph Type] is set to [Batch], [Display Mode] is set to [Locus], and [Store Memory] is deselected.

## 8.20.4 [Scatter Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

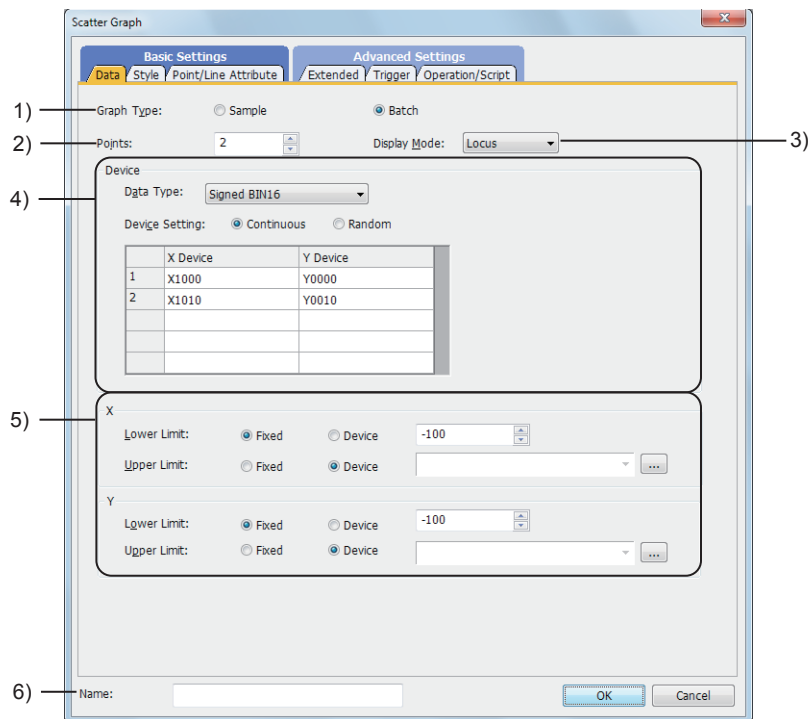

The scatter graph is an object that displays a graph using the values of two word devices as the coordinates of X-axis and Y-axis.

- Step 1 Select [Object] → [Graph] → [Scatter Graph] from the menu.
- Step 2 Click the position where you place the scatter graph. Placing the scatter graph is complete.
- Step 3 Double-click the placed scatter graph to display the setting dialog.
  - 1 [Data] tab
  - 2 [Style] tab
  - 3 [Point/Line Attribute] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab
  - 6 [Operation/Script] tab

### 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the trend graph status corresponding to the device value.

#### 1) [Graph Type]

Select the graph to be set.  
The following shows the items to be selected.

- [Sample]
- [Batch]

#### 2) [Points]

Set this item when [Batch] is selected for [Graph Type].  
Set the number of points to be displayed in a scatter graph.  
The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
The setting range is [2] to [500].
- For GT21  
When [Continuous] is selected for [Device Setting], the setting range is [2] to [500].  
When [Random] is selected for [Device Setting], the setting range is [2] to [50].

### 3) [Display Mode]

Set this item when [Batch] is selected for [Graph Type].

Select the refresh method of the display of the graph.

The following shows the items to be selected.

- [Replace]  
Only the latest data is displayed.
- [Locus] (Not available to GT21.)

The latest data is displayed on the graph displayed previously.

### 4) [Device]

Item	Description
[Data Type]	Select the data type of the word device. The following shows the items to be selected. <ul style="list-style-type: none"><li>• [Signed BIN16]</li><li>• [Unsigned BIN16]</li><li>• [Signed BIN32]</li><li>• [Unsigned BIN32]</li><li>• [BCD16]</li><li>• [BCD32]</li><li>• [Real]</li></ul>
[Device Setting]	Select the display method of the devices in each of X-axis and Y-axis. The following shows the items to be selected. <ul style="list-style-type: none"><li>• [Continuous]: When a start device is set, inputs consecutive devices automatically in the table of [Device].</li><li>• [Random] Select this item when setting devices one by one.</li></ul>
[X Device] and [Y Device]	Set the devices to be monitored for X-axis and Y-axis. →6.1.1 How to set devices

### 5) [X] and [Y]

Set the display range in the scatter graph (lower limit and upper limit) for each axis.

Select whether to use a fixed value or device value.

The following shows the items to be selected.

- [Fixed]:  
Specify a constant.
- [Device]:  
Specify a device value.  
→6.1.1 How to set devices

The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].

### 6) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

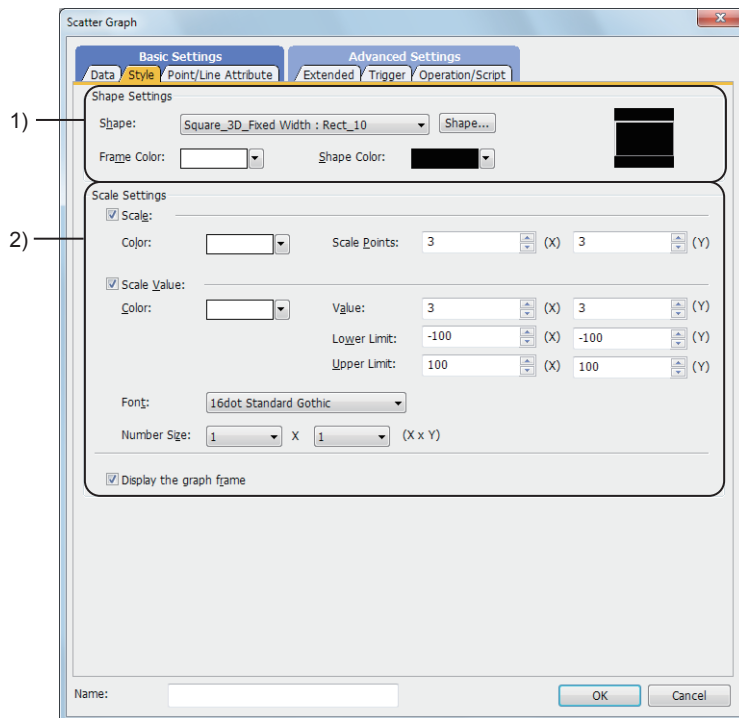

Up to 100 characters can be set.

■2 [Style] tab

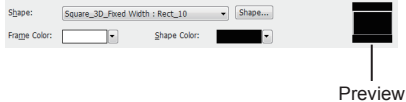

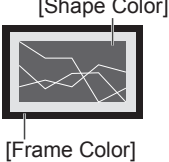

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

1) [Shape]

Item	Description
[Shape]	<p>Set the shape of the scatter graph.                      When [None] is selected, no shape is displayed.                      To select a shape other than those in the list box, click the [Shape] button.                      → 6.5.5 ■ 1 Setting object shapes</p> <p>When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p>  <p>Preview</p> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

2) [Scale Settings]

Displays the line or scale value in the scatter graph.

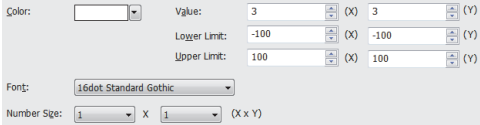

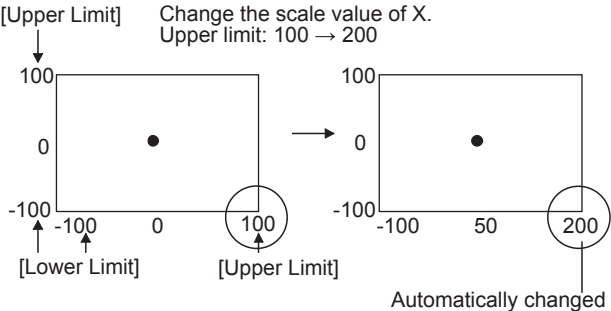

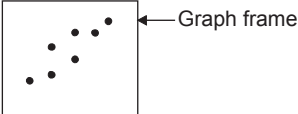

Line  
(X: 5)  
(Y: 5)

Scale value  
(X: 3)  
(Y: 3)

Displays both the lines  
and scale values.

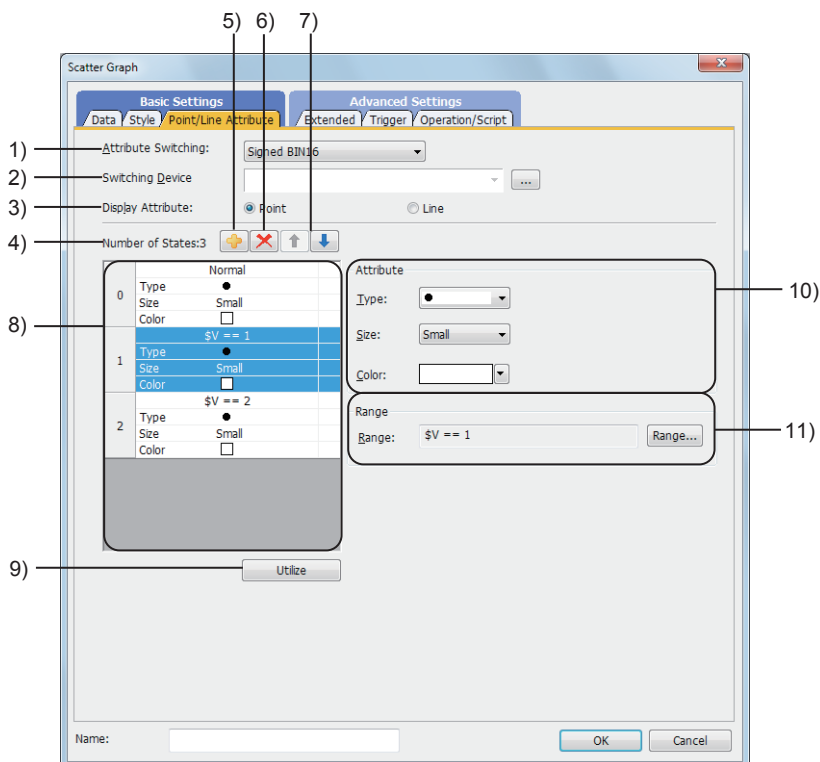

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> <li>• <b>[Scale Points] ([Horizontal] and [Vertical])</b> Set the number of lines on the scale. The setting range is [0] and [2] to [101].</li> </ul>
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value] ([Horizontal] and [Vertical])</b> Set the number of numeric characters. The setting range is [0] and [2] to [101].</li> <li>• <b>[Lower Limit] ([Horizontal] and [Vertical]) and [Upper Limit] ([Horizontal] and [Vertical])</b> Set the lower limit and upper limit of the numerical value. Changes in this setting are automatically applied to the display.</li> </ul>  <p>Depending on the item selected for [Data Type] in the [Data] tab, the setting range is different.</p> <ul style="list-style-type: none"> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. → 1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>
[Display the graph frame]	<p>Select this item to display the frame of the graph.</p> 

### 3 [Point/Line Attribute] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the status of points or lines of the graph corresponding to the device value.  
For the conditions, refer to the following.

→ 6.5.5 ■ 2 Setting conditions

#### 1) [Attribute Switching]

Select the switching type in which the display attribute of the scatter graph (type of points and lines, size, or color) is switched.

The following shows the items to be selected.

- [Fixed];  
The display attribute is not switched.  
Points or lines are displayed in the display attribute set in the [Style] tab.
- [Bit];  
Switches two types of the display attribute according to the bit device status.
- [Signed BIN16];  
Switches multiple display attributes by the value of the word device (16-bit binary value).
- [BCD16];  
Switches multiple display attributes by the value of the word device (16-bit BCD value).

Example 1)

- [Attribute Switching]: [Bit]
- [Switching Device]: [M10]

Example 2)

- [Attribute Switching]: [Signed BIN16]
- [Switching Device]: [D10]

2) **[Switching Device]**

Set the display switching device.  
 ⇒6.1.1 How to set devices

3) **[Display Attribute]**

Select the display attribute of the scatter graph.  
 The following shows the items to be selected.

- [Point]
- [Line]

4) **[Number of States]**

The number of the set conditions

5) **Add button**

Adds a new condition.

6) **Delete button**

Deletes the selected condition.

7) **Up button, down button**

Changes the order of priority of the selected condition.

8) **Preview list**

Displays set conditions.

9) **[Utilize] button**

Creates a new condition utilizing the selected condition.

10) **[Attribute]**

Set the attributes of points or lines.

- For points

• **[Style]**

Select the style of the point.  
 The following shows the items to be selected.

• **[Size]**

Select the size of the point.  
 The following shows the items to be selected.

- [Small]
- [Medium]
- [Large]

• **[Color]**

Set the color of the point.

- For lines

• **[Style]**

Select the style of the line.  
 The following shows the items to be selected.

- Solid line
- Dotted line
- Broken line
- One-dot chain line
- Two-dot chain line

• **[Size]**

Select the width of the line.  
 The following shows the items to be selected.

- [1 Dot]
- [2 Dot]
- [3 Dot]
- [4 Dot]
- [5 Dot]
- [7 Dot]

• **[Color]**

Select the color of the line.

## 11) [Range]

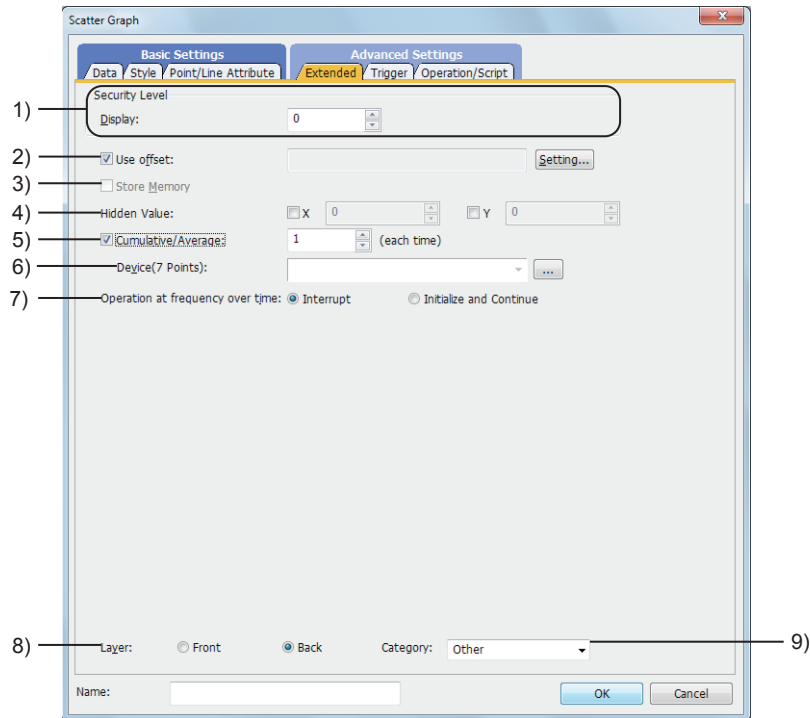

Item	Description
[Range]	Set the display range of the conditions selected in the preview list. When setting the value of the word device as the condition, click the [Range] button to display the [Edit Range] dialog, and then set the conditional expression. →6.5.5 ■ 2 Setting conditions

## ■ 4 [Extended] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

→6.1.9 Offset

If this item is set, [Store Memory] cannot be set.

### 3) [Store Memory]

Select this item to continue data collection while a screen which displays no scatter graph is displayed.

The data of the points displayed on the graph is stored to the internal memory of the GOT.

→8.20.2 ■ 4 Memory storage

If this item is set, [Use Offset] cannot be set.

### 4) [Hidden Value]

Select this item to hide a specific value in the scatter graph for each of X-axis and Y-axis.

Example) [Hidden Value] is set to 0 for both of X-axis and Y-axis.

### 5) [Cumulative/Average]

Select this item to write the cumulative count and average value, maximum value, and minimum value of the collected data to devices.

⇒8.20.2 ■ 5 Writing the cumulative count and average value

After selecting this item, set the interval of writing the cumulative count, average value, maximum value, and minimum value to devices.

The setting range is [1] time to [36000] times.

The value set in [Hidden Value] is not included in the cumulative count, average value, maximum value, and minimum value.

If the cumulative count, average value, maximum value, or minimum value is being written, the display of the object may be delayed when short intervals are set as the condition for the data storage or display.

### 6) [Device (7 devices)]

Set the device to be used for [Cumulative/Average].

Seven successive devices are automatically set from the specified device.

### 7) [Operation at frequency over time]

Select the operation that is executed when the number of displays of the memory storage or the number of data collections exceeds the limit.

For the limit, refer to the following.

⇒8.20.2 ■ 4 (1) Maximum number of displayed points that can be saved to the memory

8.20.2 ■ 5 (1) Maximum number of collections that can be counted in the cumulative count or average value

8.20.2 ■ 5 (3) When the cumulative count and average value are written and the memory storage are used simultaneously

The following shows the items to be selected.

- [Interrupt]:  
Data collection is interrupted and the display of the graph is not refreshed.
- [Initialize and Continue]:  
After the display of the graph is deleted and the memory storage, cumulative count, average value, maximum value, and minimum value are initialized, the data collection resumes.

### 8) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒6.5.5 ■ 3 Superimposition

### 9) [Category]

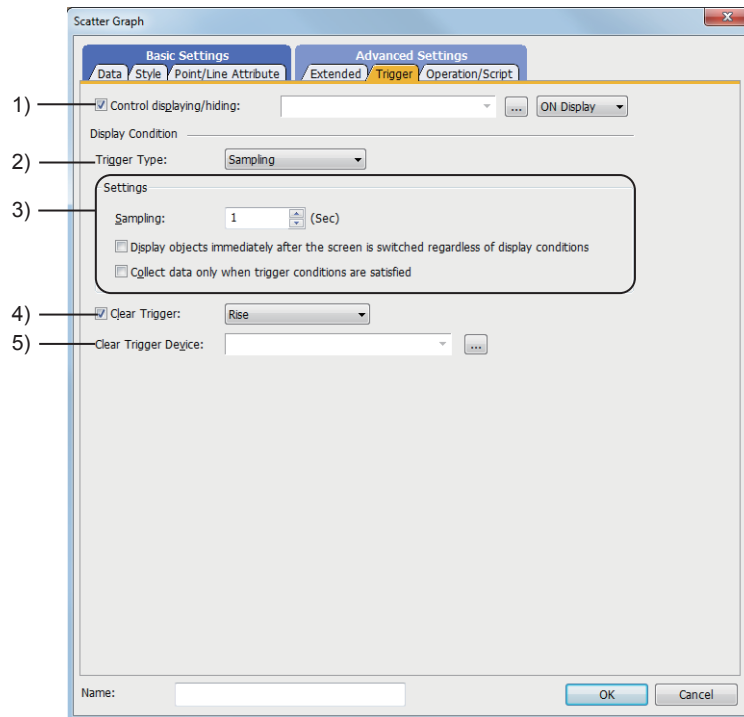

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## 5 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control Displaying/Hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒ 6.1.1 How to set devices

### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

⇒ 6.2.1 ■ 2 Correspondence between functions and trigger types

### 3) [Settings]

For details of each item, refer to the following.

⇒ 6.2.2 Setting Trigger Types

Item	Description
[Collect data only when trigger conditions are satisfied]	Select this item to collect data only when the trigger set for [Trigger Type] is satisfied. When [Rise], [Fall], [Rise/Fall], [Sampling], [ON Sampling], or [OFF Sampling] is selected, this setting is available. The graph is communicating with the controller even when the trigger is off. To reduce the load of the communication between the GOT and controller, allow the communication when the trigger is on.

#### 4) [Clear Trigger]

Select this item to use the trigger that clears the display of the graph.

After setting this item, select the clear timing of the display of the graph.

The following shows the items to be selected.

- [Rise]: The display is cleared at the rise of the bit device (OFF → ON).
- [Fall]: The display is cleared at the fall of the bit device (ON → OFF).

[Clear Trigger] clears the display of the graph, cumulative count, and average value stored in the memory.

#### 5) [Clear Trigger Device]

Set a device used for the clear trigger.

When [Sampling], [ON Sampling], or [OFF Sampling] is selected for [Trigger Type], set an interval that is equal to or longer than the one set in [Trigger Type] for the device to be set for a clear trigger.

### ■ 6 [Operation/Script] tab

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

#### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

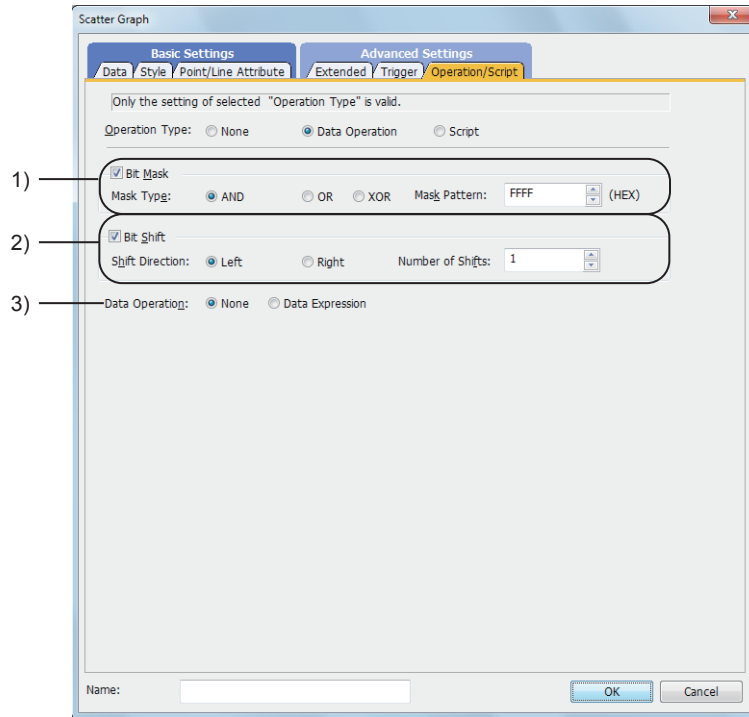

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
⇒ (1) [Data Operation]
- [Script]  
Set the expression used for the script function.  
⇒ (2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→ 6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

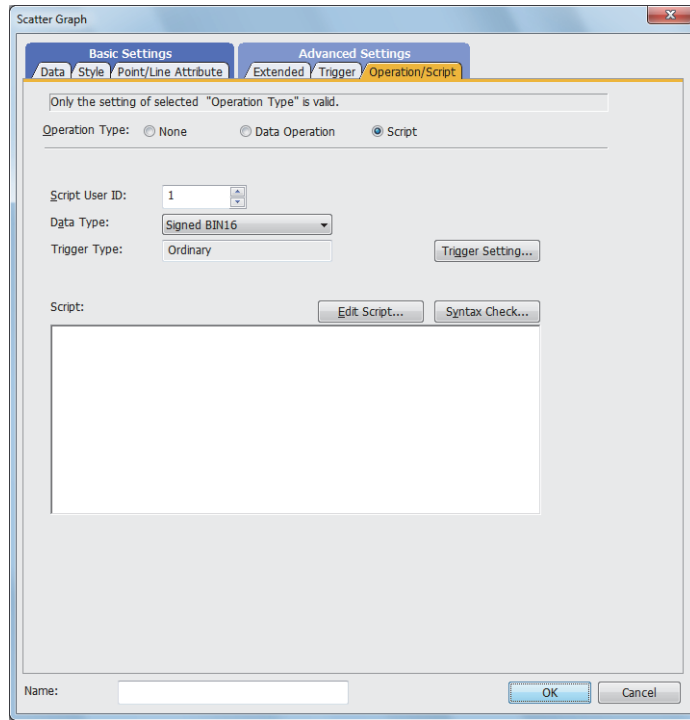

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Data]	[Lower Limit] (X)	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y)	scale_min[1]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (X)	scale_max[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y)	scale_max[1]	○	○	Upon the setting change	When the screen is updated
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
[Point/Line Attribute]	[Color]	graph_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

## 8.20.5 Relevant settings

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the scatter graph as required.  
The following shows the functions that are available by the relevant settings.

### ■1 GOT type settings

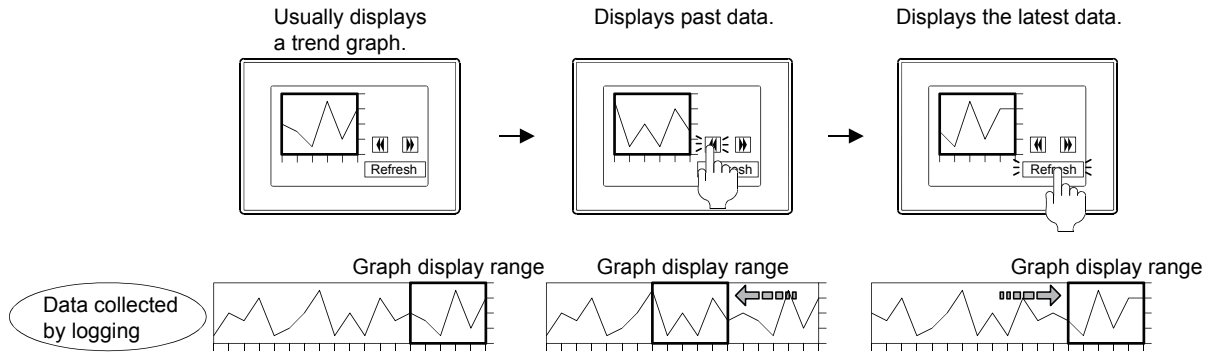

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.21 Placing a Historical Trend Graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays the device data collected by logging in chronological order in a trend graph.

### 8.21.1 Specifications of the historical trend graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the historical trend graph.

#### ■ 1 Number of trend graphs that can be set

##### (1) Maximum number of historical trend graphs on one screen

The maximum number of objects on one screen depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 32 trend graphs and/or historical trend graphs can be placed on one screen.
- For GT21  
One historical data list display, trend graph, scatter graph, or historical trend graph can be placed on one screen.

##### (2) Maximum number of lines in one historical trend graph

The maximum number of lines in one historical trend graph depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 32 lines are displayable in one graph.
- For GT21  
Up to four lines are displayable in one graph.

##### (3) Maximum number of points

The maximum number of points on one line of a historical trend graph depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 1024 points are displayable.
- For GT21  
Up to 500 points are displayable.

#### ■ 2 Relation between the historical trend graph and logging

The data collected and stored in the buffering area or memory card by logging is displayed in a graph.

→ 9.2 Collecting Device Data ([Logging])

The stored data is used, enabling display of both the latest and old data in a graph.

Displays accumulated data in a graph.

A historical trend graph displays only the data of one logging ID.  
To display the data of multiple logging IDs, set multiple historical trend graphs.

### ■3 Difference from the trend graph

The trend graph collects data and displays it.  
The trend graph does not require the setting of logging, and the data is not stored.

→8.16 Placing a Trend Graph

### ■4 Useful function

The following explains the useful functions for using the historical trend graph.

#### (1) Displaying a cursor

A cursor can be displayed and moved on the graph using the touch switch to which the key code is assigned.  
With the setting of the single touch operation, the cursor can be displayed on or moved to the touched position directly.  
The device value of the position where the cursor is displayed can be output to the device set in the [Graph Information] dialog.

While a cursor is displayed, the display of the graph stops.

#### (2) Displaying grids

Grids can be displayed on a graph.

#### (3) Displaying a reference line, lower limit line, and upper limit line

A reference line, lower limit line, and upper limit line can be displayed on a graph.

**(4) Enlarging or reducing the time axis**

The time axis can be enlarged or reduced by using the touch switch to which the key code is assigned.

**(a) Data displayed upon enlargement or reduction**

When enlarging or reducing the time axis, you can select whether to always display the latest data or stop the graph update to display the current data.

**(b) Displaying the magnification**

You can store the magnification factor being used to a specific device. Thus, the current magnification is displayable with the numerical display.

**(5) Magnification for displaying the latest data**

When the latest data is displayed with the touch switch, screen switching, or graph offset function, you can specify a magnification factor to display the data.

Example) When [Graph display magnification for latest data display] is set to [2-fold]

**(6) External output of date data**

When [Always update Beginning Position Time/End Position Time] in the [Extended] tab is set, the latest beginning position time and end position time can be output constantly to the Time device.

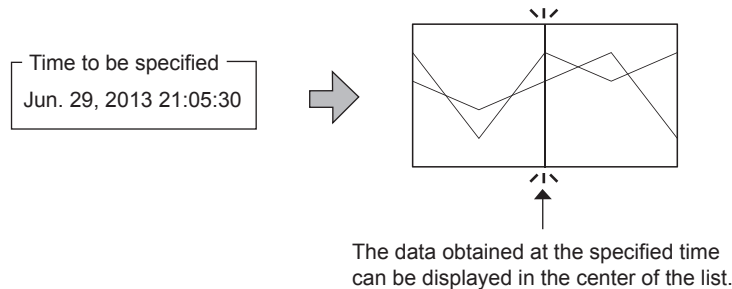

The beginning position time, end position time, and cursor position time can be output to the Time device by using the touch switch to which the key code is assigned.

While the data is output to the device, the display of the graph stops.

**(7) Displaying data obtained at specified time**

The data obtained at specified time can be displayed by using the touch switch to which the key code is assigned. While the data obtained at specified time is displayed, the display of the graph stops.

**(8) Displaying data of historical trend graphs in historical data list displays**

Not available to GT21.

The data displayed with a cursor in a historical trend graph can be displayed in a historical data list display.

⇒8.10 Placing a Historical Data List Display

**(9) Holding the graph display state displayed before screen switching**

The GOT holds the display state of the historical trend graph displayed before screen switching and displays the same graph state after switching back to the graph screen.

Before using this setting, set the Logging Count device.

→ 9.2 Collecting Device Data ([Logging])

Use the Historical Trend Graph Display Mode signal (GS450.b9) to set the historical trend graph display mode.

- ON: Holds the display state displayed before screen switching.
- OFF: Not hold the display state displayed before screen switching.

The GOT checks this signal every screen switching.

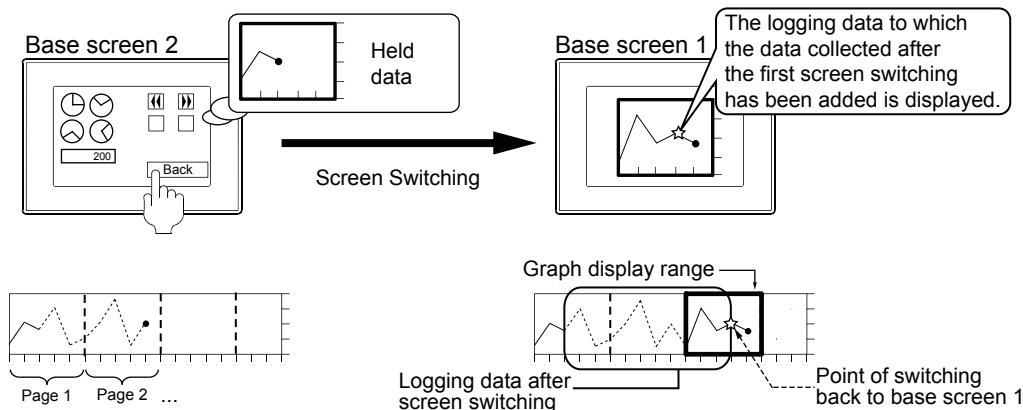

**(a) Action at screen switching**

If a screen is switched while GS450.b9 is on, the GOT operates as follows.

- Screen on which the historical trend graph is displayed → another screen  
The GOT holds the display state of the historical trend graph.

- Other screens → screen on which the historical trend graph is displayed  
The GOT restores and displays the previous historical trend graph based on the held data.  
When the amount of the logging data has increased since the first screen switching, the increased logging data is added to the graph.  
If holding no data, the GOT displays the latest logging data.

**(b) Action example**

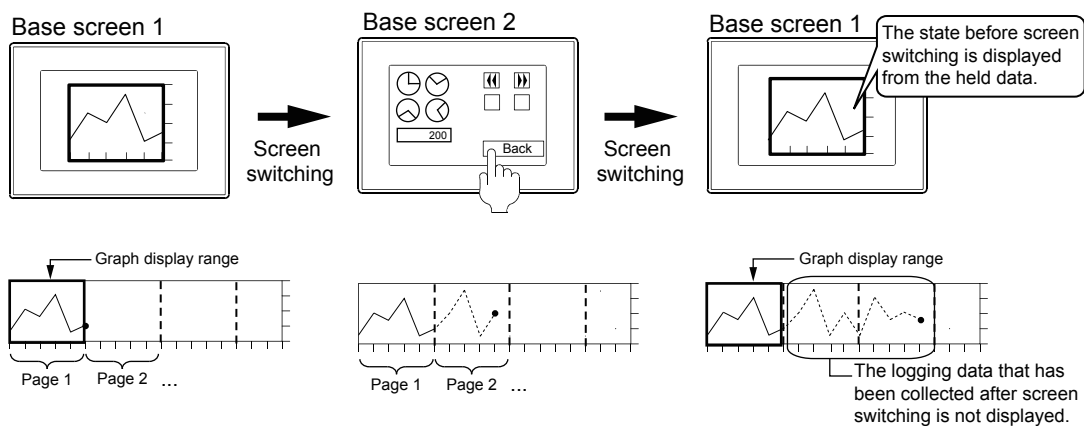

The following shows an example of the following action: base screen 1 (on which a historical trend graph is placed) is switched to base screen 2, and then base screen 1 is displayed again.

Example)

- When GS450.b9 is on (displaying the latest data)  
After the logging data that has been collected after the screen is switched is added to the held data, the logging data is displayed.

- When GS450.b9 is on (displaying the past data)  
 The state before the screen is switched is displayed.  
 The logging data that has been collected after the screen is switched is not displayed.

- When GS450.b9 is off  
 The logging data after base screen 1 is displayed again is displayed.

### (c) Restrictions

When the logging ID to be monitored by the historical trend graph is set using a device, pay attention when changing the logging ID.

If the logging ID to be monitored is changed after the display state is held, the display state is discarded.

Even when the screen is returned to the screen on which the historical trend graph is placed, the state before the screen switching is not restored and the latest logging data is displayed.

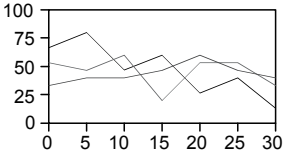

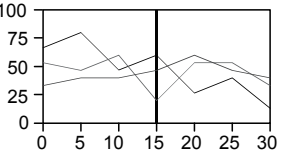

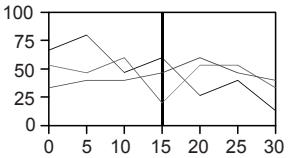

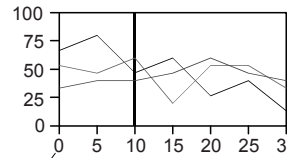

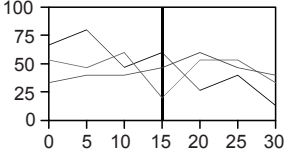

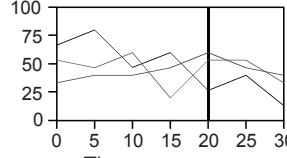

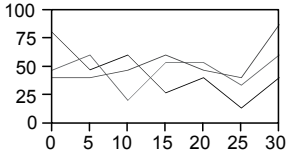

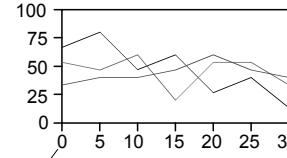

## ■5 Touch switch for the historical trend graph

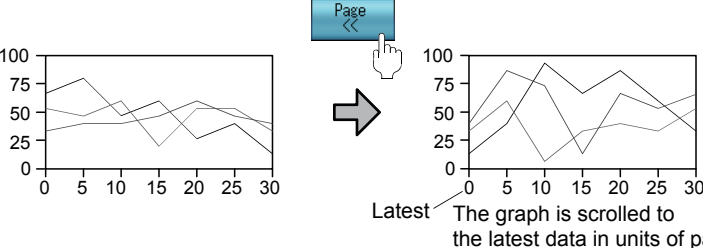

Touch switches for the historical trend graph are available by reading them from the library of GT Designer3.

The characters and shapes on the touch switches can be changed by a user.

When key codes are set for touch switches, touch switches for the historical trend graph can be created by a user.

Touch switch	Key code	Description
Show cursor 	FFF0h	Displays or deletes the cursor. Displays the cursor in the center of the graph.
Hide cursor 	FFF1h	    <p>The cursor is shown.</p>
Graph Cursor Next 	FFF2h	Moves the cursor to the new or past data. Example) When [Display Mode] is set to [Pen Record] and [Direction] is set to [Right]
Graph Cursor Previous 	FFF3h	    <p>Latest</p> <p>The cursor moves to the latest data.</p>     <p>Old</p> <p>The cursor moves to the old data.</p>
Graph Next 	FFF4h	Scrolls the graph right or left. Example) When [Display Mode] is set to [Pen Record] and [Direction] is set to [Right]
Graph Previous 	FFF5h	    <p>Latest</p> <p>The graph scrolls to the latest data.</p>

Touch switch	Key code	Description
Graph Next Page Scroll 	FFF6h	Moves the graph right or left in units of page. Example) When [Display Mode] is set to [Pen Record] and [Direction] is set to [Right]
Graph Previous Page Scroll 	FFF7h	 <p>The graph is scrolled to the latest data in units of page.</p>
Time Axis Expansion 	FFF8h	Enlarges or reduces the time axis by using the axis of new data as the reference. You can enlarge the time axis until the graph displays two points. The scope of reducing the time axis varies with the setting of [Shrink the graph to be less than its full scale].
Time Axis Reduction 	FFF9h	<ul style="list-style-type: none"> <li>• [When [Shrink the graph to be less than its full scale] is selected The time axis can be reduced to a magnification of 1/128.</li> <li>• When [Shrink the graph to be less than its full scale] is deselected The time axis can be reduced to the original magnification.</li> </ul> For the setting of [Shrink the graph to be less than its full scale], refer to the following. →8.21.4 ■ 4 [Extended] tab
Latest data 	FFEFh	Displays the latest data.
Move display position to the specified time 	FFD4h	Displays the date data stored in the Display Position Time Specification device in the center. (Time specification jump function) Using the time specification jump function may change the graph display magnification as shown below.

## 8.21.2 How to use the historical graph

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the historical trend graph.

### ■ 1 Setting logging

To use a historical trend graph, the logging setting is required.

⇒ 9.2 Collecting Device Data ([Logging])

### ■ 2 Placing the historical trend graph

The following shows how to place the historical trend graph.

- Step 1** Select [Object] → [Graph] → [Historical Trend Graph] from the menu.
- Step 2** Click the position where you place the scatter graph. Placing the scatter graph is complete.
- Step 3** Adjust the frame size of the historical trend graph.
- Step 4** Double-click the placed scatter graph to display the setting dialog.
  - ⇒ 8.21.4 [Historical Trend Graph] dialog
- Step 5** Display the [Data] tab.
  - ⇒ 8.21.4 ■ 1 [Data] tab
- Step 6** Set the number of lines and points to be displayed in the historical trend graph.

- Step 7** Set a device to be monitored.
  - ⇒ 6.1.1 How to set devices
- Step 8** Set [Lower Limit] and [Upper Limit].
- Step 9** Set the scale and figure in the [Style] tab.
  - ⇒ 8.21.4 ■ 2 [Style] tab

- Step 10** Set the graph assistance line and cursor attribute in the [Auxiliary Line/Cursor] tab.
  - ⇒ 8.21.4 ■ 3 [Auxiliary Line/Cursor] tab

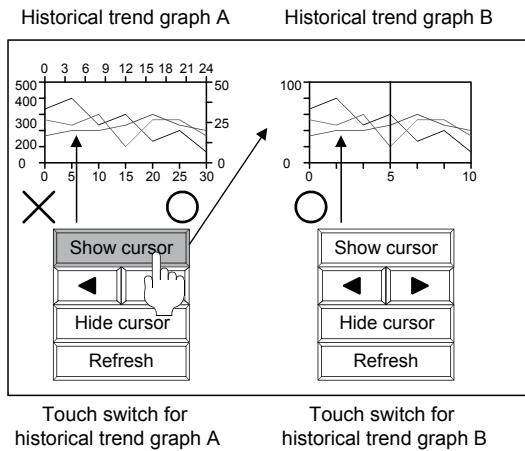

- Step 11** Click the [OK] button to complete the historical trend graph settings.

### ■3 Identifying multiple objects (setting user IDs)

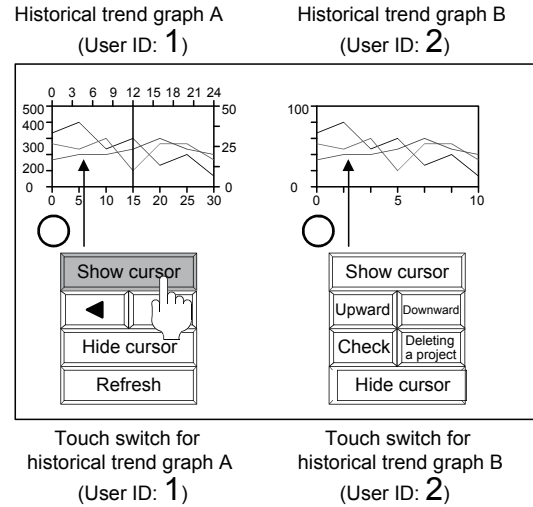

When multiple objects that are operated by the touch switch to which the key codes are assigned are placed on one screen, touching the touch switch may operate the object that is not the target. Setting a user ID limits the objects operated when the touch switch is touched.

When no user ID is set

The touch switches for historical trend graph A operate for historical trend graph B.

When the user ID is set

Although the same key codes are used, the target for an operation can be specified with ID numbers. Hence operations can be performed as required.

The following shows the setting procedure.

#### (1) Setting of the historical trend graph

**Step 1** Double-click the historical trend graph placed on the screen editor.

The [Historical Trend Graph] dialog appears.  
 ⇒8.21.4 [Historical Trend Graph] dialog

**Step 2** Enable [User ID] in the [Extended] tab, and specify the number.

⇒8.21.4 ■ 4 [Extended] tab

The number is used to define the target object as the object that operates when the touch switch is touched. Do not set [User ID] that is already used for other objects.

#### (2) Settings of touch switches

**Step 1** Display the [Switch] dialog.

For the details of the switch, refer to the following.  
 ⇒8.2 Placing a Touch Switch

**Step 2** Click the [Key Code] button in the [Action] tab.

**Step 3** Enable [Individually set user ID for a key input] and specify a number.

Set the same number as the number specified in [User ID] of [Historical Trend Graph].

### ■4 Storing date data in devices

The time of the cursor display position, display range beginning position, and display range end position of the graph can be stored to the device by using the Time device.

#### (1) How to store the data to the device

Data is stored in the upper eight bits and lower eight bits of set devices.

Numerical values are stored in BCD.

Example) When [Device] is set to [D100]

Item	Device	Description
[yymm]	D100	<ul style="list-style-type: none"> <li>• b15 to b8: The year is stored.</li> <li>• b7 to b0: The month is stored.</li> </ul>

Item	Device	Description
[ddhh]	D101	<ul style="list-style-type: none"> <li>• b15 to b8: The day is stored.</li> <li>• b7 to b0: The time (hour) is stored.</li> </ul>
[mmss]	D102	<ul style="list-style-type: none"> <li>• b15 to b8: The time (minute) is stored.</li> <li>• b7 to b0: The time (second) is stored.</li> </ul>
[Day]	D103	<ul style="list-style-type: none"> <li>• b15 to b8: None</li> <li>• b7 to b0: The day of the week is stored as a numerical value. The following shows the numerical values corresponding to the days. <ul style="list-style-type: none"> <li>• 0: Sunday</li> <li>• 1: Monday</li> <li>• 2: Tuesday</li> <li>• 3: Wednesday</li> <li>• 4: Thursday</li> <li>• 5: Friday</li> <li>• 6: Saturday</li> </ul> </li> </ul>

## (2) Storage timing and values stored to devices

### (a) Timing when the value is stored

With the following timings, values are stored to devices.

- When a cursor is displayed on a graph
- When a cursor is moved
- When a historical trend graph is operated with a touch switch with a cursor displayed

### (b) Values to be stored

When a cursor is displayed on the graph, the drawing processing of the graph stops. The values at the stop of the draw processing are stored to devices.

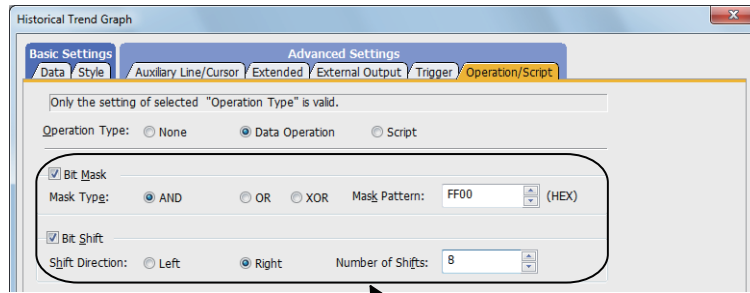

Example) Storing a time in the device

## (3) Displaying date data in the numerical display

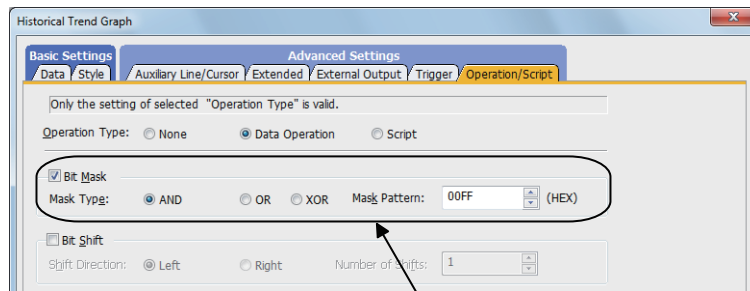

Date data can be displayed in the numerical display. The following shows the setting procedure.

- Step 1** Display the setting dialog for the placed numerical display ([Numerical Display] dialog).  
For the details of the numerical display, refer to the following.  
→ 8.4 Placing a Numerical Display and Numerical Input
- Step 2** Select [BCD16] or [BCD32] in [Data Type] in the [Device] tab.
- Step 3** Set the mask processing and shift processing in the [Operation/Script] tab.
  - When displaying upper 8 bits (year)

In the numerical display, set the lower 8 bits of D100 (b7 to b0) to be masked and the upper 8 bits of D100 (b15 to b8) to be shifted to the right by 8 bits.

- When displaying lower 8 bits (month)

In the numerical display, set the upper 8 bits of D100 (b15 to b8) to be masked.

## ■ 5 Displaying the data obtained at specified time in the center (time specification jump function)

By using the display position time device and a touch switch, the data obtained at specified time can be displayed in the center of the historical trend graph.

When no data is obtained at the specified time, the data which has the nearest specified date is displayed.  
When the multiple values are obtained at the nearest time, the first detected value is displayed.

### (1) How to store the data to the device

Set a device to store the data in the upper eight bits and lower eight bits.  
Numerical values are stored in BCD16.

Example) When [Device] is set to [D100]

Item	Device	Description
[yymm]	D100	<ul style="list-style-type: none"> <li>• b15 to b8: The year is stored.</li> <li>• b7 to b0: The month is stored.</li> </ul>
[ddhh]	D101	<ul style="list-style-type: none"> <li>• b15 to b8: The day is stored.</li> <li>• b7 to b0: The time (hour) is stored.</li> </ul>
[Minute/Second]	D102	<ul style="list-style-type: none"> <li>• b15 to b8: The time (minute) is stored.</li> <li>• b7 to b0: The time (second) is stored.</li> </ul>

### (2) Setting procedure

#### (a) Settings of touch switches

To use time specification jump function, the following touch switches are required.

- Touch switch for displaying the specified time
- Touch switch for restarting the drawing processing of the graph

If the time specification jump function is used, the drawing processing of the graph stops.

A touch switch for restarting the drawing processing of the graph is required.

The following shows the setting procedure.

**Step 1** Display the setting dialog for the placed switch ([Switch] dialog).

For the details of the switch, refer to the following.

⇒8.2 Placing a Touch Switch

**Step 2** Click the [Key Code] button in the [Action] tab.

**Step 3** Set the key cord according to the touch switch to be created.

- When setting a touch switch for displaying the specified time  
Set [Code Setting] to [FF04].
- When setting a touch switch for restarting the drawing processing of the graph  
Set [Code Setting] to [FFEF].

### Point

#### Using the library data

Touch switches are registered in the library.

⇒8.1 Using Objects in the Library

#### (b) Setting of the historical trend graph

**Step 1** Double-click the historical trend graph placed on the screen editor.

The [Historical Trend Graph] dialog appears.

⇒8.21.4 [Historical Trend Graph] dialog

**Step 2** Enable [Display Position Time] in the [Extended] tab, and specify a device.

⇒8.21.4 ■ 4 [Extended] tab

#### (3) Operation example

The following shows the operation examples.

Example) When setting [D1000] in [Display Position Time Device] and displaying the data of Jun.29, 2013 21:05:30

Display Position Time device		
	b15	b0
Year and month (D1000)	0x13	0x06
Day and time (D1001)	0x29	0x21
Minute and second (D1002)	0x05	0x30

Set the time to be displayed in the Display Position Time device.

Touch the touch switch for which the key code (FFD4h) has been set.

The data obtained at the specified time (Jun. 29, 2013 21:5:30) can be displayed in the center of the list.

#### (4) Precautions

##### (a) When date data is being searched for

When date data is being searched for, the historical trend graph cannot be operated.

##### (b) When no data can be displayed on the historical trend graph

When no data can be displayed on the historical trend graph, the time specification jump function is not executed.

##### (c) When displaying the data displayed near the start or end point

If the data obtained at specified time is near the start or end point, it may not be displayed in the center of the graph.

##### (d) Using the time specification jump function for an enlarged or reduced graph

Using the time specification jump function may change the graph display magnification as shown below.

- When a graph has been enlarged from the original magnification  
The graph display magnification returns to the original magnification after this function is used.
- When a graph has been reduced from the original magnification  
The graph display magnification remains unchanged after this function is used.

#### ■6 Operations performed using the object gesture function

Not available to GT21.

The display of objects can be operated using gestures.

For operations with gestures, refer to the following.

⇒11.13 Operating Objects by the Gesture (Object Gesture Function)

## 8.21.3 Precautions for a historical trend graph

The following shows the precautions for the historical trend graph.

### ■ 1 When the monitored device value exceeds the upper or lower limit value

The trend graph does not display a device value that is above the upper limit or below the lower limit.

In such a case, the upper or lower limit symbol appears at the position where the device value is hidden from view.

To hide the upper and lower limit symbols, turn on GS450.b10.

→ 12.1.3 GOT special register (GS)

### ■ 2 When the device type is set to the string in a logging setting

When [Device Type] is set to [String] in a logging setting, a system alarm occurs and the graph using the setting is not displayed.

(Not available to GT21.)

### ■ 3 When a graph is reduced from the original magnification

#### (1) Data displayed on the graph

If a graph is reduced from the original magnification, some pieces of data are thinned out and do not appear on the graph. Thus, the data displayed on the graph before and after the reduction may differ.

To check specific data on a graph, display the graph at the original magnification or greater.

#### (2) Elapsed time before a graph appears

If a graph is reduced from the original magnification, the graph may take a long time to appear.

In such a case, enlarge the graph close to the original magnification.

#### (3) Storing the maximum value, minimum value, and average value of a graph to specific devices

If a graph is reduced from the original magnification, some pieces of data are thinned out and do not appear on the graph. The maximum value, minimum value, and average value of the reduced graph are stored to specific devices.

Thus, the actual maximum value, minimum value, and average value of the graph at the original magnification may not be stored.

Before storing the values, enlarge the graph to the original magnification.

### ■ 4 Precautions for drawing

If you place a historical trend graph by using the [Create a new historical trend graph] button in the [Logging] dialog, the settings of the following items in the [Options] dialog are not applied.

- Place figures/objects sequentially
- Deselect figures/objects once they are placed
- Display the setting dialog once figures/objects are placed

→ 9.2.6 [Logging] dialog

11.10.4 Customizing the settings related to editing operations

## 8.21.4 [Historical Trend Graph] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The historical trend graph is an object that constantly collects data in word devices and display it in a graph.

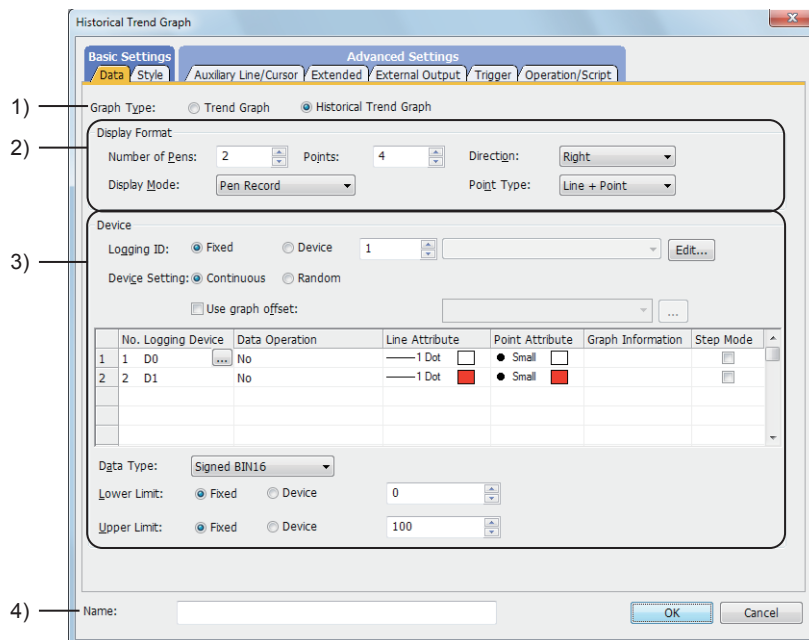

- Step 1** Select [Object] → [Graph] → [Historical Trend Graph] from the menu.  
**Step 2** Click the position where you place the historical trend graph. Placing the historical trend graph is complete.  
**Step 3** Double-click the historical trend graph display which has been placed to display the setting dialog.

- ■ 1 [Data] tab
- 2 [Style] tab
- 3 [Auxiliary Line/Cursor] tab
- 4 [Extended] tab
- 5 [External Output] tab
- 6 [Trigger] tab
- 7 [Operation/Script] tab

### ■ 1 [Data] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the device to be monitored and the historical trend graph status corresponding to the device value.

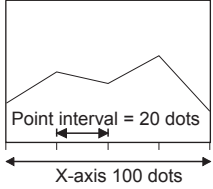

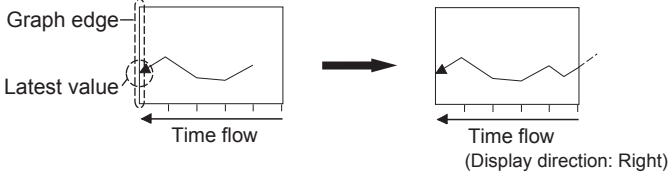

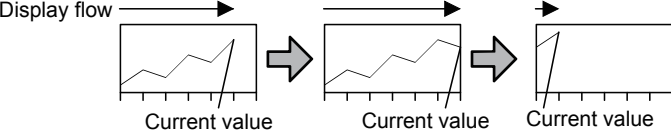

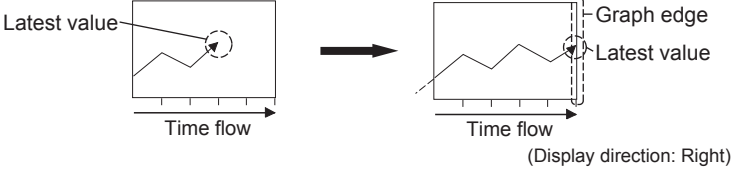

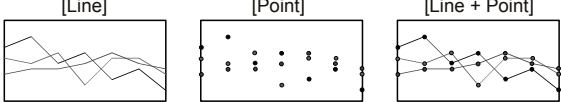

#### 1) [Graph Type]

Select the graph to be set.  
 The following shows the items to be selected.

- [Trend Graph]
- [Historical Trend Graph]

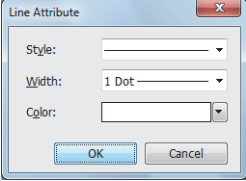

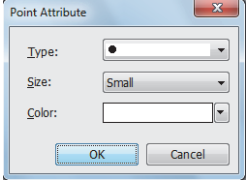

#### 2) [Display Format]

Item	Description
[Number of Pens]	Set the number of lines to be displayed in the historical trend graph. The setting range depends on the GOT model. <ul style="list-style-type: none"> <li>• For GT27, GT25, GT23, and GT SoftGOT2000                          The setting range is [1] to [32].</li> <li>• For GT21                          The setting range is [1] to [4].</li> </ul>

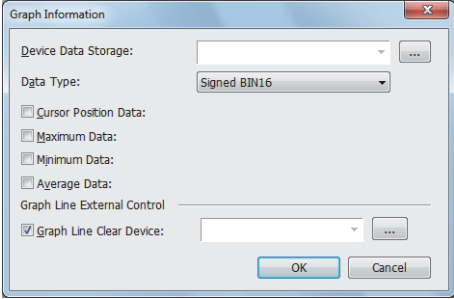

Item	Description
[Points]	<p>Set the number of points to be displayed on a line of the historical trend graph. The setting range depends on the GOT model.</p> <ul style="list-style-type: none"> <li>For GT27, GT25, GT23, and GT SoftGOT2000 The setting range is [2] to [1024].</li> <li>For GT21 The setting range is [2] to [500].</li> </ul> <p>Depending on the number of points and X-axis display range, the interval between points is adjusted automatically.</p> <p>Example) Number of points: 5</p> 
[Direction]	<p>Select the display direction of the graph. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>[Up]</li> <li>[Right]</li> <li>[Down]</li> <li>[Left]</li> </ul>
[Display Mode]	<p>The following shows how to draw the historical trend graph. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>[Pen Record]: The line of the graph is drawn by moving the whole graph to [Direction]. The point indicating the latest value is always drawn at the graph edge.</li> </ul>  <ul style="list-style-type: none"> <li>[One by One] The current value is displayed in the display direction. When the graph is drawn fully in a display range, the graph being displayed is cleared and a new graph is drawn.</li> </ul>  <ul style="list-style-type: none"> <li>[Next Point Movement] The line of the graph is drawn to [Direction]. The point indicating the latest value moves to the display direction. Once the point indicating the latest value reaches to the graph edge, the point is drawn at the graph edge constantly.</li> </ul> 
[Point Type]	<p>Select the point type. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>[Line]</li> <li>[Point]</li> <li>[Line + Point]</li> </ul> 

### 3) [Device]

Item	Description															
[Logging ID]	<p>Set the logging ID with which the data to be displayed on the historical trend graph is collected. Select whether to specify the ID using a fixed value or device value. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Specify the ID directly. You can select ID from the logging name as well.</li> <li>• [Device]: Specify the value of the word device as a logging ID. →6.1.1 How to set devices</li> </ul>															
[Device Setting]	<p>Select how to set the device. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Continuous]: When a start device is set, inputs consecutive devices automatically in the table of [Device].</li> <li>• [Random]: Select this item when setting devices one by one.</li> </ul>															
[Use Graph Offset]	<p>Select this item to monitor the logging device that is set in the logging ID and specified by the value of the offset device.</p> <p>When a graph has multiple lines, the device to be monitored differs depending on the set value in [Device Setting]. After checking the device value, set the offset device.</p> <p>Example) When [Number of Pens] is set to [2] and offset device is set to [3]</p> <div style="display: flex; justify-content: space-around;"> <div style="width: 45%;"> <p>• Device setting: Continuous</p> <p>Logging device</p> <ul style="list-style-type: none"> <li>No. 1 D100 (0)</li> <li>No. 2 D101 (first)</li> <li>No. 3 D102 (second)</li> <li>No. 4 D103 (third)</li> <li>No. 5 D200 (fourth)</li> <li>No. 6 D201 (fifth)</li> <li>No. 7 D203 (sixth)</li> <li>No. 8 D204 (seventh)</li> </ul> <p>Selected device</p> <p>The third device from the selected device and one subsequent device are monitored.</p> </div> <div style="width: 45%;"> <p>• Device setting: Random (Select No.1 or No.5.)</p> <p>Logging device</p> <ul style="list-style-type: none"> <li>No. 1 D100 (0)</li> <li>No. 2 D101 (first)</li> <li>No. 3 D102 (second)</li> <li>No. 4 D103 (third)</li> <li>No. 5 D200 (0)</li> <li>No. 6 D201 (first)</li> <li>No. 7 D203 (second)</li> <li>No. 8 D204 (third)</li> </ul> <p>Selected device</p> <p>The third devices from each selected device are monitored.</p> </div> </div>															
[No. Logging Device]	<p>In the [Device List] dialog, select a logging device of a selected logging ID number. After the selection in the [Device List] dialog, the logging devices equivalent to the setting of [Number of Pens] are set.</p> <p>Example) When [Number of Pens] is set to [3]</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>No.</th> <th>Logging Device</th> <th>D</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>2</td> <td>D1</td> </tr> <tr> <td>2</td> <td>3</td> <td>D2</td> </tr> <tr> <td>3</td> <td>4</td> <td>D3</td> </tr> <tr> <td>4</td> <td>5</td> <td>D10</td> </tr> </tbody> </table> <p style="text-align: center;">Logging device Logging device No.</p>	No.	Logging Device	D	1	2	D1	2	3	D2	3	4	D3	4	5	D10
No.	Logging Device	D

Item	Description
[Graph Information]	<p>Set the device in which the information displayed on the graph is stored or device that clears the line of the graph.</p>  <ul style="list-style-type: none"> <li>• [Device Data Storage] Set the device in which the graph information is stored. The successive devices following the device set in this item are assigned automatically to [Cursor Position Data] or later items. Set each item optionally. The device is assigned only to the set item. Using the GOT internal device is recommended for this setting.</li> <li>• [Data Type] Select the data type of the word device in which graph information is stored. Select the same data type as that of the logging device. When the data type of the logging device is bit, select [Signed BIN16], [Unsigned BIN16], or [BCD16]. The following shows the items to be selected. · [Signed BIN16] · [Unsigned BIN16] · [Signed BIN32] · [Unsigned BIN32] · [BCD16] · [BCD32] · [Real]</li> <li>• [Cursor Position Data] Select this item to store the value of device positioned by the cursor. The device is assigned automatically.</li> <li>• [Maximum Data] Select this item to store the maximum value of the device values displayed on the graph is to be stored. The device is assigned automatically.</li> <li>• [Minimum Data] Select this item to store the minimum value of the device values displayed on the graph. The device is assigned automatically.</li> <li>• [Average Data] Select this item to store the average value of the device values displayed on the graph. The device is assigned automatically.</li> <li>• [Graph Line External Control] · [Graph Line Clear Device] Select this item to clear the line of the graph using a device. After selecting this item, set the device.</li> </ul>
[Step Mode]	<p>Select this item to display the line of the trend graph by steps.</p>  <p style="text-align: center;">Displayed by no steps      Displayed by steps</p>
[Data Type]	<p>Select the data type of the word device. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Signed BIN16]</li> <li>• [Unsigned BIN16]</li> <li>• [Signed BIN32]</li> <li>• [Unsigned BIN32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> </ul>

Item	Description
[Lower Limit], [Upper Limit]	<p>Select whether to specify the display range (lower and upper limit values) of the trend graph with the fixed value or with the device value. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Specify a constant.</li> <li>• [Device]: Specify a device value.</li> </ul> <p>→6.1.1 How to set devices The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].</p>

#### 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

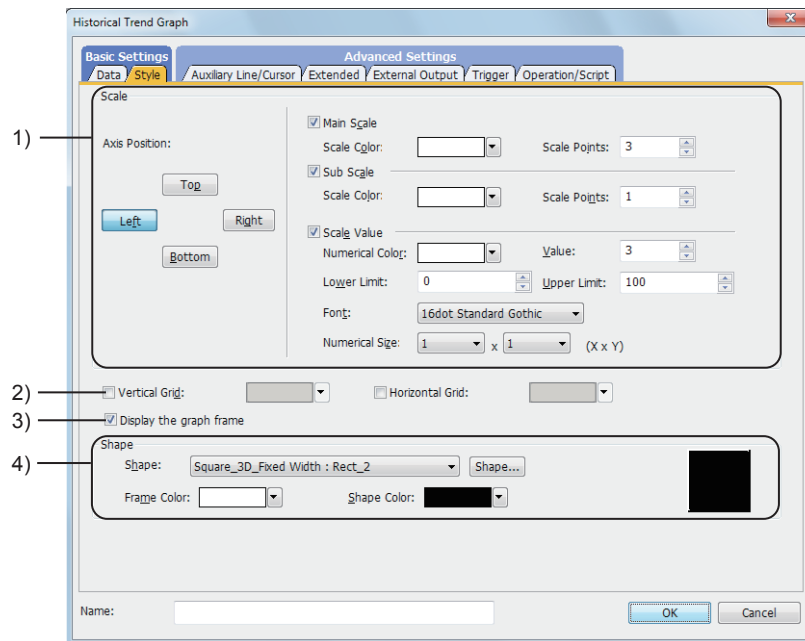

Up to 100 characters can be set.

## ■ 2 [Style] tab

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

#### 1) [Scale Settings]

Displays the line or scale value in the historical trend graph.

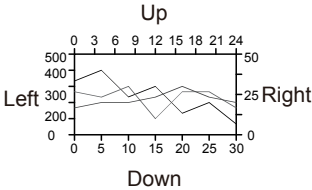

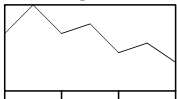

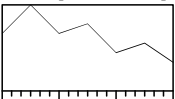

Line  
(X: 5)  
(Y: 5)

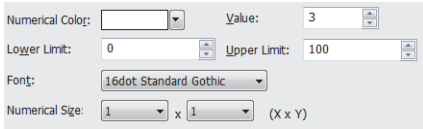

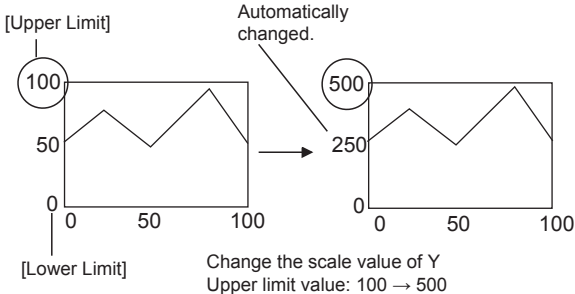

Scale value  
(X: 3)  
(Y: 3)

Displays both the lines  
and scale values.

Item	Description
[Axis Position]	<p>Select the position where the line or scale value is displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Left] button</li> <li>• [Right] button</li> <li>• [Top] button</li> <li>• [Bottom] button</li> </ul> <p>After selecting the position, set the line or scale value.</p> 
[Main Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of lines on the scale. The setting range is [2] to [101].</li> </ul>
[Sub Scale]	<p>Set this item to place lines between the lines set in [Main Scale].</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="772 1120 963 1240"> <p>Without [Sub Scale]</p>  </div> <div data-bbox="1082 1120 1273 1240"> <p>With [Sub Scale]</p>  </div> </div>  <ul style="list-style-type: none"> <li>• <b>[Color]</b> Set the color of sub lines on the scale.</li> <li>• <b>[Scale Points]</b> Set the number of sub lines on the scale. The setting range is [1] to [9].</li> </ul>

Item	Description
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• <b>[Numerical Color]</b> Set the color of numeric characters.</li> <li>• <b>[Value]</b> Set the number of numeric characters. The setting range is [2] to [101].</li> <li>• <b>[Lower Limit] and [Upper Limit]</b> Set the lower limit and upper limit of the numerical value. Changes in this setting are automatically applied to the display.</li> </ul>  <p>Depending on the item selected for [Data Type] in the [Data] tab, the setting range is different.</p> <ul style="list-style-type: none"> <li>• <b>[Font]</b> Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• <b>[Number Size]</b> Select the size of numeric characters. For the details of the font and size, refer to the following. →1.2.5 Font specifications When [6x8dot] is selected for [Font], the numeric character size cannot be set.</li> </ul>

## 2) [Vertical Grid] and [Horizontal Grid]

Select this item to display the horizontal or vertical grid.

The number of grids is the same as the number set in [Scale Points] of [Main Scale] and [Sub Scale].

The bottom and left setting in [Axis Position] is prioritized.

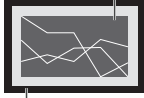

After setting this item, select the color of the grid.

## 3) [Display the graph frame]

Select this item to display the frame of the graph.

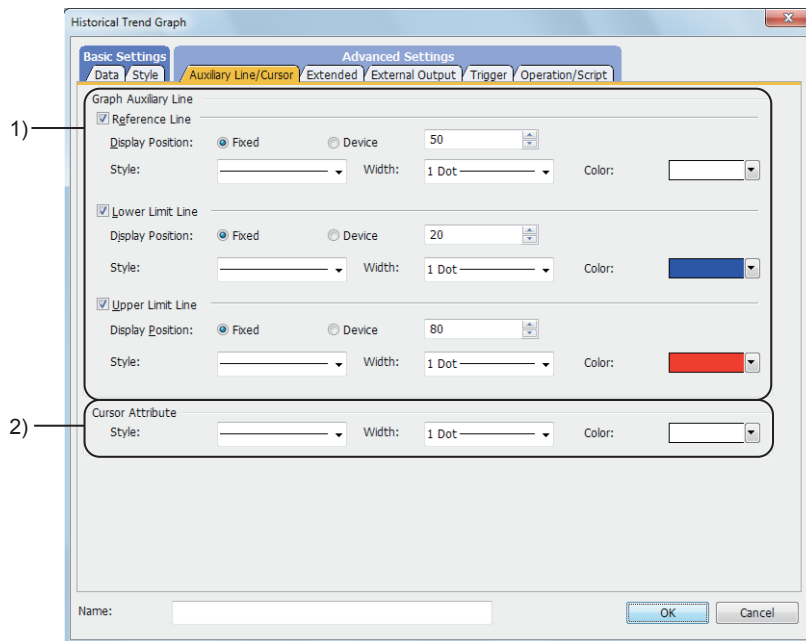

#### 4) [Shape]

Item	Description
[Shape]	<p>Set the shape of the historical trend graph.            When [None] is selected, no shape is displayed.            To select a shape other than those in the list box, click the [Shape] button.            →6.5.5 ■ 1 Setting object shapes            When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p> <div data-bbox="794 353 1236 459" style="border: 1px solid gray; padding: 5px; margin-bottom: 10px;">             Shape: <input type="text" value="Square_3D_Fixed Width : Rect_2"/> <input type="button" value="Shape..."/>              Frame Color: <input type="text" value=""/> <input type="button" value="Shape Color: [black]"/> </div> <p style="text-align: right; margin-right: 100px;">Preview</p> <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul> <div data-bbox="928 611 1099 779" style="text-align: center; margin: 10px 0;">  </div> <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

### ■ 3 [Auxiliary Line/Cursor] tab

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Set the auxiliary line and attribute of the cursor.

## 1) [Graph Auxiliary Line]

Item	Description
<p>[Reference Line], [Lower Limit Line], and [Upper Limit Line]</p>	<p>Set this item to place a reference line on the graph.</p>  <ul style="list-style-type: none"> <li>• <b>[Display Position]</b> Select whether to specify the line position using a fixed value or device value. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Fixed]: Specify a constant.</li> <li>• [Device]: Specify a device value. →6.1.1 How to set devices</li> </ul> </li> <li>• <b>[Line Style]</b> Select the style of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul> </li> <li>• <b>[Width]</b> Select the width of the line. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul> </li> <li>• <b>[Line Color]</b> Select the color of the line.</li> </ul>

## 2) [Cursor Attribute]

Set the attribute of the cursor.

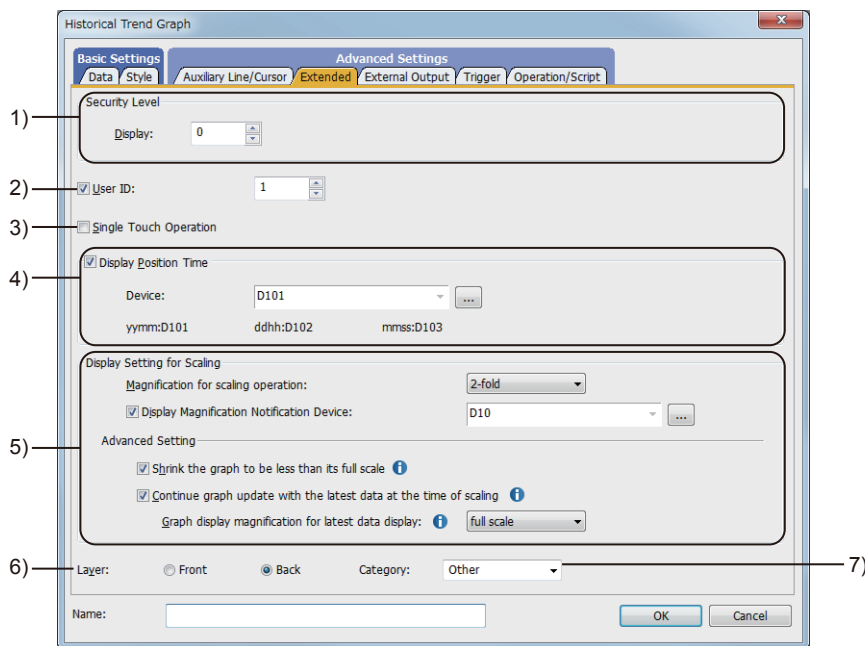

Item	Description
<p>[Line Style]</p>	<p>Select the style of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• Solid line</li> <li>• Dotted line</li> <li>• Broken line</li> <li>• One-dot chain line</li> <li>• Two-dot chain line</li> </ul>
<p>[Width]</p>	<p>Select the width of the line. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
<p>[Line Color]</p>	<p>Select the color of the line.</p>

#### ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

#### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

→ 8.16.2 ■ 2 Identifying multiple graphs (setting user IDs)

#### 3) [Single Touch Operation]

Select this item to display a cursor at the touched place.

#### 4) [Display Position Time]

Set this item to display the data obtained at specified time in the center of the graph when the touch switch is touched.

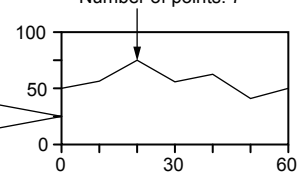

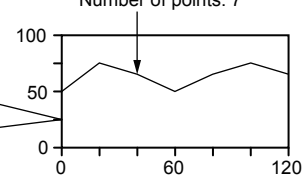

Item	Description
[Device]	Set the device in which the date data is stored. The three successive devices following the device set in this item are automatically assigned to [yymm], [ddhh], and [mmss]. The date data is stored in the upper eight bits and lower eight bits of each set device. The data type of the devices is BCD. → 8.16.2 ■ 4 Displaying the data obtained at specified time in the center (time specification jump function)

#### 5) [Display Setting for Scaling]

Not available to GT21.

Configure the settings to enlarge or reduce the time axis of a graph.

Item	Description
[Magnification for scaling operation]	Select a magnification factor to enlarge or reduce the time axis of a graph by touching a touch switch, pinching in, or pinching out one time. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [2-fold]</li> <li>• [4-fold]</li> <li>• [8-fold]</li> </ul>

Item	Description																																																												
[Display Magnification Notification Device]	Specify a device to store the magnification factor at which the time axis of a graph is being displayed. You can specify a signed 16-bit binary word device or word-specified bit device.																																																												
[Shrink the graph to be less than its full scale]	<p>Enables the setting to reduce the time axis of a graph from the original magnification. When the time axis is reduced, the number of points to be displayed remains unchanged, but some pieces of data are thinned out and do not appear on the graph. Example) When the time axis of a graph is reduced to a magnification of 1/2 The amount of data within the graph display range becomes twice as much as that at the original magnification. Because the number of points to be displayed remains unchanged, every other piece of data is thinned out and does not appear on the graph.</p> <div style="display: flex; align-items: center;"> <div style="border: 1px solid black; padding: 5px; margin-right: 20px;"> <p>Graph display range</p> <table border="1" style="font-size: small;"> <thead> <tr><th>Date and time</th><th>Line1</th></tr> </thead> <tbody> <tr><td>2016/02/23 08:30:00</td><td>50</td></tr> <tr><td>2016/02/23 08:40:00</td><td>55</td></tr> <tr><td>2016/02/23 08:50:00</td><td>75</td></tr> <tr><td>2016/02/23 09:00:00</td><td>55</td></tr> <tr><td>2016/02/23 09:10:00</td><td>60</td></tr> <tr><td>2016/02/23 09:20:00</td><td>40</td></tr> <tr><td>2016/02/23 09:30:00</td><td>50</td></tr> <tr><td>2016/02/23 09:40:00</td><td>45</td></tr> <tr><td>2016/02/23 09:50:00</td><td>60</td></tr> <tr><td>2016/02/23 10:00:00</td><td>55</td></tr> <tr><td>2016/02/23 10:10:00</td><td>75</td></tr> <tr><td>2016/02/23 10:20:00</td><td>55</td></tr> <tr><td>2016/02/23 10:30:00</td><td>60</td></tr> <tr><td>2016/02/23 10:40:00</td><td>40</td></tr> </tbody> </table> <p style="text-align: center;">Logging data</p> </div> <div style="text-align: center;"> <p>Number of points: 7</p>  </div> </div> <p style="text-align: center; margin: 10px 0;">↓ The time axis of the graph is reduced to a magnification of 1/2.</p> <div style="display: flex; align-items: center;"> <div style="border: 1px solid black; padding: 5px; margin-right: 20px;"> <p>Graph display range</p> <table border="1" style="font-size: small;"> <thead> <tr><th>Date and time</th><th>Line1</th></tr> </thead> <tbody> <tr><td>2016/02/23 08:30:00</td><td>50</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 08:40:00</td><td>55</td></tr> <tr><td>2016/02/23 08:50:00</td><td>75</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 09:00:00</td><td>55</td></tr> <tr><td>2016/02/23 09:10:00</td><td>60</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 09:20:00</td><td>40</td></tr> <tr><td>2016/02/23 09:30:00</td><td>50</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 09:40:00</td><td>45</td></tr> <tr><td>2016/02/23 09:50:00</td><td>60</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 10:00:00</td><td>55</td></tr> <tr><td>2016/02/23 10:10:00</td><td>75</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 10:20:00</td><td>55</td></tr> <tr><td>2016/02/23 10:30:00</td><td>60</td></tr> <tr style="background-color: #cccccc;"><td>2016/02/23 10:40:00</td><td>40</td></tr> </tbody> </table> <p style="text-align: center;">Logging data</p> <p style="text-align: center; font-size: x-small;">These pieces of logging data are thinned out and do not appear on the graph.</p> </div> <div style="text-align: center;"> <p>Number of points: 7</p>  </div> </div>	Date and time	Line1	2016/02/23 08:30:00	50	2016/02/23 08:40:00	55	2016/02/23 08:50:00	75	2016/02/23 09:00:00	55	2016/02/23 09:10:00	60	2016/02/23 09:20:00	40	2016/02/23 09:30:00	50	2016/02/23 09:40:00	45	2016/02/23 09:50:00	60	2016/02/23 10:00:00	55	2016/02/23 10:10:00	75	2016/02/23 10:20:00	55	2016/02/23 10:30:00	60	2016/02/23 10:40:00	40	Date and time	Line1	2016/02/23 08:30:00	50	2016/02/23 08:40:00	55	2016/02/23 08:50:00	75	2016/02/23 09:00:00	55	2016/02/23 09:10:00	60	2016/02/23 09:20:00	40	2016/02/23 09:30:00	50	2016/02/23 09:40:00	45	2016/02/23 09:50:00	60	2016/02/23 10:00:00	55	2016/02/23 10:10:00	75	2016/02/23 10:20:00	55	2016/02/23 10:30:00	60	2016/02/23 10:40:00	40

## 6) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]
- 6.5.5 ■ 3 Superimposition

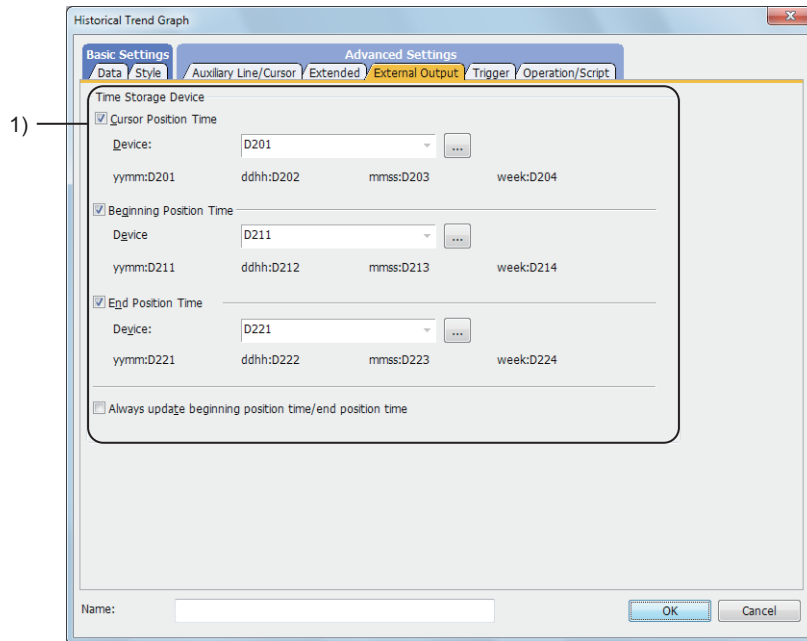

### 7) [Category]

Select the category to assign the object.

    → 11.7 Managing figures and objects by category

## ■ 5 [External Output] tab

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

### 1) [Time Device]

Stores each date data.

The four successive devices following the device set in this item are automatically assigned to [yymm], [ddhh], [mmss], and [Day].

The date data is stored in the upper eight bits and lower eight bits of each set device.

The data type of the devices is BCD.

Using the GOT internal device is recommended for this setting.

For how to display the date data stored in the device in the numerical display, refer to the following.

    → 8.16.2 ■ 3 Storing date data in devices

Item	Description
[Cursor Position Time]	Set this item to store the time of the cursor display position. After selecting this item, set the device.
[Beginning Position Time]	Set this item to store the time at the beginning position of the graph. After selecting this item, set the device.
[End Position Time]	Set this item to store the time at the end position of the graph. After selecting this item, set the device.
[Always update Beginning Position Time/End Position Time]	Select this item to constantly store the latest value in the Time device (beginning position time and end position time). New data obtained at specified time is stored every graph refresh.

## ■ 6 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set conditions for displaying the object.

### 1) [Control Displaying/Hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

## ■7 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→10.18.2 ■ 2 Usable functions

Set a formula for monitoring with the data operation function or the script function.

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

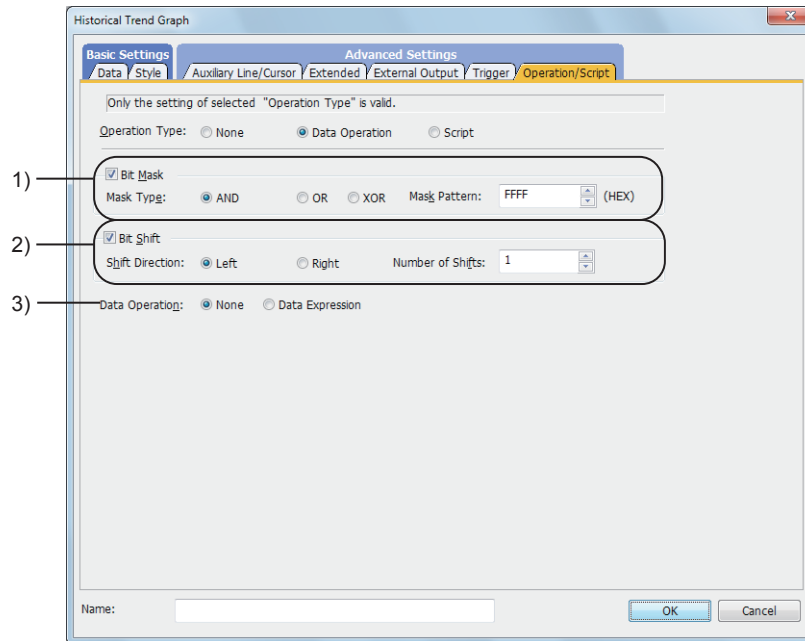

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
→(1) [Data Operation]
- [Script]  
Not available to GT21.  
Set the expression used for the script function.  
→(2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change*1	
					Object stacking order adjustment enabled*2	Object stacking order adjustment disabled*2
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Data]	[Lower Limit] (X (lower side))	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (left side))	scale_min[1]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (upper side))	scale_min[2]	○	○	Upon the setting change	When the screen is updated
	[Lower Limit] (Y (right side))	scale_min[3]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (X (lower side))	scale_max[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (left side))	scale_max[1]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (upper side))	scale_max[2]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit] (Y (right side))	scale_max[3]	○	○	Upon the setting change	When the screen is updated
[Style]	[Frame Color]	frame_color	○	×	×	×
	[Shape Color]	plate_color	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

- 9.10.2 (5) Timing at which the setting change of an object property is reflected
- \*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

- 5.1.4 [Type Setting] dialog

## 8.21.5 Relevant settings

Set the relevant settings other than the specific settings for the historical trend graph as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### ■ 2 GOT Internal Device

- 12.1.3 GOT special register (GS)

Function	Setting item
Hiding the upper and lower limit symbols	GS450.b10 (Not available to GT21.)
Retaining the state of the historical trend graph displayed before screen switching and displaying the same graph state after switching back to the graph screen (Historical Trend Graph Display Mode signal: read device) →8.21.1 ■ 4 (9) Holding the graph display state displayed before screen switching	GS450.b9 (Not available to GT21.)

## 8.22 Placing a Graphical Meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The graphical meter object monitors the value of a word device, and indicates the device value within a range of the specified upper and lower limits.

- Semicircle meter

- Horizontal bar meter

### 8.22.1 Specifications of the graphical meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 Maximum number of objects on one screen

Up to 32 graphical meter objects can be placed on one screen.

#### ■ 2 Graphical meter shape

The following shows the selectable shapes of the graphical meter.

- Sector
- Semicircle
- Bar (Vertical)
- Bar (Horizontal)

#### ■ 3 Indication of the monitored device value

The following shows the selectable methods of indicating the device value.

- Needle

The device value is indicated with a needle.

The following needle shapes are selectable: straight line, triangle, and inverted triangle.

- Fill

The device value is indicated by applying a fill (from the lower limit to the device value).

The fill color and design are settable.

- Needle and fill

The device value is indicated by using a needle and applying a fill.

#### ■ 4 Indication of the device value that is above the upper limit or below the lower limit

If the monitored device value is above the upper limit or below the lower limit, the limit value is indicated as the device value on the graphical meter.

Example) Graphical meter having an upper limit of 100 and a lower limit of 0

#### ■ 5 Areas of the graphical meter

The graphical meter consists of multiple areas as shown below.

Example) Areas of a sector meter or a horizontal bar meter

- Shape frame area

An area where the frame of the graphical meter shape is displayed.

- Scale area

An area where a scale and scale values are displayed.

The starting and ending edges of the scale area are determined by the angle, data width, and data height of the data area.

- Data area

An area where a meter, needle, and fill are displayed.

An upper limit and a lower limit are specified for the meter, and the device value is indicated by the needle and fill.

- Warning color area

An area where warning colors are displayed.

The starting and ending edges of the warning color area are determined by the angle, data width, and data height of

the data area.

For editing the areas of the graphical meter, refer to the following.

→8.22.2 ■ 4 Editing the areas of the graphical meter

## 8.22.2 How to use the graphical meter

The following shows how to use the graphical meter.

### ■ 1 Placing the graphical meter

**Step 1** Select [Object] → [Graphical Meter] from the menu to select a graphical meter.

**Step 2** Click the position to place a graphical meter.

**Step 3** Adjust the size of the graphical meter.

**Step 4** Double-click the graphical meter to display the setting dialog.

→8.22.4 [Graphical Meter] dialog

**Step 5** In the [Device/Style] tab, set [Device], [Upper Limit], and [Lower Limit].

→8.22.4 ■ 1 [Device/Style] tab

For the other setting items, refer to the following.

→ ■ 3 Setting the graphical meter

**Step 6** Click the [OK] button to complete the graphical meter settings.

### ■ 2 Editing the graphical meter

The graphical meter is editable on the screen editor.

→6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

#### (1) Resizing the graphical meter

The size of the graphical meter is changeable.

The resize operation differs depending on the selection for [Shape] in the [Scaling Setting] dialog.

- When [Circle] is selected for [Shape]

The graphical meter is resized while forming a perfect circle.

- When [Square] is selected for [Shape]

The graphical meter is resized with its length-to-width ratio changed.

- When [None] is selected for [Shape]

The graphical meter is resized while its length-to-width ratio remains unchanged.

For the details of the [Scaling Setting] dialog, refer to the following.

→8.22.4 ■ 4 [Extended Style] tab

### ■ 3 Setting the graphical meter

The setting of the graphical meter can be configured on the screen editor.

→6.5.5 Common setting for objects

#### (1) Meter setting

Set the meter shape and design in the [Device/Style] tab of the [Graphical Meter] dialog.

→8.22.4 ■ 1 [Device/Style] tab

#### (2) Text setting

Set the text to be displayed on the graphical meter in the [Text] tab of the [Graphical Meter] dialog.

→8.22.4 ■ 2 [Text] tab

### (3) Scale setting

Set the scale and scale values of the graphical meter in the [Scale] tab of the [Graphical Meter] dialog.

⇒8.22.4 ■ 3 [Scale] tab

### (4) Shape setting

Set the shape of the graphical meter in the [Extended Style] tab of the [Graphical Meter] dialog.

Only the shapes in the library are selectable.

⇒8.22.4 ■ 4 [Extended Style] tab

### (5) Needle and fill settings

Set how to indicate a device value on the graphical meter in the [Extended Style] tab of the [Graphical Meter] dialog.

⇒8.22.4 ■ 4 [Extended Style] tab

### (6) Warning color setting

Set warning colors to be displayed on the graphical meter in the [Extended Style] tab of the [Graphical Meter] dialog.

⇒8.22.4 ■ 4 [Extended Style] tab

## ■ 4 Editing the areas of the graphical meter

The areas of the graphical meter are editable on the screen editor.

Click the graphical meter to display the handles and operating auxiliary lines for the warning color area, scale area, and data area. The handles for the warning area and scale area are rectangle-shaped, and the handle for the data area is rhombus-shaped.

Drag a handle or operating auxiliary line to edit an area.

Example) Handles and operating auxiliary lines displayed for the areas of a sector meter

### (1) Editable area

The following shows the editable areas.

#### (a) Warning color area and scale area

The warning color area or scale area is movable.

When you move the area in a sector or semicircle meter, the area is resized with its width unchanged.

- Sector meter

- Vertical bar meter

#### (b) Data area

The angle or the data width and height are changeable.

When you change the above items, the warning color area and scale area are resized accordingly.

- Sector meter

The angle of the data area is changeable.

- Vertical bar meter

The data width and height of the data area are changeable.

**(2) Scope of editing the areas**

The scope of editing the areas differs depending on the selection for [Shape] in the [Scaling Setting] dialog. For the details of the [Scaling Setting] dialog, refer to the following.

→8.22.4 ■ 4 [Extended Style] tab

**(a) When [Circle] is selected for [Shape]**

The areas of the graphical meter are editable beyond the shape frame.

If you resize an area beyond the shape frame, the frame is resized to accommodate the area automatically.

- Sector meter

**(b) When [Square] is selected for [Shape]**

The areas of the graphical meter are editable beyond the shape frame.

If you resize an area beyond the shape frame, the frame is resized to accommodate the area automatically.

- Sector meter

- Vertical bar meter

- : Shape frame
- : Data area
- : Warning color area

Editing the data area

Editing the warning color area

**(c) When [None] is selected for [Shape]**

The areas of the graphical meter are editable only within the shape frame.

## 8.22.3 Precautions for a graphical meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1 Behavior of the graphical meter when it is resized

#### (1) Scale area and warning color area

Even if the graphical meter is resized, the widths of the scale area and warning color area remain unchanged. To change the widths of the areas, set the relevant items in the [Graphical Meter] dialog.

⇒8.22.4 [Graphical Meter] dialog

Example) When the graphical meter is enlarged

#### (2) Shape frame width and axis radius

The set value of [Frame Width] or [Axis Radius] in the [Scaling Setting] dialog determines whether the shape frame width or axis radius remains unchanged while the graphical meter is resized.

- When [Frame Width] or [Axis Radius] is set to a value other than [0]

The shape frame width or axis radius remains unchanged while the graphical meter is resized.

Example) When the graphical meter is enlarged

- When [Frame Width] or [Axis Radius] is set to [0]

The shape frame width or axis radius is changed while the graphical meter is resized.

Example) When the graphical meter is enlarged

For the details of the [Scaling Setting] dialog, refer to the following.

⇒8.22.4 ■ 4 [Extended Style] tab

### 2 Shape setting

The shape of the graphical meter may not appear properly if you make different selections in the following settings: [Shape] in the [Graphical Meter] dialog ([Extended Style] tab), and [Shape] in the [Scaling Setting] dialog.

Check the display of the shape, and change the selection for [Shape] in the [Scaling Setting] dialog if necessary.

For the details of the [Scaling Setting] dialog, refer to the following.

⇒8.22.4 ■ 4 [Extended Style] tab

## 8.22.4 [Graphical Meter] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Object] → [Graphical Meter] from the menu to select a graphical meter.

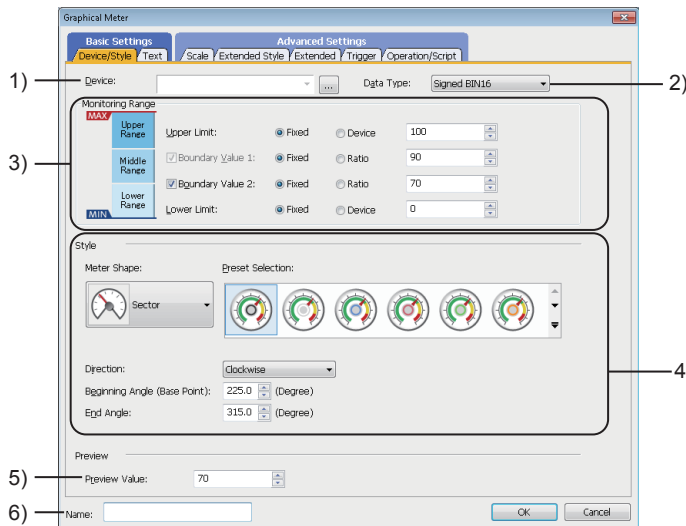

**Step 2** Click the position to place a graphical meter.

**Step 3** Double-click the graphical meter to display the setting dialog.

When [Bar (Vertical)] or [Bar (Horizontal)] is selected for [Meter Shape]

#### 1) [Device]

Set the device to be monitored.

➔ 6.1.1 How to set devices

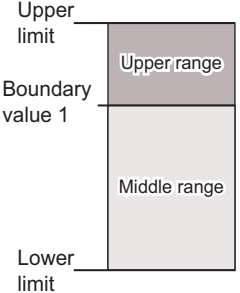

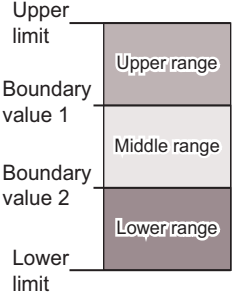

#### 2) [Data Type]

Select the data type of the word device.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

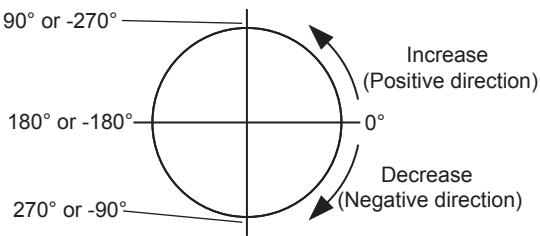

### 3) [Monitoring Range]

Item	Description
[Upper Limit], [Lower Limit]	<p>Select whether to set the data area (upper and lower limits) of the graphical meter with fixed values or device values. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Set a constant. The setting range varies with the selection for [Data Type]. When [Signed BIN16] is selected for [Data Type]: [-32768] to [32767] When [Unsigned BIN16] is selected for [Data Type]: [0] to [65535] When [Signed BIN32] is selected for [Data Type]: [-2147483648] to [2147483647] When [Unsigned BIN32] is selected for [Data Type]: [0] to [4294967295] When [BCD16] is selected for [Data Type]: [0] to [9999] When [BCD32] is selected for [Data Type]: [0] to [99999999] When [Real] is selected for [Data Type]: [-999999000000.0] to [999999000000.0]</li> <li>• [Device]: Set a device. →6.1.1 How to set devices</li> </ul>
[Boundary Value 1], [Boundary Value 2]	<p>Set these items to divide the data area of the graphical meter. Select whether to divide the data area with fixed values or by ratio. The data area is divided into the middle, upper, and lower ranges based on the settings of [Boundary Value 1] and [Boundary Value 2].</p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: These items are settable only when [Fixed] is selected for [Upper Limit] and [Lower Limit]. Set a constant. The setting ranges for [Boundary Value 1] and [Boundary Value 2] are different. For [Boundary Value 1], the setting range is the set value of [Lower Limit] to the set value of [Upper Limit]. For [Boundary Value 2], the setting range is the set value of [Lower Limit] to the set value of [Boundary Value 1].</li> <li>• [Ratio]: Set a ratio for dividing the data area based on [Upper Limit] (100%) and [Lower Limit] (0%). The setting ranges for [Boundary Value 1] and [Boundary Value 2] are different. For [Boundary Value 1], the setting range is [1]% to [99]%. For [Boundary Value 2], the setting range is [1]% to the set value of [Boundary Value 1].</li> </ul>

### 4) [Style]

Item	Description
[Meter Shape]	<p>Select a meter shape. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Sector]</li> <li>• [Semicircle]</li> <li>• [Bar (Vertical)]</li> <li>• [Bar (Horizontal)]</li> </ul>
[Preset Selection]	<p>Select a graphical meter design. Click the pull-down menu button to display all designs.</p> <div style="text-align: center;">  <p>Pull-down menu button</p> </div>

Item	Description
[Direction]	<p>Select the value increment direction for the graphical meter. The selectable items vary with the selection for [Meter Shape].</p> <ul style="list-style-type: none"> <li>When [Sector] or [Semicircle] is selected for [Meter Shape] <ul style="list-style-type: none"> <li>[Clockwise]</li> <li>[Counterclockwise]</li> </ul> </li> <li>When [Bar (Vertical)] is selected for [Meter Shape] <ul style="list-style-type: none"> <li>[Up]</li> <li>[Down]</li> </ul> </li> <li>When [Bar (Horizontal)] is selected for [Meter Shape] <ul style="list-style-type: none"> <li>[Right]</li> <li>[Left]</li> </ul> </li> </ul>
[Beginning Angle (Base Point)], [End Angle]	<p>These items are settable when [Sector] or [Semicircle] is selected for [Meter Shape]. Set an angle to define the meter shape. The setting range is [-360.0] degrees to [360.0] degrees. The angle is settable in units of 0.1 degree. Regardless of the selection for [Direction], the 0-degree position is always at the 3 o'clock position, and the angle increases counterclockwise.</p> 
[Data Width], [Data Height]	<p>These items are settable when [Bar (Vertical)] or [Bar (Horizontal)] is selected for [Meter Shape]. Set the width and height of the meter. When [Bar (Vertical)] is selected for [Meter Shape], the value of [Data Width] is applied to [Needle Length] in the [Extended Style] tab. When [Bar (Horizontal)] is selected for [Meter Shape], the value of [Data Height] is applied to [Needle Length] in the [Extended Style] tab. When [Circle] or [Square] is selected for [Shape] in the [Scaling Setting] dialog, the object is resized according to the specified width and height of the meter.</p>

### 5) [Preview Value]

Set a value or ratio for the graphical meter to be previewed on GT Designer3.

The setting range varies with the selection for [Upper Limit] and [Lower Limit].

- When [Fixed] is selected for [Upper Limit] and [Lower Limit]

The setting range is the set value of [Lower Limit] to the set value of [Upper Limit].
- When [Device] is selected for [Upper Limit] and [Lower Limit]

Set a ratio based on [Upper Limit] (100%) and [Lower Limit] (0%).  
The setting range is [0]% to [100]%.

### 6) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

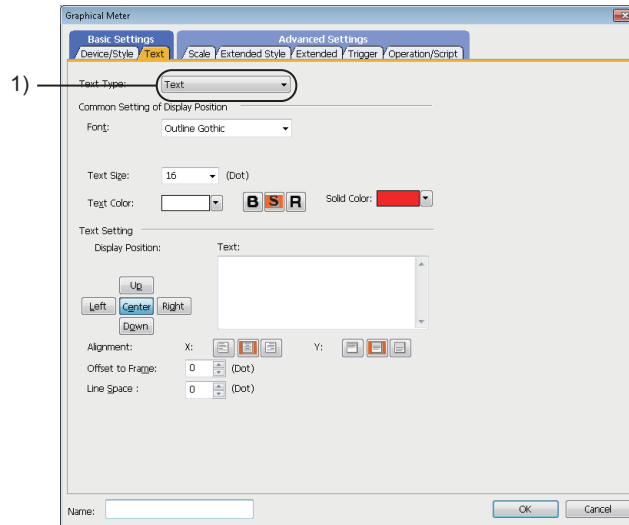

Up to 100 characters can be set.

## ■ 2 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

### 1) [Text Type]

Item	Description
[Text]	Directly input the text to be displayed. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. → 5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Set the comment in the comment group as the text.

For the setting of the comment group, refer to the following.

→ 5.8 Comment Setting ([Comment])

Setting items differ depending on the selected text type.

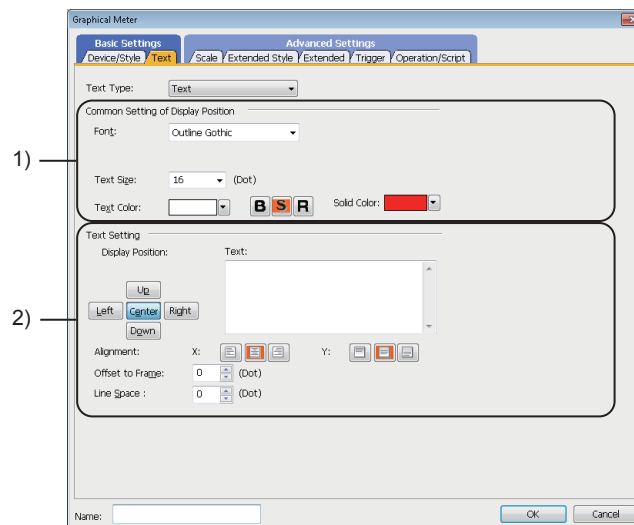

For the setting items for each text type, refer to the following.

→ (1) [Text]

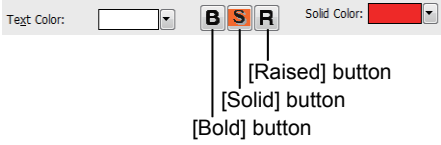

(2) [Comment]

### (1) [Text]

[Line Space]	<p>Set the space between lines in units of dots. The setting range is [0] to [128] dot(s).</p>

### 4) [Preview]

Item	Description
[Group No.]	<p>Set the group No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Group No.] of [Comment Group], the value set in [Comment Group] is fixed.</p>
[Column No.]	<p>Set the column No. of the comment to be displayed on the screen of GT Designer3.</p>

Item	Description
[Comment No.]	Set the comment No. of the comment to be displayed on the screen of GT Designer3. When [Fixed] is selected for [Comment No.] of [Comment], the value set in [Comment] is fixed.

### 3 [Scale] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Scale Display]

Displays a scale on the graphical meter.

#### 2) Scale design

Select a scale design.

#### 3) [Layout]

Item	Description
[Scale Direction]	<p>This item is settable when [Sector] or [Semicircle] is selected for [Meter Shape] in the [Device/Style] tab. Select the orientation of scale marks. This setting does not change the position and size of the scale area. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Outward]</li> <li>• [Inward]</li> </ul>

Item	Description
[Scale Position]	<p>This item is settable when [Bar (Vertical)] or [Bar (Horizontal)] is selected for [Meter Shape] in the [Device/Style] tab.            Select the orientation of scale marks.            The selectable items vary with the selection for [Meter Shape] in the [Device/Style] tab.</p> <ul style="list-style-type: none"> <li>• When [Bar (Vertical)] is selected for [Meter Shape]               <ul style="list-style-type: none"> <li>[Left Side]</li> <li>[Right Side]</li> </ul>               If the selection is changed, the graphical meter is flipped horizontally.             </li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">               [Left Side]           </div> <div style="text-align: center;">               [Right Side]           </div> </div> <ul style="list-style-type: none"> <li>• When [Bar (Horizontal)] is selected for [Meter Shape]               <ul style="list-style-type: none"> <li>[Upside]</li> <li>[Downside]</li> </ul>               If the selection is changed, the graphical meter is flipped vertically.             </li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">               [Upside]           </div> <div style="text-align: center;">               [Downside]           </div> </div>
[Scale Alignment]	<p>Select the position to align scale marks.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Inside]</li> <li>• [Outside]</li> <li>• [Center]</li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Scale value → 0 50 100</p>               [Inside]           </div> <div style="text-align: center;"> <p>0 50 100</p>               [Outside]           </div> <div style="text-align: center;"> <p>0 50 100</p>               [Center]           </div> </div>
[Scale Reference Line]	<p>Set the reference line for the scale.            When [Scale Display] is not selected, no reference line is displayed.            The selectable items vary with the selection for [Scale Alignment].</p> <ul style="list-style-type: none"> <li>• When [Inside] or [Outside] is selected for [Scale Alignment]               <ul style="list-style-type: none"> <li>[None]</li> <li>[Underline]</li> <li>[Underline + Center Line]</li> </ul> </li> <li>• When [Center] is selected for [Scale Alignment]               <ul style="list-style-type: none"> <li>[None]</li> <li>[Center Line]</li> </ul> </li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">               [None]           </div> <div style="text-align: center;">               [Underline]           </div> <div style="text-align: center;">               [Underline + Center Line]           </div> </div> <div style="text-align: center; margin-top: 20px;">               [Center Line]           </div>

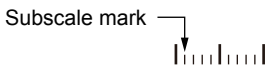

#### 4) [Main Scale]

Displays main scale marks.

Item	Description
[Scale Color]	Select the color of main scale marks. →6.4.2 Color settings
[Scale Points]	Specify the number of main scale marks. The setting range is [2] to [101].
[Scale Width]	Select the width of main scale marks. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>

Item	Description
[Scale Length]	Set the length of main scale marks. When [Circle] or [Square] is selected for [Shape] in the [Scaling Setting] dialog, the object is resized according to the specified length of the scale marks.
[Sub Scale]	Displays subscale marks.  The width and length of subscale marks default to half of the set values of [Scale Width] and [Scale Length].
[Scale Color]	Select the color of subscale marks. ⇒6.4.2 Color settings
[Scale Points]	Specify the number of subscale marks. The setting range is [1] to [9].

### 5) [Scale Value]

Displays scale values.

Item	Description
[Numerical Color]	Select the color of scale values. ⇒6.4.2 Color settings
[Numerical Value]	Specify the number of scale values. The setting range is [2] to [101].
[Scale Font]	Select the font for scale values. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows Font</li> </ul>
[Numerical Size]	Set the size of scale values in the specified font. For the settable sizes by font, refer to the following. ⇒1.2.5 Font specifications
[Number of Decimals]	Set the number of decimal places of a scale value. The setting range is [0] to [6].
[Move monitoring range and scale value range together]	This item is settable when [Fixed] is selected for [Upper Limit] and [Lower Limit] in the [Device/Style] tab. The upper and lower limits of the scale value range are identical to the values of [Upper Limit] and [Lower Limit] set in the [Device/Style] tab. When you change the set values of [Upper Limit] and [Lower Limit] in the [Device/Style] tab, the upper and lower limits of the scale value range are changed accordingly.
[Upper Limit], [Lower Limit]	Set the upper and lower limits of the scale value range. These items are not settable when [Move monitoring range and scale value range together] is selected. The setting range varies with the selection for [Data Type] in the [Device/Style] tab. <ul style="list-style-type: none"> <li>• When [Signed BIN16] is selected for [Data Type]: [-32768] to [32767]</li> <li>• When [Unsigned BIN16] is selected for [Data Type]: [0] to [65535]</li> <li>• When [Signed BIN32] is selected for [Data Type]: [-2147483648] to [2147483647]</li> <li>• When [Unsigned BIN32] is selected for [Data Type]: [0] to [4294967295]</li> <li>• When [BCD16] is selected for [Data Type]: [0] to [9999]</li> <li>• When [BCD32] is selected for [Data Type]: [0] to [99999999]</li> <li>• When [Real] is selected for [Data Type]: [-999999000000.0] to [999999000000.0]</li> </ul>

## ■ 4 [Extended Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

When [Triangle] or [Inverted Triangle] is selected for [Shape]

### 1) [Shape]

Select the shape of the graphical meter.

Only the shapes in the library are selectable.

To select a shape other than those in the list box, click the [Shape] button.

⇒6.5.5 ■ 1 Setting object shapes

### 2) [Shape Color]

Select the shape color.

The following shows the items to be selected.

- [Blue]
- [Red]
- [Yellow]
- [Green]
- [Orange]
- [Cyan]
- [Purple]
- [Pink]
- [Gray]
- [Gold]
- [Silver]
- [Black]
- [White]

### 3) [Scaling Setting] button

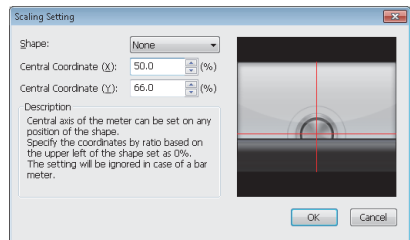

Displays the [Scaling Setting] dialog to set the details of the selected shape.

When [Circle] is selected for [Shape]

When [Square] is selected for [Shape]

When [None] is selected for [Shape]

- [Shape]
  - Select the shape outline.
  - The selectable items vary with the selection for [Meter Shape].
    - When [Sector] or [Semicircle] is selected for [Meter Shape]
      - [Circle]
      - [Square]
      - [None]
    - When [Bar (Vertical)] or [Bar (Horizontal)] is selected for [Meter Shape]
      - [Square]
      - [None]
- [Frame Width]
  - This item is settable when [Circle] or [Square] is selected for [Shape].
  - Set the frame width of the selected shape.
  - The settable minimum value is [0], and the settable maximum value varies with the shape size.
  - When [0] is set, the frame width is changed while the graphical meter is resized.
- [Axis Radius]
  - This item is settable when [Circle] is selected for [Shape].
  - Set the axis radius.
  - The settable minimum value is [0], and the settable maximum value varies with the size of the shape or object.
  - When [0] is set, the axis radius is changed while the graphical meter is resized.
- [Central Coordinate (X)], [Central Coordinate (Y)]
  - These items are settable when [None] is selected for [Shape].
  - Specify the X and Y coordinates of the meter center by ratio.
  - The upper left corner of the shape is set as 0%.
  - The setting range is [0.0]% to [100.0]%.

#### 4) [Meter Attribute]

Select the method of indicating the device value.

The selectable items vary with the selection for [Meter Shape] in the [Device/Style] tab.

- When [Sector] or [Semicircle] is selected for [Meter Shape]
  - [Needle]
- When [Bar (Vertical)] or [Bar (Horizontal)] is selected for [Meter Shape]
  - [Needle]
  - [Fill]
  - [Needle and Fill]

[Needle]

[Fill]

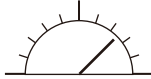

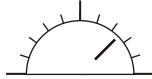

[Needle and Fill]

#### 5) [Needle Attribute]

This item is settable when [Needle] or [Needle and Fill] is selected for [Meter Attribute].

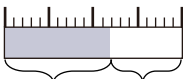

Set a needle to indicate the device value.

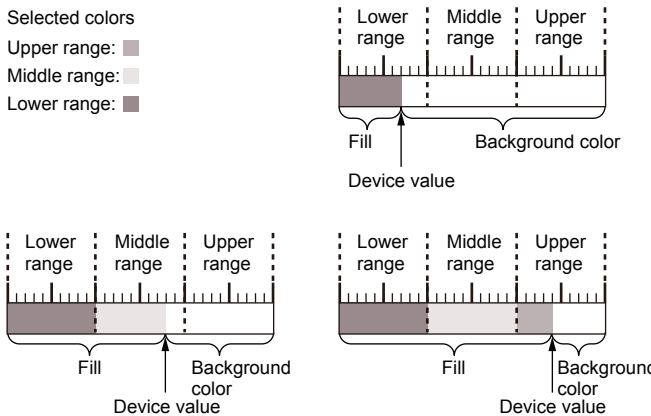

Item	Description
[Shape]	Select a needle shape. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Straight Line]</li> <li>• [Triangle]</li> <li>• [Inverted Triangle]</li> </ul>
[Needle Color]	Select a needle color. ⇒6.4.2 Color settings

Item	Description
[Needle Width]	<p>This item is settable when [Straight Line] is selected for [Shape].            Select the width of the needle.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [1 Dot]</li> <li>• [2 Dot]</li> <li>• [3 Dot]</li> <li>• [4 Dot]</li> <li>• [5 Dot]</li> <li>• [7 Dot]</li> </ul>
[Base Width]	<p>This item is settable when [Triangle] or [Inverted Triangle] is selected for [Shape].            Set the base length of the triangle with an odd number.            The setting range is [3] (dots) to the set value of [Needle Length] (dots).</p>
[Needle Length]	<p>Set the length of the needle.            When [Bar (Vertical)] is selected for [Meter Shape], the value of this item is applied to [Data Width] in the [Device/Style] tab.            When [Bar (Horizontal)] is selected for [Meter Shape], the value of this item is applied to [Data Height] in the [Device/Style] tab.            When [Circle] or [Square] is selected for [Shape] in the [Scaling Setting] dialog, the object is resized according to the specified length of the needle.</p>
[Hollow Radius]	<p>This item is settable when [Sector] or [Semicircle] is selected for [Meter Shape] in the [Device/Style] tab.            Set the distance from the meter center to the drawing start position of the needle.            The setting range is [0] (dots) to "[Needle Length] - 2" (dots).            The needle is drawn from the center of the data area.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>When [Hollow Radius] is set to [0] dots</p> </div> <div style="text-align: center;">  <p>When [Hollow Radius] is set to [10] dots</p> </div> </div>

#### 6) [Fill Attribute]

This item is settable when [Needle] or [Needle and Fill] is selected for [Meter Attribute].  
 Set a fill to indicate the range of the lower limit to the device value.

Item	Description
[Design]	<p>Select the fill design.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Gradation 1]</li> <li>• [Gradation 2]</li> <li>• [Gradation 3]</li> <li>• [Gradation 4]</li> <li>• [3D (Convex)]</li> <li>• [3D (Concave)]</li> <li>• [Plain Color (Bright)]</li> <li>• [Plain Color (Dark)]</li> <li>• [Plain Color (Light)]</li> </ul>
[Background Color]	<p>Select the color of the portion that is not filled in the data area.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Blue]</li> <li>• [Red]</li> <li>• [Yellow]</li> <li>• [Green]</li> <li>• [Orange]</li> <li>• [Cyan]</li> <li>• [Purple]</li> <li>• [Pink]</li> <li>• [Gray]</li> <li>• [Gold](Supported soon)</li> <li>• [Silver]</li> <li>• [Black]</li> <li>• [White]</li> </ul> <div style="text-align: center; margin-top: 20px;">  <p>Fill      No fill        (Background color)</p> </div>

Item	Description
<p>[Upper Range Color], [Middle Range Color], [Lower Range Color]</p>	<p>Select fill colors for the upper range, middle range, and lower range. Each range appears in its specified color.</p> <p>[Upper Range Color] is settable when [Boundary Value 1] is set in the [Device/Style] tab.</p> <p>[Lower Range Color] is settable when [Boundary Value 1] and [Boundary Value 2] are set in the [Device/Style] tab.</p> <p>For the boundary value settings, refer to the following.</p> <p>→ ■ 1 [Device/Style] tab</p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Blue]</li> <li>• [Red]</li> <li>• [Yellow]</li> <li>• [Green]</li> <li>• [Orange]</li> <li>• [Cyan]</li> <li>• [Purple]</li> <li>• [Pink]</li> <li>• [Gray]</li> <li>• [Gold](Supported soon)</li> <li>• [Silver]</li> <li>• [Black]</li> <li>• [White]</li> </ul> <p>Selected colors</p> <p>Upper range: ■</p> <p>Middle range: ■</p> <p>Lower range: ■</p> 

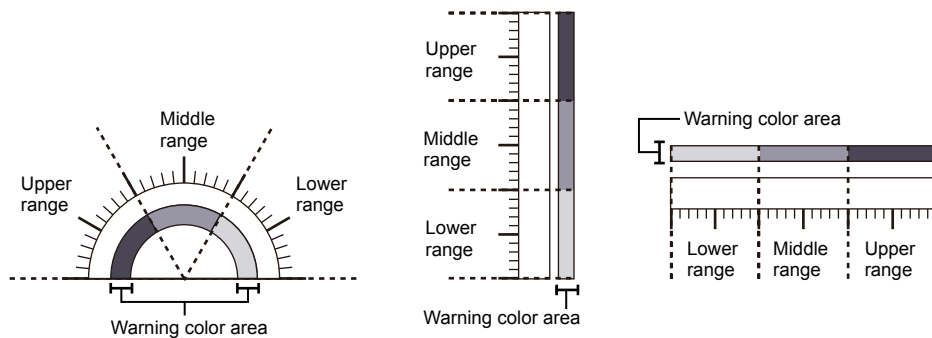

### 7) [Warning Color Setting]

Set the warning color by range.

Selecting this item displays the warning color area.

The warning color area is divided based on the upper, middle, and lower ranges of the data area.

To reposition the warning color area, select and move the area on the screen editor.

For the boundary value settings, refer to the following.

⇒ ■ 1 [Device/Style] tab

Item	Description
[Design]	Select a warning color area design. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Gradation 1]</li> <li>• [Gradation 2]</li> <li>• [Gradation 3]</li> <li>• [Gradation 4]</li> <li>• [3D (Convex)]</li> <li>• [3D (Concave)]</li> <li>• [Plain Color (Bright)]</li> <li>• [Plain Color (Dark)]</li> <li>• [Plain Color (Light)]</li> </ul>
[Upper Range Color], [Middle Range Color], [Lower Range Color]	Select colors for the upper range, middle range, and lower range of the warning color area. [Upper Range Color] is settable when [Boundary Value 1] is set in the [Device/Style] tab. [Lower Range Color] is settable when [Boundary Value 1] and [Boundary Value 2] are set in the [Device/Style] tab. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Blue]</li> <li>• [Red]</li> <li>• [Yellow]</li> <li>• [Green]</li> <li>• [Orange]</li> <li>• [Cyan]</li> <li>• [Purple]</li> <li>• [Pink]</li> <li>• [Gray]</li> <li>• [Gold](Supported soon)</li> <li>• [Silver]</li> <li>• [Black]</li> <li>• [White]</li> </ul>
[Range Width]	Set the width of the warning color area. When [Circle] or [Square] is selected for [Shape] in the [Scaling Setting] dialog, the object is resized according to the specified width of the warning color area.

8) [Part Names ]

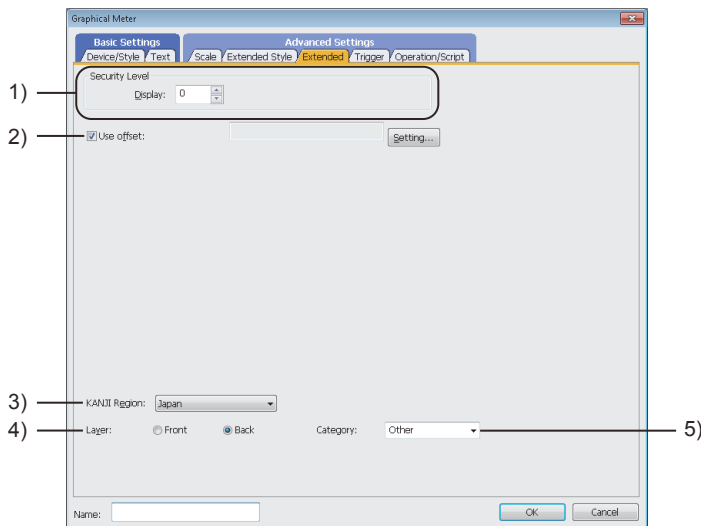

Displays the image of the graphical meter to which the settings configured in this tab are applied.

■ 5 [Extended] tab

For mobile screens, some setting items are not available.

⇒ 10.18.2 ■ 2 Usable functions

1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

## 2) [Use offset]

Select this item to monitor multiple devices by switching between them.  
After selecting this item, set the offset device.

⇒ 6.1.9 Offset

## 3) [KANJI Region]

Set the KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

## 4) [Layer]

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
  - [Back]
- ⇒ 6.5.5 ■ 3 Superimposition

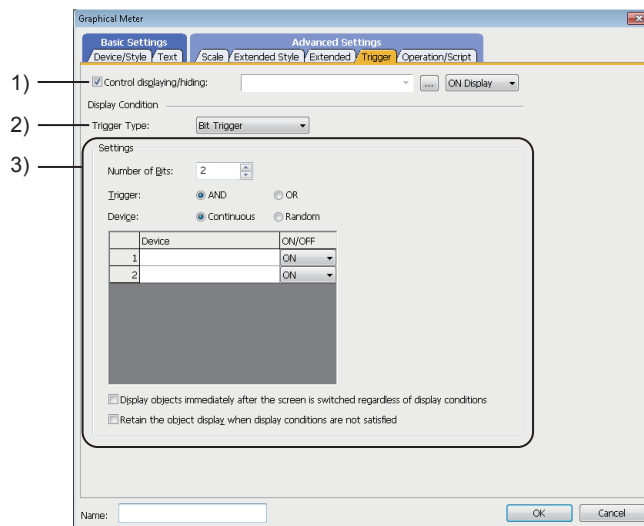

## 5) [Category]

Select the category to assign the object.

⇒ 11.7 Managing figures and objects by category

## ■ 6 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

## 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

⇒ 6.1.1 How to set devices

## 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]

- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

### 3) [Settings]

For details of each item, refer to the following.

⇒6.2.2 Setting Trigger Types

## ■ 7 [Operation/Script] tab

For mobile screens, some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
⇒(1) [Data Operation]
- [Script]  
Set the expression used for the script function.  
⇒(2) [Script]

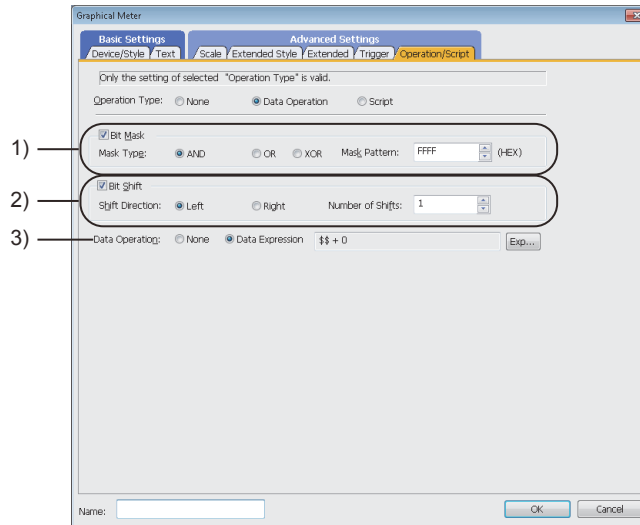

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

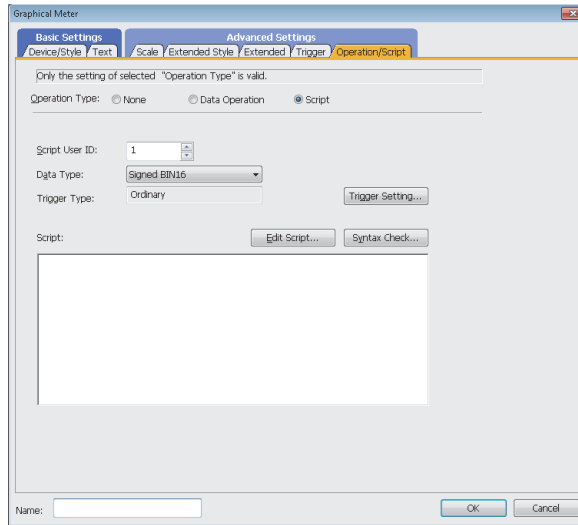

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Extended Style]	[Needle Color]	graph_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 ■ 2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.22.5 Relevant settings

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the graphical meter as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

→ 5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.23 Placing a Level Object

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

This function monitors the word device value and fills the specified area with the user-selected color, based on the ratio of the device value compared to the set upper and lower limit values.

With this function, the device value can be displayed as a level in any closed figure.

A value or comment is displayable on a level object by placing one of the following objects on the level object.

- Numerical display
- Numerical input
- Comment display

If any object mentioned above is placed under the level object on the same layer, this object still appears in front of the level object on the GOT screen.

The display mode of the value or comment varies depending on the relevant settings.

### **GOT Graphic Ver.2**

When any object mentioned above is superimposed on a level object, the transparent mode is applied.

The transparent mode displays the text in the overlapping portion of the objects in the specified color.

- Example of superimposing a numerical display on a level object

- Example of superimposing a comment display on a level object

### **GOT Graphic Ver.1**

When any object mentioned above is superimposed on a level object, the XOR mode or the transparent mode is selectable.

The XOR mode inverts the text color in the overlapping portion of the objects.

The transparent mode displays the text in the overlapping portion of the objects in the specified color.

- Example of superimposing a numerical display on a level object

- Example of superimposing a comment display on a level object

### 8.23.1 Specifications of the level object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the level object.

#### ■1 Maximum number of objects arrangeable on one screen

Up to 1024 objects can be arranged on one screen.

Maximum number of level objects is calculated by subtracting the number of objects other than level objects from 1024.

#### ■2 Objects that can be superimposed on a level object

The following shows the objects that can be superimposed on a level object.

- Numerical display
- Numerical input
- Comment display (bit comment, word comment)

Multiple objects can be superimposed on one level object.

Regardless of the order in which the objects are placed on GT Designer3, the overlapping object (numerical display, numerical input, or comment display) appears in front of the level object on the GOT screen.

## 8.23.2 How to use the level object (GOT Graphic Ver.2)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### GOT Graphic Ver.2

#### ■ 1 Placing a parts display to add a frame to a level object

The level object has no frame setting.

To add a frame to a level object, place a parts display on the level object.

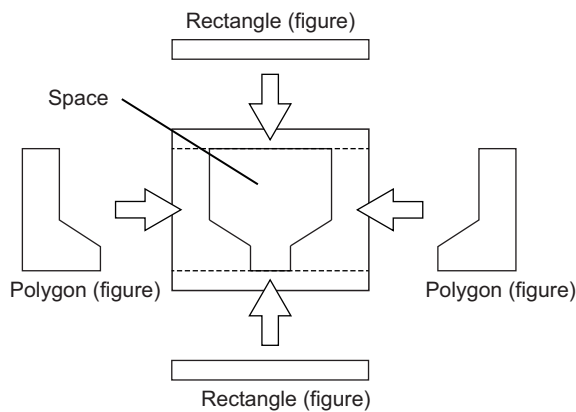

Before setting a level object, create a part to be used as the frame of the level object, and specify the part for a parts display.

The following shows the procedure for using a parts display (fixed parts) as an example.

**Step 1** Create a part to be used as the frame.

Leave a space in the place where a level object is to be displayed.

For creating a part, refer to the following.

→5.9.3 ■ 1 Registering parts

**Step 2** Place a parts display (fixed parts).

→8.8.6 [Fixed Parts Display] dialog

#### ■ 2 Placing a level object

The following shows how to place a level object.

**Step 1** Select [Object] → [Meter] → [Level] from the menu.

**Step 2** Click the position to place a level object on a screen editor.

**Step 3** To use a parts display to add a frame to the level object, adjust the position and size of the level object to fit in the space left in the part that is specified as the frame.

**Step 4** Move the adjusted level object under the parts display.

Right-click the level object, and select [Stacking Order] → [Move to the Back] from the displayed menu.

### ■3 Setting the level object

The following shows how to set the level object.

- Step 1** Double-click the level object which has been placed to display the setting dialog.  
 ⇒8.23.5 [Level] dialog
- Step 2** Display the [Device/Style] tab.  
 ⇒8.23.5 ■ 1 [Device/Style] tab
- Step 3** Set a device to be monitored for [Device].  
 ⇒6.1.1 How to set devices
- Step 4** Set [Direction], [Lower Limit], and [Upper Limit].

- Step 5** Set the fill color with [Level Color], [Background Color], and [Pattern].

- Step 6** To change the fill color according to the device value, add conditions.  
 After adding conditions, set the following.
- Ranges corresponding to each condition
  - [Level Color], [Background Color], and [Pattern] that are displayed when the conditions are satisfied
- Step 7** Click the [OK] button to complete the level object settings.

### ■4 Displaying a value or text on a level object

To display a value or text on a level object, place one of the following objects within the frame of the level object.

- Numerical display
- numerical input
- Comment display (bit comment, word comment)

Regardless of the order in which the objects are placed on GT Designer3, the overlapping object (numerical display, numerical input, or comment display) appears in front of the level object on the GOT screen.

- Step 1** Place one of the above objects within the frame of a level object.
- Step 2** Configure the settings of the relevant object, including the device and the display method.  
 For the settings of each object, refer to the following.

- ⇒8.4.4 [Numerical Display] dialog
- 8.4.5 [Numerical Input] dialog
- 8.7.4 [Bit Comment Display] dialog
- 8.7.5 [Word Comment Display] dialog

**Step 3** Click the [OK] button to complete the object settings.

The following shows an example of settings.

Example) Displaying the level with the comment display

Set the same condition (display range) for the level and comment display, and switch the level color and comment simultaneously.

Level  
 Device to be monitored : D100  
 Display direction : Up  
 Upper limit value : 100  
 Lower limit value : 0

Comment  
 Device to be monitored : D100  
 Registered comments : Comment No. 1...Increase  
 : Comment No. 2...Decrease  
 : Comment No. 3...Appropriate

Condition No.	Display range	Level color	Comment	Font image
1	71<=\$V	Red	Increase	
2	\$V<=30	Yellow	Decrease	
0 (normal)	-	Light blue	Appropriate	

## 8.23.3 How to use the level object (GOT Graphic Ver.1)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### GOT Graphic Ver.1

The following shows how to use the level object.

#### ■1 Drawing a figure in which a level is displayed

To display a level in a figure, draw the figure in advance.  
When drawing a figure, note the following.

→7. FIGURES

##### (1) Drawing a figure in the back layer

Not available to GT21.

To display a level in a figure, draw the figure and level object in the back layer.

If the level object is drawn in the front layer, the figure is not the target of the level display.

##### (2) Setting the same color for [Line Color] of a figure and [Boundary Color] of a level

The figure drawn in the same color as [Boundary Color] of the level is the target of the level display.

After placing the level object, set the same color as [Line Color] of the figure for [Boundary Color].

##### (3) Drawing a figure without any clearance between lines

A level can be displayed only with a completely-closed figure.

A figure drawn with multiple lines can also be used for the level display.

Draw a figure in which a level is displayed without any clearance between lines.

#### ■2 Placing the level object

The following shows how to place the level object.

**Step 1** Select [Object] → [Meter] → [Level] from the menu.

**Step 2** Click the position to place a level object on a screen editor.

**Step 3** Adjust the frame size of the level object.

To display a level in a figure, surround the figure with the frame of the level object and adjust the frame according to the figure size.

When the color of the figure is reversed, the figure is set as the target of the level display.

When the color of the figure is not reversed, the internal coordinate mark of the level object is not superimposed with the figure.

Move the internal coordinate mark manually.

Right-click the frame of the level object and select [Touch Area Edit] → [Manual Edit] from the menu to drag the internal coordinate mark.

### ■3 Setting the level object

The following shows how to set the level object.

**Step 1** Double-click the level object which has been placed to display the setting dialog.

→8.23.5 [Level] dialog

**Step 2** Display the [Device/Style] tab.

→8.23.5 ■ 1 [Device/Style] tab

**Step 3** Set a device to be monitored for [Device].

→6.1.1 How to set devices

**Step 4** Set [Direction], [Boundary Color], [Lower Limit], and [Upper Limit].

Set the same color as [Line Color] (frame line color) of the target figure of the level display for [Boundary Color].

**Step 5** Set the fill color for [Level Color], [Background Color], and [Pattern].

**Step 6** To change the fill color according to the device value, add conditions.

After adding conditions, set the following.

- Ranges corresponding to each condition
- [Level Color], [Background Color], and [Pattern] that are displayed when the conditions are satisfied

**Step 7** Click the [OK] button to complete the level object settings.

## ■4 Displaying a value or text on a level object

To display a value or text on a level object, place one of the following objects within the frame of the level object.

- Numerical display
- Numerical input
- Comment display (bit comment, word comment)

Regardless of the placing order, the objects superimposed with level objects (numerical display, numerical input, and comment display) are displayed over the level objects on the GOT.

**Step 1** Place an object within the frame of the level object.

**Step 2** Display the setting dialog of the object.

For the setting dialog, refer to the following.

- ⇒ 8.4.4 [Numerical Display] dialog
- 8.4.5 [Numerical Input] dialog
- 8.7.4 [Bit Comment Display] dialog
- 8.7.5 [Word Comment Display] dialog

**Step 3** Select the display color, which is used when the level area to be filled and the object are overlapped, in [Display Mode].

- [Transparent]: The color of a numerical value or characters is not changed.
- [XOR]: The color of a numerical value or characters and the level color are integrated into an XOR synthesis.

**Step 4** Click the [OK] button to complete the object settings.

**Step 5** When [Blink] or [Reverse] is set for the object, select [Common] → [GOT Type Setting] from the menu, and set [Adjust object display order in GOT to the one in GT Designer3].

With this setting, the blinking display and reversing display of the object to be superimposed with the level are enabled.

The following shows an example of settings.

Example) Displaying the level with the comment display

Set the same condition (display range) for the level and comment display, and switch the level color and comment simultaneously.

Level setting

+

Comment setting

Increase

=

0 (normal)	-	Light blue	Appropriate	

## 8.23.4 Precautions for a level object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for the level object.

### 1 Precautions for superimposing an object on a level object

#### (1) Precautions for the display

##### (a) When a level object and a figure overlap one another

**GOT Graphic Ver.2**

Even if a level object and a figure overlap one another on the same layer, the figure is filled with the level color on the GOT screen.

To use a figure as the frame of a level object, register the figure as a part, specify the part for a parts display, and position the parts display on the level object.

→8.23.2 ■ 1 Placing a parts display to add a frame to a level object

##### (b) When a part of the object is out of the frame of the level object

**GOT Graphic Ver.1**

When a part of the object (numerical display, numerical input, or comment display) is out of the frame of the level object, the level or the object is displayed incorrectly.

- When a part of the object placed behind the level object is out of the frame of the level object  
The area of the object within the frame of the level object is not displayed.  
Only the area out of the frame of the level object is displayed.
- When a part of the object placed over the level object is out of the frame of the level object

The level is not displayed only for the area superimposed with the object.

To solve the above problems, execute one of the following operations.

- Move the whole object outside the frame of the level object.
- Move the whole object within the frame of the level object.
- Set [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)  
(This setting is available in the [GOT Type Setting] dialog displayed by selecting [Common] → [GOT Type Setting] from the menu.)

##### (c) When a level object and an object are placed in different layers

**GOT Graphic Ver.1**

Not available to GT21.

When a level object and an object (numerical display, numerical input, or comment display) are placed in different layers, the level and the object are not integrated into an XOR synthesis.

- When a level object is placed in the front layer and an object is placed in the back layer  
If the level area to be filled is superimposed with the object, the object is hidden.

- When an object is placed in the front layer and a level object is placed in the back layer  
The object is displayed over the level. However, the object and level are not integrated into an XOR synthesis because they are in different layers.

## (2) Precautions for the operation

### (a) Update timing of the displayed contents

#### GOT Graphic Ver.1

The displayed comments of an object (numerical display, numerical input, or comment display) and a level are updated simultaneously.

The update timing set for the object (display condition) is invalid.

To set the update timing of the object different from that of the level, set [Adjust object display order in GOT to the one in GT Designer3].

This setting is available in the [GOT Type Setting] dialog displayed by selecting [Common] → [GOT Type Setting] from the menu.

### (b) Blink, reverse

#### GOT Graphic Ver.1

Normally, an object (numerical display, numerical input, or comment display) which is superimposed with a level object does not blink or reverse.

To blink or reverse the object superimposed with the level object, set [Adjust object display order in GOT to the one in GT Designer3]. (Not available to GT21.)

### (c) Display at inputting a numerical value

#### GOT Graphic Ver.1

While a cursor is displayed at the numerical input, the area superimposed with the level object is displayed incorrectly. After the numerical input is completed and the level is updated, the area is displayed correctly.

### (d) Text style of the comment display

#### GOT Graphic Ver.1

When the text style (bold, solid, raised) is set for the comment display, the text or the text color may be displayed incorrectly.

## 2 Precautions for the lower and upper limit values

### (1) Operations of when the monitored device value exceeds the upper or lower limit value

When the monitored device value exceeds the lower limit value, the display of the lower limit value is applied.

When the monitored device value exceeds the upper limit value, the display of the upper limit value is applied.

### (2) Operations of when the lengths of the frame of a level object and a figure are different

When the lengths of the frame of a level object and a figure are different in the direction of the level display, the figure is not filled corresponding to the ratio compared to the upper and lower limit values.

Adjust the frame length of the level object to the length of the figure.

## 8.23.5 [Level] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The level object is an object that monitors the word device value and fills the specified area with the user-selected color, based on the ratio of the device value compared to the set upper and lower limit values.

**Step 1** Select [Object] → [Meter] → [Level] from the menu.

**Step 2** Click the position where you place the level object. Placing the level object is complete.

**Step 3** Double-click the level object which has been placed to display the setting dialog.

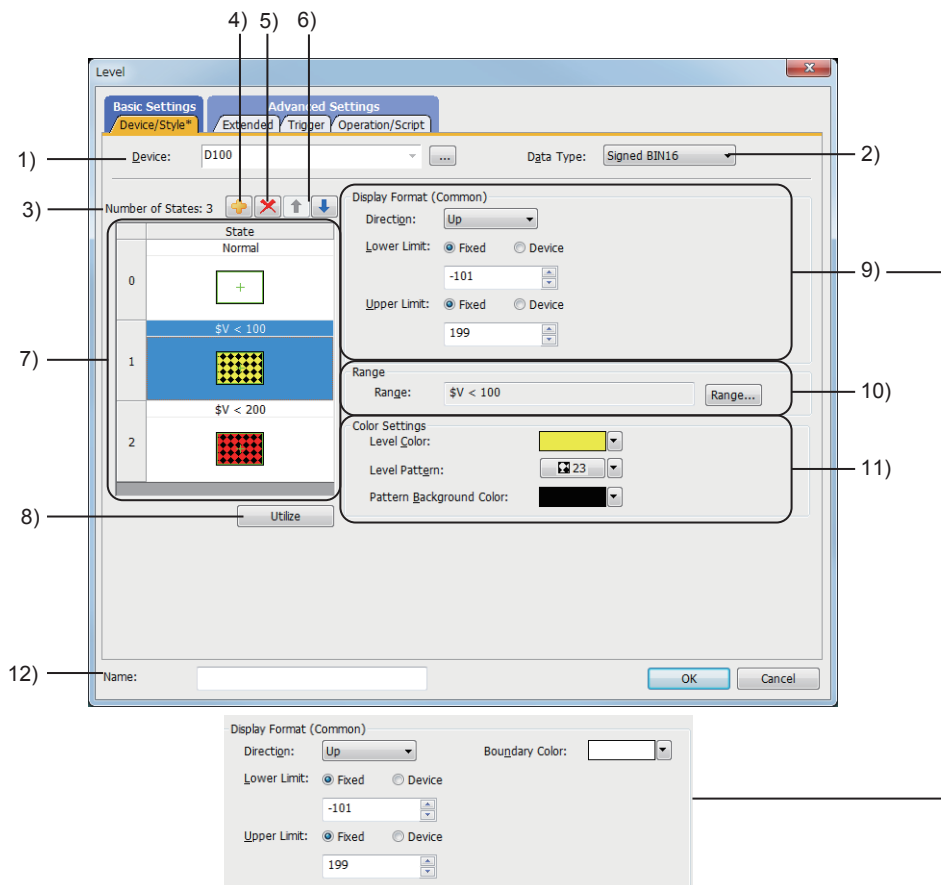

- ■ 1 [Device/Style] tab
- 2 [Extended] tab
- 3 [Trigger] tab
- 4 [Operation/Script] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the level status corresponding to the device value. For the conditions, refer to the following.

- 6.5.5 ■ 2 Setting conditions

#### 1) [Device]

Set the device to be monitored.

- 6.1.1 How to set devices

#### 2) [Data Type]

Select the data type of the word device.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]

- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

### 3) [Number of States]

The number of the set conditions

### 4) Add button

Adds a new condition.

### 5) Delete button

Deletes the selected condition.

### 6) Up button, down button

Changes the order of priority of the selected condition.

### 7) Preview list

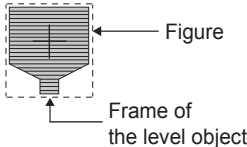

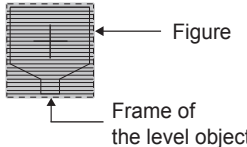

Displays set conditions.

### 8) [Utilize] button

Creates a new condition utilizing the selected condition.

### 9) [Display Format (Common)]

Set the level display that is common to all conditions.

Item	Description
[Direction]	<p>Select the direction in which the level area to be filled extends. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Up]</li> <li>• [Down]</li> <li>• [Left]</li> <li>• [Right]</li> </ul>
[Boundary Color]	<p><b>GOT Graphic Ver.1</b></p> <p>Set the same color as [Line Color] (frame line color) of the target figure of the level display. Set this item to display a level in a figure.</p>  <p>If a color other than [Line Color] of the figure is set, the level is not displayed in the frame of the figure.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Example1) When [Boundary Color] of the figure and [Line Color] are the same</p>  <p>Figure</p> <p>Frame of the level object</p> <p>The figure is set as the target of the level display.</p> </div> <div style="text-align: center;"> <p>Example2) When [Boundary Color] of the figure and [Line Color] are different</p>  <p>Figure</p> <p>Frame of the level object</p> <p>The figure is not set as the target of the level display.</p> </div> </div>
[Lower Limit], [Upper Limit]	<p>Select whether to specify the display range (lower and upper limit values) of the level with the fixed value or with the device value. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Specify a constant.</li> <li>• [Device]: Specify a device value. →6.1.1 How to set devices</li> </ul> <p>The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].</p>

### 10) [Range]

Item	Description
[Range]	<p>Set the display range of the conditions selected in the preview list. When setting the value of the word device as the condition, click the [Range] button to display the [Edit Range] dialog, and then set the conditional expression. →6.5.5 ■ 2 Setting conditions</p>

## 11) [Color Setting]

Item	Description
[Level Color]	Set the fill color.
[Pattern], [Background Color]	<p>Set the pattern and the background color to be used for filling.</p> <p>Example) [Level Color] :  [Pattern] :  [Background Color] : </p> <p> +  → </p> <p> +  → </p>

## 12) [Name]

Set the object name.

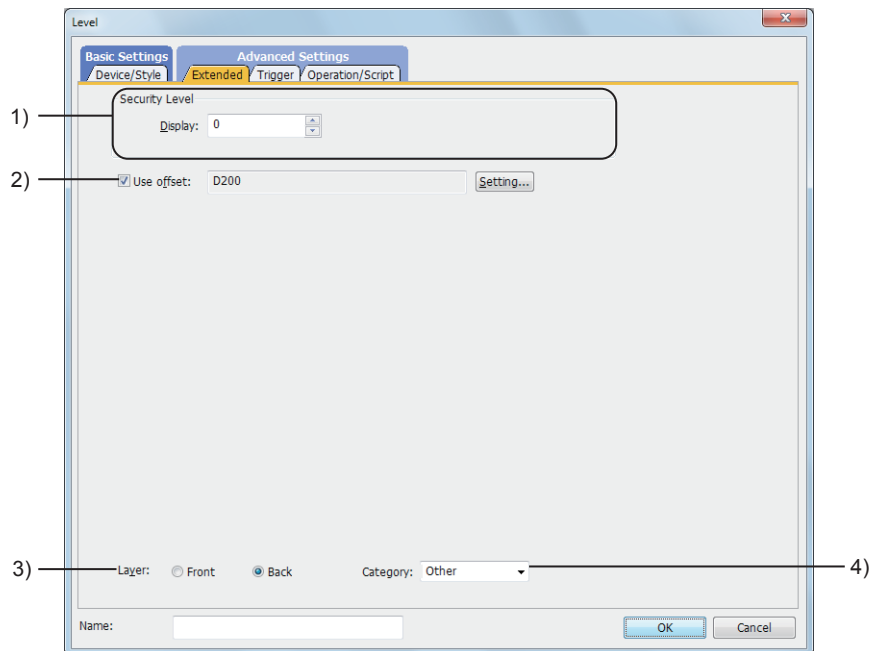

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■2 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

⇒6.1.9 Offset

### 3) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

⇒6.5.5 ■ 3 Superimposition

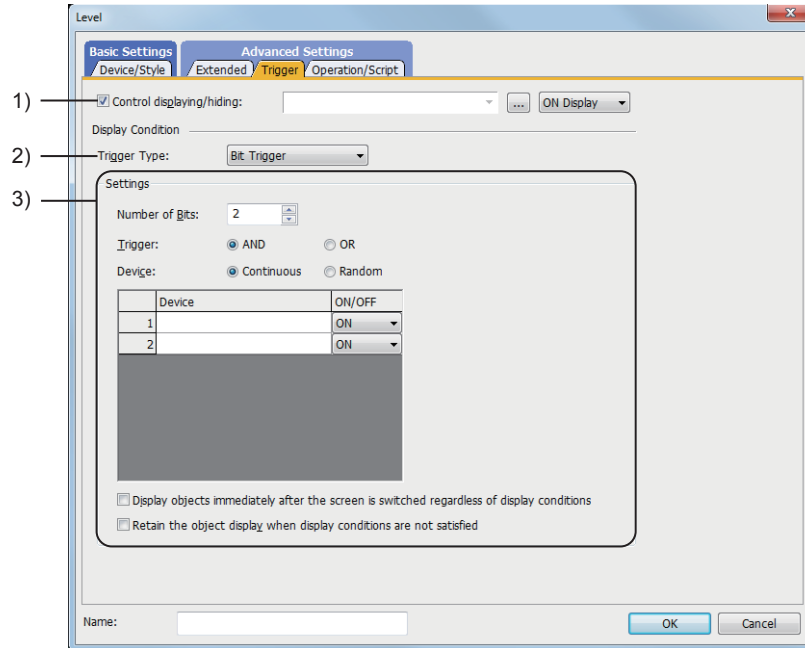

### 4) [Category]

Select the category to assign the object.

### ■ 3 [Trigger] tab

Set conditions for displaying the object.

#### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

→ 6.1.1 How to set devices

#### 2) [Trigger Type]

Select the condition of displaying the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

The selectable items vary with the GOT model.

For details, refer to the following.

→ 6.2.1 ■ 2 Correspondence between functions and trigger types

#### 3) [Settings]

For details of each item, refer to the following.

→ 6.2.2 Setting Trigger Types

## ■ 4 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set a formula for monitoring with the data operation function or the script function.

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

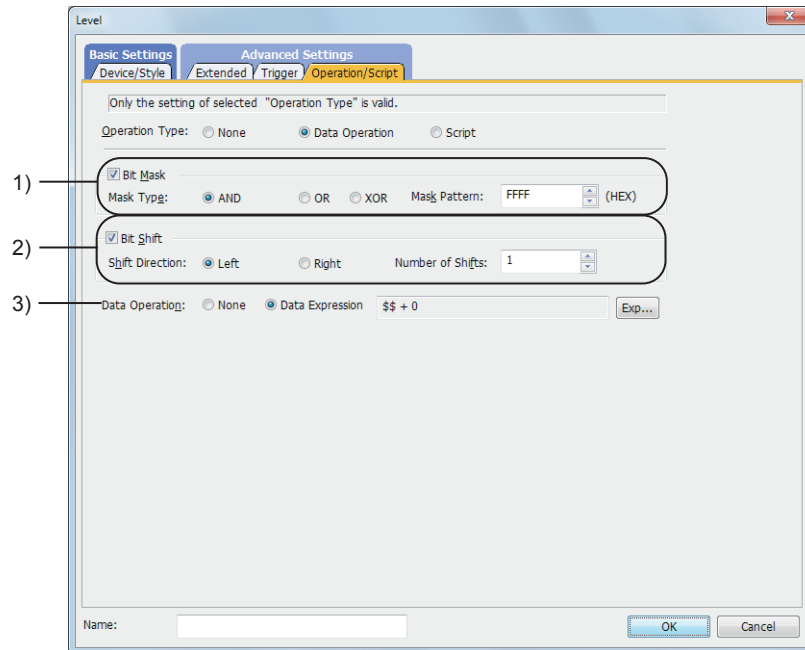

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
    ⇒(1) [Data Operation]
- [Script]  
Not available to GT21.  
Set the expression used for the script function.  
    ⇒(2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.  
 ⇒9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- × : Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change*1	
					Object stacking order adjustment enabled*2	Object stacking order adjustment disabled*2
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×
[Device/Style]	[Level Color]	graph_color	○	○	Upon the setting change	When the object is updated
	[Mask Pattern]	pattern	○	○	Upon the setting change	When the object is updated
	[Background Color]	back_color	○	○	Upon the setting change	When the object is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

⇒9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

**GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

**GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

## 8.23.6 Relevant settings

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the level object as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.24 Placing a Panel Meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function monitors the word device value and indicates the relative value to the set upper and lower limit values with a needle.

### Application examples

Panel meter for displaying the A/D conversion value of current of 12 mA

Current input range : 0 to 500 mA  
 Digital output range : D10  
 Conversion value : 0 to 100%

## 8.24.1 Specifications of the panel meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the panel meter.

### ■ 1 Maximum number of objects arrangeable on one screen

Up to 1024 objects can be arranged on one screen.

Maximum number of panel meters is calculated by subtracting the number of objects other than panel meters from 1024.

## 8.24.2 How to use the panel meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the panel meter.

- Step 1** Select [Object] → [Meter] → [Panelmeter] from the menu.
- Step 2** Click the position where you place the panel meter. Placing the panel meter is complete.
- Step 3** Adjust the frame size of the panel meter.
- Step 4** Double-click the panel meter which has been placed to display the setting dialog.
  - ⇒ 8.24.4 [Panelmeter] dialog
- Step 5** Display the [Device/Style] tab.
  - ⇒ 8.24.4 ■ 1 [Device/Style] tab
- Step 6** Set a device to be monitored for [Device].
  - ⇒ 6.1.1 How to set devices
- Step 7** Set [Type], [Beginning Angle], [End Angle], [Needle Shape], [Needle Color], [Distance from the Axis], [Shape Settings], [Lower Limit], and [Upper Limit].

- Step 8** Set the fill color for [Fill Color], [Background Color], and [Pattern].
- Step 9** Set [Scale Settings] and [Text] in the [Scale/Text] tab.
  - ⇒ 8.24.4 ■ 2 [Scale/Text] tab

- Step 10** To change the color of the panel meter according to the device value, add conditions in the [Range Setting] tab.
  - ⇒ 8.24.4 ■ 3 [Range Setting] tab
  - After adding conditions, set the following.
    - Ranges corresponding to each condition
    - [Fill Color], [Background Color], and [Pattern] that are displayed when the conditions are satisfied
- Step 11** Set [Needle Color], [Fill Color], [Background Color], and [Pattern] that are displayed when the added conditions are satisfied.
- Step 12** Click the [OK] button to complete the panel meter settings.

### 8.24.3 Precautions for a panel meter

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for the panel meter.

#### ■ 1 When the monitored device value exceeds the upper or lower limit value

When the monitored device value exceeds the lower limit value, the display of the lower limit value is applied.  
When the monitored device value exceeds the upper limit value, the display of the upper limit value is applied.

### 8.24.4 [Panelmeter] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

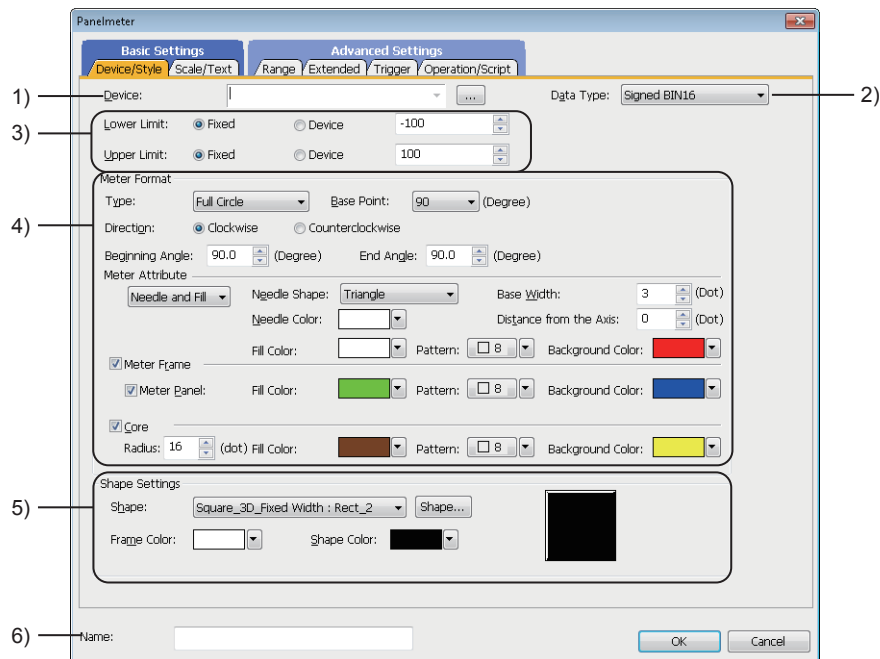

The panel meter is an object that monitors the word device value and indicates the relative value to the set upper and lower limit values with a needle.

- Step 1 Select [Object] → [Meter] → [Panelmeter] from the menu.
- Step 2 Click the position where you place the panel meter. Placing the panel meter is complete.
- Step 3 Double-click the panel meter which has been placed to display the setting dialog.
  - ■ 1 [Device/Style] tab
  - 2 [Scale/Text] tab
  - 3 [Range Setting] tab
  - 4 [Extended] tab
  - 5 [Trigger] tab
  - 6 [Operation/Script] tab

#### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the target device to be monitored and the panel meter status corresponding to the device value.

#### 1) [Device]

Set the device to be monitored.

⇒6.1.1 How to set devices

## 2) [Data Type]

Select the data type of the word device.

The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

## 3) [Lower Limit], [Upper Limit]

Select whether to specify the display range (lower and upper limit values) of the panel meter with the fixed value or with the device value.

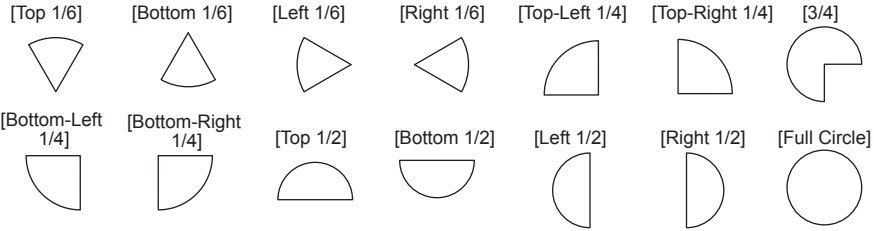

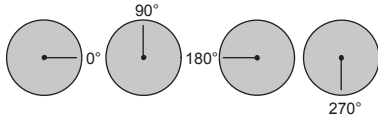

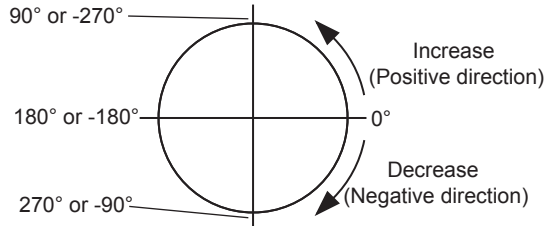

The following shows the items to be selected.

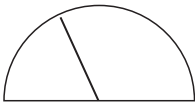

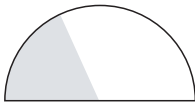

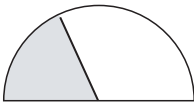

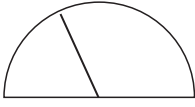

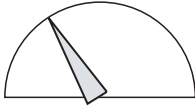

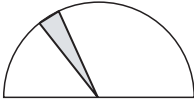

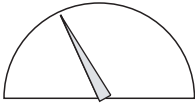

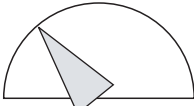

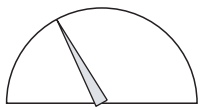

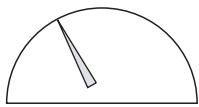

- [Fixed]:  
Specify a constant.
- [Device]:  
Specify a device value.

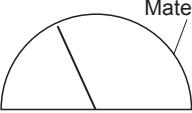

⇒6.1.1 How to set devices

The setting range of [Lower Limit] and [Upper Limit] differs depending on the item selected for [Data type].

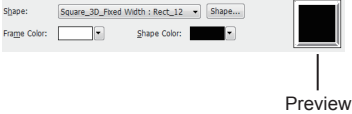

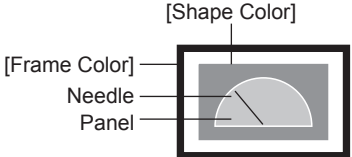

#### 4) [Meter Format]

Item	Description
[Type]	<p>Select the shape of the panel meter. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Top 1/6]</li> <li>• [Bottom 1/6]</li> <li>• [Left 1/6]</li> <li>• [Right 1/6]</li> <li>• [Top-Right 1/4]</li> <li>• [Top-Left 1/4]</li> <li>• [Bottom-Left 1/4]</li> <li>• [Bottom-Right 1/4]</li> <li>• [Top 1/2]</li> <li>• [Bottom 1/2]</li> <li>• [Left 1/2]</li> <li>• [Right 1/2]</li> <li>• [3/4]</li> <li>• [Full Circle]</li> <li>• [Custom]</li> </ul>  <p>If you select [Full Circle], set the base point.</p> <div style="border: 1px solid gray; padding: 2px; display: inline-block;">Base Point: <input type="text" value="90"/> (Degree)</div> <ul style="list-style-type: none"> <li>• <b>[Base Point]</b> Select the base point (the point where the upper or lower limit is displayed). The following shows the items to be selected.</li> <li>• [0]</li> <li>• [90]</li> <li>• [180]</li> <li>• [270]</li> </ul>  <p>While selecting any other than [Custom] for [Type], inputting an angle to [Beginning Angle] or [End Angle] sets [Type] to [Custom].</p>
[Direction]	<p>Select the direction in which the value of the meter increases. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Clockwise]</li> <li>• [Counterclockwise]</li> </ul>
[Beginning Angle] and [End Angle]	<p>Set the shape of the panel meter by specifying angles. The setting range is [-360.0] degrees to [360.0] degrees. The angle is settable in units of 0.1 degree. When any other than [Custom] is selected for [Type], the set values of [Beginning Angle] and [End Angle] are changed to defaults according to the selected item. Regardless of [Base Point] and [Direction] for [Full Circle], the 0-degree position is always at the 3 o'clock position, and the angle increases counterclockwise.</p> 

Item	Description
	<p>Select a display method for the panel meter. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Needle]</li> <li>• [Fill]</li> <li>• [Needle and Fill]</li> </ul> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>[Needle]</p>  </div> <div style="text-align: center;"> <p>[Fill]</p>  </div> <div style="text-align: center;"> <p>[Needle and Fill]</p>  </div> </div> <p>When selecting [Needle] or [Needle and Fill], set the needle shape.</p> <div style="text-align: center;"> <p>Needle Shape: <input type="text" value="Triangle"/></p> </div> <ul style="list-style-type: none"> <li>• <b>[Needle Shape]</b> Select a needle shape. [Core]	<p>Set this item to paint the core of the panel meter. Set the radius of the target area.</p> <p style="text-align: center;">  <span style="margin-left: 20px;">Radius</span> </p> <p>The setting range is [1] to [139] dot(s) .</p> <p style="text-align: center;"> <input type="text" value="Fill Color:"/> <input type="text" value="Pattern: 8"/> <input type="text" value="Background Color:"/> </p> <ul style="list-style-type: none"> <li>• <b>[Fill Color]</b> Select the fill color of the core.</li> <li>• <b>[Pattern], [Background Color]</b> Select the pattern and the background color to be used for the core.</li> </ul>

## 5) [Shape]

Item	Description
[Shape]	<p>Set the shape of the panel meter. When [None] is selected, no shape is displayed. To select a shape other than those in the list box, click the [Shape] button. →6.5.5 ■ 1 Setting object shapes</p> <p>When selecting a shape in [Basic Figure], set the color of the frame and of the shape.</p>  <ul style="list-style-type: none"> <li>• <b>[Frame Color]</b> Set the color of the frame.</li> <li>• <b>[Shape Color]</b> Set the color of the shape.</li> </ul>  <ul style="list-style-type: none"> <li>• <b>Preview</b> Displays a preview of the set shape.</li> </ul>

## 6) [Name]

Set the object name.

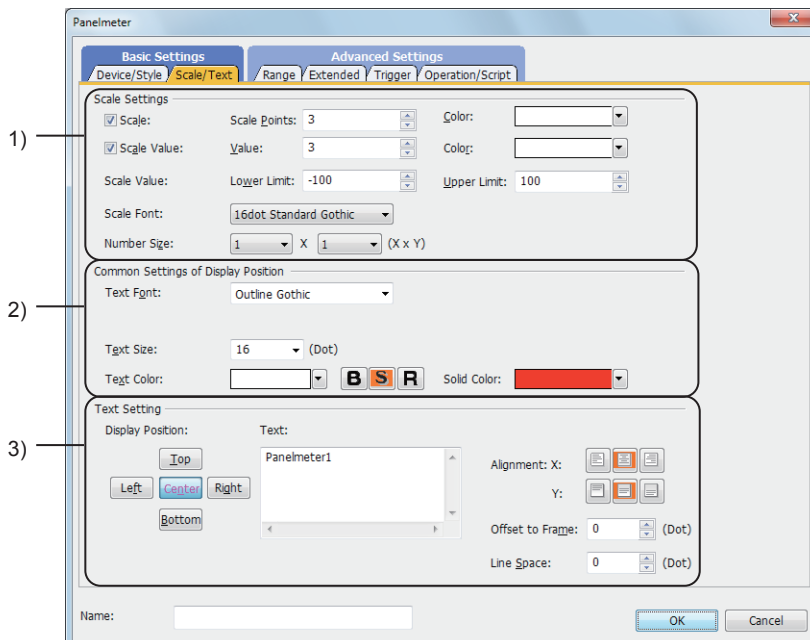

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Scale/Text] tab

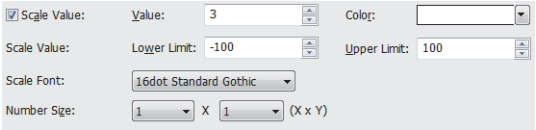

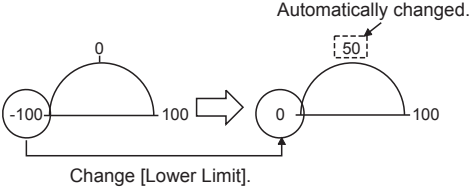

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Scale Settings]

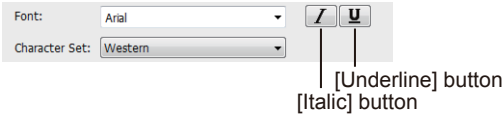

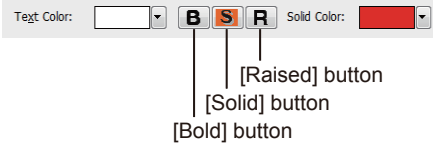

Displays lines and values on the scale on the panel meter.

Item	Description
[Scale]	<p>Set this item to display lines on the scale.</p>  <ul style="list-style-type: none"> <li>• [Scale Points] Set the number of lines on the scale. The setting range is [2] to [101].</li> <li>• [Color] Set the color of lines on the scale.</li> </ul>
[Scale Value]	<p>Set this item to display numeric characters as the scale value.</p>  <ul style="list-style-type: none"> <li>• [Value] Set the number of numeric characters. The setting range is [2] to [101].</li> <li>• [Color] Set the color of numeric characters.</li> <li>• [Scale Value] ([Lower Limit], [Upper Limit]) Set the lower and upper limit values of numeric characters. Changes in this setting are automatically applied to the display.</li> </ul> <p>Example)</p>  <p>The setting range differ depending on the item selected for [Data type] in the [Device/Style] tab.</p> <ul style="list-style-type: none"> <li>• [Scale Font] Select the font of numeric characters. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul> </li> <li>• [Number Size] Select the size of numeric characters. For the details of the font and size, refer to the following. ⇒ 1.2.5 Font specifications When [6x8dot] is selected for [Scale Font], this item cannot be set.</li> </ul>

## 2) [Common Settings of Display Position]

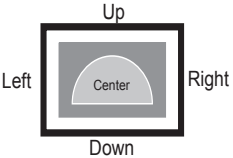

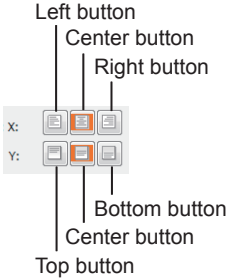

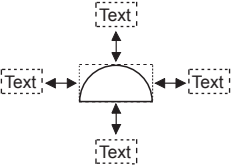

Set this item to display texts on the panel meter.

Item	Description
[Text Font]	<p>Select the font of the text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [12dot HQ Mincho]</li> <li>• [12dot HQ Gothic]</li> <li>• [16dot HQ Mincho]</li> <li>• [16dot HQ Gothic]</li> <li>• [TrueType Mincho]</li> <li>• [TrueType Gothic]</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> <li>• Windows font</li> </ul> <p>When a Windows font is selected, italicizing and underlining text are available.</p>  <ul style="list-style-type: none"> <li>• [Italic] button Italicizes the text.</li> <li>• [Underline] button Underlines the text.</li> </ul>
[Character Set]	<p>When a Windows font is selected, select a character set.</p>
[Text Size]	<p>Select a text size. For the details of the font and size, refer to the following. →1.2.5 Font specifications When [6x8dot] is selected for [Text Font], this item cannot be set.</p>
[Text Color]	<p>Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• [Text Color] Set the text color. →6.4 Color Settings</li> <li>• [Bold] button Displays the text in bold.</li> <li>• [Solid] button Displays the text with a shadow.</li> <li>• [Raised] button Displays the text embossed.</li> <li>• [Solid Color] When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

### 3) [Text Setting]

Select this item to monitor multiple devices by switching between them.

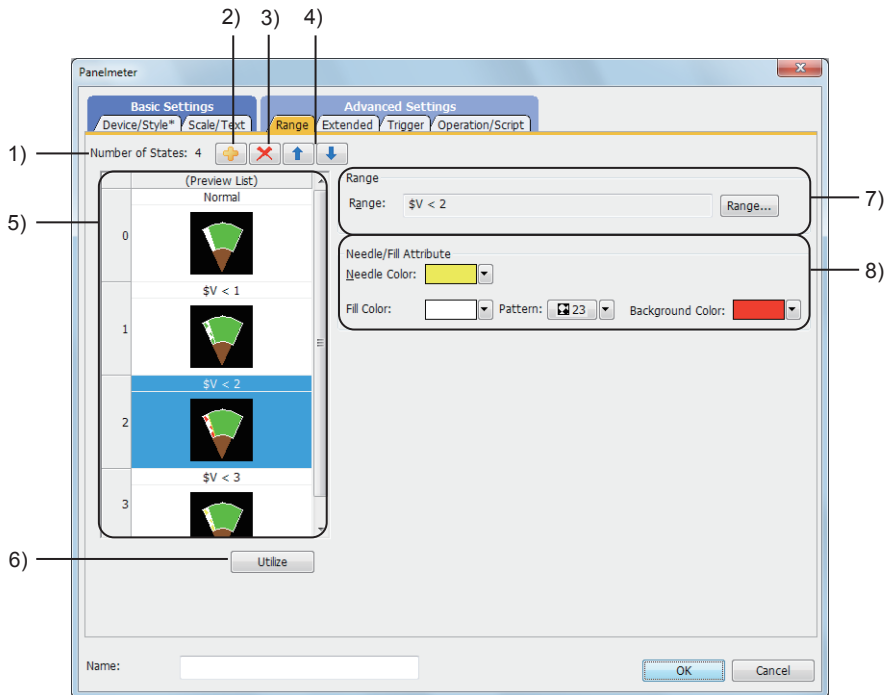

Item	Description
[Display Position]	<p>Set the position of the text. After clicking [Display Position], input the texts to be displayed in each position.</p> <ul style="list-style-type: none"> <li>• [Center] button: Displays the text at the center of the object.</li> <li>• [Up] button: Displays the text on the upper side of the object.</li> <li>• [Down] button: Displays the text on the lower side of the object.</li> <li>• [Left] button: Displays the text on the left side of the object.</li> <li>• [Right] button: Displays the text on the right side of the object.</li> </ul> 
[Text]	<p>Input the text to be displayed. Up to 1024 characters can be set. To display the text in multiple lines, press the [Enter] key at the end of the text in each line. (When a line feed is inserted, two characters per line feed are added to the number of characters.)</p>
[Alignment]	<p>Set the horizontal and vertical positions of the text.</p>  <ul style="list-style-type: none"> <li>• [Horizontal] <ul style="list-style-type: none"> <li>Set the horizontal position of the text. <ul style="list-style-type: none"> <li>• Left button: Aligns the text to the left.</li> <li>• Center button: Aligns the text to the center.</li> <li>• Right button: Aligns the text to the right.</li> </ul> </li> </ul> </li> <li>• [Vertical] <ul style="list-style-type: none"> <li>Set the vertical position of the text. <ul style="list-style-type: none"> <li>• Top button: Aligns the text to the top.</li> <li>• Center button: Aligns the text to the center.</li> <li>• Bottom button: Aligns the text to the bottom.</li> </ul> </li> </ul> </li> </ul>
[Offset to Frame]	<p>Set the offset between the text and the frame of the object. The setting range is [0] to [100] dot(s).</p> 
[Line Space]	<p>Set the space between lines. The setting range is [0] to [128] dot(s).</p>

### ■ 3 [Range Setting] tab

For the conditions, refer to the following.

→6.5.5 ■ 2 Setting conditions

#### 1) [Number of States]

The number of the set conditions

#### 2) Add button

Adds a new condition.

#### 3) Delete button

Deletes the selected condition.

#### 4) Up button, down button

Changes the order of priority of the selected condition.

#### 5) Preview list

Displays set conditions.

#### 6) [Utilize] button

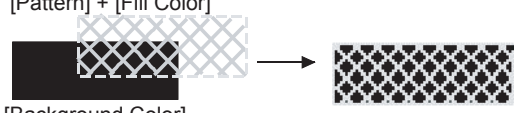

Creates a new condition utilizing the selected condition.

#### 7) [Range]

Item	Description
[Range]	Set the display range of the conditions selected in the preview list. When setting the value of the word device as the condition, click the [Range] button to display the [Edit Range] dialog, and then set the conditional expression. →6.5.5 ■ 2 Setting conditions

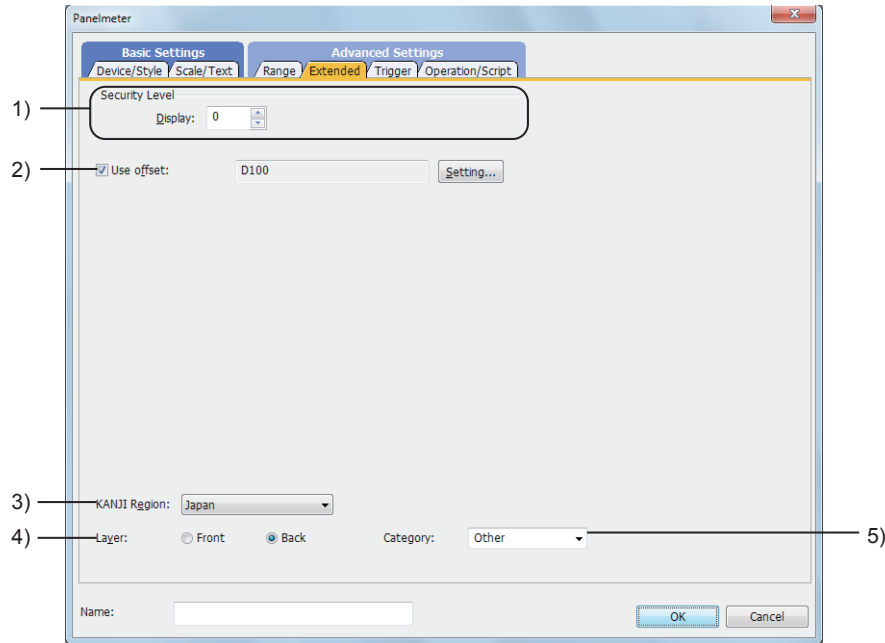

#### 8) [Needle/Fill Attribute]

Item	Description
[Needle Color]	Set the color of the needle. When either of [Needle] or [Needle and Fill] is selected for [Meter Attribute] in the [Device/Style] tab, set the color of the needle.
[Fill Color]	Set the fill color. When either of [Fill] or [Needle and Fill] is selected for [Meter Attribute] in the [Device/Style] tab, set the fill color.

Item	Description
[Pattern], [Background Color]	<p>Set the pattern and the background color to be used for filling.</p> <p>Example) [Fill Color] :  [Pattern] :  [Background Color]: </p> <p></p> <p>[Pattern] + [Fill Color]</p> <p>[Background Color]</p>

#### ■ 4 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

##### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

##### 2) [Use offset]

Select this item to monitor multiple devices by switching between them.

After selecting this item, set the offset device.

⇒6.1.9 Offset

##### 3) [KANJI Region]

Set the KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

Example) Difference between [Japanese]  
and [China(GB)-Mincho]

[Japan]

[China(GB)-Mincho]

##### 4) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]

- [Back]
- ⇒6.5.5 ■ 3 Superimposition

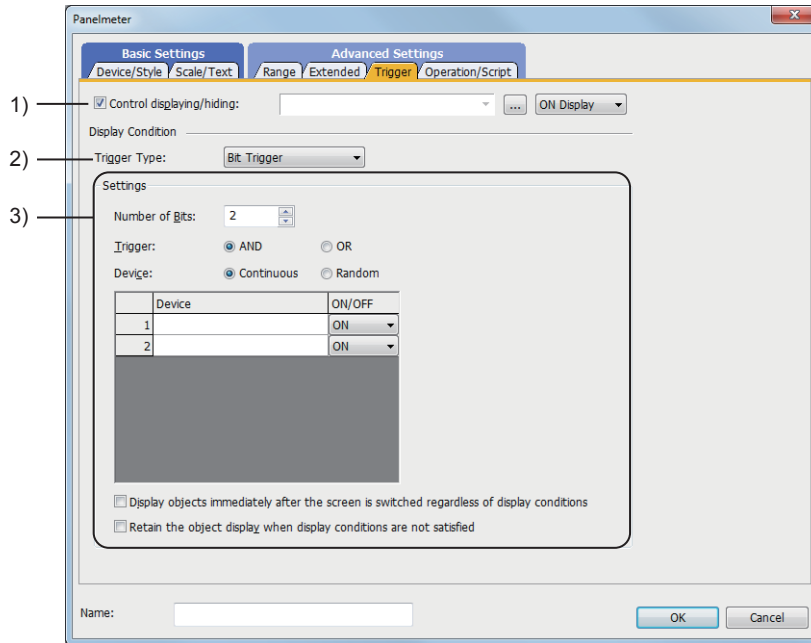

### 5) [Category]

- Select the category to assign the object.
- ⇒11.7 Managing figures and objects by category

### ■ 5 [Trigger] tab

Set conditions for displaying the object.

#### 1) [Control Displaying/Hiding]

- Set the control device to display or hide all the objects including the shape frame.
- When the set device is in either the ON or OFF status, select whether or not to display the object.
- The following shows the items to be selected.

- [ON Display]
- [OFF Display]
- ⇒6.1.1 How to set devices

#### 2) [Trigger Type]

- Select the condition of displaying the object.
- The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Rise]
- [Fall]
- [Rise/Fall]
- [Sampling]
- [Range]
- [Bit Trigger]
- [ON Sampling]
- [OFF Sampling]

- The selectable items vary with the GOT model.
- For details, refer to the following.
- ⇒6.2.1 ■ 2 Correspondence between functions and trigger types

#### 3) [Settings]

- For details of each item, refer to the following.
- ⇒6.2.2 Setting Trigger Types

## ■ 6 [Operation/Script] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set a formula for monitoring with the data operation function or the script function.

### 1) [Operation Type]

To use the data operation or script, select the operation type.

The following shows the items to be selected.

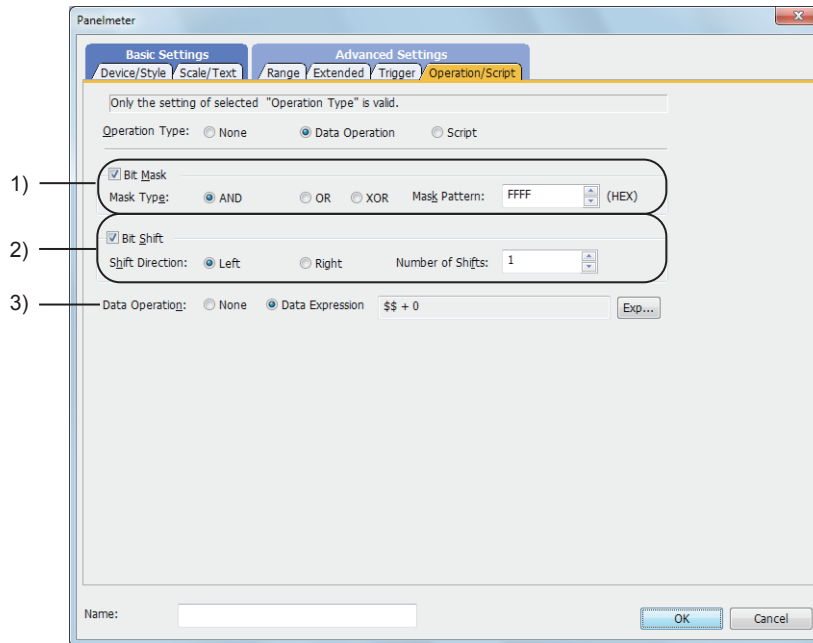

- [None]  
Select this item if the data operation and script are unnecessary.
- [Data Operation]  
Set the expression used for the data operation.  
    ⇒(1) [Data Operation]
- [Script]  
Set the expression used for the script function.  
    ⇒(2) [Script]

## (1) [Data Operation]

For the settings of the data operation function, refer to the following.

→6.5.5 ■ 4 Setting data operations

### 1) [Bit Mask]

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range varies with the selection for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [0000] to [FFFF]</li> <li>• 32 bits: [00000000] to [FFFFFFFF]</li> </ul>

### 2) [Bit Shift]

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range varies with the selection for [Data Type] in the [Device] tab. <ul style="list-style-type: none"> <li>• 16 bits: [1] to [15]</li> <li>• 32 bits: [1] to [31]</li> </ul>

### 3) [Data Operation]

Set the format of the expression.

The following shows the items to be selected.

- [None]:  
Select this item not to perform the data operation by using the expression.
- [Data Expression]:  
Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to set the format of the expression in the [Edit Data Expression] dialog.

(2) [Script]

For the settings of scripts, refer to the following.

→9.10 Object Script

(a) Correspondence between the object settings and the object properties used in scripts

You can read the set value from an object setting or write a new value to the setting by using an object property in a script. The following shows the correspondence between the relevant setting items in the object setting dialog and the object properties used in scripts.

- : Available
- ×: Not available
- : No applicable setting item

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>2</sup>	Object stacking order adjustment disabled <sup>2</sup>
-	-	active	○	○	Upon the setting change	Upon the setting change
		x	○	○	When the screen is updated	When the screen is updated
		y	○	○	When the screen is updated	When the screen is updated
		width	○	×	×	×
		height	○	×	×	×

Setting dialog		Object property				
Tab name	Setting item	Property name	Read	Write	Timing for reflecting the setting change <sup>*1</sup>	
					Object stacking order adjustment enabled <sup>*2</sup>	Object stacking order adjustment disabled <sup>*2</sup>
[Device/Style]	[Needle Color]	graph_color	○	○	Upon the setting change	When the object is updated
	[Meter Panel]	back_color	○	○	Upon the setting change	When the object is updated
	[Frame Color]	frame_color	○	×	×	×
	[Plate Color]	plate_color	○	○	Upon the setting change	When the object is updated
	[Mater Panel Pattern]	pattern	○	○	Upon the setting change	When the object is updated
	[Mater Panel Background Color]	pattern_bg_color	○	○	Upon the setting change	When the object is updated
	[Fill Color]	fill_color	○	○	Upon the setting change	When the object is updated
	[Fill Background Color]	fill_bg_color	○	○	Upon the setting change	When the object is updated
	[Fill Pattern]	fill_pattern	○	○	Upon the setting change	When the object is updated
	[Core]	core_color	○	○	Upon the setting change	When the object is updated
	[Core Background Color]	core_bg_color	○	○	Upon the setting change	When the object is updated
	[Core Pattern]	core_pattern	○	○	Upon the setting change	When the object is updated
	[Lower Limit]	scale_min[0]	○	○	Upon the setting change	When the screen is updated
	[Upper Limit]	scale_max[0]	○	○	Upon the setting change	When the screen is updated
[Extended]	[Security Level]	security	○	○	Upon the setting change	When the screen is updated

\*1 For the timing at which the setting change of an object property is reflected, refer to the following.

→9.10.2 (5) Timing at which the setting change of an object property is reflected

\*2 The setting to enable the object stacking order adjustment varies by graphics mode.

#### **GOT Graphic Ver.2**

As the object stacking order adjustment is always enabled, no additional setting is required accordingly.

#### **GOT Graphic Ver.1**

To enable the object stacking order adjustment, select [Adjust object display order in GOT to the one in GT Designer3] in the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

## 8.24.5 Relevant settings

Set the relevant settings other than the specific settings for the panel meter as required.

The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

→5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.25 Placing a Slider

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Use the slider to set the continuous value to the device within any setting range. The value of the destination where you stop the knob is input to the device.

Changing the set output with the slider

### 8.25.1 Specifications of the slider

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the slider.

#### ■ 1 Maximum number of objects arrangeable on one screen

Up to 1024 sliders can be set on a screen.

#### ■ 2 Minimum size of slider

Arrange the slider on the screen not smaller than the following size.

- When [Horizontal] is selected for [Slider Direction]: 18 dots (width) × 16 dots (height)
- When [Vertical] is selected for [Slider Direction]: 16 dots (width) × 18 dots (height)

### 8.25.2 How to use the slider

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the slider.

#### ■ 1 Arranging the slider

Arrange the slider on the screen editor.

⇒ 6.5.1 Placing figures and objects

#### Point

##### Arrangement positions of the slider and the other input object

Arranging an input object, such as a touch switch, near the slider arrangement area may cause a malfunction when you touch the input object during slider operation.

It is recommended not to arrange any input object in or near the slider arrangement area.

#### ■ 2 Editing the slider

Edit the slider arranged on the screen editor.

⇒ 6.5.3 Editing figures and objects

#### ■ 3 Setting the slider

Configure the settings for the slider arranged on the screen editor.

- Common setting of objects  
⇒ 6.5.5 Common setting for objects
- Settings of sliders  
⇒ 8.25.3 [Slider] dialog

## ■4 Slider operation

This section describes the operations of the slider.

Touch the area where the slider is arranged. Select the setting value, and release the finger so that the setting value is written into the device.

→8.25.3 ■ 3 [Extended] tab

### (1) When touch-and-holding the knob to slide

Touch-and-hold the knob to slide until the destination.

When the finger is released from the slider arrangement area, the knob is displayed at the destination, and the setting value is changed simultaneously.

### (2) When touching the slider arrangement area

When you touch the value to be set, the knob moves to the touched position.

When the finger is released from the slider arrangement area, the knob is displayed at the destination, and the setting value is changed simultaneously.

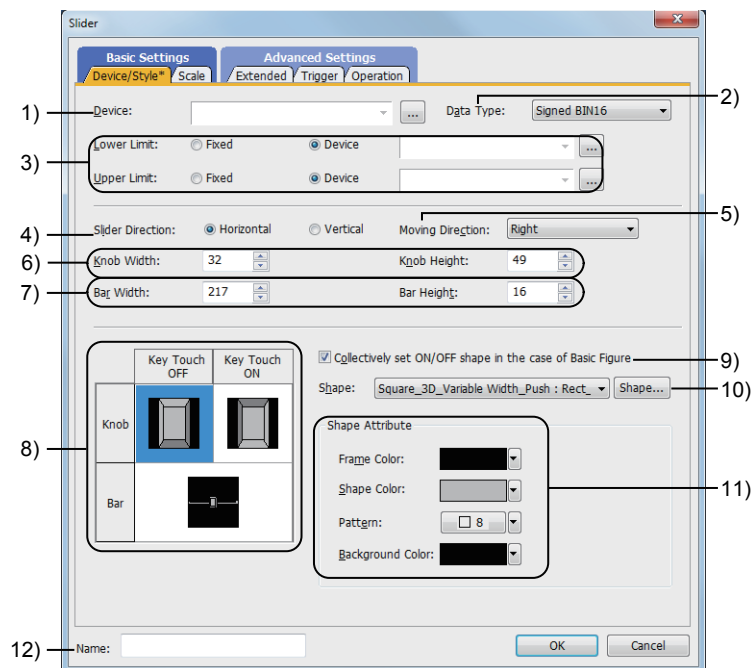

## 8.25.3 [Slider] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Slider] from the menu.
- Step 2** Click the position where you arrange the slider to complete the arrangement.
- Step 3** Double-click the arranged slider to display the setting dialog.
- ■ 1 [Device/Style] tab
    - 2 [Scale] tab
    - 3 [Extended] tab
    - 4 [Trigger] tab
    - 5 [Operation] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Device]

Set the device to be monitored.  
→ 6.1.1 How to set devices

#### 2) [Data Type]

Select the data type of the device.  
The following shows the items to be selected.

- [Signed BIN 16]
- [Unsigned BIN16]
- [Signed BIN 32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

#### 3) [Lower Limit] and [Upper Limit]

Select whether to specify the display range (lower and upper limit values) of the slider with the fixed value or with the device value.

The following shows the items to be selected.

- [Fixed]:  
Specify a constant.

- [Device]:  
Specify a device value.  
⇒6.1.1 How to set devices

The setting ranges of [Lower Limit] and [Upper Limit] differ depending on the item selected for [Data Type].

#### 4) [Slider Direction]

Select the slider direction from [Horizontal] or [Vertical].

The following shows the items to be selected.

- [Horizontal]: Arranges the slider to be displayed in horizontal direction.
- [Vertical]: Arranges the slider to be displayed in vertical direction.

#### 5) [Moving Direction]

Select the moving direction of the knob.

The setting range differs depending on the item selected for [Slider Direction].

When [Horizontal] is selected for [Slider Direction]

- [Right]: Slides the knob from the left (lower limit) to the right (upper limit).
- [Left]: Slides the knob from the right (lower limit) to the left (upper limit).

When [Vertical] is selected for [Slider Direction]

- [Up]: Slides the knob from the bottom (lower limit) to the top (upper limit).
- [Down]: Slides the knob from the top (lower limit) to the down (upper limit).

#### 6) [Knob Width] and [Knob Height]

Specify the width and height of the knob.

The following shows the setting range.

- When [Horizontal] is selected for [Moving Direction]  
[16] dots to [1998] dots (Width) × [16] dots to [1600] dots (Height)
- When [Vertical] is selected for [Moving Direction]  
[16] dots to [2000] dots (Width) × [16] dots to [1598] dots (Height)

After the width and height of the knob are specified, when the setting of [Slider Direction] is changed, the set values of [Knob Width] and [Knob Height] are switched.

Relationship between the width and the height when [Horizontal] is selected for [Slider Direction]

Relationship between the width and the height when [Vertical] is selected for [Slider Direction]

### 7) [Bar Width] and [Bar Height]

Specify the width and height of the bar.

The following shows the setting range.

- When [Horizontal] is selected for [Moving Direction]  
[18] dots to [2000] dots (Width) × [4] dots to [1600] dots (Height)
- When [Vertical] is selected for [Moving Direction]  
[4] dots to [2000] dots (Width) × [18] dots to [1600] dots (Height)

When [Horizontal] is selected for [Slider Direction], the set value of [Bar Width] varies according to the object size adjusted directly on the screen editor. When [Vertical] is selected for [Slider Direction], the set value of [Bar Height] varies according to the object size adjusted directly on the screen editor.

#### ⇒6.5.3 ■ 3 Changing sizes

After the width and height of the bar are specified, when the setting of [Slider Direction] is changed, the set values of [Bar Width] and [Bar Height] are switched.

### 8) Preview list

The display status of the knob and the bar

### 9) [Collectively set ON/OFF shape in the case of Basic Figure]

This item is available when [Basic Figure] is selected for [Shape].

### 10) [Shape]

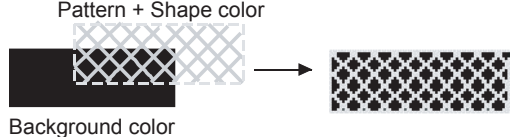

Select the shapes of the knob and the bar.

From the list box, only one item can be selected either for the knob or for the bar.

To select a shape other than those in the list box, click the [Shape] button.

#### ⇒6.5.5 ■ 1 Setting object shapes

### 11) [Shape Attribute]

Item	Description
[Frame Color]	Select the frame colors of the knob and the bar.
[Shape Color]	Select the shape colors of the knob and the bar.
[Pattern] and [Background Color]	Select the patterns and background colors of the knob and the bar. The selected pattern in the shape color is displayed on the background color.  Example) Shape color:  Pattern:  Background color:  

### 12) [Name]

Set the object name.

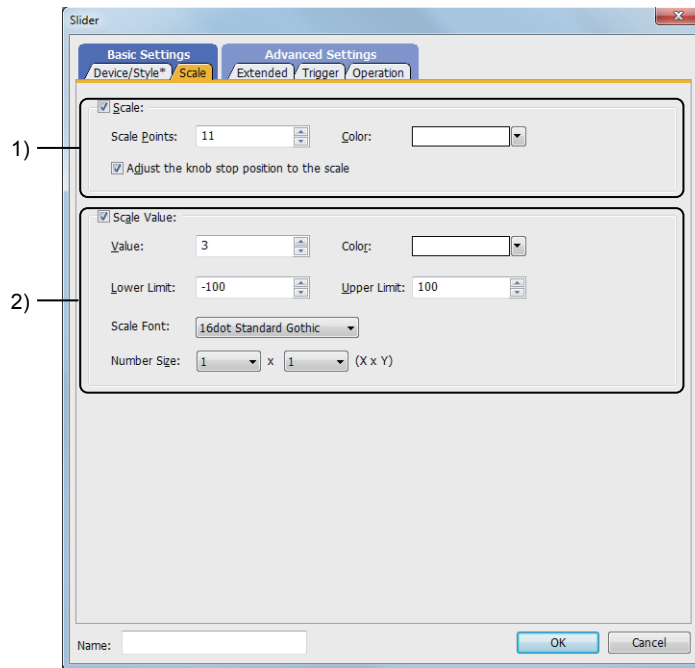

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Scale] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Scale]

Arrange the slider scale.

Item	Description
[Scale Points]	Specify the number of scale points. The setting range is [2] to [101].
[Color]	Set the scale color. →6.4 Color Settings
[Adjust the knob stop position to the scale]	Adjusts the knob stop position to the scale by matching the centers of the knob and the scale points. When the following setting is configured, the knob does not stop at the scale points correctly. <ul style="list-style-type: none"> <li>• The data type is not a real number.</li> <li>• (Upper limit of monitor device - Lower limit of monitor device + 1) &lt; Number of scale points</li> </ul>

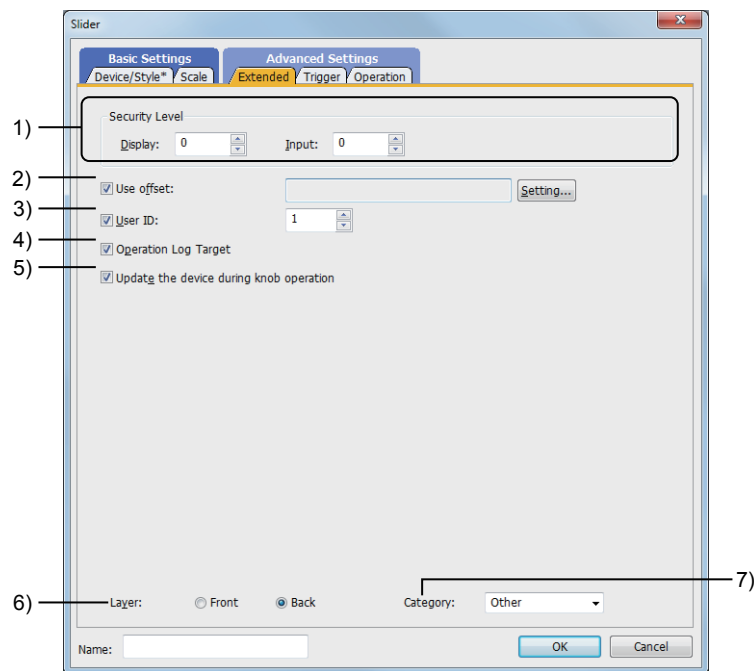

### 2) [Scale Value]

Arrange the scale values.

Item	Description
[Value]	Specify the number of scale values. The setting range is [2] to [101].
[Color]	Set the color of scale values. →6.4 Color Settings
[Lower Limit] and [Upper Limit]	Specify the lower limit and upper limit of scale values. The setting range differs depending on the item selected for [Data Type] in the [Device/Style] tab.
[Scale Font]	Select the scale font. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> </ul>
[Number Size]	Select the size of the scale value. For the details of the font and the size, refer to the following. →1.2.5 Font specifications

### ■ 3 [Extended] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Security Level]

When using the security function, set the security level.

The setting range is [1] to [15].

When not using the security function, set the level to [0].

→ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Use offset]

Monitors multiple devices by switching them.

After selecting this item, set the offset device.

→ 6.1.9 Offset

#### 3) [User ID]

Enables the user ID setting.

The setting range is [1] to [65535].

Setting the user ID enables you to identify the object with the operation log.

→ 5.2.11 Configuring the settings for creating the operation history of the GOT ([Operation Log])

#### 4) [Operation Log Target]

Not available to GT21.

Targets the object for the operation log.

→ 5.2.11 ■ 1 Specifications of the operation log

#### 5) [Update the device during knob operation]

Updates the device in the fixed cycle (500 ms) during knob operation.

#### 6) [Layer]

Not available to GT21.

Select the layer to arrange the object on.

The following shows the items to be selected.

- [Front]
- [Back]

→ 6.5.5 ■ 3 Superimposition

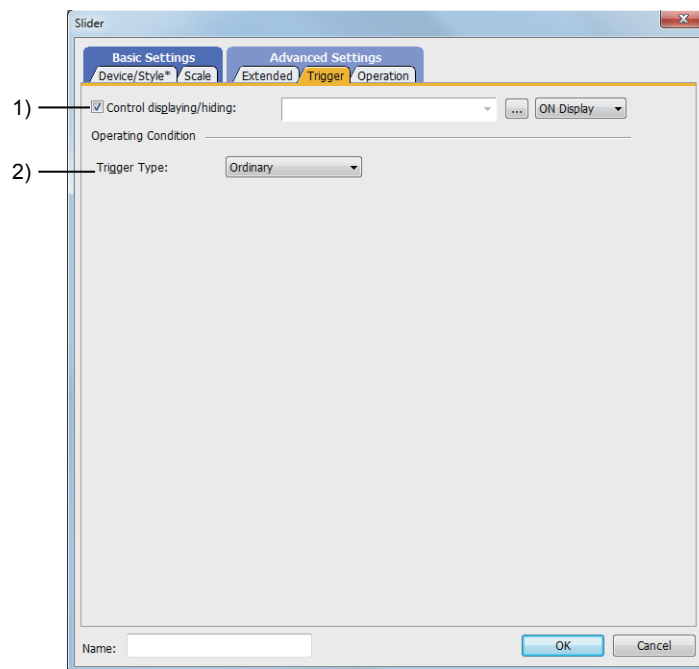

#### 7) [Category]

Select the category to assign the object.

→ 11.7 Managing figures and objects by category

## ■ 4 [Trigger] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Control displaying/hiding]

Set the device that controls display/hide of the object.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

### 2) [Trigger Type]

Select a trigger condition to display the object.

The following shows the items to be selected.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

For the details of each item, refer to the following.

⇒6.2.2 Setting Trigger Types

### Point

#### Refresh timing for slider operations and device values

When the display conditions or the operating conditions of the object are unsatisfied, the slider stops operating.

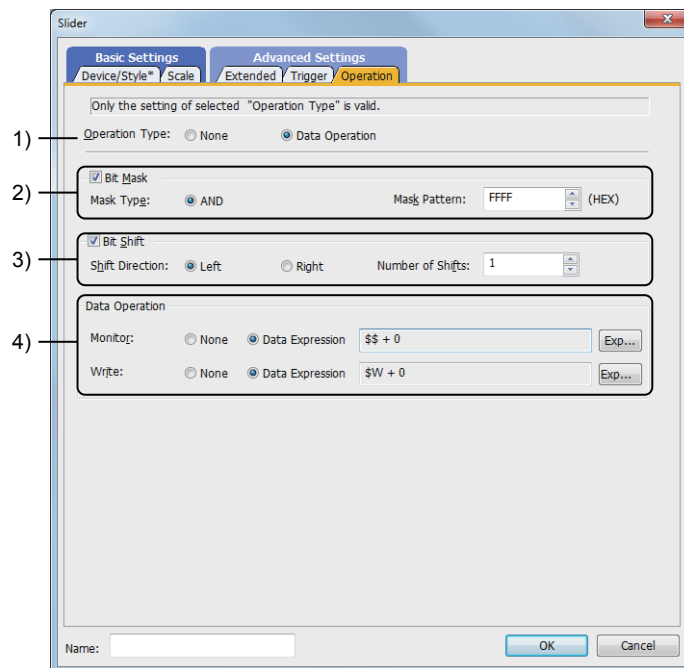

The value is also not written to the device.

Therefore, the value written to the device may differ from the value of the knob stop position during slider operation.

## ■ 5 [Operation] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Operation Type]

Item	Description
[None]	Does not use the data operation function.
[Data Operation]	Sets the expression used for the data operation function.

### 2) [Bit Mask]

Sets the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. • [AND]: Logical AND
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 3) [Bit Shift]

Sets the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. • [Left]: Shifts to the left • [Right]: Shifts to the right
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] bit to [15] bits.

### 4) [Data Operation]

Set the format of the expression.

Item	Description
[None]	Does not perform the data operation by using the expression.
[Data Expression]	Performs the data operation by using the expression.
[Exp] button	This button is available only when [Data Expression] is selected for [Data Operation]. Click the [Exp] button to set the format of the expression in the [Edit Data Expression] dialog. →6.5.5 ■ 4 Setting data operations

## 8.25.4 Relevant settings

---

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the slider as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<b>GOT Graphic Ver.2</b> Always enabled. (Not available to GT21.) <b>GOT Graphic Ver.1</b> [Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)

## 8.26 Placing a Document Display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays documents created with a personal computer (such as Microsoft Word and Microsoft Excel) on the GOT.

With this function, the GOT can display specifications and manuals. Thus, you can utilize the documents for the screen of troubleshooting, or display the documents for the operation during monitoring.

Display the document for the operation of objects such as touch switches on the GOT.

### 8.26.1 Specifications of the document display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the document display.

#### ■1 Usable document type

The following shows the types of documents displayable on a document display object.

##### (1) PDF file

The PDF file under the following conditions is displayed without conversion to JPEG format.

- Any TTF font is embedded in the file.
- No password is required to open the file.

##### (2) Document Converter output file

JPEG file that is converted from a document in another file format with Document Converter.

The following shows the documents that can be converted to JPEG format with Document Converter.

- Microsoft Word file
- Microsoft Excel file
- Microsoft PowerPoint file
- PDF file
- Image file (JPEG, BMP)

#### ■2 Usable drive

The document display uses the files stored in the drive from which the project is opened.

However, when the project is opened from drive C, the document display uses the files stored in drive A.

#### ■3 Document ID

ID number that is set for a document to appear on the document display.

The setting range is 1 to 32767.

#### ■4 Displaying a cached document

PDF files are cached to speed up the display of the files on the document display.

A PDF file is cached or a cached PDF file is updated when the file is displayed.

The cached PDF file is stored in the CACHE folder in the data storage where the source PDF file is stored.

#### ■5 Maximum number of objects on one screen

One document display can be placed on one screen.

## ■6 Number of objects that can be displayed at one time

One document display can be displayed for each document type at one time.

If the same document type is set for multiple document displays, these document displays cannot be displayed simultaneously.

Regardless of using the overlap window, superimpose window, or set overlay screen, the multiple document displays are unavailable.

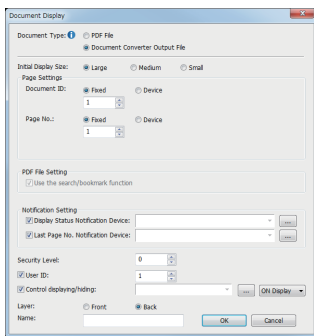

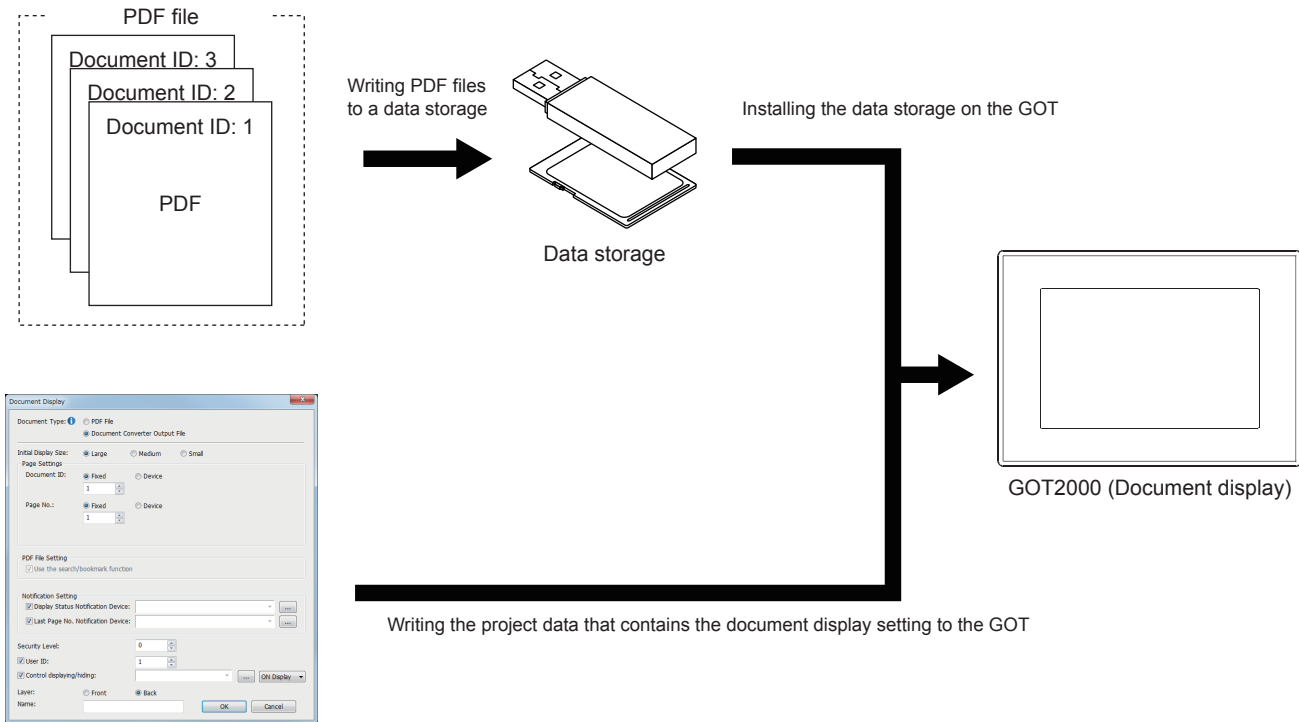

### 8.26.2 How to use the document display (for PDF files)

The following shows how to display PDF files on the document display.

#### ■1 Procedure for displaying PDF files

The following shows the procedure for displaying PDF files.

GT Designer3 (Object setting)

For the details of the operations below, refer to the following.

- Storing PDF files to a data storage
    - ⇒ ■ 2 Storing files to a data storage
  - Setting a document display object with GT Designer3
    - ⇒ ■ 3 Placing the document display
- 8.26.6 [Document Display] dialog

#### ■2 Storing files to a data storage

Use the data storage in which the project folder is stored.

In the root directory of the data storage, create a folder named "PDFDAT", and store PDF files in the folder.

Create folders and files in the PDFDAT folder as shown below.

- Document ID setting
  - According to the hierarchical structure of the folders and files, set a document ID number in each folder name or file name.
  - A five-digit document ID number is settable.
  - The setting range is 00001 to 32767.
- Hierarchical structure of the folders and files
  - To store PDF files, use one of the following hierarchical structures.
  - If multiple hierarchical structures are used, an unintended PDF file may appear on the document display.

⇒(1) Storing PDF files by document ID number

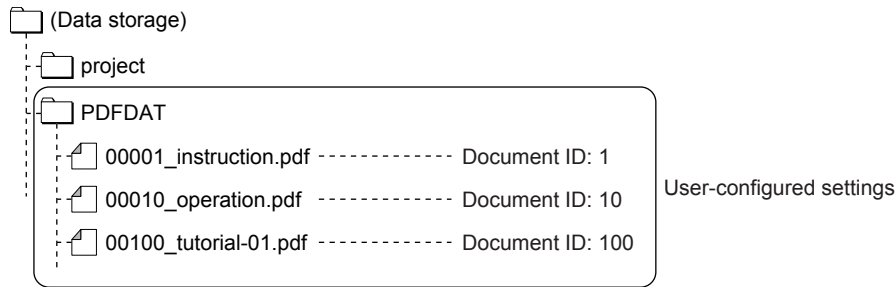

(2) Storing a PDF file to each folder named with a document ID number

### (1) Storing PDF files by document ID number

Store the PDF file whose file name includes a document ID number.

To store multiple PDF files, set a different document ID number for each file name.

- Hierarchical structure of the folders and files

- PDF file name

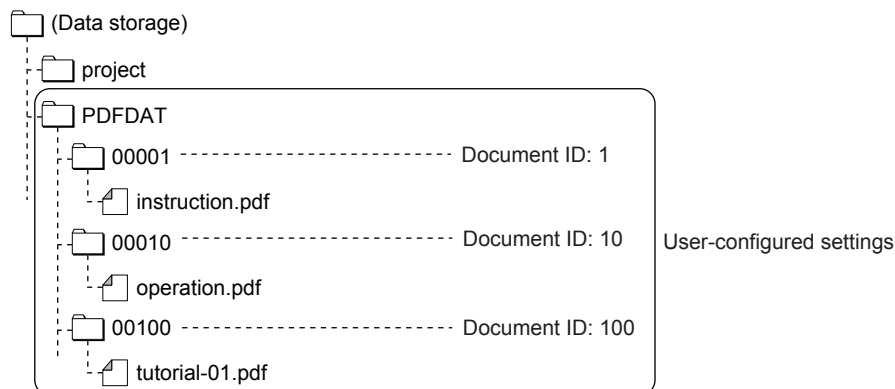

Set a PDF file name that includes a document ID number, an underscore, and user-specified characters as shown below.

### (2) Storing a PDF file to each folder named with a document ID number

Create folders named with a different document ID number, and store one PDF file to each folder.

Name the PDF file freely.

## ■ 3 Placing the document display

The following shows how to place the document display (object).

- Step 1** Select [Object] → [Document Display] from the menu.
- Step 2** Click the position where you place the document display. Placing the document display is completed.
- Step 3** Double-click the document display which has been placed to display the setting dialog.  
⇒ 8.26.6 [Document Display] dialog
- Step 4** Depending on the frame size of the placed document display object and the size of a target PDF or JPEG file, the display is changed as shown below.  
The shaded area is displayed on the GOT.

### Point

#### (1) Sample image for the document display

When you install GT Designer3, the following sample images for the document display are supplied in the folder where GTD3\_2000.exe is stored.

- IMG00000L.JPG: Large size (816 dots × 1168 dots)
- IMG00000M.JPG: Medium size (656 dots × 928 dots)
- IMG00000S.JPG: Small size (400 dots × 584 dots)

The sample image is previewed as image.

When the sample image is replaced with another image in the same file name, the replaced image is previewed.

#### (2) More useful setting method

You can configure the object settings with the property sheet.

→ 11.9 Checking and Editing Settings of Screens and Objects (Property Sheet)

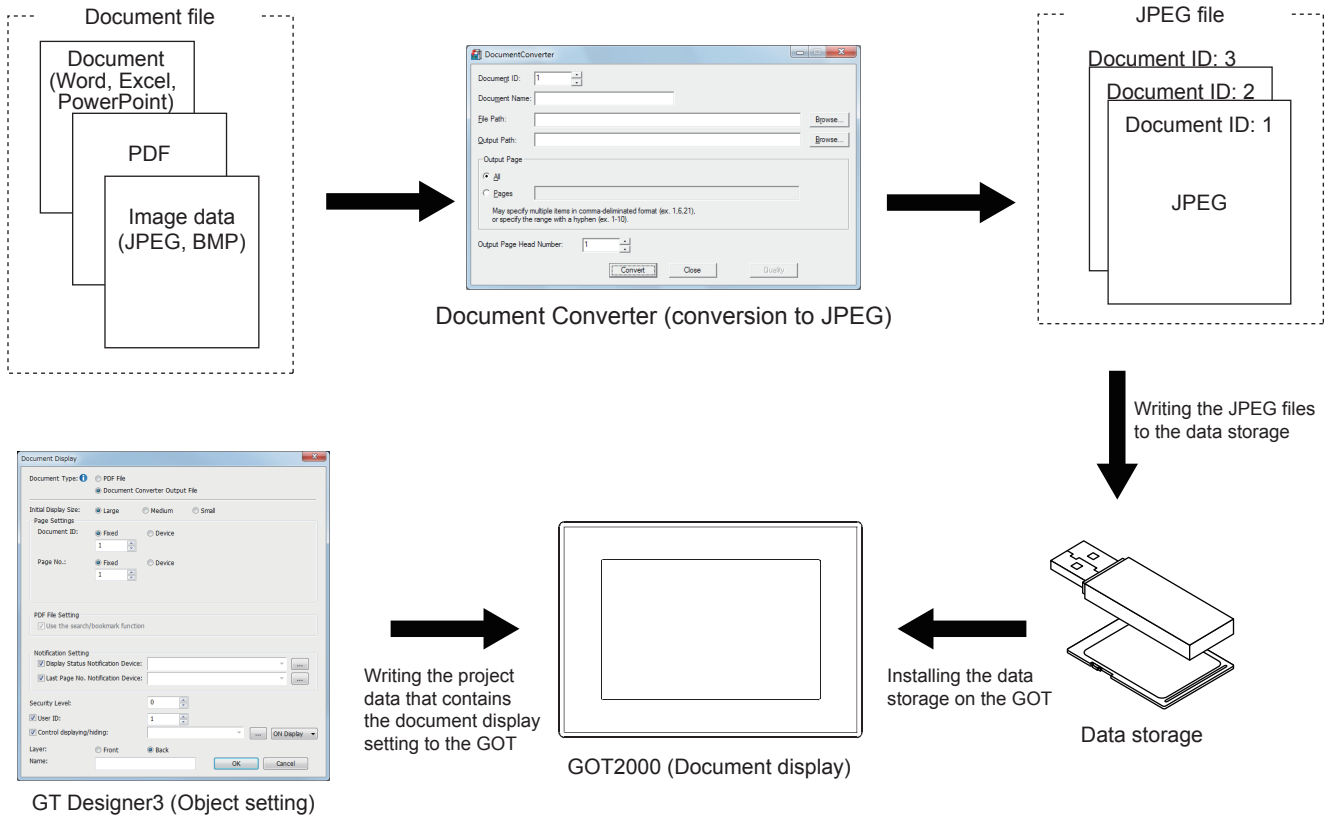

## 8.26.3 How to use the document display (for Document Converter output files)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to display Document Converter output files on the document display.

### 1 Procedure for displaying Document Converter output files

The following shows the procedure for displaying Document Converter output files.

For the details of the operations below, refer to the following.

- Converting files with Document Converter
  - ⇒ ■ 2 Converting documents to JPEG format with Document Converter
- Storing JPEG files to a data storage
  - ⇒ ■ 3 Storing files to a data storage
- Setting a document display object with GT Designer3
  - ⇒ 8.26.2 ■ 3 Placing the document display
  - 8.26.6 [Document Display] dialog

### 2 Converting documents to JPEG format with Document Converter

The following shows the procedure for converting a document to JPEG format with Document Converter.

Before using Document Converter, install the following software in the personal computer.

- Document Converter (installed from Disk3 folder in the DVD-ROM of GT Works3)
- Ghostscript GPL8.50 to 9.15<sup>\*1</sup> (Free software)
- PostScript printer driver supplied with Windows<sup>\*2</sup>
- Microsoft Office 2003, Microsoft Office XP, Microsoft Office 2000<sup>\*3</sup>

<sup>\*1</sup> Versions 8.50, 8.71, and 9.15 of the software are validated by our company.

<sup>\*2</sup> Only the application for creating the document to be used is required.

<sup>\*3</sup> Required to convert a file created with Microsoft Word, Microsoft Excel, or Microsoft PowerPoint.

#### (1) Installing Document Converter

For how to install Document Converter, refer to the following.

The following shows the operating environment for Document Converter.

Item	Description
Model	Personal computer that Windows runs on.
OS(English version)	<ul style="list-style-type: none"> <li>• Microsoft Windows 10 Enterprise (32 bit, 64 bit)<sup>*1*2*4*6</sup></li> <li>• Microsoft Windows 10 Pro (32 bit, 64 bit)<sup>*1*2*4*6</sup></li> <li>• Microsoft Windows 10 Home (32 bit, 64 bit)<sup>*1*2*4</sup></li> <li>• Microsoft Windows 8.1 Enterprise (32 bit, 64 bit)<sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8.1 Pro (32 bit, 64 bit)<sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8.1 (32 bit, 64 bit)<sup>*1*2*4*5</sup></li> <li>• Microsoft Windows 8 Enterprise (32 bit, 64 bit)<sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8 Pro (32 bit, 64 bit)<sup>*1*2*4*5*6</sup></li> <li>• Microsoft Windows 8 (32 bit, 64 bit)<sup>*1*2*4*5</sup></li> <li>• Microsoft Windows 7 Ultimate (32 bit, 64 bit)<sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Enterprise (32 bit, 64 bit)<sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Professional (32 bit, 64 bit)<sup>*1*2*3*4</sup></li> <li>• Microsoft Windows 7 Home Premium (32 bit, 64 bit)<sup>*1*2*4</sup></li> <li>• Microsoft Windows 7 Starter (32 bit)<sup>*1*2</sup></li> <li>• Microsoft Windows Vista Ultimate (32 bit) Service Pack1 or later<sup>*1*2</sup></li> <li>• Microsoft Windows Vista Enterprise (32 bit) Service Pack1 or later<sup>*1*2</sup></li> <li>• Microsoft Windows Vista Business (32 bit) Service Pack1 or later<sup>*1*2</sup></li> <li>• Microsoft Windows Vista Home Premium (32 bit) Service Pack1 or later<sup>*1*2</sup></li> <li>• Microsoft Windows Vista Home Basic (32 bit) Service Pack1 or later<sup>*1*2</sup></li> <li>• Microsoft Windows XP Professional (32 bit) Service Pack2 or later<sup>*1*2</sup></li> <li>• Microsoft Windows XP Home Edition (32 bit) Service Pack2 or later<sup>*1*2</sup></li> </ul>
CPU	<ul style="list-style-type: none"> <li>• For Windows Vista or later: 1 GHz or more recommended</li> <li>• For Windows XP: 300 MHz or more</li> </ul>
Memory	<ul style="list-style-type: none"> <li>• For Windows Vista or later: 1 GB or more recommended</li> <li>• For Windows XP: 128 MB or more</li> </ul>
Display	Resolution SVGA (800 × 600 dots) or higher
Hard disk space	<ul style="list-style-type: none"> <li>• For installation: 10 MB or more</li> <li>• For execution: 100 MB or more recommended<sup>*7</sup></li> </ul>
Display color	High Color (16 bits) or higher
Other software	<p>To display Help, the following software must be installed.</p> <ul style="list-style-type: none"> <li>• Internet Explorer7 or later recommended</li> </ul> <p>The following software must be installed.</p> <ul style="list-style-type: none"> <li>• Ghostscript GPL8.50 to 9.15<sup>*8</sup> (Free software)</li> <li>• PostScript printer driver supplied with Windows<sup>*9</sup></li> <li>• Microsoft Office 2003, Microsoft Office XP, Microsoft Office 2000<sup>*9</sup></li> </ul>
Other hardware	<p>Use the hardware compatible with the above OS.</p> <ul style="list-style-type: none"> <li>• For installation: mouse, keyboard, DVD-ROM drive</li> <li>• For execution: mouse, keyboard</li> <li>• For printing: printer</li> </ul>

- \*1 For installation, the standard user or administrator account is required.  
 For installation on Windows XP, the administrator authority is required.  
 To interact GT Designer3 with other MELSOFT applications which are used under the administrator authority, use GT Designer3 under the administrator authority.
- \*2 The following functions are not supported.
- Application start in Windows compatibility mode
  - Fast user switching
  - Changing your desktop themes (fonts)
  - Remote desktop
  - DPI setting other than the normal size (For Windows XP and Windows Vista)
  - Setting the size of texts and illustrations on the screen to any size other than [Smaller - 100%] (For Windows 10, Windows 8.1, Windows 8, and Windows 7)
- \*3 Windows XP Mode is not supported.
- \*4 The touch feature is not supported.
- \*5 Modern UI Style is not supported.
- \*6 Hyper-V is not supported.
- \*7 For execution, the hard disk space for storing the temporary data in conversion is required.  
 The required hard disk space is different depending on the document to be converted.

- When the conversion fails, increase the hard disk space and convert the document again.
- \*8 Versions 8.50, 8.71, and 9.15 of the software are validated by our company.
- \*9 Required to convert a file created with Microsoft Word, Microsoft Excel, or Microsoft PowerPoint.

## (2) Installing Ghostscript (Free software)

Download Ghostscript from the following website.

<http://www.ghostscript.com/download/gsdnld.html>

Note that the above website may be changed without notification.

### (a) Installing procedure

The following shows how to install Ghostscript GPL9.15 as an example.

- Step 1** Execute the downloaded file.
- Step 2** In the setup wizard, click the [Next] button.
- Step 3** In the license agreement window, click the [I Agree] button.
- Step 4** Select the installation destination, and click the [Install] button to start the installation.
- Step 5** In the window notifying the completion of the installation, select options as necessary and click the [Finish] button.

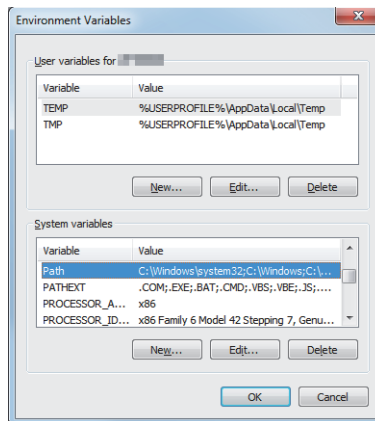

### (b) Adding environment variables

When setting [C:\gs] as the installation destination, add [C:\gs\\*\*\*\*\*\bin] and [C:\gs\\*\*\*\*\*\lib] to the path of environment variables after the installation is completed.

Input six characters consisting of upper five digits of the installation execution file name and a decimal number to \*\*\*\*\*.  
(For gs915w32.exe, input gs9.15.)

The following shows the procedure for setting environment variables.

- Step 1** Select [Start] → [Control Panel] → [System and Security] → [System] from the menu.
- Step 2** Click the [Change settings] button in [Computer name, domain, and work group settings].
- Step 3** Select the [Advanced] tab and click the [Environment Variables] button.
- Step 4** Select [Path] in [System variables], and then click the [Edit] button.

- Step 5** Add the path to [Variable value].  
Make sure to separate the existing path and the added path with a semicolon (;).

- Step 6** Restart the personal computer.

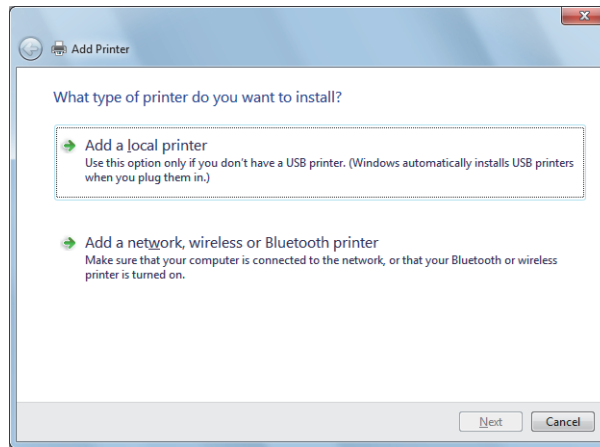

### (3) PostScript printer driver

The following shows how to install the PostScript printer driver.

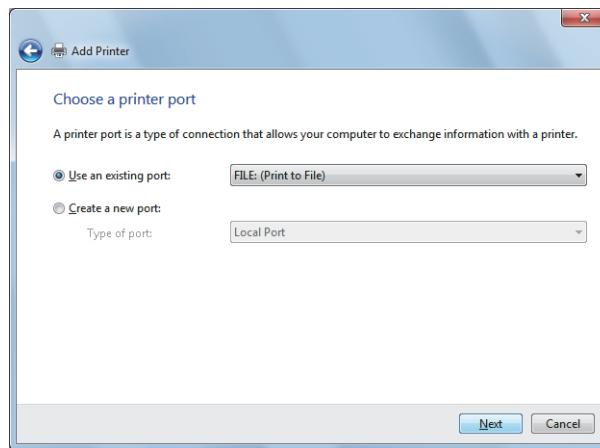

(For Windows 7)

For the detail of the operation of Windows, refer to the manual or help of Windows.

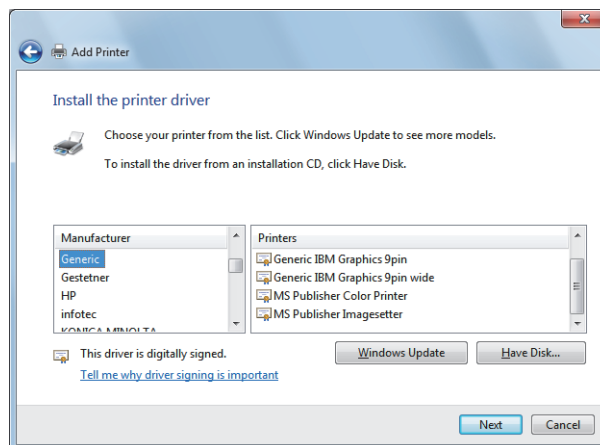

- Step 1** Select [Start] → [Control Panel] → [Hardware and Sound] → [Add a printer] from the menu.
- Step 2** Select [Add a local printer].

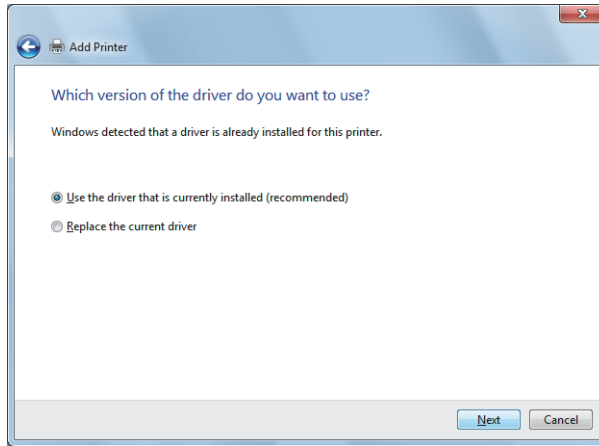

- Step 3** Select [FILE: (Print to File)] for [Use an existing port].

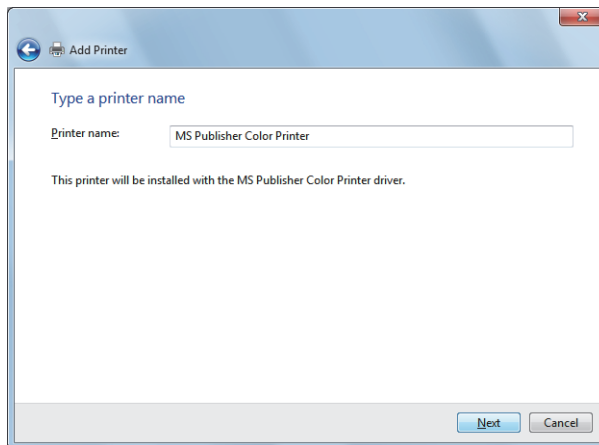

- Step 4** Select the PostScript printer driver (Generic, MS Publisher Color Printer) supplied with Windows.

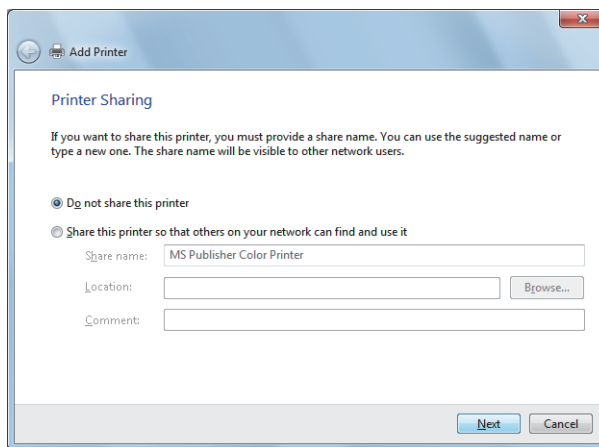

- Step 5** Select [Use the driver that is currently installed] for [Which version of the driver do you want to use?].

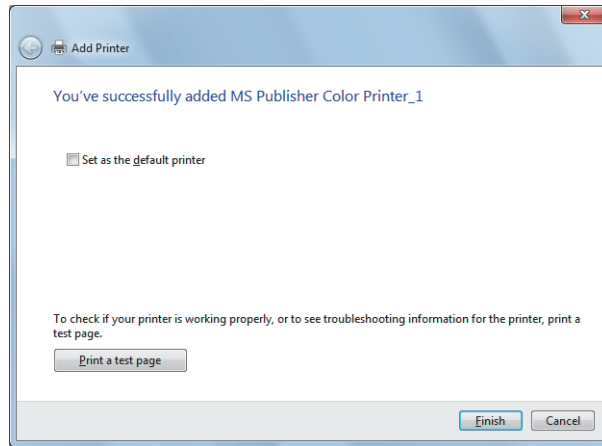

**Step 6** Confirm the description in the window, and then click the [Next] button.

**Step 7** Select [Do not share this printer].

**Step 8** Select the [Finish] button.

#### (4) Conversion procedure

The following shows the conversion procedure.

**Step 1** Start Document Converter.

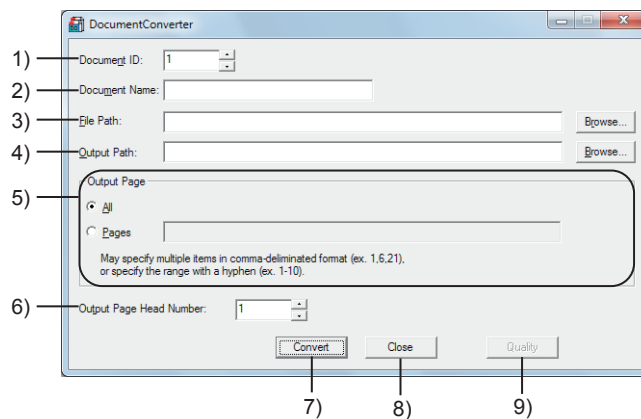

On Window 10, Windows 8.1, Window 8, Windows 7, or Windows Vista, when Ghostscript runs with administrative privileges, Document Converter must also run with administrative privileges.

For how to run the software with administrative privileges, refer to the following.

→Manual and help for Window10, Window 8.1, Windows 8, Windows 7, or Windows Vista

**Step 2** The [Document Converter] dialog appears.

Set the following items.

**1) [Document ID]**

Set the document ID for the converted document.

The setting range is [1] to [32767].

**2) [Document Name]**

Se the name for the converted document.

The name is displayed in GT Designer3 (such as the data view or property sheet) and in the operation log.

Up to 32 characters can be set.

**3) [File Path]**

Clicking the [Browse] button to specify the path name of the file to be converted.

**4) [Output Path]**

Set the output destination (path) of the converted file.

The following shows the folders and files after the path which can be set.

(Output path)\DOCIMG\\(Output size: L, M, or S)\IMG\*\*\*\*\*.JPG

As the output size, L means large, M means medium, and S means small.

\*\*\*\*\* is the page No.

Example) When [Document ID] is set to [1] and [Size] is set to [L]

(Output path)\DOCIMG\001\L\IMG00001.JPG

**5) [Output Page]**

Set the page to be converted.

Set this item when the file to be converted is Word, Excel, PowerPoint, or PDF file.

### 6) [Output Page Head Number]

Set the head number of the pages to be converted.

The setting range is [1] to [65535] page(s).

### 7) [Convert] button

Starts conversion.

### 8) [Close] button

Closes the [Document Converter] dialog.

### 9) [Quality] button

Set the image quality of the document.

The setting is applied to the converted document.

→(5) Quality adjustment procedure

#### Step 3 After the setting, click the [Convert] button.

The conversion starts.

After the conversion, the JPEG file is created in three sizes (large, medium, small) for each page.

The following shows the size of a JPEG file converted from an A4-size document.

- Large: 816 dots × 1168 dots
- Medium: 656 dots × 928 dots
- Small: 400 dots × 584 dots

## (5) Quality adjustment procedure

The following shows the quality adjustment procedure.

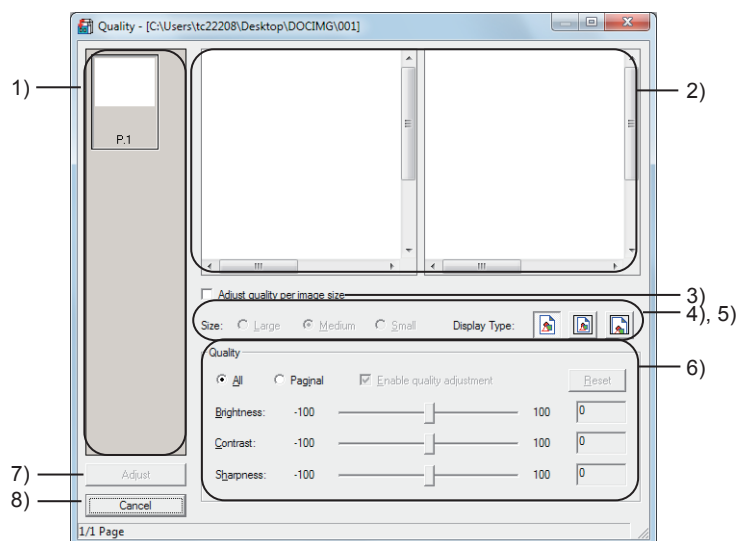

**Step 1** Start Document Converter.

**Step 2** The [Document Converter] dialog appears.

Click the [Quality] button.

**Step 3** The [Quality] dialog appears.

Set the following items.

### 1) Page list

Displays the thumbnails for each page.

Select the page whose image quality is to be adjusted from this list.

When [Paginal] is set for [Quality], select the page.

### 2) Preview window

Displays the preview of the image.

The preview before the quality adjustment is shown in the left window.

The preview after the quality adjustment is shown in the right window.

### 3) [Adjust quality per image size]

Set this item to adjust the image quality per image size.

Select the image size to be adjusted at [Size].

### 4) [Size]

Select the image size to be adjusted.

Select the size every time an image in different size is to be adjusted.

The following shows selectable items.

- [Large]
- [Medium]
- [Small]

Set this item when [Adjust quality per image size] is set.

#### 5) [Display Type]

Select a display type at the preview window.

The following shows selectable items.

- Actual size
- Entire page
- Fitted to the width

#### 6) [Quality]

Set this item to adjust the image quality.

Select the method of adjustment.

The following shows selectable items.

- [All]:  
Select this item to apply the same adjustment to all pages.
- [Paginal]:  
Select this item to adjust the image quality per page.

Select the page to be adjusted from the page list and set [Enable quality adjustment] to adjust the selected page.

Item	Description
[Reset] button	Clears the setting of [Quality].
[Brightness]	Set the value of brightness. The setting range is [-100] to [100].
[Contrast]	Set the value of contrast. The setting range is [-100] to [100].
[Sharpness]	Set the value of sharpness. The setting range is [-100] to [100].

#### 7) [Adjust] button

Executes the set quality adjustment.

Note that the setting cannot be restored after the execution.

#### 8) [Cancel] button

Cancels the set quality adjustment and closes the dialog.

**Step 4** After the setting, click the [Adjust] button.

The [Quality] dialog is closed and the setting of the quality adjustment is completed.

### ■3 Storing files to a data storage

When saving converted files in data storage, save the DOCIMG folder containing the child folders in the root directory.

In the root directory of the data storage, create a folder named "DOCIMG".

Do not change the hierarchical structure of the folders and files in the DOCIMG folder.

Doing so cause the GOT not to recognize the files.

#### Point

##### Image files required when the the graphics accelerator is enabled

When the graphics accelerator is enabled, only large image files are used.

Even if you do not store folder M or folder S, which contains medium or small image files, in a data storage, the document display operates.

For the graphics accelerator, refer to the following.

⇒8.26.4 ■ 1 Enlarging or reducing the display of a document

## 8.26.4 Operating the document display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to operate the document display.

### 1 Enlarging or reducing the display of a document

On the GOT, you can enlarge or reduce the display of a document on the document display object.

The frame size of the document display object remains unchanged even though the display of the document is enlarged or reduced.

#### GOT Graphic Ver.2

When the display of a document is enlarged or reduced, the display varies depending on the document type.

- When the document type is set to [Document Converter Output File]

The document size is switched to large, medium, or small.

- When the document type is set to [PDF File]

The document size is enlarged or reduced by using the large size (100% magnification) as the reference.

When the document size is enlarged or reduced with the object gesture function, a magnification of 25% to 400% is used.

When the document size is enlarged or reduced with a key code switch, one of the following magnifications is used.

Magnification (%)										
25	37.5	50	62.5	75	87.5	100	125	150	200	400

#### GOT Graphic Ver.1

When the display of a document is enlarged or reduced, the display varies depending on the document type and the graphics accelerator setting.

→5.1.4 [Type Setting] dialog

- When the document type is set to [Document Converter Output File] and the graphics accelerator is disabled

The document size is switched to large, medium, or small.

- When the document type is set to [PDF File] or when the document type is set to [Document Converter Output File] and the graphics accelerator is enabled

The document size is enlarged or reduced by using the large size (100% magnification) as the reference.

When the document size is enlarged or reduced with the object gesture function, a magnification of 25% to 400% is used.

When the document size is enlarged or reduced with a key code switch, one of the following magnifications is used.

Magnification (%)										
25	37.5	50	62.5	75	87.5	100	125	150	200	400

## ■ 2 Operating method of the document display

The following shows how to operate the document display.

- (1) Operations by using touch switches
- (2) Scrolling a document (PDF file) on the document display object
- (3) Operations by using the object gesture function
- (4) Page switching by using a device
- (5) Using bookmarks
- (6) Searching for a string
- (7) Key window for entering a search string

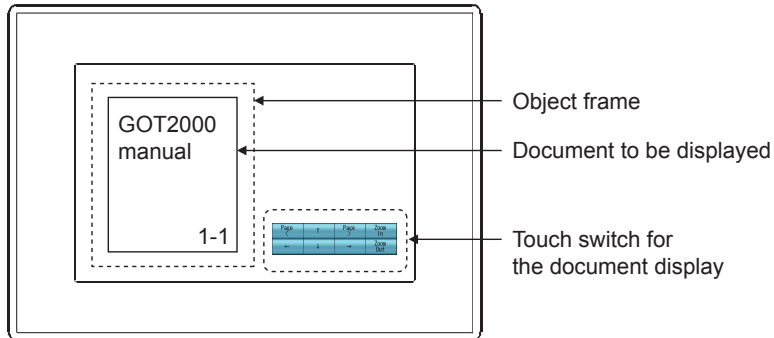

## (1) Operations by using touch switches

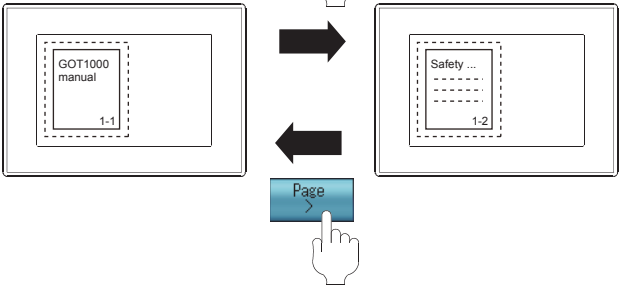

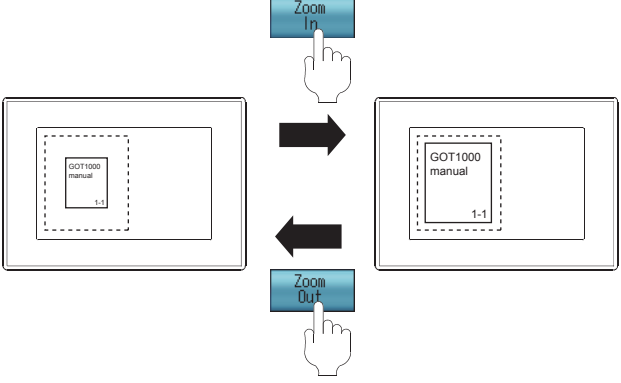

Using touch switches where the key codes for the document display are set, operate the document display.

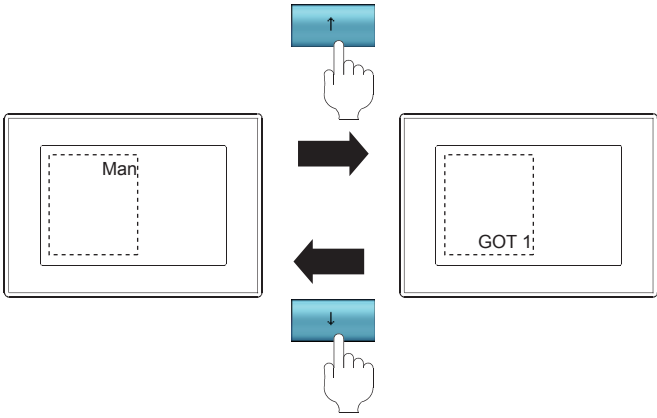

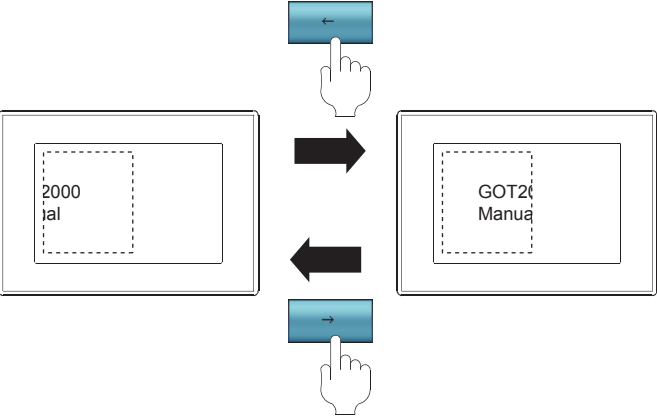

Touch switches for the document display are available by reading from the library of GT Designer3.

The characters and shapes on the touch switches can be changed by a user.

When key codes are set for touch switches, touch switches for the document display can be created by a user.

Touch switch	Key code	Description
Next page 	FFE0h	Moves to the next page or previous page.
Previous page 	FFE1h	 <p>When the page No. is specified using a device, the device value is changed according to the key operation.</p>
Expansion 	FFE2h	Enlarges or reduces the display of a page. When the display of a document is enlarged or reduced, the display is changed depending on the document type and the graphics accelerator setting. For the setting details, refer to the following. → ■ 1 Enlarging or reducing the display of a document
Reduction 	FFE3h	

Touch switch	Key code	Description
Up Scroll 	FFE4h	Scrolls the page either upward or downward. 
Down Scroll 	FFE5h	When the top or bottom of the page is displayed, or the vertical size of the document is smaller than the object frame size (at vertical centering display), the keys do not work.
Left Scroll 	FFE6h	Scrolls the page either left or right. 
Right Scroll 	FFE7h	When the left end or right end of the page is displayed, or the vertical size of the document is smaller than the object frame size (at horizontal centering display), the keys does not work.

**(2) Scrolling a document (PDF file) on the document display object**

Not available to GT SoftGOT2000.

You can slide your finger on the document display object to scroll a document without using the object gesture function.

**(3) Operations by using the object gesture function**

The display of objects can be operated using gestures.

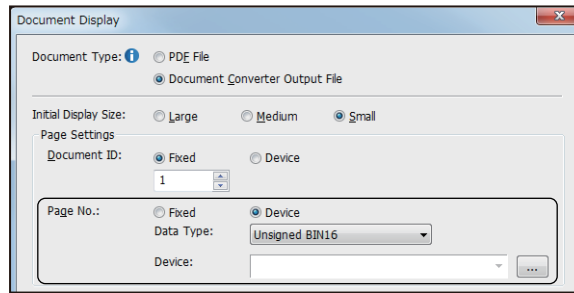

For operations with gestures, refer to the following.

⇒ 11.13 Operating Objects by the Gesture (Object Gesture Function)

#### (4) Page switching by using a device

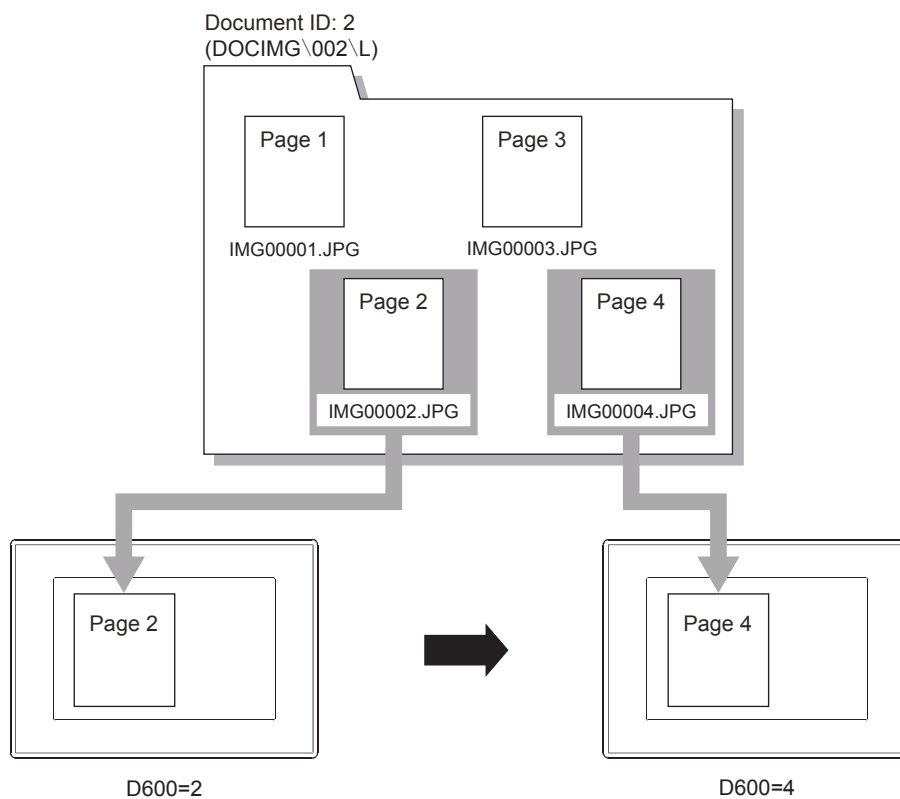

You can control the page displayed on the document display by using a device.  
In the [Document Display] dialog, select [Device] for [Page No.] and set [Device].

→8.26.6 [Document Display] dialog

Changing the set device value switches the page displayed on the document display.

Example) When [Document Type] is [Document Converter Output File], [Initial Display Size] is [Large], [Document ID] is [2], and [Device] is [D600]

#### (5) Using bookmarks

This function is available only when [Document Type] is set to [PDF File].

Touching a bookmark displays the linked page.

Up to 1000 bookmarks in 10 levels are displayable.

For a PDF file without bookmarks, nothing is displayed in the [Bookmark] window.

For the setting to use the [Bookmark] window, refer to the following.

→8.26.6 [Document Display] dialog

The following shows how to operate the [Bookmark] window on the GOT.

**Step 1** Touch a document display object to display the Bookmark button.

If no operation is performed within a certain time period, the Bookmark button is hidden.

Touch the document display object.

Touch the Bookmark button.

**Step 2** Touch the Bookmark button to display the [Bookmark] window.

**1) Search button**

Switches to the [Search] window.

**2) [×] button**

Closes the [Bookmark] window.

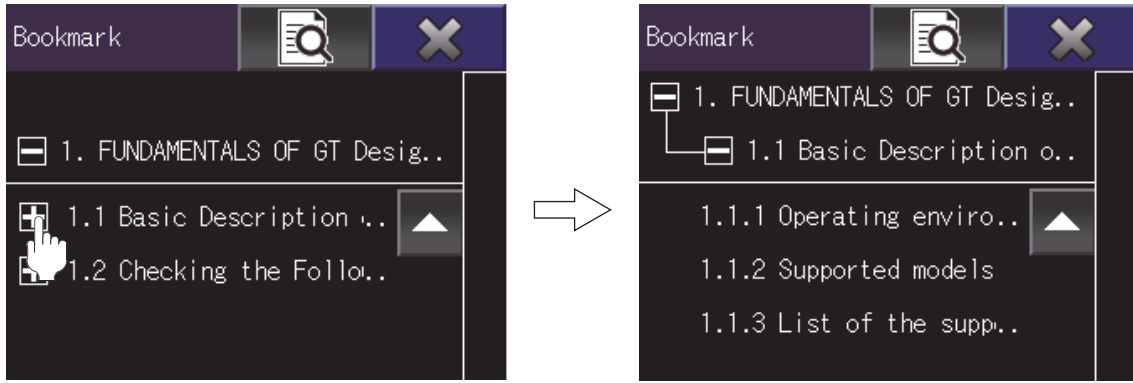

**3) Bookmarks**

Touch a bookmark to display the linked page.

To expand a bookmark, touch [+] beside the bookmark.

In this case, only the bookmark and its child bookmarks are listed.

To return to the parent level, touch [-] beside the bookmark.

Touch [+] beside section 1.1.

#### 4) Change Window Width button

Changes the width of the [Bookmark] window.

#### (6) Searching for a string

This function is available only when [Document Type] is set to [PDF File].  
 Entering a string in the [Search] window searches for the string in a PDF file.  
 The following strings cannot be searched for.

- String split across a page boundary
- One-byte string split over two lines
- Bookmark or comment

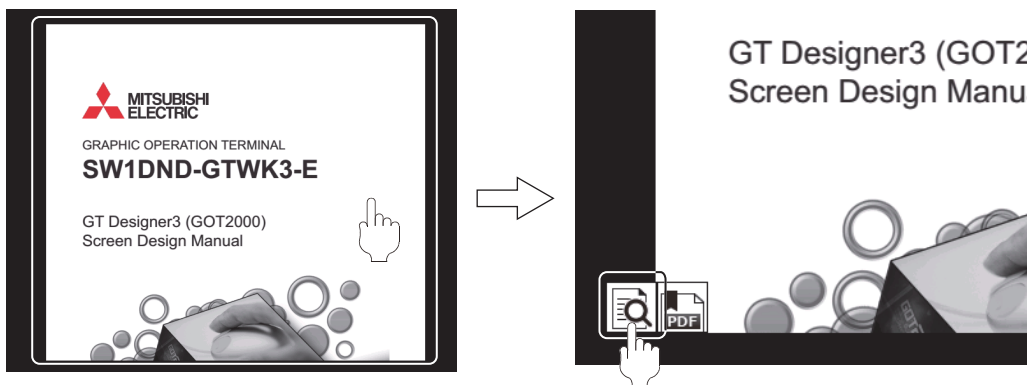

For the setting to use the [Search] window, refer to the following.

→8.26.6 [Document Display] dialog

The following shows how to operate the [Search] window on the GOT.

**Step 1** Touch a document display object to display the Search button.

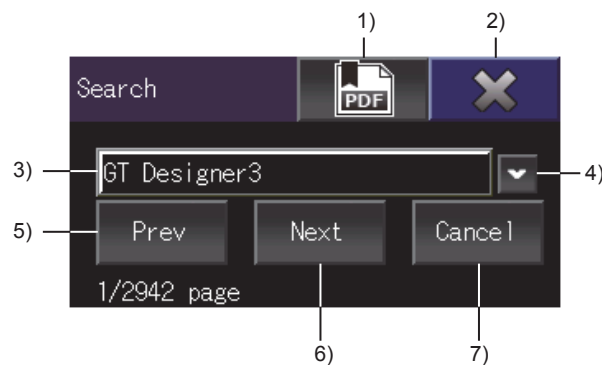

If no operation is performed within a certain time period, the Search button is hidden.

Touch the document display object.

Touch the Search button.

**Step 2** Touch the Search button to display the [Search] window.

#### 1) Bookmark button

Switches to the [Bookmark] window.

## 2) [X] button

Closes the [Search] window.

## 3) Search string entry field

Touch the entry field to display the key window for entering a search string.

→(7) Key window for entering a search string

Enter a string and touch the [ENTER] key in the key window to perform a search.

The search is case-sensitive and only returns exact matches.

Up to 47 Unicode characters can be entered.

The 48th and subsequent characters are deleted when the [Enter] key is touched.

## 4) Search History button

Lists up to 10 strings which are recently searched for.

Select a string from the search history to perform a search.

In this case, the selected string becomes the last-used one and moves to the top of the search history.

When the Disable Search History Update signal (GS523.b1) is on, the search history does not update.

However, you can still perform searches using the strings in the search history.

## 5) [Prev] button

Searches for the previous instance of a string from the current page.

## 6) [Next] button

Searches for the next instance of a string from the current page.

## 7) [Cancel] button

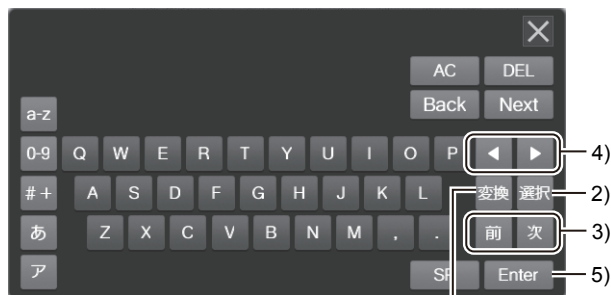

Cancels the search.

## (7) Key window for entering a search string

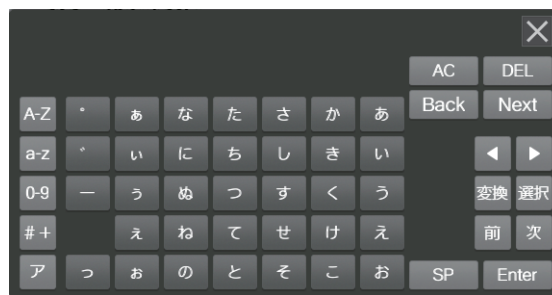

Enter a string to perform a search in the [Search] window.

For the basic operations of a key window, refer to the following.

→5.2.4 Setting key windows ([Key Window])

Key window in alphabet mode

Key window in kana mode

### 1) Convert key

This key is usable only when the system language is Japanese and the kana input is used.

Converts a group of hiragana characters to kanji characters.

If you touch this key during the conversion, the converted characters will be restored to their original state.

### 2) Select key

This key is usable only when the system language is Japanese.

Confirms the entry.

Before the entry is confirmed

After the entry is confirmed

Up to 40 one-byte or 20 two-byte characters can be entered at one time.

To enter a longer string, touch the Select key before the number of the entered characters exceeds the above limit, and then enter the rest of characters.

When you convert multiple groups of hiragana characters, confirm each group of characters with the Select key.

### 3) Previous key or Next key

This key is usable only when the system language is Japanese and the kana input is used.

Converts a group of hiragana characters to kanji characters.

Switches between kanji conversion candidates.

### 4) Cursor keys

The behavior of the keys differs depending on the status of the entry.

- Before the entry is confirmed  
The keys change the range of the characters to be converted.  
After the change, perform a conversion.
- After the entry is confirmed  
The keys move the cursor.

#### 5) [Enter] key

Executes a search based on the entered string.

## 8.26.5 Precautions for a document display object

This section explains the precautions for the document.

### ■1 When the page is switched to a nonexistent page

When a nonexistent page is specified at switching the page, no document is displayed.  
The Document Display Status Notification signal (GS276.b0) turns on.

### ■2 When a document is not displayable

In the following cases, a document is not displayable on the document display object.  
The Document Error signal (GS276.b0) turns on when a document is not displayable.

- The specified file is nonexistent.
- The type of the specified file differs from the set document type.
- The specified file is corrupt.
- No data storage is installed.
- The data storage is unformatted.
- The SD card cover of the GOT is open.
- The SD card access switch of the GOT is turned off.
- A nonexistent document ID number or page number is specified.
- The size of a JPEG file exceeds the size of 1240 dots × 840 dots or 840 dots × 1240 dots.
- The size of a JPEG file converted with Document Converter exceeds 960 KB.
- The specified PDF file is not supported.
- A specified PDF file is password protected.
- The data size of a page in a specified PDF file exceeds 30 MB.

### ■3 When a document cannot be cached to display

A document cannot be cached to display in the following cases.  
The Cache Invalidated signal (GS276.b1) turns on when the cache is unavailable.

- The data storage is write-protected.
- The free space of the data storage is insufficient.
- The data storage is faulty.
- The Invalidate Cache signal (GS523.b0) is on.

### ■4 Restrictions when the graphics accelerator setting and the display order setting are both configured

#### **GOT Graphic Ver.1**

When the following settings are both configured in the [Type Setting] dialog, the GOT has restrictions on its operations.

- [Enable the graphics accelerator to smooth the screen gesture and document display operations] is selected.
- [Adjust object display order in GOT to the one in GT Designer3] is selected.

#### (1) Refresh stop of the object display

While the document display is being operated, the displays of the other objects are not refreshed.

#### (2) Functions that do not operate normally

While the document display is being operated, some functions may not operate normally.

Do not use the following functions simultaneously with the document display.

- Free figure drawing function of the object script
- Parts display ([Display Mode]: [Overwrite])
- Scatter graph ([Display Mode]: [Locus])

## ■5 PDF file which cannot be converted

When the font used in the PDF file is in either of the following statuses, the PDF file cannot be used for the document display.

- The font does not exist in the operating environment (in Windows).
- The font information is not embedded in the PDF file.

In the above cases, an error occurs at the conversion using Document Converter.

Convert the page which cannot be converted using Document Converter in the following procedure.

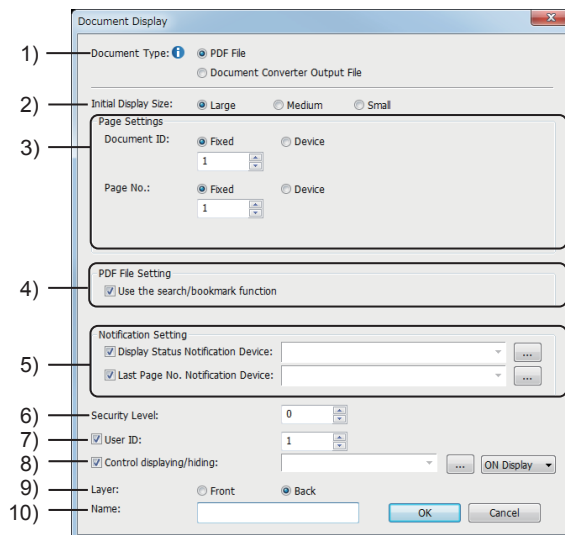

- Step 1** Select [Page] for [Output Page] and execute the conversion.
- Step 2** Check the page which cannot be converted with the error message.
- Step 3** Capture the image of the page which cannot be converted, and save the captured image as an image file (JPEG or BMP).
- Step 4** Convert the saved image file (JPEG or BMP) using Document Converter.

### 8.26.6 [Document Display] dialog

The document display is an object that displays documents created with a personal computer (such as Microsoft Word, Microsoft Excel) on the GOT.

- Step 1** Select [Object] → [Document Display] from the menu.
- Step 2** Click the position where you place the document display. Placing the document display is completed.
- Step 3** Double-click the document display which has been placed to display the setting dialog.

#### 1) [Document Type]

Select the type of a document to be displayed on the document display object.

The following shows selectable items.

- [PDF File]  
Displays a PDF file as it is.  
For the storage location of the PDF files, refer to the following.  
⇒8.26.2 ■ 2 Storing files to a data storage
- [Document Converter Output File]  
Displays a JPEG file that is converted from a document in another format with Document Converter.  
For the storage location of the JPEG files, refer to the following.  
⇒8.26.3 ■ 3 Storing files to a data storage

#### 2) [Initial Display Size]

Select the initial size of the document display to be displayed at screen switching.

The following shows selectable items.

#### **GOT Graphic Ver.2**

The selection for [Document Type] determines the GOT operation.

When the document type is set to [PDF File]

- [Large]: Displays a large PDF file at 100% magnification.
  - [Medium]: Displays a large PDF file at 75% magnification.
  - [Small]: Displays a large PDF file at 50% magnification.
- When the document type is set to [Document Converter Output File]

- [Large]: Displays a large JPEG file.
- [Medium]: Displays a medium JPEG file.
- [Small]: Displays a small JPEG file.

### **GOT Graphic Ver.1**

The selection for [Document Type] and the graphics accelerator setting determine the GOT operation.  
 →5.1.4 [Type Setting] dialog

When [Document Type] is set to [PDF File] or [Document Converter Output File] and the graphics accelerator is enabled

- [Large]: Displays a large PDF file or JPEG file at 100% magnification.
- [Medium]: Displays a large PDF file or JPEG file at 75% magnification.
- [Small]: Displays a large PDF file or JPEG file at 50% magnification.

When [Document Type] is set to [Document Converter Output File] and the graphics accelerator is disabled

- [Large]: Displays a large JPEG file.
- [Medium]: Displays a medium JPEG file.
- [Small]: Displays a small JPEG file.

### 3) [Page Settings]

Item	Description
[Document ID]	<p>Select how to set a document ID.            If an nonexistent document ID is set, no document is displayed. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]:                Sets the document ID by entering a number directly.                Set the document ID of the document to be displayed first at screen switching.                The setting range is [1] to [32767].</li> <li>• [Device]:                Sets the document ID by specifying a device value.                Set a device that specifies the document ID.                →6.1.1 How to set devices</li> </ul>
[Page No.]	<p>Select how to set the page to be displayed.            The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [Fixed]:                Sets the page number by entering a number directly.                Set the number of a page to be displayed first upon screen switching.                The setting range is [0] to [65535].</li> <li>• [Device]:                Select this item to specify a page No. with the device value.</li> </ul> <div style="border: 1px solid #ccc; padding: 5px; width: fit-content; margin: 10px auto;"> <p>Page No.: <input type="radio"/> Fixed <input checked="" type="radio"/> Device</p> <p>Data Type: <input type="text" value="Unsigned BIN16"/></p> <p>Device: <input type="text" value=""/> <input type="button" value="..."/></p> </div> <ul style="list-style-type: none"> <li>• [Data Type]                Select a data type of the word device.                The following shows selectable items.                :[Unsigned BIN16]                :[BCD16]</li> <li>• [Device]                Set a device that specifies the page number.                →6.1.1 How to set devices</li> </ul>

### 4) [Use the search/bookmark function]

This item is selectable when [Document Type] is set to [PDF File].  
 Select this item to use the search or bookmark function.

## 5) [Notification Setting]

Item	Description
[Display Status Notification Device]	<p>Set a device that notifies the display status of a document. The device stores any of the following values according to the display status of the document.</p> <ul style="list-style-type: none"><li>• 0: Normal</li><li>• 1: A specified file is nonexistent or exceeds 3 MB, or the data storage is inaccessible.</li><li>• 2: A specified file is not an image file or is corrupted.</li><li>• 3: A specified document ID is outside a range of 1 to 32767 or its corresponding document is nonexistent.</li><li>• 4: A nonexistent page number is specified.</li><li>• 101: A specified PDF file is nonexistent, or the data storage is inaccessible.</li><li>• 102: A specified PDF file is not supported or is corrupt.</li><li>• 103: The document ID of a specified PDF file is outside the range of 1 to 32767, or no PDF file corresponds to the document ID.</li><li>• 104: A specified page number is nonexistent in a target PDF file.</li><li>• 105: A specified PDF file is password protected.</li><li>• 107: The data size of a page in a specified PDF file exceeds 30 MB.</li></ul>
[Last Page No. Notification Device]	<p>Set a device that notifies the last page number of the document corresponding to a specified document ID.</p>

## 6) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

## 7) [User ID]

Select this item to set the user ID.

The setting range is [1] to [65535].

## 8) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

When the set device is in either the ON or OFF status, select whether or not to display the object.

The following shows selectable items.

- [ON Display]
- [OFF Display]

⇒6.1.1 How to set devices

## 9) [Layer]

Select the layer to arrange the object on.

The following shows selectable items.

- [Front]
- [Back]

## 10) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

Up to 100 characters can be set.

## 8.26.7 Relevant settings

Set the relevant settings other than the specific settings for the document display as required.  
The following shows the functions that are available by the relevant settings.

### ■1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.

→5.1.4 [Type Setting] dialog

Function	Setting item
Enabling the gesture function	[Use the gesture function]
Smoothing the operations of the document display	<b>GOT Graphic Ver.1</b> [Enable the graphics accelerator to smooth the screen gesture and document display operations]

### ■2 GOT Internal Device

→12.1.3 GOT special register (GS)

Function	Setting item
Checking if the document is displayed. (Write device)	GS276.b0
Notifying that a PDF file cannot be cached to display. (Write device)	GS276.b1
Notifying the display quality when a PDF document is displayed (Write device)	GS276.b2
Displaying a PDF file without caching the file. (Read device)	GS523.b0
Using the PDF search function without creating or updating the search history file. (Read device)	GS523.b1
Displaying a PDF document in high quality (Read device)	GS523.b2

## 8.27 Placing a Video/RGB Display Object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Not available to GT2705-V.

Displaying video images will be supported soon.

The video/RGB display object displays an RGB image on a base screen or window screen.

You can specify the exact display position of an input image just by placing a video/RGB display object on a screen, which is unavailable with the video/RGB display function.

The display magnification, rotation angle, inversion, and others are also settable, displaying an RGB image in various ways.

### Point

#### RGB input unit applicable to the video/RGB display object

Use GT27-R2 for the video/RGB display object.

GT27-R2-Z or GT27-V4R1-Z is not applicable.

When using GT27-R2-Z or GT27-V4R1-Z, use the RGB display function.

→10.7 Displaying Image from a Personal Computer on the GOT (RGB Display Function)

### 8.27.1 Specifications of the video/RGB display object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 System application (extended function)

To use the video/RGB display object, a system application (extended function) of [Video/RGB (Object)] is required.

To incorporate the application into package data automatically, select [Use Video/RGB Input] and select [GT27-R2 (RGB Screen only)] for [Unit Type Name] in the [Video/RGB Input] dialog.

#### ■ 2 Required version of BootOS

To use GT27-R2, install version N or later of BootOS on the GOT.

→4.3.2 Transferring data

#### ■ 3 Resolution and refresh rate

The video/RGB display object supports the following resolutions and refresh rates.

Resolution	Refresh rate (Hz)
XGA(1024×768 dots)	60
SVGA(800×600 dots)	60/72/75
VGA(640×480 dots)	60/72/75/85

#### ■ 4 Applicable channel

The video/RGB display object can display an image input from the following channels.

Input signal	Number of applicable channels	Applicable channel number
RGB input	2	CH1, CH2

## ■5 Maximum number of objects that can be placed on one screen

Up to four video/RGB display objects can be placed on one screen.

The GOT can simultaneously display up to four video/RGB display objects placed on base screens and window screens.

The other video/RGB display objects are not displayed.

Configure the setting so as to display up to four video/RGB display objects placed on base screens and window screens simultaneously.

## ■6 Applicable screen

The video/RGB display object can be placed on the following screens.

- Base screen
- Overlap window
- Superimpose window
- User-created key window
- Dialog window

## ■7 Size of the video/RGB display object

The position and size (width and height) of the video/RGB display object are settable in units of 4 dots.

The settable size range is 64 by 64 dots to 1280 by 1024 dots.

## ■8 Displaying an input image

Input images are displayable in various ways by using the video/RGB display object.

For the details of the setting method, refer to the following.

⇒8.27.4 [Video/RGB Display] dialog

### (1) Display magnification

You can change the display magnification of an input image.

[Fixed], [Device], and [Auto-resizing] are selectable to specify the display magnification.

For [Fixed], the following magnification factors are selectable: [400], [200], [100], [87.5], [75], [62.5], [50], [37.5], or [25] (%).

For [Device], the display magnification depends on the device value as shown below.

Device value	Display magnification
0	100%
1	87.5%
2	75%
3	62.5%
4	50%
5	37.5%
6	25%
7	400%
8	200%
9 to 24	100%
25 to 400 <sup>*1</sup>	25% to 400%, or 100%
401 or more	100%

\*1 When the object gesture function is enabled, the magnification range of 25% to 400% is applied.

When the object gesture function is disabled, the magnification of 100% is applied.

For [Auto-resizing], an input image is displayed according to the size of a video/RGB display object. When the aspect (length-to-width) ratios differ between an input image and a video/RGB display object, the image is enlarged or reduced to the object size with the image aspect ratio unchanged.

## (2) Rotation angle

You can rotate an input image in units of 90 degrees.

[Fixed] and [Device] are selectable to specify the rotation angle.

For [Fixed], the following rotation angles are selectable: [None], [90 degrees to the right], [180 degrees], and [90 degrees to the left].

For [Device], the rotation angle depends on the device value as shown below.

Device value	Rotation angle
0	[None]
1	[90 degrees to the right]
2	[180 degrees]
3	[90 degrees to the left]
4 or more	[None]

## (3) Inversion

You can invert an input image horizontally or vertically.

[Fixed] or [Device] are selectable to set the inversion method.

For [Fixed], the following inversion methods are selectable: [None], [Horizontal], and [Vertical].

For [Device], the inversion method depends on the device value as shown below.

Device value	Inversion method
0	[None]
1	[Horizontal]
2	[Vertical]
3 or more	[None]

#### (4) Filling blank space

You can select whether to fill blank space with a specified color when an input image is smaller than a video/RGB display object.

For filling blank space, 65536 colors are selectable.

When the blank space is not filled, other figures and objects under the blank space are displayed.

#### (5) Clip display

You can specify the clip origin to cut out a part of an input image to be displayed.

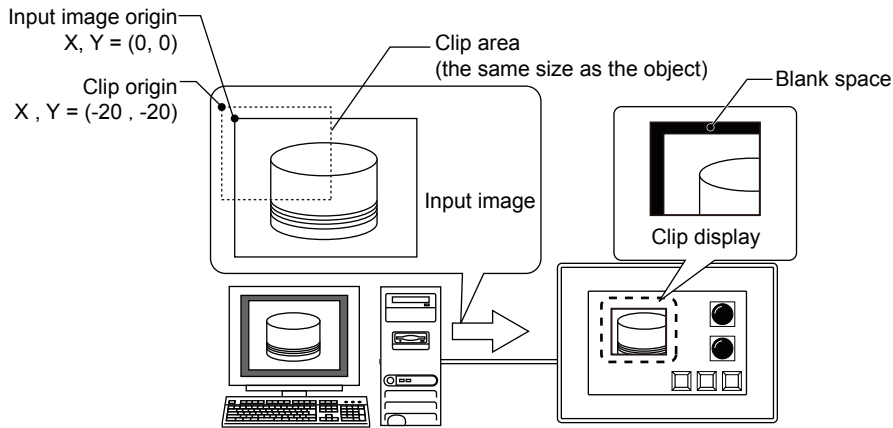

Specify the clip origin in units of 4 dots by using the X and Y coordinates of the input image as the reference.

The following shows the setting ranges for the X and Y coordinates of the clip origin.

- X coordinate: -1280 dots to 1280 dots
- Y coordinate: -1024 dots to 1024 dots

The clip origin is in the upper left corner of the clip area. The GOT displays the clip area as the same size as the video/RGB display object.

Portions of the clip area that extend off the input image are displayed as blank space.

[Fixed] and [Device] are selectable to specify the clip origin.

When selecting [Device], set the first device. Two consecutive devices (signed 16-bit binary), the first device and the subsequent device, are automatically assigned to the X and Y coordinates of the clip origin.

- First device: X coordinate
- Second device: Y coordinate

## ■9 Display mode

The video/RGB display object is displayed in front of or behind all other figures and objects on the same screen, regardless of the layers and object display order of the screen.

When the video/RGB display object is displayed behind all other figures and objects, the transparent method and color are settable with [Display Mode] in the [Video/RGB Input Common] dialog.

For the setting procedure, refer to the following.

⇒ 10.6.5 [Video/RGB Input] dialog

### (1) Display in the foreground

The video/RGB display object is displayed in front of all other figures and objects on the same screen. Overlapping figures and objects are hidden behind the video/RGB display object.

### (2) Display on the specified color area (behind all other figures and objects)

The video/RGB display object is displayed behind all other figures and objects on the same screen.

When a figure or object overlaps the video/RGB display object, the video/RGB display object passes through the specified color.

**(3) Display on the area of other colors (behind all other figures and objects)**

The video/RGB display object is displayed behind all other figures and objects on the same screen. When a figure or object overlaps the video/RBB display object, the video/RGB display object does not pass through the specified color. (However, the video/RBG display object passes through colors other than the specified one.)

**8.27.2 How to use the video/RGB display object**

**1 System configuration**

The following shows the system configuration to use the video/RGB display object.

Signal type	RGB output device	Connection cable <sup>*1</sup>	GOT		Number of connectable RGB devices
			Option	GOT model	
Analog RGB	For the connectable RGB output devices, refer to the following Technical News. →List of Valid Devices Applicable for GOT2000 Series (GOT-A-0064)	GT15-C50VG(5m) or Preparing connection cables by each user <sup>*2</sup>	GT27-R2	GT27	Two RGB output devices for one GOT

\*1 The cable length depends on the specifications of the RGB output device used.

\*2 For how to create a cable, refer to the following.

→GOT2000 Series Connection Manual (Microcomputer, MODBUS/Fieldbus Products, Peripherals) for GT Works3 Version1

**2 Setting procedure**

- Step 1** Connect the GOT and the RGB output device.
  - 1 System configuration
- Step 2** Select [Common] → [Peripheral Setting] → [Video/RGB Input] from the menu to display the [Video/RGB Input] dialog.
  - 10.6.5 [Video/RGB Input] dialog
- Step 3** In the [Video/RGB Input] dialog, set the items as shown below and click the [OK] button.
  - [Destination I/F]: [Extend I/F(1st)]
  - [Use Video/RGB Input]: Selected
  - [Unit Type Name]:[GT27-R2 (RGB Screen only)]
  - [Display Mode]: Display mode for a video/RGB display object
- Step 4** Display a screen to place a video/RGB display object.

⇒2.5.2 Opening and closing screens

**Step 5** Select [Object] → [Video/RGB Display] from the menu, and place the object on the screen editor.

**Step 6** Double-click the object to configure the setting.

⇒8.27.4 [Video/RGB Display] dialog

**Step 7** Write package data to the GOT.

For the communication method between the personal computer (GT Designer3) and the GOT, refer to the following.

⇒4. COMMUNICATING WITH GOT

### ■3 Operation on the GOT

To perform operation by touching the video/RGB display object on the GOT, set [Touch Mode] in the [Video/RGB Setting] tab in the [Video/RGB Display] dialog.

For the details of the setting method, refer to the following.

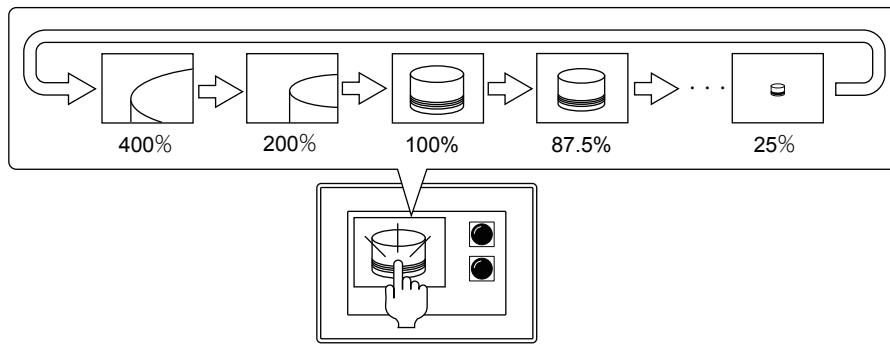

⇒8.27.4 [Video/RGB Display] dialog

#### (1) Magnification switching (Loop)

Enlarge or reduce an input image by one magnification factor according to the setting of [Change Direction] with a touch of the video/RGB display object.

The display magnification is wrapped around at its maximum or minimum factor.

Example) When selecting [Smaller ratio] for [Change Direction]

#### (2) Magnification switching (Reciprocation)

Enlarge or reduce an input image by one magnification factor with a touch of the video/RGB display object.

The display magnification is switched in the opposite direction at its maximum or minimum factor.

#### (3) Gesture operation

Reduce or enlarge an input image or reposition the clip origin with the object gesture function.

To reduce or enlarge the input image, pinch in or pinch out the image.

The image is reduced or enlarged by moving fingers toward or away from each other.

To reposition the clip origin, slide the origin.  
 The clip area is scrolled by the slide operation.

For the details of the object gesture, refer to the following.  
 ⇒ 11.13 Operating Objects by the Gesture (Object Gesture Function)

**(4) Remote personal computer operation function (Serial)**

Remotely operate the mouse pointer of the personal computer with the remote personal computer operation function (Serial).

For the details of the remote personal computer operation function (Serial), refer to the following.

⇒ 10.4 Operating a Personal Computer by Using the GOT (Remote Personal Computer Operation (Serial))

## 8.27.3 Precautions for a video/RGB display object

### ■ 1 Precautions for drawing

#### (1) Functions that cannot be used together

The following functions cannot be used together with the video/RGB display object.

- Video display function
- RGB display function
- Video output function
- Multimedia function

#### (2) Placing a video/RGB display object on a window screen

Make sure to place a video/RGB display object 4 dots or more away from the edges of a window screen.

The GOT can only display the video/RGB display object with the X and Y coordinates in units of 4 dots.

If the window screen is moved or switched, the video/RGB display object may not be displayed with the X and Y coordinates in units of 4 dots.

In such a case, the X and Y coordinates of the object are automatically corrected toward the input image origin.

If the video/RGB display object is too close to the edges of the window screen, the displayed input image may overlap the window frame depending on the position of the window screen.

#### (3) Object stacking order when a video/RGB display object is placed

The video/RGB display object is not targeted for the object stacking order adjustment setting.

The GOT always displays the video/RGB display object in front of or behind all other figures and objects on the same screen.

#### (4) Placing an input object on a video/RGB display object

When placing an object requiring touch operation, such as a touch switch or numerical input, on the video/RGB display object, select [Disabled] for [Touch Mode] of the video/RGB display object.

Otherwise, the touch operation of the overlapping object is not performed properly.

#### (5) Number of video/RGB display objects that can be placed when the remote personal computer operation function (Serial) is used

When using the remote personal computer operation function (Serial), do not place multiple video/RGB display objects on the same screen.

Otherwise, the touch operation of the video/RGB display object may not be performed properly.

#### (6) Clip origin setting

If an input image is outside the clip area according to the specified clip origin, the image is not displayed within the video/RGB display object.

Set the clip origin while making sure that the image is within the clip area.

### ■ 2 Precautions for use

#### (1) Displaying a window screen on a video/RGB display object

Do not display multiple window screens on a video/RGB display object.

Otherwise, the following may occur.

- Window screens, figures, and objects are not displayed in a correct order.
- The video/RGB display object is not displayed.
- A system alarm occurs.

## (2) Restrictions on the video/RGB display object in the window screen

When a window screen contains a video/RGB display object, the input image of the object may not be displayed properly if the window screen lies off the GOT screen.

Make sure that such a window screen does not lie off the GOT screen.

### 8.27.4 [Video/RGB Display] dialog

Displaying video images will be supported soon.

The video/RGB display object displays an RGB image on the GOT screen.

**Step 1** Select [Object] → [Video/RGB Display] from the menu.

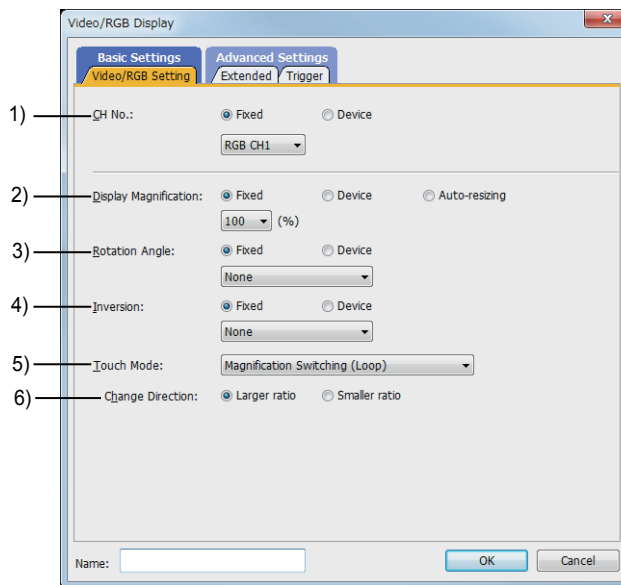

**Step 2** Click the position to place a video/RGB display object.

**Step 3** Adjust the size of the object.

**Step 4** Double-click the object to display the setting dialog.

- ■ 1 [Video/RGB Setting] tab
  - 2 [Extended] tab
  - 3 [Trigger] tab

#### ■ 1 [Video/RGB Setting] tab

##### 1) [CH No.]

Select the channel number of an RGB output device.

The following shows the items to be selected.

- [Fixed]  
Select the channel number.  
The selectable channel numbers are [RGB CH1] and [RGB CH2].
- [Device]  
Specify the channel number with a device value.  
Select this item, and then set a device.

##### 2) [Display Magnification]

Select the display magnification of an input image.

For the details of the display magnification, refer to the following.

→ 8.27.1 ■ 8 (1) Display magnification

The following shows the items to be selected.

- [Fixed]  
Select the display magnification.  
The following shows the items to be selected.

- [25] %
- [37.5] %
- [50] %
- [62.5] %
- [75] %
- [87.5] %
- [100] %
- [200] %
- [400] %

- [Device]

Specify the display magnification with a device value.  
Select this item, and then set a device.

- [Auto-resizing]

Automatically adjusts the display magnification according to the size of a video/RGB display object.

### 3) [Rotation Angle]

Select the rotation angle of an input image.

For the details of the rotation angle, refer to the following.

⇒8.27.1 ■ 8 (2) Rotation angle

The following shows the items to be selected.

- [Fixed]

Select the rotation angle.

The following shows the items to be selected.

[None]

[90 degrees to the right]

[180 degrees]

[90 degrees to the left]

- [Device]

Specify the rotation angle with a device value.

Select this item, and then set a device.

### 4) [Inversion]

Select the inversion method of an input image.

For the details of the inversion method, refer to the following.

⇒8.27.1 ■ 8 (3) Inversion

The following shows the items to be selected.

- [Fixed]

Select the inversion method.

The following shows the items to be selected.

[None]

[Horizontal]

[Vertical]

- [Device]

Specify the inversion method with a device value.

Select this item, and then set a device.

### 5) [Touch Mode]

Select the operation performed when a video/RGB display object is touched.

For the details of the touch mode, refer to the following.

⇒8.27.2 ■ 3 Operation on the GOT

The following shows the items to be selected.

- [Disabled]

Disables the touch operation.

- [Gesture Operation (Scaling/Scrolling)]

Enlarges or reduces an input image or repositions the clip origin by using the gesture operation.

- [Magnification Switching (Loop)]

Enlarges or reduces an input image according to the setting of [Change Direction].

The display magnification is wrapped around at its maximum or minimum factor.

- [Magnification Switching (Reciprocation)]

Enlarges or reduces an input image.

The display magnification is switched in the opposite direction at its maximum or minimum factor.

- [PC Remote Operation (Serial)]  
Remotely operates the mouse pointer of the personal computer by using the remote personal computer operation function (Serial).

## 6) [Change Direction]

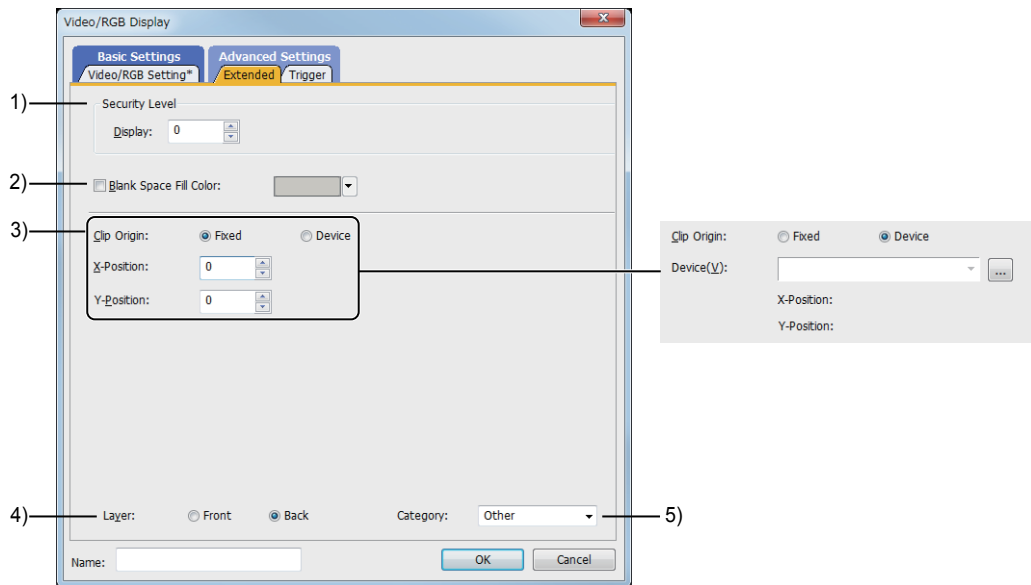

This item appears when [Touch Mode] is set to [Magnification Switching (Loop)].

Select the direction of the display magnification switching.

The following shows the items to be selected.

- [Larger ratio]
- [Smaller ratio]

## ■ 2 [Extended] tab

### 1) [Security Level]

Set the security level when using the security function.

The setting range is [1] to [15].

Set the level to [0] when the security function is not used.

⇒ 5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

### 2) [Blank Space Fill Color]

Fills the blank space of a video/RGB display object.

Select this item, and then set a color to fill the space.

For the details of filling blank space, refer to the following.

⇒ 8.27.1 ■ 8 (4) Filling blank space

### 3) [Clip Origin]

Set the clip origin for the clip display.

For the details of the clip display, refer to the following.

⇒ 8.27.1 ■ 8 (5) Clip display

The following shows selectable items.

- [Fixed]  
Specify the clip origin within given ranges.  
Select this item, and then set [X Position] and [Y Position].  
The following shows the setting ranges.  
[X Position]: [-1280] dots to [1280] dots  
[Y Position]: [-1024] dots to [1024] dots
- [Device]  
Specify the clip origin with a device value.  
Select this item, and then set the first device. Two consecutive devices (signed 16-bit binary), the first device and the subsequent device, are automatically assigned to the X and Y coordinates of the clip origin.  
First device: X coordinate  
Second device: Y coordinate

#### 4) [Layer]

Switches layers to be placed.

The following shows the items to be selected.

- [Front]
- [Back]

This setting is valid only for filling blank space.

For the details of filling blank space, refer to the following.

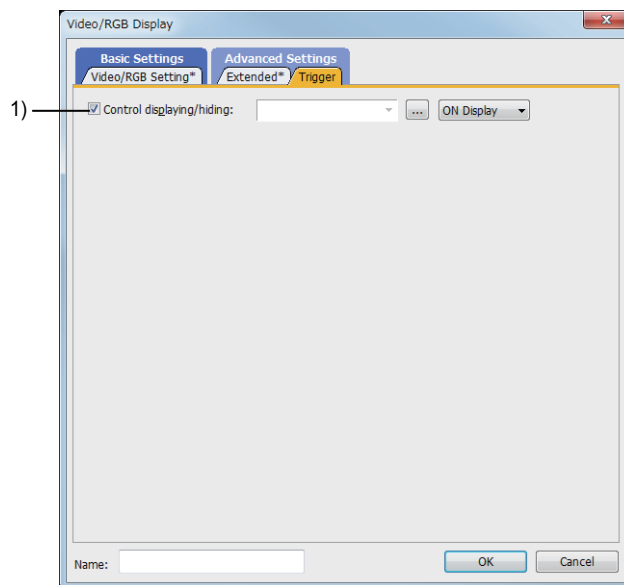

⇒8.27.1 ■ 8 (4) Filling blank space

#### 5) [Category]

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

### ■ 3 [Trigger] tab

#### 1) [Control Displaying/Hiding]

Set the control device to display or hide the object.

Select the ON/OFF status of the set device to display the object.

The following shows the items to be selected.

- [ON Display]
- [OFF Display]

## 8.27.5 Relevant settings

Set the relevant settings other than the specific settings for the video/RGB display object as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT Internal Device

For the details of the devices, refer to the following.

→ 12.1.3 GOT special register (GS)

Function	Setting item
Checking if the input status of the RGB signal for CH1 is recognized	GS252.b15
Checking if the input status of the RGB signal for CH2 is recognized (when an RGB input unit, GT27-R2 or GT27-R2-Z, is used)	GS252.b14
Checking the RGB signal input status of CH1	GS1030
Checking the RGB signal input status of CH2	GS1035
Checking the RGB signal horizontal resolution for CH1	GS1031
Checking the RGB signal horizontal resolution for CH2	GS1036
Checking the RGB signal vertical resolution for CH1	GS1032
Checking the RGB signal vertical resolution for CH2	GS1037
Checking the RGB signal refresh rate for CH1	GS1033
Checking the RGB signal refresh rate for CH2	GS1038

## 8.28 Placing a Script Parts Object

---

A script parts object is placed to create a script.

When the GOT displays the screen on which a script parts object is placed, if the trigger condition for the created script is satisfied, the script runs.

The following object manipulations are supported.

- Copying to another screen
- Grouping
- Registering to the library
- Adding to a template

A script parts object is visible only on the screen editor of GT Designer3.

The object is invisible on the GOT screen.

For information on how to place a script parts object and configure its settings, refer to the following.

→9.9.3 ■ 1 (2) Procedure for setting a script part

For the types of scripts, refer to the following.

→9.8 Controlling Operations with Scripts ([Script])

## 8.29 Placing Another Screen on a Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

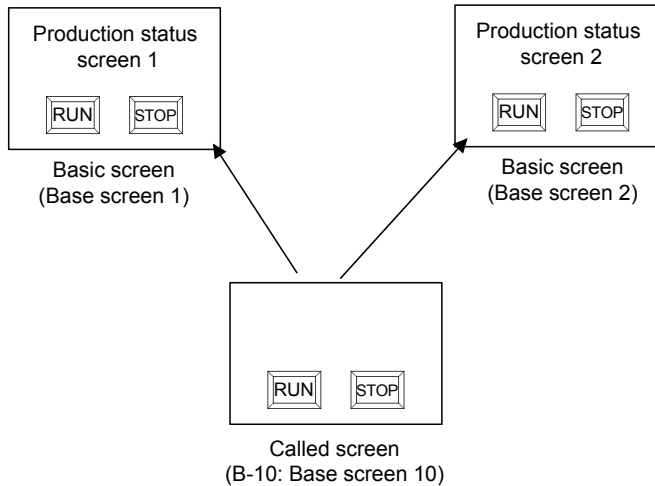

Calling other base screens and window screens (called screen) on a basic screen, this function displays them as a single screen.

When the same objects are used on multiple screens, memory space can be saved.

- When using no set over screen  
Four touch switches need to be set.  
(two on base screen 1, two on base screen 2)

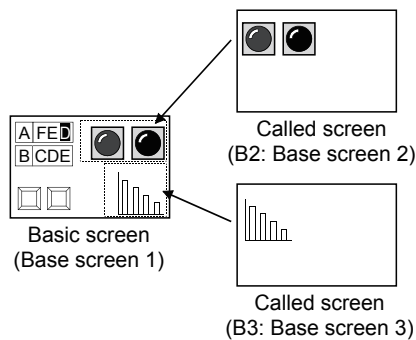

- When using a set over screen  
Only two touch switches need to be set.  
(two on a called screen)  
Because production status screen 1 and 2 display the touch switches on the called screen, no touch switch is required to be placed on production status screen 1 and 2.

Create a screen for placing touch switches and call it from each basic screen.

Application examples

- Displaying multiple called screens on one basic screen

- Placing hierarchically and displaying

## 8.29.1 Specifications of the set overlay screen

The following shows the specifications of the set overlay screen.

### ■ 1 Type of a screen that can be used as the basic screen

The following screens can be used as the basic screen.

- Base screen
- Window screen (Not applicable to GT21)
- Mobile screen (GT27 and GT25)

For calling a mobile screen, refer to the following.

⇒ 10.18.2 ■ 2 Usable functions

### ■ 2 Types of screens that can be used as called screens

The following screens can be used as called screens.

- Base screen
- Window screen
- Mobile screen (GT27 and GT25)

For calling a mobile screen, refer to the following.

⇒ 10.18.2 ■ 2 Usable functions

The trigger actions and screen scripts set for the called screens are executed. (Not available to GT21.)

### ■ 3 Number of set overlay screens that can be placed

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 2047 set overlay screen objects can be placed.
- For GT21  
Up to 5 set overlay screen objects can be placed.

### ■ 4 Hierarchy of called screens

#### (1) Number of layers in the hierarchy

Set overlay screens can be also placed on screens used as called screens.

The type of the basic screen determines the maximum number of layers of displayable called screens.

- For GT27 and GT25  
Base screen or window screen: 16 layers  
Mobile screen: 1 layer
- For GT23 and GT SoftGOT2000  
Base screen or window screen: 16 layers
- For GT21  
Base screen or window screen: 4 layers

#### (2) Relation between security levels of called screens and the display of the layers in the hierarchy

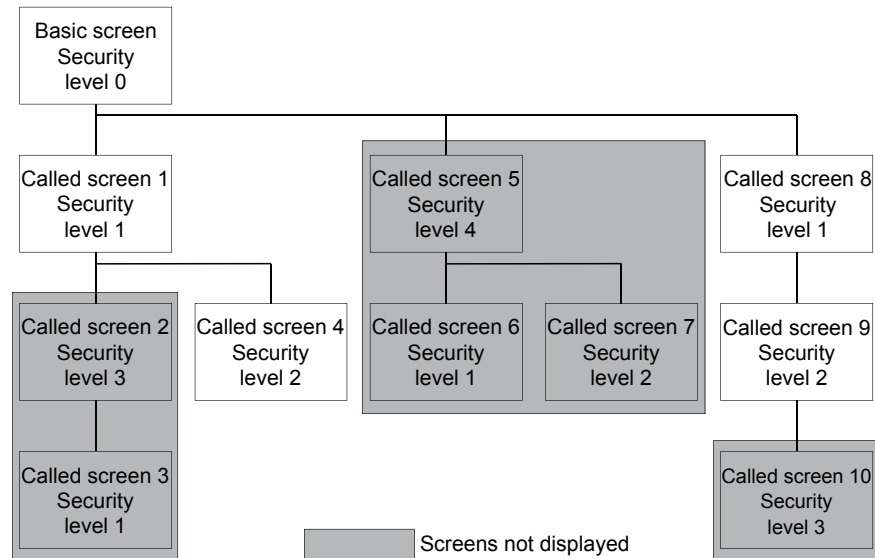

The security set for each called screen is valid.

The following describes the specifications of called screens provided when security is set for each screen.

- When a password entered on a basic screen is at a security level lower than that of called screens, the called screens are not displayed.

- Screens called in nested structures from the screens that cannot be displayed are not displayed.
- If a called screen is not displayed, the trigger action and screen script set for the called screen are not executed.

Example) Called screens that can be displayed with passwords at security level 2

### (3) Display order applied when multiple screens are called

When multiple set overlay screens are placed on one screen, the display order of the called screens is determined according to the order of setting with GT Designer3 and the layer in the hierarchy at which the called screens are set. Called screens are displayed on previously displayed screens. Hence screens placed later in the display order are displayed in front.

The following shows the specifications of the display order.

- When multiple called screens are set on a basic screen, the screens are displayed in order of setting with GT Designer3.
- When called screens are placed hierarchically, the screens are displayed in order of layer in the hierarchy from the shallowest depth.
- When multiple called screens are set on a basic screen and a hierarchy is established, the screens placed hierarchically are displayed first.

Example) When multiple called screens are set on one screen and there are ones placed hierarchically among the called screens (1) to (11): Display order)

### Point

#### (1) Security function, trigger action function, and script function set for each called screen

The security function, trigger action function, and script function set for each called screen are executed in the display order of the called screens.

#### (2) How to check the hierarchy and order in which called screens are set

The hierarchy can be checked in the screen view tree.

→2.2.4 Work tree

The order in which called screens are set can be checked in the data view.

For how to use the data view, refer to the following.

→6.5.2 Selecting figures and objects on the screen editor

## 8.29.2 How to use the set overlay screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the set overlay screen.

### 1 Placing the set overlay screen

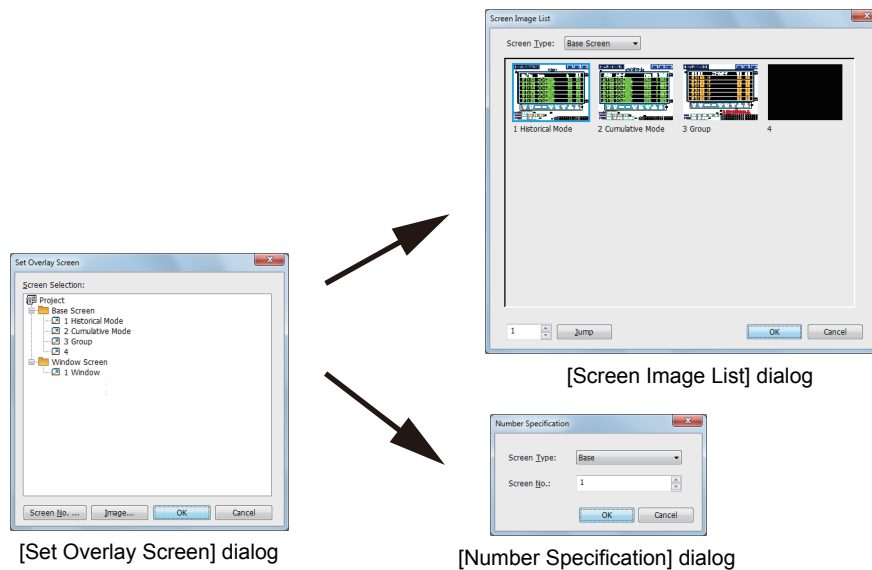

The following shows how to place the set overlay screen.

**Step 1** Select [Object] → [Display Overlay Screen] from the menu.

**Step 2** The [Display Overlay Screen] dialog appears.

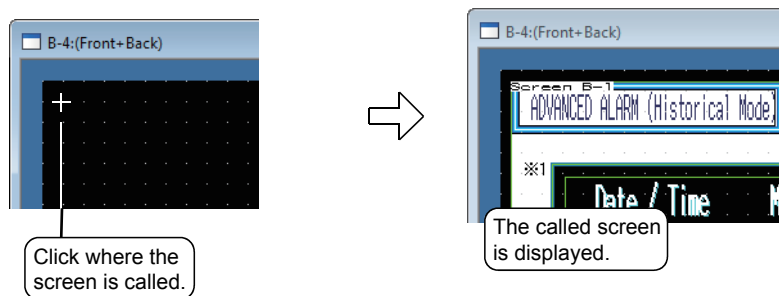

Select a called screen with any one of the following methods and click the [OK] button.

- Select a called screen from the window selection tree.
- Click the [Screen No.] button to display the [Number Specification] dialog, and specify the screen number that has assigned to the called screen.
- Click the [Image] button to display the [Screen Image List] dialog, and select a called screen from the screen images.

**Step 3** On the screen editor, place the set over lay screen.

Click the position where you place the called screen.

### Point

#### (1) Editing called screens

Double-click the set overlay screen that has been placed on the screen editor to open and edit the called screen.

#### (2) Simpler way of setting

Called screens can be placed by dragging them from the screen view tree.

## ■2 Checking set overlay screen settings

Set overlay screen settings can be checked in the screen view tree.  
For the details of the screen view tree, refer to the following.  
⇒2.2.4 Work tree

### 8.29.3 Precautions for a set overlay screen object

This section explains the precautions for set overlay screens.

#### ■1 Editing called screens

Called screens cannot be edited with the set overlay screens (object).  
Open the called screens and edit them.  
When called screens are edited, the edits are reflected to all the set overlay screens.

#### ■2 Editing figures overlapping with set overlay screens

When figures are placed on a basic screen on the back of set overlay screens (object), the figures cannot be edited.  
When selecting and editing figures on a basic screen, click the [Edit] → [Object of Selection] from the menu to deselect [Display Overlay Screen].

#### ■3 Figures and objects placed in the temporary area

When figures and objects are placed in the temporary area for called screens, the figures are displayed but the objects are not displayed with the GOT.

#### ■4 Display of called screens viewed when figures and objects are overlapping

When called screens and figures/objects overlap in the same layer, they are displayed with the GOT as follows.  
For the details of superimposition, refer to the following.  
⇒6.5.5 ■ 3 Superimposition

##### (1) Figure

The shape of the called screen is displayed in front.

When paints are set for figures on the basic screen and the figures overlap with the shapes of called screens, the colors of the figures may not be displayed correctly.

When the color of a figure is not displayed correctly, set the color fill of the figure with the setting dialog for the figure.

## (2) Screen Background

The background color of the called screen is displayed in front.

When the area of the background color overlaps with figures, the figures are not displayed.

When no background color is set or [No pattern] is set for [Pattern] of the background color, the called screen is displayed in the background color of the basic screen.

## (3) Object

Among the objects on basic screens and called screens, ones on which values change are displayed in front.

## (4) Touch switch

Initially, touch switches placed later in the display order are displayed in front.

Subsequently, those with display conditions changed are displayed in front.

## ■5 Displaying the objects of the types for which only one object can be set on one screen

Do not place on both a basic screen and called screen the objects of the types for which only one object can be set on one screen.

When they are placed, they are displayed but the functionality is limited and they do not work correctly.

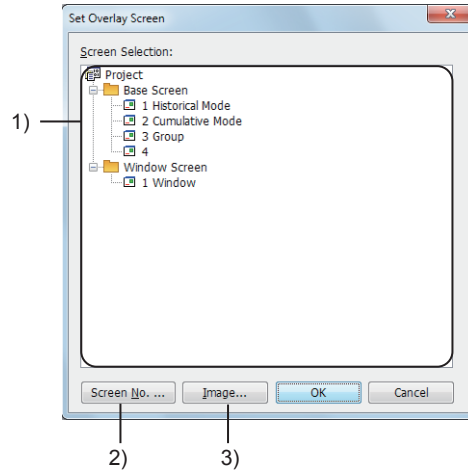

## 8.29.4 [Set Overlay Screen] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The set overlay screen is an object that calls other base screens and window screens (called screen) on a basic screen and display them as a single screen.

**Step 1** Select [Object] → [Display Overlay Screen] from the menu.

The [Display Overlay Screen] dialog appears.

### 1) [Screen Selection]

Select the screen used as a called screen from the tree.

Screens being edited cannot be selected.

### 2) [Screen No.] button

When specifying a called screen with a screen number, click this button.

Displays the [Number Specification] dialog.

Item	Description
[Screen Type]	Select the type of the screen used as a called screen. The following shows the items to be selected. When the basic screen is a mobile screen, the selection is fixed to [Mobile]. • [Base Screen] • [Window Screen]
[Screen No.]	Set the number that has been assigned to the screen used as a called screen. The setting range is [0] to [32767]. Screen numbers cannot be set if the corresponding screens are non-existent.

### 3) [Image] button

When selecting a called screen from the screen preview list, click this button.

Displays the [Screen Image List] dialog.

Item	Description
[Screen Type]	<p>Select the type of the screen used as a called screen. The following shows the items to be selected.</p> <p>When the basic screen is a mobile screen, the selection is fixed to [Mobile].</p> <ul style="list-style-type: none"> <li>• [Base Screen]</li> <li>• [Window Screen]</li> </ul> <p>After selecting the type, select the screen used as a called screen.</p>
[Jump] button	<p>Enter a screen number and click this button to select the corresponding screen. The setting range is [0] to [32767].</p> <p>Screen numbers cannot be set if the corresponding screens are non-existent.</p>

#### 4) [OK] button

After selecting the screen used as a called screen, click this button.

Close the [Set Overlay Screen] dialog.

After clicking this button, click where the called screen should be displayed.

## 8.29.5 Relevant settings

Set the relevant settings other than the specific settings for the set overlay screen as required.  
The following shows the functions that are available by the relevant settings.

### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.

⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### ■ 2 GOT environmental settings (Screen switching/window setting)

Select [Common] → [GOT Environmental Setting] → [Screen Switching/Windows] from the menu to display the [Environmental Setting] dialog.

⇒5.2.1 Setting for switching screens to be displayed on the GOT ([Screen Switching/Window])

Function	Setting item
Setting the position of a called screen in front of or behind the basic screen Regardless of this setting, if the basic screen is a mobile screen, a called screen is always positioned in front of the basic screen.	[Overlay Screen Positioning]
Setting whether to disable the background color of a called screen Regardless of this setting, if the basic screen is a mobile screen, the background color of a called screen is always enabled.	[Disable background colors of overlay screen when setting an overlay screen]

## 8.30 Specifying the Display Position of a Window Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the position of the window screen to be displayed on the base screen.

### Point

#### (1) Operation on the GOT

An overlap window can be moved on the screen of the GOT.

A superimpose window cannot be moved on the screen of the GOT.

#### (2) Controlling the display position of the overlap window with devices

The display position of the overlap window can be controlled with the device value.

### 8.30.1 Specifications of the window position

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of the window position.

#### ■ 1 The type of the screen for which the window position can be set

The window position can be set only for the base screen.

You can set the position of the window screen to be displayed when the base screen is displayed.

#### ■ 2 The type of the screen for which the display position can be set

The following shows the type of windows for which the display position can be set.

- Overlap window
- Superimpose window
- Key window

### 8.30.2 How to use the window position

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use the window position.

#### ■ 1 Setting the window position

The following shows the procedure for setting a window position.

**Step 1** Select [Object] → [Window position] from the menu and select the window whose position is to be set.

The following shows the items to be selected.

- [Overlap Window1]
- [Overlap Window2]
- [Overlap Window3]
- [Overlap Window4]
- [Overlap Window5]
- [Superimpose 1]
- [Superimpose 2]
- [Key Window]

**Step 2** Click the position where you display the window.

A mark indicating the window position is placed.

To display a key window at the position where a window position object is placed, configure one of the following settings.

- In the [Environmental Setting] window, select [Not move] for [Key Window Position Correction] on the [Advanced Setting] tab.
  - 5.2.4 ■ 4 (2) [Advanced Setting] tab
- In the [Screen Property] dialog for a base screen, select [Not move] for [Key Window Position Correction] on the [Key Window Advanced Setting] tab.
  - 2.7.1 ■ 3 [Key Window Advanced Setting] tab

A key window appears near an input object by default.

## ■2 Displaying the preview on the screen editor

The preview of the window screen placed as the window position can be displayed on the screen editor.  
For details, refer to the following.

⇒2.9.2 Displaying the preview of a window screen on the screen editor of a base screen

### 8.30.3 Precautions for a window position object

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This section explains the precautions for the window position.

#### ■1 When using a set overlay screen

The setting of the window position is valid when the screen is opened as the basic screen.

When the screen for which the window position is set is opened as a called screen, the setting of the window position is invalid.

For the details of the set overlay screen function, refer to the following.

⇒8.29 Placing Another Screen on a Screen

#### ■2 When the size of the window screen exceeds the size of the base screen

At setting of the window position, the size of the window screen is not considered.

The following shows the displays that are shown when the size of the window screen exceeds the size of the base screen.

##### (1) Overlap window

The window screen is moved inside the base screen automatically.

##### (2) Superimpose window

The window screen is not moved and the area beyond the base screen is not displayed.

## 8.31 Placing an Object to Display the Input Information

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays the information about the input when numerical values or texts are input to an object using key windows.

For the details of the key window, refer to the following.

→5.2.4 Setting key windows ([Key Window])

### 8.31.1 Specifications of key window objects

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the specifications of key window objects.

#### ■1 Key window object types

The following show the information that can be displayed on the key window objects.

- Input value area: Displays the numerical value or text which is being input to the object.
- Input range area: Displays the maximum and minimum values which can be input to the object.
- Input maximum range area: Displays the maximum value which can be input to the object.
- Input minimum range area: Displays the minimum value which can be input to the object.
- Previous value area: Displays a numerical value or text previously input to the object.

#### ■2 Types of the screen where the key window object can be placed

The following shows the types of the screen where the key window object can be placed.

- Base screen
- Window screen

#### ■3 Number of placeable key window objects

You cannot place each key window object more than once on a screen.

You cannot also place two or more objects in the same type on a screen.

### 8.31.2 How to use key window objects

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to use key window objects.

#### ■1 Placing the key window object

The following shows how to place the key window object.

**Step 1** Select [Object] → [Key Window Object] from the menu, and then select a key window object to be placed.

The following shows the items to be selected.

- [Input Value Area Setting]
- [Input Range Area Setting]
- [Input Maximum Value Area Setting]
- [Input Minimum Value Area Setting]
- [Previous Value Area Setting]

**Step 2** Click the position where you place the object. Placing the object is completed.

**Step 3** Adjust the frame size of the object.

**Step 4** Double-click the placed object to display the [Input Value Area Setting] dialog.

→8.31.4 [Input Value Area Setting] dialog

8.31.5 [Input Range Area Setting] dialog

8.31.6 [Input Maximum Value Area Setting] dialog

8.31.7 [Input Minimum Value Area Setting] dialog

8.31.8 [Previous Value Area Setting] dialog

**Step 5** Click the [OK] button to complete the object settings.

### 8.31.3 Precautions for a key window object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows the precautions for key window objects.

#### ■ 1 Operations for displaying the key window object

The following shows operations that display the key window object except inputting numerical values or texts to the object.

- The security level is changed.
- The language is switched.
- The system language is switched.
- The station number is switched.
- The character code is changed by the Character Code Control (GS456).

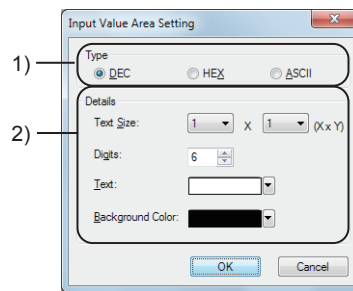

### 8.31.4 [Input Value Area Setting] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The key window object is an object that displays the information about the input when numerical values or texts are input to an object using key windows.

The numerical value or text which is being input to the object is displayed in the input value area.

- Step 1** Select [Object] → [Key Window Object] → [Input Value Area Setting] from the menu.
- Step 2** Click the position where you place the object. Placing the object is completed.
- Step 3** Double-click the placed object to display the [Input Value Area Setting] dialog.

#### 1) [Display Format]

Select the display format.

This setting only determines the setting range of [Digits].

The key window operates on the GOT according to the format of the input object.

The following shows the items to be selected.

- [DEC]
- [HEX]
- [Text]

To create a key window for inputting decimal values, select [DEC].

To create a key window for inputting hexadecimal values, select [HEX].

To create a key window for inputting octal values, select [DEC] or [HEX].

To create a key window for inputting binary values, select [DEC].

To create a key window for inputting characters, select [Text].

## 2) [Detail]

Item	Description
[Font]	Select the font of the text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Size]	Select a text size. For the details of the font and size, refer to the following. → 1.2.5 Font specifications
[Digits]	Set the digits to be displayed. If [DEC] is selected for [Type], the setting range is [1] to [33] digit(s). If [HEX] is selected for [Type], the setting range is [1] to [8] digit(s). If [Text] is selected for [Type], the setting range is [1] to [100] digit(s).
[Text Color]	Set the text color.
[Background Color]	Set the color for the object.

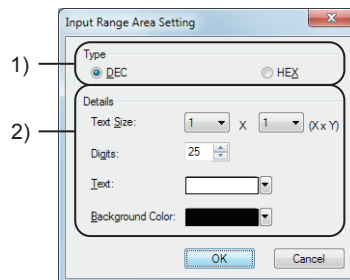

### 8.31.5 [Input Range Area Setting] dialog

The key window object is an object that displays the information about the input when numerical values or texts are input to an object using key windows.

The maximum and minimum values which can be input are displayed in the input range area.

- Step 1** Select [Object] → [Key Window Object] → [Input Range Area Setting] from the menu.
- Step 2** Click the position where you place the object. Placing the object is completed.
- Step 3** Double-click the placed object to display the [Input Range Area Setting] dialog.

#### 1) [Display Format]

Select the display format.

This setting only determines the setting range of [Digits].

The key window operates on the GOT according to the format of the input object.

The following shows the items to be selected.

- [DEC]
- [HEX]

To create a key window for inputting decimal values, select [DEC].

To create a key window for inputting hexadecimal values, select [HEX].

To create a key window for inputting octal values, select [DEC] or [HEX].

To create a key window for inputting binary values, select [DEX].

## 2) [Detail]

Item	Description
[Font]	<p>Select the font of the text. The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Size]	<p>Select a text size. For the details of the font and size, refer to the following. →1.2.5 Font specifications</p>
[Digits]	<p>Set the digits to be displayed. The setting range is [15] to [79] digits. When the device is set with a range expression and the device value exceeds the set number of digits, ? may be displayed. Set the number of digits in consideration of the device value referring to the following. Example 1) D100 &lt;= INPUT &lt;= D200</p> $\begin{array}{ccccccc} \text{D } 100 & \leq & \text{INPUT} & \leq & \text{D } 200 \\ \text{Device value} & & & & \text{Device value} \\ (-32767 \text{ to } & & & & (-32767 \text{ to } \\ 32767)^* & & & & 32767)^* \\ \hline 6 \text{ digits} & + & 13 \text{ digits} & + & 6 \text{ digits} & \text{Input range} \\ & & & & & \boxed{\text{Requires 25 digits.}} \\ & & & & & * \text{ For 16-bit signed decimal numbers} \end{array}$ <p>Example 2) D100 &lt; INPUT</p> $\begin{array}{ccccccc} \text{D } 100 & < & \text{INPUT} \\ \text{Device value} & & & & & & \\ (-32767 \text{ to } & & & & & & \\ 32767)^* & & & & & & \\ \hline 6 \text{ digits} & + & 8 \text{ digits} & & & & \text{Input range} \\ & & & & & & \boxed{\text{Requires 14 digits.}} \\ & & & & & & * \text{ For 16-bit signed decimal numbers} \end{array}$
[Text Color]	Set the text color.
[Background Color]	Set the color for the object.

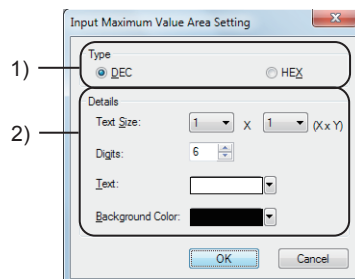

### 8.31.6 [Input Maximum Value Area Setting] dialog

The key window object is an object that displays the information about the input when numerical values or texts are input to an object using key windows.

The maximum value which can be input is displayed in the input maximum range area.

- Step 1** Select [Object] → [Key Window Object] → [Input Maximum Value Area Setting] from the menu.
- Step 2** Click the position where you place the object. Placing the object is completed.
- Step 3** Double-click the placed object to display the [Input Maximum Value Area Setting] dialog.

#### 1) [Display Format]

Select the display format.

This setting only determines the setting range of [Digits].

The key window operates on the GOT according to the format of the input object.

The following shows the items to be selected.

- [DEC]
- [HEX]

To create a key window for inputting decimal values, select [DEC].

To create a key window for inputting hexadecimal values, select [HEX].

To create a key window for inputting octal values, select [DEC] or [HEX].

To create a key window for inputting binary values, select [DEX].

## 2) [Detail]

Item	Description
[Font]	Select the font of the text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Size]	Select a text size. For the details of the font and size, refer to the following. →1.2.5 Font specifications
[Digits]	Set the digits to be displayed. If [DEC] is selected for [Type], the setting range is [1] to [33] digit(s). If [HEX] is selected for [Type], the setting range is [1] to [8] digit(s).
[Text Color]	Set the text color.
[Background Color]	Set the color for the object.

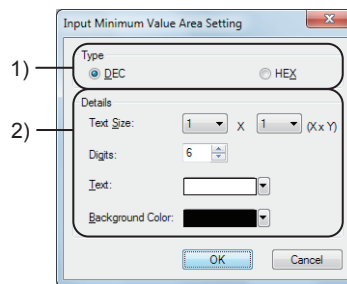

## 8.31.7 [Input Minimum Value Area Setting] dialog

The key window object is an object that displays the information about the input when numerical values or texts are input to an object using key windows.

The minimum value which can be input is displayed in the input minimum range area.

- Step 1** Select [Object] → [Key Window Object] → [Input Minimum Value Area Setting] from the menu.
- Step 2** Click the position where you place the object. Placing the object is completed.
- Step 3** Double-click the placed object to display the [Input Minimum Value Area Setting] dialog.

### 1) [Display Format]

Select the display format.

This setting only determines the setting range of [Digits].

The key window operates on the GOT according to the format of the input object.

The following shows the items to be selected.

- [DEC]
- [HEX]

To create a key window for inputting decimal values, select [DEC].

To create a key window for inputting hexadecimal values, select [HEX].

To create a key window for inputting octal values, select [DEC] or [HEX].

To create a key window for inputting binary values, select [DEX].

## 2) [Detail]

Item	Description
[Font]	Select the font of the text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Size]	Select a text size. For the details of the font and size, refer to the following. →1.2.5 Font specifications
[Digits]	Set the digits to be displayed. If [DEC] is selected for [Type], the setting range is [1] to [33] digit(s). If [HEX] is selected for [Type], the setting range is [1] to [8] digit(s).
[Text Color]	Set the text color.
[Background Color]	Set the color for the object.

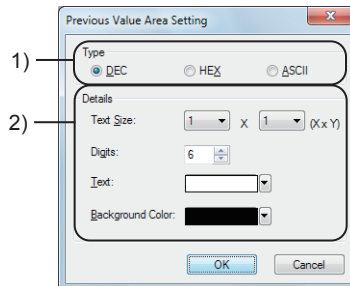

### 8.31.8 [Previous Value Area Setting] dialog

The key window object is an object that displays the information about the input when numerical values or texts are input to an object using key windows.

The numerical value or text that is previously input is displayed in the previous value area.

- Step 1** Select [Object] → [Key Window Object] → [Previous Value Area Setting] from the menu.
- Step 2** Click the position where you place the object. Placing the object is completed.
- Step 3** Double-click the placed object to display the [Previous Value Area Setting] dialog.

#### 1) [Display Format]

Select the display format.

This setting only determines the setting range of [Digits].

The key window operates on the GOT according to the format of the input object.

The following shows the items to be selected.

- [DEC]
- [HEX]
- [Text]

To create a key window for inputting decimal values, select [DEC].

To create a key window for inputting hexadecimal values, select [HEX].

To create a key window for inputting octal values, select [DEC] or [HEX].

To create a key window for inputting binary values, select [DEX].

To create a key window for inputting characters, select [Text].

## 2) [Detail]

Item	Description
[Font]	Select the font of the text. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [6x8dot]</li> <li>• [12dot Standard]</li> <li>• [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)</li> <li>• [16dot Standard] (GT23 and GT21 only)</li> <li>• [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)</li> <li>• [Outline] (GT2107-W only)</li> </ul>
[Size]	Select a text size. For the details of the font and size, refer to the following. → 1.2.5 Font specifications
[Digits]	Set the digits to be displayed. If [DEC] is selected for [Type], the setting range is [1] to [33] digit(s). If [HEX] is selected for [Type], the setting range is [1] to [8] digit(s). If [Text] is selected for [Type], the setting range is [1] to [100] digit(s).
[Text Color]	Set the text color.
[Background Color]	Set the color for the object.

### 8.31.9 Relevant settings

Set the relevant settings other than the specific settings for the key window object as required.  
The following shows the functions that are available by the relevant settings.

#### ■ 1 GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [Type Setting] dialog.  
→ 5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other	[Check for overlapping objects in the GOT] (Not available to GT21.)
Adjusting the stacking order of the objects on the GOT to that on GT Designer3	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

## 8.32 Placing a Print Object on a Report Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ 8.32.1 Specifications of the print object
- 8.32.2 How to use the print object
- 8.32.3 Precautions for a print object
- 8.32.4 [Numerical Print] dialog
- 8.32.5 [Text Print] dialog
- 8.32.6 [Bit Comment Print] dialog
- 8.32.7 [Word Comment Print] dialog

The print object is placed on a report screen to print its device value or the comment corresponding to the device. For the details of the report function, refer to the following.

- ⇒ 10.11 Outputting the Collected Data as a Report (Report Function)

### ■ 1 Numerical print

The numerical print object prints the value stored in a specified device.

Oct. 20, 2013 16:53:24		1
Production line status	Product qty	
Running	100	D100 = 100
Conveyor is stopped.	50	D100 = 50
Completed	10	D100 = 10

### ■ 2 Text print

The text print object prints the text stored in specified consecutive devices.

Oct. 20, 2013 16:53:24		1
Production line status	Product qty	
Running	100	Printing the text stored in D200 to D249
Conveyor is stopped.	50	Printing the text stored in D250 to D299
Completed	10	Printing the text stored in D300 to D349

### ■ 3 Bit comment print

The bit comment print object prints the comment corresponding to a specified bit device.

Oct. 20, 2013 16:53:24		1
Production line status	Product qty	
Running	100	X10 = OFF: Printing the comment specified when the device is off
Conveyor is stopped.	50	X10 = ON: Printing the comment specified when the device is on

### ■ 4 Word comment print

The word comment print object prints the comment corresponding to a specified word device.

Oct. 20, 2013 16:53:24 1	
Production line status	Product qty
Running	100
Conveyor is stopped.	50
Completed	10

-----D200 = 1: Printing comment No.1.  
-----D200 = 10: Printing comment No.10.  
-----D200 = 100: Printing comment No.100.

## 8.32.1 Specifications of the print object

### ■1 Applicable screen

The numerical print, text print, and comment print can be placed on a report screen only.

Up to 260 devices can be monitored on one report screen.

The object devices, collection trigger device, output trigger device, and other devices set for a report screen are included.

### ■2 Specifications of the numerical print

#### (1) Maximum number of printable characters

The maximum number of printable characters depends on the setting of [Format].

- [Signed Decimal] or [Unsigned Decimal]: 14 characters
- [Hexadecimal]: 8 characters
- [Binary]: 32 characters
- [Real]: 33 characters

### ■3 Specifications of the text print

#### (1) Maximum number of printable characters

Up to 50 two-byte or 100 one-byte characters are printable.

#### (2) Applicable character code

The following character codes are applicable.

- ASCII code
- Unicode
- Shift JIS code
- GB code
- KS code
- Big5 code

### ■4 Specifications of the comment print

#### (1) Comment with multiple rows

Only the first row of a comment that involves multiple rows can be printed.

#### (2) Character property

The character property (character effect, character color, and others) cannot be changed.

#### (3) Character size

Two-byte characters are placed by 16 dots × 16 dots. One-byte characters are placed by 16 dots × 8 dots.

#### (4) Maximum number of printable characters

The number of printable characters varies with the setting of [Printer Type] in the [Printer] dialog.

⇒ 10.11.8 [Printer] dialog

[PictBridge] or [ESC/P-R]: Up to 62 two-byte or 124 one-byte characters

[Serial]: Up to 127 two-byte or 255 one-byte characters

## 8.32.2 How to use the print object

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### ■ 1 Placing a print object

Comments displayed by a comment print must be registered in advance.

⇒5.8 Comment Setting ([Comment])

The following shows how to use the numerical print and comment print.

- Step 1** Open the report screen to select [Object] → [Print] from the menu then select either of the following items.
- [Numerical Print]
  - [Text Print]
  - [Bit Comment Print]
  - [Word Comment Print]

**Step 2** Click the position to place the selected object.

**Step 3** Double-click the object to display the setting dialog.

The setting dialog appears.

⇒8.32.4 [Numerical Print] dialog

8.32.5 [Text Print] dialog

8.32.6 [Bit Comment Print] dialog

8.32.7 [Word Comment Print] dialog

**Step 4** Click the [OK] button to complete the object settings.

## 8.32.3 Precautions for a print object

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

For the precautions for a print object, refer to those for the report function.

⇒10.11.4 Precautions

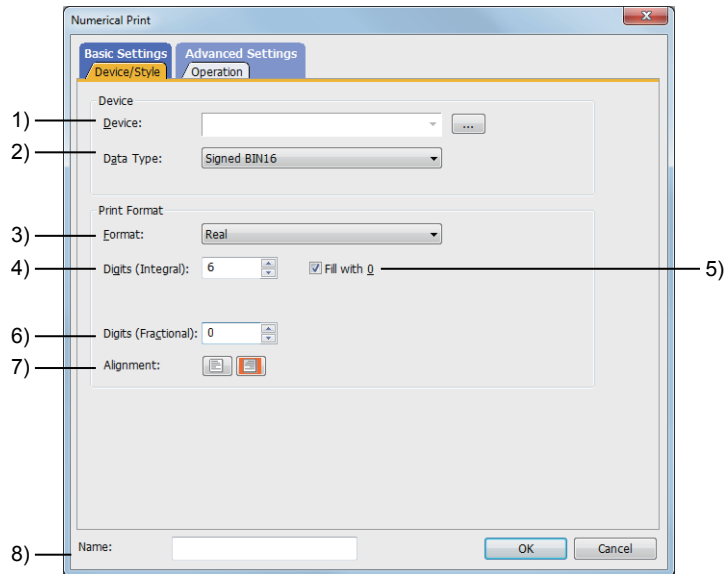

## 8.32.4 [Numerical Print] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Print] → [Numerical Print] from the menu.
- Step 2** Click the position where you place the numerical print. Placing the numerical print is complete.
- Step 3** Double-click the numerical print which has been placed to display the setting dialog.
- ■ 1 [Device/Style] tab
  - 2 [Operation] tab

### ■ 1 [Device/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Device]

Set the device to be monitored.  
→ 6.1.1 How to set devices

#### 2) [Data Type]

Select the data type of the device to be set.  
The following shows the items to be selected.

- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [Real]

#### 3) [Format]

Select the data type at printing.  
The following shows the items to be selected.

- [Signed Decimal]
- [Unsigned Decimal]
- [Hexadecimal]
- [Binary]
- [Real]

#### 4) [Digits (Integral)]

Set the integer digits to be printed.  
The setting range depends on the setting in [Format].

- [Signed Decimal], [Unsigned Decimal]  
[1] to [13] digit(s)
- [Hexadecimal]

- [1] to [8] digit(s)
- [Binary], [Real]
- [1] to [32] digit(s)

### 5) [Fill with 0]

This item can be set when the right justification is set for numerical values in [Alignment].  
Prefixes a numerical value with 0 and adds it.

### 6) [Digits (Fractional)]

This item can be set when [Real] is set in [Format].  
Set the fractional digits to be printed.  
The setting range is [0] to [30] digit(s).

### 7) [Alignment]

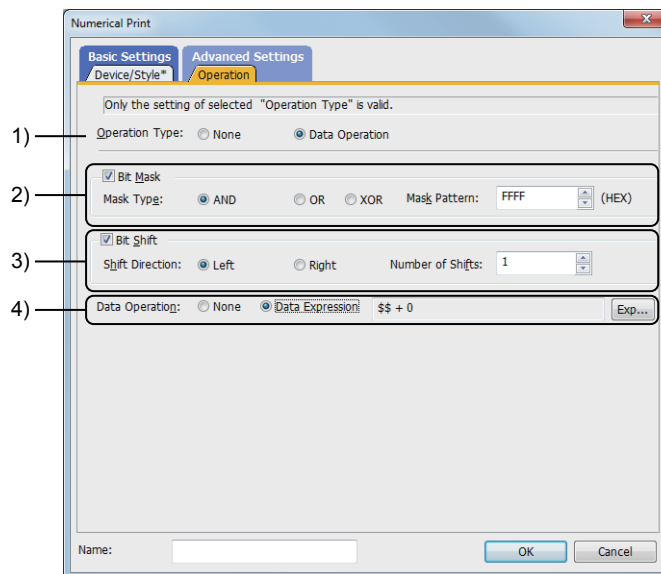

Select the direction of the justification for the numerical values to be printed.

### 8) [Name]

Set the object name.  
The name is displayed in the [Data View] window, property sheet, and others.  
The name is changeable on the other tabs as well.  
Up to 100 characters can be set.

## ■ 2 [Operation] tab

### 1) [Operation Type]

Select whether to use the data operation function.  
The following shows the items to be selected.

- [None]:  
Select this item if the data operation is unnecessary.
- [Data Operation]:  
Select this item if the data operation is necessary.  
For the settings of the data operation function, refer to the following.  
⇒ 6.5.5 ■ 4 Setting data operations

### 2) [Bit Mask]

This item can be set when [Data Operation] is set in [Operation Type].

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 3) [Bit Shift]

This item can be set when [Data Operation] is set in [Operation Type].

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 4) [Data Operation]

This item can be set when [Data Operation] is set in [Operation Type].

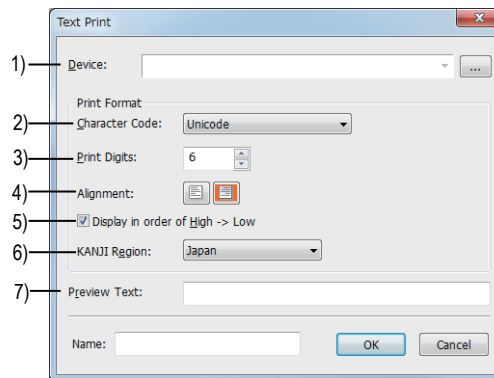

Set the format of the expression.

- [None]  
Select this item not to perform the data operation by using the expression.
- [Data Expression]  
Select this item to perform the data operation by using the expression.  
Click the [Exp] button to display the [Edit Data Expression] dialog.  
Set the expression.  
⇒6.5.5 ■ 4 Setting data operations

## 8.32.5 [Text Print] dialog

- Step 1** Select [Object] → [Print] → [Text Print] from the menu.
- Step 2** Click the position to place a text print.
- Step 3** Double-click the placed object to display the setting dialog.

#### 1) [Device]

Set the first device to be monitored.

⇒6.1.1 How to set devices

When [Unicode] is selected for [Character Code], the number of monitored consecutive devices equals the value set for [Print Digits].

When an item other than [Unicode] is selected for [Character Code], the number of monitored consecutive devices equals the value set for [Print Digits] divided by 2.

#### 2) [Character Code]

Set the character code applied to text.

The following shows the items to be selected.

- [ASCII]
- [Unicode]
- [S-JIS]
- [GB]
- [KS](GT27, GT25, GT23, GT SoftGOT2000)
- [Big5]

3) **[Print Digits]**

Set the number of digits of text printed.

The setting range is [0] to [100].

4) **[Alignment]**

Select the alignment direction of text.

5) **[Display in order of High -> Low]**

Displays text corresponding to the character codes stored in specified devices, starting from higher-order bytes. (When this item is not selected, the text is displayed starting from lower-order bytes.)

6) **[KANJI Region]**

This item is settable when [Character Code] is set to [Unicode].

Set the KANJI region.

The following shows the items to be selected.

- [Japan]
- [China(GB)-Mincho]
- [China(Big5)-Gothic]

7) **[Preview Text]**

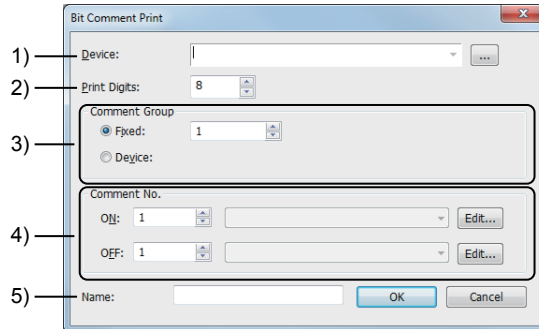

Set the text to be previewed on the screen editor.

Up to 100 characters can be set.

## 8.32.6 [Bit Comment Print] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1** Select [Object] → [Print] → [Bit Comment Print] from the menu.
- Step 2** Click the position where you place the bit comment print. Placing the bit comment print is completed.
- Step 3** Double-click the bit comment print which has been placed to display the setting dialog.

### 1) [Device]

Set the device to be monitored.  
 ⇒ 6.1.1 How to set devices

### 2) [Print Digits]

Set the digits of a comment to be printed.  
 The setting range varies with the setting of [Printer Type] in the [Printer] dialog.  
 ⇒ 10.11.8 [Printer] dialog

- [PictBridge] or [ESC/P-R]: [1] digit to [124] digits
- [Serial]: [1] digit to [255] digits

### 3) [Comment Group]

Set the comment group number to be used.

- [Fixed]:  
 Input directly the comment group number to be used.
- [Device]:  
 Use the comment group of the same number as the device value.  
 Set the device.  
 ⇒ 6.1.1 How to set devices

### 4) [Comment No.]

Set the comment No. to be printed while the bit device to be monitored is on or off.  
 The setting range is [0] to [32767].  
 If [0] is set, the comment is not printed.  
 To print the comment No. only while the bit device to be monitored is on, set [0] while it is off.  
 Click the [Edit] button to display the [Edit Comment] dialog.  
 The displayed comments can be edited.

#### • [Column No.]

Select the column No. of the comment to be edited.

#### • [Comment]

Edit the comment in the comment group.  
 If an unregistered comment group number, comment number, or column number is specified, enter a new comment.  
 Up to 1024 characters can be set for the comment.  
 The number of characters, digits, and rows of the input comment are displayed on the upper right of the comment input field.

- Number of characters:  
 A character is counted as one character.  
 The line feed is counted as two characters.
- Number of digits:  
 The number of digits of the row with the largest number of digits is displayed.
- Number of rows:  
 The number of rows of the comment is displayed.  
 Even though a line feed is inserted without characters, the line feed is counted as one row.

## 5) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

Up to 100 characters can be set.

## 8.32.7 [Word Comment Print] dialog

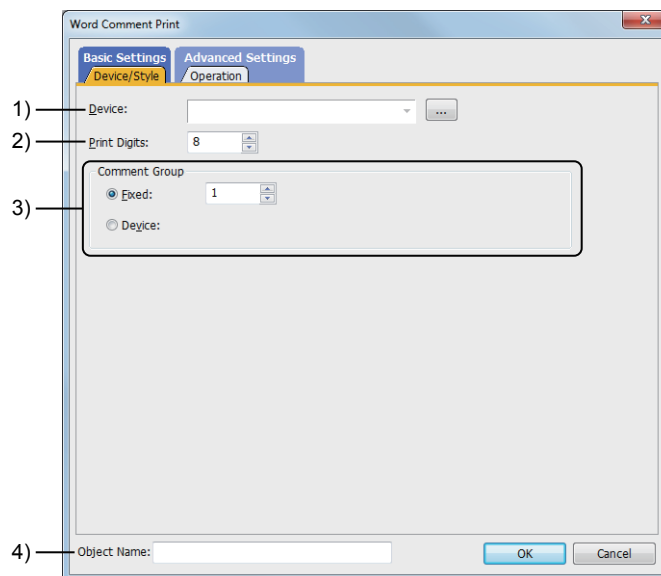

**Step 1** Select [Object] → [Print] → [Word Comment Print] from the menu.

**Step 2** Click the position where you place the word comment print. Placing the word comment print is completed.

**Step 3** Double-click the word comment print which has been placed to display the setting dialog.

- ■ 1 [Device/Style] tab
- 2 [Operation] tab

### ■ 1 [Device/Style] tab

#### 1) [Device]

Set the device to be monitored.

→6.1.1 How to set devices

The comment of the comment No. corresponding to the device value is printed.

#### 2) [Print Digits]

Set the digits of a comment to be printed.

The setting range varies with the setting of [Printer Type] in the [Printer] dialog.

- [PictBridge] or [ESC/P-R]: [1] digit to [124] digits
- [Serial]: [1] digit to [255] digits

#### 3) [Comment Group]

Set the comment group number to be used.

- [Fixed]:  
Input directly the comment group number to be used.
- [Device]:  
Use the comment group of the same number as the device value.  
Set the device.

→6.1.1 How to set devices

#### 4) [Name]

Set the object name.

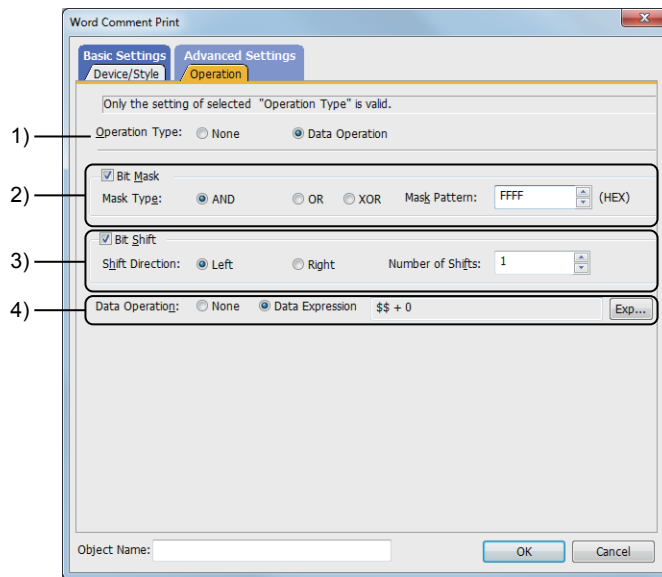

The name is displayed in the [Data View] window, property sheet, and others.

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■ 2 [Operation] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 1) [Operation Type]

Select whether to use the data operation function.

The following shows the items to be selected.

- [None]:  
Select this item if the data operation is unnecessary.
- [Data Operation]:  
Select this item if the data operation is necessary.

For the settings of the data operation function, refer to the following.

→ 6.5.5 ■ 4 Setting data operations

### 2) [Bit Mask]

This item can be set when [Data Operation] is set in [Operation Type].

Set the operation of mask processing.

Item	Description
[Mask Type]	Select a type of mask processing. The following shows the items to be selected. <ul style="list-style-type: none"> <li>• [AND]: Logical AND</li> <li>• [OR]: Logical OR</li> <li>• [XOR]: Exclusive OR</li> </ul>
[Mask Pattern]	Set a pattern value to mask in hexadecimal. The setting range is [0000] to [FFFF].

### 3) [Bit Shift]

This item can be set when [Data Operation] is set in [Operation Type].

Set the operation of shift processing.

Item	Description
[Shift Direction]	Select a shifting direction. <ul style="list-style-type: none"> <li>• [Left]: Left-shift</li> <li>• [Right]: Right-shift</li> </ul>
[Number of Shifts]	Set the number of bits to be shifted. The setting range is [1] to [15] bit(s).

### 4) [Data Operation]

This item can be set when [Data Operation] is set in [Operation Type].

Set the format of the expression.

- [None]  
Select this item not to perform the data operation by using the expression.
- [Data Expression]

Select this item to perform the data operation by using the expression.  
Click the [Data Expression] button to display the [Edit Data Expression] dialog.  
Set the expression.

⇒6.5.5 ■ 4 Setting data operations

## 8.32.8 Relevant settings

---

For the settings related to the report function, refer to the following.

⇒10.11 Outputting the Collected Data as a Report (Report Function)

## 8.33 Placing a Hyperlink on a Mobile Screen

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- 8.33.1 Specifications of the hyperlink object
- 8.33.2 How to use the hyperlink object
- 8.33.3 Precautions for a hyperlink object
- 8.33.4 [Hyperlink] dialog

The hyperlink object is placed on a mobile screen to access a website or a file in the GOT public folder, or to make a phone call from a GOT Mobile function client.

For the details of the GOT Mobile function, refer to the following.

- 10.18 Monitoring a Controller from Tablets or Other Clients (GOT Mobile Function)

### ■1 Application examples

#### (1) Opening a website

You can access a website by specifying its URL.

#### (2) Opening a file in the public folder

You can access or download a file in the GOT public folder through a browser.

For the details of the public folder, refer to the following.

- 10.18.2 ■ 7 Public folder

Example) When accessing a PDF file

#### (3) Making a phone call

You can call a specified phone number.

## 8.33.1 Specifications of the hyperlink object

---

### ■ 1 Maximum number of objects on one screen

The maximum number of hyperlink objects and other objects combined is 1024 on one screen.

### ■ 2 Applicable screen

The hyperlink object can be placed only in the mobile screen.

## 8.33.2 How to use the hyperlink object

---

### ■ 1 Placing a hyperlink object

Place a hyperlink object on the screen editor.

⇒6.5.1 Placing figures and objects

### ■ 2 Editing a hyperlink object

Edit a hyperlink object placed on the screen editor.

⇒6.5.2 Selecting figures and objects on the screen editor

6.5.3 Editing figures and objects

### ■ 3 Configuring the hyperlink object setting

Configure the setting for a hyperlink object placed on the screen editor.

- Common setting of objects

⇒6.5.5 Common setting for objects

- Hyperlink object setting

⇒8.33.4 [Hyperlink] dialog

### 8.33.3 Precautions for a hyperlink object

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### ■ 1 Behavior of the hyperlink function dependent on the GOT Mobile function client

##### (1) When opening a file in the public folder

To open a file in the public folder, the client to be used must have the application that supports the file format. If the client does not have the applicable application, the file is downloaded to the client.

##### (2) When making a phone call

To call a specified phone number, the client to be used must have a phone call function.

#### ■ 2 When hyperlink objects overlap one another

If you touch the overlapping portion between hyperlink objects, the hyperlink object at the front operates only.

#### ■ 3 When sliding your finger on a hyperlink object

If you slide your finger within the touch area of a hyperlink object, the object operates when you release your finger.

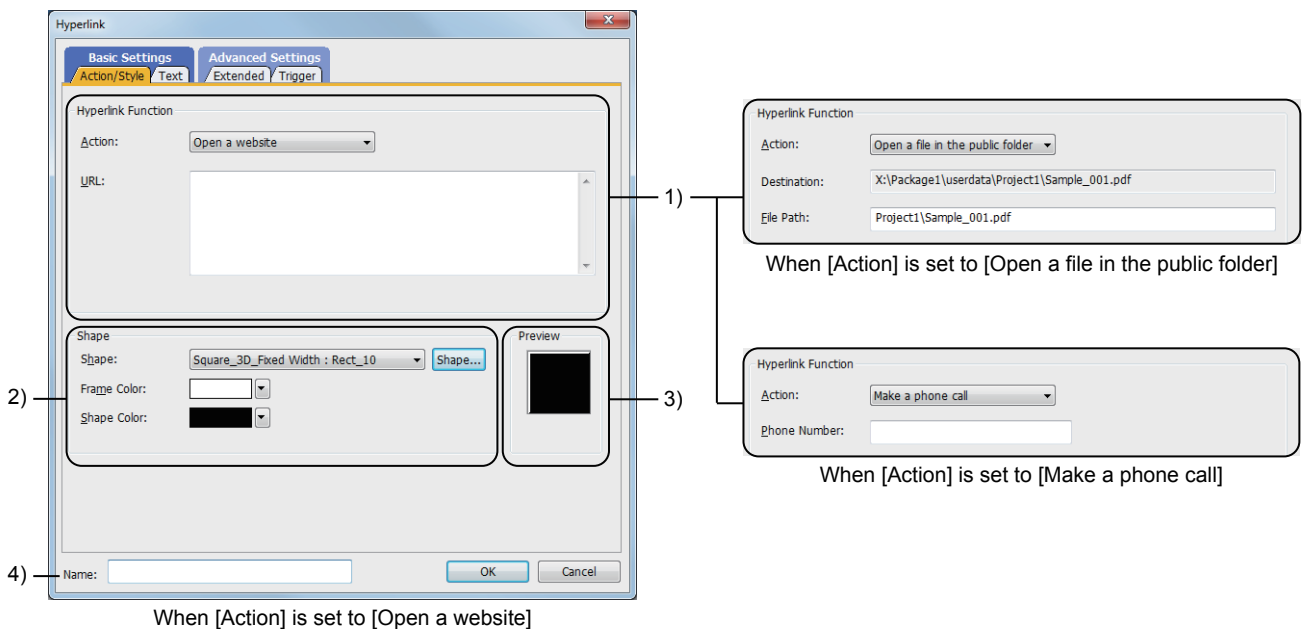

### 8.33.4 [Hyperlink] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- Step 1 Select [Object] → [Hyperlink] from the menu.
- Step 2 Click the position to place a hyperlink object.
- Step 3 Double-click the placed object to display the setting dialog.
  - ■ 1 [Action/Style] tab
  - 2 [Text] tab
  - 3 [Extended] tab
  - 4 [Trigger] tab

#### ■ 1 [Action/Style] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### 1) [Hyperlink Function]

The setting items differ depending on the selection for [Action].

Item	Description
[Action]	The following shows selectable items. <ul style="list-style-type: none"> <li>• [Open a website]</li> <li>• [Open a file in the public folder]</li> <li>• [Make a phone call]</li> </ul>
[URL]	Set the URL of a website to be accessed. Specify the URL with one-byte alphanumerics and symbols within 2083 characters.
[Destination]	Displays the full path to the file to be opened in the GOT public folder. If a message saying [The public folder is not set] appears, select [Allow external access to GOT public folder] in the [GOT Mobile Setting] window ([Basic Setting]). →10.18.6 ■ 1 [Basic Setting]
[File Path]	Set the relative path to the file to be opened in the GOT public folder (including sub folders). Example) When opening Sample_001.pdf in the Project1 folder under the GOT public folder  For restrictions on the folder name and file name, refer to the following. →12.4 Restrictions for Folder Names and File Names used in GOT
[Phone Number]	Set a phone number to be called. Specify the phone number with one-byte numerics and no hyphen within 15 digits.

## 2) [Shape]

Item	Description
[Shape]	Set a shape for the hyperlink object. To select a shape other than those in the list box, click the [Shape] button.
[Frame Color]	Set the frame color of the shape.
[Shape Color]	Set the color of the shape.

## 3) [Preview]

Object preview

## 4) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

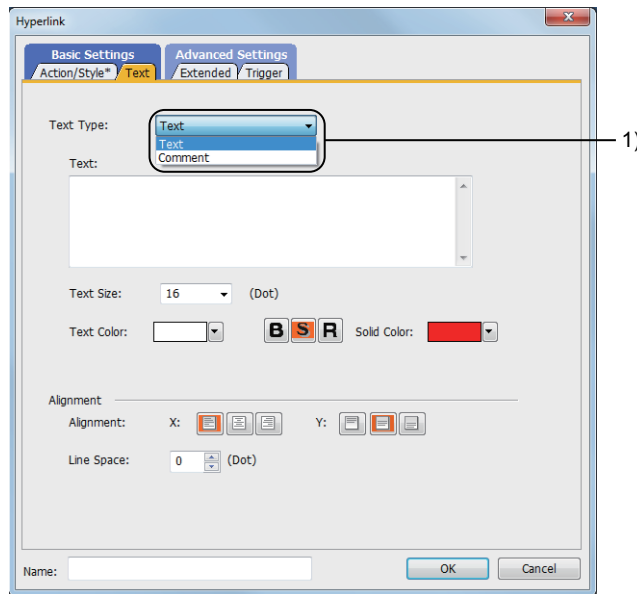

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## ■2 [Text] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can select the text type to display the entered characters or a comment in a comment group on the object.

### 1) [Text Type]

Item	Description
[Text]	Displays the entered characters on the object. If characters have already been entered in the [Text] field, switching the text type from [Text] to [Comment] enables you to register the entered characters in a comment group. For the registration method for the comment group, refer to the following. →5.8.4 ■ 12 (2) Registering the characters in the [Text] field to a comment group
[Comment]	Displays a comment of a specified comment group on the object.

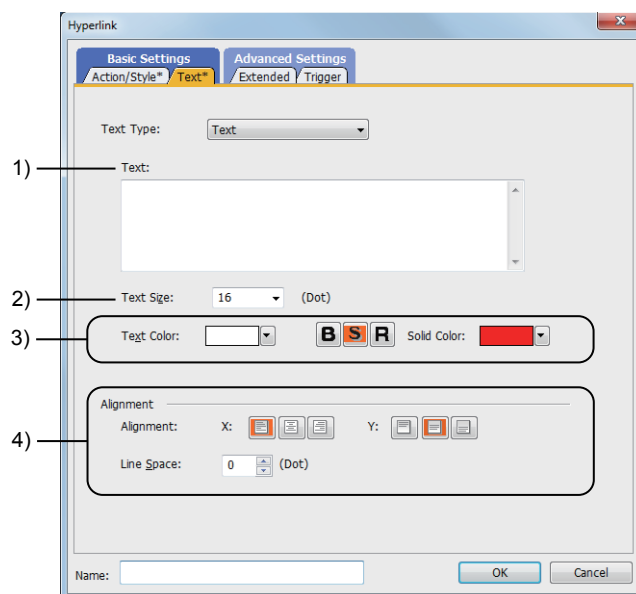

For the setting of the comment group, refer to the following.

→5.8 Comment Setting ([Comment])

The setting items differ according to the text type.

The following shows the setting items for each text type.

### (1) [Text]

### 1) [Text]

Enter characters to be displayed on the object.

Up to 1024 characters can be set.

To display the characters in multiple lines, press the [Enter] key at the end of a line.

(A line feed is counted as two characters.)

## 2) [Text Size]

Set the size of the text to be displayed on the object.

The setting range for the vertical and horizontal orientations is [8] dots to [240] dots (in 1-dot units).

## 3) [Text Color]

Set the color and style of the text to be displayed on the object.

One style ([Bold], [Solid], or [Raised]) is settable only.

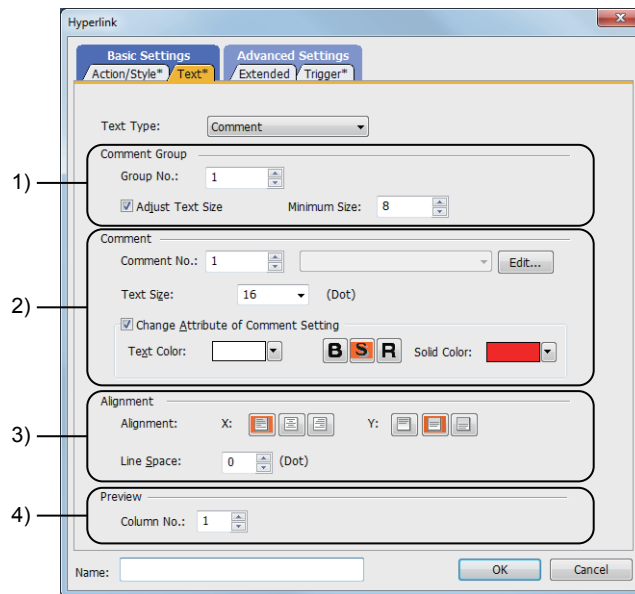

Item	Description
[Text Color]	Set the text color. →6.4 Color Settings
[Bold] button	Displays the text in bold.
[Solid] button	Displays the text with a shadow.
[Raised] button	Displays the text embossed.
[Solid Color]	When [Solid] or [Raised] is selected as the text style, set the color of the shadow.

## 4) [Alignment]

Item	Description
[Alignment]	Set the vertical and horizontal positions of the text.
[Line Space]	Set the space between lines in units of dots. The setting range is [0] dots to [128] dots.

## (2) [Comment]

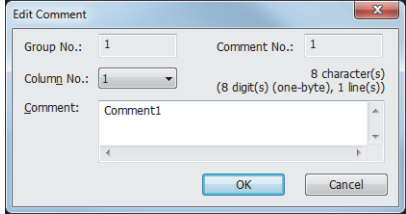

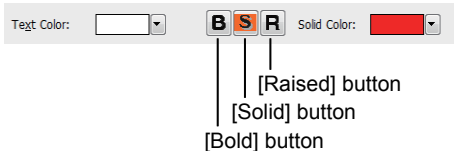

### 1) [Comment Group]

Item	Description
[Group No.]	Set the comment group number to be used. The setting range is [1] to [500].
[Adjust Text Size]	Automatically adjusts the text size according to the object size. When this item is not selected, a line feed is automatically inserted if the text is more than one line.

Item	Description
[Minimum Size]	Set the minimum text size applied when the text size is automatically adjusted. The setting range is [8] dots to [240] dots.

## 2) [Comment]

Item	Description
[Comment No.]	<p>Set the comment number to be displayed. The setting range is [0] to [32767]. To edit the comment to be displayed, click the [Edit] button to display the [Edit Comment] dialog. If you specify an unregistered comment group number or comment number, a comment is newly created.</p>  <ul style="list-style-type: none"> <li>• <b>[Column No.]</b> Select the column number of the comment to be edited.</li> <li>• <b>[Comment]</b> Edit the specified comment. If an unregistered comment group number, comment number, or column number is specified, enter a new comment. Up to 1024 characters can be set for the comment. The numbers of characters, digits, and lines of the comment are displayed on the upper right above the comment entry field. <ul style="list-style-type: none"> <li>• Number of characters: A one-byte or two-byte character is counted as one character. A line feed is counted as two characters.</li> <li>• Number of digits: A one-byte character is counted as one digit, and a two-byte character is counted as two digits. Among the lines, the largest number of digits is displayed.</li> <li>• Number of lines: The number of lines of the comment is displayed. If only a line feed is inserted, it is counted as one line.</li> </ul> </li> </ul>
[Text Size]	Set the size of the text to be displayed on the object. The setting range for the vertical and horizontal orientations is [8] dots to [240] dots (in 1-dot units).
[Change Attribute of Comment Setting]	<p>Change the comment attributes. Set the color and style of the text to be displayed on the object. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• <b>[Text Color]</b> Set the text color. →6.4 Color Settings</li> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> <li>• <b>[Solid Color]</b> When [Solid] or [Raised] is selected as the text style, set the color of the shadow.</li> </ul>

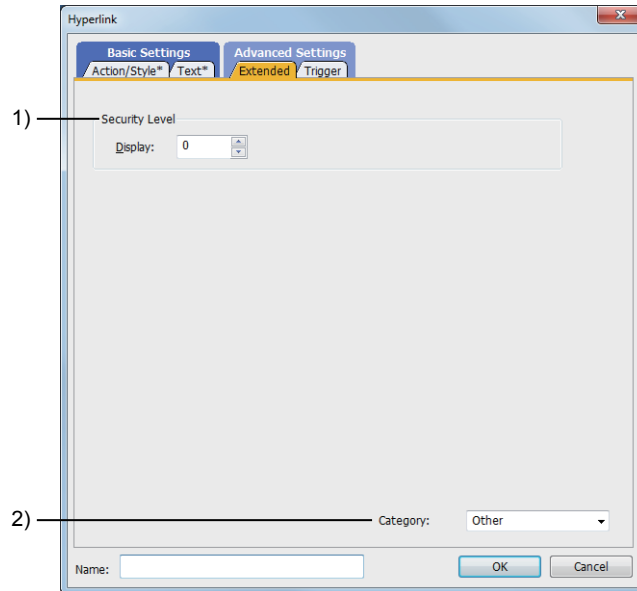

## 3) [Alignment]

Item	Description
[Alignment]	Set the vertical and horizontal positions of the text.
[Line Space]	Set the space between lines in units of dots. The setting range is [0] dots to [128] dots.

#### 4) [Preview]

Item	Description
[Column No.]	Set the column number of the comment to be displayed on the object on GT Designer3.

### ■ 3 [Extended] tab

#### 1) [Security Level]

Set a security level when using the security.

The setting range is [0] to [15].

If you do not use the security, select [0].

⇒5.2.6 Configuring the security settings for displaying screen data on the GOT ([Screen Security])

#### 2) [Category]

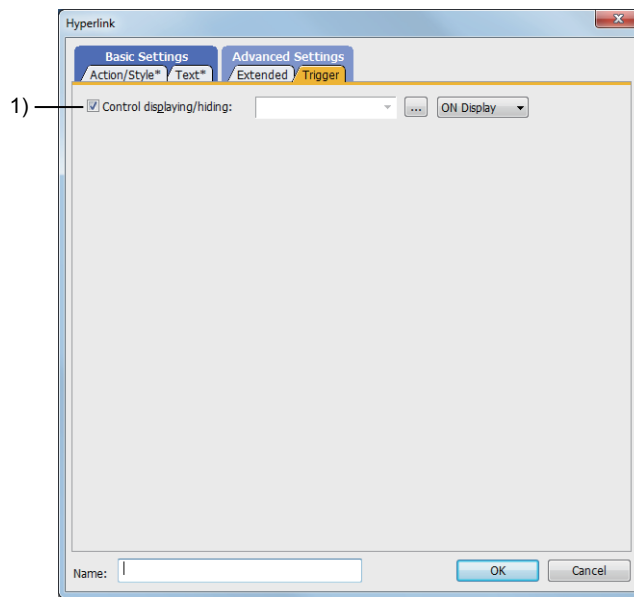

Select the category to assign the object.

⇒11.7 Managing figures and objects by category

## ■4 [Trigger] tab

## 9.1 Collecting Alarms by Monitoring Devices or the System ([Alarm])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 9.1.1 Overview of the alarm function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

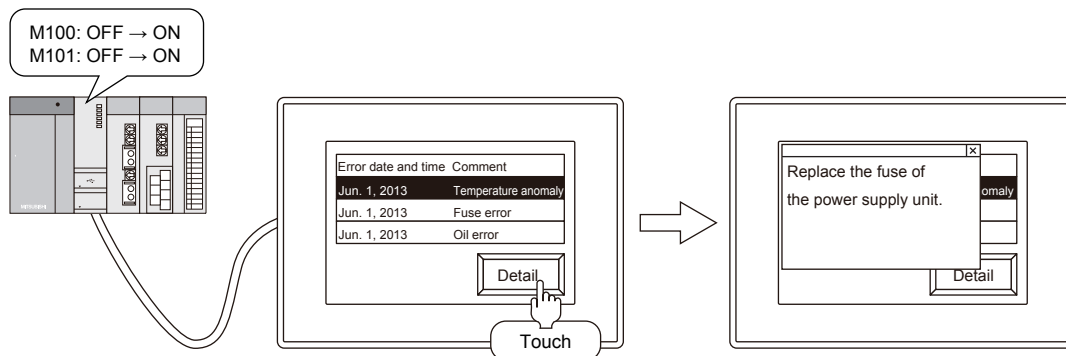

#### 1 Alarm type

The GOT collects the following alarms.

##### (1) User alarm

GT27 GT25 GT23 GT21 SoftGOT2000 GS

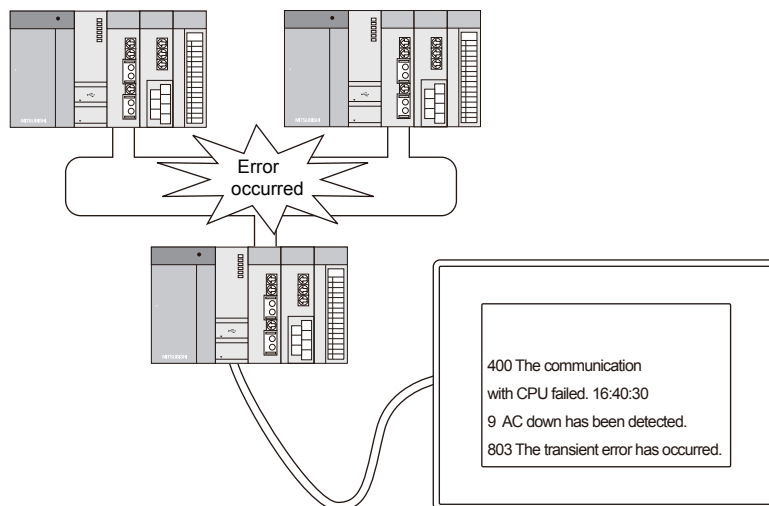

This function displays a comment created by user as an alarm message when an alarm occurs. Use this function when displaying an alarm created by a user.

##### (2) System alarm

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function displays the error code and the error message when an error occurs in the GOT, controller, or network. Use this function when displaying an error occurred in the GOT, controller, or network.

## ■2 Available functions in the alarm

The GOT collects and displays alarms as follows.

### (1) Displaying the comment set previously at the alarm occurrence

You can register any comment for the user alarm.

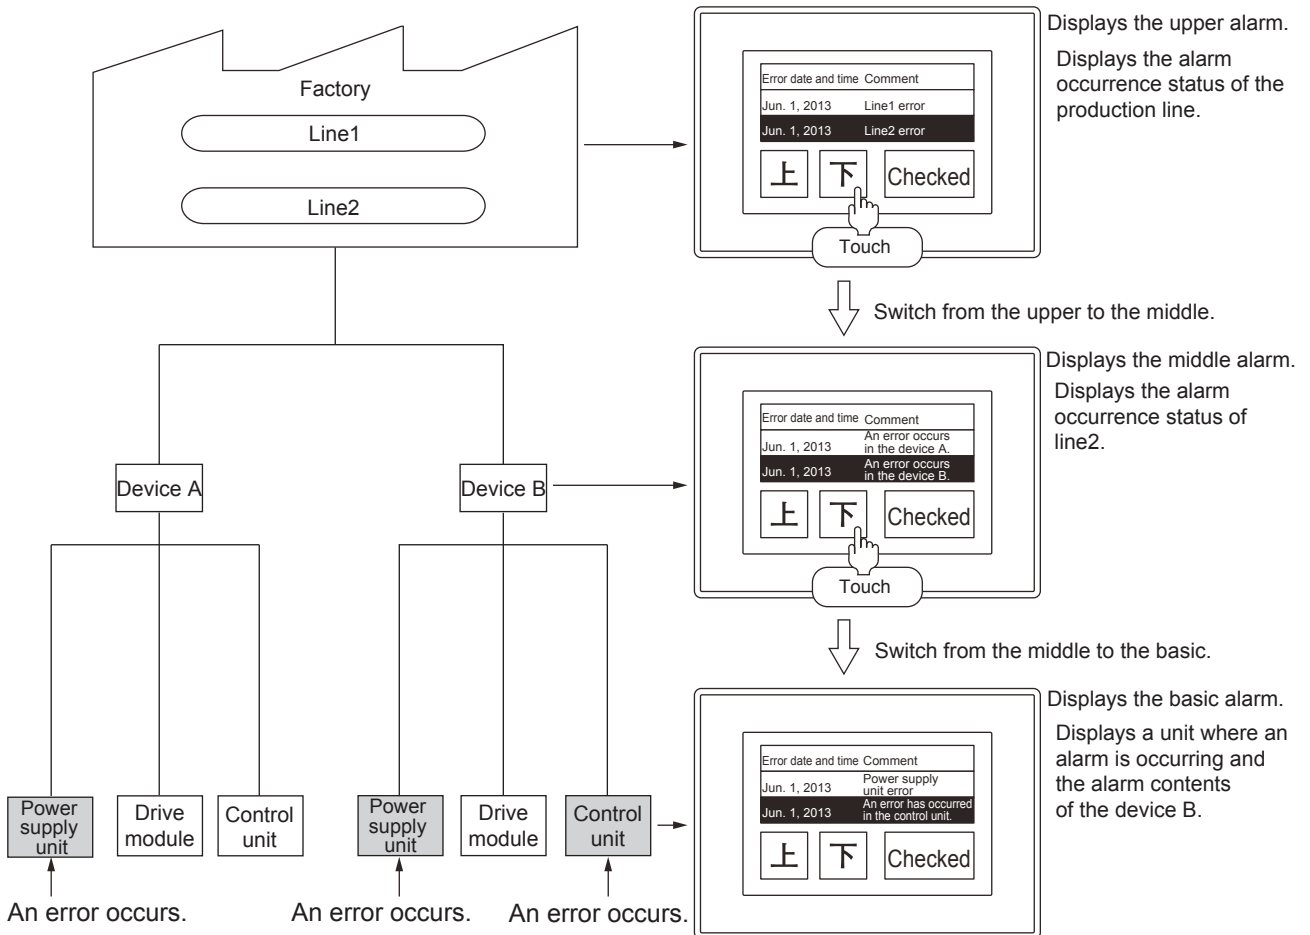

### (a) Displaying comments by level in the hierarchy

The user alarm function displays the comment for one alarm in the upper alarm comment, middle alarm comment, or basic alarm comment.

→9.1.5 ■ 4 (1) [Alarm Setting] tab

This enables you to check the alarm from the overview to the detail.

## (b) Displaying the comment by switching the language

Switch the language for the comment by the value of the device (language switching device).

Comment group setting

Column No.	1 <Remark>	2 <Remark>	3 <Remark>	Attribute Settings	
Windows Font	None	None	None	Attributes	
Comment No. (HEX)	KANJI Region Japan	KANJI Region Japan	KANJI Region Japan	Text	Invert
0x0001	温度異常	Temperature anomaly		<input type="checkbox"/>	No
0x0002	ヒューズエラー	Fuse error		<input type="checkbox"/>	No
0x0003	オイルエラー	Oil error		<input type="checkbox"/>	No
0x0004	燃料エラー	Fuel error		<input type="checkbox"/>	No

発生日時	コメント
13/6/1 11:35:52	温度異常
13/6/1 09:45:30	ヒューズエラー
13/6/1 08:15:45	オイルエラー
13/6/1 05:22:35	燃料エラー

Language switching device: 1

Occurred	Comment
Jun. 1, 2013 11:35:52	Temperature anomaly
Jun. 1, 2013 09:45:30	Fuse error
Jun. 1, 2013 08:15:45	Oil error
Jun. 1, 2013 05:22:35	Fuel error

Language switching device: 2

## (2) Checking the working status of the equipment by displaying the alarm information

The alarm function displays the following items.

- Occurred time
- Comment
- Restored time
- Checked time
- Cumulative Time \*1
- Frequency
- Alarm status
- Down Time \*2
- Level \*3
- Group \*3

\*1 The total of alarm occurrence times.

\*2 The time from the alarm occurrence to the restoration.

\*3 By setting the level or group for each alarm, the display contents can be narrowed.

By the information above, you can understand the working status of the equipment and you can identify the cause of the deterioration of productivity.

## (3) Operating the display contents

### (a) Changing the display order by the setting

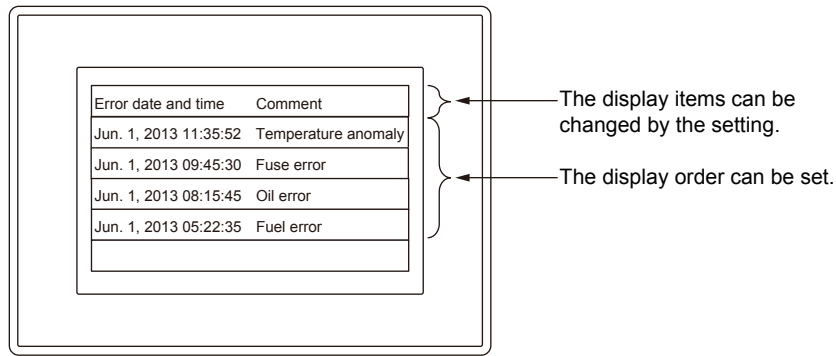

Set the display order for the displayed alarms.

You can sort the display order by the ascending order or the descending order of either of following conditions.

- Error date and time
- Comment
- Alarm status
- Restored
- Checked
- Frequency
- Cumulative Time
- Down Time
- Level

- Group

Example) When displaying alarms in the descending order of the date of alarm occurrence

The display order can be changed by the device value.

→ 9.1.1 ■ 2 (3) (b) Operating the alarm display by device

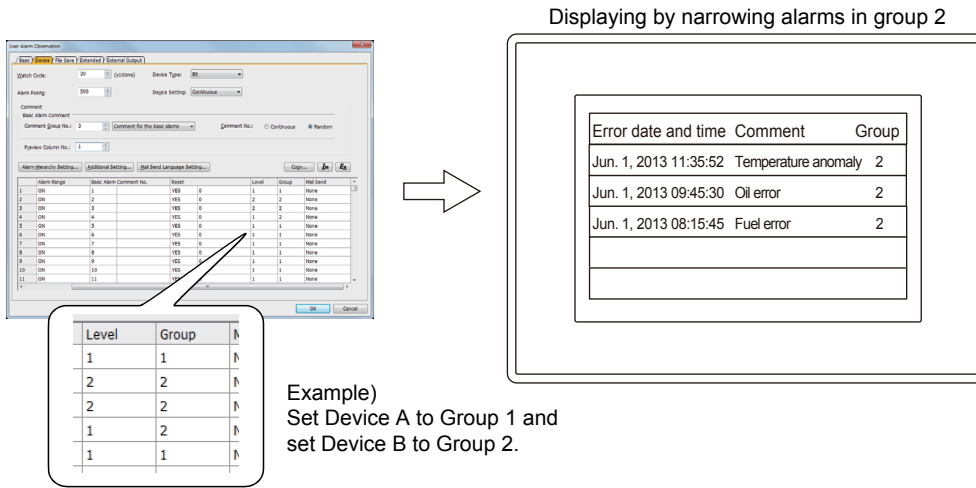

(b) Operating the alarm display by device

- Displaying or hiding the alarm  
You can display or hide the alarm by the device.

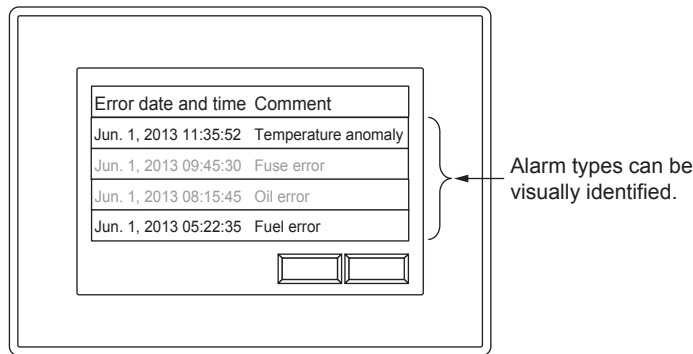

- Narrowing the display contents  
You can narrow the display contents by the device.

By setting the level or group for each alarm, the display contents can be narrowed.  
Two or more items can be set for narrowing the display contents.

**(c) Setting a display color for the alarm contents**

By displaying different character colors for each alarm, you can distinguish the alarm type visually.  
The character color can be set only for the alarm popup display.

**(d) Displaying the alarm only at the alarm occurrence**

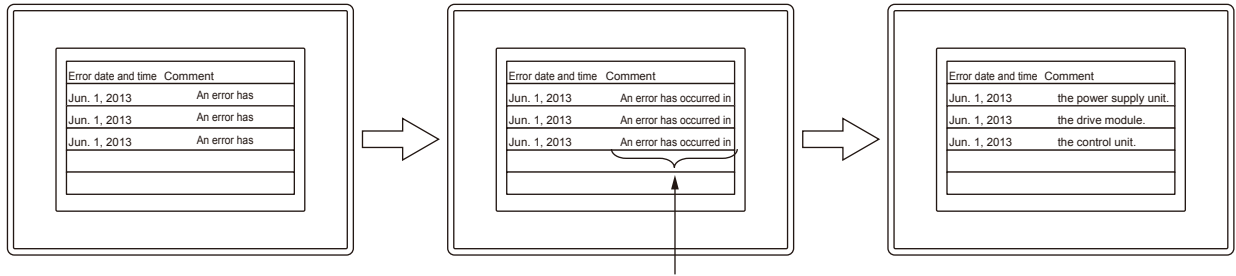

By using the alarm popup display, you can display the alarm only at the alarm occurrence without arranging the alarm display object.  
When an object is placed on the alarm display position, the alarm is displayed.  
Touching the alarm popup display on the screen switches a screen or level in the hierarchy, or displays the detail display.

**(e) Scrolling comment display**

The comments at the alarm occurrence are displayed by scrolling across the screen from right to left.  
This function displays whole comments even when the display area is narrow.

Comments are displayed by scrolling across the screen from right to left.

**(f) Writing the alarm information to devices**

You can write the touched alarm information to a device.  
The following shows the writable information.

- Alarm ID
- Comment group No.
- Comment No.
- Alarm status
- Occurrence date
- Occurrence time
- Date of restoration
- Time of restoration
- Date of confirmation
- Time of confirmation
- Level
- Group
- Frequency
- Cumulative Time
- Down Time

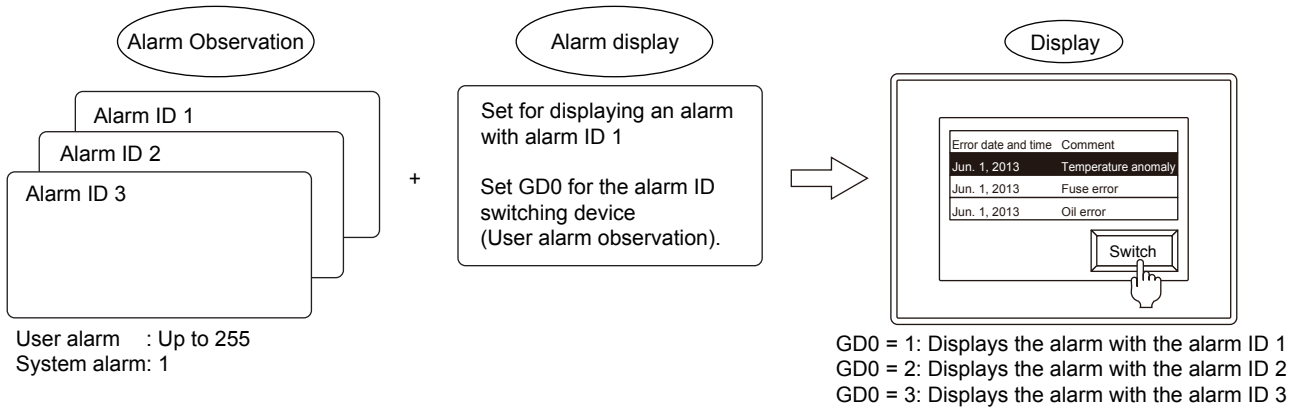

The detail message of the selected alarm can be displayed in the comment display.  
In addition, the contents that cannot be displayed due to a narrow screen can be written to the device.

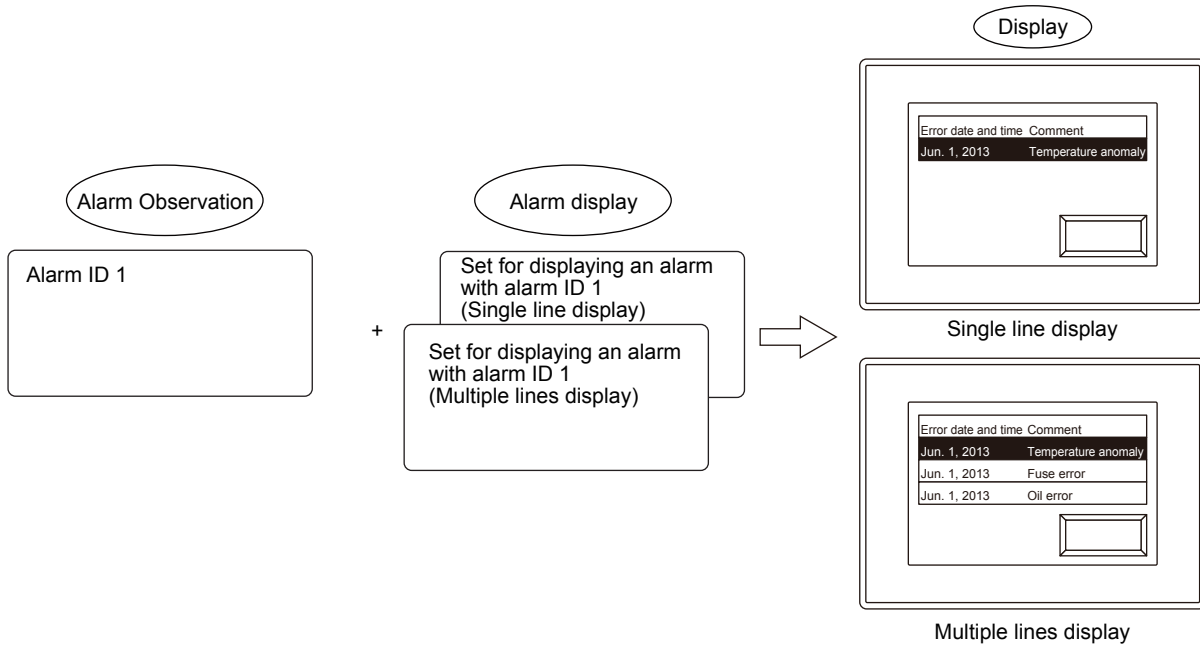

**(g) Setting any alarm monitor device**

The alarm monitor device can be set by the user.  
Set the monitor device (alarm monitor) and the alarm display in different screens.

- Configuring multiple monitor device settings (alarm monitor) and displaying on one screen by switching the screen

- Arranging various displays by one monitor device setting (alarm monitor)

#### (h) Storing the alarm data (power failure backup)

By storing the alarm data as alarm log files, the alarm histories can be stored even when the GOT is powered off.

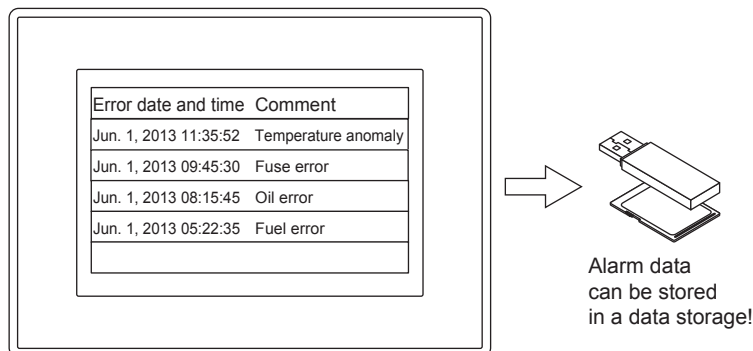

- Storing the alarm data in data storage

You can store the user alarm history and the system alarm history in data storage.

Set whether to store or not each monitor device of the user alarm and the system alarm, and set the folder name and file name for each user alarm history and the system alarm history.

Set the timing for the storage from any of the rise, fall, cycle, ON sampling, or OFF sampling with the device.

When an alarm log file exists in the data storage, the alarm data in the data storage are read automatically when the GOT is powered on from off.

- Storing the alarm data in SRAM user area

You can store the user alarm history and the system alarm history in SRAM user area.

The latest alarm data are stored.

Set whether to store or not each monitor device of the user alarm and the system alarm.

When an alarm log file exists in the SRAM user area, the alarm data in the SRAM user area are read automatically when the GOT is powered on from off.

**(i) Utilizing the stored data**

The stored alarm log files can be displayed and edited in a personal computer, and displayed in a graph in the GOT.

- Outputting the alarm log files to a Unicode text file or a CSV file

The alarm data can be output to a Unicode text file and a CSV file.

The output alarm data can be displayed and edited on a personal computer.

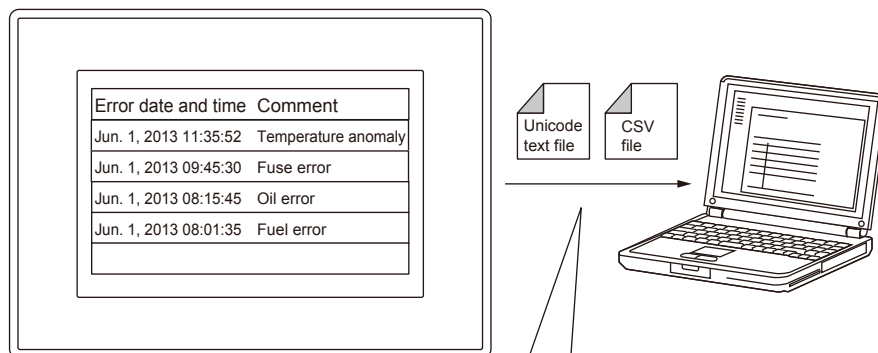

To display and edit the alarm data on a personal computer, store the Unicode text file or the CSV file into the personal computer.

To read the resource data with GT Designer3, refer to the following.

⇒4.3.2 ■ 3 Reading the data from the GOT

To read the CSV file stored in the data storage to the personal computer, refer to the following.

⇒4.5 Transferring the Data with Data Storage

When reading a CSV file

	A	B	C	D	E	F	G	H	I
1	STX_ALARM_LOG_CUMULATIVE	6							
2		1							
3	HISTORY BY LINE								
4	COMMENT_GROUP_NUM	4							
5	ALARM_HISTORY_NUM	6							
6	NOT_RESOLVED_NUM	6							
7	UNCONFIRMED_NUM	4							
8	UPPER_NO	MIDDLE_NO	COMMENT_NO	COMMENT	STATUS	OCCURRED	RESTORED	CHECKED	LEVEL
10	1	2	5	Internal pressure error	RC	2013/6/1 11:48	2013/6/1 12:10	1	1
11	1	2	6	Barbally error	R	2013/6/1 11:44	*****	1	1
12	1	1	1	Temperature anomaly	R	2013/6/1 11:10	2013/6/1 11:40	1	1
13	1	1	1	Fuse error	R	2013/6/1 9:45	*****	1	1
14	1	1	1	Oil error	RC	2013/6/1 8:15	2013/6/1 8:17	1	1
15	1	2	4	Fuel error	R	2013/6/1 8:01	*****	1	1

- Converting the alarm log file stored in the data storage

The alarm log file can be converted into a CSV file or a Unicode text file.

For the conversion with the utility of the GOT, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

For the conversion with the conversion trigger device, refer to the following.

⇒9.1.2 ■ 6 [User Alarm Observation List] dialog

For the conversion with GT Designer3, refer to the following.

⇒9.1.2 ■ 8 [Alarm File Conversion] dialog

## 9.1.2 Collecting alarms by monitoring devices

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the user alarm observation
- 2 How to use the user alarm observation
- 3 Precautions for drawing
- 4 Precautions for use
- 5 [Alarm Common Setting] dialog
- 6 [User Alarm Observation List] dialog
- 7 [User Alarm Observation] dialog
- 8 [Alarm File Conversion] dialog
- 9 Relevant settings

In a user alarm monitor, the time when set conditions of devices set as the alarm detection are satisfied or comments as the user alarm data history to a built-in memory of the GOT.

### ■ 1 Specifications of the user alarm observation

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Alarm detection condition and range

##### (a) Detection condition

- Rising (OFF to ON) or falling (ON to OFF) of the bit device
- Word device value

##### (b) Collection cycle (monitoring cycle)

The user alarms can be collected and updated to a buffering area of the GOT in a cycle set by the user regardless of a displayed screen.

The following shows the setting range of the cycle.

- 0.1 second to 3600 seconds
- 0.5 second to 3600 seconds (GT23 and GT21 only)

##### (c) Setting range

- User alarm observation setting

A user alarm observation setting specifies a pattern of collecting alarms.

Each user alarm observation setting has an alarm ID, which is used to specify its corresponding setting as the target of the alarm display (user) or others.

Up to 300 user alarm observation settings can be set.

The setting range of the alarm ID is 1 to 32767.

- Alarm points

The alarm points refer to the number of monitored devices.

The setting range depends on the GOT model.  
 For GT27, GT25, GT23, and GT SoftGOT2000  
 Up to 32767 devices can be set in one user alarm observation setting.  
 Up to 45000 devices can be set in one project.  
 For GT21  
 Up to 2000 devices can be set in one project.

## (2) Setting example

Alarm detection conditions, collection cycles (observation cycle),  
 and number of alarms for each alarm ID  
 Number of alarm ID numbers: 3 (No.1, No.150, and No.300)  
 Alarm points: 58 (No.1: 50, No.150: 4, No.300: 4)

Alarm ID: 1 (An alarm for the maintenance)

D10 > 40 [Supply oil]
D20 > 500 [Supply fuel]
.
.
.

Setting

Alarm detection condition: Values of word devices
Watch cycle : 3600 seconds
Alarm points : 50

Alarm ID: 150 (An alarm for an emergency)

M10: OFF → ON [LineA abnormal stop]
M20: OFF → ON [LineB abnormal stop]
M30: OFF → ON [LineC abnormal stop]
M40: OFF → ON [LineD abnormal stop]

Setting

Alarm detection condition: Bit devices
Watch cycle : 2 seconds
Alarm points : 4

Alarm ID: 300

M80: OFF → ON [Check a battery]
M81: OFF → ON [Check the hydraulic pressure]
M82: OFF → ON [Check the internal pressure]
M83: OFF → ON [Check a fuse]

Setting

Alarm detection condition: Bit devices
Watch cycle : 60 seconds
Alarm points : 4

## ■ 2 How to use the user alarm observation

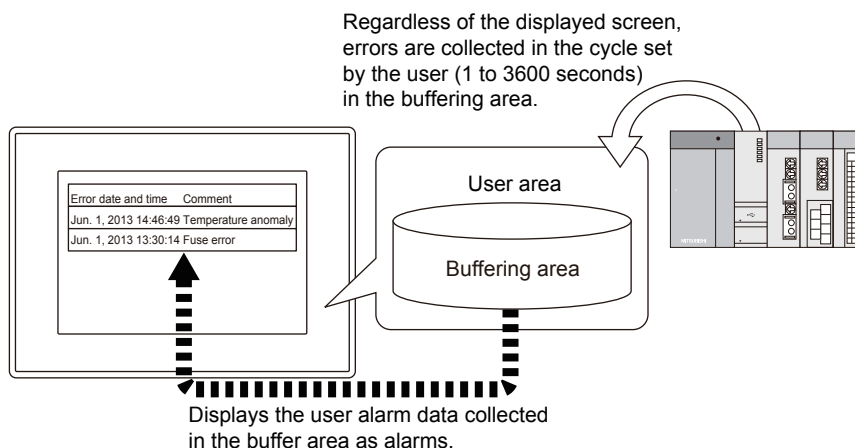

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

### (1) Alarm collecting procedure and alarm history collecting method

#### (a) Alarm collecting procedure

The user alarms are collected to a buffering area of the user area in a cycle (1 to 3600 seconds) set by the user regardless of a displayed screen.

The buffering area stores the collected user alarms as histories temporarily, and displays them on the GOT as alarms.

• For how to delete the data in the buffering area, refer to the following.

⇒9.1.2 ■ 2 (2) Storing and deleting the collected user alarm data

- The data to be stored in the buffering area of the user area differ depending on the history collecting method.

(b) Alarm history collecting method

The following shows the alarm history collecting method.

- History mode  
Adds the alarm contents to the user area of the GOT for each alarm occurrence.
- Cumulative mode  
Collects the latest alarm status and the alarm counts or time together for each alarm.
- Only the current alarm  
Displays only the alarm in occurrence, and deletes the display after the alarm restoration.

For the setting of the alarm history collecting method, refer to the following.

⇒9.1.2 ■ 7 [User Alarm Observation] dialog

Depending on the collecting method, the types of information collected differs.

Example) Alarm Display (User)

Error date and time	Comment	Alarm status	Restored	Checked	Frequency	Cumulative Time	Down Time	Level	Group
Jun. 1, 2013 20:00	Power supply unit error	-	-	-	1	-	-	1	2
Jun. 1, 2013 18:30	Hydraulic pressure failure	Checked	-	18:50	2	-	-	1	1
Jun. 1, 2013 16:10	Drive module error	Checked	16:30	16:20	2	00:40	00:20	2	1

(1)
(2)
(3)
(4)
(5)
(6)
(7)
(8)
(9)
(10)

Displayed information	Description		
	History mode	Cumulative mode	Alarms in the "Occurred" status only
(1) Date of occurrence	Displays the date and time when an alarm occurs.		
(2) Comment	Displays the comment assigned to the alarm at the alarm occurrence.		
(3) Alarm status	Displays the alarm status that is currently displayed. • Occurred: The alarm has occurred. (The occurrence of the alarm has not been checked.) • Checked: The occurrence of the alarm has been checked. • Restored: The monitor target already recovered from the alarm.		
(4) Restored	Displays the date and time when the monitor target recovered from the alarm.		
(5) Checked	Displays the date and time when an alarm occurrence has been checked. Check the occurrence of an alarm with the touch switch or device that is set for the alarm check. ⇒9.1.2 ■ 7 (2) [Device] tab 9.1.5 ■ 2 (11) Touch switches for the alarm display Example) Operation with a touch switch		
(6) Frequency	-	Displayed only for the accumulation mode. Displays the number of error occurrence.	-
(7) Cumulative Time	-	Displayed only for the accumulation mode. Displays the total time of alarm occurrence including the past alarm occurrence time.	-
(8) Down time	-	Displayed only for the accumulation mode. Displays the time from the alarm occurrence to the alarm restoration.	-

Displayed information	Description		
	History mode	Cumulative mode	Alarms in the "Occurred" status only
(9) Level	Displays the levels set for alarms. The alarms can be classified into the level according to the alarm importance. You can display the alarm with higher level preferentially or display the alarms with specific level only. →9.1.2 ■ 2 (6) Useful operations and functions		
(10) Group	Displays the groups set for alarms. The alarms can be classified into groups according to the alarm contents. You can display the alarms in order of the group or display the alarms with specific group only. →9.1.2 ■ 2 (6) Useful operations and functions		

**(c) Alarm display example**

The following shows the examples for displaying alarms with the alarm display (user) for each alarm collecting method.

• Historical

Collects the alarm occurrence status as histories.  
 The history is added every time an alarm occurs.

These items are not collected in the historical.

(1) A temperature anomaly occurs.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly		12:00			
Jun. 1, 2013 10:25	Fuse error					

← A temperature anomaly occurs.

(2) A temperature anomaly has checked.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly		12:00			
Jun. 1, 2013 10:25	Fuse error					

← A temperature anomaly has checked.

Checked

Key code: FFB4h

(3) A temperature anomaly has restored.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly	15:30	12:00			
Jun. 1, 2013 10:25	Fuse error					

← Displays the restored time.

(4) The restored temperature anomaly occurs again.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 18:25	Temperature anomaly					
Jun. 1, 2013 11:30	Temperature anomaly	15:30	12:00			
Jun. 1, 2013 10:25	Fuse error					

← Displays the alarm adding a row newly.

(5) A temperature anomaly has restored.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 18:25	Temperature anomaly	19:00				
Jun. 1, 2013 11:30	Temperature anomaly	15:30	12:00			
Jun. 1, 2013 10:25	Fuse error					

← Displays the restored time.

- Cumulative

Collects the latest alarm status, the alarm counts, and the time together for each alarm.

(1) A temperature anomaly occurs.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly			1	00:00	
Jun. 1, 2013 10:25	Fuse error			1	00:00	

← A temperature anomaly occurs.

(2) A temperature anomaly has checked.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly		12:00	1	00:00	
Jun. 1, 2013 10:25	Fuse error			1	00:00	

← A temperature anomaly has checked.

Key code: FFB4h

(3) A temperature anomaly has restored.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 11:30	Temperature anomaly	15:30	12:00	1	04:00	04:00
Jun. 1, 2013 10:25	Fuse error		12:00	1	00:00	

← Displays the restored time, the down time, and the cumulative time.

(4) The restored temperature anomaly occurs again.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 18:25	Temperature anomaly			2	04:00	
Jun. 1, 2013 10:25	Fuse error		12:00	1	00:00	

← Displays the alarm occurred time of the alarm that occurred again in the same line, and frequency is added by one.

(5) A temperature anomaly has restored.

Error date and time	Comment	Restored	Checked	Frequency	Cumulative Time	Down Time
Jun. 1, 2013 18:25	Temperature anomaly	19:00		2	04:35	00:35
Jun. 1, 2013 10:25	Fuse error		12:00	1	00:00	

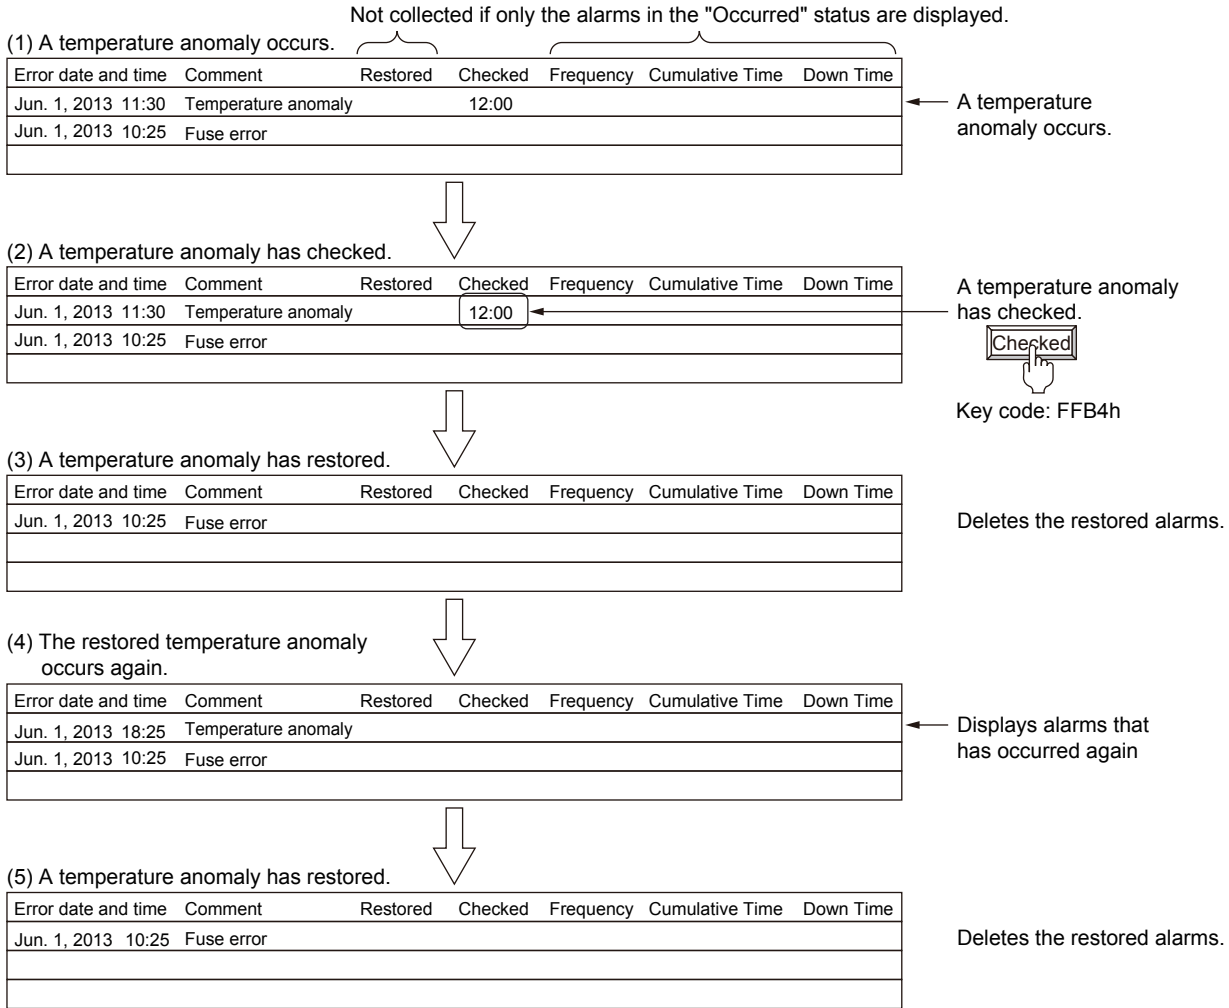

← Displays the restore time, downtime, and cumulative time (total time during which the alarm has occurred).

- Alarms in the "Occurred" status only

Collects the alarms that are currently occurring only.

The histories of the alarms that have been recovered are not stored.

**(2) Storing and deleting the collected user alarm data**

The user alarm data are stored in the buffering area in the user area of the GOT.  
The stored user alarms are deleted at the following timing.

**(a) When turning on the buffering data clear trigger device**

Turn on [Buffering Data Clear Trigger Device] set in the [Basic] tab of the [User Alarm Observation] dialog to delete all alarm data in the "Restored" status.

⇒ 9.1.2 ■ 7 [User Alarm Observation] dialog

**(b) When inputting a key code for deletion using a touch switch**

Use a touch switch to delete one or all alarm data items in the "Restored" status.

⇒ 9.1.2 ■ 2 (6) Useful operations and functions

**(c) When powering off or resetting the GOT**

Power off or reset the GOT to delete alarm data.

However, when the alarm data is stored in a data storage, the data is retained even after the GOT is powered off.

(d) **When changing the [Controller] setting in the utility**

Change the [Controller] setting in [GOT basic set] in the utility to delete all alarm data in the "Restored" status.

(e) **When writing/deleting data to/from the GOT**

Perform any of the following operations in the [Communicate with GOT] dialog to delete all alarm data in the "Restored" status.

- Writing package data
- Deleting an item from the drive information
- Formatting a drive

(3) **Power failure backup for the user alarm**

(a) **Overview of the power failure backup**

Once the user alarm data are stored in the data storage or the SRAM user area as the alarm log file, the user alarm data are held even when the GOT is powered off.

When the alarm log file is stored in the data storage or the SRAM user area when the GOT is powered on, the alarm log file is read automatically and the user alarm history before the power-off is restored.

• **Precautions for starting the GOT**

When reading and restoring the user alarm from the data storage, install the data storage on the GOT before powering-on the GOT.

After the powering-on the GOT, the data in the data storage cannot be restored.

In addition, when the data storage is installed after the power-on, the user alarm data in the data storage are overwritten when other user alarm data are stored in the data storage.

(b) **Performing the power-failure backup**

To hold the data in the data storage, configure the setting in the [File Save] tab of the [User Alarm Observation] dialog, and use either of the following methods.

- Storage by the store trigger device
  - ⇒9.1.2 ■ 7 [User Alarm Observation] dialog
- Storage by the touch switch
  - ⇒9.1.2 ■ 2 (6) Useful operations and functions
- Storage by the Buffer Flash Forced Saving signal (GS520.b0)
  - ⇒12.1 GOT Internal Device

To hold the data in the SRAM user area, configure the setting in the [Basic] tab of the [User Alarm Observation] dialog.

- Saving data to the SRAM user area

→9.1.2 ■ 7 [User Alarm Observation] dialog

**(c) Information to be stored**

The information in the alarm log file to be stored in the data storage and the SRAM user area differ depending on the alarm collecting method.

→9.1.2 ■ 1 Specifications of the user alarm observation

**(d) File name and storage timing**

You can set any file name for each alarm ID.

You can set triggers (rise or fall) to perform the file save.

→9.1.2 ■ 7 [User Alarm Observation] dialog

**(e) Available memory capacity**

The memory capacity used to retain the user alarms at power failure can be checked in the [Basic] tab of the [User Alarm Observation] dialog.

→9.1.2 ■ 7 (1) [Basic] tab

**(f) Backing up the alarm log file stored in the data storage**

Select [Automatically backup at the time of saving] in the [File Save] tab of the [User Alarm Observation] dialog to store the alarm log file as a backup file when the alarm log file is saved.

**(g) Backing up/restoring the data stored in the SRAM user area**

Backup or restore the data stored in the SRAM user area by using the [SRAM control] of the utility.

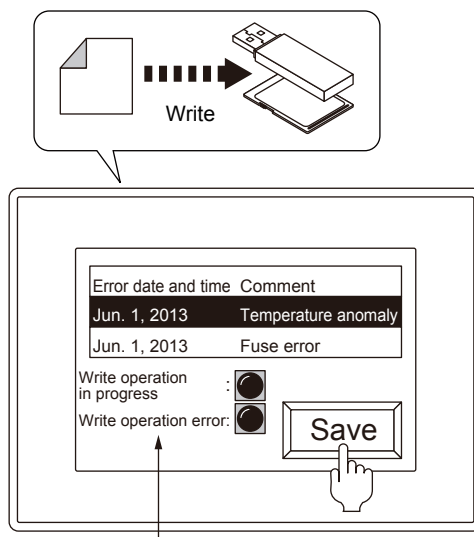

For the details of the backup/restore, refer to the following.

→GOT2000 Series User's Manual (Utility)

**(h) Monitoring the writing status**

You can monitor the status during the user alarm data writing and a writing error by using a device.

→9.1.2 ■ 7 [User Alarm Observation] dialog

The status of write operations can be monitored.

**(4) Converting alarm log files**

Alarm log files generated by user alarms are binary format files (\*.G2A).

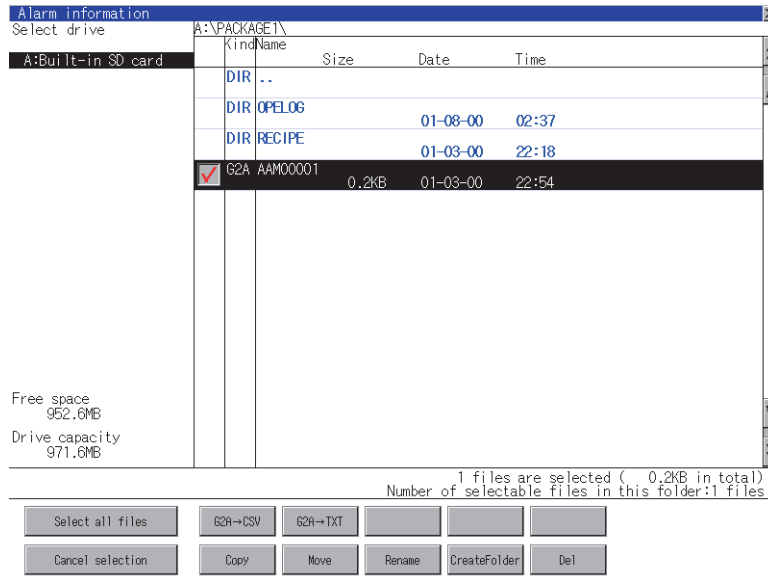

To display and edit the alarm log files on a personal computer, convert them into Unicode text files or CSV files.

The following shows how to convert the alarm log files.

**(a) Creating a Unicode text file or a CSV file with the utility**

Convert a binary format file (\*.G2A) stored in the data storage into a Unicode text file or a CSV file with the utility.

**Step 1** Select a (\*.G2A) file in [Alarm information] of the utility and touch the [G2A → TXT] or [G2A → CSV] button.

**Step 2** Store the created Unicode text file or CSV file into a personal computer by either of the following methods.

- Transferring with GT Designer3  
Reads resource data from the GOT.

- Storing by using the data storage  
Stores the alarm log file to the data storage and reads the alarm log file from the data storage.

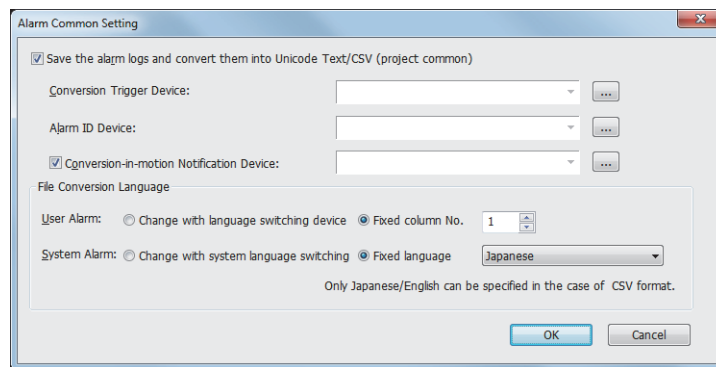

**Step 3** Display or edit the converted Unicode text file or the CSV file on a personal computer.

- For the operations of the utility, refer to the following.
  - ⇒GOT2000 Series User's Manual (Utility)
- To read the resource data from the GOT, refer to the following.
  - ⇒4.3.2 ■ 3 Reading the data from the GOT

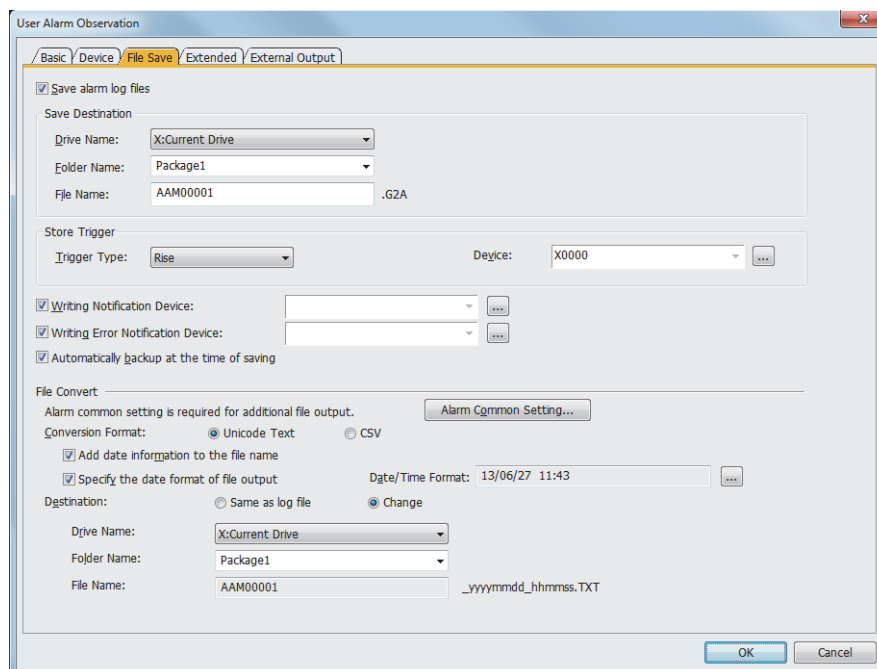

**(b) Converting a Unicode text file or a CSV file with the device**

Turning on a specified device converts a binary format file (\*.G2A) stored in the data storage into a Unicode text file or a CSV file.

**Step 1** Configure the setting for control the alarm log file conversion with the device in the [Alarm Common Setting] dialog.

**Step 2** Configure the setting for storing the alarm log file stored in the buffering area to the data storage in the [File Save] tab of the [User Alarm Observation] dialog.

- For how to configure the setting in the [Alarm Common Setting] dialog, refer to the following.
  - ⇒ 9.1.2 ■ 5 [Alarm Common Setting] dialog
- For the [File Save] tab setting of the [User Alarm Observation] dialog, refer to the following.
  - ⇒ 9.1.2 ■ 7 (3) [File Save] tab
- Precautions on converting files by using external control devices
 

Before converting the alarm log files, write the user alarm monitor ID that generates a file to the alarm ID specification device. When the conversion trigger device is turned on before the user alarm monitor ID is written, the alarm log file is not converted.

Always turn off the conversion trigger device after the alarm log file conversion.

When the alarm log file conversion is completed, the conversion notification device does not turn off when the conversion trigger device is on.

**(5) Configurations of a Unicode text file and a CSV file**

**(a) History mode**

	A	B	C	D	E	F	G	H	I	J
1)	GT2K_ALARM_LOG_HISTORY									
2)	ALARM_ID									
3)	ALARM_NAME									
4)	RECORD_NUM									
5)	COMMENT_GROUP_GENERAL_ID

No.	Description
1)	An alarm collecting method.
2)	An alarm ID.
3)	An alarm name.
4)	The number of data points.
5)	The basic comment group No.
6)	The middle comment group No.
7)	The upper comment group No.
8)	The detailed comment group No.
9)	The number of the alarm histories.
10)	The number of unrestored alarms.
11)	The number of unchecked alarms.
12)	The order of the dates.
13)	The difference between the Greenwich Mean Time and "Occurred"/"Restored"/"Checked".
14)	The order of the output time.
15)	The upper comment No.
16)	The middle comment No.
17)	The basic comment No.
18)	The comment for a basic alarm.
19)	The alarm status. (O: Alarm has been occurring, but has not been confirmed, OC: Alarm has been occurring, and has been confirmed, R: Alarm has been restored, but has not been confirmed, RC: Alarm has been restored, and has been confirmed)
20)	The date and time when an alarm occurs.
21)	The date and time when an alarm has restored.
22)	The date and time when an alarm occurrence has been checked.
23)	The level set for an alarm.
24)	The group set for an alarm.
25)	The number of alarms.
26)	The total time of alarm occurrence including the past alarm occurrence time (total downtime).
27)	The time from the alarm occurrence to the alarm restoration.

## (6) Useful operations and functions

### (a) Hierarchizing alarms

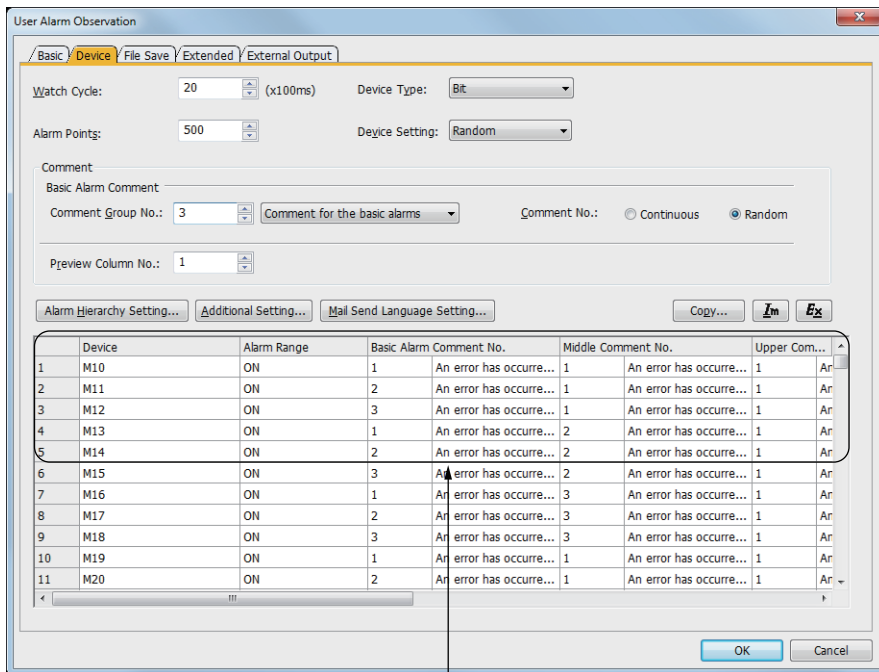

The following shows examples of hierarchizing alarms.

#### Setting example

Classify the comment for the occurrence of an alarm into three levels in the hierarchy: upper level, middle level, and basic level. Then set as follows.

Setting in the [Device] tab of the [User Alarm Observation] dialog

	Device	Alarm Range	Basic Alarm Comment No.	Middle Comment No.	Upper Comment No.
1	M10	ON	1	An error has occurre...	1
2	M11	ON	2	An error has occurre...	1
3	M12	ON	3	An error has occurre...	1
4	M13	ON	1	An error has occurre...	2
5	M14	ON	2	An error has occurre...	2

Detail Display	Detail No.	Reset	Level	Group	Mail Send
Comment Window	1	An error has occurre... YES 0	1	1	None
Base Screen	1	YES 0	1	1	None
Window Screen	1	YES 0	1	1	None
Comment Window	4	Cooling water hydra... YES 0	1	1	None
Comment Window	5	Supply fuel. YES 0	1	1	None

- Narrowing the alarm location

The alarm can be displayed from the overview to the detail.

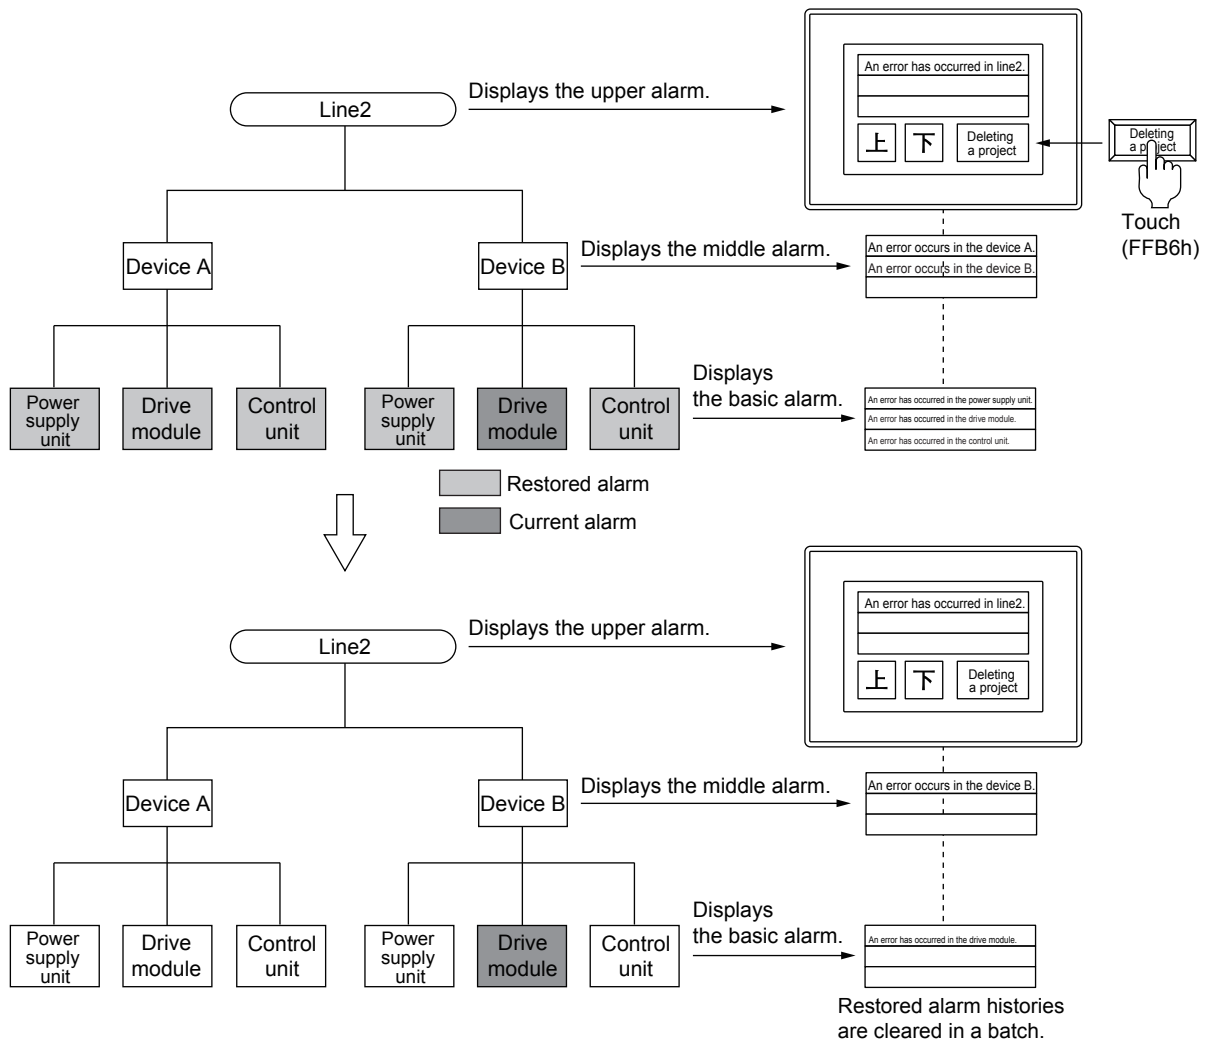

- Executing the check (FFB4h) and the deletion (FFB6h) to multiple alarms in a batch  
 The following operation can be executed to multiple alarms in the lower hierarchy in a bath.

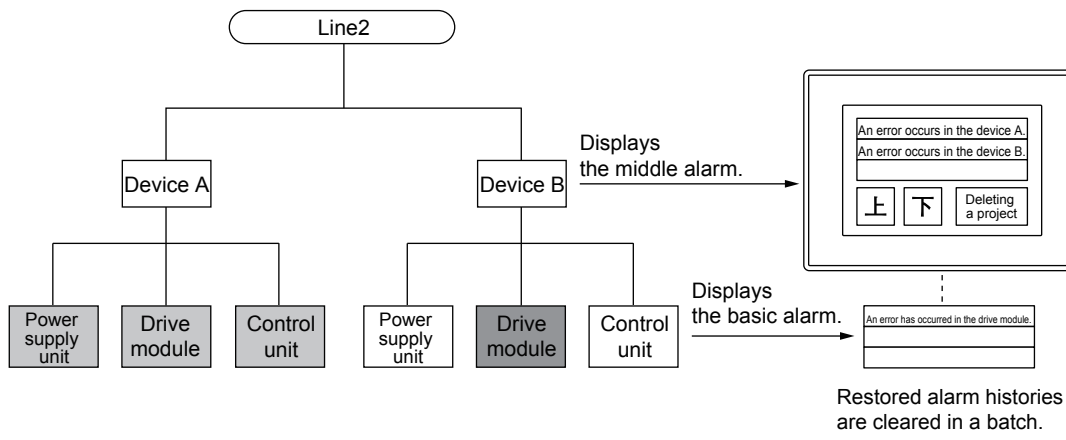

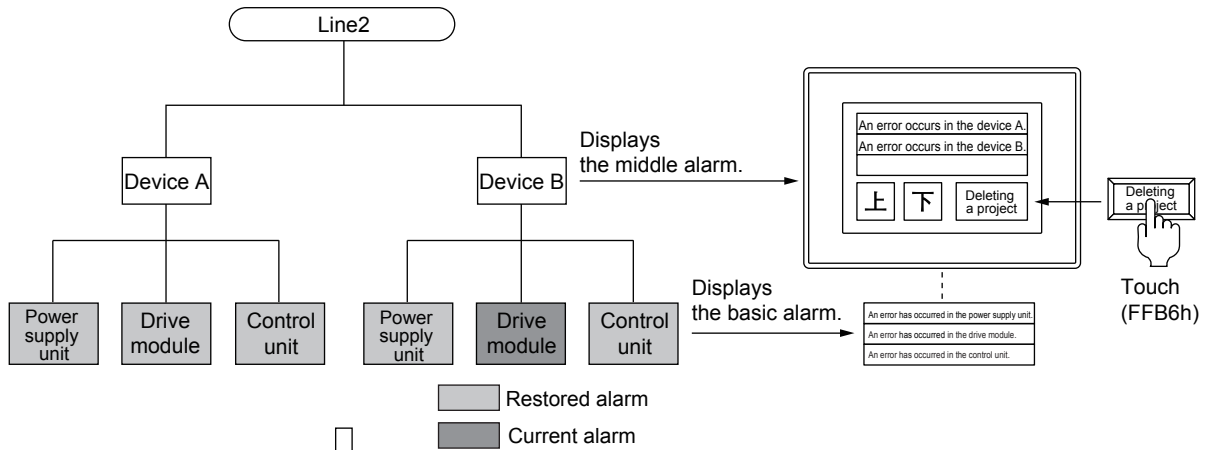

Operation	Description
Check	Records the date and time when an alarm occurrence has been confirmed.
Deleting a project	Deletes the alarm history that has been restored.

Executing the check (FFB4h) or the deletion (FFB6h) in the upper alarms executes the same operation for the middle alarms and the basic alarms under the upper alarms.

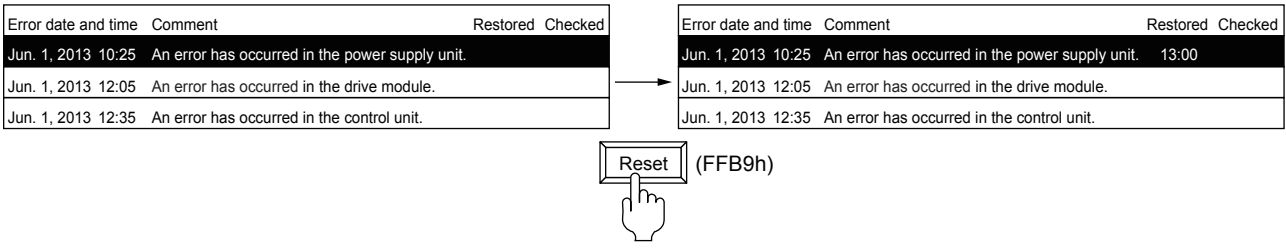

Executing the check (FFB4h) or the deletion (FFB6h) in the middle alarms executes the same operation for the basic

alarms under the middle alarms.

• Reset operation

The operation to eliminate alarms (turning on to off or entering the reset value) manually by the reset (FFB9h) cannot be executed to multiple alarms in a batch. Execute the resetting in the basic alarm display.

Execute the reset operation for each alarm.

• Classifying alarms into levels or groups

The alarms can be classified into levels or groups. You can display errors displayed at the error occurrence by narrowing in the alarm importance or the alarm type. The following shows an example for narrowing an alarm display by changing the switching device value. Configure the switching device setting in the [Alarm Display(User)] dialog. For the details of the settings, refer to the following.

⇒9.1.5 ■ 4 [Alarm Display(User)] dialog

Displaying alarms in the chronological order.

Error date and time	Comment	Level	Group
Jun. 1, 2013 16:51	Hydraulic pressure failure	1	1
Jun. 1, 2013 14:25	Cooling water hydraulic pressure drop	2	1
Jun. 1, 2013 12:25	Supply oil	1	2
Jun. 1, 2013 09:40	The amount of the remaining feedstock is low.	1	2
Jun. 1, 2013 07:35	Supply fuel	2	2

Level switching device (D32)

Group switching device (D33)

Only the alarms in the level 1 are displayed.

Error date and time	Comment	Level	Group
Jun. 1, 2013 16:51	Hydraulic pressure failure	1	1
Jun. 1, 2013 12:25	Supply oil	1	2
Jun. 1, 2013 09:40	The amount of the remaining feedstock is low.	1	2

Level switching device (D32)

Group switching device (D33)

Only the alarms in the group 2 are displayed.

Error date and time	Comment	Level	Group
Jun. 1, 2013 12:25	Supply oil	1	2
Jun. 1, 2013 09:40	The amount of the remaining feedstock is low.	1	2

Level switching device (D32)

Group switching device (D33)

**(b) Display example of the basic alarm (detailed display)**

In the basic alarm, the detailed information such as the cause or measure of the alarm in the comment window, the base screen, and the window screen.

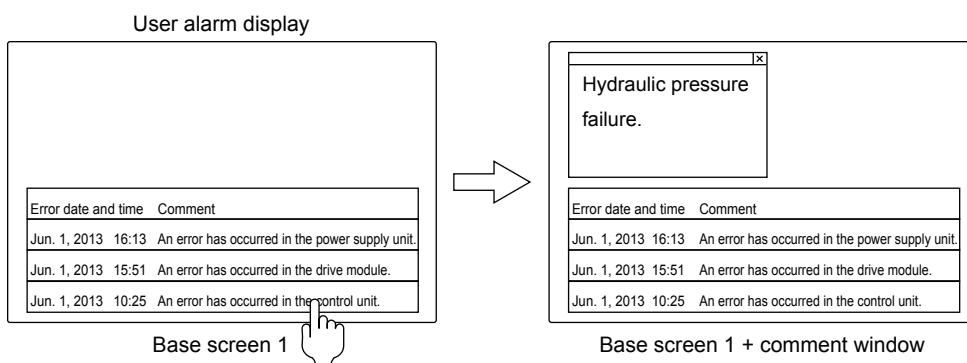

Setting example

Detail Display	Detail No.	Reset	Level	Group	Mail Send
Comment Window	1	An error has occurre... YES 0	1	1	None
Base Screen	1	YES 0	1	1	None
Window Screen	1	YES 0	1	1	None
Comment Window	4	Cooling water hydra... YES 0	1	1	None
Comment Window	5	Supply fuel. YES 0	1	1	None

• Comment window

Displays a comment a user registers.

In the comment window, more detailed comments such as the measures for alarms are displayed.

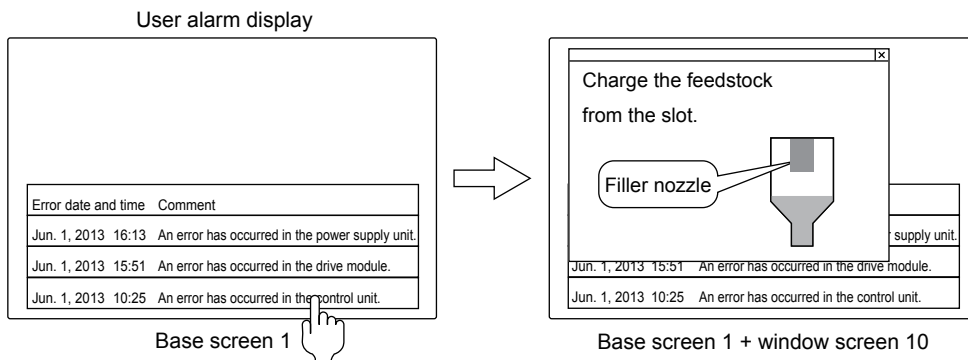

• Base screen

Displays the specified base screen.

- Window screen

Displays the specified window screen (overlap window 1).

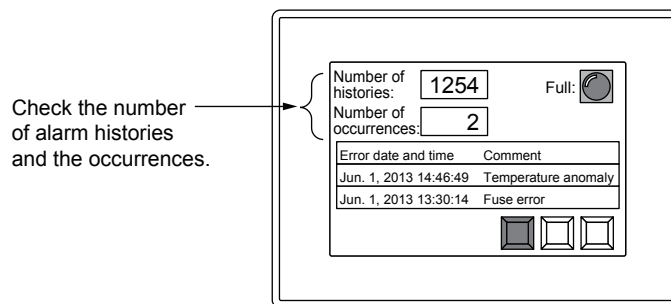

(c) When the buffering area is full

You can set a device for executing a notification when the number of alarms reaches to [Stored Number] set in the [Basic] tab of the [User Alarm Observation] dialog.

- Confirming the number of the alarm histories and the alarms

You can confirm the number of the alarm histories by storing the histories stored in the buffering area temporarily to a device.

The number of the user alarms that are currently occurring can be confirmed as well.

- When the buffering area is full

You can set a device for notifying the full of the buffering area.

To execute the notification before the buffer area becomes full, set [Full Notification Signal Device] in the [Basic] tab of the [User Alarm Observation] dialog.

Select the operation when the buffering area is full in [Action When Buffer is Full] in the [Basic] tab of the [User Alarm Observation] dialog.

• Size of the buffering

The size of the buffering area to be used for the user alarm varies depending on the setting. Increasing the size of the buffering decreases the user area of the GOT. Adjust the size of the buffering according to the user area capacity.

Setting items for the size of the buffering area

Alarm collecting method	Setting for the size of the buffering area
History mode	<ul style="list-style-type: none"> <li>• Number of devices set for the alarm ([Alarm Points] in the [Device] tab of the [User Alarm Observation] dialog)</li> <li>• Number of alarm histories to be stored ([Stored Number] in the [Basic] tab of the [User Alarm Observation] dialog)</li> </ul>
Cumulative	<ul style="list-style-type: none"> <li>• Number of devices set for the alarm ([Alarm Points] in the [Device] tab of the [User Alarm Observation] dialog)</li> </ul>
Alarms in the "Occurred" status only	

The size of the buffering area required for the set user alarm list can be confirmed in the [Basic] tab of the [User Alarm Observation] dialog.

For the details of the buffering area, refer to the following.

→9.1.2 ■ 2 (1) Alarm collecting procedure and alarm history collecting method

For how to configure the setting in the [User Alarm Observation] dialog, refer to the following.

→9.1.2 ■ 7 [User Alarm Observation] dialog

■ 3 Precautions for drawing

(1) Setting for storing the user alarm data to data storage

To place a button for storing the user alarm data, configure either of the following settings.

- Set the store trigger device in the [File Save] tab of the [User Alarm Observation] dialog and store the user alarm data.
  - 9.1.2 ■ 7 [User Alarm Observation] dialog
- Place a touch switch for the alarm display (user) on the screen where the alarm display (user) is set and store the user alarm data.
  - 9.1.2 ■ 2 (6) Useful operations and functions

(2) Available file size

Data storage must have larger capacity than the size of the file to be stored.

For the file size, refer to the following.

→9.1.2 ■ 1 Specifications of the user alarm observation

(3) Comment group

If the nonexistent value (column No.) is stored in the language switching device, "No message" is not displayed.

(4) Changing the user alarm observation settings

After the first settings and any change of the following setting items, if you change the settings again or import settings from a CSV file, note the following:

The history data may be partially deleted or displayed incorrectly.

Before you change the setting, backing up the alarm files of the GOT is recommended.

- Alarm ID
- Collection Mode
- Stored Number
- Alarm Points
- Middle Comment No.

- Upper Comment No.

### (5) Setting when using the mail send function

If you select [Only current alarm] for [Collection Mode] in the [User Alarm Observation] dialog ([Basic] tab), no e-mail is sent upon recovery from an alarm because the GOT does not monitor such events.

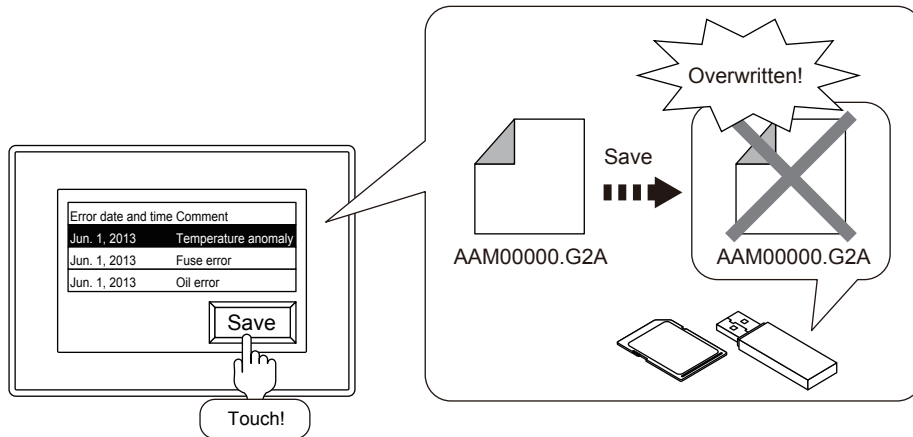

To send an e-mail upon recovery from an alarm, select an item other than [Only current alarm] for [Collection Mode].

⇒9.1.2 ■ 7 [User Alarm Observation] dialog

## ■ 4 Precautions for use

### (1) When the same data are stored in data storage

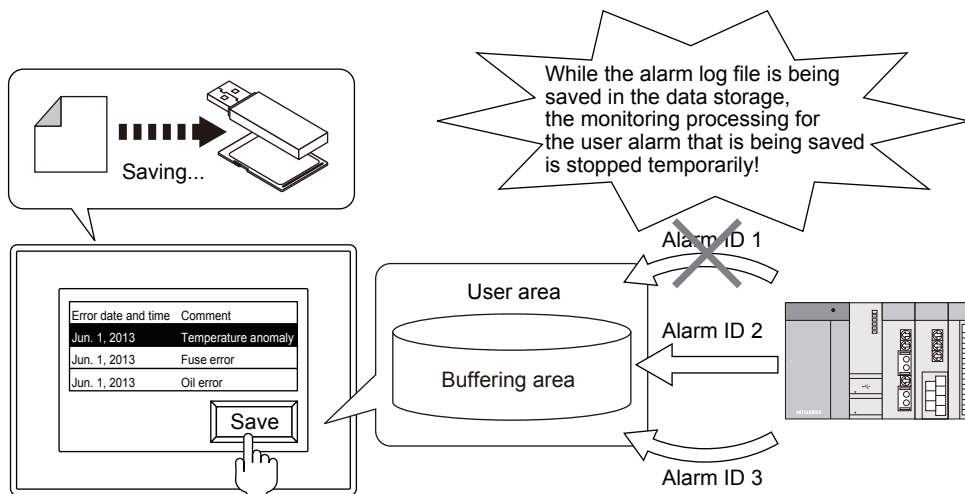

The data in the data storage are overwritten. To reserve the data, move the data in the data storage to a personal computer with either of following methods.

- Reading resource data with GT Designer3  
⇒4.3.2 ■ 3 Reading the data from the GOT
- Reading a CSV file stored in the data storage with a personal computer

### (2) Alarm monitoring during the alarm log file saving

While the alarm log file is being saved in the data storage, the monitoring processing for the user alarm of the alarm ID that is being saved is stopped temporarily.

User alarms occurred or restored during the storing are not displayed.

### (3) Storage by the Buffer Flash Forced Saving signal (GS520.b0)

It may take minutes for an alarm log file to be saved in data storage because the data of all the target user alarms for the alarm log file is saved.

To prevent the monitoring from stopping for a long time, save the alarm log files in units of objects.

- Setting the store trigger for each user alarm observation setting
- Setting the touch switch (key code: FFBBh) for each alarm display (user)

**(4) Precautions for removing an SD card**

When you open the SD card cover or turn off the SD card access switch, the files are saved automatically.

Before removing the SD card, make sure that the file saving is complete by checking one of the following conditions.

- The Drive Status Notification signal (system signal 2-2.b0, b1) is turned off.
- The SD card access LED is turned off.

→5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Storing may take longer because all the user alarms and system alarms for saving the alarm log files are stored.

**(5) Restoring the alarm histories when powering-off to on the GOT**

When the alarm log file in the data storage is not created in the project in the GOT, the file cannot be read from the GOT.

In this case, an alarm occurs or a device turns on.

- A system alarm 525 occurs.
- The [Writing Error Notification Device] set in the [File Save] tab of the [User Alarm Observation] dialog turns on.

**(6) Collecting alarms when the buffering area is full**

The operation when the buffering area is full is either of the followings according to the [Action When Buffer is Full] in the [Basic] tab of the [User Alarm Observation] dialog.

- Deleting restored user alarms and adding a new user alarm
- The user alarms are not collected.

To prevent the operations above, set the [Full Notification Signal Device] in the [Basic] tab of the [User Alarm Observation] dialog and delete the restored alarm when the device turns on.

→9.1.2 ■ 7 [User Alarm Observation] dialog

**(7) Error occurred during the alarm log file saving**

When an error occurs during the alarm log file saving, the [Writing Error Notification Device] set in the [File Save] tab of the [User Alarm Observation] dialog turns on.

Check that the following conditions are satisfied.

- The SD card cover of the GOT is closed.
- The SD card access switch of the GOT is turned on.
- The data storage is not full.

**(8) Difference from the Drive status notification signal (writing device: system signal 2-2)**

The full notification, writing notification and a writing error can be notified by the Drive status notification signal as well, and the operations differ from the devices set in the user alarm monitoring.

Item	Operation (difference)	
	User alarm observation	Drive status notification signal
Difference between [Full Notification Signal Device] set for user alarm monitors and the Drive status notification signal (System signal 2-2.b4, b5)	Turns on when the number of log files reaches the [Stored Number] set in the [Basic] tab (when the buffering area reserved for the user alarms is full).	Turns on when the data storage is full.
Difference between [Writing Notification Device] set for user alarm monitors and the Drive status notification signal (System signal 2-2.b0, b1)	Turns on while the user alarm data are written to the data storage.	Turns on while the data are written to the data storage (turns on while data other than the user alarm are written).
Difference between [Writing Error Notification Device] set for user alarm monitors and the Drive status notification signal (System signal 2-2.b7, b8)	<ul style="list-style-type: none"> <li>• Turns on when an error occurs at the accessing to the alarm log file in the data storage (when the alarm log file in the data storage is not created in the project in the GOT).</li> <li>• Turns on when the data storage cannot be accessed (e.g. when a data storage is not installed or the SD card cover is open).</li> </ul>	Turns on when the data storage cannot be accessed (e.g. when a data storage is not installed or the SD card cover is open).

**(9) Character code and conversion destination file**

If an alarm log file contains any character other than ASCII and Shift JIS characters, convert the file as shown below.

- Convert the file to Unicode text format.
- Turn on the Character Code for CSV Conversion signal (GS522.b2), and convert the file to CSV format.

**(10) Unicode text file converted with the utility**

For the precautions for using Unicode text files, refer to the following.

→12.5 Precautions for Using Unicode Text File

## (11)Editing the exported file

If a device in use has a name starting from 0, the 0 may be deleted by a function of spreadsheet software for editing files. If the file is saved after the first 0 is deleted, the file cannot be imported normally. When using a device that has a name starting from 0, edit the file with a text editor.

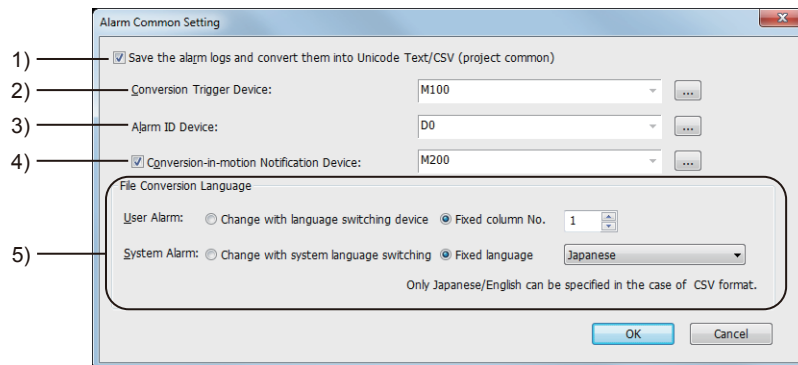

## ■ 5 [Alarm Common Setting] dialog

Configure this setting when controlling the alarm log file conversion by devices.

Select [Common] → [Alarm] → [Alarm Common Setting] from the menu to display the [Alarm Common Setting] dialog. To control the alarm log file conversion by devices, configure the [File Convert] setting in the [File Save] tab of the [User Alarm Observation] dialog.

⇒9.1.2 ■ 7 [User Alarm Observation] dialog

### 1) [Save the alarm logs and convert them into Unicode Text/CSV (project common)]

Configure this setting for controlling the alarm log file conversion by devices.

### 2) [Conversion Trigger Device]

Set trigger devices for the file conversion.

### 3) [Alarm ID Device]

Set the device that specifies the alarm monitoring ID for generating a conversion target file.

### 4) [Conversion-in-motion Notification Device]

Set the device to notify that a file is being converted.

After the alarm log file conversion is started, make sure to turn off the conversion trigger device.

If the conversion trigger device is on even after the conversion is complete, the conversion notification device does not turn off.

### 5) [File Conversion Language]

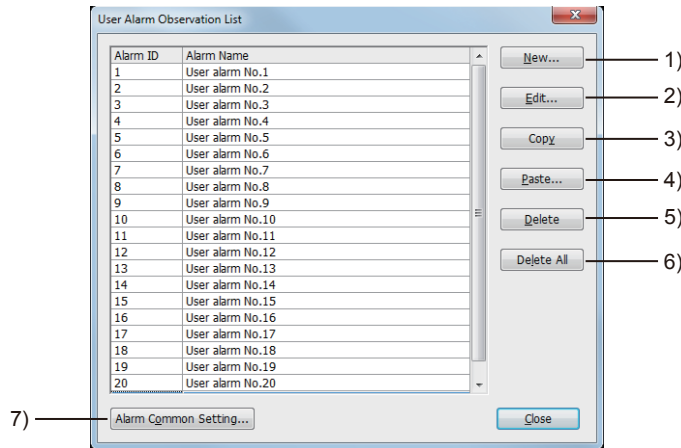

Item	Description
User alarm	Set the row No. of the comment group to be used in the file conversion. [Change with language switching device]: Converts files with a row No. switched by the language switching device. [Fixed column No.]: Converts files with a set row No. The setting range is [1] to [30].
System alarm	GT21 does not support this item. Set the system language to be used for the file conversion. [Change with system language switching]: Converts files in the system language displayed on the GOT. [Fixed language]: Converts files with a set language.

■ 6 [User Alarm Observation List] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select [Common] → [Alarm] → [User Alarm Observation] from the menu to display the [User Alarm Observation List] dialog. Configure the user alarm setting (devices set for the alarm, the monitoring cycle, and the alarm history collecting method) for each alarm ID. Up to 255 alarm IDs can be set.

1) [New] button

Displays the [User Alarm Observation] dialog to set a new alarm ID.

⇒ 9.1.2 ■ 7 [User Alarm Observation] dialog

2) [Edit] button

Displays the [User Alarm Observation] dialog to configure the setting of selected alarm ID.

⇒ 9.1.2 ■ 7 [User Alarm Observation] dialog

3) [Copy] button

Copies a selected alarm ID.

4) [Paste] button

Pastes the copied alarm ID to the alarm ID list.

• [Destination Alarm ID]

Set the copy destination of the copied alarm ID.

5) [Delete] button

Deletes a selected alarm ID.

6) [Delete All] button

Deletes all selected alarm ID.

7) [Alarm Common Setting] button

Displays the [Alarm Common Setting] dialog.

⇒ 9.1.2 ■ 5 [Alarm Common Setting] dialog

■ 7 [User Alarm Observation] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Alarm] → [User Alarm Observation] → [New] from the project tree.

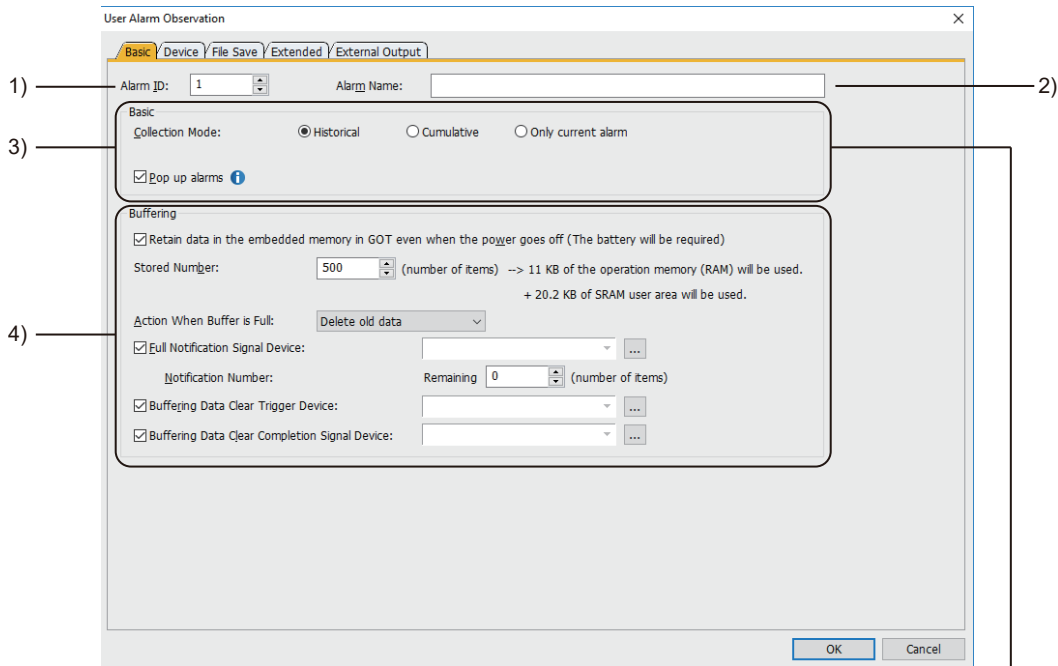

**Step 2** Double-click the [New] to display the [User Alarm Observation] dialog.

- ⇒ (1) [Basic] tab
- (2) [Device] tab
- (3) [File Save] tab
- (4) [Extended] tab
- (5) [External Output] tab

(1) [Basic] tab

Set the alarm history collecting method and the buffering that stores the alarm history.

When [Cumulative] is selected for the [Collection Mode].

1) [Alarm ID]

Set the alarm ID of the user alarm.  
The setting range is [1] to [32767].

2) [Alarm Name]

Set an alarm name of the user alarm.  
Up to 32 characters can be set as an alarm name.

3) [Basic]

Item	Description
[Collection Mode]	Select a user alarm collecting method. <ul style="list-style-type: none"> <li>• [Historical]: Collects the user alarm occurrence status as histories. Adds a history every time an alarm occurs.</li> <li>• [Cumulative]: Collects the latest user alarm status and the user alarm counts or time together for each user alarm.</li> <li>• [Only current alarm]: Collects the alarms that are currently occurring only. The history of the user alarms that have been restored are not stored.</li> </ul>
[Display the same alarm occurring multiple times as another item]	This item can be set only when the [Collection Mode] is [Cumulative]. Displays the same alarm, which occurred multiple times, as another item at each time of occurrence.
[Pop up alarms]	Pops up a user alarm message. Configure the following settings additionally. <ul style="list-style-type: none"> <li>• Alarm popup display settings → 9.1.4 ■ 4 [Alarm Popup Display] dialog</li> <li>• Setting of the screen where an alarm message pops up → 2.7.1 ■ 1 [Basic] tab 10.18.7 ■ 1 [Basic] tab</li> </ul>

4) [Buffering]

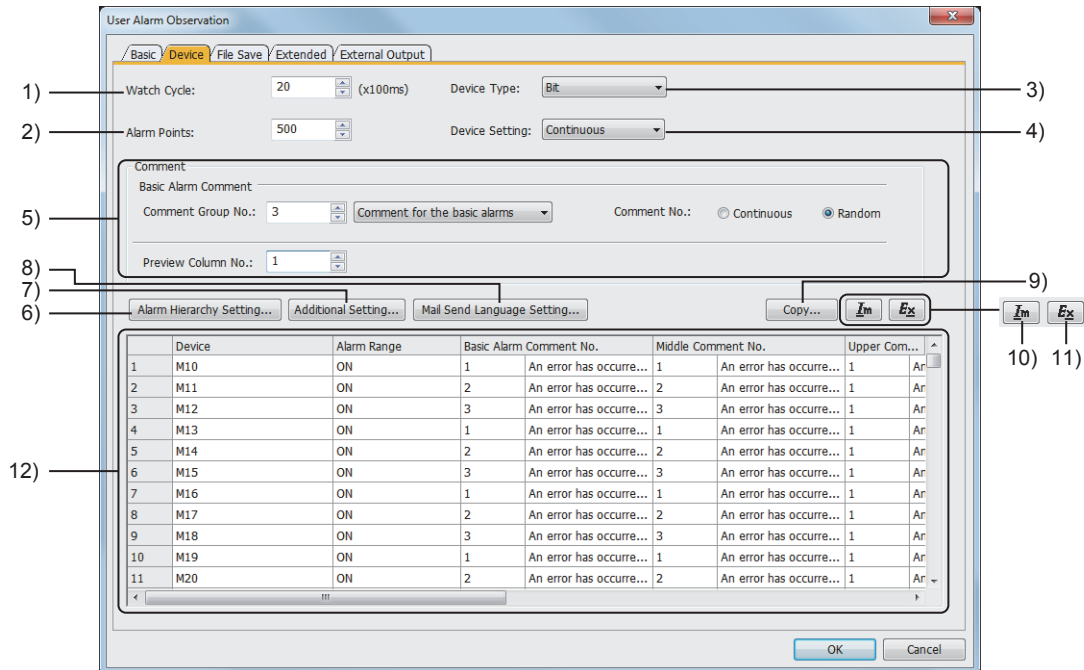

Configure settings for the buffering that stores the collected user alarms.

Item	Description
[Retain data in the embedded memory in GOT even when the power goes off (The battery will be required)]	GT21 does not support this item. Saves alarm data in the buffering area in the SRAM user area. →9.1.1 ■ 2 (3) (h) Storing the alarm data (power failure backup)
[Stored Number]	Set this item when setting [Collection Mode] to [Historical]. Set the number of user alarm history events to be stored. The setting range depends on the GOT model. For GT27, GT25, GT23, and GT SoftGOT2000 The setting range is [Alarm Points] set in the [Device] tab to [32767]. For GT2107-W, GT2105-Q, GT2104-R, and GT2104-P The setting range depends on the drive in which events are stored. • Drive D: [Alarm Points] set in the [Device] tab to [1000] • Other drives: [Alarm Points] set in the [Device] tab to [2000] For GT2103-P The setting range depends on the drive in which events are stored. • Drive C: [Alarm Points] set in the [Device] tab to [1000] • Other drives: [Alarm Points] set in the [Device] tab to [2000] The buffer size increases as the number of the stored events increases.
[Action When Buffer is Full]	Set this item when setting [Collection Mode] to [Historical]. Select the operation executed when the number of the user alarms stored in the buffering area reaches the [Stored Number]. • [Delete old data]: Deletes the user alarm with the oldest restoration date from the restored user alarms, and collects a new user alarm. • [Add no item]: Stops collecting the user alarms and does not collect a new user alarm.
[Full Notification Signal Device]	Set this item when setting [Collection Mode] to [Historical]. Notifies that the storable number of user alarm histories becomes the number set in the [Notification Number] or less by the set device. →6.1.1 How to set devices
[Notification Number]	When setting [Full Notification Signal Device], set this item. Set the number of the user alarm histories for which the [Full Notification Signal Device] is notified. The setting range is [0] to [255]. • Setting example When the [Stored Number] is set to 1000, the [Notification Number] is set to 10 The [Full Notification Signal Device] turns on when the number of stored user alarm histories becomes 990 because the number of storable user alarm histories becomes 10.
[Buffering Data Clear Trigger Device]	Deletes the restored user alarms stored in the buffering area by the set device. →6.1.1 How to set devices
[Buffering Data Clear Completion Signal Device]	When setting [Buffering Data Clear Trigger Device], set this item. Notifies you with a set device that deleting buffering data is complete. →6.1.1 How to set devices

## (2) [Device] tab

Configure settings for the timing for collecting user alarms or user alarm settings (devices set for user alarms, comments displayed at a user alarm occurrence, resetting user alarms, and level/group setting).

### 1) [Watch Cycle]

Set a cycle at which the device is monitored.

The following shows the setting range.

- [1] to [36000]
- [5] to [36000] (GT23 and GT21 only)

### 2) [Alarm Points]

Set the number of alarms.

The setting range depends on the GOT model.

For GT27, GT25, GT23, and GT SoftGOT2000

The setting range is [1] to [32767].

For GT2107-W, GT2105-Q, GT2104-R, and GT2104-P

The setting range depends on the drive in which events are stored.

- Drive D: [1] to [1000]
- Other drives: [1] to [2000]

For GT2103-P

The setting range depends on the drive in which events are stored.

- Drive C: [1] to [1000]
- Other drives: [1] to [2000]

### 3) [Device Type]

Select the data type of the device to be set.

The following shows selectable items.

- [Bit]
- [Signed BIN16]
- [Unsigned BIN16]
- [Signed BIN32]
- [Unsigned BIN32]
- [BCD16]
- [BCD32]
- [Real]

### 4) [Device Setting]

Select whether to set devices sequentially or not.

The following shows selectable items.

- [Continuous]: Set the comment No. of the comment group sequentially.
- [Random]: Set the comment No. of the comment group one by one.
- [Identical]: Select this item when other than [Bit] is selected for [Device Type].

### 5) [Comment]

Item	Description
[Basic Alarm Comment]	<ul style="list-style-type: none"> <li>• [Comment Group No.]: Set the comment group No. to be used for the basic alarm comment.</li> <li>• [Comment No.]: Select the setting method of the comment. [Continuous]: Set the comment No. of the comment group sequentially. [Random]: Set the comment No. of the comment group one by one.</li> </ul>
[Preview Column No.]	Set the column No. of the comment to be previewed.

### 6) [Alarm Hierarchy Setting] button

In the [Alarm Hierarchy Setting] dialog, set the levels of alarms in the hierarchy.

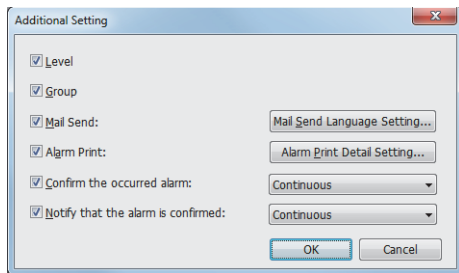

Hierarchy

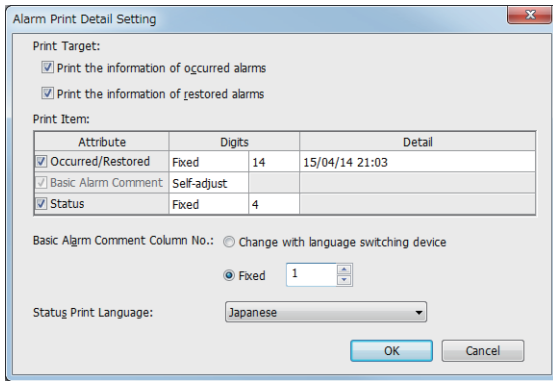

- **[Hierarchy]**  
Select a level to be added in the hierarchy.
- **[Comment Group No.]**  
Set the comment group No. of the comment. The set comment group name is displayed.
- **[Comment No.]**  
Select the setting method of comment No.
  - [Continuous]:  
Sets the comment No. of the comment group sequentially.
  - [Device]:  
Sets the comment No. of the comment group one by one.

### 7) [Additional Setting] button

Displays the [Additional Setting] dialog to configure the setting for items displayed in the alarm setting list.

- **[Level]**  
Adds a level setting.
- **[Group]**  
Adds a group setting.
- **[Mail Send]**  
Adds a mail send setting.
- **[Mail Send Language Setting] button**  
Displays the [Mail Send Language Setting] dialog to set the language used in an e-mail to be sent.  
→ 8) [Mail Send Language Setting] button
- **[Alarm Print]**  
Adds the alarm print setting.  
For information on how to set the alarm print, refer to the following.  
→ 10.11.3 How to use the report function
- **[Alarm Print Detail Setting] button**  
Displays the [Alarm Print Detail Setting] dialog to set the alarm details printed on a report.
- **[Confirm the occurred alarm]**  
Adds the setting of a device to change the status of an alarm to "Checked".  
Select a device setting method.  
The following shows selectable items.
  - [Continuous]: Sets successive devices starting from a set device.
  - [Random]: set device numbers one by one.
- **[Notify that the alarm is confirmed]**  
Adds the setting of a device to notify that the status of an alarm has been changed to "Checked".  
Select a device setting method.  
The following shows selectable items.
  - [Continuous]: Sets successive devices starting from a set device.
  - [Random]: set device numbers one by one.

- **[Print Target]**  
Details of an alarm to be printed
  - [Print the information of occurred alarms]  
Prints the details of an occurring alarm.
  - [Print the information of restored alarms]  
Prints the details of a corrected alarm.
- **[Print Item]([Occurred/Restored])**  
Prints the date and time on which an alarm occurred or was corrected.  
Select this item, and then configure the setting as follows.
  - [Digits]  
Select a method of specifying the number of digits to be printed.  
[Self-adjust]: Automatically adjusts the number of digits to be printed according to the print contents.  
[Fixed]: Specify the number of digits to be printed.
  - [Detail]  
Click [...] button to set the date and time format.  
→6.3.2 Date/time format settings
- **[Print Item]([Basic Alarm Comment])**  
Prints the date and time on which an alarm occurred or was corrected.  
Select this item, and then configure the setting as follows.
  - [Digits]  
Select a method of specifying the number of digits to be printed.  
[Self-adjust]: Automatically adjusts the number of digits to be printed according to the print contents.  
[Fixed]: Specify the number of digits to be printed.
- **[Print Item]([Status])**  
Prints the status of an alarm.  
Select this item, and then configure the setting as follows.
  - [Digits]  
Select a method of specifying the number of digits to be printed.  
[Self-adjust]: Automatically adjusts the number of digits to be printed according to the print contents.  
[Fixed]: Specify the number of digits to be printed.
- **[Basic Alarm Comment Column No.]**  
Select a method of specifying the column number to print an alarm comment.  
The following shows selectable items.
  - [Change with language switching device]  
Specifies the column number according to the language switching device.
  - [Fixed]  
Set the column number to print a comment.  
The setting range is [1] to [30].
- **[Status Print Language]**  
Select the language to print the alarm status.  
The following shows selectable items.
  - [Japanese]
  - [English]

## 8) [Mail Send Language Setting] button

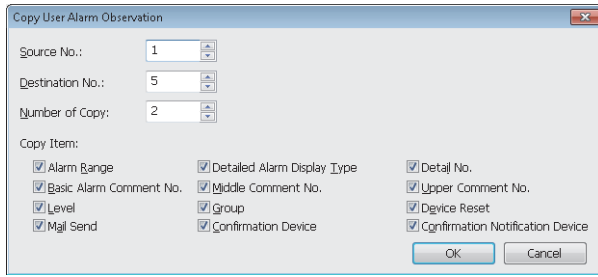

Displays the [Mail Send Language Setting] dialog to set a language used in a mail to be sent.

- **[Title]**  
Select a language.  
The following shows selectable items.
  - [Japanese]
  - [English]
- **[Message]**  
Input text for the comment.  
The setting range is [1] to [30].

## 9) [Copy] button

Displays the [Copy Advanced User Alarm Observation] dialog to copy the alarm setting list contents.

- **[Source No.]**  
Set a line number to be copied.
- **[Destination No.]**  
Set a line number where the copied contents are pasted.
- **[Number of Copy]**  
Set the number of times the copied contents are pasted.  
Pastes the copied contents sequentially for the number of lines set in the [Number of Copy] from the line No. set in the [Source No.].
- **[Alarm Range]**  
Sets the contents of the [Alarm Range] column to be copied.
- **[Detailed Alarm Display Type]**  
Sets the contents of the [Detailed Alarm Display Type] column to be copied.
- **[Detail No.]**  
Sets the contents of the [Detail No.] column to be copied.
- **[Basic Alarm Comment No.]**  
Sets the contents of the [Basic Alarm Comment No.] column to be copied.
- **[Middle Comment No.]**  
Sets the contents of the [Middle Comment No.] column to be copied.
- **[Upper Comment No.]**  
Sets the contents of the [Upper Comment No.] column to be copied.
- **[Level]**  
Sets the contents of the [Level] column to be copied.
- **[Group]**  
Sets the contents of the [Group] column to be copied.
- **[Device Reset]**  
Sets the contents of the [Reset] column to be copied.
- **[Mail Send]**  
Sets the contents of the [Mail Send] column to be copied.
- **[Confirmation Device]**  
Sets the contents of the [Confirmation Device] column to be copied.
- **[Confirmation Notification Device]**  
Sets the contents of the [Confirmation Notification Device] column to be copied.

## 10) Import button

Imports the alarm observation (user) setting file that has been exported from GT Designer3 to overwrite the settings of the [Device] tab.

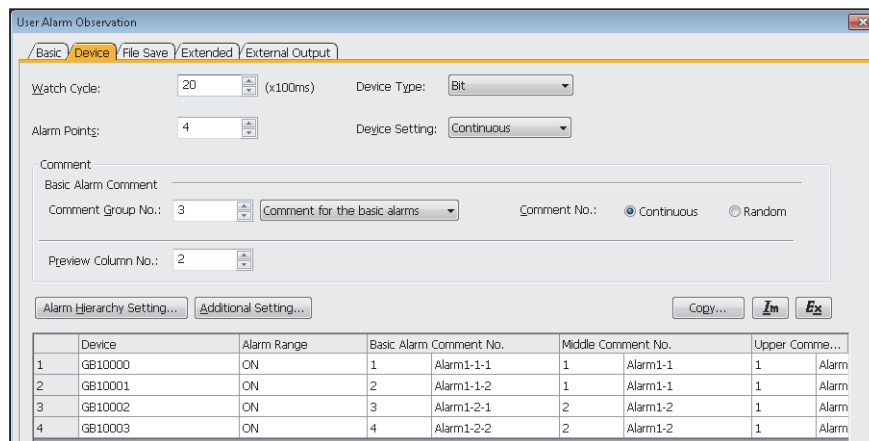

## 11) Export button

Saves the settings of the [Device] tab to a Unicode text or CSV file.

You can edit the exported file in spreadsheet software and others.

The edited file can be imported with GT Designer3.

Example) When exporting the settings of the [Device] tab to a CSV file

Device	Alarm Range	Basic Alarm Comment No.	Middle Comment No.	Upper Comment No.	Detail No.	Reset	Reset Value	Level	Group	Mail Send	Confirmation Device	Confirmation Notification Device
GB10000	ON	1	1	1	1	1	YES	0				
GB10001	ON	2	1	1	1	2	YES	0				
GB10002	ON	3	2	1	1	3	YES	0				
GB10003	ON	4	2	1	1	4	YES	0				

## 12) Alarm setting list

Set devices for alarms and comments displayed at an alarm occurrence.

Item	Description
[Device]	Set devices for alarms. <ul style="list-style-type: none"> <li>• 6.1.1 How to set devices</li> </ul>
[Alarm Range]	Set a range of device for displaying alarms. <ul style="list-style-type: none"> <li>• When the [Device Type] is [Bit]               <ul style="list-style-type: none"> <li>[ON]: Displays an alarm by rising the bit device (OFF to ON)</li> <li>[OFF]: Displays an alarm by falling the bit device (ON to OFF)</li> </ul> </li> <li>• When the [Device Type] is other than [Bit]               <ul style="list-style-type: none"> <li>Click the [Exp.] button to display the [Edit Alarm Range] dialog and set a range of the word device value for displaying alarms.</li> </ul> </li> </ul> <div data-bbox="762 483 1193 730" style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• <b>[Alarm Range]</b> <ul style="list-style-type: none"> <li>Select a range expression.</li> <li>When you select [Other], click the [Exp] button to display the [Edit Range] dialog and set the range expression.</li> <li>→6.2.2 Setting Trigger Types</li> </ul> </li> </ul>
[Basic Alarm Comment No.], [Middle Comment No.], [Upper Comment No.] <sup>1</sup>	Set the comment No. of the comment group for comments to be displayed at an alarm occurrence. <p>Specify the comment No. of the comment group used in the basic alarm, the middle alarm, and the upper alarm for one alarm.</p> <p>To hide the middle alarms and the upper alarms, set [0].</p>
[Detail Display]	Select the display method of the detail display. <ul style="list-style-type: none"> <li>• [Not Display]:               <ul style="list-style-type: none"> <li>The details are not displayed.</li> </ul> </li> <li>• [Comment Window]:               <ul style="list-style-type: none"> <li>Displays the details in a window for the detail display.</li> <li>In the comment window, the registered comments are displayed.</li> </ul> </li> <li>• [Base Screen]:               <ul style="list-style-type: none"> <li>Displays a base screen as the detail display.</li> <li>Displays the base screen set for the detail No. in the device.</li> </ul> </li> <li>• [Window Screen]:               <ul style="list-style-type: none"> <li>Displays the window screen (overlap window 1) as the detail display.</li> <li>Displays the window screen set for the detail No. in the device.</li> </ul> </li> </ul> <p>When setting the [Detail Display] for each alarm, set [Comment No.] to [Random] in the [Detail Comment] of the [Alarm Hierarchy Setting] dialog.</p> <p>When [Comment No.] is set to [Continuous], the [Detail Display] of all alarms are set as same as the head alarm.<sup>2</sup></p> <p>→6) [Alarm Hierarchy Setting] button</p>
[Detail No.]	Set a comment number, window screen number, and base screen number of the detail display.
[Reset]	Set the reset operation for the alarm. <ul style="list-style-type: none"> <li>• [YES]:               <ul style="list-style-type: none"> <li>Enables the reset operation for the alarm.</li> <li>The bit device turns off the specified device.</li> <li>The word device turns the specified device value to the reset value.</li> <li>Set the reset value after selecting.</li> </ul> </li> <li>• [NO]:               <ul style="list-style-type: none"> <li>Disables the reset operation for the alarm.</li> <li>The specified device is not turned off or the device value is not turned to the reset value.</li> </ul> </li> </ul>
[Level]	Set the level of alarms. <p>The setting range is [1] to [255].</p> <p>You can display the alarm with higher level preferentially or display the alarms with specific level only.</p>
[Group]	Set the group of alarms. <p>The setting range is [1] to [255].</p> <p>You can display the alarms in order of the group or display the alarms with specific group only.</p>

Item	Description
[Mail Send]	Set the mail sending method. • [None]: No mail is sent. • [Occur]: Sends the date of occurrence or comment contents at an alarm occurrence (when a specified device condition is satisfied) by mail. • [Restore]: Sends the date of restoration or comment contents at an alarm restoration (when a specified device condition is not satisfied) by mail. • [Occur/Restore]: Sends the date of occurrence or restoration and comment contents at an alarm occurrence or alarm restoration by mail.
[Confirmation Device]	Set a bit device to change the status of an alarm to "Checked". ⇒6.1.1 How to set devices When the set device is turned on, the status of the corresponding alarm is changed to "Checked". The GOT monitors the set device in the cycle that is specified with [Watch Cycle].
[Confirmation Notification Device]	Set a bit device to notify that the status of an alarm has been changed to "Checked". ⇒6.1.1 How to set devices When the status of the corresponding alarm is changed to "Checked", the set device turns on. You need to turn off the device after it is turned on.

\*1 The following shows examples for displaying comments of the comment group in the basic alarm, the upper alarm, the middle alarm, and the detailed screen.

- Register comments to be displayed at an alarm occurrence to the comment group.

Register comment groups by level in the alarm hierarchy.

Comment group No. 1  
(For the upper alarms)

Comment group No. 2  
(For the middle alarms)

Comment group No. 3  
(For the basic alarms)

Comment group No. 4  
(For the detail screens)

Column No.	Japan	
Comment No.	1 <Remark>	Text
	1 An error has occurred in Line No. 1.	<input type="text"/>
	2 An error has occurred in Line No. 2.	<input type="text"/>
	3 An error has occurred in Line No. 3.	<input type="text"/>

Column No.	Japan	
Comment No.	1 <Remark>	Text
	1 An error has occurred in device A.	<input type="text"/>
	2 An error has occurred in device B.	<input type="text"/>
	3 An error has occurred in device C.	<input type="text"/>

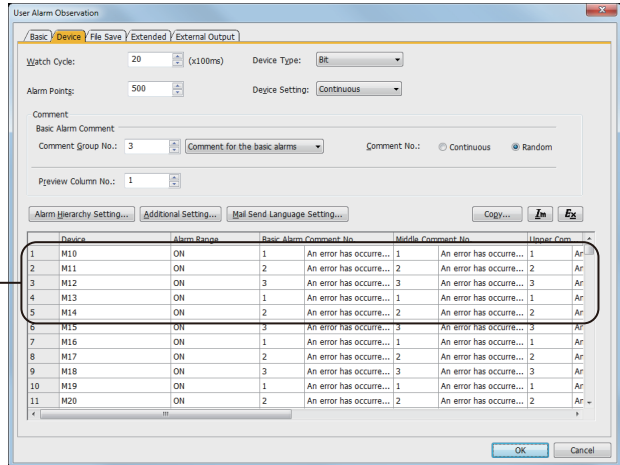

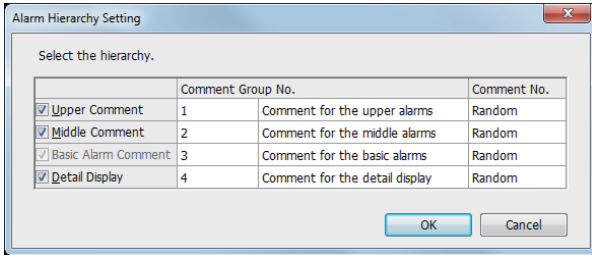

Column No.	Japan	
Comment No.	1 <Remark>	Text
	1 An error has occurred in the power supply unit.	<input type="text"/>
	2 An error has occurred in the drive module.	<input type="text"/>
	3 An error has occurred in the control unit.	<input type="text"/>

Column No.	Japan	
Comment No.	1 <Remark>	Text
	1 Supply oil.	<input type="text"/>
	2 Supply fuel.	<input type="text"/>
	3 Check the hydraulic pressure.	<input type="text"/>

- Set the registered comments to the user alarm monitoring.

1. Set a group No. to be displayed for each level in the hierarchy.

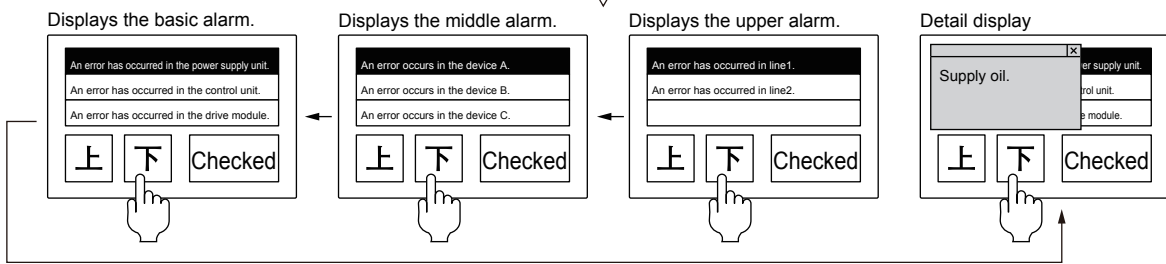

2. Set comments displayed in the basic alarm, the middle alarm, upper alarm, and the detail screen for each alarm.

	Basic Alarm Comment No.	Middle Comment No.	Upper Comment No.	Detail Display	Detail No.
1	1	1	1	Comment Window	1
2	2	2	2	Comment Window	2
3	3	3	3	Comment Window	3
4	1	1	1	Comment Window	1
5	2	2	2	Comment Window	2

A comment displayed in alarm M10 →  
 A comment displayed in alarm M11 →  
 A comment displayed in alarm M12 →  
 ...  
 Set the comment in the comment group No. 3.    Set the comment in the comment group No. 2.    Set the comment in the comment group No. 1.    Set the comment in the comment group No. 4.

Example) Comment display when the alarm M10 occurs

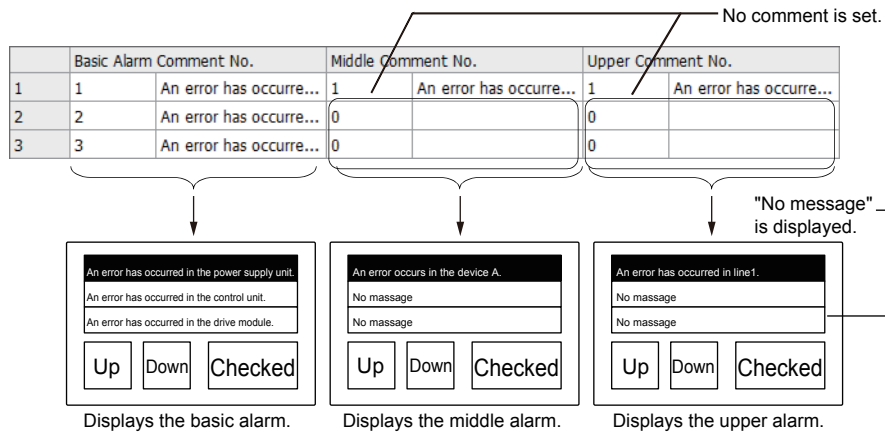

When configuring the following settings to comments displayed at an alarm occurrence, [No Message] is displayed at an alarm occurrence.

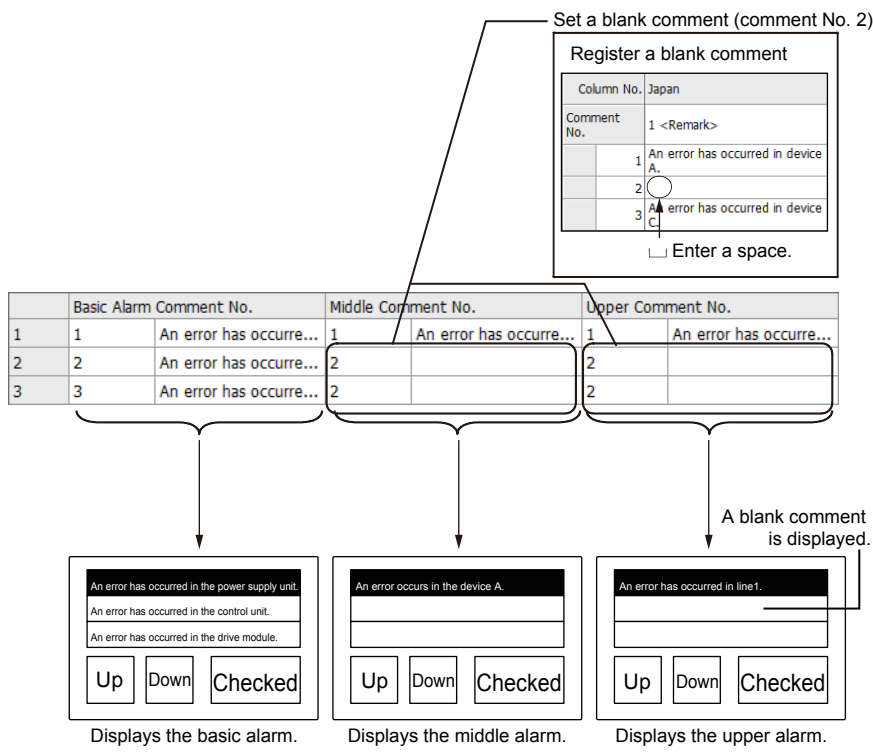

- No comment is set ([0] is specified for the comment No.).
- A comment is not set to the set comment No.

In using hierarchical alarms, if a level in the hierarchy does not need any comment, enter a blank (only space) so as not to display [No Message].

Example 1) No comment is specified No.).

Example 2) Blank comment is specified

\*2 The following shows the display method of the comment window.

1. Displaying the detail display screen by a single touch operation

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 10:25	Line1 error	11:25	10:45
Jun. 1, 2013 12:05	Line2 error		12:28
Jun. 1, 2013 12:35	Line3 error		

2. Displaying the detail display screen by key inputs of a touch switch

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 10:25	Line1 error	11:25	10:45
Jun. 1, 2013 12:05	Line2 error		12:28
Jun. 1, 2013 12:35	Line3 error		

Displaying in a comment window

Displays the specified comment.

Displaying in a window screen (overlap window)

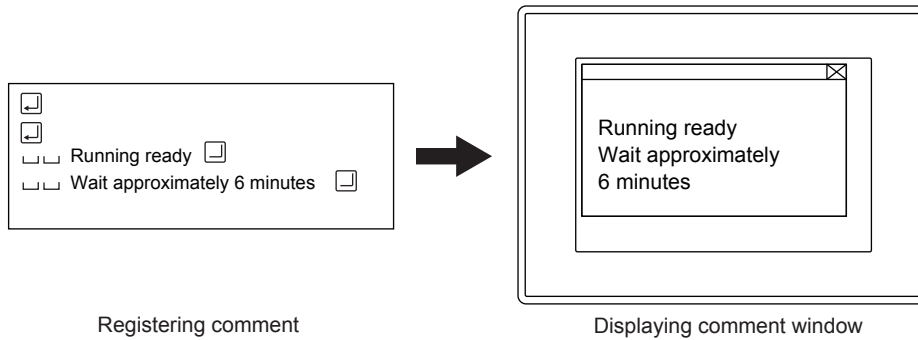

Displays the specified base screens and window screens.

Displaying in a base screen

Item	Specifications
Number of characters that can be displayed in a comment window	<ul style="list-style-type: none"> <li>• For GT27, GT25, GT23, and GT SoftGOT2000 Up to 39 characters can be displayed in each row and 11 rows can be displayed. Thus, A maximum of 429 characters can be displayed. Two -byte character forms a row with 19 characters and up to 11 rows, 209 characters can be displayed.</li> <li>• For GT2107-W, GT2105-Q, and GT2104-R Up to 161 one-byte characters (7 lines of 23 characters) are displayed. Up to 77 two-byte characters (7 lines of 11 characters) are displayed.</li> <li>• GT21-P Up to 203 one-byte characters (7 lines of 29 characters) are displayed. Up to 98 two-byte characters (7 lines of 14 characters) are displayed.</li> </ul>

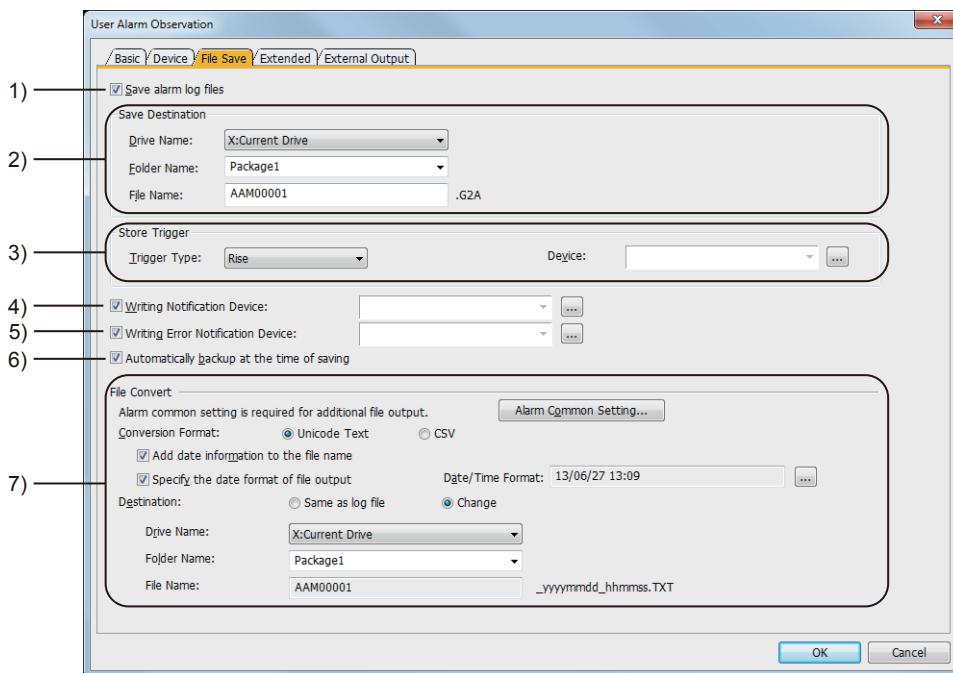

Item	Specifications
Display position of the comment window	A comment window is displayed on the base screen. The window can be moved and closed in the same way that operates window screens.
Display of comments	Text size is fixed to one time high and one time wide. Regardless of the settings made when comments are registered, a blink and HQ characters are not displayed.
Display of comment rows	From the top left of the comment window, the registered comments are displayed. When a comment is longer than the display range of the comment window, the comment is wrapped around to be displayed. To display the comment in the center of the comment window, adjust the position of the comment by inserting line feeds.

### (3) [File Save] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the following items to save the alarm histories stored in the buffering area in the data storage.

#### 1) [Save alarm log files]

Writes the user alarm histories stored in the buffering area as alarm log files to the data storage when [Historical] or [Cumulative] is selected in [Collection Mode] of the [Basic] tab.  
Into data storage, the log file is written as a binary file (\*.G2A).

## 2) [Save Destination]

Item	Description
[Drive Name]	<p>Select a destination drive. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [C:Built-in Flash Memory]</li> <li>• [D:Built-in SRAM]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> <li>• [X:Current Drive]</li> </ul> <p>[C:Built-in Flash Memory] or [D:Built-in SRAM] is settable only in one user alarm observation setting in one project. For the available drives by GOT model, refer to the following. ⇒1.2.7 Drive configuration of the target GOT for data transfer</p>
[Folder Name]	<p>Set the folder name of the destination to save a file. The default is set to the folder name that is specified with [Package Folder Name] in the [Type Setting] dialog. Alphanumeric characters and following symbols are available for the folder name. #%&amp;'()+-.=@[]^_{}~\</p> <p>For the restrictions on the folder name used with the GOT, refer to the following. ⇒12.4 Restrictions for Folder Names and File Names used in GOT When [Drive Name] is set to [C:Built-in Flash Memory] or [D:Built-in SRAM], the folder name specified with [Package Folder Name] in the [Type Setting] dialog is applied.</p>
[File Name]	<p>Set the file name of the destination to save a file. As the default, AAM***** is set for the file name. (* indicates alarm IDs.) Alphanumeric characters and following symbols are available for the file name. #%&amp;'()+-.=@[]^_{}~\</p> <p>For the restrictions of the file name used in the GOT, refer to the following. ⇒12.4 Restrictions for Folder Names and File Names used in GOT</p>

## 3) [Store Trigger]

Item	Description
[Trigger Type]	<p>Select the timing when the user alarm stored in the buffering area is stored to the data storage. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Rise]</li> <li>• [Fall]</li> <li>• [Sampling]</li> <li>• [ON Sampling]</li> <li>• [OFF Sampling]</li> <li>• [Alarm State Change]</li> </ul> <p>When setting [Sampling], [ON sampling], or [OFF sampling], set a cycle. The following shows the setting range. [1] minute to [1440] minutes</p>
[Device]	<p>Set a device used as a store trigger. ⇒6.1.1 How to set devices</p>

## 4) [Writing Notification Device]

Set a device which notifies that the alarm log file is in the process of being written.

⇒6.1.1 How to set devices

## 5) [Writing Error Notification Device]

Set a device which notifies an error when alarm log file writing fails.

⇒6.1.1 How to set devices

## 6) [Automatically backup at the time of saving]

Saves the alarm log file created immediately before it is saved as a backup file (\*.BAK).

If the name of the alarm log file is AAM00001.G2A, the name of the backup file is AAM00001.G2A.BAK.

The stored backup file is not displayed in the utility of the GOT.

## 7) [File Convert]

Set the following items to convert files.

To use file conversion, the setting of [Alarm Common Setting] is required.

Click the [Alarm Common Setting] button and set the [Alarm Common Setting] dialog.

Item	Description
[Conversion Format]	Set the file format applied after the conversion. <ul style="list-style-type: none"> <li>• <b>[Unicode Text]:</b> Saves as a Unicode text file.</li> <li>• <b>[CSV]:</b> Saves as a CSV file.</li> </ul>
[Add date information to the file name]	Date information is added to the name of the alarm log file.
[Specify the date/time format for file output]	Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings
[Save Destination]	Select the save destination folder for a converted file. <ul style="list-style-type: none"> <li>• <b>[Same as log file]:</b> Saves in the destination for the alarm log file.</li> <li>• <b>[Change]:</b> Saves in a destination different from one for the alarm log file. Set [Drive Name] and [Folder Name]. The setting method is the same as that of [Save Destination] for the alarm log file. [File Name] is the same as that of the alarm log file. The file is saved as (*.TXT) if the conversion format is [Unicode Text] and (*.CSV) if [CSV].</li> </ul>

(4) [Extended] tab

Configure the settings for searching the devices of selected alarm when the sequence program monitor is started.

1) [Ladder Search Setting]

Item	Description
[Ladder Search Mode]	Select a ladder searching method from [Coil] or [Factor].
[Specify the search file]	Select this item to specify the name of the program file to be searched. Up to 8 characters can be set for the file name. The file name having both two-byte and one-byte characters can also be searched.

(5) [External Output] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the following items to save the number of user alarms and the occurrences.

1) [History Number Storage]

Select this item to store the number of the user alarm histories in the word device.

All the errors in the status of "Occurred", "Checked", and "Restored" are included in the number of the histories to be stored.

→ 6.1.1 How to set devices

2) [Generated Number Storage]

Select this item to store the number of the system alarms that are currently occurring in the word device.

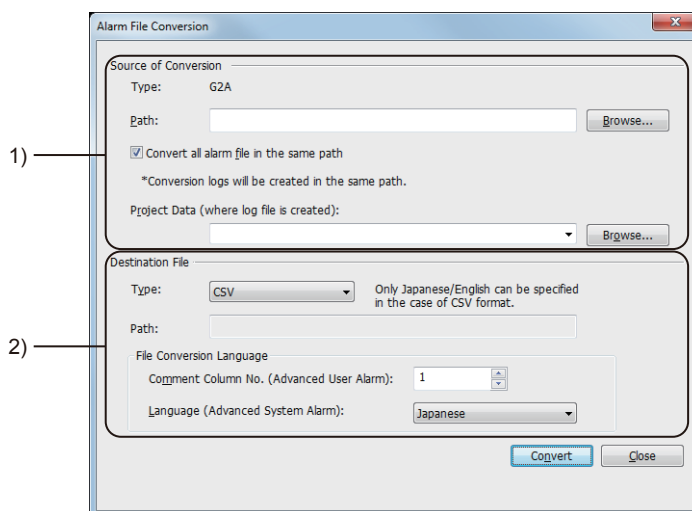

→ 6.1.1 How to set devices

## 8 [Alarm File Conversion] dialog

A binary file (\*.G2A) stored in the data storage with GT Designer3 can be converted into a Unicode text file or CSV file. Since the file is converted with GT Designer3, converting is processed without any load on the GOT.

- Step 1** Store the binary file (\*.G2A) in the personal computer.
- Transferring with GT Designer3  
Select [Communication] → [Read from GOT...] from the menu to transfer a binary file to the personal computer.
  - Storing by using the data storage  
Save a binary file to the data storage and read the file in the data storage using the personal computer.
- Step 2** Select [Tools] → [Resource Data Conversion] → [Alarm File] from the menu.
- Step 3** The [Alarm File Conversion] dialog appears.

### 1) [Source of Conversion]

Item	Description
[Type]	The conversion source file type.
[Path]	Specify a path of the conversion source file.
[Target files in the same path]	Select this item to set all binary files (*.G2A) on the same path to the conversion target. A conversion log is created to a destination with the set path automatically. You can check the full path of the converted files, the conversion results or the creation date of files with the conversion log.
[Project Data (where log file is created)]	Select the project data used for generating the alarm log file for the conversion.

### 2) [Destination File]

Item	Description
[Type]	Select a file type of a file to be created after the conversion. The following shows selectable items. <ul style="list-style-type: none"> <li>• [CSV]</li> <li>• [Unicode Text]</li> </ul>
[Path]	A path for a destination where a destination file is saved. The same path as the one of the conversion source file is displayed.
[File Conversion Language]	<ul style="list-style-type: none"> <li>• [Comment Column No. (User Alarm)]: Select the comment column No. when the conversion source file is a user alarm.</li> <li>• [Language (System Alarm)]: Select the language when the conversion source file is a system alarm.</li> </ul>

## ■ 9 Relevant settings

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

Set the relevant settings other than the specific settings for the user alarm monitoring as required. The following shows the functions that are available by the relevant settings.

### (1) GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

⇒ 5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Notifying the status of the access to the drive <sup>*1</sup> (Write device: System signal 2-2.b0, b1)	[System Signal 2-2]
Notifying that the free space in the drive is insufficient <sup>*1</sup> (Write device: System signal 2-2.b4, b5)	[System Signal 2-2]
Notifying the failure of the access to the drive <sup>*1*2</sup> (Write device: System signal 2-2.b7, b8)	[System Signal 2-2]
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key codes set to the input keys when the keys are input to ASCII input, touch switch, or other objects. (Write device)	[Key Code Input]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]

<sup>\*1</sup> A signal which notifies the full during the access exists in the user alarm monitoring. The signal differs from that of the Drive status notification signal.  
For details, refer to the following.

⇒ 9.1.2 ■ 4 (8) Difference from the Drive status notification signal (writing device: system signal 2-2)

<sup>\*2</sup> Reset the Drive A/B File Access Error signal (writing device: System signal 2-2.b7, b8) with the File Access Error Reset signal (read device: System signal 1-2.b0).

### (2) GOT internal device

⇒ 1.2.6 ■ 1 (1) GOT internal devices (GB, GD, and GS)

Function	Setting item
Saving the data in the buffering area to data storage <sup>*1</sup>	GS520.b0
Changing the character code to Unicode when a binary file is converted to CSV format (Read device)	GS522.b2

<sup>\*1</sup> Only when [Save alarm log files] is selected in the [File Save] tab of the [User Alarm Observation], the data is saved. When [Save alarm log files] is not selected, the user alarm is not saved.

⇒ 9.1.2 ■ 7 (3) [File Save] tab

## 9.1.3 Collecting alarms by monitoring the system

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the system alarm observation
- 2 How to use the system alarm observation
- 3 Precautions for drawing
- 4 Precautions for use
- 5 [System Alarm Observation] dialog
- 6 Relevant settings

The system alarm observation logs errors occurred in the GOT, controller, or network as system alarm events in the GOT built-in memory.

### ■ 1 Specifications of the system alarm observation

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Types of the alarms which can be monitored and necessary settings

##### (a) Alarm type

You can monitor the following alarms with the system alarm observation.

- CPU error  
Indicates an error of a controller.
- GOT error  
Indicates an error of the GOT.  
A GOT Mobile error, which occurs on a GOT Mobile function client, is categorized as a GOT error.
- Network error  
Indicates an error of the communication unit mounted on the GOT.

The type of alarms to be monitored is selectable.

The alarm events are displayable by alarm type, enabling you to rapidly grasp the alarm information.

##### (b) Required settings for using the system alarm

To use the system alarm, select [Use System Alarm] in the [Basic] tab of the [System Alarm Observation] dialog and set a monitor target.

➔ 9.1.3 ■ 5 [System Alarm Observation] dialog

For system alarm monitors, set the type of the alarms to be collected and the collecting method of the alarms.

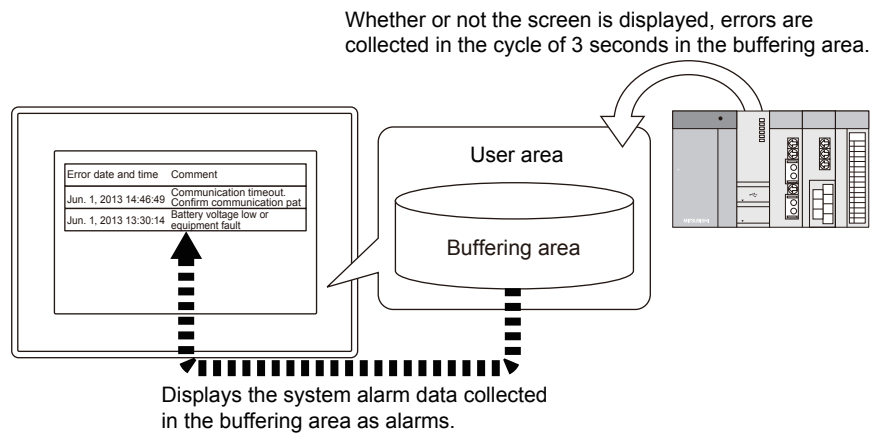

### ■ 2 How to use the system alarm observation

GT27 GT25 GT23 GT21 SoftGOT2000 GS

## (1) Alarm collecting procedure and alarm history collecting method

### (a) Alarm collecting procedure

- CPU errors, network errors  
CPU errors and network errors are collected in the cycle of 3 seconds in the buffering area in the user area of the GOT, regardless of the screen being displayed.  
The buffering area stores the collected system alarms as histories temporarily, and displays them on the GOT as alarms.

- GOT error  
GOT errors are collected in the buffering area in the user area when alarms occur.
- For how to delete the data in the buffering area, refer to the following.  
    ⇒ 9.1.3 ■ 2 (2) Recovery from alarms
- The data to be stored in the buffering area of the user area differ depending on the history collecting method.

### (b) Alarm history collecting method

The following shows the alarm history collecting method.

- History mode  
Adds the alarm contents to the user area of the GOT for each alarm occurrence.
- Only the current alarm  
Displays only the alarm in occurrence, and deletes the display after the alarm restoration.

For the setting of the alarm history collecting method, refer to the following.

⇒ 9.1.3 ■ 5 [System Alarm Observation] dialog

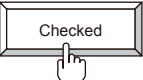

Depending on the collecting method, the types of information collected differs.

Example) Alarm Display (system)

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 20:00	402 Communication timeout. Confirm communicat	-	-	-
Jun. 1, 2013 18:30	70 Battery voltage low or equipment fault	Checked	-	18:50
Jun. 1, 2013 16:10	803 Transient error	Checked	16:30	16:20

(1)
(2)
(3)
(4)
(5)

Displayed information	Description	
	History mode	Alarms in the "Occurred" status only
(1) Date of occurrence	Displays the date and time when an alarm occurs.	
(2) Message	Displays an error code and message when an alarm occurs. For error codes and the corrective actions, refer to the following. ⇒ GOT2000 Series User's Manual (Hardware) Messages registered in the GOT beforehand are displayed as alarm messages.	
(3) Alarm status	Displays the alarm status that is currently displayed. <ul style="list-style-type: none"> <li>• Occurred: The alarm has occurred. (The occurrence of the alarm has not been checked.)</li> <li>• Checked: The occurrence of the alarm has been checked.</li> <li>• Restored: The monitor target already recovered from the alarm.</li> </ul>	
(4) Restored	Displays the date and time when the monitor target recovered from the alarm.	-

Displayed information	Description													
	History mode	Alarms in the "Occurred" status only												
(5) Checked	<p>Displays the date and time when an alarm occurrence has been checked.            Check the occurrence of the alarm with a touch switch for the alarm check.            →9.1.3 ■ 2 (7) Useful operations and functions</p> <table border="1"> <tr> <td>Comment</td> <td>Restored</td> <td>Checked</td> </tr> <tr> <td>402 Communication timeout. Confirm communication pathway</td> <td>-</td> <td>-</td> </tr> </table> <div style="text-align: center;">  <p>Key code: FFB4h or FFB5h</p> </div> <table border="1"> <tr> <td>Comment</td> <td>Restored</td> <td>Checked</td> </tr> <tr> <td>402 Communication timeout. Confirm communication pathway</td> <td>-</td> <td>19:00</td> </tr> </table>		Comment	Restored	Checked	402 Communication timeout. Confirm communication pathway	-	-	Comment	Restored	Checked	402 Communication timeout. Confirm communication pathway	-	19:00
Comment	Restored	Checked												
402 Communication timeout. Confirm communication pathway	-	-												
Comment	Restored	Checked												
402 Communication timeout. Confirm communication pathway	-	19:00												

### (c) Alarm display example

The following shows the examples for displaying alarms with the alarm display (system) for each alarm collecting method.

- Historical

Collects the alarm occurrence status as histories.  
 The history is added every time an alarm occurs.

#### (1) Occurrence of a communication timeout

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Occurred		
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

← A communication timeout has occurred.

#### (2) Communication timeout check

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked		12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

← The communication timeout error has already been checked.

Key code: FFB4h

#### (3) Communication timeout restoration

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked		12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

← The alarm status of the GOT does not turn "Restored".

#### (4) Alarm reset

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked	16:00	12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

← The alarm was reset.

Key code: FFB4h  
 The alarm status of the GOT turns "Restored" and the recovery time is displayed.

#### (5) The reset communication timeout occurs again

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 18:25	402 Communication timeout. Confirm communic	Occurred		
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked	16:00	12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

← Displays the alarm adding a row newly.

- Alarms in the "Occurred" status only

Only the latest GOT error, CPU error, and network error are collected.  
The histories of the alarms that have been recovered are not stored.

Not collected if only the alarms in the "Occurred" status are displayed.

(1) Occurrence of a communication timeout

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Occurred		
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

A communication timeout has occurred.

(2) Communication timeout check

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked		12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

The communication timeout error has already been checked.

Key code: FFB4h

(3) Communication timeout restoration

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 11:30	402 Communication timeout. Confirm communic	Checked		12:00
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

The alarm status of the GOT does not turn "Restored".

(4) Alarm reset

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

After the alarm status turns "Restored", the alarm is deleted.

(5) The reset communication timeout occurs again

Error date and time	Comment	Alarm status	Restored	Checked
Jun. 1, 2013 18:25	402 Communication timeout. Confirm communic	Occurred		
Jun. 1, 2013 10:25	500 Warning! Built-in battery voltage is low.	Occurred		

Displays the alarm that has occurred.

(2) Recovery from alarms

The following shows the procedure for turning the alarm status of each error to "Restored".

(a) CPU errors

Eliminate all the alarm causes of the CPU error.

The alarm status of the system error caused by the CPU error turns "Restored" by eliminating all the alarm causes.

When the multi-channel function is used, the alarm status of all the channels turns "Restored" by eliminating the alarm causes of all the channels.

(b) Network errors

Eliminate all the alarm causes of the network error.

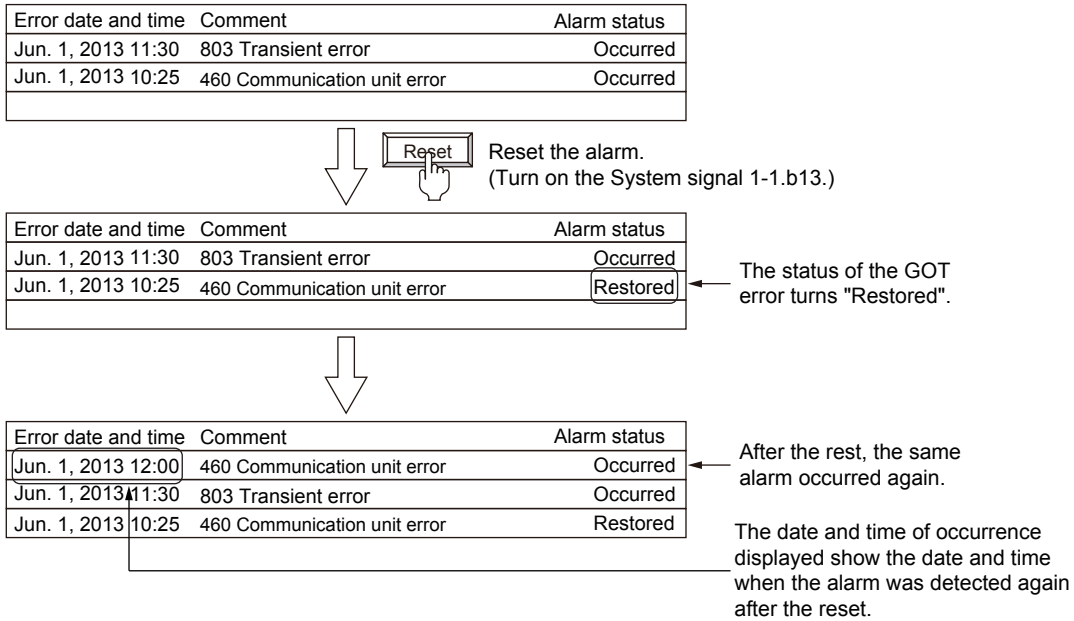

The alarm status of the system error caused by the network error turns "Restored" by eliminating all the alarm causes.

**(c) GOT errors**

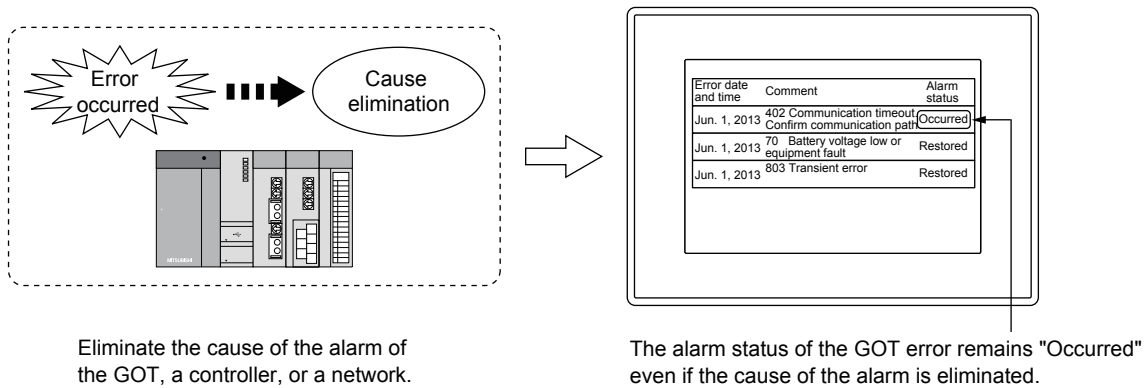

Eliminate all the alarm causes of the GOT error.

Otherwise the same alarm occurs again after the alarm status is turned from "Occurred" to "Restored".

Example) When the alarm of error code 460 occurs and the alarm is reset before the cause is eliminated

The alarm status of GOT errors does not turn "Restored" even after the alarm causes are eliminated. To turn the status to "Restored", execute any one of the following operations.

• Turning the alarm status of a selected error to "Restored"

Using a touch switch, turn the alarm status of an selected error to "Restored".

⇒9.1.3 ■ 2 (7) Useful operations and functions

• Using the system information, turning the alarm status of all the GOT errors to "Restored"

By turning on the GOT Error Reset signal (System signal 1-1.b13), turn the alarm status of all the GOT errors to "Restored".

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

- Using a utility, turning the alarm status of all the GOT errors to "Restored"  
Using the alarm display (system) utility, turn the alarm status of all the GOT errors from "Occurred" to "Restored".  
    → GOT2000 Series User's Manual (Utility)

### (3) Deleting alarm data

Alarms in the "Restored" status can be deleted from the history.  
To delete alarms, turn the alarm status from "Occurred" to "Restored".  
    → 9.1.3 ■ 2 (2) Recovery from alarms

To delete alarm data, perform one of the following operations.

#### (a) Deleting with a device

Turn on [Buffering Data Clear Trigger Device] set in the [Basic] tab of the [System Alarm Observation] dialog to delete all alarm data in the "Restored" status.

#### (b) Deleting with a touch switch

Use a touch switch to delete one or all alarm data items in the "Restored" status.

#### (c) Powering off or resetting the GOT

Power off or reset the GOT to delete alarm data.  
However, when the alarm data is stored in a data storage, the data is retained even after the GOT is powered off.  
    → 9.1.3 ■ 2 (7) Useful operations and functions

#### (d) Changing the [Controller] setting in the utility

Change the [Controller] setting in [GOT basic set] in the utility to delete all alarm data in the "Restored" status.

#### (e) Writing/deleting data to/from the GOT

Perform any of the following operations in the [Communicate with GOT] dialog to delete all alarm data in the "Restored" status.

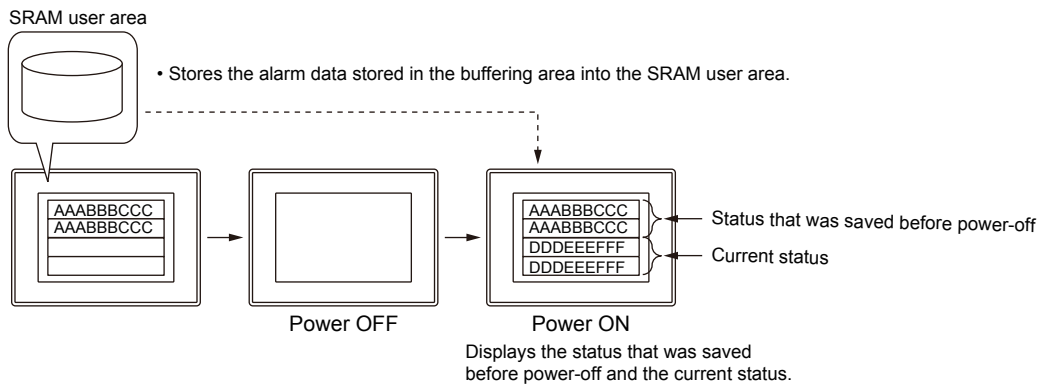

- Writing package data
- Deleting an item from the drive information
- Formatting a drive

### (4) Power-failure backup of the system alarm data

#### (a) Overview of the power failure backup

Once the system alarm data are stored in the data storage or the SRAM user area as the alarm log file, the system alarm data are held even when the GOT is powered off.

When the alarm log file is stored in the data storage or the SRAM user area when the GOT is powered on, the alarm log file is read automatically and the system alarm history before the power-off is recovered.

### (b) Performing the power-failure backup

To hold the data in the data storage, configure the setting in the [File Save] tab of the [System Alarm Observation] dialog, and use either of the following methods.

- Storage by the store trigger device
  - ⇒9.1.3 ■ 5 [System Alarm Observation] dialog
- Storage by the touch switch
  - ⇒9.1.3 ■ 2 (7) Useful operations and functions
- Storage by the Buffer Flash Forced Saving signal (GS520.b0)
  - ⇒12.1 GOT Internal Device

To hold the data in the SRAM user area, configure the setting in the [Basic] tab of the [System Alarm Observation] dialog.

- Saving data to the SRAM user area
  - ⇒9.1.3 ■ 5 [System Alarm Observation] dialog

### (c) Information to be stored

The information in the alarm log file to be stored in the data storage and the SRAM user area differ depending on the alarm collecting method.

- ⇒9.1.3 ■ 1 Specifications of the system alarm observation

### (d) File name and storage timing

- Saving in data storage
 

You can set a file name.

  - ⇒9.1.3 ■ 5 [System Alarm Observation] dialog
- Saving data to the SRAM user area
 

The name of a file to be stored cannot be set.

Alarm data is stored with the timing with which the alarm data is saved in the buffering area.

### (e) Available memory capacity

For the memory capacity available for system alarms to be retained when a power failure occurs, refer to the specifications of each function.

### (f) Backing up the alarm log file stored in the data storage

Select [Automatically backup at the time of saving] in the [File Save] tab of the [System Alarm Observation] dialog to store the alarm log file as a backup file when the alarm log file is saved.

### (g) Backing up/restoring the data stored in the SRAM user area

Backup or restore the data stored in the SRAM user area by using the [SRAM control] of the utility.

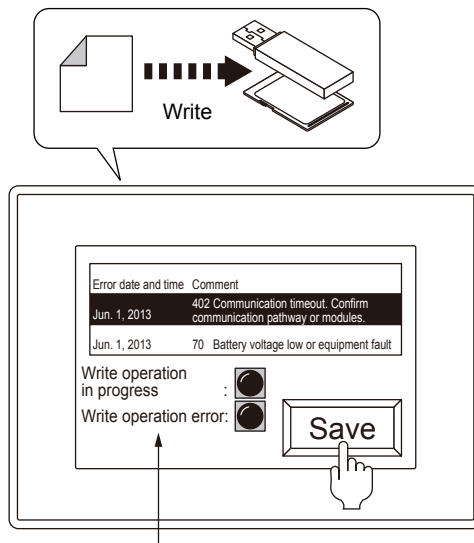

For the details of the backup/restore, refer to the following.

→GOT2000 Series User's Manual (Utility)

(h) **Monitoring the writing status**

You can monitor an error occurred during the system alarm data writing and a writing error by using a device.

→9.1.3 ■ 5 [System Alarm Observation] dialog

The status of write operations can be monitored.

(5) **Converting alarm log files**

Alarm log files generated by system alarms are binary format files (\*.G2A).

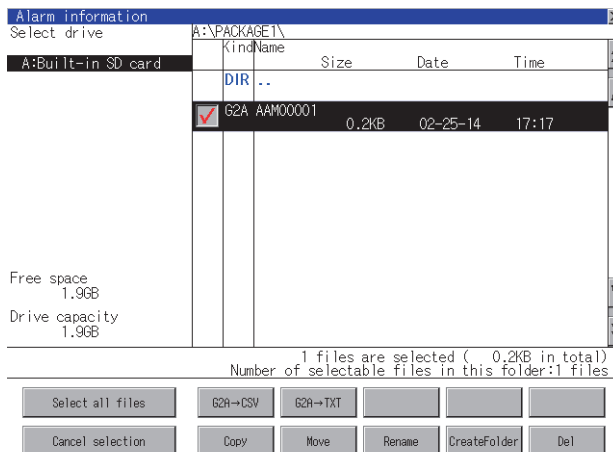

To display and edit the alarm log files on a personal computer, convert them into Unicode text files or CSV files.

The following shows how to convert the alarm log files.

(a) **Creating a Unicode text file or a CSV file with the utility**

Convert a binary format file (\*.G2A) stored in the data storage into a Unicode text file or a CSV file with the utility.

**Step 1** Select a (\*.G2A) file in [Alarm information] of the utility and touch the [G2A → TXT] or [G2A → CSV] button.

**Step 2** Store the created Unicode text file or CSV file into a personal computer by either of the following methods.

- Transferring with GT Designer3  
Reads resource data from the GOT.

- Storing by using the data storage  
Stores the alarm log file to the data storage and reads the alarm log file from the data storage.

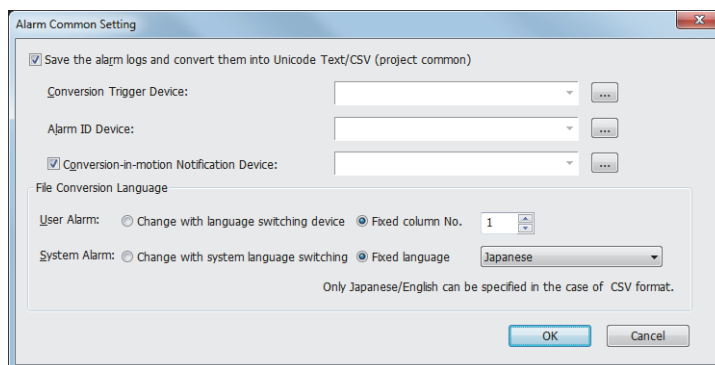

**Step 3** Display or edit the converted Unicode text file or the CSV file on a personal computer.

- For the operations of the utility, refer to the following.
  - ➔GOT2000 Series User's Manual (Utility)
- To read the resource data from the GOT, refer to the following.
  - ➔4.3.2 ■ 3 Reading the data from the GOT

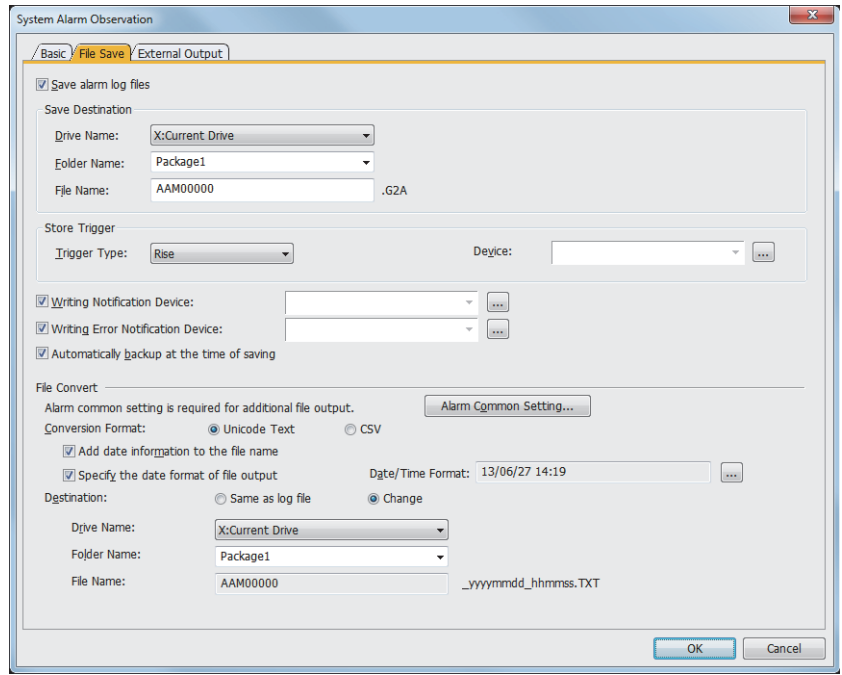

#### (b) Converting a Unicode text file or a CSV file with the device

Turning on a specified device converts a binary format file (\*.G2A) stored in the data storage into a Unicode text file or a CSV file.

**Step 1** Configure the setting for control the alarm log file conversion with the device in the [Alarm Common Setting] dialog.

**Step 2** Configure the setting for storing the alarm log file stored in the buffering area to the data storage in the [File Save] tab of the [System Alarm Observation] dialog.

- For how to configure the setting in the [Alarm Common Setting] dialog, refer to the following.
  - ⇒9.1.2 ■ 5 [Alarm Common Setting] dialog
- For the [File Save] tab setting of the [System Alarm Observation] dialog, refer to the following.
  - ⇒9.1.3 ■ 5 (2) [File Save] tab

• Precautions on converting files by using external control devices

Before converting the alarm log files, write the system alarm monitor ID that generates a file to the alarm ID specification device. When the convert trigger device is turned on before the system alarm monitor ID is written, the alarm log file is not converted.

Always turn off the conversion trigger device after the alarm log file conversion.

When the alarm log file conversion is completed, the conversion notification device does not turn off when the conversion trigger device is on.

**(6) Configurations of a Unicode text file and a CSV file**

No.	Field Name	Value
1)	GT2K ALARM LOG HISTORY	0
2)	ALARM ID	0
3)	ALARM NAME	--
4)	RECORD NUM	2
5)	COMMENT GROUP GENERAL ID	0
6)	COMMENT GROUP MIDDLE ID	0
7)	COMMENT GROUP UPPER ID	0
8)	COMMENT GROUP DETAIL ID	0
9)	ALARM HISTORY NUM	2
10)	NOT RESUMED NUM	1
11)	UNCONFIRMED NUM	2
12)	DATE ORDER	YYYY/MM/DD hh:mm:ss
13)	LOCAL TIME	
14)	TIME INF ORDER	
15)	ERROR_NO	COMMENT
16)	G01-402	Communication timeout
17)	STATUS	2014/3/10 13:39
18)	OCCURRED	2014/3/10 13:39
19)	RESTORED	2014/3/10 13:39
20)	CHECKED	****/*/*/* **
21)	CH.NUM	
22)	NET_STA	
23)	DEV.NAME	
24)	SCR.NO	
25)	DEF_SCR.NO	
26)	OBJECT_ID	
27)	FUNCTION_NAME	
28)	DRIVE	

No.	Description
1)	An alarm collecting method.
2)	An alarm ID. For system alarms, this item is fixed to 65535.
3)	An alarm name. For system alarms, this item is left blank.
4)	The number of data points.
5)	The basic comment group No. For system alarms, this item is fixed to 0.
6)	The middle comment group No. For system alarms, this item is fixed to 0.
7)	The upper comment group No. For system alarms, this item is fixed to 0.
8)	The detailed comment group No. For system alarms, this item is fixed to 0.
9)	The number of the alarm histories.
10)	The number of unrestored alarms.
11)	The number of unchecked alarms.

No.	Description
12)	The order of the dates.
13)	The difference between the Greenwich Mean Time and "Occurred"/"Restored"/"Checked".
14)	The order of the output time.
15)	The error No..
16)	System alarm messages.
17)	The alarm status. (O: Alarm has been occurring, but has not been confirmed, OC: Alarm has been occurring, and has been confirmed, R: Alarm has been restored, but has not been confirmed, RC: Alarm has been restored, and has been confirmed)
18)	The date and time when an alarm occurs.
19)	The date and time when an alarm has restored.
20)	The date and time when an alarm occurrence has been checked.
21)	CH No. (CH1 to CH4)
22)	Network No., station No., and module No.
23)	Device name.
24)	The screen type.(BASE: Base screen, OVL1 to OVL5: Overlap window 1 to 5, SPI1 to SPI2: Superimpose window 1 to 2, DLG: Dialog window, PNL: Operation panel, KEY: Key window, RPT: Report screen)
25)	Definition Screen No. (B: Base screen, W: Window screen, R: Report screen)
26)	Object ID.
27)	Function name.
28)	Drive Name. (A, B, E, F, G)

## (7) Useful operations and functions

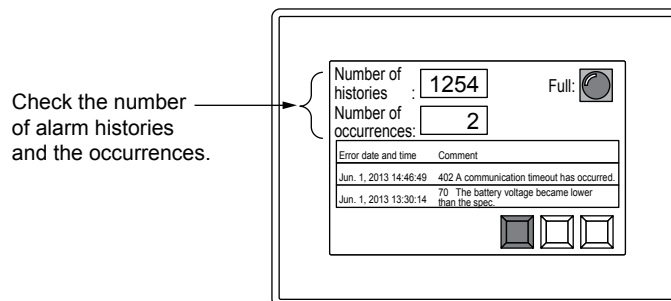

### (a) When the buffering area is full

You can set a device for executing a notification when the number of alarms reaches to the [Stored Number] set in the [Basic] tab of the [System Alarm Observation] dialog.

- Confirming the number of the alarm histories and the alarms

You can confirm the number of the alarm histories by storing the histories stored in the buffering area temporarily to a device.

The number of the system alarms that are currently occurring can be confirmed as well.

- When the buffering area is full

You can set a device for notifying the full of the buffering area.

To execute the notification before the buffer area becomes full, set the [Full Notification Signal Device] in the [Basic] tab of the [System Alarm Observation] dialog.

Select the operation when the buffering area is full in the [Action When Buffer is Full] in the [Basic] tab of the [System Alarm Observation] dialog.

- Size of the buffering

The size of the buffering area to be used for the system alarm varies depending on the setting.

Increasing the size of the buffering decreases the user area of the GOT. Adjust the size of the buffering according to the user area capacity.

Setting items for the size of the buffering area

Alarm collecting method	Setting for the size of the buffering area
History mode	• Number of alarm histories to be stored ([Stored Number] in the [Basic] tab of the [System Alarm Observation] dialog)
Alarms in the "Occurred" status only	-

The size of the buffering area required for the set system alarm list can be confirmed in the [Basic] tab of the [System Alarm Observation] dialog.

For the details of the buffering area, refer to the following.

→9.1.3 ■ 2 (1) Alarm collecting procedure and alarm history collecting method

For how to configure the setting in the [User Alarm Observation] dialog, refer to the following.

→9.1.3 ■ 5 [System Alarm Observation] dialog

### (b) Corrective actions on the cause of the alarm of each type and error codes

For details, refer to the following.

→3.8.1 Error messages (GOT2000 Series simulator)

## ■3 Precautions for drawing

### (1) Setting for saving system alarm data to data storage

To place a button for storing the system alarm data, configure either of the following settings.

- Set the store trigger devices in the [File Save] tab of the [System Alarm Observation] dialog and store the system alarm data.

→9.1.3 ■ 5 [System Alarm Observation] dialog

- Place a touch switch for the alarm display (system) on the screen where the alarm display (system) is set and store the system alarm data.

→9.1.3 ■ 2 (7) Useful operations and functions

### (2) Available file size

Data storage must have larger capacity than the size of the file to be stored.

For the file size, refer to the following.

→9.1.3 ■ 1 Specifications of the system alarm observation

### (3) Changing the setting for recording the label or tag name at an alarm occurrence

On the [Basic] tab in the [System Alarm Observation] dialog, changing the setting of [Record label/tag name at the time of alarm generation] affects the already recorded label and tag names.

For the setting details and the labels and tags to be recorded, refer to the following.

→9.1.3 ■ 5 (1) [Basic] tab

- When clearing this item after recording

The already recorded label and tag names are discarded.

- When selecting this item after recording

For the already collected system alarms, the label and tag names remain unrecorded.

### (4) Changing the number of characters of a label or tag name to be recorded at an alarm occurrence

On the [Basic] tab in the [System Alarm Observation] dialog, changing the setting of [Number of characters to be recorded] affects the already recorded label and tag names.

For the setting details and the labels and tags to be recorded, refer to the following.

→9.1.3 ■ 5 (1) [Basic] tab

- When decreasing the number of characters

Of an already recorded label or tag name, the characters up to the newly-specified number of characters remain and the rest is discarded.

- When increasing the number of characters

The already recorded label and tag names are retained.

## 4 Precautions for use

GT27 GT25 GT23 GT21 SoftGOT2000 GS

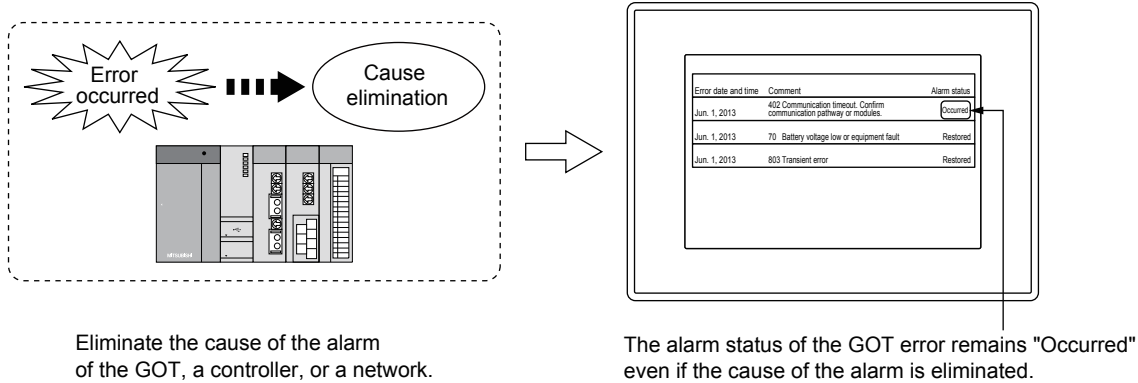

### (1) Controllers for which system alarms are not displayed in the GOT

The CPU errors which occur in the following controllers cannot be displayed on the GOT system alarm display (system). Check the errors with the software for the controllers.

- SIEMENS PLC CPU
- AZBIL controller
- RKC temperature controller
- Inverter

### (2) Resetting alarms

The alarm status of GOT errors does not turn "Restored" even if the alarm cause of the GOT errors is eliminated.

For details, refer to the following.

⇒9.1.3 ■ 2 (2) Recovery from alarms

### (3) Recovering from network errors and deleting the errors

The alarm status of network errors that occur in the CC-Link communication unit and MELSECNET/H communication unit does not turn "Restored" even if the cause of the alarms is eliminated until the GOT is powered off or reset.

For turning the alarm status to "Restored" and deleting the alarms, refer to the followings.

⇒9.1.3 ■ 2 (2) Recovery from alarms

### (4) Display of system alarms occurring in multiple channels

If system alarms occur in multiple channels simultaneously, the alarm occurring in the highest numbered channel is displayed.

### (5) When the same data are stored in data storage

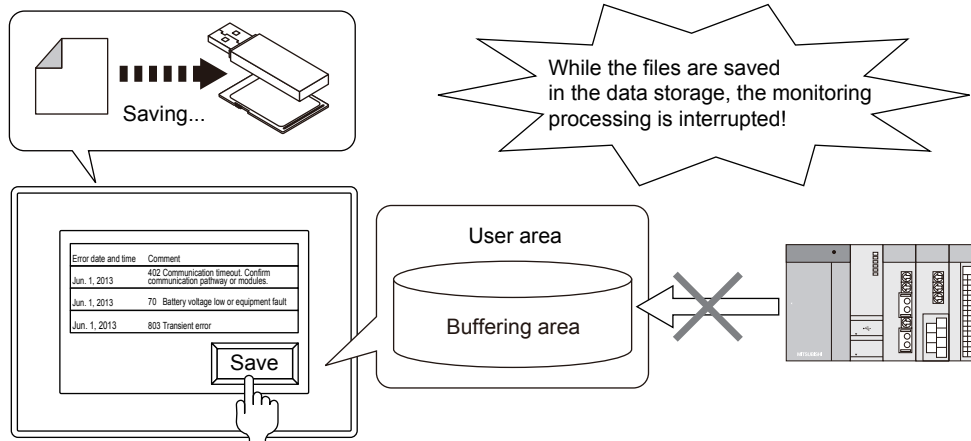

The data in the data storage are overwritten. To reserve the data, move the data in the data storage to a personal computer with either of following methods.

- Reading resource data with GT Designer3
  - ⇒4.3.2 ■ 3 Reading the data from the GOT
- Reading a CSV file stored in the data storage with a personal computer

**(6) Alarm monitoring during the alarm log file saving**

While alarm log files are saved in the data storage, the system alarm monitoring processing is interrupted. System alarms occurred or recovered during the storing are not displayed.

**(7) Storage by the Buffer Flash Forced Saving signal (GS520.b0)**

It may take minutes for an alarm log file to be saved in data storage because the data of all the target system alarms for the alarm log file is saved.

To prevent the monitoring from stopping for a long time, save the alarm log files in units of objects.

- Setting the store trigger for each system alarm observation setting
- Setting the touch switch (key code: FFBBh) for each alarm display (system)

**(8) Precautions for removing an SD card**

When you open the SD card cover or turn off the SD card access switch, the files are saved automatically.

Before removing the SD card, make sure that the file saving is complete by checking one of the following conditions.

- The Drive Status Notification signal (system signal 2-2.b0, b1) is turned off.
- The SD card access LED is turned off.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Storing may take longer because all the user alarms and system alarms for saving the alarm log files are stored.

**(9) Restoring the alarm histories when powering-off to on the GOT**

When the alarm log file in the data storage is not created in the project in the GOT, the file cannot be read from the GOT. In this case, an alarm occurs or a device turns on.

- A system alarm 525 occurs.
- The [Writing Error Notification Device] set in the [File Save] tab of the [System Alarm Observation] dialog turns on.

**(10)Collecting alarms when the buffering area is full**

The operation when the buffering area is full is either of the followings according to the [Action When Buffer is Full] in the [Basic] tab of the [System Alarm Observation] dialog.

- Deleting recovered system alarms and adding a new system alarm
- The system alarms are not collected.

To prevent the operations above, set the [Full Notification Signal Device] in the [Basic] tab of the [System Alarm Observation] dialog and delete the recovered alarm when the device turns on.

⇒9.1.3 ■ 5 [System Alarm Observation] dialog

**(11)Error occurred during the alarm log file saving**

When an error occurs during the alarm log file saving, the [Writing Error Notification Device] set in the [File Save] tab of the [System Alarm Observation] dialog turns on.

Check that the following conditions are satisfied.

- The SD card cover of the GOT is closed.
- The SD card access switch of the GOT is turned on.
- The data storage is not full.

## (12) Difference from the Drive status notification signal (writing device: system signal 2-2)

The full notification, writing notification and a writing error can be notified by the Drive status notification signal as well, and the operations differ from the devices set in the system alarm monitoring.

Item	Operation (difference)	
	User alarm observation	Drive status notification signal
Difference between [Full Notification Signal Device] set for system alarm monitors and the Drive status notification signal (System signal 2-2.b4, b5)	Turns on when the number of log files reaches the [Stored Number] set in the [Basic] tab (when the buffering area reserved for the system alarms is full).	Turns on when the data storage is full.
Difference between [Writing Notification Device] set for system alarm monitors and the Drive status notification signal (System signal 2-2.b0, b1)	Turns on while the system alarm data are written to the data storage.	Turns on while the data are written to the data storage (turns on while data other than the system alarm are written).
Difference between [Writing Error Notification Device] set for system alarm monitors and the Drive status notification signal (System signal 2-2.b7, b8)	<ul style="list-style-type: none"> <li>Turns on when an error occurs at the accessing to the alarm log file in the data storage (when the alarm log file in the data storage is not created in the project in the GOT).</li> <li>Turns on when the data storage cannot be accessed (e.g. when a data storage is not installed or the SD card cover is open).</li> </ul>	Turns on when the data storage cannot be accessed (e.g. when a data storage is not installed or the SD card cover is open).

## (13) Character code and conversion destination file

If an alarm log file contains any character other than ASCII and Shift JIS characters, convert the file as shown below.

- Convert the file to Unicode text format.
- Turn on the Character Code for CSV Conversion signal (GS522.b2), and convert the file to CSV format.

## (14) System language applied at the conversion of the system alarm files

When [System Language Switching Operation] is set for [System Alarm] of [File Conversion Language] in the [Alarm Common Setting] dialog, system alarm files are not converted in the language specified in the system language switching device.

A file is converted in the system language set in the utility.

## (15) Alarm log file conversion by utility

When converting an alarm log file (\*G2A) into a CSV file or a Unicode text file with a utility, execute a conversion by each file.

Even if multiple files are selected at once, they cannot be converted.

## (16) Unicode text file converted with the utility

For the precautions for using Unicode text files, refer to the following.

⇒ 12.5 Precautions for Using Unicode Text File

## ■ 5 [System Alarm Observation] dialog

**Step 1** Select [Alarm] → [System Alarm Observation] from the project tree.

**Step 2** Double-click the [System Alarm Observation] to display the [System Alarm Observation] dialog.

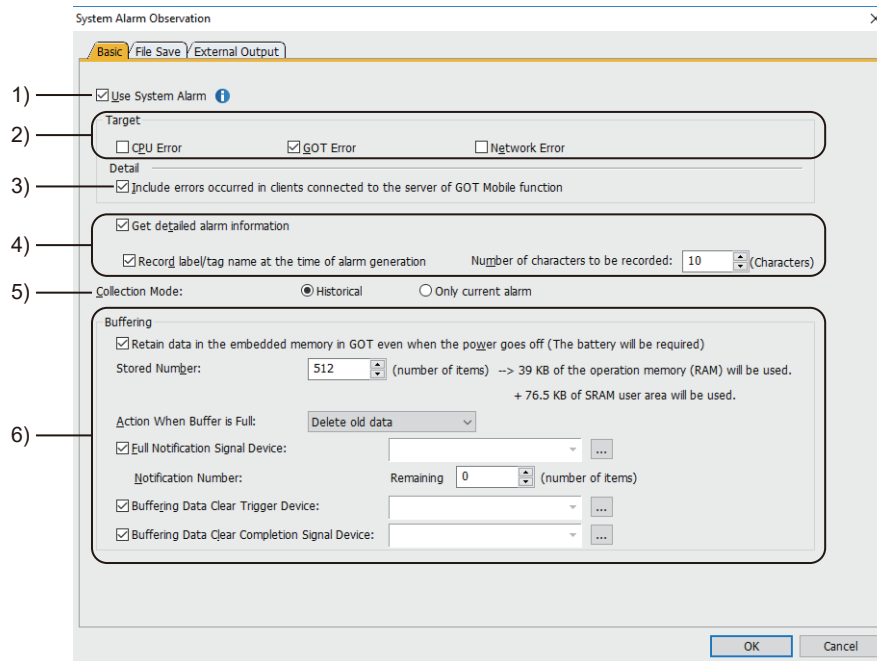

- ⇒ (1) [Basic] tab  
 (2) [File Save] tab  
 (3) [External Output] tab

## (1) [Basic] tab

Set the type of the alarm to be monitored, alarm history collecting method and the buffering that stores the alarm history.

### 1) [Use system alarm]

Set whether to enable or disable the system alarm function.

To pop up an alarm message, configure the following settings additionally.

- Alarm popup display settings
  - ⇒ 9.1.4 ■ 4 [Alarm Popup Display] dialog
- Setting of the screen where an alarm message pops up
  - ⇒ 2.7.1 ■ 1 [Basic] tab
  - 10.18.7 ■ 1 [Basic] tab

### 2) [Target]

Select the system alarm to be monitored.

The following shows selectable items.

- [CPU Error]
- [GOT Error]
- [Network Error]

### 3) [Include errors occurred in clients connected to the server of GOT Mobile function]

Available to GT27 and GT25.

This item is settable only when [Target] is set to [GOT Error].

Monitors errors of a GOT Mobile function client (GOT Mobile errors).

### 4) [Get detailed alarm information]

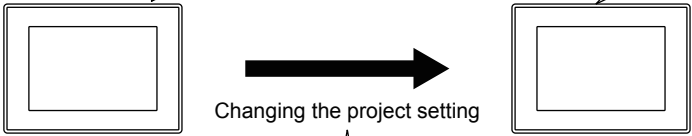

Makes it easy to identify where the alarm has occurred by obtaining the detail information of the system alarm.

After a system alarm has occurred, when another system alarm with the same error code occurs, if their error factors differ, the alarms are handled as different alarms.

The setting determines the information to be obtained.

- Not selected:
  - Error code, and the date and time of occurrence/restoration/check
- Selected:
  - Error code, date and time of occurrence/restoration/check, channel No., network No., station No., CPU No., device, screen No., definition screen No. (the number of the screen on which an object having an error is placed when the set overlay screen function is used), object ID, function name, and drive name

The information obtained varies according to each system alarm.

Item	Description
<p>[Record label/tag name at the time of alarm generation]</p>	<p>Records the label or tag name and the assigned device when a system alarm occurs. The following shows the labels and tags to be recorded.</p> <ul style="list-style-type: none"> <li>• Global label</li> <li>• OMRON NJ/NX tag</li> <li>• AB native tag</li> </ul> <p>Even if you change the label or tag set for an object or others after the system alarm collection, you can check the label or tag name as of the system alarm collection. Specify the number of characters of a label or tag name to be recorded with [Number of characters to be recorded]. The more the numbers of recorded characters and stored items, the larger the used area of the operation memory (RAM). The following shows the operation when this item is selected. Example) When the global label name set for the numerical input is changed after system alarm collection</p> <div data-bbox="491 589 1353 1126" style="border: 1px solid black; padding: 10px;"> <p>The detailed information about the occurred system alarm is obtained, and the global label name is also recorded.</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 5px auto;">::LABEL_FOR_LINE_A</div> <p>The global label name recorded at the alarm occurrence is retained.</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 5px auto;">::LABEL_FOR_LINE_A</div>  <p style="text-align: center;">Changing the project setting</p> <p>A system alarm occurs in the numerical input.</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 5px auto;">         With the change of the global label name, change the global label set for the numerical input.          ::LABEL_FOR_LINE_A → ::LABEL_FOR_LINE_B       </div> </div> <p>Even if this item is not selected, the label or tag name appears on the alarm display or others. The number of characters is unlimited. However, if you change a label or tag, the label or tag name as of the system alarm collection does not appear. The symbol (::) indicating a label or tag and the characters indicating the offset setting are displayed. When an alarm log file is converted to a CSV file or Unicode text file, the label and tag names are not output.</p>
<p>[Number of characters to be recorded]</p>	<p>Specify the number of characters of a label or tag name to be recorded. The characters up to the set number of characters are recorded, and the rest is unrecorded. The setting range is [10] to [300]. The more the number of characters, the larger the used area of the operation memory (RAM) and the size of the alarm log file.</p>

### 5) [Collection Mode]

Select a system alarm collecting method.

- [Historical]:  
Collects the system alarm occurrence status as histories.  
The history is added every time a system alarm occurs.
- [Only the current alarm]:  
Collects only the latest CPU error, GOT error, and network error.  
System alarms which obtained the Restored" status in the GOT are deleted.

### 6) [Buffering]

Set the buffering that stores collected system alarms.

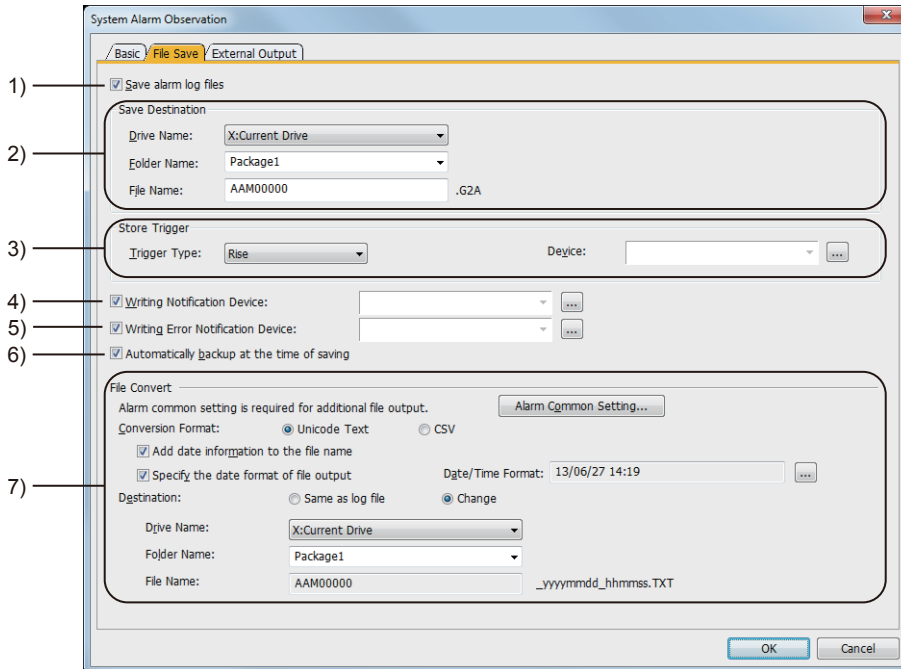

Item	Description
<p>[Retain data in the embedded memory in GOT even when the power goes off (The battery will be required)]</p>	<p>Saves alarm data in the buffering area in the SRAM user area. →9.1.1 ■ 2 (3) (h) Storing the alarm data (power failure backup)</p>

Item	Description
[Stored Number]	Set this item when setting [Collection Mode] to [Historical]. Set the number of the system alarms to be stored. The setting range is [512] to [32767]. The size of the buffering increases as the number of the alarms to be stored increases.
[Action When Buffer is Full]	Set this item when setting [Collection Mode] to [Historical]. Select the operation performed when the number of the system alarms stored in the buffering area reaches [Stored Number]. <ul style="list-style-type: none"> <li>[Delete old data]: Among the system alarms in the "Restored" status, deletes the system alarm with the oldest date and time of recovery and collects a new system alarm.</li> <li>[Add no item]: Stops collecting system alarms even when new ones occur.</li> </ul>
[Full Notification Signal Device]	Set this item when setting [Collection Mode] to [Historical]. A set device notifies you that the number of system alarm histories which can be stored in the remaining space in the buffering becomes the same as [Notification Number] or smaller. →6.1.1 How to set devices
[Notification Number]	When setting [Full Notification Signal Device], set this item. Set the number of the remaining system alarm histories with which [Full Notification Signal Device] notifies. The setting range is [0] to [255]. <ul style="list-style-type: none"> <li>Setting example When the [Stored Number] is set to 1000, the [Notification Number] is set to 10 The [Full Notification Signal Device] turns on when the number of stored system alarm histories becomes 990 because the number of storable system alarm histories becomes 10.</li> </ul>
[Buffering Data Clear Trigger Device]	Deletes with a set device the system alarms which the monitor targets recovered from and are stored in the buffering area. →6.1.1 How to set devices
[Buffering Data Clear Completion Signal Device]	When setting [Buffering Data Clear Trigger Device], set this item. Notifies you with a set device that deleting buffering data is complete. →6.1.1 How to set devices

**(2) [File Save] tab**

Set the following items to save the alarm histories stored in the buffering area in the data storage.

**1) [Save alarm log files]**

When [Historical] is selected for [Collection Mode] in the [Basic] tab, writes the system alarm histories stored in the buffering area in data storage as an alarm log file.  
Into data storage, the log file is written as a binary file (\*.G2A).

## 2) [Save Destination]

Item	Description
[Drive Name]	<p>Select a destination drive.</p> <p>The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> <li>• [X:Current Drive]</li> </ul> <p>For the available drives by GOT model, refer to the following.</p> <p>→1.2.7 Drive configuration of the target GOT for data transfer</p>
[Folder Name]	<p>Set the folder name of the destination to save a file.</p> <p>The default is set to the folder name that is specified with [Package Folder Name] in the [Type Setting] dialog.</p> <p>Alphanumeric characters and following symbols are available for the folder name.</p> <p>#\$%&amp;'()+-.=@[^_{}~\</p> <p>For the restrictions on the folder name used with the GOT, refer to the following.</p> <p>→12.4 Restrictions for Folder Names and File Names used in GOT</p>
[File Name]	<p>Set the file name of the destination to save a file.</p> <p>The default is set to AAM00000.</p> <p>Alphanumeric characters and following symbols are available for the file name.</p> <p>#\$%&amp;'()+-.=@[^_{}~\</p> <p>For the restrictions of the file name used in the GOT, refer to the following.</p> <p>→12.4 Restrictions for Folder Names and File Names used in GOT</p>

## 3) [Store Trigger]

Item	Description
[Trigger Type]	<p>Select the timing with which system alarms stored in the buffering area are stored into the data storage.</p> <p>The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Rise]</li> <li>• [Fall]</li> <li>• [Sampling]</li> <li>• [ON Sampling]</li> <li>• [OFF Sampling]</li> <li>• [Alarm State Change]</li> </ul> <p>When setting [Sampling], [ON sampling], or [OFF sampling], set a cycle.</p> <p>The following shows the setting range.</p> <p>[1] minute to [1440] minutes</p>
[Device]	<p>Set a device used as a store trigger.</p> <p>→6.1.1 How to set devices</p>

## 4) [Writing Notification Device]

Set a device which notifies that the alarm log file is in the process of being written.

→6.1.1 How to set devices

## 5) [Writing Error Notification Device]

Set a device which notifies an error when alarm log file writing fails.

→6.1.1 How to set devices

## 6) [Automatically backup at the time of saving]

Saves the alarm log file created immediately before it is saved as a backup file (\*.BAK).

If the name of the alarm log file is AAM00000.G2A, the name of the backup file is AAM00000.G2A.BAK.

The stored backup file is not displayed in the utility of the GOT.

## 7) [File Convert]

Set the following items to convert files.

To use file conversion, the setting of [Alarm Common Setting] is required.

Click the [Alarm Common Setting] button and set the [Alarm Common Setting] dialog.

Item	Description
[Conversion Format]	<p>Set the file format applied after the conversion.</p> <ul style="list-style-type: none"> <li>• [Unicode Text]: Saves as a Unicode text file.</li> <li>• [CSV]: Saves as a CSV file.</li> </ul>

Item	Description
[Add date information to the file name]	Date information is added to the name of the alarm log file.
[Specify the date/time format for file output]	Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings
[Save Destination]	Select the save destination folder for a converted file. <ul style="list-style-type: none"> <li>• [Same as log file]: Saves in the destination for the alarm log file.</li> <li>• [Change]: Saves in a destination different from one for the alarm log file. Set [Drive Name] and [Folder Name]. The setting method is the same as that of [Save Destination] for the alarm log file. [File Name] is the same as that of the alarm log file. The file is saved as (*.TXT) if the conversion format is [Unicode Text] and (*.CSV) if [CSV].</li> </ul>

### (3) [External Output] tab

Set the following items to save the number of system alarms and the occurrences.

#### 1) [History Number Storage]

Stores the number of system alarm histories in a set word device.

All the errors in the status of "Occurred", "Checked", and "Restored" are included in the number of the histories to be stored.

→6.1.1 How to set devices

#### 2) [Generated Number Storage]

Stores the number of the system alarms in the "Occurred" status in a set word device.

→6.1.1 How to set devices

## 6 Relevant settings

Set the relevant settings other than the specific settings for the system alarm monitor as required. The following shows the functions that are available by the relevant settings.

### (1) GOT environmental settings (System information)

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

⇒5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Resetting system alarms and system information (GOT error code, GOT Error Detection) (Read device: System signal 1-1.b13)	[System Signal 1-1]
Notifying the status of the access to the drive <sup>*1</sup> (Write device: System signal 2-2.b0, b1)	[System Signal 2-2]
Notifying that the free space in the drive is insufficient <sup>*1</sup> (Write device: System signal 2-2.b4, b5)	[System Signal 2-2]
Notifying the failure of the access to the drive <sup>*1*2</sup> (Write device: System signal 2-2.b7, b8)	[System Signal 2-2]
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Notifying the key codes set to the input keys when the keys are input to ASCII input, touch switch, or other objects. (Write device)	[Key Code Input]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]

\*1 A signal which notifies the full during the access exists in the user alarm monitoring. The signal differs from that of the Drive status notification signal.

For details, refer to the following.

⇒9.1.2 ■ 4 (8) Difference from the Drive status notification signal (writing device: system signal 2-2)

\*2 Reset the Drive A/B File Access Error signal (writing device: System signal 2-2.b7, b8) with the File Access Error Reset signal (read device: System signal 1-2.b0).

### (2) GOT internal device

⇒1.2.6 ■ 1 (1) GOT internal devices (GB, GD, and GS)

Function	Setting item
Saving the data in the buffering area to data storage <sup>*1</sup>	GS520.b0
Changing the character code to Unicode when a binary file is converted to CSV format (Read device)	GS522.b2
Storing the channel No. that has been assigned to the channel where a system alarm (GOT error) occurs (Write device)	GS262
Storing the channel No. that has been assigned to the channel where a system alarm (CPU error) occurs (Write device)	GS263
Storing the channel No. that has been assigned to the channel where a system alarm (network error) occurs (Write device)	GS264

\*1 Only when [Save alarm log files] is selected in the [File Save] tab of the [System Alarm Observation] dialog, the data is saved.

⇒9.1.3 ■ 5 (2) [File Save] tab

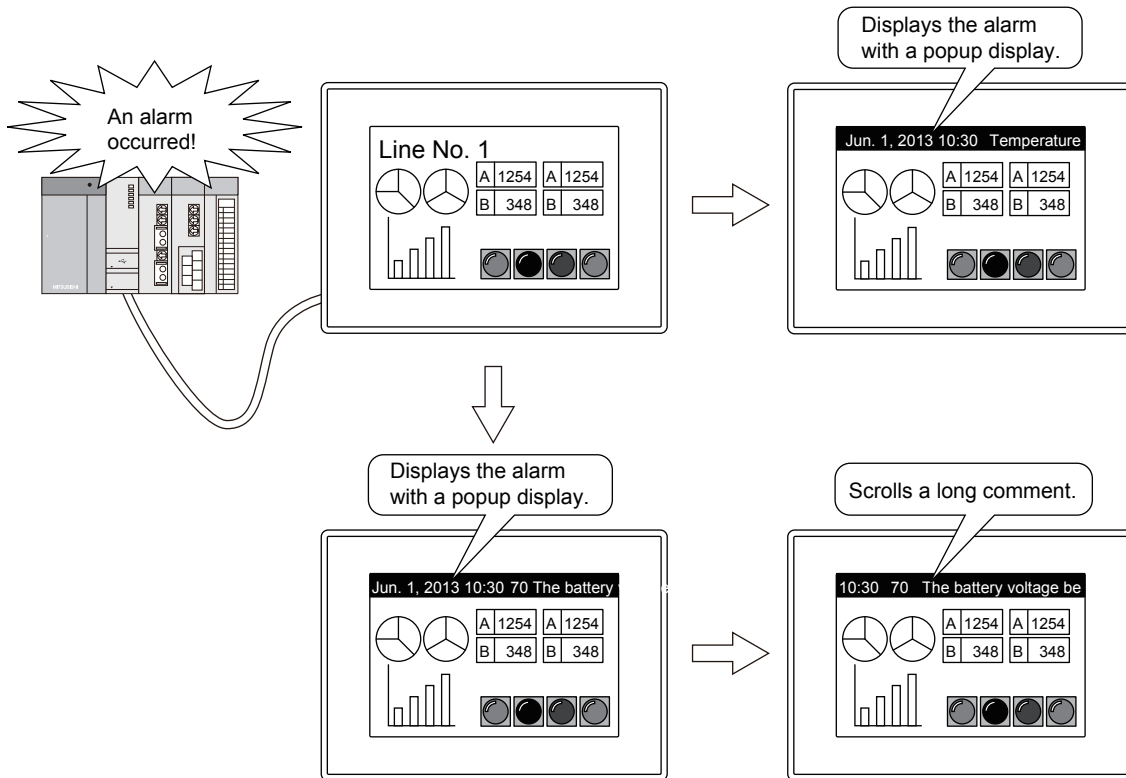

## 9.1.4 Enabling the popup display for when an alarm occurs

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ➔ ■ 1 Specifications of the alarm popup display
- 2 How to use the alarm popup display
- 3 Precautions
- 4 [Alarm Popup Display] dialog
- 5 Relevant settings

In the alarm popup display, the GOT displays alarms whether or not the target object for the alarm popup display is placed.

Even a long comment can be displayed in the alarm popup display by scrolling across the screen from right to left.

### ■ 1 Specifications of the alarm popup display

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (1) Types of alarms which can be displayed and necessary settings

##### (a) Alarm type

User alarms and system alarms can be displayed in the alarm popup display.

- Setting the alarm popup display
  - Set the alarms to be displayed in the alarm popup display.
    - ➔9.1.4 ■ 4 [Alarm Popup Display] dialog
- Auxiliary settings for each screen
  - For each base screen and mobile screen, set whether to display the alarm popup display, and set the position of the alarm popup display.
  - Set the alarm popup display in the [Screen Property] dialog.
  - For details, refer to the following.
    - ➔2.7.1 ■ 1 [Basic] tab
    - 10.18.7 ■ 1 [Basic] tab
- When the display position overlaps with other objects
  - Objects hidden under the alarm popup display are not operable.
- Switching the display position with touch operations

The position of the alarm popup display can be switched with touch operations.  
For details, refer to the following.

⇒9.1.4 ■ 2 (3) Useful operations and functions

### (b) Necessary settings for using the alarm popup display

Prior to using the alarm popup display, set the alarm to be displayed with the alarm monitor.

- Displaying user alarms

Select [Popup Display] in the [Basic] tab in the [User Alarm Observation] dialog.

When user alarms with multiple alarm ID numbers are displayed, whether to display the popup display or not can be selected.

⇒9.1.2 ■ 7 (1) [Basic] tab

Additionally, by using a device, only one alarm ID number can be displayed.

⇒9.1.4 ■ 2 (3) Useful operations and functions

- Displaying system alarms

GT21 does not support the system alarm function.

Select [Target] in the [Basic] tab in the [User Alarm Observation] dialog.

The selected system alarm is displayed in the popup display.

⇒9.1.3 ■ 5 (1) [Basic] tab

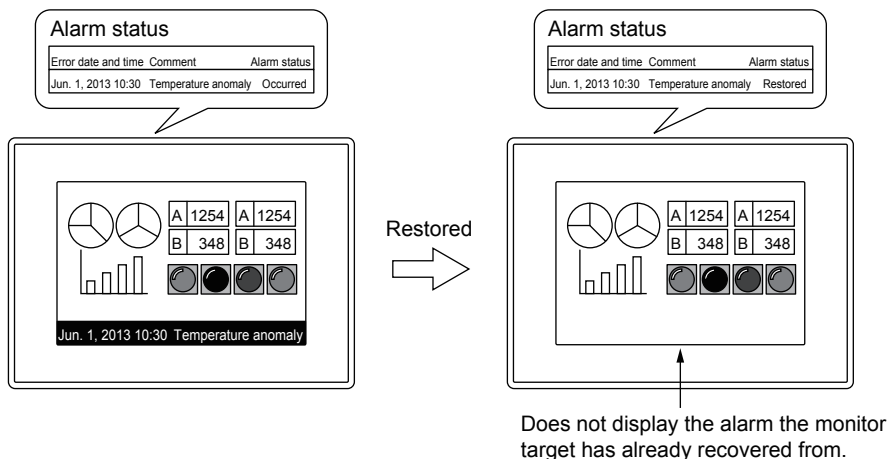

## ■ 2 How to use the alarm popup display

### (1) Alarms to be displayed in the popup display

In the alarm popup display, the GOT displays alarms in the "Occurred" or "Checked" status.

When the alarm status becomes "Restored" (including already checked alarms which the monitor targets recovered from), the display is hidden.

### (2) Selecting the display method

#### (a) Fixed

The comments to be displayed at the occurrence of an alarm are not scrolled in the display.

When multiple alarms occur, the alarms are displayed by automatically switching the display.

When a temperature anomaly and the fuse error occur

- When multiple alarms occur

For the details of the order in which alarms are displayed, refer to the following.

⇒9.1.4 ■ 3 Precautions

- When setting a comment using multiple rows  
Only the part in the first row is displayed.  
The parts in the second and the following successive rows cannot be displayed.

(b) Flow

Comments displayed when alarms occur are displayed by scrolling from right to left.  
When multiple alarms occur, the alarms are displayed in order.

- When multiple alarms occur  
For the details of the order in which alarms are displayed, refer to the following.  
⇒9.1.4 ■ 3 Precautions
- When setting a comment using multiple rows  
After the part of the comment in the first row is displayed, the parts in the second and the following successive rows are displayed by scrolling.

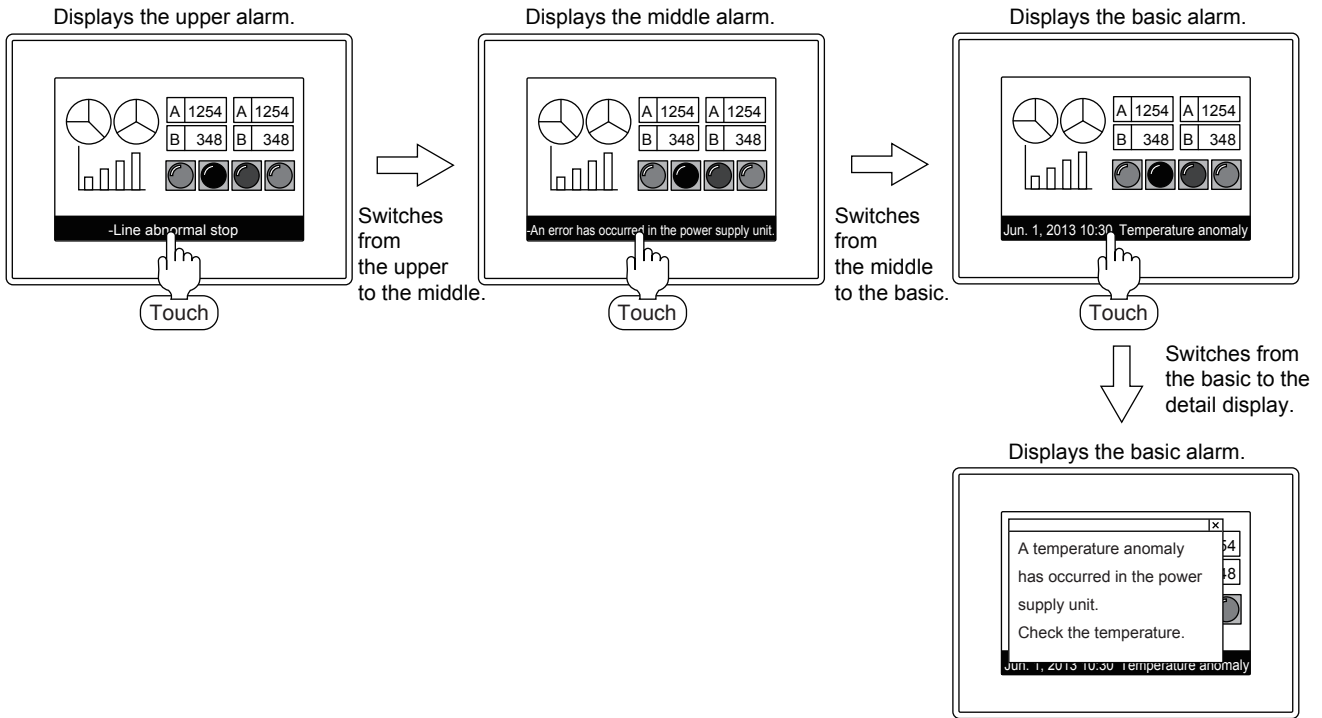

(3) Useful operations and functions

(a) Operations performed when the popup display section is directly touched

- Screen Switching  
The display can be switched to the base screen with a specified No. or overlap window 1.  
The popup display can be used in a manner that displays an alarm processing screen with detailed information when the popup display section is touched.  
⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

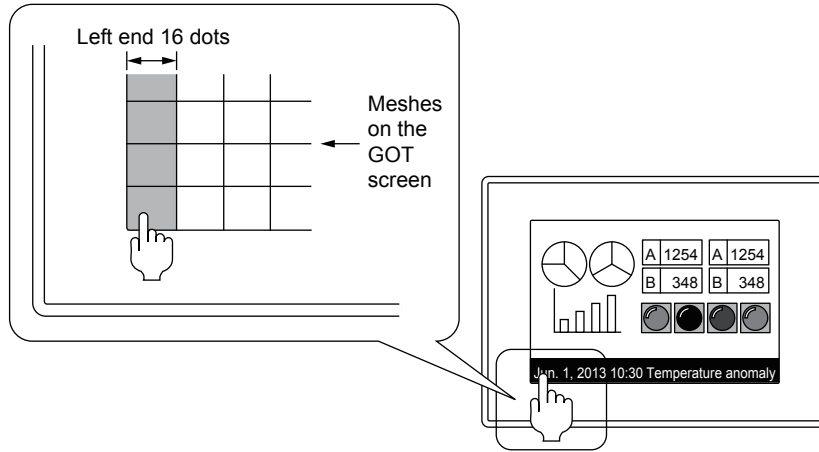

- Switching the levels in the hierarchy of comments/Detail display  
When user alarms are displayed in the popup, the target level for the display in the hierarchy of comments can be switched.  
⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

- Levels in the hierarchy which can be switched with touch operations  
Touch operations can switch only to lower levels in the hierarchy.  
To switch to an upper level in the hierarchy, set [Hierarchy] of [Switching Device] in the [Extended] tab in the [Alarm Popup Display] dialog. Then, store the value for the target level in a set device.  
⇒9.1.4 ■ 4 [Alarm Popup Display] dialog
- Difference in the display range between the methods of switching levels in the hierarchy  
Depending on the method of switching levels in the hierarchy, touch operations or the switching device, the display range is different.  
For details, refer to the following.  
⇒9.1.4 ■ 2 (3) (b) Switching the levels in the alarm hierarchy (for alarm display (user) only)
- Switching the display position  
The display position can be switched with touch operations. Doing so, you can display objects hidden under the alarm popup display.  
Set [Display Position Switching] in the [Basic] tab in the [Alarm Popup Display] dialog.

Touch the left end of the alarm popup display area to switch the display position. The position changes in the screen at every touch. The switching order of the position is upper-center-lower.  
The area where touch operations are enabled is within 16 dots from the left end of the display area.

If screen switching is performed while the popup display is displayed, the popup display is displayed where it was before the switch.

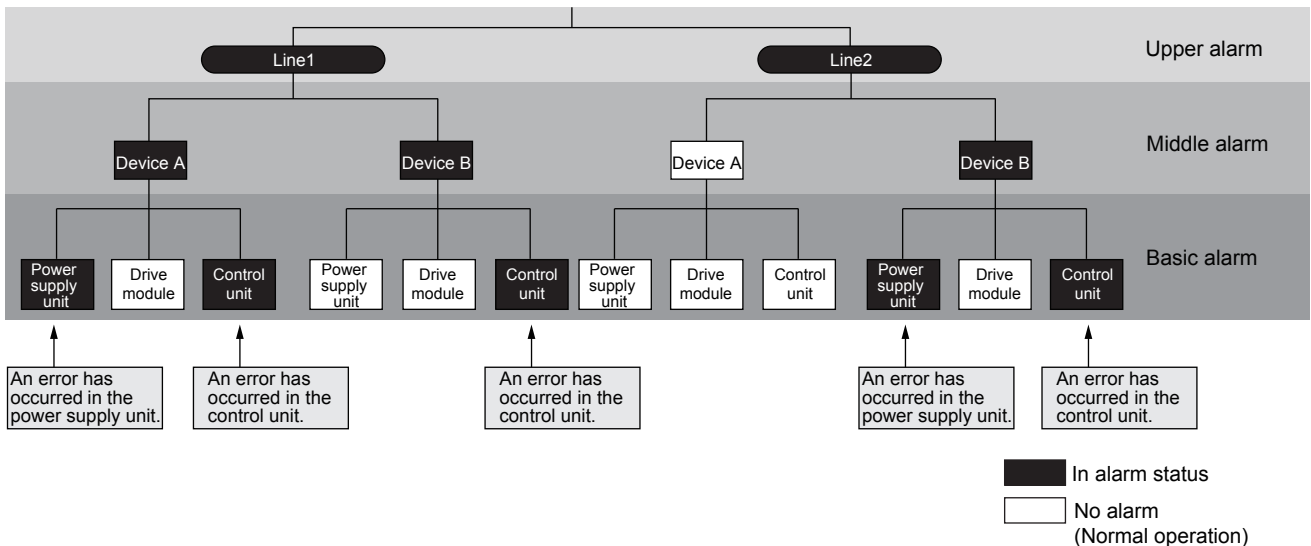

The display position set in the [Screen Property] dialog is enabled the next time the popup display is displayed.

**(b) Switching the levels in the alarm hierarchy (for alarm display (user) only)**

In the alarm popup display, the levels of the alarm hierarchy are switched with either of the following methods. However, the display range differs depending on the switching method.

The following system examples show differences in display ranges according to the switching methods.

- When switching the display by directly touching the popup display section

When an alarm is touched, alarms at levels in the hierarchy lower than that of the touched alarm are displayed.

The following shows an example in which [Initial Display Hierarchy] is set to the upper alarm in the [Basic] tab in the [Alarm Popup Display] dialog.

The level in the alarm hierarchy (upper alarm) specified as the initial target for the display is displayed.

Touch

Switches to the middle.

The middle alarms of the selected alarm are displayed.

Touch

Switches to the basic.

The basic alarms of the selected alarm are displayed.

Displays all the upper alarms.

Display range

Display range

If an alarm at the upper or middle level in a tree of the hierarchy occurs while alarms at the upper or middle level in another tree of the hierarchy are displayed, the new alarm is not displayed.

A new alarm is not displayed.

An alarm at the upper or middle level in another tree of the hierarchy occurs.

To display a new alarm which occurs, use the hierarchy switching device to display all the alarms in the specified level in the hierarchy, or display the upper alarm and switch the display down to the level in the hierarchy where the new alarm occurs.

⇒9.1.4 ■ 4 (3) [Extended] tab

- When switching with the device set for [Hierarchy] of [Switching Device] in the [Extended] tab in the [Alarm Popup Display] dialog

All the alarms at the level in the hierarchy specified with a device are displayed.

⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

The following shows an example in which the hierarchy switching device is set to GD110.

In setting hierarchical alarms, it is recommended that the top of the alarm hierarchy be set for the initial target for the display.

When a lower level in the alarm hierarchy is set for the initial target for the display, all the alarms at the set level are displayed regardless of which tree they belong.

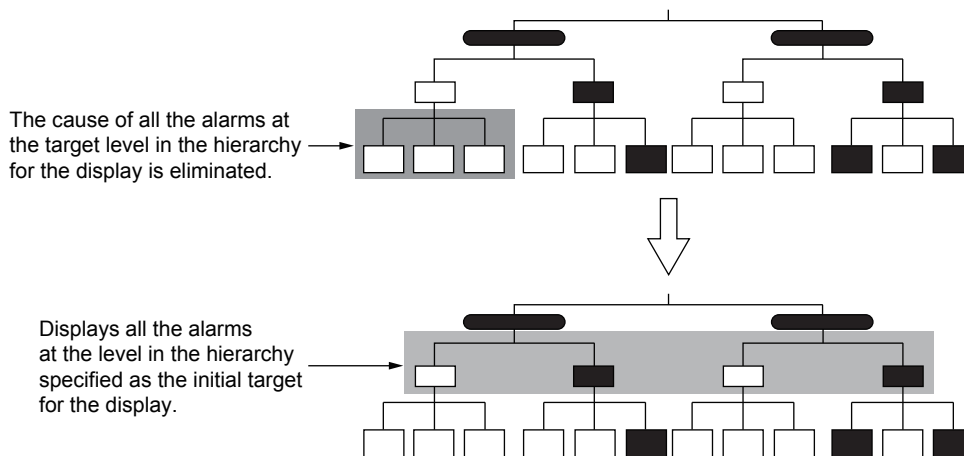

Example) Setting basic alarms for the initial targets for the display

When the cause of all the alarms at the displayed level in the hierarchy are eliminated or the user alarms to be displayed are switched with a device, all the alarms at the level in the hierarchy specified as the initial target for the display are displayed.

⇒9.1.4 ■ 2 (3) (d) Switching the display using devices

Example) When the initial targets for the display are middle alarms and the cause of all the alarms at the displayed level in the hierarchy is eliminated

### (c) Displaying alarms with a set font, character color, and background color

Set a font, character, and back ground color so as to make the popup display stand out and not to be missed.

Although level numbers and group numbers cannot be displayed in the alarm popup display, each of them can be indicated with a set display color.

⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

### (d) Switching the display using devices

The display can be switched according to the device value.

⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

- Item to which the switching device can be set

Item to which the switching device can be set	Alarms to be displayed	
	User alarm	System Alarm
Hierarchy* <sup>1</sup>	All the alarms at a specified level in the alarm hierarchy that occur are displayed.	
Level* <sup>1</sup>	Alarms with specified alarm numbers are displayed.	
Group* <sup>1</sup>	Alarms in the specified group are displayed.	
Priority display attribute	The display order is switched between the ascending order and descending order. Date and time of occurrence, level, or group can be selected as the basis on which the order is arranged.	The display order is switched between the ascending order and descending order. Date and time of occurrence, level, or group can be selected as the basis on which the order is arranged.
User alarm observation	The setting of the user alarm observation (alarm ID) displayed with the alarm display (user) can be changed. Multiple alarms can be displayed with one alarm display (user).	
Basic comment group	Comments to be displayed when an alarm occurs can be changed by comment group. Comments to be displayed can be changed according to the user and the purpose.	
Middle comment group		
Upper comment group		

\*1 To set levels in the hierarchy, level numbers, and groups for alarms, use the user alarm observation.

⇒9.1.2 ■ 7 [User Alarm Observation] dialog

- Display example

By changing the device value, the range of the target alarms for the display is narrowed.

The following shows an example in which the level switching device is set to GD10 and the group switching device to GD11.

When the following alarms have occurred

Error date and time	Comment	Alarm status	Level	Group
Jun. 1, 2013 16:50	Temperature anomaly	Occurred	1	1
Jun. 1, 2013 14:25	Motor error	Occurred	3	1
Jun. 1, 2013 11:20	Oil error	Checked	3	2
Jun. 1, 2013 10:00	Fuel error	Occurred	3	2
Jun. 1, 2013 08:10	Internal pressure error	Occurred	2	1
Jun. 1, 2013 07:40	Fuse error	Restored	1	1

← An alarm in the "Restored" status cannot be displayed in the alarm popup display.

GD10 3

GD11 0

Error date and time	Comment	Alarm status	Level	Group
Jun. 1, 2013 14:25	Motor error	Occurred	3	1
Jun. 1, 2013 11:20	Oil error	Checked	3	2
Jun. 1, 2013 10:00	Fuel error	Occurred	3	2

GD10 3

GD11 2

Display target alarms

Error date and time	Comment	Alarm status	Level	Group
Jun. 1, 2013 11:20	Oil error	Checked	3	2
Jun. 1, 2013 10:00	Fuel error	Occurred	3	2

For details of switching the display without devices, refer to the following.

⇒9.1.4 ■ 3 Precautions

When the order in which alarms are displayed is changed by setting [Priority Display Attribute] in the [Extended] tab in the [Alarm Popup Display] dialog, it can be changed only while alarms are displayed if the targets are basic alarms. While upper alarms or middle alarms are displayed, the order cannot be changed.

Even if you specify an alarm ID number for which [Popup Display] in the [Basic] tab in the [User Alarm Observation] dialog is not set, the alarm is displayed regardless of the setting of [Popup Display].

If you specify the alarm ID number for which [Popup Display] is set, only the alarm ID number is displayed.

**(e) Writing the alarm information to devices**

The alarm information touched in the alarm popup display can be written to devices.

Information that cannot be displayed in the alarm popup display, such as downtime, can be also written into devices.

The following lists the types of alarm information that can be written into devices.

- Alarm ID
- Comment group No.
- Comment No.
- Alarm status
- Occurrence date
- Occurrence time
- Date of restoration
- Time of restoration
- Date of confirmation

- Time of confirmation
- Level
- Group
- Frequency
- Cumulative time
- Downtime

Output the dates of the occurrences of selected alarms to devices.

Set [Touch Mode] to [Screen Switching] or [Stage Hierarchy Switching/Detail Display] in the [Basic] tab in the [Alarm Popup Display] dialog.

⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

### ■ 3 Precautions

The following shows the precautions for the alarm popup display.

#### (1) Precautions for drawing

##### (a) Initial display hierarchy and hierarchy switching device

In the alarm display (user) and alarm popup display, the level in the hierarchy specified in [Initial Display Hierarchy] is written into the hierarchy switching device with the following timing.

The level in the hierarchy to be displayed is switched.

- When switching screens (alarm display (user) only)
- At the first display of objects
- When the alarm observation ID number to be displayed is switched with the switching device for user alarm observation ID

For the setting of [Initial Display Hierarchy], refer to the following.

⇒9.1.4 ■ 4 (1) [Basic] tab

For the setting of the switching devices for levels in the hierarchy and user alarm ID, refer to the following.

⇒9.1.4 ■ 4 (3) [Extended] tab

##### (b) Switching comment displays or others with the hierarchy switching device

The leftmost bit of the hierarchy switching device changes to 1 by touch operations. Use mask processing and mask the device with 7FFFh so that the leftmost bit is always masked to 0.

Comment displays and others cannot work normally without mask processing.

Example) When switching comments to be displayed with the value of the hierarchy switching device

Hierarchy switching device value	Corresponding comment	Comment to be displayed
0	0	Basic alarm on display
1	1	Middle alarm on display
2	2	Upper alarm on display

- With mask processing

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 Hierarchy switching device value [ 2 ]

Displays the comment of comment No.2 because the hierarchy switching device value is 2.

Touch Switch from the upper to the middle by touching.

Mask processing

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 Hierarchy switching device value [ 1 ]

Displays the comment of comment No.1 because the hierarchy switching device value is 1.

• Without mask processing

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 Hierarchy switching device value [ 2 ]

Displays the comment of comment No.2 because the hierarchy switching device value is 2.

Touch Switch from the upper to the middle by touching.

1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 Hierarchy switching device value [-32767]

Comments are not displayed normally because the hierarchy switching device value becomes 1 and thus becomes -32767.

**(c) Settings for storing alarm data to data storage**

To the alarm popup display, a touch switch for storing alarms cannot be assigned.  
To place a button for storing alarm data, make either of the following settings.

- When setting the store trigger device for the alarm observation
  - Set [Store Trigger] in the [File Save] tab of the [User Alarm Observation] dialog or the [System Alarm Observation] dialog to store the alarm data.
    - ⇒9.1.2 ■ 7 [User Alarm Observation] dialog
    - ⇒9.1.3 ■ 5 [System Alarm Observation] dialog
- When saving alarm data with a touch switch for alarm display
  - On the screen where an alarm display object is placed, place a touch switch for alarm display to save the alarm data.
    - ⇒9.1.2 ■ 2 (6) Useful operations and functions
    - ⇒9.1.3 ■ 2 (7) Useful operations and functions

**(d) Precautions for using comment groups**

If a nonexistent value (column No.) is stored in the language switching device, the GOT displays "No message".

**(2) Precautions for use**

**(a) When the display position overlaps with the positions of other objects**

Objects such as touch switches hidden under the alarm popup display cannot be operated.  
To operate those objects, change the display position of the alarm popup display.

⇒9.1.4 ■ 2 (3) Useful operations and functions

**(b) When the alarm popup display does not work**

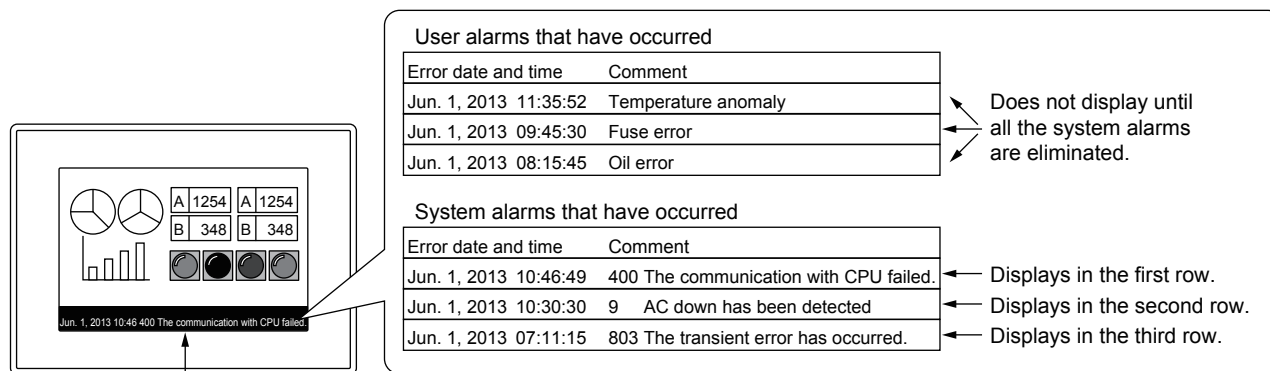

Review the settings of the alarm popup display.  
For the details of the settings, refer to the following.  
⇒9.1.4 ■ 4 [Alarm Popup Display] dialog

**(c) Order of priority in which alarms are displayed**

- When selecting no target item for [Switching Device] in the [Extended] tab of the [Alarm Popup Display] dialog
  - Displays in order of date and time, from the latest.
  - For user alarms, displays only the alarms with the alarm ID numbers for which [Popup Display] of the user alarm observation is selected.

- When selecting the target items for [Switching Device] in the [Extended] tab of the [Alarm Popup Display] dialog
  - Displays according to the selected target items for the switching device.
- When selecting [User Alarm + System Alarm] for [Display Alarm] set in the [Basic] tab of the [Alarm Popup Display] dialog
  - If user alarms and system alarms occur simultaneously, only the system alarms are displayed.
  - The user alarms are displayed when the alarm status of all the system alarms turns "Restored".

Prioritizes system alarms in the order in which alarms are displayed.

For how to recover from system alarms, refer to the following.

⇒9.1.3 ■ 2 (2) Recovery from alarms

**(d) Switching levels in the hierarchy to be displayed with the hierarchy switching device**

When [Display Type] is set to [Fixed] in the [Basic] tab of the [Alarm Popup Display] dialog and the display target level in the hierarchy is switched with the hierarchy switching device, the display is updated with the timing set for [Switching Cycle].

Therefore, the display may not be switched soon after the level in the hierarchy is switched.

**(e) Narrowing the range of alarms to be displayed when the number of alarms to be monitored is large**

When the number of alarms to be monitored is large and the range of alarms to be displayed is narrowed, displaying the alarms may take seconds.

⇒9.1.4 ■ 2 (3) (d) Switching the display using devices

**(f) Display of the time of occurrence, confirmation, and restoration**

For the time of occurrences, the clock data of the GOT is used.

For the precautions and restrictions of the clock function which manages the GOT clock data, refer to the following.

⇒5.3.5 Setting the GOT time setting method ([Time Setting])

**(g) Deleting the alarm popup display (network error)**

When the alarm popup display appears for network errors which occur in the CC-Link communication unit and MELSECNET/H communication unit, the display is not deleted until the GOT is powered off or reset even if the cause of the alarms is eliminated.

## ■ 4 [Alarm Popup Display] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

**Step 1** Select [Common] → [Alarm] → [Alarm Popup Display] from the menu.

**Step 2** The [Alarm Popup Display] dialog appears.

- ⇒(1) [Basic] tab
- (2) [Text Format] tab
- (3) [Extended] tab
- (4) [External Output] tab

### (1) [Basic] tab

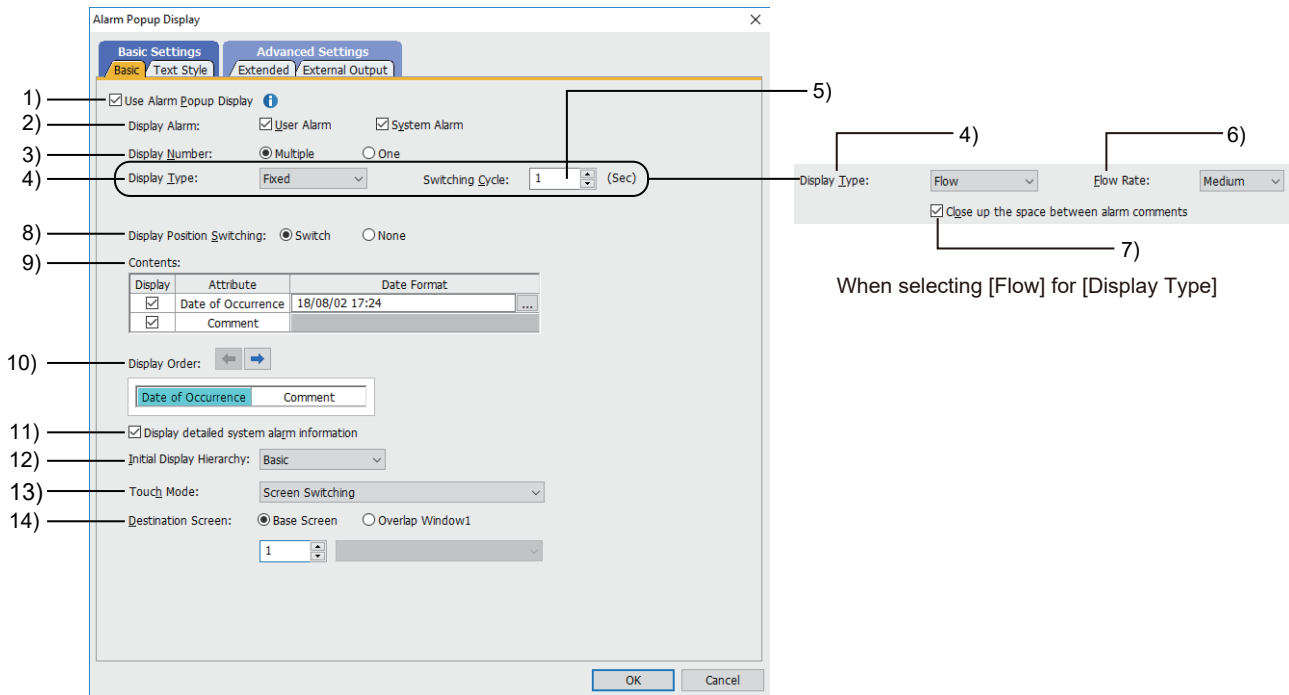

GT27 GT25 GT23 GT21 SoftGOT2000 GS

If you display this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display]), some setting items are not available.

⇒10.18.2 ■ 2 Usable functions

Set the type of the alarm popup display, the contents of the display, and the touch mode.

- When displaying this dialog by selecting [Common] → [Alarm] → [Alarm Popup Display] from the menu  
The setting contents are applied to the alarm popup display appearing on the GOT.
- When displaying this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display])  
The setting contents are applied to the alarm popup display appearing on a GOT Mobile function client.

#### 1) [Use Alarm Popup Display]

Uses the alarm popup display.

Configure the following settings additionally.

- Alarm popup display settings
  - ⇒9.1.2 ■ 7 [User Alarm Observation] dialog
  - 9.1.3 ■ 5 [System Alarm Observation] dialog
- Setting of the screen where an alarm message pops up
  - ⇒2.7.1 ■ 1 [Basic] tab
  - 10.18.7 ■ 1 [Basic] tab

#### 2) [Display Alarm]

Select the alarm type to be displayed.

The following shows selectable items.

- [User Alarm]

- [System Alarm]

For GT21, the setting is fixed to [User Alarm].

For the order of priority in which multiple alarms that occur are displayed, refer to the following.

→9.1.4 ■ 3 Precautions

### 3) [Display Number]

Select the number of the alarms to be displayed.

The following shows selectable items.

- [Multiple]: Displays multiple alarms in order.
- [One]: Displays the single alarm given the top priority.

For the order of priority in which multiple alarms that occur are displayed, refer to the following.

→9.1.4 ■ 3 Precautions

### 4) [Display Type]

Select the display method of the comments for alarms.

The following shows selectable items.

- [Fixed]:

The comments to be displayed at the occurrence of an alarm are not scrolled in the display.

The part of a comment that extends off the display area, and the second and the following successive rows of a comment that involves multiple rows are not displayed.

- [Flow]:

The comments to be displayed at the occurrence of an alarm are displayed by scrolling from right to left.

For a comment which consists of multiple rows, the GOT displays whole comments including the comments after the second row.

→9.1.4 ■ 2 (2) Selecting the display method

### 5) [Switching Cycle]

This item can be set only when [Display Type] is [Fixed].

Set a cycle at which alarms to monitor are switched when multiple alarms occur.

The setting range is [1] to [60].

### 6) [Flow Rate]

This item can be set only when [Display Type] is [Flow].

Set the speed at which the display is scrolled.

The following shows selectable items.

- [High]: The text of comments flows at the speed of 200 dots a second.
- [Medium]: The text of comments flows at the speed of 100 dots a second.
- [Low]: The text of comments flows at the speed of 50 dots a second.

### 7) [Close up the space between alarm comments]

This item can be set only when [Display Type] is [Flow].

Set whether to reduce the space between scrolling comments.

When this item is selected, the space between comments is reduced to two one-byte characters.

When this item is deselected, a space of a half the screen width is inserted between comments.

### 8) [Display Position Switching]

Set whether to enable or disable display position switching of the alarm popup display.

- [Switch]: Enables the display position to be switched.
- [None]: Disables the display position to be switched.

### 9) [Contents]

Item	Description
[Display]	Select the items to be displayed in the alarm popup display.
[Attribute]	Displays the items to be displayed in the alarm popup display. <ul style="list-style-type: none"> <li>• [Occurred]: Displays the date and time of occurrence of an alarm.</li> <li>• [Comment]: Displays the comment which is set for the alarm.</li> </ul>
[Date/Time Format]	Set the format in which the date and time of occurrence are displayed. Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings

### 10) [Display Order]

Set the order in which the items set for [Attribute] in [Contents] are displayed.

Move the display position of the selected item sideways by using the right button, the left button.

If either [Date of Occurrence] or [Comment] is selected for [Attribute] of [Contents], the right button and the left button are invalid.

#### 11) [Display detailed system alarm information]

GT21 does not support this item.

Displays the detailed information of system alarms.

#### 12) [Initial Display Hierarchy]

This item can be set only when [Display Alarm] is [User Alarm] or [User Alarm + System Alarm].

Select a level in the alarm hierarchy to be displayed first when a user alarm occurs.

→9.1.4 ■ 2 (3) Useful operations and functions

The following shows selectable items.

- [Basic]
- [Middle]
- [Upper]

#### 13) [Touch Mode]

Set the action taken when the alarm popup display is touched.

→9.1.4 ■ 2 (3) Useful operations and functions

The following shows selectable items.

- [None]:  
Select this item to disable touch operations.
- [Screen Switching]:  
Displays the base screen with the screen No. set for [Destination Screen] or overlap window 1.
- [Hierarchy Switching /Detail Display]:  
Switches levels in the hierarchy and displays the detail screen.  
The operations differ depending on the alarm being displayed.  
When upper alarms or middle alarms are displayed, the display is switched to a lower level in the alarm hierarchy.  
When basic alarms are displayed, the detail screen is displayed.

#### 14) [Destination Screen]

This item can be set only when [Touch Mode] is [Screen Switching].

Set the screen that appears when the alarm popup display is touched.

The following shows selectable items.

- [Base Screen]
- [Overlap 1]

After selecting either of the above screens, set the target screen number for the display.

The setting range is [0] to [32767].

The title of the selected screen is displayed.

## (2) [Text Format] tab

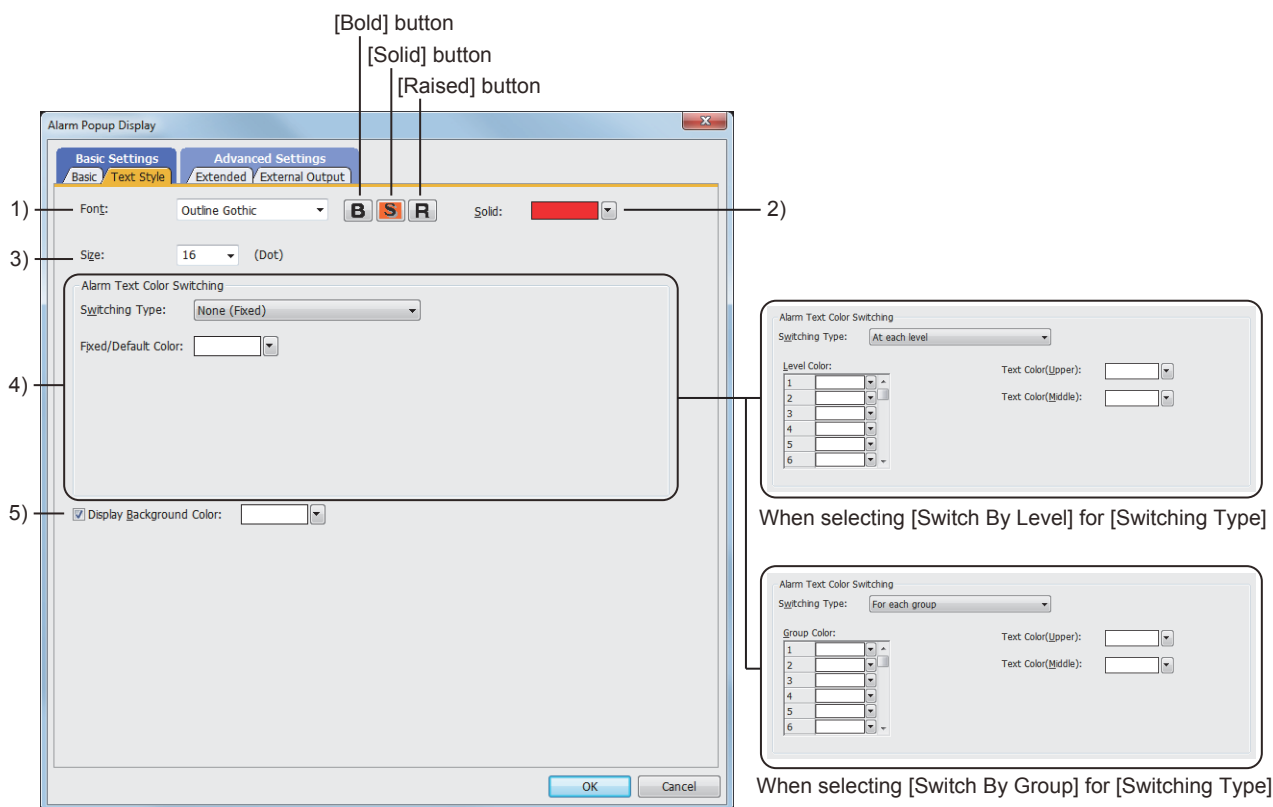

If you display this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display]), some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the text format of alarms.

- When displaying this dialog by selecting [Common] → [Alarm] → [Alarm Popup Display] from the menu  
The setting contents are applied to the alarm popup display appearing on the GOT.
- When displaying this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display])  
The setting contents are applied to the alarm popup display appearing on a GOT Mobile function client.

When selecting [No Switching (Fixed)] or [Comment Color (System Alarm Fixed Color)] for [Switching Type]

### 1) [Font]

Select the font of the displayed text.

The following shows selectable items.

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

Set the style of the text to be displayed.

One style ([Bold], [Solid], or [Raised]) is settable only.

[Bold] button: Displays the text in bold.

[Solid] button: Displays the text with a shadow.

[Raised] button: Displays the text embossed.

### 2) [Solid Color]

When [Solid] or [Raised] is selected as the text style, set the color of the shadow.

### 3) [Text Size]

For the details of each font and size, refer to the following.

→ 1.2.5 Font specifications

### 4) [Alarm Text Color Switching]

Item	Description
[Switching Type]* <sup>1</sup>	<p>Select how to use different text colors in displaying alarms. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [No Switching (Fixed)]: Displays texts in a single color.</li> <li>• [Switch By Level]: Gives different colors by level number.</li> <li>• [Switch By Group]: Gives different colors by group.</li> <li>• [Comment Color (System Alarm: Fixed)] ([Comment Color] for GT21): Displays the alarm display (user) in text colors set for comment groups. The settings other than that of the text color are displayed in the settings of the [Alarm Popup Display] dialog. For the alarm display (system), texts are displayed in the color set for [Fixed/Default Color].</li> </ul> <p>[Switch By Level], [Switch By Group], and [Comment Color (System Alarm Fixed Color)] can be set when [User Alarm] or [User Alarm + System Alarm] is selected for [Display Alarm] in the [Basic] tab.</p>
[Fixed/Default Color]	<p>When selecting one of the following items for [Alarm Text Color Switching], select a text color.</p> <ul style="list-style-type: none"> <li>• None (Fixed)</li> <li>• [Comment Color (System Alarm: Fixed)] ([Comment Color] for GT21)</li> </ul>
[Level Color]	<p>When selecting [Switch By Level] for [Alarm Text Color Switching], select a text color for each level.</p>
[Group Color]	<p>When selecting [Switch By Group] for [Alarm Text Color Switching], select a text color for each group.</p>

\*1 The following shows the relation between the set text color and text color displayed.

Alarms to be displayed	Target			
	Fixed	Level	Group	Comment
User alarm	Displays in the color set for [Fixed/Default Color].	Displays in the color set in [Level]. Displays upper alarms and middle alarms in the color set for 1 of [Level].	Displays in the color set for [Group Color]. Displays upper alarms and middle alarms in the color set for 1 of [Group Color].	Displays in the color set for each comment group. In a case where no comment exists, displays in the color set for [Fixed/Default Color].
System Alarm		Displays in the color set for 1 of [Level].	Displays in the color set for 1 of [Group Color].	Displays in the color set for [Fixed/Default Color].

### 5) [Display Background Color]

Select the background color of the alarm popup display.

#### **GOT Graphic Ver.2**

A semitransparent popup window appears in a user-specified color.

#### **GOT Graphic Ver.1**

An opaque popup window appears in a user-specified color.

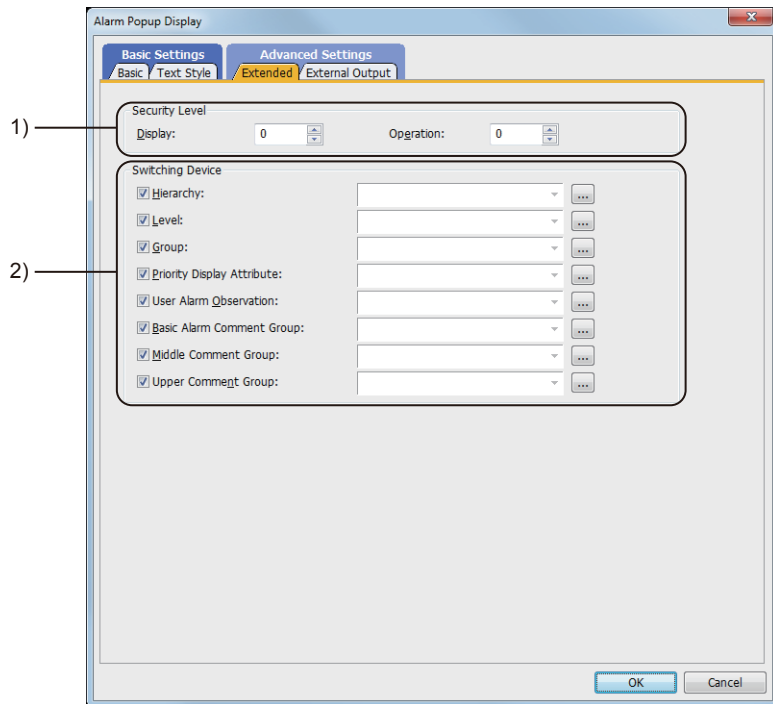

(3) [Extended] tab

Set the operation of switching displays for the alarm popup display by devices.

- When displaying this dialog by selecting [Common] → [Alarm] → [Alarm Popup Display] from the menu  
The setting contents are applied to the alarm popup display appearing on the GOT.
- When displaying this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display])  
The setting contents are applied to the alarm popup display appearing on a GOT Mobile function client.

1) [Security Level]

Set the security level of display and operation.

Item	Description
[Display]	Set the security level of display. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security.
[Operation]	Set the security level of operation. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security. The setting of security level of [Operation] must be set to the one exceeding the security level of [Display].

2) [Switching Device]

Select items to switch the display using devices.

⇒9.1.4 ■ 2 (3) Useful operations and functions

Item	Description
[Hierarchy]	<p>Available only for the alarm display (user).  Switches the level in the alarm hierarchy to be displayed using the device value.  All the alarms at the specified level in the alarm hierarchy are displayed.  Set the switching device.  ⇒6.1.1 How to set devices  Store values to the device as follows to switch the level in the alarm hierarchy.</p> <div style="text-align: center; border: 1px solid black; padding: 2px;"> <span style="border: 1px solid black; padding: 0 5px;">b15</span> <span style="border: 1px solid black; padding: 0 20px;">b14 to b2</span> <span style="border: 1px solid black; padding: 0 5px;">b1</span> <span style="border: 1px solid black; padding: 0 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• Specifies the destination level in the alarm hierarchy for b1 to b0.  00 (0): Basic alarm  01 (1): Middle alarm  xxx10 (2): Upper alarm</li> <li>• Using b14 to b2 is prohibited.</li> <li>• To b15, store the type of operations of switching levels in the hierarchy. (Identifier of hierarchy switching controllers)  To switch levels in the hierarchy using the hierarchy switching device, always set 0 to this bit.  0: Switching by using the switching device  1: Switching by touching the display part</li> </ul> <p>For the precautions of switching the comment display or other items using devices, refer to the following.  ⇒9.1.4 ■ 3 Precautions</p>
[Level]	<p>Available only for the alarm display (user).  Only the alarms with a specified level No. are displayed.  Set the switching device.  ⇒6.1.1 How to set devices  Store the level No. of alarms to be displayed to the device.</p> <ul style="list-style-type: none"> <li>• To display a specific level, specify a level No. within 1 to 255.</li> <li>• If a nonexistent level No is specified, alarms are not displayed.</li> <li>• To display all levels, specify the level No. 0 or a No. over 256.</li> </ul>
[Group]	<p>Available only for the alarm display (user).  Only the alarms with a specified group No. are displayed.  Set the switching device.  ⇒6.1.1 How to set devices  Store the group No. of alarms to be displayed to devices.</p> <ul style="list-style-type: none"> <li>• To display a specific group, specify a group No. within 1 to 255.</li> <li>• If a nonexistent group No is specified, alarms are not displayed.</li> <li>• To display all groups, specify the group No. 0 or a No. over 256.</li> </ul>
[Priority Display Attribute]	<p>Switch the item to be the sort criteria according to the device values.  Set the switching device.  ⇒6.1.1 How to set devices  Store values to the device to switch the order of alarm display.</p> <div style="text-align: center; border: 1px solid black; padding: 2px;"> <span style="border: 1px solid black; padding: 0 5px;">b15</span> <span style="border: 1px solid black; padding: 0 20px;">b14 to b4</span> <span style="border: 1px solid black; padding: 0 5px;">b3</span> <span style="border: 1px solid black; padding: 0 5px;">b2</span> <span style="border: 1px solid black; padding: 0 5px;">b1</span> <span style="border: 1px solid black; padding: 0 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• For b3 to b0, specify the sort criteria. (The parts with * are prohibited.) <ul style="list-style-type: none"> <li>□ **0h: Normal (date and time of occurrence)</li> <li>□ **1h: Date and time of occurrence</li> <li>□ **5h: Level (User alarm only)</li> <li>□ **6h: Group (User alarm only)</li> </ul> </li> <li>• Using b14 to b4 is prohibited.</li> <li>• Ascending or descending is specified for b15. (The parts with * are prohibited.)  0* □ h: Descending  8* □ h: Ascending</li> </ul> <p>If a value other than the above is stored, alarms are displayed in the order of the date and time of occurrence.</p>
[User Alarm Observation]	<p>Available only for the alarm display (user).  The specified user alarm is displayed.  Set the switching device.  ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• Store the alarm ID of the user alarm observation to the device.</li> <li>• The alarm with a stored alarm ID number is displayed regardless of the settings of [Popup Display] of user alarm observation.</li> <li>• When 0 is stored to a device, only the alarm with an alarm ID for which [Popup Display] of the user alarm observation is set is displayed.</li> <li>• If a nonexistent alarm ID is specified, alarms are not displayed.</li> </ul>
[Basic Alarm Comment Group]	<p>Available only for the alarm display (user).  Switch the comment group to be displayed in the basic alarm according to the device values.  Set the switching device.  ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>

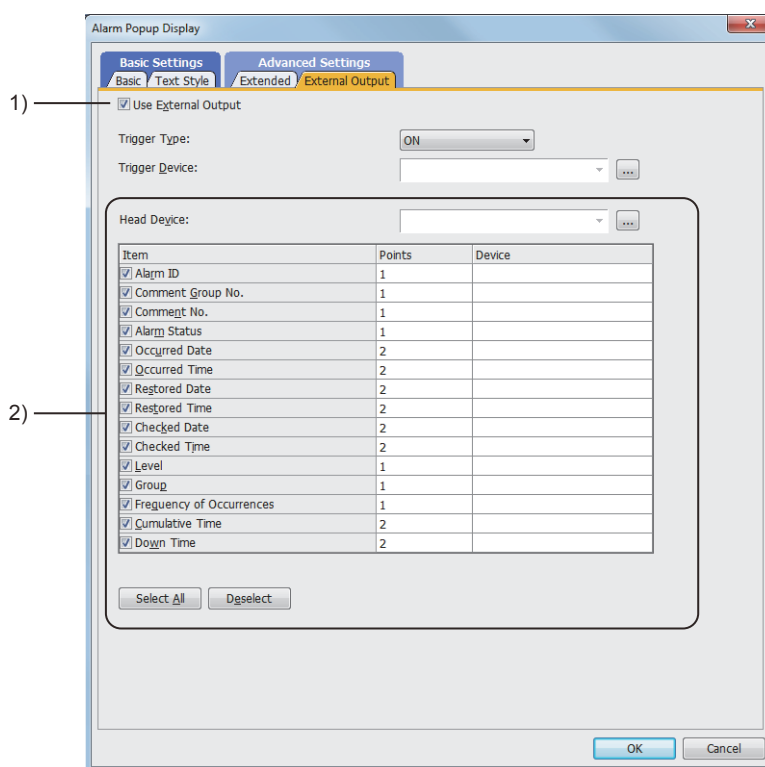

Item	Description
[Middle Alarm Comment Group]	<p>Available only for the alarm display (user). Switch the comment group to be displayed in the middle alarm according to the device values. Set the switching device. ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>
[Upper Alarm Comment Group]	<p>Available only for the alarm display (user). Switch the comment group to be displayed in the upper alarm according to the device values. Set the switching device. ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>

#### (4) [External Output] tab

Configure the setting for writing the information of touched alarm in the alarm popup display into devices.

- When displaying this dialog by selecting [Common] → [Alarm] → [Alarm Popup Display] from the menu  
The setting contents are applied to the alarm popup display appearing on the GOT.
- When displaying this dialog from the [GOT Mobile Setting] window ([Alarm Popup Display])  
The setting contents are applied to the alarm popup display appearing on a GOT Mobile function client.

#### 1) [Enable External Output]

Write the information of touched alarm into devices.

⇒9.1.4 ■ 2 (3) Useful operations and functions

- [Trigger Type]:  
Select the timing to write the alarm information into a device.  
Select [Ordinary] to write the alarm information into the device when the alarm is touched.  
Select [ON] to write the alarm information into the device when the alarm display area is touched while the device is on.  
Select [OFF] to write the alarm information into the device when the alarm display is touched while the device is off.
- [Trigger Device]:  
When selecting [ON] or [OFF] in [Trigger Type], set the device to be a trigger.

→6.1.1 How to set devices

2) [Device]

Set the devices to which the information of a touched alarm is written.

Item	Description
[First Device]	Set the start device (word device) to which the information of the alarm is written. When items to be written are selected, the successive devices following the start device are automatically set.
[Alarm ID]	Available only for the alarm display (user). Select this item to write the alarm ID into devices.
[Comment Group No.]	Available only for the alarm display (user). Select this item to write the comment group No. of the comment displayed with the alarm display.
[Comment No.]	Available only for the alarm display (user). Select this item to write the comment No. of the comment displayed with the alarm display.
[Identification Data]	Available only for the alarm display (system). Select this item to write the alarm identification data into devices.
[Error No.]	Available only for the alarm display (system). Select this item to write the error No. of an alarm into devices.
[Channel]	Available only for the alarm display (system). Select this item to write the channel No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Network No.]	Available only for the alarm display (system). Select this item to write the network No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Station No.]	Available only for the alarm display (system). Select this item to write the station No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[CPU No.]	Available only for the alarm display (system). Select this item to write the CPU No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Screen No.]	Available only for the alarm display (system). Select this item to write the screen No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Definition Screen No.]	Available only for the alarm display (system). Select this item to write the definition screen No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Object ID]	Available only for the alarm display (system). Select this item to write the object ID of an alarm as added information into devices. For the added information, refer to the following. →9.1.4 ■ 4 (4) (a) Added information
[Alarm Status]	Select this item to write the alarm status into devices.  <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <span style="border-right: 1px solid black; padding: 0 10px;">b15 to b3</span> <span style="border-right: 1px solid black; padding: 0 5px;">b2</span> <span style="border-right: 1px solid black; padding: 0 5px;">b1</span> <span style="padding: 0 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• b0: When the alarm is in the "Occurred" status, 1 is stored, and when the alarm is in the "Restored" status, 0 is stored.</li> <li>• b1: When the alarm is in the "Checked" status, 1 is stored, and when the alarm is unchecked, 0 is stored.</li> <li>• b2: When writing the alarm status into devices is enabled, 1 is stored, and when writing the alarm status into devices is disabled, 0 is stored.</li> <li>• b15 to b3: Using these bits is prohibited. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger</li> </ul>
[Occurred Date]	Select this item to write the date when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written

Item	Description
[Occurred Time]	Select this item to write the time when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Restored Date]	Select this item to write the date when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Restored Time]	Select this item to write the time when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Checked Date]	Select this item to write the date when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Checked Time]	Select this item to write the time when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Level]	Available only for the alarm display (user). Select this item to write the level No. of an alarm into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger
[Group]	Available only for the alarm display (user). Select this item to write the group No. of an alarm into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger
[Frequency]	Available only for the alarm display (user). Select this item to write the frequency of alarm occurrences into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger
[Cumulative Time]	Available only for the alarm display (user). Select this item to write the cumulative time of alarms into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Down Time]	Available only for the alarm display (user). Select this item to write the down time of alarms into devices. For the details of the write trigger, refer to the following. →9.1.4 ■ 4 (4) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.4 ■ 4 (4) (c) Descriptions of the date and time to be written
[Select All] button	Selects all alarm information.
[Deselect] button	Cancel all the selected alarm information.

(a) Added information

- By adding the information of an error that has occurred, it becomes easy to identify where the error has occurred. The added information which is not related to the error is not added even if the information is set.

Added information	Description
(1) Error message	Displays the error code of a system alarm and the error message.
(2) Channel	Displays the channel No. The display type is DEV: Ch No.
(3) Network No.	Displays the network No. with three digits number. *2
(4) Station	Displays the station No. with three digits number. *2
(5) CPU No.	Displays the CPU No.

Added information		Description	
(6)	Device	Displays the device.	
(7)	Screen No.	Displays the screen type and the screen No.	
		Base screen	BASE: *****1*2
		Overlap window 1 to 5	OVL1: *****1*2 to OVL5: *****1*2
		Superimpose window 1 to 2	SPI1: *****1*2 to SPI2: *****1*2
		User customize dialog	DLG: *****1*2
		Operation panel	PNL: *****1*2
		Key window	KEY: *****1*2
(8)	Definition screen No.	Displays the definition screen type and the screen No.	
		Base screen	B: *****1*2
		Window screen	W: *****1*2
		Report screen	R: *****1*2
(9)	Object ID	Displays the object ID.	
(10)	Function name	Displays the function name. Switches languages with the language switching.	
(11)	Drive name	Displays the drive name. The display type is DRV: Drive name.	

\*1 The number of the symbol \* represents the number of the digits of the screen No.

\*2 When a displayed number contains a number of digits less than that shown in the table, the number is displayed with 0 padded.

- The following shows a display example of added information.

Channel (1), device (X1000), screen No. (overlap window 3, screen No. 251), definition screen No. (window screen, screen No. 251), object ID (10000), function name (shape display)

G01-322 The specified device No. is out of the range. Check the available range. DEV:Ch1 X1000/OVL3:00251/W:00251/ID:10000/Shape display

If added information is displayed, the message is longer.

When all information is not be displayed, select Flow as the display type.

- For the device to which offset is specified, the device name and address after the offset are displayed.

If the address after the offset is out of the range, ?? is displayed.

The following shows the display example of a case where the device M1000 (range: 0 to 61424) is offset.

Offset device 60000 → The device M61000 after offset is displayed.

Offset device 61000 → ?? is displayed because the device after offset is out of the range.

### (b) Write trigger

- Available alarm hierarchy for writing alarm information for the alarm display (user)  
Only when the basic alarm is touched, the alarm information is written into devices.

- Writing by the collection mode

The available data for writing differs according to the collection mode which is set in the alarm observation.

For details, refer to the following.

⇒9.1.2 ■ 1 Specifications of the user alarm observation

### (c) Descriptions of the date and time to be written

The date and time are written into the 2-word data.

The following describes the case in which the time of occurrence is written into D254 (2 points) and the date of occurrence is written into D256 (2 points).

- Date

Store the year, month, and day with BCD code.

- Time

Stores the hour, minute, and second with BCD code.

Example) Jun. 1, 2013 12:24:56

## 5 Relevant settings

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Set the relevant settings other than the specific settings for the alarm popup display as required. The following shows the functions that are available by the relevant settings.

### (1) Property of screens

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

The property can be set for each screen.

Select the screen editor on which the key window is to be set and select [Screen] → [Screen Property] from the menu to display the [Screen Property] dialog.

→2.7 Changing Screen Property

Function	Setting item
Setting whether to display the alarm popup display or not for each screen Selecting the display position of the alarm popup display from among three positions: the top row, the center row, or the lower row	Set this function with the following items of the [Basic] tab. • [Use Alarm Popup Display] • [Display Position]

### (2) GOT environmental settings (System information)

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Select [Common] → [GOT Environmental Setting] → [System Information] from the menu to display the [Environmental Setting] dialog.

→5.2.5 Setting a device which controls the GOT operations or notifies the GOT status ([System Information])

Function	Setting item
Turning off the key Input signal (Read device: System signal 1-1.b3)	[System Signal 1-1]
Disabling all the key inputs (Read device: System signal 1-1.b9)	[System Signal 1-1]
Resetting system alarms and system information (GOT error code, GOT Error Detection signal) (Read device: System signal 1-1.b13) <sup>*1</sup>	[System Signal 1-1]
Notifying the key input. (Write device: System signal 2-1.b3)	[System Signal 2-1]

\*1 GT21 does not support this item.

### (3) GOT internal device

→ 1.2.6 ■ 1 (1) GOT internal devices (GB, GD, and GS)

Function	Setting item
Storing the channel No. that has been assigned to the channel where a system alarm (GOT error) occurs (Write device)	GS262
Storing the channel No. that has been assigned to the channel where a system alarm (CPU error) occurs (Write device)	GS263
Storing the channel No. that has been assigned to the channel where a system alarm (network error) occurs (Write device)	GS264

## 9.1.5 Viewing alarm events (Alarm display)

- ■ 1 Specifications of the alarm display
- 2 How to use the alarm display
- 3 Precautions
- 4 [Alarm Display(User)] dialog
- 5 [Alarm Display(System)] dialog
- 6 Relevant settings

The alarm display object lists the collected user or system alarm events.

For collecting user or system alarm events, refer to the following.

- 9.1.2 Collecting alarms by monitoring devices
- 9.1.3 Collecting alarms by monitoring the system

### ■ 1 Specifications of the alarm display

#### (1) Maximum number of objects on one screen

The maximum number of objects on one screen depends on the GOT model.

GOT	Maximum number of objects on one screen	
	Alarm Display (User)	Alarm Display (System)
GT27, GT25, GT23, GT SoftGOT2000	33	9
GT21	1	GT21 does not support the alarm display (system).

#### (2) Alarm events to be listed

- 9.1.5 ■ 4 [Alarm Display(User)] dialog
- 9.1.5 ■ 5 [Alarm Display(System)] dialog

Select the type of alarm events to be listed.

- All alarms

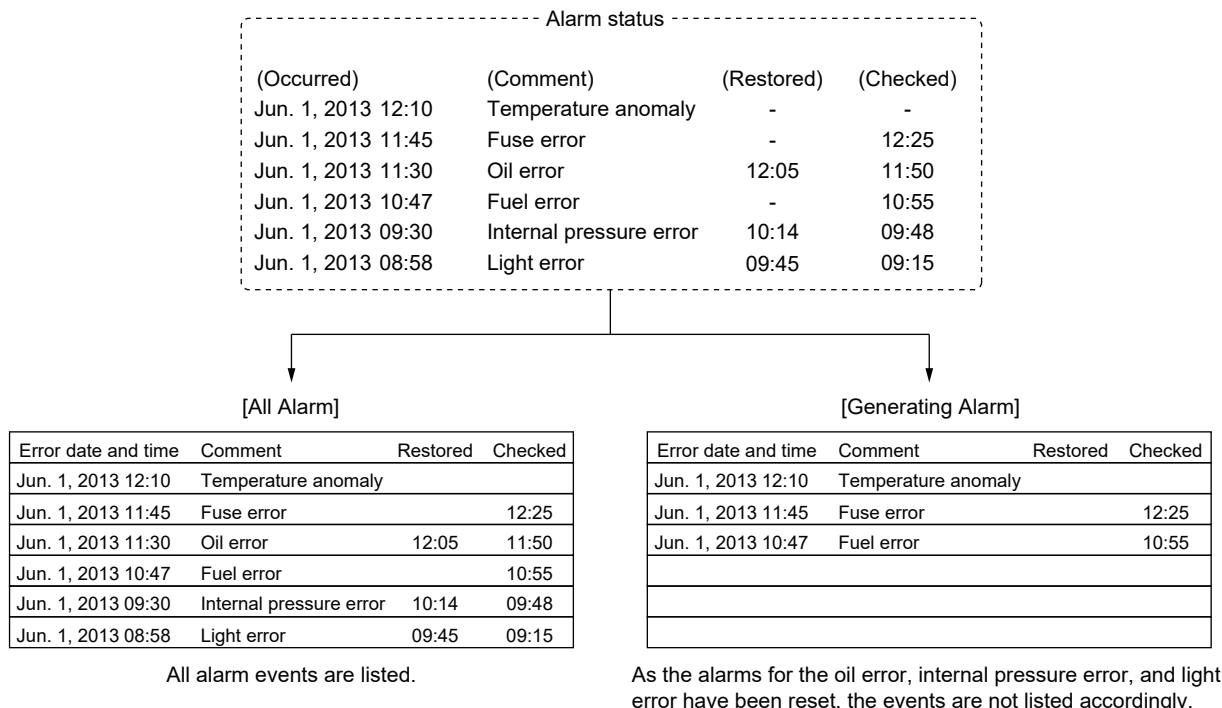

All alarm events are listed.

- Alarms being raised

The alarm events excluding the reset alarm events are listed.

Example) Alarm display (user)

## ■2 How to use the alarm display

### (1) Placing an alarm display object

The following outlines how to set an alarm display object.

- Step 1** Place an alarm display object on the screen editor.
  - ⇒6.5.1 Placing figures and objects
- Step 2** The relevant key code switches are placed together.
  - The user ID of the alarm display object is assigned to the switches.
  - Delete unnecessary key code switches.
  - Place additional key code switches as necessary.
  - ⇒8.2.11 [Key Code Switch] dialog
- Step 3** Configure the settings of the alarm display object.
  - ⇒9.1.5 ■ 4 [Alarm Display(User)] dialog
  - 9.1.5 ■ 5 [Alarm Display(System)] dialog

For the settings common to the objects, refer to the following.

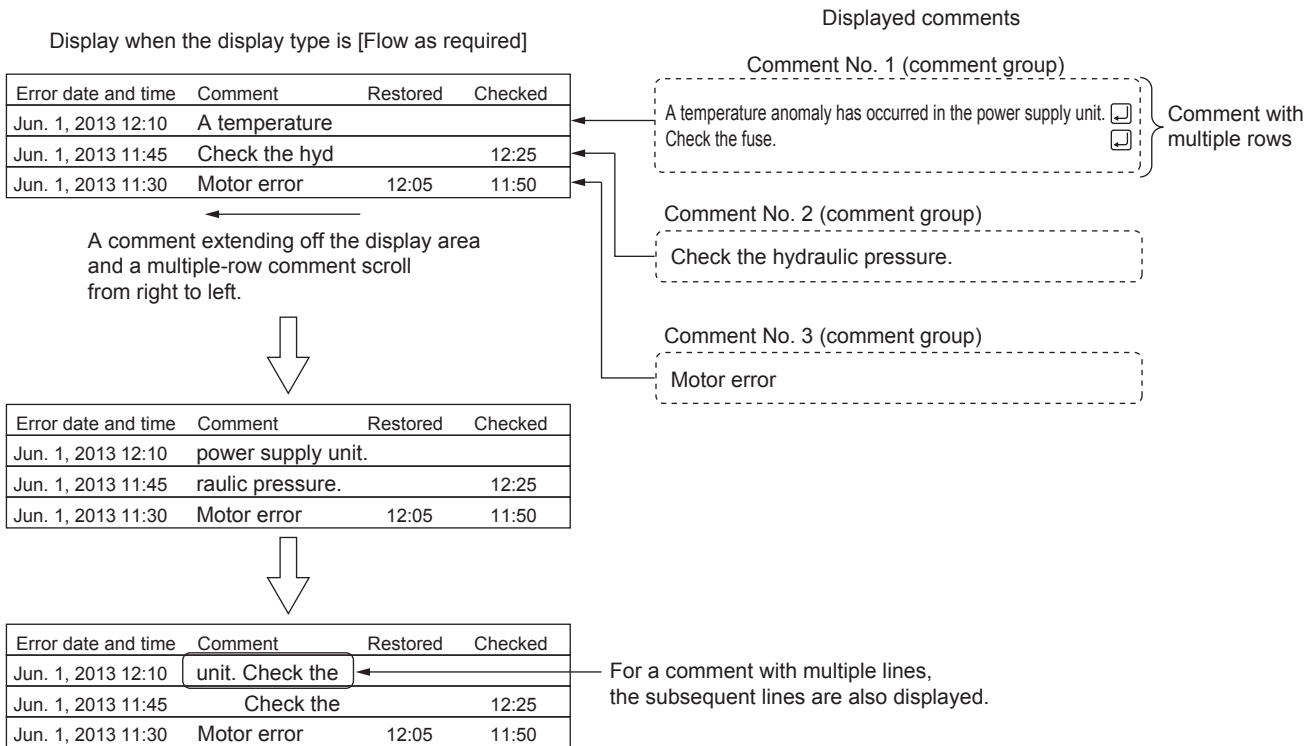

- ⇒6.5.5 Common setting for objects

### (2) Display method of comments

You can select either of the following display methods.

- ⇒9.1.5 ■ 4 [Alarm Display(User)] dialog
- 9.1.5 ■ 5 [Alarm Display(System)] dialog
- [Fixed]
  - Does not scroll a comment displayed at an alarm occurrence.
  - When a comment extends off the display area, the part outside the area and the second and subsequent rows are not displayed.
- [Flow all]
  - Scrolls a full comment displayed at an alarm occurrence from right to left.
- [Flow as required]
  - Does not scroll a comment fully displayed within the display area.
  - Scrolls a comment extending off the display area and a multiple-row comment from right to left.
- [Flow the selected row]

Scrolls only the comment selected among the comments displayed at an alarm occurrence from right to left.  
 Display example) Alarm display (user)

### (3) Display order of alarms

Set the display order of alarms as follows.

**Step 1** Specify an item for sorting the display of alarms.

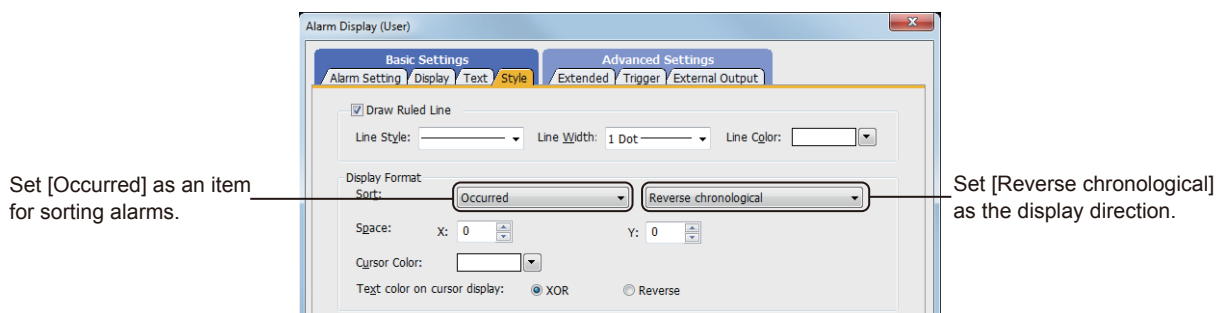

The display of alarms is sorted according to the specified item.

Display example) Displaying user alarms in the chronological order

Sorting user alarms in the chronological order

Error date and time	Comment	Alarm status	Restored	Checked	Frequency	Cumulative Time	Down Time	Level	Group
Jun. 1, 2013 20:00	Power supply unit error	Occurred	-	-	1	-	-	1	2
Jun. 1, 2013 18:30	Hydraulic pressure failure	Checked	-	18:50	2	00:20	-	1	1
Jun. 1, 2013 16:10	Drive module error	Checked	16:30	16:20	5	04:10	00:20	2	1
Jun. 1, 2013 14:00	Motor error	Checked	15:00	14:10	4	02:30	01:00	2	1
Jun. 1, 2013 13:30	Light error	Checked	14:30	13:50	1	01:00	01:00	2	1

Setting example) Configure the setting in the [Style] tab of the [Alarm Display(User)] dialog as follows.

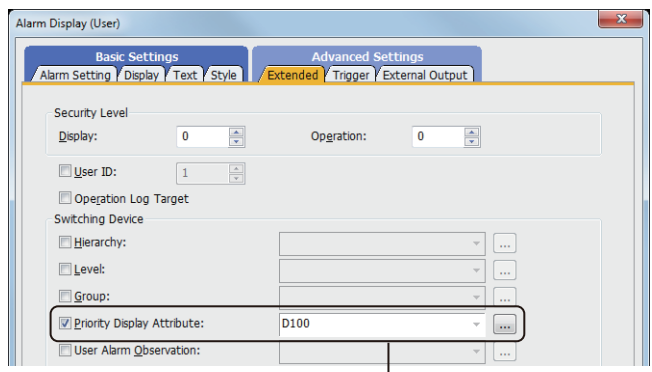

**Step 2** You can change the item for sorting the display of alarms.

Display example) Sorting user alarms in the descending order of frequency of occurrences

Sorting user alarms according to the frequency of occurrences (in the descending order)

Error date and time	Comment	Alarm status	Restored	Checked	Frequency	Cumulative Time	Down Time	Level	Group
Jun. 1, 2013 16:10	Drive module error	Checked	16:30	16:20	5	04:10	00:20	2	1
Jun. 1, 2013 14:00	Motor error	Checked	15:00	14:10	4	02:30	01:00	2	1
Jun. 1, 2013 18:30	Hydraulic pressure failure	Checked	-	18:50	2	00:20	-	1	1
Jun. 1, 2013 20:00	Power supply unit error	Occurred	-	-	1	-	-	1	2
Jun. 1, 2013 13:30	Light error	Checked	14:30	13:50	1	01:00	01:00	2	1

Setting example) Configure the setting in the [Extended] tab of the [Alarm Display(User)] dialog as follows.

Switching device D100 [ 9 ]

The sort criteria can be changed according to the value in the switching device (priority display attribute).

- 0: Without specification  
(sorting by the occurrence date and time)
- 1: Occurred
- 2: Restored
- 3: Checked
- 4: Comment (comment No.)
- 5: Level
- 6: Group
- 7: Status  
(Ascending: Checked → Restored → Occurred)  
(Descending: Occurred → Restored → Checked)
- 9: Freque
- 10: Cumulative Time
- 11: Down Time

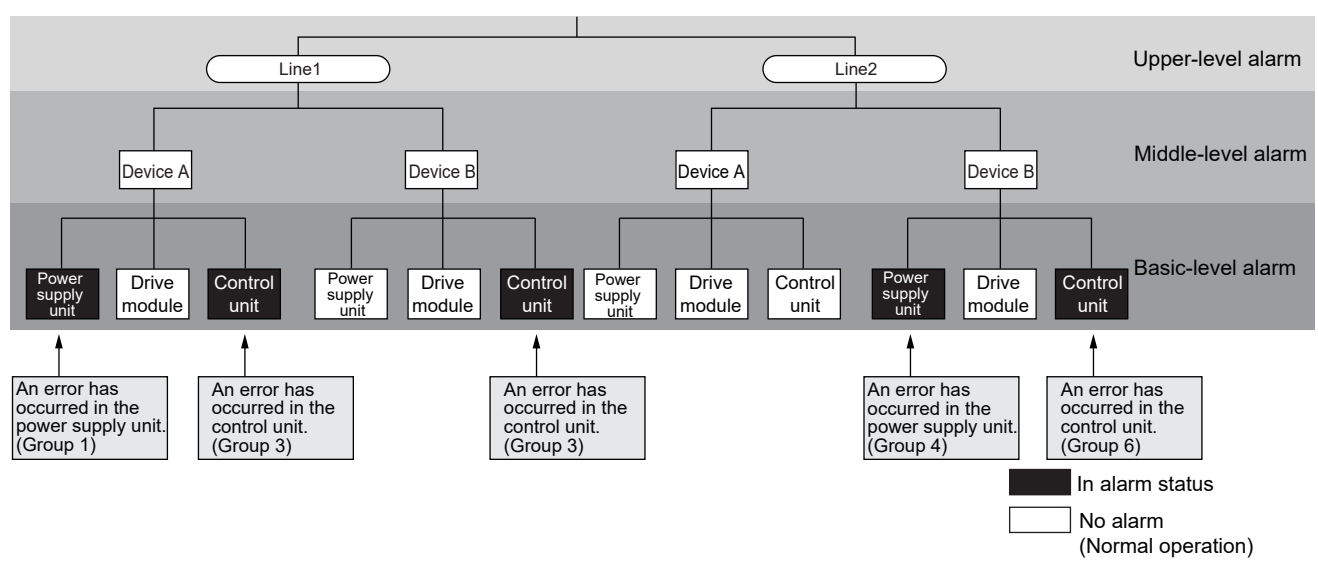

- Display order of when both [Display Order] in the [Display] tab and [Priority Display Attribute] in [Switching Device] in the [Extended] tab are set
- When both [Display Order] in the [Display] tab and [Priority Display Attribute] in [Switching Device] in the [Extended] tab are set, the display order set in [Priority Display Attribute] has priority.

#### (4) Switching the levels in the alarm hierarchy

Only available to the alarm display (user).  
Switch the levels in the alarm hierarchy by one of the following methods.

- Touching the screen  
Touch the alarm display (user) or a touch switch for the alarm display (user).  
→ 9.1.5 ■ 2 (11) Touch switches for the alarm display
- Using a device  
Specify a device for [Hierarchy] in [Switching Device].  
→ 9.1.5 ■ 4 (5) [Extended] tab

The following shows a system hierarchy example to explain alarm events to be displayed by each method.

**(a) Touching the screen**

The alarm display object lists the alarm events in the level directly below the current level in the alarm hierarchy. Example) When switching the upper level to another level by touching an event on the alarm display (user)

The upper-level alarm events are initially displayed.

Error date and time	Comment	Restored	Checked
-	Line1 abnormal stop	-	-
-	Line2 abnormal stop	-	-

Select an event to switch to the middle level in the alarm hierarchy.

Error date and time	Comment	Restored	Checked
-	Line1 abnormal stop	-	-
-	Line2 abnormal stop	-	-

The middle-level alarm events are displayed.

Error date and time	Comment	Restored	Checked
-	An error occurs in the device A.	-	-
-	An error occurs in the device B.	-	-

Select an event to switch to the basic level in the alarm hierarchy.

Error date and time	Comment	Restored	Checked
-	An error occurs in the device A.	-	-
-	An error occurs in the device B.	-	-

The basic-level alarm events are displayed.

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 14:25	An error has occurred in the power supply unit.	-	-
Jun. 1, 2013 12:10	An error has occurred in the control unit.	-	12:25

While alarm events are displayed, if an alarm occurs in any other branch of the system hierarchy, the alarm event will not be displayed.

Alarm events in device A in line 1 are displayed.

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 14:25	An error has occurred in the power supply unit.		
Jun. 1, 2013 12:10	An error has occurred in the control unit.		12:25

The new alarm event in device B in line 2 is not displayed.

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 14:25	An error has occurred in the power supply unit.		
Jun. 1, 2013 12:10	An error has occurred in the control unit.		12:25

To display the new alarm event, perform one of the following operations.

- Set a hierarchy switching device to display all the alarm events in the specified level in the alarm hierarchy.
- Switch the level in the alarm hierarchy.

**(b) Using a device**

The alarm display object lists all the alarm events in the level specified with the hierarchy switching device.

Example) When the hierarchy switching device is set to GD110

GD110

Error date and time	Comment	Restored	Checked
-	Line1 abnormal stop	-	-
-	Line2 abnormal stop	-	-

GD110

Error date and time	Comment	Restored	Checked
-	An error occurs in the device A.	-	-
-	An error occurs in the device B.	-	-
-	An error occurs in the device B.	-	-

GD110

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 14:25	An error has occurred in the power supply unit.		
Jun. 1, 2013 12:10	An error has occurred in the control unit.		12:25
Jun. 1, 2013 10:00	An error has occurred in the control unit.		11:00
Jun. 1, 2013 09:15	An error has occurred in the power supply unit.	10:10	09:55
Jun. 1, 2013 08:35	An error has occurred in the control unit.	10:20	09:40

**(c) How to switch to a higher level in the alarm hierarchy**

To switch the basic level to the upper or middle level in the alarm hierarchy, use a touch switch for the alarm display (user).

→9.1.5 ■ 2 (11) Touch switches for the alarm display

**(d) Initially-displayed level in the alarm hierarchy**

You are recommended to set upper-level alarm events to be initially displayed.  
 If you set lower-level alarm events to be initially displayed, all the alarm events in the level will be displayed.  
 Example) When the initially-displayed level is set to the basic level

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 14:25	An error has occurred in the power supply unit.		
Jun. 1, 2013 12:10	An error has occurred in the control unit.		12:25
Jun. 1, 2013 10:00	An error has occurred in the control unit.		11:00
Jun. 1, 2013 09:00	An error has occurred in the power supply unit.	11:00	09:20
Jun. 1, 2013 08:40	An error has occurred in the control unit.	10:20	08:50

All basic-level alarm events are displayed.

**(e) Timing for switching to the initially-displayed level**

When you perform any of the following operations using a device, the alarm display object lists all alarm events in the initially-displayed level in the alarm hierarchy.

- Switching between alarm IDs
- Switching between languages

**(5) Switching the display using devices**

The alarm events can be switched according to the value of the specified device.

Set [Switching Device] on the [Extended] tab.

→9.1.5 ■ 4 (5) [Extended] tab

9.1.5 ■ 5 (5) [Extended] tab

The following shows the setting items in [Switching Device].

- Alarm display (user)

Setting item	Description
[Hierarchy]	The alarm events in the specified level in the alarm hierarchy are displayed.
[Level]	The alarm events in the specified level are displayed.
[Group]	The alarm events in the specified group are displayed.
[Priority Display Attribute]	The alarm events are sorted in ascending or descending order. Select a sort criterion from the following. <ul style="list-style-type: none"> <li>• Date and time of occurrence</li> <li>• Date and time of restoration</li> <li>• Date and time of confirmation</li> <li>• Comment number</li> <li>• Level</li> <li>• Group</li> <li>• Alarm status (Occurring, reset, or checked)</li> <li>• Frequency</li> <li>• Cumulative time</li> <li>• Down time</li> </ul> This setting is applied only to basic-level alarm events.
[Basic Alarm Comment Group]	The alarm events are displayed using the comments of the specified comment group. You can change the comments according to your purpose.
[Middle Comment Group]	
[Upper Comment Group]	

- Alarm display (system)

Setting item	Description
[Priority Display Attribute]	The alarm events are sorted in ascending or descending order. Select a sort criterion from the following. <ul style="list-style-type: none"> <li>• Date and time of occurrence</li> <li>• Date and time of restoration</li> <li>• Date and time of confirmation</li> <li>• Alarm status (Occurring, reset, or checked)</li> </ul>

The following shows an example of displaying alarm events on the alarm display (user).

Example) When D102 is set for [Level] and D103 is set for [Priority Display Attribute] in [Device Switching]

The following alarm events are displayed.

Occurrence date and time	Comment	Status	Level
Jun. 1, 2013 16:50	Temperature anomaly	Occurred	1
Jun. 1, 2013 14:25	Motor error	Occurred	3
Jun. 1, 2013 11:20	Oil error	Checked	3
Jun. 1, 2013 10:00	Fuel error	Restored	3
Jun. 1, 2013 08:10	Internal pressure error	Restored	3
Jun. 1, 2013 07:40	Fuse error	Restored	2

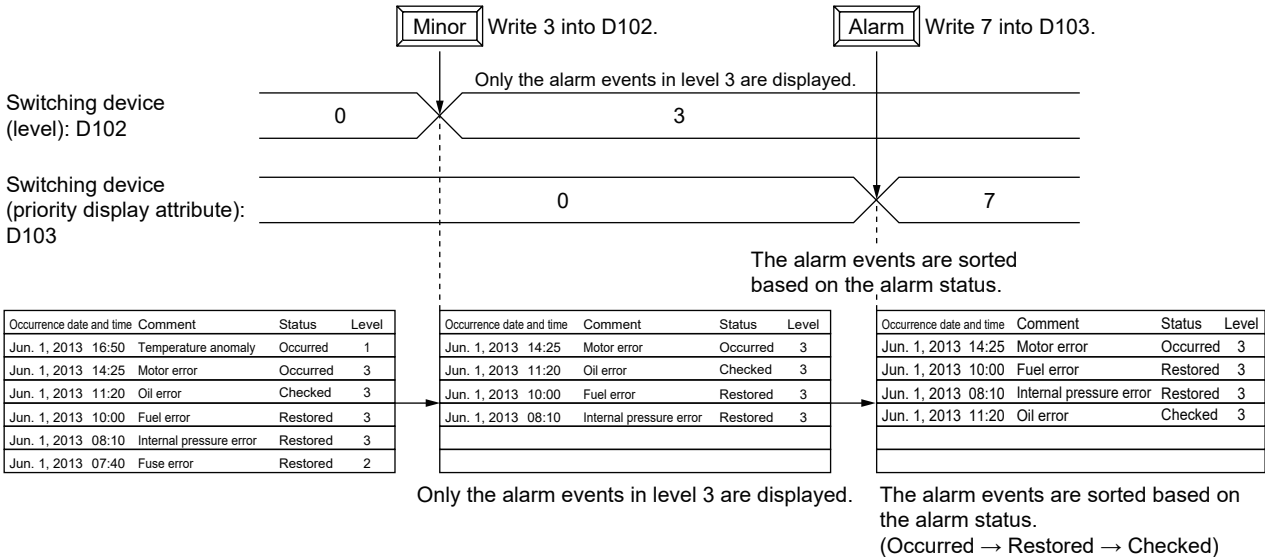

Touch switches for switching the alarms to be displayed

Switching the display according to the level

- All** Displays all alarm events. (D102: 0)
- Major** Displays alarm events in level 1. (D102: 1)
- Moderate** Displays alarm events in level 2. (D102: 2)
- Minor** Displays alarm events in level 3. (D102: 3)

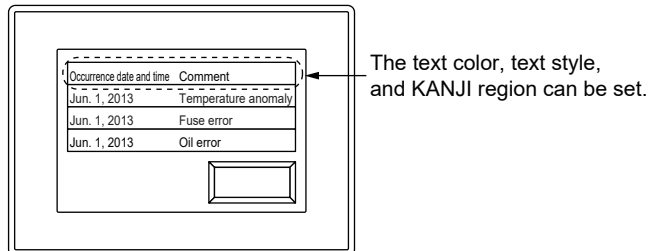

Switching the sort criterion

- Error date and time** Sorts the alarm events based on the date and time of occurrence in reverse chronological order. (D103: 1)
- Level** Sorts the alarm events in descending order of level. (D103: 5)
- Alarm** Sorts the alarm events in descending order of alarm status. (D103: 7)

### (6) Formatting the column header of the table

The format of the column header is user-changeable.

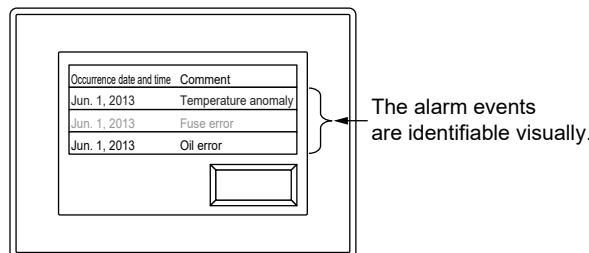

Set [Title Format] on the [Text] tab.

- ⇒ 9.1.5 ■ 4 (3) [Text] tab
- 9.1.5 ■ 5 (3) [Text] tab

### (7) Setting text colors for alarm events

Setting text colors facilitates visual identification of alarm events.

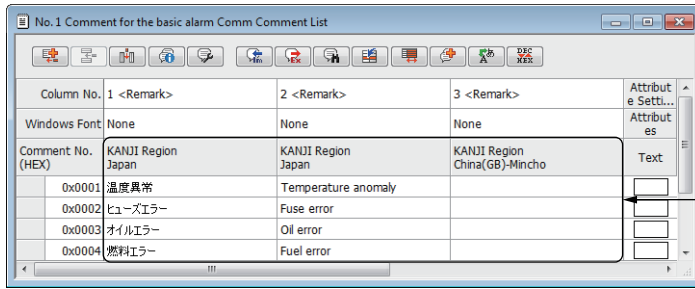

Set [Table Format] on the [Text] tab.

- ⇒ 9.1.5 ■ 4 (3) [Text] tab

**(8) Switching the column header language**

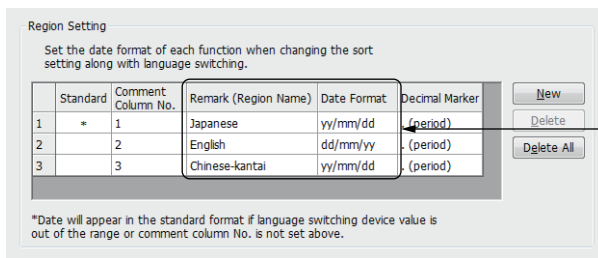

When a comment group including comments in multiple languages is used for the column header, you can switch the column header language.

Comment group setting

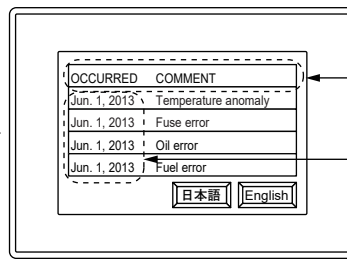

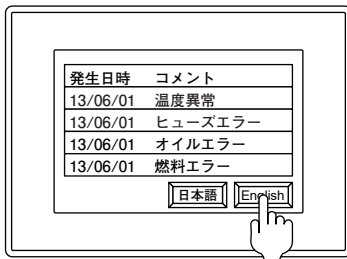

The comments are switched according to the language to be used.

Language switching settings

The date format is switched according to the language to be used.

The column header language can be switched when a comment group including comments in multiple languages is used for the column header.

If a date format has been specified for each language in the region setting for language switching, the relevant date format is applied upon language switching.

For the language switching settings, refer to the following.

⇒5.2.2 Setting for switching the language displayed on the GOT ([Language Switching])

**(9) Writing the information on the touched alarm event into devices**

The information on the alarm event touched on the alarm display object is writable to devices.

The occurrence date (Jun. 1, 2013) of the selected alarm event is written to devices.

Configure the following settings.

- On the [Alarm Setting] tab, select [Selection] or [Operation] for [Touch Mode].
- On the [External Output] tab, select [Use External Output].

⇒9.1.5 ■ 4 (7) [External Output] tab

9.1.5 ■ 5 (7) [External Output] tab

### (10) Writing the number of alarms into devices

The number of alarms targeted for listing is writable to devices.

On the [External Output] tab, set [Display Target Alarm Number Output].

→ 9.1.5 ■ 4 (7) [External Output] tab

9.1.5 ■ 5 (7) [External Output] tab

### (11) Touch switches for the alarm display

To use the touch switches for the alarm display, select them from the library of GT Designer3.

The text and shape of each switch is user-changeable.

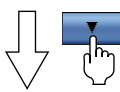

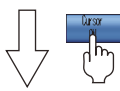

Alternatively, assign relevant key codes to touch switches.

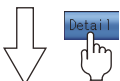

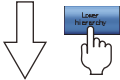

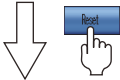

Touch switches for the alarm display (user)

### (12)SRAM power-failure backup function

This function saves the logging data collected in the buffering area to the SRAM user area. The logging data saved in the SRAM user area is retained even at power failure. Saving data to the SRAM user area for backup at power failure can be used for the following functions.

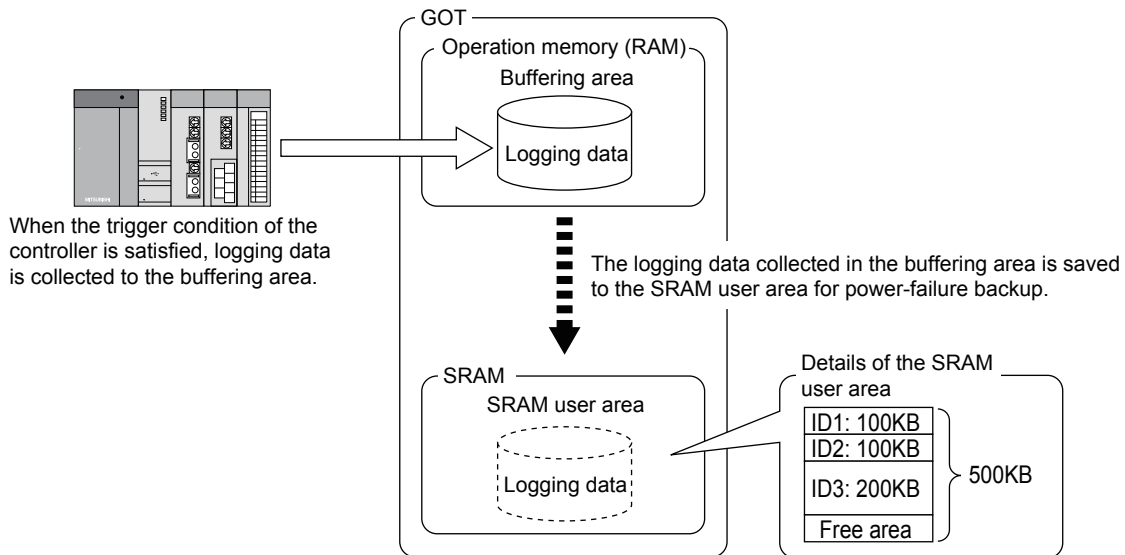

- User alarm observation
- System alarm observation
- Logging function

To use the logging data as a file, configure the setting for the file save and power-failure backup to the SRAM user area.

### (13)Saving data to the SRAM user area

When logging data is collected to the buffering area, the logging data is also saved to the SRAM user area. This saving timing cannot be changed.

When the SRAM user area has logging data, the logging data is automatically read when the GOT is powered on.

#### (14) Specifications of the SRAM user area

The following functions can save data into the SRAM user area.

- User alarm observation
- System alarm observation
- Logging function
- Recipe function

Applicable function	Number of settings	Size
User alarm observation	Max. 10	500 KB (total)
System alarm observation	Max. 1	
Logging function	Max. 20	
Recipe function	Max. 20	

#### (15) Priority in the SRAM user area

When the free area in the SRAM user area is used, the priority is applied. To use this backup function regardless of the priority, the total capacity of the data handled by each function must be 500 KB or less.

The following shows the priority among the functions.

Priority in the SRAM user area	Function
High ↓ Low	User alarm observation ↓ System Alarm Observation ↓ Recipe function ↓ Logging function

When multiple IDs are set for one function, the higher priority is applied to the smaller ID.

#### (16) Deleting and backing up the data in the SRAM user area

The data saved in the SRAM user area is deleted under the following conditions.

- Project data and system applications are written to the GOT when [Initialize SRAM user area when writing project data/OS] is selected in the [Communicate with GOT] dialog.
- The SRAM user area is initialized by using [SRAM management] in the utility.
- The clear trigger device set in [Buffering] of the user alarm observation setting or the system alarm observation setting turns on.

To retain the data saved in the SRAM user area, execute the backup/restoration function in the utility.

For the details of the backup/restoration function, refer to the following.

→GOT2000 Series User's Manual (Utility)

#### (17) Precautions for using the SRAM user area

Data may not be saved into the SRAM user area due to some reasons, including the setting change of an applicable function and physical memory corruption.

**(a) Normal conditions**

The data collected by each applicable function is saved to the SRAM user area.

**(b) Setting change**

If the size of data to be collected by the user alarm observation, system alarm observation, or logging function is changed, the data of the function saved in the SRAM user area will be deleted.

- When the size is reduced:  
The data is saved to the initialized area. The remaining area is reserved as a free area.
  - When the size is increased:  
The area used is initialized and the data is saved to another area.  
If the area required for saving the data is insufficient, an error occurs.  
If an error occurs, initialize the SRAM user area, reduce the data size to 500 KB or less, and save the data again.
- Example) When the size for ID 1 is increased from 100 KB to 200 KB

**(c) Setting deletion**

When the setting of each function is deleted, the SRAM user area used for saving the data is reserved as an unused area. Initialize the unused area to use it.

For the initialization of the SRAM user area, refer to the following.

➔GOT2000 Series User's Manual (Utility)

Example) When the setting of ID 1 is deleted

**(d) Others**

If the data saved in the SRAM user area is not restored at the GOT startup, a system alarm occurs. In such a case, check the battery status.

- When the battery status is normal:  
A part of the SRAM user area may be damaged.  
Initialize the SRAM user area.  
➔GOT2000 Series User's Manual (Utility)
- When the voltage is low:  
Replace the battery.  
If the data is still not restored after the battery is replaced, initialize the SRAM user area.  
For information on how to replace the battery, refer to the following.  
➔GOT2000 Series User's Manual (Hardware)  
For the initialization of the SRAM user area, refer to the following.  
➔GOT2000 Series User's Manual (Utility)

**3 Precautions**

The following shows the precautions for the alarm display.

**(1) Precautions for drawing**

**(a) Initial display hierarchy and hierarchy switching device**

In the alarm display (user) and alarm popup display, the level in the hierarchy specified in [Initial Display Hierarchy] is written into the hierarchy switching device with the following timing.

The level in the hierarchy to be displayed is switched.

- When switching screens (alarm display (user) only)
- At the first display of objects
- When the alarm observation ID number to be displayed is switched with the switching device for user alarm observation ID

For the setting of [Initial Display Hierarchy], refer to the following.

→9.1.4 ■ 4 (1) [Basic] tab

For the setting of the switching devices for levels in the hierarchy and user alarm ID, refer to the following.

→9.1.4 ■ 4 (3) [Extended] tab

**(b) Switching comment displays or others with the hierarchy switching device**

The leftmost bit of the hierarchy switching device changes to 1 by touch operations. Use mask processing and mask the device with 7FFFh so that the leftmost bit is always masked to 0.

Comment displays and others cannot work normally without mask processing.

Example) When switching comments to be displayed with the value of the hierarchy switching device

Hierarchy switching device value	Corresponding comment	Comment to be displayed
0	0	Basic alarm on display
1	1	Middle alarm on display
2	2	Upper alarm on display

• With mask processing

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 Hierarchy switching device value [2]

Switch from the upper to the middle by touching.

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 Hierarchy switching device value [1]

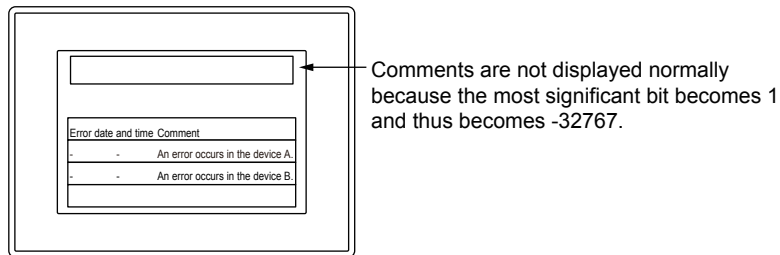

• Without mask processing

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 Hierarchy switching device value 2

1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 Hierarchy switching device value -32767

### (c) Text display in the row where the cursor is inserted

If the text color of the target set in [Target] in [Text] tab of the [Alarm Display] dialog is set to black, the text color and cursor color are shown in the same color, and the text in the row where the cursor is inserted becomes invisible. To display the text in the row where the cursor is inserted, set a color other than black.

### (d) Number of settings

The set size of an object cannot exceed the user area of the GOT. Therefore, not all the setting values such as device values can be set to their maximum values. Set the setting values within the capacity of the available user area for the GOT. For the calculation method of the setting size of the alarm display, refer to the following.

⇒ 1.2.3 ■ 3 Functions arrangeable on the screen

For the capacity of the available user area for the GOT, refer to the following.

⇒ 12.6.1 Data transferred to the GOT and capacity of the destination drive

## (2) Precautions for use

### (a) Display of the time of occurrence, confirmation, and restoration

For the time of occurrences, the clock data of the GOT is used.

For the precautions and restrictions of the clock function which manages the GOT clock data, refer to the following.

⇒ 5.3 Setting the Utility Function ([GOT Setup])

### (b) Narrowing down the large number of monitored alarms

If the number of alarms is narrowed down when the number of monitored devices are large in the user alarm observation, displaying the alarms may require a few seconds.

⇒ 9.1.3 ■ 2 (7) Useful operations and functions

### (c) Order of priority in which alarms are displayed

When the display order is not changed in the setting for [Switching Device] in the [Text] tab of the [Alarm Display] dialog, alarms are displayed in the descending order of the date and time of occurrences.

When the display order is changed, alarms are displayed in the order set in [Switching Device].

### (d) Alarm display for using the set overlay screen function

When setting the overlay screen function to display a screen for which the alarm display is set, do not set the alarm display for the basic screen.

If the alarm display is set for the basic screen, alarms are not displayed on the called screen.

For how to set the set overlay screen function, refer to the following.

⇒ 6.6.7 ■ 5 [Overlay Screen]

### (e) Precautions for the use of the time specification jump function

- When carrying out another operation while a time specification jump is performed  
While the data obtained at a specified time is searched with the time specification jump function, the operations with functions other than the alarm display cannot be performed.
- When multiple values of alarm data are obtained around a specified time  
If alarm data are not obtained at a specified time, the data obtained at the nearest time is searched.  
When the multiple values are obtained at the nearest time, the first detected value is displayed.
- When displaying the alarm data obtained at the start of collecting the data and the data obtained around the time when the latest data is obtained  
When the alarm data obtained at a specified time is the one obtained at the start of the collecting the data or the data obtained around the time when the latest data is obtained, the data to be displayed may not be displayed in the center of the alarm display.
- When there is no alarm data that can be displayed in alarm displays  
When there is no alarm data that can be displayed in an alarm display, no time specification jump is performed.
- Levels in the alarm hierarchy available for the time specification jump function  
Only the basic alarm is available for the time specification jump function.  
The middle alarm and upper alarm are unavailable for the time specification jump function.

#### (f) User ID assigned to key code switches

When you place an alarm display object on the screen editor, the relevant key code switches are placed together. The user ID of the alarm display object is automatically assigned to each key code switch ([User ID for a key input]). If you change the user ID of the alarm display object, also change the set value of [User ID for a key input] for each switch. Otherwise, the alarm display object is inoperable using the switches.

→8.2.11 [Key Code Switch] dialog

#### ■ 4 [Alarm Display(User)] dialog

- Step 1** Select [Object] → [Alarm Display] → [Alarm Display (User)] from the menu.
- Step 2** Click the position where you place the alarm display. Placing the alarm display is complete.
- Step 3** Double-click the alarm display which has been placed to display the setting dialog.

- (1) [Alarm Setting] tab
- (2) [Display] tab
- (3) [Text] tab
- (4) [Style] tab
- (5) [Extended] tab
- (6) [Trigger] tab
- (7) [External Output] tab

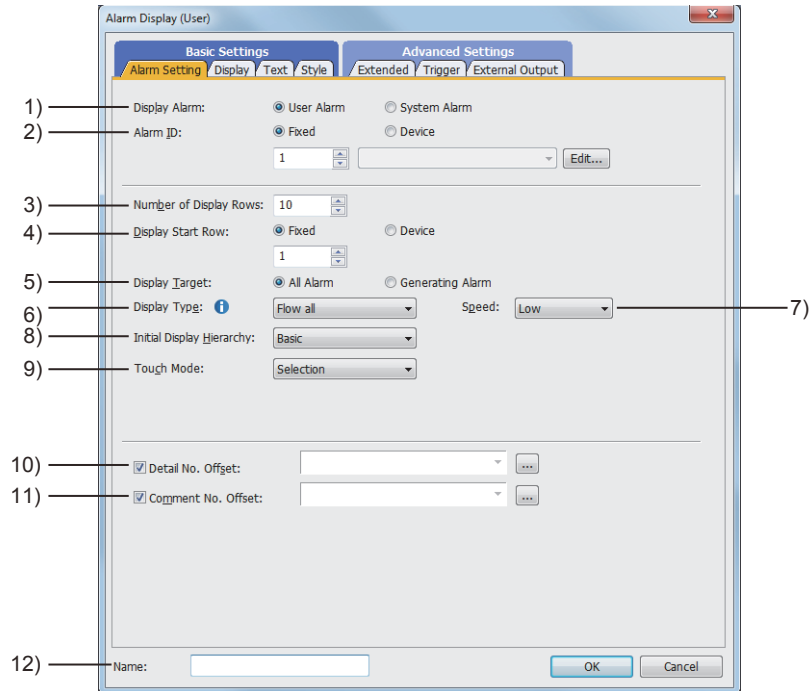

(1) [Alarm Setting] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Configure the settings such as the type of the alarm observation to be displayed, the display method of the message, and the operation performed when the alarm display is touched.

1) [Display Alarm]

Select the alarm type to be displayed in the alarm display.

The following shows selectable items.

- [User Alarm]: Displays user alarms.
- [System Alarm]: Displays system alarms. (Not available to GT21)

For the alarm display (user), select [User Alarm].

2) [Alarm ID]

Set the alarm ID of the user alarm to be displayed.

Item	Description
[Fixed]	Enter the alarm ID directly. The setting range is [1] to [32767]. Click the [Edit] button to display the [User Alarm Observation] dialog. → 9.1.2 ■ 7 [User Alarm Observation] dialog
[Device]	Set the device that specifies the alarm ID. → 6.1.1 How to set devices If a nonexistent alarm ID is specified, user alarms are not displayed.

3) [Number of Display Rows]

Set the number of rows displayed in a screen.

The following shows the setting range.

- [1] to [64](GT27, GT25, GT23 and GT SoftGOT2000)
- [1] to [27](GT21 only)

Example) When [Number of Display Rows] is set to three rows

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 10:25	Temperature anomaly	11:25	10:45
Jun. 1, 2013 12:05	Fuel error	12:25	12:28
Jun. 1, 2013 08:30	Motor error	09:45	09:40

} Alarms are displayed for three rows excluding the title row.

4) [Display Start Row]

Select a row to be displayed in the top row when the number of alarms exceeds the number of rows set in [Number of Display Rows].

Item	Description
[Fixed]	Enter the number of rows to be displayed directly. The setting range is [1] to [32767].
[Device]	Set the device that specifies the start row. →6.1.1 How to set devices

- When the number of alarms is larger than the value set in [Display Start Row]

The alarm corresponding to the row number set in [Display Start Row] is displayed in the top row.

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 2, and the number of alarms is 5

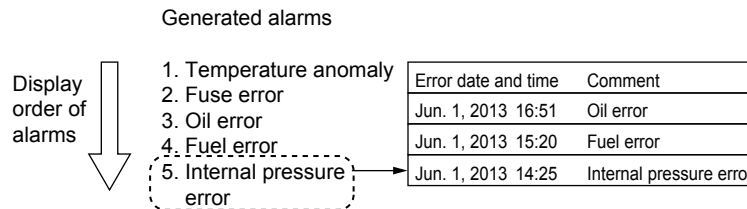

The alarm corresponding to the row number set in [Display Start Row] is displayed in the top row.

- When the number of alarms is smaller than the value set in [Display Start Row]

The last alarm is displayed in the bottom row.

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 10, and the number of alarms is 5

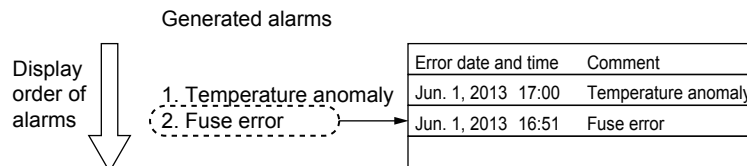

The last alarm is displayed in the bottom row.

- When the number of alarms is smaller than the value set in [Number of Display Rows]

The setting for [Display Start Row] becomes disabled, and all the alarms that have occurred are displayed.

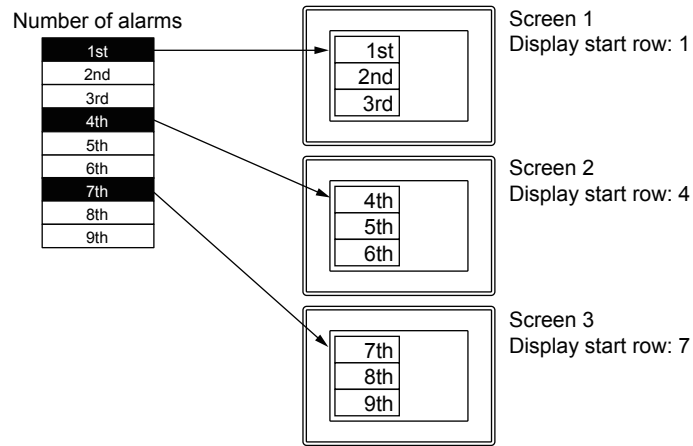

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 3, and the number of alarms is 2

All the alarms that have occurred are displayed.

- Using the setting for multiple screens

When different values of [Display Start Row] are set for each screen, the user alarm displays differ depending on the screens.

Even if the number of alarms exceeds the value set in [Display Start Row] when user alarms are displayed on the GOT, the setting for [Display Start Row] does not become enabled.

To enable the setting for [Display Start Row], switch the screen to another one, then switch back the screen to the one in which the user alarm is displayed.

### 5) [Display Target]

Select the display method of collected alarms.

The following shows selectable items.

- [All Alarm]:  
Select this item to display the history of alarms including the past alarms.
- [Generating Alarm]:  
When this item is set, only the existing alarms are displayed.  
→9.1.5 ■ 1 (2) Alarm events to be listed

### 6) [Display Type]

Select the display method of the comments for alarms.

The following shows selectable items.

- [Fixed]:  
Does not scroll a comment displayed at an alarm occurrence.  
When a comment extends off the display area, the part outside the area and the second and subsequent rows are not displayed.
- [Flow all]:  
Scrolls a full comment displayed at an alarm occurrence from right to left.
- [Flow as required]:  
Does not scroll a comment fully displayed within the display area.  
Scrolls a comment extending off the display area and a multiple-row comment from right to left.
- [Flow the selected row]:  
Scrolls only the comment selected among the comments displayed at an alarm occurrence from right to left.  
→9.1.5 ■ 2 (2) Display method of comments

### 7) [Speed]

This item is settable when [Display Type] is set to [Flow all], [Flow as required], or [Flow the selected row].

Set the speed at which the display is scrolled.

The following shows selectable items.

- [High]: The text of comments flows at the speed of 200 dots a second.
- [Medium]: The text of comments flows at the speed of 100 dots a second.
- [Low]: The text of comments flows at the speed of 50 dots a second.

### 8) [Initial Display Hierarchy]

Select a level in the alarm hierarchy to be displayed first when a user alarm occurs.

The following shows selectable items.

- [Basic]
- [Middle]
- [Upper]

### 9) [Touch Mode]

Select the operation performed when the alarm display (user) is touched.

The following shows selectable items.

- [None]:  
Select this item to disable touch operations.
- [Selection]:  
Selects a touched alarm.
- [Operation]:  
Selects a touched alarm.  
Switches between levels in the alarm hierarchy with each touch of the selected alarm.  
Touching a selected upper alarm displays the middle alarm.  
Touching a selected middle alarm displays the basic alarm.  
Touching a selected basic alarm displays the detail screen.  
While GS450.b15 is on, even when a basic alarm is not selected, a single touch of the basic alarm displays the detail screen.

10) **[Detail No. Offset]**

Select this item to switch detailed information displayed in the user alarm according to the value of a device.  
The device value is added to the detail No.

11) **[Comment No. Offset]**

Select this item to switch comments displayed in the user alarm according to the value of a device.  
The set device value is added to the comment No.

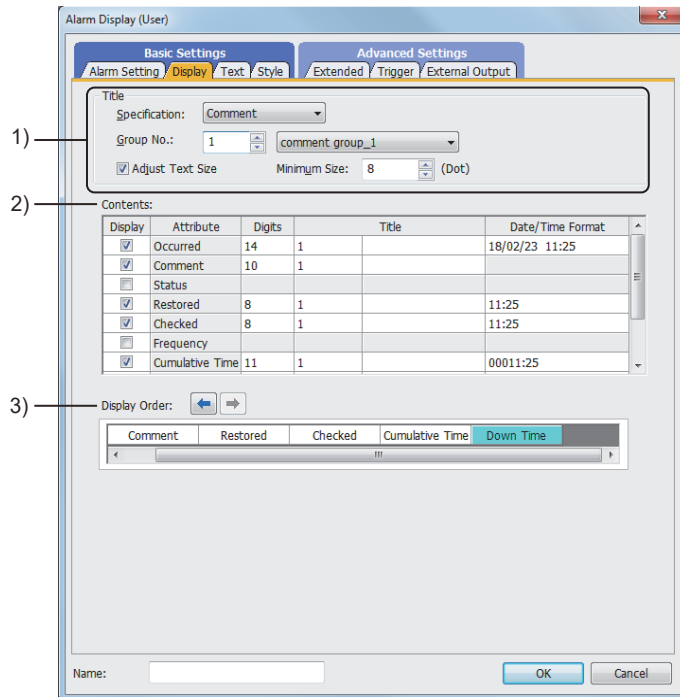

12) **[Name]**

Set the object name.  
The name is displayed in the [Data View] window, property sheet, and others.  
The name is changeable on the other tabs as well.  
Up to 100 characters can be set.

(2) [Display] tab

Set the items to be displayed in the user alarm and the display order.

1) [Title]

Item	Description
[Specification]	Select the method of specifying the text to be displayed in the title. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Direct]: Select this item to input the text to be displayed in the title directly into [Title] in [Contents].</li> <li>• [Comment]: Select this item to display the text to be displayed in the title using the comment in the comment group.</li> <li>• [None]: Select this item not to display the title.</li> </ul>
[Group No.]	Only when [Comment] is selected for [Specification], this item can be set. Set the comment group in which the text to be displayed in the title is registered.
[Adjust Text Size]	Only when [Comment] is selected for [Specification], this item can be set. The text size is adjusted according to the width of the title. When [Adjust Text Size] is not selected, the text size is adjusted by inserting a line feed.
[Minimum Size]	Only when [Comment] is selected for [Specification] and [Adjust Text Size] is selected, this item can be set. Set the minimum text size for adjustment. The setting range is [8] to [240] dot(s).

2) [Contents]

Item	Description
[Display]	Select the items to be displayed in the alarm display (user).

Item	Description
[Attribute]	<p>Items to be displayed in the alarm display (user)</p> <ul style="list-style-type: none"> <li>• [Occurred]: Displays the date and time of occurrence of an alarm.</li> <li>• [Comment]: Displays the date and time of occurrence of an alarm.</li> <li>• [Status]: Displays the alarm status.</li> <li>• [Restored]: Displays the date and time when an alarm has restored.</li> <li>• [Checked]: Displays the date and time when an alarm occurrence has been checked.</li> <li>• [Frequency]: Displays the number of error occurrence.</li> <li>• [Cumulative Time]: Displays the total time during which the relevant alarm has occurred.</li> <li>• [Down Time]: Displays the time from the alarm occurrence to the alarm restoration.</li> <li>• [Level]: Displays the levels set for alarms.</li> <li>• [Group]: Displays the groups set for alarms.</li> </ul> <p>When an option other than [Cumulative] is selected for [Collection Mode] in the [Basic] tab of [User Alarm Observation], the item name is displayed, but the value is not displayed.</p>
[Digits]	<p>Set the number of the digits displayed in each item. Set a one-byte character as one digit and a two-byte character as two digits. The following shows the setting range of each item.</p> <ul style="list-style-type: none"> <li>• [Occurred]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> <li>• [Comment]: [10] digits to [128] digits (For GT21: [10] digits to [80] digits)</li> <li>• [Status]: [6] digits to [128] digits (For GT21: [6] digits to [80] digits)</li> <li>• [Restored]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> <li>• [Checked]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> <li>• [Frequency]: [5] digits to [128] digits (For GT21: [5] digits to [80] digits)</li> <li>• [Cumulative Time]: [8] digits to [128] digits (For GT21: [8] digits to [80] digits)</li> <li>• [Down Time]: [8] digits to [128] digits (For GT21: [8] digits to [80] digits)</li> <li>• [Level]: [3] digits to [128] digits (For GT21: [3] digits to [80] digits)</li> <li>• [Group]: [3] digits to [128] digits (For GT21: [3] digits to [80] digits)</li> </ul>
[Title]	<p>Set a title of the alarm display (user). The setting depends on the value selected for [Specification]. When [Direct] is selected, input characters within the number of digits set in [Digits]. When [Comment] is selected, the comment No. and the comment to be displayed in the title are displayed. When [None] is selected, the title cannot be set.</p>
[Date/Time Format]	<p>Set the date and time format for each attribute item. The setting method varies by attribute item. For [Occurred], [Restored], and [Checked], click the [...] button to set the date and time format in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings For [Cumulative Time] and [Down Time], select a time format of hours:minutes or hours:minutes:seconds.</p>

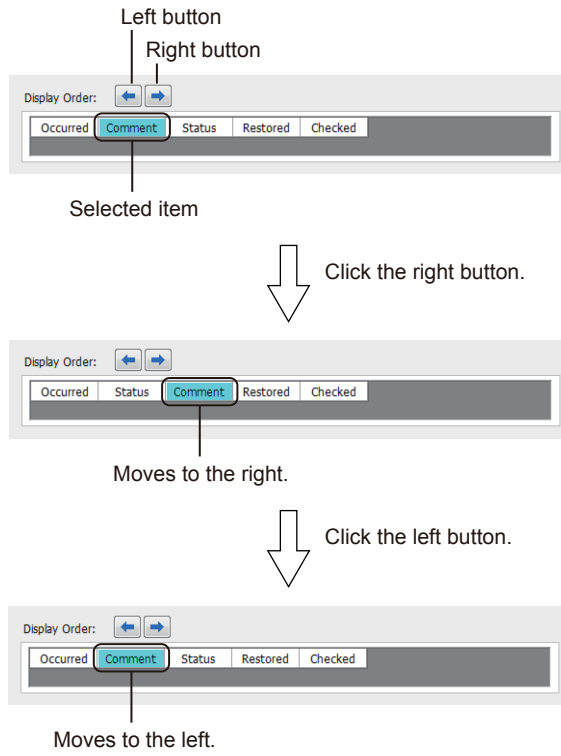

### 3) [Display Order]

Set the order in which the items set for [Attribute] in [Contents] are displayed.

The items of [Attribute] which are set in [Display] are displayed.

Move the display position of the selected item sideways by using the right button and the left button.

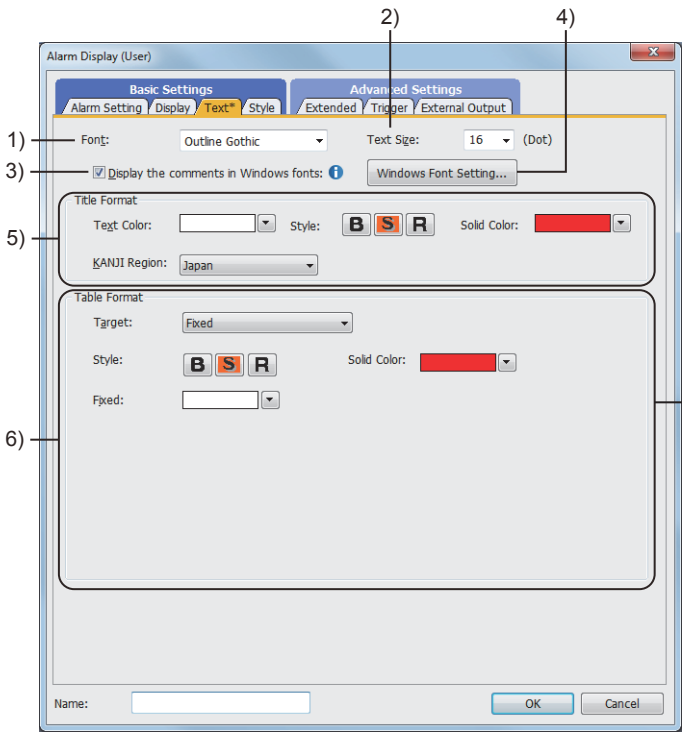

### (3) [Text] tab

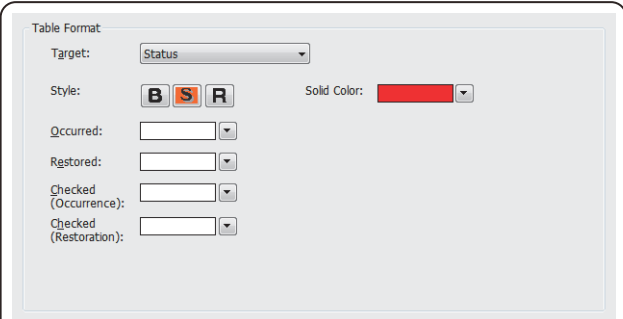

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

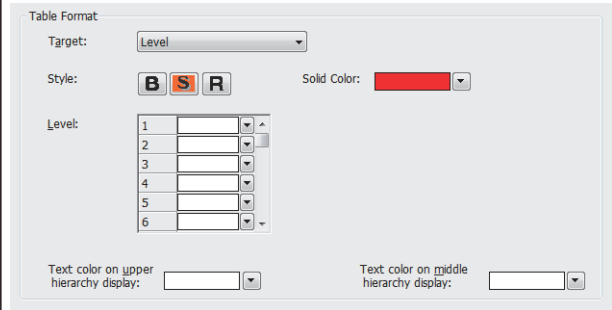

Set the font of displayed alarms.

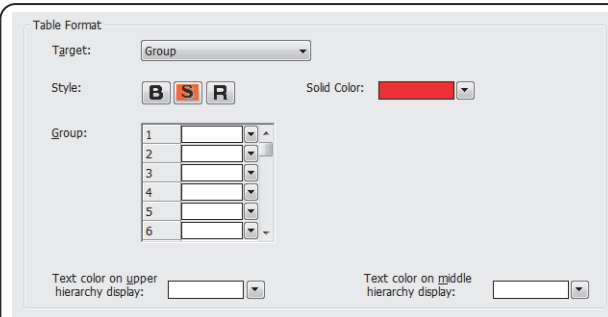

When [Fixed] is selected for [Target]

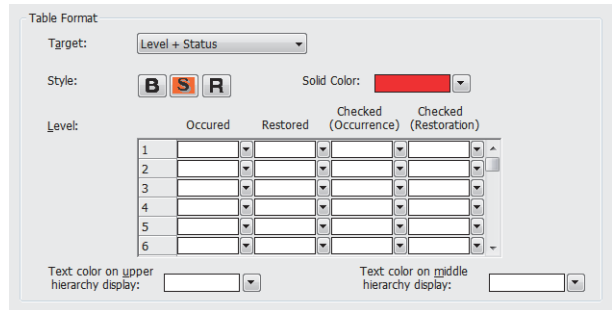

When [Status] is selected for [Target]

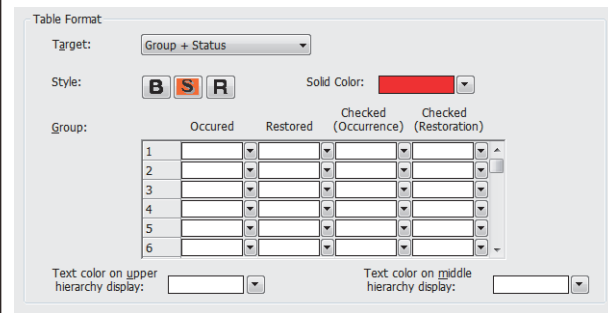

When [Level] is selected for [Target]

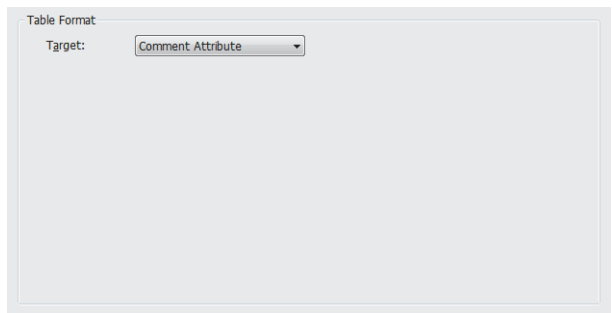

When [Group] is selected for [Target]

When [Level + Status] is selected for [Target]

When [Group + Status] is selected for [Target]

When [Comment Attribute] is selected for [Target]

### 1) [Font]

Select the font of the displayed text.

The following shows selectable items.

- [6x8dot]
- [12dot Standard]

- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline Gothic] (GT27, GT25, GT23, and GT SoftGOT2000)
- [Outline] (GT2107-W only)

## 2) [Text Size]

For the details of each font and size, refer to the following.

⇒1.2.5 Font specifications

## 3) [Display the comments in Windows fonts]

Displays the following registered comments in Windows fonts.

- Comments set for the basic alarm comment, upper comment, middle comment, and detail display in the user alarm observation
- Comments set for the titles in the [Display] tab (when [Comment] is selected for [Specification])

This setting is deleted when one of the following settings is made.

- [Device] is selected for [Alarm ID] in the [Alarm Setting] tab.
- An item other than [Fixed] is selected for [Display Type] in the [Alarm Setting] tab.
- [Basic Alarm Comment Group], [Middle Comment Group], or [Upper Comment Group] is selected in the [Extended] tab.

## 4) [Windows Font Setting] button

Displays the [Comment Group Property] dialog. (The properties of the comment group used for the basic alarm comment are displayed.)

Set Windows fonts to display comments.

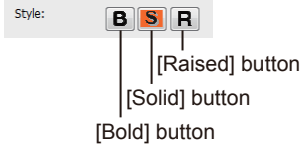

⇒5.8.4 ■ 2 (1) [Comment Group Property] dialog

## 5) [Title Format]

Set the format of the text displayed in the title of the alarm display (user).

Item	Description
[Text Color]	Set the text color. ⇒6.4 Color Settings
[Style]	<p>Set the style of the text to be displayed. One style ([Bold], [Solid], or [Raised]) is settable only.</p> <div style="text-align: center;"> <p>The diagram shows a 'Style:' label followed by three buttons: 'B' (Bold), 'S' (Solid), and 'R' (Raised). Lines connect the 'B' button to the text '[Bold] button', the 'S' button to '[Solid] button', and the 'R' button to '[Raised] button'.</p> </div> <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> </ul>
[Solid Color]	When [Solid] or [Raised] is selected for [Style], set the color of the shadow.
[KANJI Region]	<p>Select the KANJI region of the displayed text. ⇒1.2.5 Font specifications</p> <p>The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Japan]</li> <li>• [China(GB)-Mincho]</li> <li>• [China(Big5)-Gothic]</li> </ul>

## 6) [Table Format]

Item	Description
[Switching]	<p>Select how to use different text colors in displaying alarms. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Displays texts only in the color set as a text color.</li> <li>• [Status]: Changes the text color for each alarm status.</li> <li>• [Level]: Changes the text color for each level.</li> <li>• [Group]: Changes the text color for each group.</li> <li>• [Level + Status]: Changes the text color for each level and alarm status.</li> <li>• [Group + Status]: Changes the text color for each group and alarm status.</li> <li>• [Comment Attribute]: Applies colors of text according to the character attribute set for the comment group, and displays the comments.</li> </ul>
[Style]	<p>Set the style of the text to be displayed. One style ([Bold], [Solid], or [Raised]) is settable only.</p>  <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> </ul>
[Solid Color]	When [Solid] or [Raised] is selected for [Style], set the color of the shadow.
[Fixed]	When [Fixed] is selected for [Switching], set the text color.
[Occurred]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm occurs.
[Restored]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm is restored.
[Checked (Occurrence)]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm occurrence is checked.
[Checked (Restoration)]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm restoration is checked.
[Level Color]	When [Level] or [Level + Status] is selected for [Switching], set the text color for the level.
[Group Color]	When [Group] or [Group + Status] is selected for [Switching], set the text color for the group.
[Text Color (Upper)]	When selecting [Level], [Group], [Level + Status], or [Group + Status] for [Switching], set the text color for alarms displayed at the upper level in the hierarchy.
[Text Color (Middle)]	When selecting [Level], [Group], [Level + Status], or [Group + Status] for [Switching], set the text color for alarms displayed at the middle level in the hierarchy.

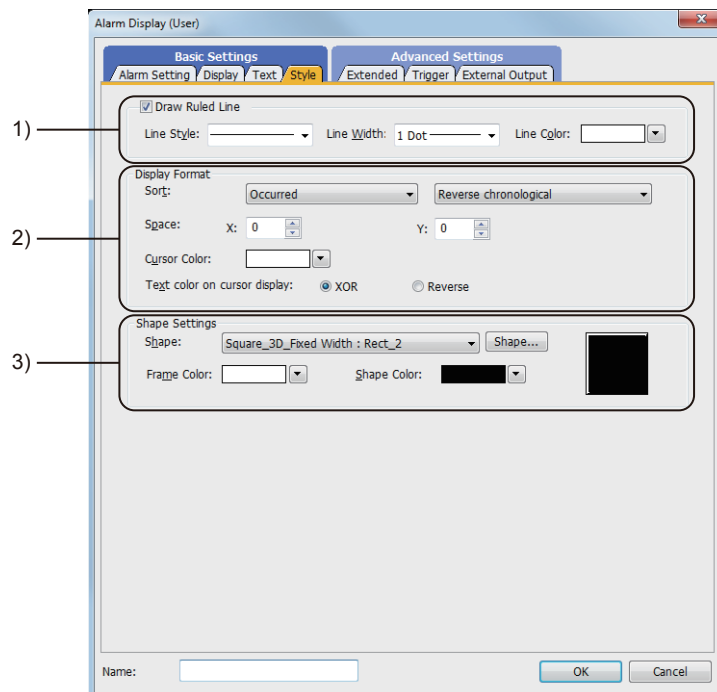

## (4) [Style] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the ruled line and shape of the alarm display (user).

### 1) [Draw Ruled Line]

Item	Description
[Line Style]	Select the type of the ruled line of the alarm display (user).
[Line Width]	Select the width of the ruled line of the alarm display (user).
[Line Color]	Select the color of the ruled line of the alarm display (user).

### 2) [Display Format]

Item	Description
[Sort]	<p>Select an item and a method for sorting the display of user alarms.</p> <ul style="list-style-type: none"> <li>For [Occurred], [Restored], and [Checked], the sorting order can be selected from [Reverse chronological] or [Chronological].</li> <li>For [Comment], [Frequency], [Cumulative Time], [Down Time], [Level], [Group], and [Observation Alarm No.], the sorting order can be selected from [Ascending] or [Descending].</li> <li>For [Status], the sorting order can be selected from [Checked-&gt;Restored-&gt;Occurred] or [Occurred-&gt;Restored-&gt;Checked].</li> </ul>
[Space]	<p>Set the space between the text to be displayed and the line.</p> <ul style="list-style-type: none"> <li>[X]: Set the space in 1 dot unit. The setting range is [0] to [32].</li> <li>[Y]: Set the space in 1 dot unit. The setting range is [0] to [32].</li> </ul>
[Cursor Color]	Set the cursor color for selecting a user alarm.
[Text color on cursor display]	<p>Method to set the color of text on the cursor.</p> <ul style="list-style-type: none"> <li>[XOR] Displays the text in the synthesized color with XOR specification.</li> <li>[Reverse] Inverts the text.</li> </ul> <p><b>GOT Graphic Ver.2</b></p> <p>As the setting is fixed to [Reverse], no additional setting is required accordingly.</p> <p><b>GOT Graphic Ver.1</b></p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>[XOR]</li> <li>[Reverse]</li> </ul>

### 3) [Shape Settings]

Item	Description
[Shape]	Set a shape for the alarm display (user). To select a shape other than those in the list box, click the [Shape] button.
[Frame Color]	Set the frame color of the shape.
[Shape Color]	Set the color of the shape.

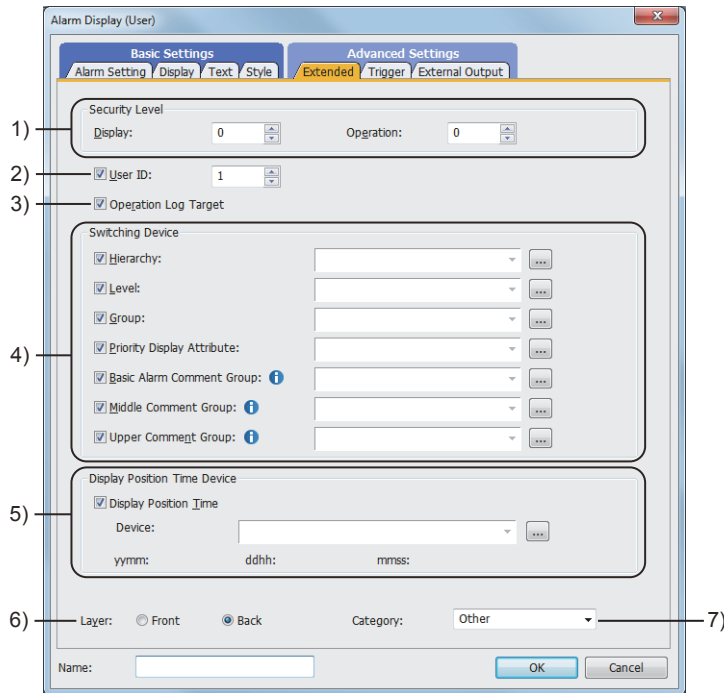

### (5) [Extended] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the operation of switching displays for the alarm display (user) by devices.

### 1) Security level

Set the security level of display and operation.

Item	Description
[Display]	Set the security level of display. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security.
[Operation]	Set the security level of operation. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security. The setting of security level of [Operation] must be set to the one exceeding the security level of [Display].

### 2) [User ID]

Set the user ID of the alarm display (user).

If an alarm display (user) and another alarm display are set on a screen, touch switches for the alarm display (user) may not function.

For secure operations of the touch switches for alarm displays (user), set user ID for the alarm displays (user).

→ 9.1.5 ■ 2 How to use the alarm display

### 3) [Operation Log Target]

Select this item to target the object for the operation log.

→ 5.2.11 ■ 1 Specifications of the operation log

### 4) [Switching Device]

Select items to switch the display using devices.

⇒9.1.5 ■ 2 How to use the alarm display

Item	Description
[Hierarchy]	<p>Switches the level in the alarm hierarchy to be displayed using the device value. All the user alarms at the specified level in the alarm hierarchy are displayed. Set the switching device. ⇒6.1.1 How to set devices</p> <p>Store values to the device as follows to switch the level in the alarm hierarchy.</p> <div style="border: 1px solid black; padding: 2px; margin: 10px 0;"> <span style="border: 1px solid black; padding: 0 5px;">b15</span> <span style="border: 1px solid black; padding: 0 20px;">b14 to b2</span> <span style="border: 1px solid black; padding: 0 5px;">b1</span> <span style="border: 1px solid black; padding: 0 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• With b1 to b0, specify the target level in the user alarm hierarchy for switching. 00 (0): Basic alarm 01 (1): Middle alarm 10 (2): Upper alarm</li> <li>• Using b14 to b2 is prohibited.</li> <li>• To b15, store the type of operations of switching levels in the hierarchy. (Identifier of hierarchy switching controllers) To switch levels in the hierarchy using the hierarchy switching device, always set 0 to this bit. 0: Switching by using the switching device 1: Switching by touching the display part</li> </ul> <p>For the precautions of switching the comment display or other items using devices, refer to the following. ⇒9.1.4 ■ 3 Precautions</p>
[Level]	<p>Only the user alarms with a specified level No. are displayed. Set the switching device. ⇒6.1.1 How to set devices</p> <p>Store the level No. of user alarms to be displayed to the device.</p> <ul style="list-style-type: none"> <li>• To display a specific level, specify a level No. within 1 to 255.</li> <li>• If a nonexistent level No. is specified, user alarms are not displayed.</li> <li>• To display all levels, specify the level No. 0 or a No. over 256.</li> </ul>
[Group]	<p>Only the user alarms with a specified group No. are displayed. Set the switching device. ⇒6.1.1 How to set devices</p> <p>Store the group No. of user alarms to be displayed to the device.</p> <ul style="list-style-type: none"> <li>• To display a specific group, specify a group No. within 1 to 255.</li> <li>• If a nonexistent group No is specified, alarms are not displayed.</li> <li>• To display all groups, specify the group No. 0 or a No. over 256.</li> </ul>
[Priority Display Attribute]	<p>Switch the item to be the sort criteria according to the device values. Set the switching device. ⇒6.1.1 How to set devices</p> <p>Store values to the device to switch the order of alarm display.</p> <div style="border: 1px solid black; padding: 2px; margin: 10px 0;"> <span style="border: 1px solid black; padding: 0 5px;">b15</span> <span style="border: 1px solid black; padding: 0 20px;">b14 to b4</span> <span style="border: 1px solid black; padding: 0 5px;">b3</span> <span style="border: 1px solid black; padding: 0 5px;">b2</span> <span style="border: 1px solid black; padding: 0 5px;">b1</span> <span style="border: 1px solid black; padding: 0 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• b0 to b3: Specify the sort criteria. (Using the "*" part is prohibited.)  <input type="checkbox"/> **0h: Normal (date and time of occurrence)  <input type="checkbox"/> **1h: Date and time of occurrence  <input type="checkbox"/> **2h: Date and time of restoration  <input type="checkbox"/> **3h: Date and time of confirmation  <input type="checkbox"/> **4h: Comment No.  <input type="checkbox"/> **5h: Level  <input type="checkbox"/> **6h: Group  <input type="checkbox"/> **7h: Alarm status  <input type="checkbox"/> **9h: Frequency  <input type="checkbox"/> **Ah: Cumulative time  <input type="checkbox"/> **Bh: Down time</li> <li>• b4 to b14: Using these bits is prohibited.</li> <li>• b15: Specifies the ascending or descending order. (Using the "*" part is prohibited.)  0** □ h: Descending  8** □ h: Ascending</li> </ul> <p>The date and time of occurrence, cumulative time, and down time can be set only when the collection mode in the user alarm observation is [Cumulative]. If a value other than the above is stored, alarms are displayed in the order of the date and time of occurrence.</p>
[Basic Alarm Comment Group]	<p>Switch the comment group to be displayed in the basic alarm according to the device values. Set the switching device. ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>

Item	Description
[Middle Alarm Comment Group]	<p>Switch the comment group to be displayed in the middle alarm according to the device values. Set the switching device.            ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>
[Upper Alarm Comment Group]	<p>Switch the comment group to be displayed in the upper alarm according to the device values. Set the switching device.            ⇒6.1.1 How to set devices</p> <ul style="list-style-type: none"> <li>• If 0 is stored to the device, alarms are displayed with the comment group which is set in the user alarm observation.</li> <li>• When a nonexistent comment group No. is specified, No message is displayed.</li> </ul>

## 5) [Display Position Time Device]

Item	Description																																				
[Display Position Time]	<p>Displays the data of a specified time. (Time specification jump function)            Set a device in which a specified time is stored.            ⇒6.1.1 How to set devices</p> <p>The successive devices from a set device are set to store the data of year and month, day and hour, and minute and second.            By using the display position time device and a touch switch, the basic alarm or a specified time is displayed.            If alarm data are not obtained at a specified time, the data obtained at the nearest time is displayed.</p> <ul style="list-style-type: none"> <li>• Time specification jump function of when [Priority Display Attribute] is set              Alarms are displayed in the order set in [Priority Display Attribute].              The display order is "Restored", "Checked", and "Occurred".              When [Priority Display Attribute] is not set, alarms in a specified time are displayed regardless of the above order.</li> <li>• Specification of the time which can be set              Data type: BCD16 (binary coded decimal)              Data range: Jan.1, 2000 to Dec.31, 2099</li> <li>• Required settings<sup>*1</sup></li> <li>• Operation example</li> </ul> <p>The following shows an example of a time specification jump function operation.            Example) When setting D1000 as the display position time specification device and displaying the data of Jun.1, 2013 21:05:30</p> <p style="text-align: center;">Display position time device</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th colspan="2">H 15 bits 8 bits</th> <th colspan="2">L 7 bits 0 bit</th> </tr> </thead> <tbody> <tr> <td>Year and month (D1000)</td> <td>0x13</td> <td></td> <td>0x06</td> <td></td> </tr> <tr> <td>Day and time (D1001)</td> <td>0x01</td> <td></td> <td>0x21</td> <td></td> </tr> <tr> <td>Minute and second (D1002)</td> <td>0x05</td> <td></td> <td>0x30</td> <td></td> </tr> </tbody> </table> <div style="text-align: center; margin: 10px 0;"> </div> <p style="margin-left: 20px;">Set the time to be displayed in the display position time device.</p> <p style="margin-left: 20px;">Touch the touch switch for which the key code (FFBEh) has been set.</p> <table border="1" style="margin-left: auto; margin-right: auto; text-align: center;"> <thead> <tr> <th>Error date and time</th> <th>Comment</th> <th>Restored</th> <th>Checked</th> </tr> </thead> <tbody> <tr> <td>Jun. 1, 2013 21:05:40</td> <td>Motor error</td> <td></td> <td></td> </tr> <tr style="background-color: #e0e0e0;"> <td>Jun. 1, 2013 21:05:30</td> <td>Light error</td> <td></td> <td>21:35:45</td> </tr> <tr> <td>Jun. 1, 2013 10:25</td> <td>Oil pressure error</td> <td>21:40:30</td> <td>21:35:45</td> </tr> </tbody> </table> <p style="margin-left: 20px;">The data obtained at the specified time (Jun. 1, 2013 21:05:30) is displayed.</p> <p>For precautions of the time specification jump function, refer to the following.            ⇒9.1.5 ■ 1 Specifications of the alarm display</p>		H 15 bits 8 bits		L 7 bits 0 bit		Year and month (D1000)	0x13		0x06		Day and time (D1001)	0x01		0x21		Minute and second (D1002)	0x05		0x30		Error date and time	Comment	Restored	Checked	Jun. 1, 2013 21:05:40	Motor error			Jun. 1, 2013 21:05:30	Light error		21:35:45	Jun. 1, 2013 10:25	Oil pressure error	21:40:30	21:35:45

Alarm display (system)	Select [Display Position Time] in the [Extended] tab and set a device. →9.1.5 ■ 5 (5) [Extended] tab

### 6) [Layer]

GT21 does not support this item.

Select the layer to arrange the object on.

The following shows selectable items.

- [Front]
- [Back]

→6.5.5 ■ 3 Superimposition

### 7) Category I

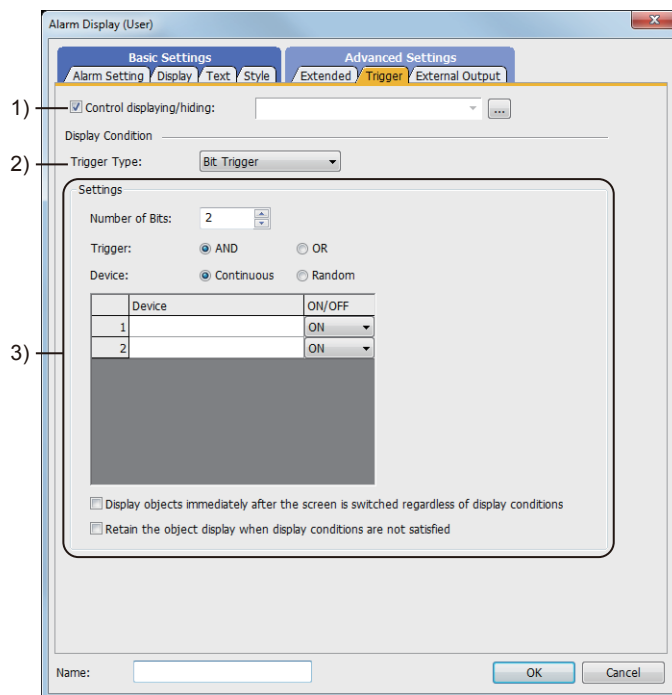

Select the category to assign the object.

→11.7 Managing figures and objects by category

### (6) [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

### 2) [Trigger Type]

Select the condition of displaying and operating the object.

The following shows selectable items.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Settings]

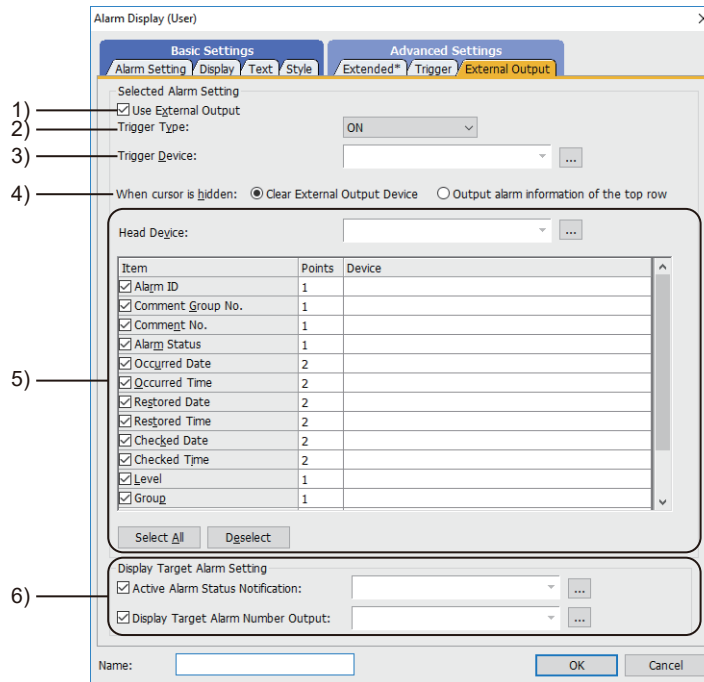

For details of each item, refer to the following.

→6.2.2 Setting Trigger Types

## (7) [External Output] tab

Configure the setting for writing the information of the alarm selected in the alarm display (user) into devices.

### 1) [Enable External Output]

Write the information of touched alarm into devices.

⇒9.1.5 ■ 2 How to use the alarm display

### 2) [Trigger Type]

Select the timing to write the alarm information into a device.

Select [Ordinary] to write the alarm information into the device when the alarm is touched.

Select [ON] to write the alarm information into the device when the alarm display area is touched while the device is on.

Select [OFF] to write the alarm information into the device when the alarm display is touched while the device is off.

### 3) [Trigger Device]

When selecting [ON] or [OFF] in [Trigger Type], set the device to be a trigger.

⇒6.1.1 How to set devices

### 4) [When cursor is hidden]

Configure the setting for external outputs of when the cursor is hidden.

- [Clear External Output Device]:

Select this item to clear the value of the external output device when no alarm is selected.

- [Output alarm information of the top row]:

Select this item to output externally the alarm information displayed at the top row when no alarm is selected.

### 5) [First Device]

Set the start device (word device) to which the information of the alarm is written.

When items to be written are selected, the successive devices following the start device are automatically set.

Item	Description
[Alarm ID]	Select this item to write the alarm ID into devices.
[Comment Group No.]	Select this item to write the comment group No. of the comment displayed with the alarm display.
[Comment No.]	Select this item to write the comment No. of the comment displayed with the alarm display.

Item	Description
[Status]	<p>Select this item to write the alarm status into devices.</p> <div style="border: 1px solid black; padding: 2px; display: inline-block; margin-bottom: 10px;"> <span style="margin-right: 10px;">b15 to b3</span> <span style="border: 1px solid black; padding: 0 2px;">b2</span> <span style="border: 1px solid black; padding: 0 2px;">b1</span> <span style="border: 1px solid black; padding: 0 2px;">b0</span> </div> <ul style="list-style-type: none"> <li>• b0: When the alarm is in the "Occurred" status, 1 is stored, and when the alarm is in the "Restored" status, 0 is stored.</li> <li>• b1: When the alarm is in the "Checked" status, 1 is stored, and when the alarm is unchecked, 0 is stored.</li> <li>• b2: When writing the alarm status into devices is enabled, 1 is stored, and when writing the alarm status into devices is disabled, 0 is stored.</li> <li>• b15 to b3: Using these bits is prohibited. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger</li> </ul>
[Occurred Date]	<p>Select this item to write the date when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Occurred Time]	<p>Select this item to write the time when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Restored Date]	<p>Select this item to write the date when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Restored Time]	<p>Select this item to write the time when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Checked Date]	<p>Select this item to write the date when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Checked Time]	<p>Select this item to write the time when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Level]	<p>Select this item to write the level No. of an alarm into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger</p>
[Group]	<p>Select this item to write the group No. of an alarm into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger</p>
[Frequency]	<p>Select this item to write the frequency of alarm occurrences into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger</p>
[Cumulative Time]	<p>Select this item to write the cumulative time of alarms into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Down Time]	<p>Select this item to write the down time of alarms into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 4 (7) (a) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 4 (7) (b) Descriptions of the date and time to be written</p>
[Select All] button	Selects all alarm information.
[Deselect] button	Cancels all the selected alarm information.

## 6) [Display Target Alarm Setting]

Set the devices to which the information on the displayed alarms is written.

Item	Description				
[Active Alarm Status Notification]	<p>Set the device that notifies the status of the displayed alarms. The following shows the notification details of each bit.</p> <table border="1" style="margin-left: 40px;"> <tr> <td style="width: 10px;">b15</td> <td style="width: 10px;">b14</td> <td style="width: 100px;"></td> <td style="width: 100px;">b13 ~ b0</td> </tr> </table> <ul style="list-style-type: none"> <li>• b0 to 13: Using these bits is prohibited.</li> <li>• b14: Stores 1 when a value greater than the number of displayed alarms is input to the device, which is set for [Display Start Row] on the [Alarm Setting] tab.</li> <li>• b15: Using these bits is prohibited.</li> </ul>	b15	b14		b13 ~ b0
b15	b14		b13 ~ b0		
[Display Target Alarm Number Output]	Set the device that stores the number of displayed alarms.				

(a) **Write trigger**

- Levels in the alarm hierarchy for which the alarm information can be written  
Only when the basic alarm is touched, the alarm information is written into devices.
- Writing by the collection mode  
The available data for writing differs according to the collection mode which is set in the alarm observation. For details, refer to the following.  
    ⇒9.1.2 ■ 1 Specifications of the user alarm observation

(b) **Descriptions of the date and time to be written**

The date and time are written into the 2-word data.

The following describes the case in which the time of occurrence is written into D254 (2 points) and the date of occurrence is written into D256 (2 points).

- Date  
Store the year, month, and day with BCD code.

- Time  
Stores the hour, minute, and second with BCD code.

Example) Jun. 1, 2013 12:24:56

D254	b15 to b8	b7 to b0
	06h	01h
	(Month)	(Date)
D255	b15 to b8	b7 to b0
	20h	13h
	(Year)	
D256	b15 to b8	b7 to b0
	24h	56h
	(Minute)	(Second)
D257	b15 to b8	b7 to b0
	00h	12h
	(Hour)	

■ 5 [Alarm Display(System)] dialog

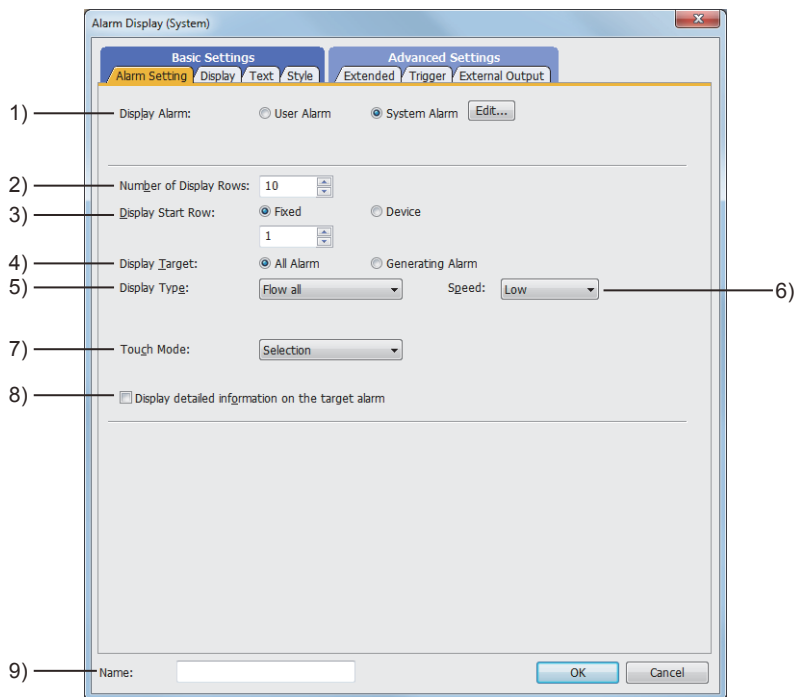

- Step 1 Select [Object] → [Alarm Display] → [Alarm Display (System)] from the menu.
- Step 2 Click the position where you place the alarm display. Placing the alarm display is complete.
- Step 3 Double-click the alarm display which has been placed to display the setting dialog.

- (1) [Alarm Setting] tab
- (2) [Display] tab
- (3) [Text] tab
- (4) [Style] tab
- (5) [Extended] tab
- (6) [Trigger] tab
- (7) [External Output] tab

(1) [Alarm Setting] tab

Configure the settings such as the type of the alarm observation to be displayed, the display method of the message, and the operation performed when the alarm display is touched.

1) [Display Alarm]

Select the alarm type to be displayed in the alarm display.

The following shows selectable items.

- [User Alarm]: Select this item to display the user alarm.
- [System Alarm]: Select this item to display the system alarm.

For the alarm display (system), select [System Alarm].

Click the [Edit] button to display the [System Alarm Observation] dialog.

→9.1.3 ■ 5 [System Alarm Observation] dialog

## 2) [Number of Display Rows]

Set the number of rows displayed in a screen.

The following shows the setting range.

- [1] to [64](GT27, GT25, GT23 and GT SoftGOT2000)
- [1] to [27](GT21 only)

Example) When [Number of Display Rows] is set to three rows

Error date and time	Comment	Restored	Checked
Jun. 1, 2013 10:25	402 A communication tim	11:25	10:45
Jun. 1, 2013 12:05	70 The battery voltage	12:25	12:28
Jun. 1, 2013 08:30	460 Communication unit	09:45	09:40

Alarms are displayed for three rows excluding the title row.

## 3) [Display Start Row]

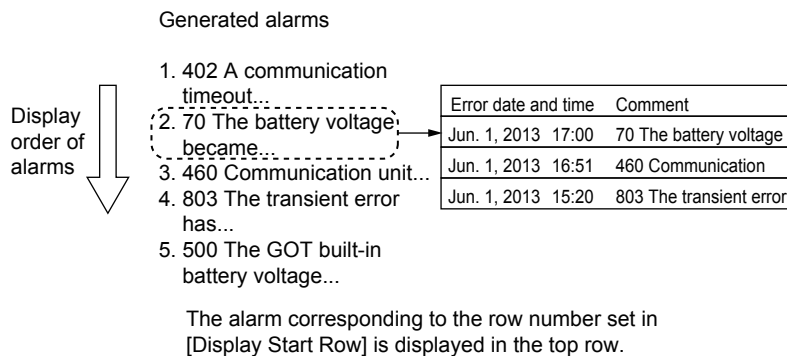

Select a row to be displayed in the top row when the number of alarms exceeds the number of rows set in [Number of Display Rows].

Item	Description
[Fixed]	Enter the number of rows to be displayed directly. The setting range is [1] to [32767].
[Device]	Set the device that specifies the start row. →6.1.1 How to set devices

- When the number of alarms is larger than the value set in [Display Start Row]

The alarm corresponding to the row number set in [Display Start Row] is displayed in the top row.

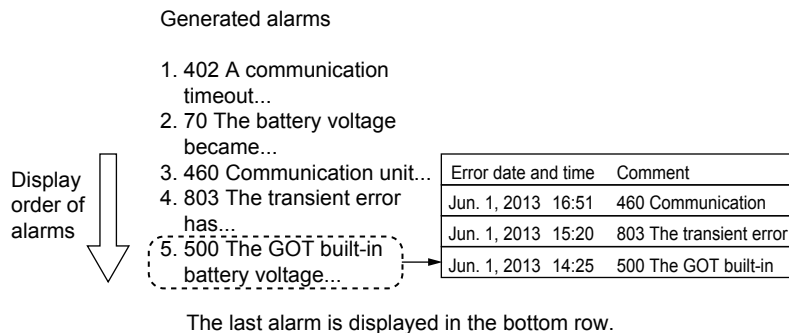

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 2, and the number of alarms is 5

- When the number of alarms is smaller than the value set in [Display Start Row]

The last alarm is displayed in the bottom row.

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 10, and the number of alarms is 5

- When the number of alarms is smaller than the value set in [Number of Display Rows]

The setting for [Display Start Row] becomes disabled, and all the alarms that have occurred are displayed.

Example) When [Number of Display Rows] is set to 3, [Display Start Row] is set to 3, and the number of alarms is 2

- Using the setting for multiple screens

When different values of [Display Start Row] are set for each screen, the system alarm displays differ depending on the screens.

Even if the number of alarms exceeds the value set in [Display Start Row] when system alarms are displayed on the GOT, the setting for [Display Start Row] does not become enabled.

To enable the setting for [Display Start Row], switch the screen to another one, then switch back the screen to the one in which the system alarm is displayed.

#### 4) [Display Target]

Select the display method of collected alarms.

The following shows selectable items.

- [All Alarm]:  
Select this item to display the history of alarms including the past alarms.
- [Generating Alarm]:  
When this item is set, only the existing alarms are displayed.  
→9.1.5 ■ 1 (2) Alarm events to be listed

#### 5) [Display Type]

Select the display method of the comments for alarms.

The following shows selectable items.

- [Fixed]:  
Does not scroll a comment displayed at an alarm occurrence.  
When a comment extends off the display area, the part outside the area and the second and subsequent rows are not displayed.
- [Flow all]:  
Scrolls a full comment displayed at an alarm occurrence from right to left.
- [Flow as required]:  
Does not scroll a comment fully displayed within the display area.  
Scrolls a comment extending off the display area and a multiple-row comment from right to left.
- [Flow the selected row]:  
Scrolls only the comment selected among the comments displayed at an alarm occurrence from right to left.  
→9.1.5 ■ 2 (2) Display method of comments

#### 6) [Speed]

This item is settable when [Display Type] is set to [Flow all], [Flow as required], or [Flow the selected row].

Set the speed at which the display is scrolled.

The following shows selectable items.

- [High]: The text of comments flows at the speed of 200 dots a second.
- [Medium]: The text of comments flows at the speed of 100 dots a second.
- [Low]: The text of comments flows at the speed of 50 dots a second.

### 7) [Touch Mode]

Select the operation performed when the alarm display (user) is touched.  
The following shows selectable items.

- [None]: Select this item to disable touch operations.
- [Selection]: Select this item to select a touched alarm.

### 8) [Display detailed information on the target alarm]

Displays detailed information added to system alarms.

This item is enabled only when [Display detailed information on the target alarm] is selected in the [Basic] tab of the [System Alarm Observation].

The following shows the detailed information to be added.

- [Channel]
- [Network No.]
- [Station No.]
- [CPU No.]
- [Device]
- [Screen No.]
- [Definition Screen No.]
- [Object ID]
- [Function Name]
- [Drive Name]

[.] is displayed for information which is not related to the alarm or information in which no alarm is detected.

### 9) [Name]

Set the object name.

The name is displayed in the [Data View] window, property sheet, and others.

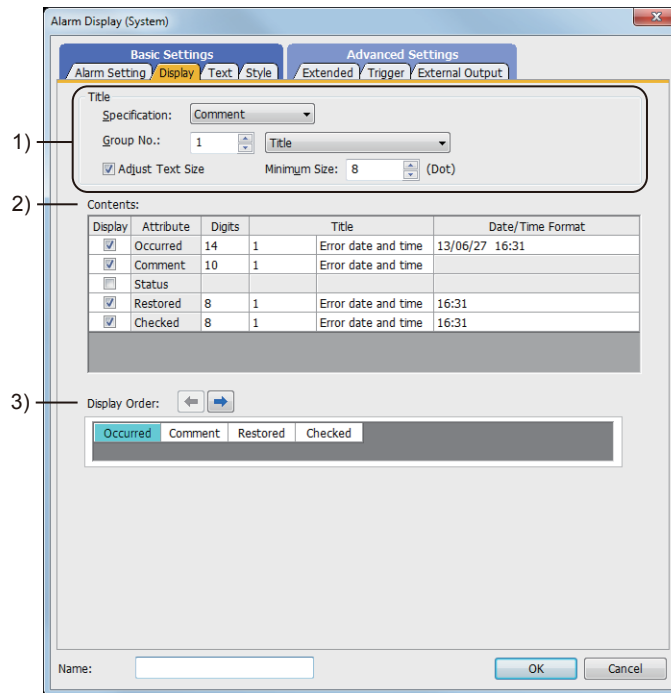

The name is changeable on the other tabs as well.

Up to 100 characters can be set.

## (2) [Display] tab

Set the items to be displayed in the system alarm and the display order.

### 1) [Title]

Item	Description
[Specification]	Select the method of specifying the text to be displayed in the title. The following shows selectable items. <ul style="list-style-type: none"> <li>• [Direct]: Select this item to input the text to be displayed in the title directly into [Title] in [Contents].</li> <li>• [Comment]: Select this item to display the text to be displayed in the title using the comment in the comment group.</li> <li>• [None]: Select this item not to display the title.</li> </ul>
[Group No.]	Only when [Comment] is selected for [Specification], this item can be set. Set the comment group in which the text to be displayed in the title is registered.
[Adjust Text Size]	Only when [Comment] is selected for [Specification], this item can be set. The text size is adjusted according to the width of the title. When [Adjust Text Size] is not selected, the text size is adjusted by inserting a line feed.
[Minimum Size]	Only when [Comment] is selected for [Specification] and [Adjust Text Size] is selected, this item can be set. Set the minimum text size for adjustment. The setting range is [8] to [128] dot(s).

### 2) [Contents]

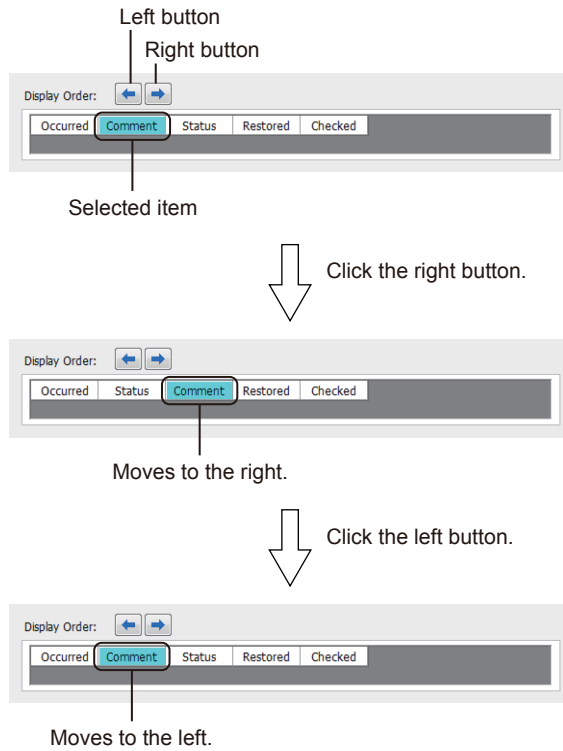

Item	Description
[Display]	Select the items to be displayed in the alarm display (system).
[Attribute]	Items to be displayed in the alarm display (system) <ul style="list-style-type: none"> <li>• [Occurred]: Displays the date and time of occurrence of an alarm.</li> <li>• [Comment]: Displays the date and time of occurrence of an alarm.</li> <li>• [Status]: Displays the alarm status.</li> <li>• [Restored]: Displays the date and time when an alarm has restored.</li> <li>• [Checked]: Displays the date and time when an alarm occurrence has been checked.</li> </ul> When an option other than [Cumulative] is selected for [Collection Mode] in the [Basic] tab of [User Alarm Observation], the item name is displayed, but the value is not displayed.
[Digits]	Set the number of the digits displayed in each item. Set a one-byte character as one digit and a two-byte character as two digits. The following shows the setting range of each item. <ul style="list-style-type: none"> <li>• [Occurred]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> <li>• [Comment]: [10] digits to [128] digits (For GT21: [10] digits to [80] digits)</li> <li>• [Status]: [6] digits to [128] digits (For GT21: [6] digits to [80] digits)</li> <li>• [Restored]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> <li>• [Checked]: The number of digits for this item is automatically set according to the setting for [Date/Time Format].</li> </ul>
[Title]	Set a title of the alarm display (user). The setting depends on the value selected for [Specification]. When [Direct] is selected, input characters within the number of digits set in [Digits]. When [Comment] is selected, the comment No. and the comment to be displayed in the title are displayed. When [None] is selected, the title cannot be set.
[Date/Time Format]	Set the display format to display the date and time of occurrence of an alarm. Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog. →6.3.2 Date/time format settings

### 3) [Display Order]

Set the order in which the items set for [Attribute] in [Contents] are displayed.

The items of [Attribute] which are set in [Display] are displayed.

Move the display position of the selected item sideways by using the right button and the left button.

**(3) [Text] tab**

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the font of displayed alarms.

When [Fixed] is selected for [Target]

When [Status] is selected for [Target]

**1) [Font]**

Select the font of the displayed text.  
The following shows selectable items.

- [6x8dot]

- [12dot Standard]
- [16dot Standard Mincho] (GT27, GT25, and GT SoftGOT2000 only)
- [16dot Standard Gothic] (GT27, GT25, and GT SoftGOT2000 only)
- [16dot Standard] (GT23 and GT21 only)
- [12dot HQ Mincho]
- [12dot HQ Gothic]
- [16dot HQ Mincho]
- [16dot HQ Gothic]
- [Outline Kaisho]
- [Outline Gothic]

## 2) [Text Size]

For the details of each font and size, refer to the following.

⇒ 1.2.5 Font specifications

## 3) [Title Format]

Set the format of the text displayed in the title of the alarm display (user).

Item	Description
[Text Color]	Set the text color. ⇒ 6.4 Color Settings
[Style]	<p>Set the style of the text to be displayed. One style ([Bold], [Solid], or [Raised]) is settable only.</p> <div style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> </ul>
[Solid Color]	When [Solid] or [Raised] is selected for [Style], set the color of the shadow.
[KANJI Region]	<p>Select the KANJI region of the displayed text. ⇒ 1.2.5 Font specifications</p> <p>The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Japan]</li> <li>• [China(GB)-Mincho]</li> <li>• [China(Big5)-Gothic]</li> </ul>

## 4) [Table Format]

Item	Description
[Switching]	<p>Select how to use different text colors in displaying alarms. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Fixed]: Displays texts only in the color set as a text color.</li> <li>• [Status]: Changes the text color for each alarm status.</li> </ul>
[Style]	<p>Set the style of the text to be displayed. One style ([Bold], [Solid], or [Raised]) is settable only.</p> <div style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• <b>[Bold] button</b> Displays the text in bold.</li> <li>• <b>[Solid] button</b> Displays the text with a shadow.</li> <li>• <b>[Raised] button</b> Displays the text embossed.</li> </ul>
[Solid Color]	When [Solid] or [Raised] is selected for [Style], set the color of the shadow.

Item	Description
[Fixed]	When [Fixed] is selected for [Switching], set the text color.
[Occurred]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm occurs.
[Restored]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm is restored.
[Checked (Occurrence)]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm occurrence is checked.
[Checked (Restoration)]	When one of [Status], [Level + Status], or [Group + Status] is selected for [Switching], set the text color of when an alarm restoration is checked.

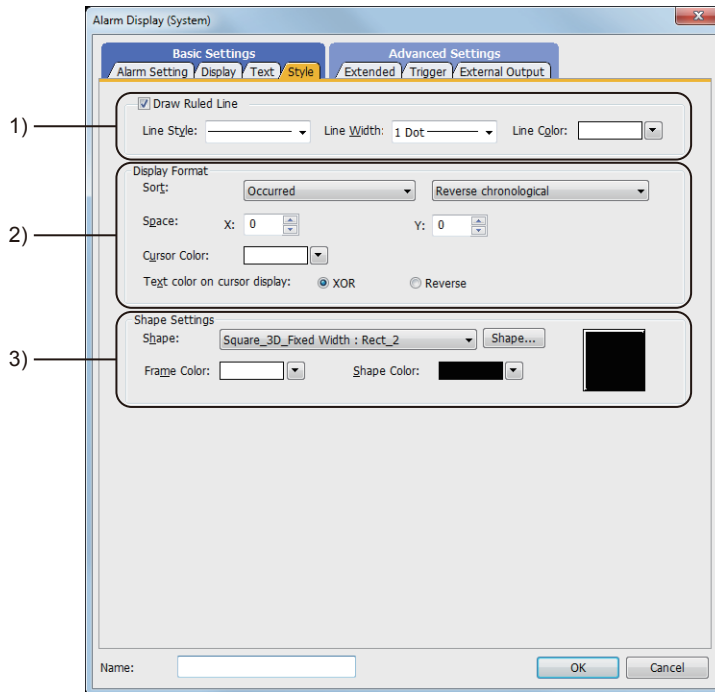

#### (4) [Style] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the ruled line and shape of the alarm display (system).

#### 1) [Draw Ruled Line]

Item	Description
[Line Style]	Select the type of the ruled line of the alarm display (system).
[Line Width]	Select the width of the ruled line of the alarm display (system).
[Line Color]	Select the color of the ruled line of the alarm display (system).

#### 2) [Display Format]

Item	Description
[Sort]	<p>Select an item and a method for sorting the display of user alarms.</p> <ul style="list-style-type: none"> <li>For [Occurred], [Restored], and [Checked], the sorting order can be selected from [Reverse chronological] or [Chronological].</li> <li>For [Comment], [Frequency], [Cumulative Time], [Down Time], [Level], [Group], and [Observation Alarm No.], the sorting order can be selected from [Ascending] or [Descending].</li> <li>For [Status], the sorting order can be selected from [Checked-&gt;Restored-&gt;Occurred] or [Occurred-&gt;Restored-&gt;Checked].</li> </ul>

Item	Description
[Space]	Set the space between the text to be displayed and the line. <ul style="list-style-type: none"> <li>• [X]: Set the space in 8 dot units. The setting range is [0], [8], [16], [24], and [32].</li> <li>• [Y]: Set the space in 1 dot unit. The setting range is [0] to [32].</li> </ul>
[Cursor Color]	Set the cursor color for selecting a user alarm.
[Text color on cursor display]	Method to set the color of text on the cursor. <ul style="list-style-type: none"> <li>• [XOR] Displays the text in the synthesized color with XOR specification.</li> <li>• [Reverse] Inverts the text.</li> </ul> <p><b>GOT Graphic Ver.2</b></p> <p>As the setting is fixed to [Reverse], no additional setting is required accordingly.</p> <p><b>GOT Graphic Ver.1</b></p> <p>The following shows the items to be selected.</p> <ul style="list-style-type: none"> <li>• [XOR]</li> <li>• [Reverse]</li> </ul>

3) [Shape]

Item	Description
[Shape Settings]	Set a shape for the alarm display (system). To select a shape other than those in the list box, click the [Shape] button.
[Frame Color]	Set the frame color of the shape.
[Shape Color]	Set the color of the shape.

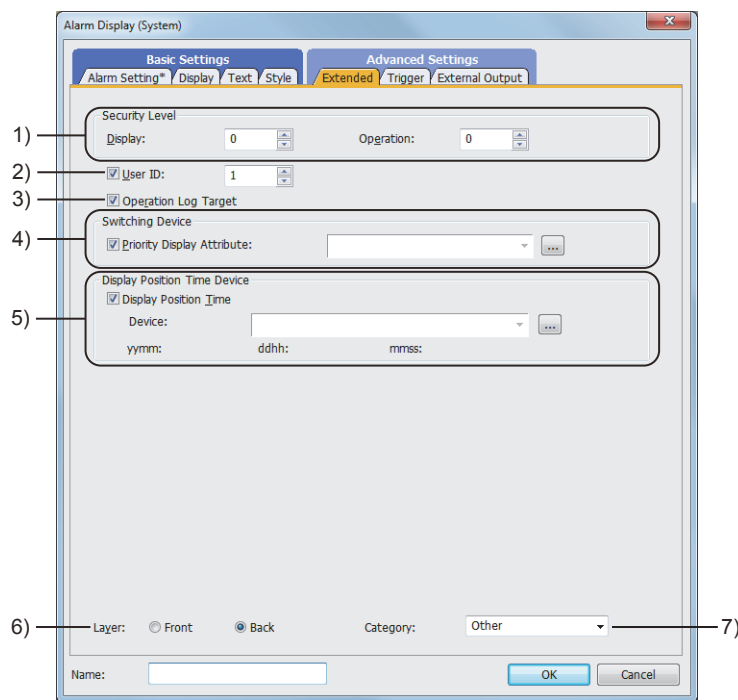

(5) [Extended] tab

For mobile screens, some setting items are not available.

→ 10.18.2 ■ 2 Usable functions

Set the operation of switching displays for the alarm display (system) by devices.

1) [Security level]

Set the security level of display and operation.

Item	Description
[Display]	Set the security level of display. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security.
[Operation]	Set the security level of operation. The setting range is [0] to [15]. Select [0] not to set the security and select [1] to [15] to set the security. The setting of security level of [Operation] must be set to the one exceeding the security level of [Display].

## 2) [User ID]

Set the user ID of the alarm display (system).

If an alarm display (system) and another alarm display are set on a screen, touch switches for the alarm display (system) may not function.

For secure operations of the touch switches for alarm displays (system), set user ID for the alarm displays (system).

→9.1.5 ■ 2 How to use the alarm display

## 3) [Operation Log Target]

Select this item to target the object for the operation log.

→5.2.11 ■ 1 Specifications of the operation log

## 4) [Switching Device]

Select items to switch the display using devices.

→9.1.5 ■ 2 How to use the alarm display

Item	Description
[Priority Display Attribute]	<p>Switch the item to be the sort criteria according to the device values. Set the switching device. →6.1.1 How to set devices</p> <p>Store values to the device to switch the order of alarm display.</p> <div style="border: 1px solid black; padding: 2px; display: inline-block;"> <span style="border: 1px solid black; padding: 0 2px;">b15</span> <span style="border: 1px solid black; padding: 0 2px;">b14 to b4</span> <span style="border: 1px solid black; padding: 0 2px;">b3</span> <span style="border: 1px solid black; padding: 0 2px;">b2</span> <span style="border: 1px solid black; padding: 0 2px;">b1</span> <span style="border: 1px solid black; padding: 0 2px;">b0</span> </div> <ul style="list-style-type: none"> <li>• For b3 to b0, specify the sort criteria. (The parts with * are prohibited.) <ul style="list-style-type: none"> <li><input type="checkbox"/> **0h: Normal (date and time of occurrence)</li> <li><input type="checkbox"/> **1h: Date and time of occurrence</li> <li><input type="checkbox"/> **2h: Date and time of restoration</li> <li><input type="checkbox"/> **3h: Date and time of confirmation</li> <li><input type="checkbox"/> **7h: Alarm status</li> </ul> </li> <li>• Using b14 to b4 is prohibited.</li> <li>• Ascending or descending is specified for b15. (The parts with * are prohibited.) <ul style="list-style-type: none"> <li>0** <input type="checkbox"/> h: Descending</li> <li>8** <input type="checkbox"/> h: Ascending</li> </ul> </li> </ul> <p>The date and time of occurrence, cumulative time, and down time can be set only when the collection mode in the user alarm observation is [Cumulative]. If a value other than the above is stored, alarms are displayed in the order of the date and time of occurrence.</p>

## 5) [Display Position Time Device]

Item	Description
[Display Position Time]	<p>Displays the data of a specified time. (Time specification jump function) Set a device in which a specified time is stored. →6.1.1 How to set devices</p> <p>The successive devices from a set device are set to store the data of year and month, day and hour, and minute and second.</p>

## 6) [Layer]

Select the layer to arrange the object on.

The following shows selectable items.

- [Front]
- [Back]

→6.5.5 ■ 3 Superimposition

## 7) [Category]

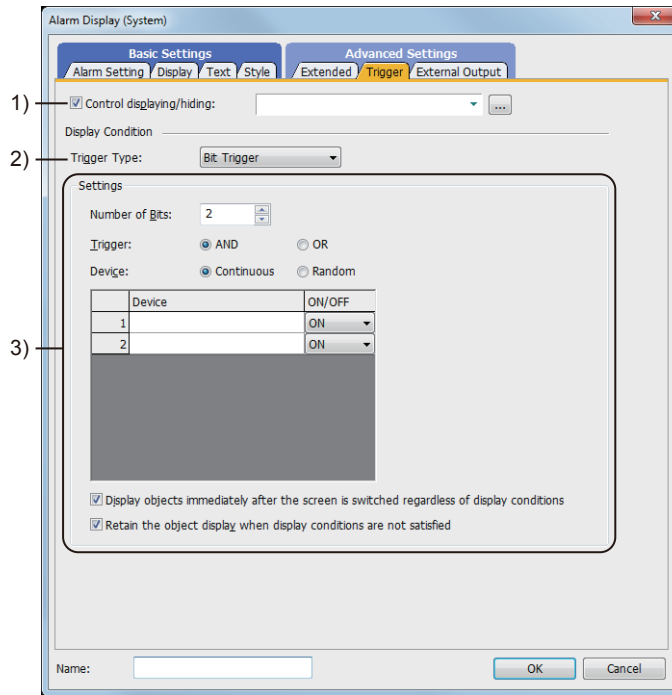

Select the category to assign the object.

→11.7 Managing figures and objects by category

## (6) [Trigger] tab

Set conditions for displaying the object.

### 1) [Control displaying/hiding]

Set the control device to display or hide all the objects including the shape frame.

### 2) [Trigger Type]

Select the condition of displaying and operating the object.

The following shows selectable items.

- [Ordinary]
- [ON]
- [OFF]
- [Range]
- [Bit Trigger]

### 3) [Settings]

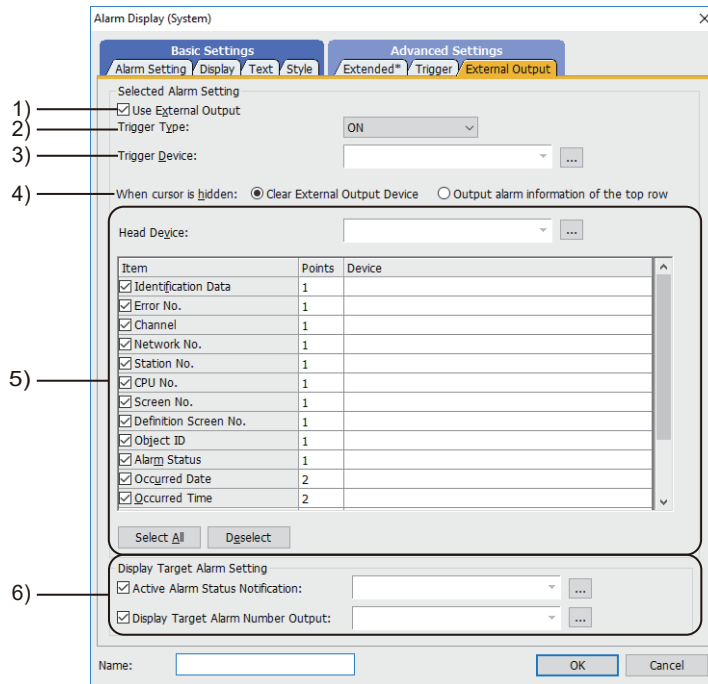

For details of each item, refer to the following.

→ 6.2.2 Setting Trigger Types

(7) [External Output] tab

Configure the setting for writing the information of the alarm selected in the alarm display (system) into devices.

1) [Enable External Output]

Write the information of touched alarm into devices.

→9.1.5 ■ 2 How to use the alarm display

2) [Trigger Type]

Select the timing to write the alarm information into a device.

Select [Ordinary] to write the alarm information into the device when the alarm is touched.

Select [ON] to write the alarm information into the device when the alarm display area is touched while the device is on.

Select [OFF] to write the alarm information into the device when the alarm display is touched while the device is off.

3) [Trigger Device]

When selecting [ON] or [OFF] in [Trigger Type], set the device to be a trigger.

→6.1.1 How to set devices

4) [When cursor is hidden]

Configure the setting for external outputs of when the cursor is hidden.

- [Clear External Output Device]:

Select this item to clear the value of the external output device when no alarm is selected.

- [Output alarm information of the top row]:

Select this item to output externally the alarm information displayed at the top row when no alarm is selected.

5) [First Device]

Set the start device (word device) to which the information of the alarm is written.

When items to be written are selected, the successive devices following the start device are automatically set.

Item	Description
[Identification Data]	Select this item to write the alarm identification data into devices.
[Error No.]	Select this item to write the error No. of an alarm into devices.
[Channel]	Select this item to write the channel No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[Network No.]	Select this item to write the network No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information

Item	Description
[Station No.]	Select this item to write the station No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[CPU No.]	Select this item to write the CPU No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[Screen No.]	Select this item to write the screen No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[Definition Screen No.]	Select this item to write the definition screen No. of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[Object ID]	Select this item to write the object ID of an alarm as added information into devices. For the added information, refer to the following. →9.1.5 ■ 5 (7) (a) Added information
[Alarm Status]	Select this item to write the alarm status into devices. <div style="text-align: center; border: 1px solid black; margin: 5px 0;"> <span style="border: 1px solid black; padding: 2px;">b15 to b3</span> <span style="border: 1px solid black; padding: 2px; margin-left: 10px;">b2</span> <span style="border: 1px solid black; padding: 2px; margin-left: 5px;">b1</span> <span style="border: 1px solid black; padding: 2px; margin-left: 5px;">b0</span> </div> <ul style="list-style-type: none"> <li>• b0: When the alarm is in the "Occurred" status, 1 is stored, and when the alarm is in the "Restored" status, 0 is stored.</li> <li>• b1: When the alarm is in the "Checked" status, 1 is stored, and when the alarm is unchecked, 0 is stored.</li> <li>• b2: When writing the alarm status into devices is enabled, 1 is stored, and when writing the alarm status into devices is disabled, 0 is stored.</li> <li>• b15 to b3: Using these bits is prohibited.</li> </ul> For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger
[Occurred Date]	Select this item to write the date when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Occurred Time]	Select this item to write the time when an alarm has occurred into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Restored Date]	Select this item to write the date when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Restored Time]	Select this item to write the time when an alarm has been restored into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Checked Date]	Select this item to write the date when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Checked Time]	Select this item to write the time when an alarm has been checked into devices. For the details of the write trigger, refer to the following. →9.1.5 ■ 5 (7) (b) Write trigger For the description of the date and time to be written, refer to the following. →9.1.5 ■ 5 (7) (c) Descriptions of the date and time to be written
[Select All] button	Selects all alarm information.
[Deselect] button	Cancels all the selected alarm information.

## 6) [Display Target Alarm Setting]

Set the devices to which the information on the displayed alarms is written.

Item	Description
[Active Alarm Status Notification]	<p>Set the device that notifies the status of the displayed alarms. The following shows the notification details of each bit.</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <span style="border: 1px solid black; padding: 2px;">b15</span><span style="border: 1px solid black; padding: 2px;">b14</span> <span style="margin-left: 100px;">b13 ~ b0</span> </div> <ul style="list-style-type: none"> <li>• b0 to 13: Using these bits is prohibited.</li> <li>• b14: Stores 1 when a value greater than the number of displayed alarms is input to the device, which is set for [Display Start Row] on the [Alarm Setting] tab.</li> <li>• b15: Using these bits is prohibited.</li> </ul>
[Display Target Alarm Number Output]	Set the device that stores the number of displayed alarms.

(a) **Added information**

- By adding the information of an error that has occurred, it becomes easy to identify where the error has occurred.  
The added information which is not related to the error is not added even if the information is set.

Added information		Description	
(1)	Error message	Displays the error code of a system error and the error message.	
(2)	Channel	Displays the channel No. The display type is DEV: Ch No.	
(3)	Network No.	Displays the network No. with three digits number. *2	
(4)	Station	Displays the station No. with three digits number. *2	
(5)	CPU No.	Displays the CPU No.	
(6)	Device	Displays the device.	
(7)	Screen No.	Displays the screen type and the screen No.	
		Base screen	BASE: ***** *1*2
		Overlap window 1 to 5	OVL1: ***** to OVL5: ***** *1*2
		Superimpose window 1 to 2	SPI1: ***** to SPI2: ***** *1*2
		User customize dialog	DLG: ***** *1*2
		Operation panel	PNL: ***** *1*2
(8)	Definition screen No.	Displays the definition screen type and the screen No.	
		Base screen	B: ***** *1*2
		Window screen	W: ***** *1*2
(9)	Object ID	Displays the object ID.	
(10)	Function name	Displays the function name. Switches languages with the language switching.	
(11)	Drive name	Displays the drive name. The display type is DRV: Drive name.	

\*1 The number of the symbol \* represents the number of the digits of the screen No.

\*2 When a displayed number contains a number of digits less than that shown in the table, the number is displayed with 0 padded.

- The following shows a display example of added information.

Channel (1), device (X1000), screen No. (overlap window 3, screen No. 251), definition screen No. (window screen, screen No. 251), object ID (10000), function name (shape display)

G01-322 The specified device No. is out of the range. Check the available range. DEV:Ch1 X1000/OVL3:00251/W:00251/ID:10000/Shape display

If added information is displayed, the message is longer.

When all information is not be displayed, select Flow as the display type.

- For the device to which offset is specified, the device name and address after the offset are displayed.

If the address after the offset is out of the range, ?? is displayed.

The following shows the display example of a case where the device M1000 (range: 0 to 61424) is offset.

Offset device 60000 → The device M61000 after offset is displayed.

Offset device 61000 → ?? is displayed because the device after offset is out of the range.

**(b) Write trigger**

- Writing by the collection mode

The available data for writing differs according to the collection mode which is set in the alarm observation.

For details, refer to the following.

→9.1.3 ■ 1 Specifications of the system alarm observation

**(c) Descriptions of the date and time to be written**

The date and time are written into the 2-word data.

The following describes the case in which the time of occurrence is written into D254 (2 points) and the date of occurrence is written into D256 (2 points).

- Date

Store the year, month, and day with BCD code.

	b15 to b8	b7 to b0
D254	Month (1 to 12)	Date (1 to 31)

	b15 to b8	b7 to b0
D255	Two upper digits of year	Two lower digits of year

- Time

Stores the hour, minute, and second with BCD code.

	b15 to b8	b7 to b0
D256	Minute (0 to 59)	Second (0 to 59)

	b15 to b8	b7 to b0
D257	00h	Hour (0 to 23)

Example) Jun. 1, 2013 12:24:56

	b15 to b8	b7 to b0
D254	06h	01h
	(Month)	(Date)

	b15 to b8	b7 to b0
D255	20h	13h
	(Year)	

	b15 to b8	b7 to b0
D256	24h	56h
	(Minute)	(Second)

	b15 to b8	b7 to b0
D257	00h	12h
	(Hour)	

## 6 Relevant settings

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the relevant settings other than the specific settings for the alarm display as required.  
The following shows the functions that are available by the relevant settings.

### (1) GOT type settings

Select [Common] → [GOT Type Setting] from the menu to display the [GOT Type Setting] dialog.  
⇒5.1.4 [Type Setting] dialog

Function	Setting item
Checking if the objects are overlapping to each other.	[Check for overlapping objects in the GOT]
Adjusting the display order of the overlapped objects on the GOT to that in GT Designer3.	<p><b>GOT Graphic Ver.2</b></p> <p>Always enabled. (Not available to GT21.)</p> <p><b>GOT Graphic Ver.1</b></p> <p>[Adjust object display order in GOT to the one in GT Designer3] (Not available to GT21.)</p>

### (2) GOT internal device

⇒12.1.3 GOT special register (GS)

Function	Setting item
Displaying the detail screen with a single touch of a basic alarm even when the alarm is not selected in the alarm display (user) (Write device)	GS450.b15
Moving the cursor to a different alarm on the alarm display (user) when the alarm under the cursor is deleted (Write device)	GS467.b0

## 9.2 Collecting Device Data ([Logging])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 9.2.1 Overview of the logging function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The logging function collects the device values of a controller at the specified time or intervals, and saves the collected data into the buffering area, data storage, or file server.

The logging function has two modes.

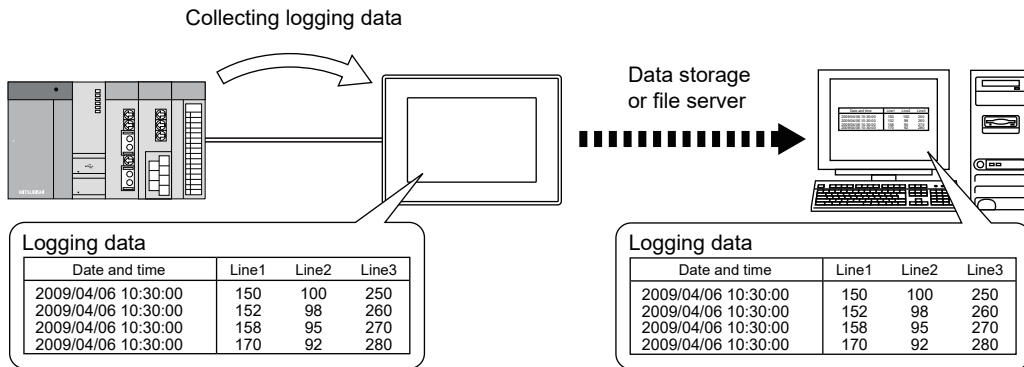

- File save mode

In this mode, logging data is saved into a data storage or file server.

The saved logging data can be output to a Unicode text file or CSV file and displayed on a personal computer.

For the details of the file save mode, refer to the following.

⇒9.2.3 ■ 4 File save mode

- Buffer historical mode

In this mode, logging data is displayed on the GOT while the data is being collected.

To display the logging data on the GOT, use the historical trend graph or historical data list display.

For the details of the buffer historical mode, refer to the following.

⇒9.2.3 ■ 5 Buffer historical mode

For the details of the historical trend graph and historical data list display, refer to the following.

⇒8.10 Placing a Historical Data List Display

8.21 Placing a Historical Trend Graph

For the logging data that can be displayed by the historical trend graph or historical data list display in the file save mode or buffer historical mode, refer to the following.

⇒9.2.3 ■ 6 Display and operation

## 9.2.2 Specifications of the logging

The following shows the specifications of the logging.

### ■1 Maximum number of logging settings

The maximum number of logging settings for one project depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 60 settings can be configured for one project.
- For GT21  
Up to four settings can be configured for one project.

### ■2 Size of the buffering area

The size of the buffering area reserved for logging data varies depending on the setting of [Log Storage Number] in the [Logging] dialog.

⇒9.2.6 [Logging] dialog

Adjust the [Log Storage Number] setting referring to the following.

#### (1) When the [Log Storage Number] setting is large

The available user area is small.

Adjust the [Log Storage Number] setting according to the capacity of the user area.

#### (2) When the [Log Storage Number] setting is small

In the file save mode, the frequency of saving files is increased.

While a file is saved, collecting device values is stopped, and thus the device values may not be collected normally. (especially when device values are collected in short intervals)

Adjust the [Log Storage Number] setting referring to the following.

Example) Relation among the logging trigger, log storage number, and saving frequency

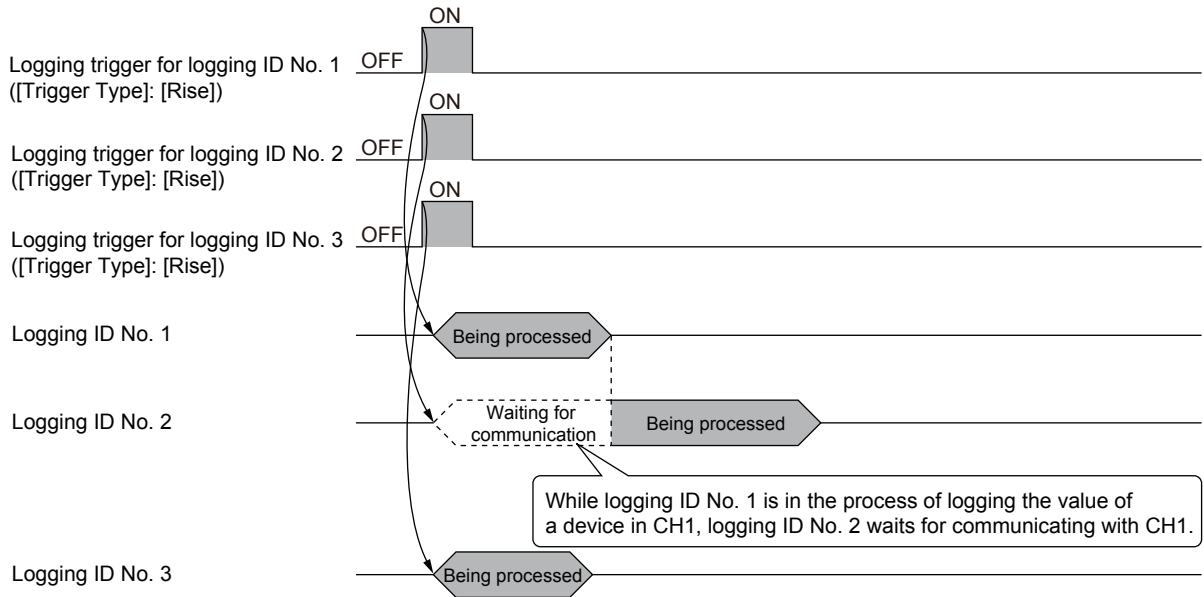

Logging trigger ([When to collect device values])	[Log Storage Number]		
	1	100	10000
10 (100-ms interval)	Saving every 1 sec	Saving every 100 sec	Saving every 10000 sec
1000 (100-ms interval)	Saving every 100 sec	Saving every 10000 sec	Saving every 1000000 sec

### ■3 Logging trigger and logging process

If the conditions of multiple logging triggers are satisfied simultaneously, device data logs are taken in parallel.

Example) When the logging trigger conditions of logging ID No. 1 to 3 are satisfied simultaneously

- Logging ID No. 1 and 2: A device of channel No. 1 is set as the logging target.
- Logging ID No. 3: A device of channel No. 2 is set as the logging target.

The device data logs of the same channel are taken one by one, and therefore a waiting time occurs, causing a longer logging time.

## 9.2.3 How to use the logging

The logging function can be executed according to the device status or in intervals.  
→9.2.6 [Logging] dialog

### 1 Logging mode

The file save mode and buffer historical mode are provided as the logging mode.

Item	Logging mode	
	File save mode	Buffer historical mode
Application	To save large amount of logging data	To execute display by the historical trend graph or historical data list display at high speed and to execute high-speed logging
Location where the collected data is saved	Logging data is temporarily saved in the buffering area, and then saved into a data storage or file server. *1	Logging data is temporarily saved into the buffering area. *2
Operation when the buffering area is full *3	The logging data in the buffering area is saved into a data storage or file server.	Select either of the following. • Do not add the new data. • Delete the old data.
Saved-file format	Binary file (*.G2L) *4	Binary file (*.G2L) *4
Uses of the logging data in a data storage or file server	To display the collected data	Power-failure backup for the buffering area

\*1 When the number of events in a logging file exceeds the limit, a new logging file is automatically created.

To specify the limit, set [Number of logs to be stored in 1 logging file] in the [Logging] dialog.

\*2 To restore logging data in the event of a power failure, save the data in the buffering area into a data storage or file server.

→9.2.3 ■ 5 (1) Saving data

\*3 To specify the number of events to be temporarily stored in the buffering area, set [Log Storage Number] in the [Logging] dialog.

\*4 The data can be output to a Unicode text file or CSV file to be displayed on a personal computer.

→9.2.3 ■ 7 Creating a Unicode text file or CSV file

### 2 Device

The logging status can be output to devices.

The following shows the devices to be used by the logging function.

#### (1) Logging Notification device

Notifies that the device values of a controller are being collected to the buffering area.

If [Trigger Type] of the logging trigger is set to [Rise] or [Fall], this device turns off when all the following conditions are satisfied.

- Collecting device values is complete.
- The conditions of the logging trigger are unsatisfied.

To ensure that the target process is performed, establish a handshake.

Example) When [Trigger Type] of the logging trigger is set to [Rise]

To notify the completion of a logging process, check that the Logging Notification device is on, and then turn off the logging trigger to turn off the Logging Notification device.

Set the logging trigger with [When to collect device values] in the [Logging] dialog.  
 Set the Logging Notification device with [Logging Notification Device] in the [Logging] dialog.

**(2) Notify File Creation device**

Notifies that logging data is being saved to a file when the conditions of the file creation trigger are satisfied. This device turns off when all the following conditions are satisfied.

- The file creation is complete.
- The conditions of the file creation trigger are unsatisfied.

To ensure that the target process is performed, establish a handshake.

To notify the completion of a file creation process, check that the Notify File Creation device is on, and then turn off the file creation trigger to turn off the Notify File Creation device.

To specify the file creation trigger, set [Create a logging file at any desired time] in the [Logging] dialog.  
 To specify the Notify File Creation device, set [File Creation Notification Device] in the [Logging] dialog.  
 Use this device in the file save mode.

**(3) Full Notification Signal device**

Notifies that the buffering area is full.  
 Use this device in the buffer historical mode.  
 This device is settable in the [Logging] dialog (traditional display) only.

**(4) Buffer Historical Data Cleared device**

Turning on the buffer historical data clear trigger starts clearing the logging data in the buffering area. The Buffer Historical Data Cleared device notifies the completion of clearing the data.  
 To specify the buffer historical data clear trigger, set [Delete all the histories] in the [Logging] dialog.  
 To specify the Buffer Historical Data Cleared device, set [Notify when all the histories are deleted] in the [Logging] dialog.  
 Use this device in the buffer historical mode.

**(5) Logging Count device**

Notifies the number of collection times of device values after the GOT is started.  
 You can check that the logging operates normally with this device.  
 The count cycles through 0 to 65535. (for unsigned BIN16)  
 The count is cleared when the GOT is powered off, reset, or restarted.  
 This device is settable in the [Logging] dialog (traditional display) only.

## (6) Writing Notification device

Notifies that the logging data is being saved to a file when the conditions of the storage trigger are satisfied.

If [Trigger Type] of the storage trigger is set to [Rise] or [Fall], this device turns off when all the following conditions are satisfied.

- Saving the logging data is complete.
- The conditions of the storage trigger are unsatisfied.

To ensure that the target process is performed, establish a handshake.

Example) When [Trigger Type] of the storage trigger is set to [Rise]

To notify the completion of a writing process, check that the Writing Notification device is on, and then turn off the storage trigger to turn off the Writing Notification device.

This device is settable in the [Logging] dialog (traditional display) only.

## (7) Writing Error Notification device

Notifies that an error has occurred while logging data is being written to a data storage or file server.

The Writing Error Notification device is not turned off even if the error is eliminated. The Writing Error Notification device must be turned off by the user.

If this device is turned on, check the following.

- The SD card cover of the GOT is closed.
- The SD card access switch of the GOT is turned on.
- The data storage or file server works normally.

This device is settable in the [Logging] dialog (traditional display) only.

## (8) Timing of turning on the trigger

### (a) Timing of turning on the logging trigger

The logging trigger condition must be satisfied while the Notify File Creation device and the Logging Notification device are off.

While the two devices are on, device values are not collected even if the logging trigger condition is satisfied.

### (b) Timing of turning on the storage trigger

When the Writing Notification device is off, turn on the storage trigger.

When the Writing Notification device is on, saving the device values is not started even after the storage trigger is turned on.

## ■ 3 SRAM power-failure backup function

This function saves the logging data collected in the buffering area to the SRAM user area.

The logging data saved in the SRAM user area is retained even at power failure.

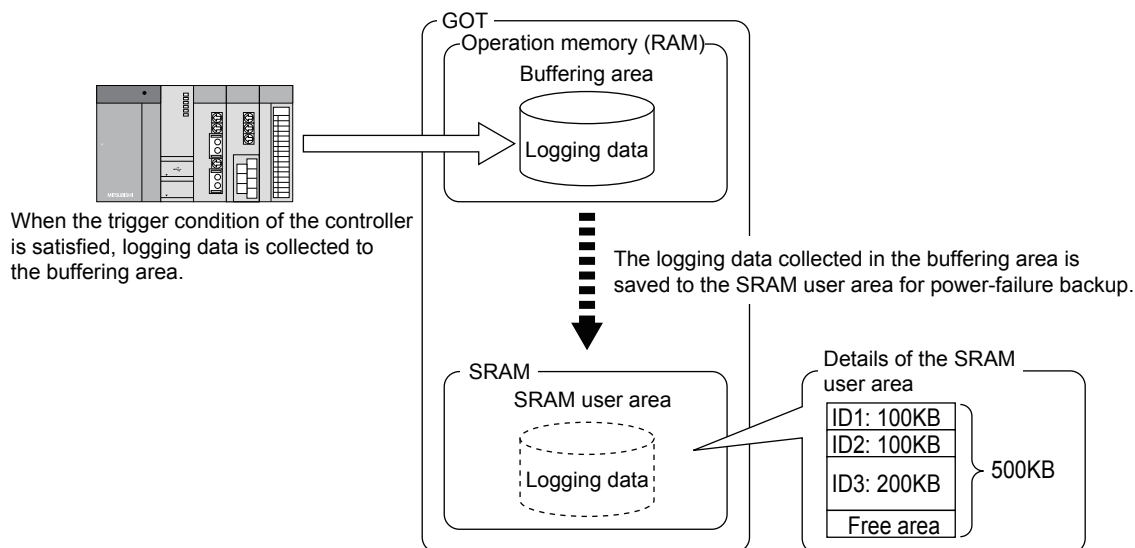

Saving data to the SRAM user area for backup at power failure can be used for the following functions.

- User alarm observation
- System alarm observation
- Logging function

### (1) Saving data to the SRAM user area

When logging data is collected to the buffering area, the logging data is also saved to the SRAM user area. This saving timing cannot be changed.

When the SRAM user area has logging data, the logging data is automatically read when the GOT is powered on.

### (2) Specifications of the SRAM user area

The following functions can save data into the SRAM user area.

- User alarm observation
- System alarm observation
- Logging function
- Recipe function

Applicable function	Number of settings	Size
User alarm observation	Max. 10	500 KB (total)
System alarm observation	Max. 1	
Logging function	Max. 20	
Recipe function	Max. 20	

### (3) Priority in the SRAM user area

When the free area in the SRAM user area is used, the priority is applied.

To use this backup function regardless of the priority, the total capacity of the data handled by each function must be 500 KB or less.

The following shows the priority among the functions.

Priority in the SRAM user area	Function
High	User alarm observation
↓	↓
↓	System alarm observation
↓	↓
Low	Recipe function
	↓
	Logging function

When multiple IDs are set for one function, the higher priority is applied to the smaller ID.

### (4) Deleting and backing up the data in the SRAM user area

The data saved in the SRAM user area is deleted under the following conditions.

- Project data and system applications are written to the GOT when [Initialize SRAM user area when writing project data/OS] is selected in the [Communicate with GOT] dialog.
- The SRAM user area is initialized by using [SRAM management] in the utility.
- The clear trigger device set in [Buffering] of the user alarm observation setting or the system alarm observation

setting turns on.

To retain the data saved in the SRAM user area, execute the backup/restoration function in the utility.  
For the details of the backup/restoration function, refer to the following.

→GOT2000 Series User's Manual (Utility)

### (5) Precautions for the power-failure backup of the SRAM user area

Data may not be saved into the SRAM user area due to some reasons, including the setting change of an applicable function and physical memory corruption.

#### (a) Normal conditions

The data collected by each applicable function is saved to the SRAM user area.

#### (b) Setting change

If the size of data to be collected by the user alarm observation, system alarm observation, or logging function is changed, the data of the function saved in the SRAM user area will be deleted.

- When the size is reduced:

The data is saved to the initialized area. The remaining area is reserved as a free area.

- When the size is increased:

The area used is initialized and the data is saved to another area.

If the area required for saving the data is insufficient, an error occurs.

If an error occurs, initialize the SRAM user area, reduce the data size to 500 KB or less, and save the data again.

Example) When the size for ID 1 is increased from 100 KB to 200 KB

#### (c) Setting deletion

When the setting of each function is deleted, the SRAM user area used for saving the data is reserved as an unused area. Initialize the unused area to use it.

For the initialization of the SRAM user area, refer to the following.

→GOT2000 Series User's Manual (Utility)

Example) When the setting of ID 1 is deleted

#### (d) Others

If the data saved in the SRAM user area is not restored at the GOT startup, a system alarm occurs.

In such a case, check the battery status.

- When the battery status is normal:

A part of the SRAM user area may be damaged.

Initialize the SRAM user area.

→GOT2000 Series User's Manual (Utility)

- When the voltage is low:

Replace the battery.

If the data is still not restored after the battery is replaced, initialize the SRAM user area.

For information on how to replace the battery, refer to the following.

→GOT2000 Series User's Manual (Hardware)

For the initialization of the SRAM user area, refer to the following.

→GOT2000 Series User's Manual (Utility)

## ■4 File save mode

GT27 GT25 GT23 GT21 SoftGOT2000 GS

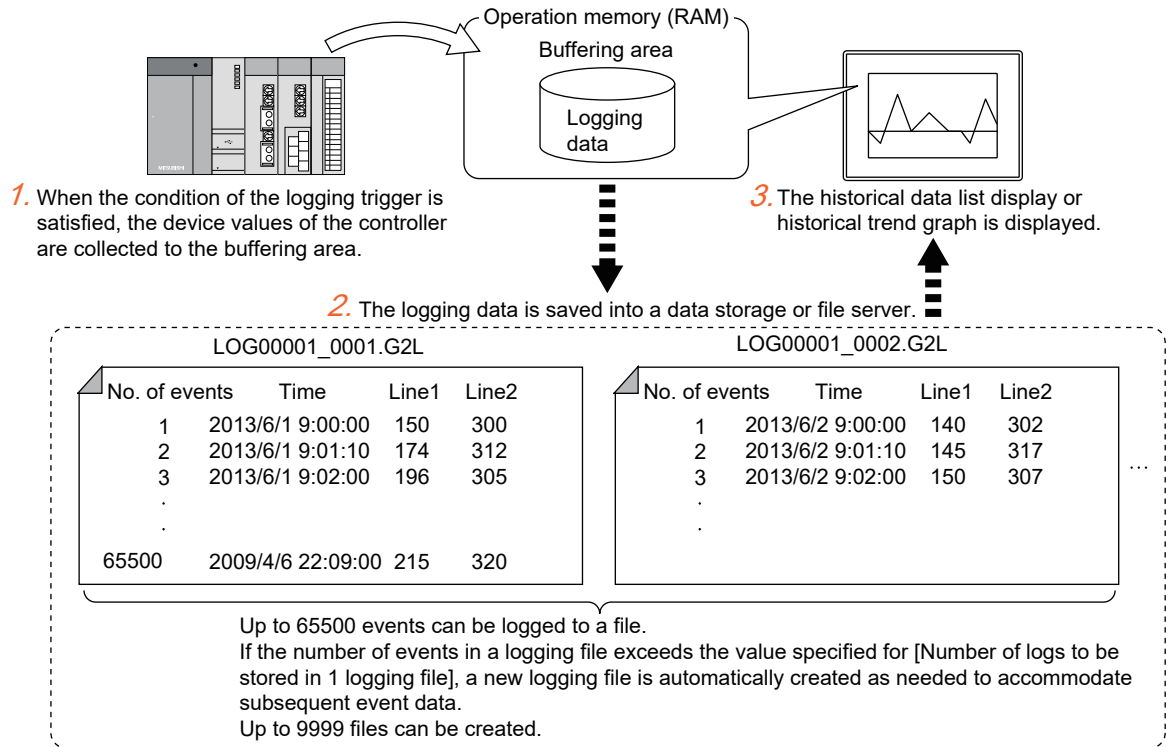

In this mode, logging data is saved into a data storage or file server.

When a file is filled with data, a new file is created to save the subsequent data, enabling saving a large amount of logging data.

Use the file save mode in the following cases.

- To save a large amount of logging data
- To automatically create a file to save logging data if the number of the events saved in the current file has reached the limit

Example) Saving one day's logging data into files

- Step 1** When the condition of the logging trigger is satisfied, the device values of the controller are collected and temporarily saved in the buffering area.
- Step 2** The logging data in the buffering area is saved into a data storage or file server.
- Step 3** The collected logging data can be used for the following applications.
- Log analysis after the data is output to a Unicode text file or CSV file
    - 9.2.3 ■ 7 Creating a Unicode text file or CSV file
  - Display by the historical trend graph or historical data list display
    - 9.2.3 ■ 6 Display and operation

### (1) Saving data

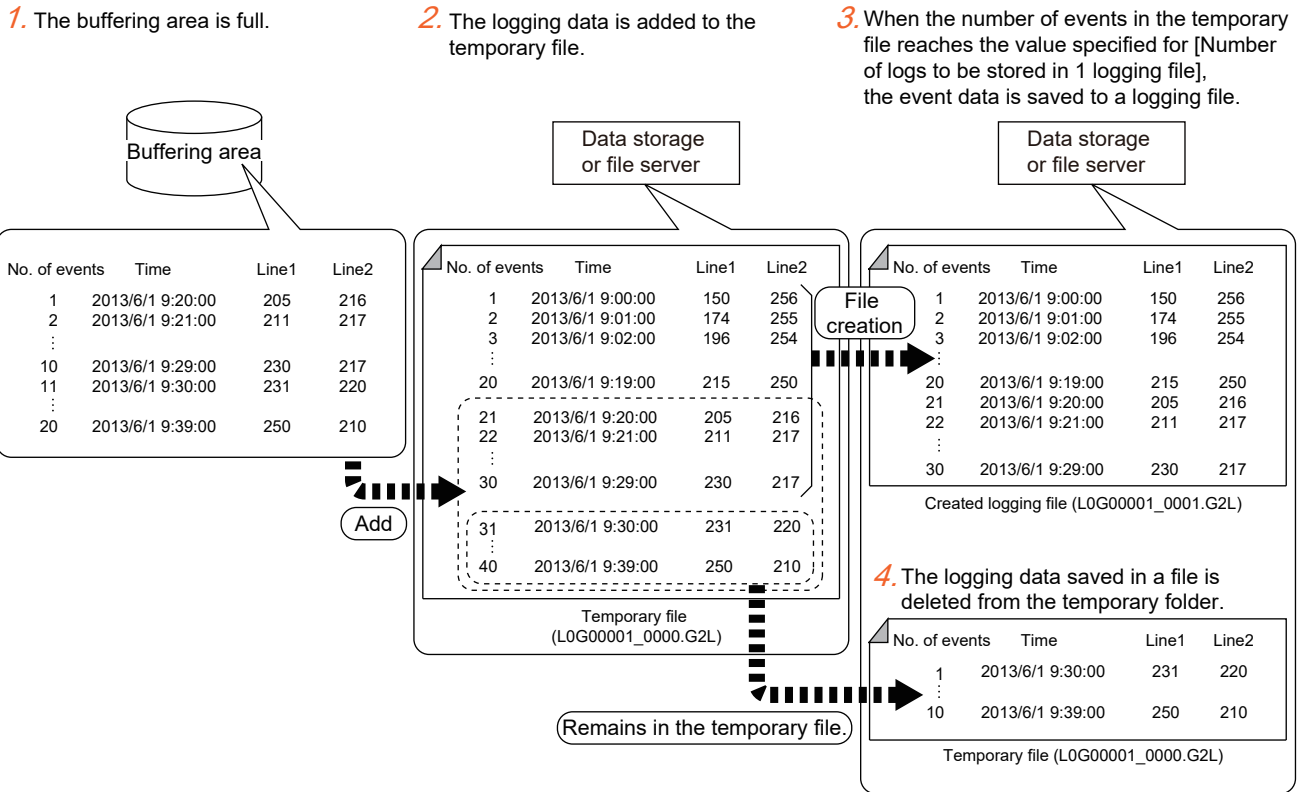

In the file save mode, the logging data in the buffering area is saved into a data storage or file server at the following timing.

- When the reserved portion of the buffering area becomes full
- When the file creation trigger is turned on regardless of the number of events in the buffering area

#### (a) Saving logging data when the reserved portion of the buffering area becomes full

When the number of events in the buffering area has reached the set value of [Log Storage Number] in the [Logging] dialog, the events are automatically saved into a data storage or file server.

Example) When [Number of logs to be stored in 1 logging file] is set to 30

- Step 1** When the buffering area becomes full, the logging data in the buffering area is automatically saved into a data storage or file server.
- Step 2** The data is saved to a temporary file (file number: 0000).
- Step 3** When the number of events in the temporary file reaches the value specified for [Number of logs to be stored in 1 logging file], the event data is saved to a logging file (file number: 0001 to 9999).  
 After the number of logging files reaches the value specified for [Maximum number of files to store logs], file number 0001 is assigned to a new logging file.  
 In this case, the existing logging file numbered 0001 is overwritten.  
 When [Maximum number of files to store logs] is set to 12

To avoid overwriting an existing logging file in the data storage or file server, back up the file to another location.

- Step 4** After the logging file is saved, the logging data in the temporary file is automatically deleted and the logging resumes.

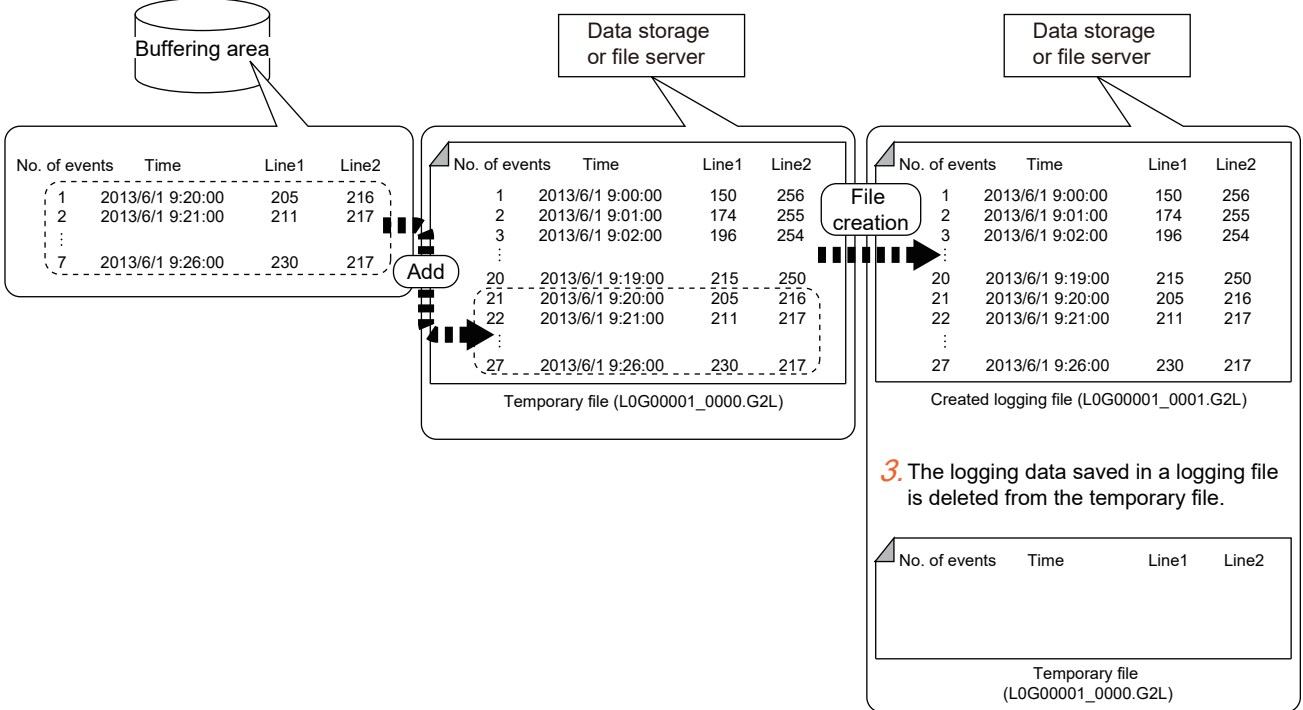

#### (b) Saving logging data by using the file creation trigger

To save logging data to a file at an intended timing regardless of the number of events in the buffering area, use the file creation trigger.

To specify the file creation trigger, set [Create a logging file at any desired time] in the [Logging] dialog.  
 Example) When [Number of logs to be stored in 1 logging file] is set to 30

1. Turning on the file creation trigger adds the logging data stored in the buffering area to a temporary file.

2. A logging file is created.

**Step 1** Turn on the file creation trigger to add the logging data stored in the buffering area to a temporary file.

**Step 2** The logging data in the temporary file (file number: 0000) is saved to a logging file (file number: 0001 to 9999).

(The data is saved regardless of the number of logs.)

After the number of logging files reaches the value specified for [Maximum number of files to store logs], file number 0001 is assigned to a new logging file.

In this case, the existing logging file numbered 0001 is overwritten.

When [Maximum number of files to store logs] is set to 12

**Step 3** To avoid overwriting an existing logging file in the data storage or file server, back up the file to another location. After the logging file is saved, the logging data in the temporary file is automatically deleted and the logging resumes.

## 5 Buffer historical mode

GT27 GT25 GT23 GT21 SoftGOT2000 GS

In the buffer historical mode, the logging data in the buffering area is displayed quickly on a historical trend graph or historical data list display.

Use the buffer historical mode in the following cases.

- To execute the historical trend graph or historical data list display at high speed and to execute logging at high speed
- When saving a large amount of logging data is not required

1. When the condition of the logging trigger is satisfied, the device values of the controller are collected to the buffering area.

2. The historical data list display or historical trend graph is displayed.

**Step 1** When the condition of the logging trigger is satisfied, the device values of the controller are collected and temporarily saved in the buffering area.

**Step 2** The logging data that is temporarily saved in the buffering area is displayed by the historical trend graph or historical data list display.

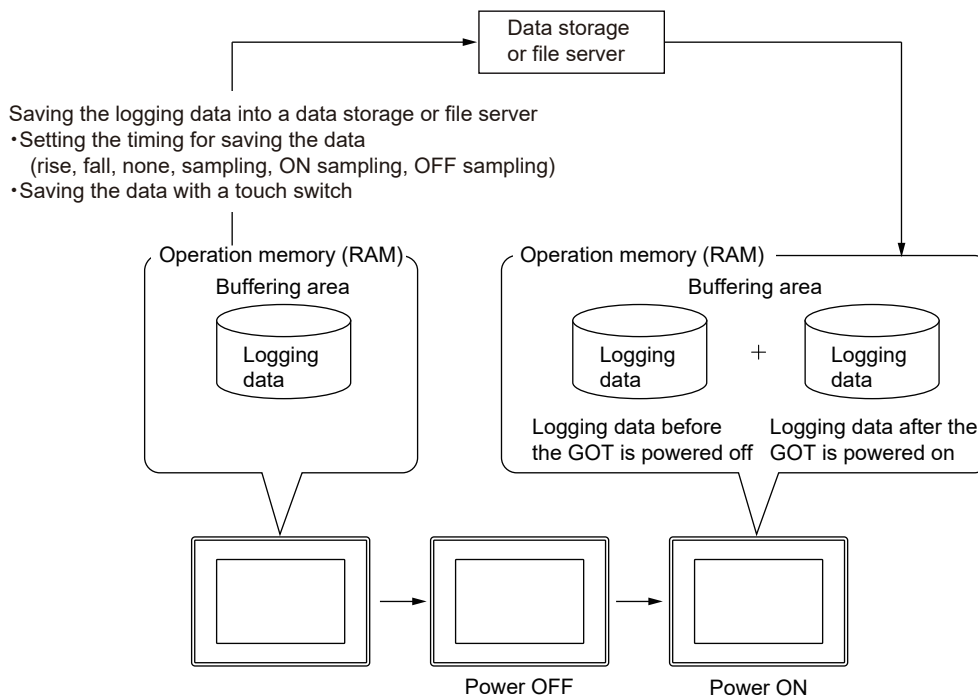

### (1) Saving data

In the buffer historical mode, the logging data in the buffering area is saved into a data storage or file server when [Buffer Save] is enabled.

The logging data can be automatically restored from the data storage or file server upon turn-on of the GOT.

The following shows the uses of this setting.

- To retain logging data in the event of an accident, such as a power failure
- To save logging data into a data storage or file server when the buffering area becomes full

#### (a) Restoring logging data from a data storage or file server

Connect a data storage or file server, and then turn on the GOT.

Do not perform the above operations in reverse order, or logging data cannot be restored from the data storage or file server upon turn-on of the GOT.

The wrong procedure will also cause the logging data in the data storage or file server to be overwritten with new data after the GOT is turned on.

**(b) Restoring logging data when the power-failure backup is used**

GT21 does not support the SRAM power-failure backup function.

If logging data is saved into both the SRAM user area and a data storage or file server, the logging data is restored from the SRAM user area upon turn-on of the GOT.

If the SRAM user area is unusable due to the undervoltage battery or other causes, the logging data is restored from the data storage or file server.

**(c) When the reserved portion of the buffering area becomes full**

To notify that the number of events in the buffering area reaches the value specified for [Log Storage Number], set [Full Notification Signal Device].

With additional setting, the following usages are available.

- Notifying the full status before the buffering area is actually full by setting [Buffer Full Alert Capacity]
- Providing options for the full status using [Action When Buffer is Full]

Upon turn-on of the full notification device, the logging data in the buffering area is saved into a data storage or file server.

- Deleting the logging data in the buffering area without saving using [Buffer Historical Data Clear]

The logging data in the buffering area is deleted.

[Full Notification Signal Device] and [Buffer Full Alert Capacity] are settable in the [Logging] dialog (traditional display) only.

→9.2.7 [Logging] dialog (traditional display)

## 6 Display and operation

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The following shows how to display and operate logging data collected through the GOT or personal computer.

### (1) Display by the historical trend graph or historical data list display

Collected logging data can be displayed by the historical trend graph or historical data list display. Specify the data to be displayed by logging ID.

→8.10 Placing a Historical Data List Display

8.21 Placing a Historical Trend Graph

Historical trend graph

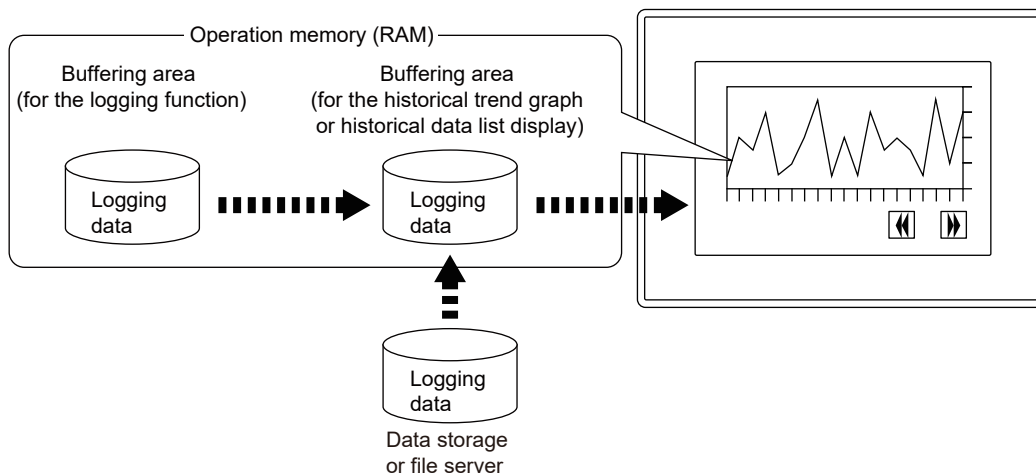

Historical data list display

日時	計画	生産	不良
2010/10/08 11:35:00	100	68	5
2010/10/08 11:40:00	100	55	3
2010/10/08 11:45:00	100	72	6
2010/10/08 11:50:00	100	66	6
2010/10/08 11:55:00	100	81	6
2010/10/08 12:00:00	100	55	3

### (a) Display target in the file save mode

The logging data in the buffering area, data storage, or file server is displayable.

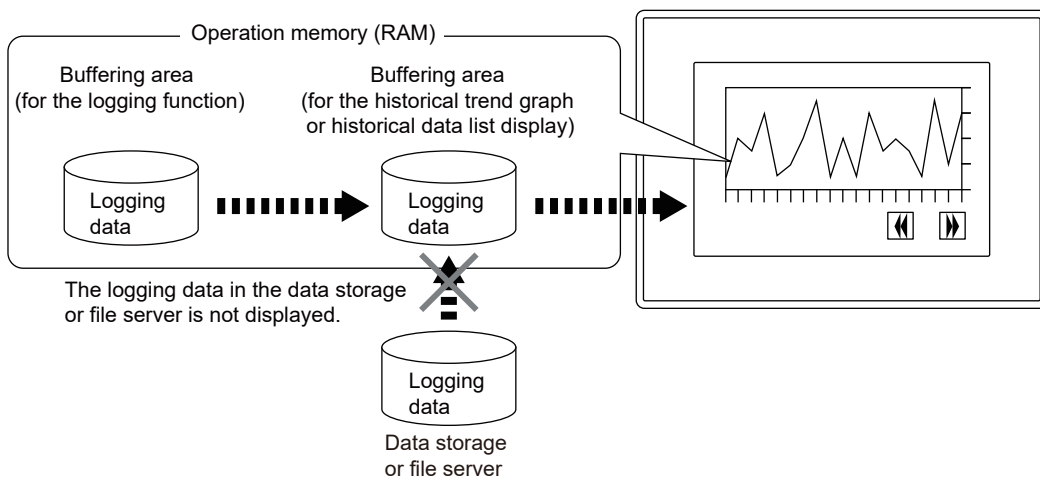

### (b) Display target in the buffer historical mode

The logging data in the buffering area is displayable.

The logging data in a data storage or file server is not displayable.

To display old logging data, use the file save mode.

**(2) Operations with the utility**

The following operations can be performed with the utility.  
 You can manage logging files on the GOT without a personal computer.  
 →GOT2000 Series User's Manual (Utility)

Item	Description
Creating a folder	GT21 does not support this item. Creates a folder where logging files are stored. Folders can be created for each line and production item to manage logging files. <div style="text-align: center;"> <p>Create a folder for each line or production item.</p> </div>
Deleting a folder	GT21 does not support this item. Deletes a folder where logging files are stored.
Copying a file	Copies a logging file. Perform this operation to back up a logging file.
Deleting a file	Deletes a logging file.
Renaming a file	GT21 does not support this item. Renames a logging file.
Moving a file	GT21 does not support this item. Moves a logging file to another folder. Perform this operation to back up a logging file.
Converting a binary file (*.G2L) into a Unicode text file or CSV file	GT21 does not support this item. Converts the binary file (*.G2L) into a Unicode text file or CSV file.

**(3) Saving logging data in Unicode text file format or CSV file format and displaying it with a personal computer**

Collected logging data is saved in a binary file (\*.G2L).  
 With this binary file, a Unicode text file or CSV file can be created to display the data on a personal computer.  
 →9.2.3 ■ 7 Creating a Unicode text file or CSV file

**(a) When displaying logging data in the multiple-language input environment**

When displaying logging data in the multiple-language input environment, use Unicode text files.  
 The characters of multiple languages can be displayed normally by using Unicode text files.

**(b) Display example and detail of logging data**

The following shows the display format of logging data in the binary file (\*.G2L) that has been output to a Unicode text file

or CSV file.

### 1) Logging ID

Displays the logging ID.

### 2) Logging name

Displays the logging name.

### 3) Serial number

Displays a number 0001 to 9999 attached to the end of the file name.

### 4) Number of set devices

Displays the number of set devices.

### 5) Number of logs

Displays the number of logs.

### 6) Order of dates

Displays the order of dates.

### 7) Time zone

Displays the difference between the Greenwich Mean Time and "Occurred"/"Restored"/"Checked".

### 8) Time information

Displays the information on the time data.

- L: Local time

### 9) Device comment

Displays device comments.

### 10) Device type

Displays device types.

- [BIT]: Bit
- [BIN16]: Signed 16-bit binary
- [BIN16\_Unsigned]: Unsigned 16-bit binary
- [BIN32]: Signed 32-bit binary
- [BIN32\_Unsigned]: Unsigned 32-bit binary
- [BCD16]: 16-bit binary-coded decimal
- [BCD32]: 32-bit binary-coded decimal
- [REAL]: Real number
- [STRING]: Character string

### 11) Display format

Displays the display formats.

- [BIT]: Bit
- [DEC]: Signed decimal
- [UNSIGNED\_DEC]: Unsigned decimal
- [REAL\_FLOAT]: Real number (exponential expression)
- [REAL\_FIX]: Real number (fixed-point number)
- [ASC]: ASCII code
- [UNI]: Unicode

- [SJIS]: Shift JIS code
- [KS]: KS (Korean)
- [GB]: GB (Simplified Chinese)
- [BIG5]: BIG5 (Traditional Chinese)
- [BIN]: Binary number
- [OCT]: Octal number
- [HEX]: Hexadecimal number

**12) Device size**

Displays the device size. (Unit: byte)

- 1: Bit device or word device (16 bits)
- 2: Word device (32 bits)
- 1 to 250: Character string

**13) Time data**

Displays the time when the device value is collected.

**14) Logging data**

Displays the collected device values.

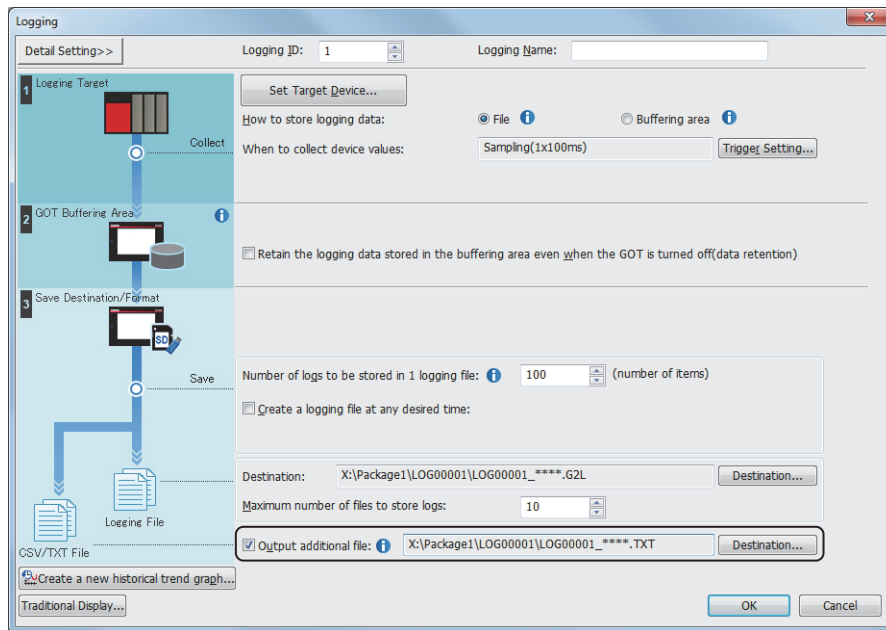

**7 Creating a Unicode text file or CSV file**

**(1) Creating a Unicode text file or CSV file when saving logging data into a data storage or file server**

When logging data is saved into a data storage or file server, a Unicode text file or CSV file can be automatically created to save the data.

**Step 1** Select [Output additional file] and configure the setting in the [Logging] dialog.

**Step 2** When a binary file is saved, a Unicode text file or CSV file is also automatically created.

A Unicode text file or CSV file is not created at the timing of when a temporary file is created.

⇒ 9.2.3 ■ 4 File save mode

While the file is being created, the logging is stopped.

To shorten the interruption time, clear [Output additional file], and convert the binary file (\*.G2L) to a Unicode text file or CSV file with GT Designer3 or the utility.

GT21 does not support the conversion with the utility.

**(2) Creating a Unicode text file or CSV file with GT Designer3**

On GT Designer3, a binary file (\*.G2L) in the data storage or file server can be converted into a Unicode text file or CSV file.

Since the file is converted with GT Designer3, converting is processed without any load on the GOT.

For the details of the [Logging File Conversion] dialog, refer to the following.

⇒ 9.2.8 [Logging File Conversion] dialog

**(3) Creating a Unicode text file or a CSV file with the utility**

GT21 does not support this item.

In the GOT utility, a binary file (\*.G2L) in the data storage or file server can be converted into a Unicode text file or CSV file.

GT Designer3 is not required for the conversion.

**Step 1** Select a G2L file in [Logging Information] of the utility and touch the [G2L → CSV] button or the [G2L → TXT] button to convert the file.

For the operations of the utility, refer to the following.

→GOT2000 Series User's Manual (Utility)

**Step 2** Store the created Unicode text file or CSV file into a personal computer by either of the following methods.

Set the following items and convert a binary file into a Unicode text file or a CSV file.

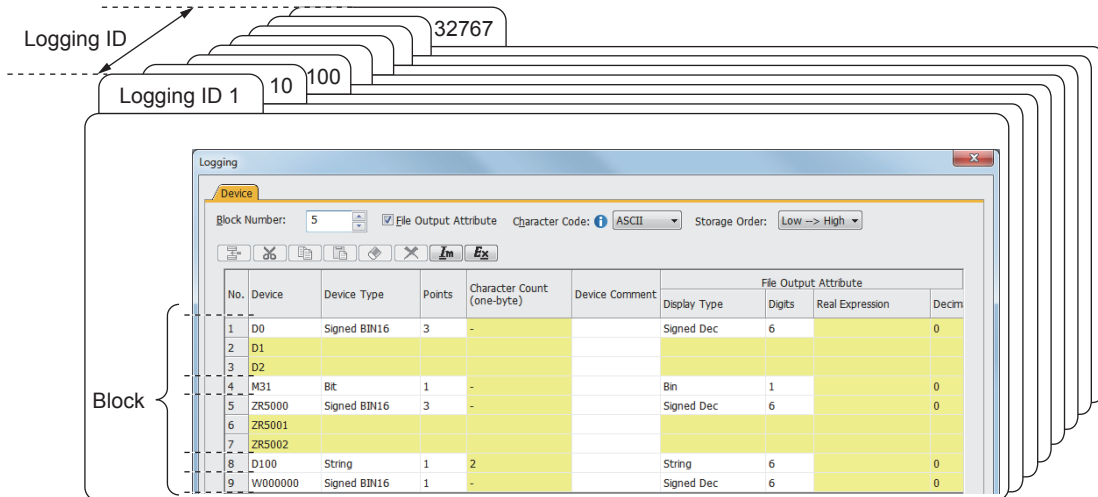

- Transferring with GT Designer3  
Select [Communication] → [Read from GOT...] from the menu to transfer a file to the personal computer.
- Saving the file into a data storage or file server  
Save the file into a data storage or file server, and then read the file into the personal computer.

**■ 8 Management of logging setting**

Multiple logging can be managed with one recipe setting by setting the following items.

- Logging ID
- Number of blocks

**(1) Logging ID**

The logging ID is for distinguishing the logging settings.

The logging ID is used to select data to be displayed by the historical trend graph or historical data list display.

- 8.10 Placing a Historical Data List Display
- 8.21 Placing a Historical Trend Graph

**(a) Setting method**

Set the logging ID in the [Logging] dialog.

→9.2.6 [Logging] dialog

**(b) Setting range**

The setting range of the logging ID is 1 to 32767.

However, up to 60 logging settings are settable.

(Up to 4 logging settings are settable for GT21.)

**(2) Block**

Blocks are units for setting device numbers randomly and different device types.

By setting device numbers and device types in block units, the following settings can be made.

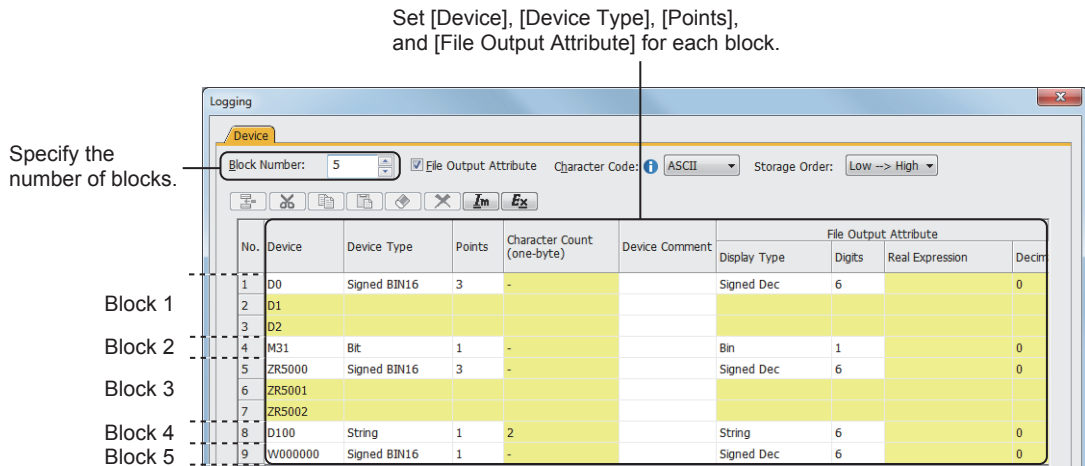

- Mixing multiple device types (including bits and words)
- Mixing the consecutive setting and the random setting of device numbers

**(a) Setting method**

Set the number of blocks in the [Device] tab of the [Logging] dialog.

→9.2.7 ■ 2 [Device] tab

The following shows a logging setting example in which bit devices, word devices (signed 16-bit binary and signed 32-bit binary data), and character strings are mixed.

**(b) Setting range**

The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
Up to 250 blocks can be set for one logging setting.
- For GT21  
Up to 20 blocks can be set for one logging setting.

**(3) Device**

**(a) Number of devices that can be set**

The number of devices that can be set is 250 per logging setting.

One device is calculated as one device regardless of the device type (word/bit).

However, a device that has 32-bit data is counted as two devices.

When multiple blocks exist, the number of devices that can be set is the total number of devices in all blocks. Example)

Block 1: 30 devices, Block 2: 70 devices, Block 3: 120 devices

The number of devices that can be set is 30 + 70 + 120 = 220 devices.

**(b) When setting device numbers at random**

A single device number can be set for a single block.

To set device numbers randomly, divide the block.

**(c) When the device type is bit**

Only one device can be set for one block (fixed).

## ■ 9 Missing logging data detection function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

This function detects the device values that are not collected (Missing information) when you use the logging function. This device is settable in the [Logging] dialog (traditional display) only.

If a communication timeout occurs, or the values are outside the device range, the GOT does not detect the values as the missing information.

When the communication process is not completed and the logging function has not updated the collected device values, the GOT identifies the uncollected device values (Missing information).

The device values (Missing information) are not collected as the logging data and not displayed on the historical trend graph.

You can set whether to use the missing logging data detection function for each logging setting.

For the setting procedure, refer to the following.

⇒ 9.2.7 ■ 1 [Basic] tab

## 9.2.4 Precautions

This section explains the precautions for using the logging function.

### ■1 Precautions for drawing

#### (1) Setting of [Log Storage Number] in the file save mode

To collect device values in short intervals, set a larger number in [Log Storage Number].

#### (2) Mixing the file save mode and buffer historical mode

Do not set the same name for multiple folders or files. If the same name is used for multiple folders or files, logging is not executed normally.

In the file save mode

In the buffer historical mode

↑ Do not set the same name  
↓ for multiple folders or files.

In the file save mode, LOG00001.G2L is saved as a management file together with LOG00001\_\*\*\*\*.G2L (\* indicates a number). The file name is duplicated with the file name in the buffer historical mode LOG00001.G2L, and thus logging is not executed normally.

To check the duplication, select [Tools] → [Data Check] from the menu.

#### (3) Setting value of logging setting

The set size of an object cannot exceed the user area of the GOT.

Depending on the combination of the settings, not all the setting values (such as the number of devices) can be set to their maximum values.

Set the setting values within the capacity of the available user area for the GOT.

#### (4) Relation between device comments and their setting sizes

Device comments affect the setting size of the logging and its file size. If device comments are set for each device, their setting sizes and the file size are large.

#### (5) When setting a string-type label or tag for the logging device

Set [Device Type] to [String].

#### (6) Character code when a string-type label or tag is set for the device whose [Device Type] is set to [String]

If you set a string-type label or tag for the device whose [Device Type] is set to [String], set the character code according to the type of the label or tag.

- System label Ver.1: ASCII code or Shift JIS code
- System label Ver.2 and global label: ASCII code, Unicode, or Shift JIS code
- OMRON NJ/NX tag: Unicode
- AB native tag: ASCII code

#### (7) When multiple GOTs use the network drive

If the logging files of the GOTs are saved into a single folder, logging cannot be executed normally due to data loss or file corruption.

When the GOTs have the same file save destination, select [Separate destinations for each GOT] in the [Logging] dialog.

→ 5.3.15 ■ 4 Creating a folder for each GOT

9.2.6 [Logging] dialog

### ■2 Precautions for use

#### (1) Saving a file

A data storage or file server is required to save files.

The data storage or file server must have enough space to save logging files.

⇒12.7 Resource Data Size

If no data storage or file server is connected, files fail to be saved and the Writing Error Notification device is turned on. Device values are not collected until the files are successfully saved.  
To resume saving files and collecting device values, connect a data storage or a file server.

**(2) To maintain the access performance**

**(a) Before starting logging**

You are recommended to format your data storage before data logging.

**(b) Number of files stored in a folder**

The number of files to be stored in a folder should be less than 500.  
If 500 or more files are stored in a folder, file access performance may be lowered.

**(c) When data is repeatedly written or deleted to or from the data storage**

Regardless of the number of files, file access performance may be lowered.  
Format the data storage.

**(3) Device values are not collected as set**

In the following cases, device values may not be collected in set intervals or when the trigger device is turned on.

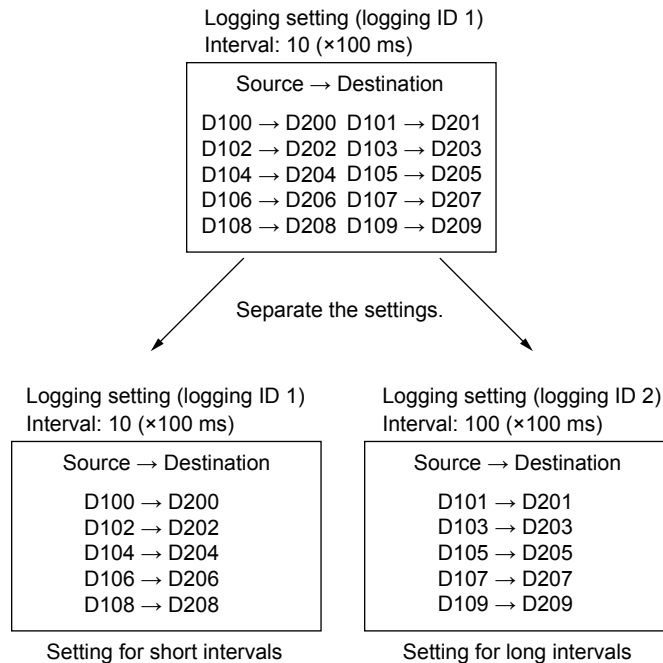

- The communication between the GOT and controllers takes a long time because a large number of devices to be collected is set.
- When the interval for the logging trigger is short (the trigger is turned on while device values are being collected)

Example) When the interval for the logging trigger is short

Take either of the following countermeasures.

- When selecting [Sampling] for the trigger type, reduce the number of devices per logging setting that is executed in short intervals. (Set the logging that is not needed to be executed in short intervals as another logging with long intervals.)

- While the Logging Notification device is off, satisfy the trigger condition.

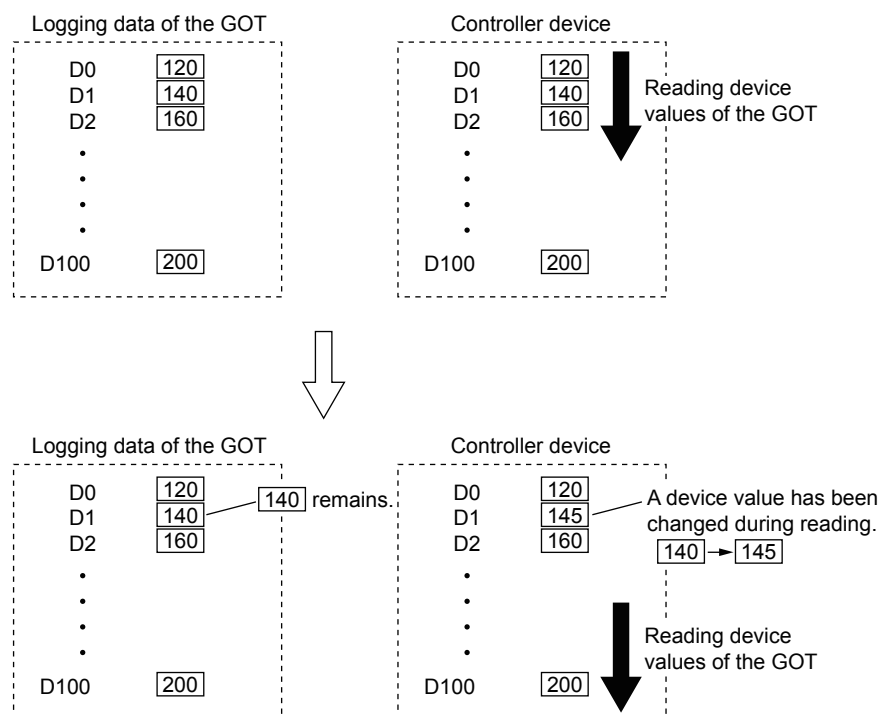

⇒9.2.6 [Logging] dialog

- If the baud rate can be changed, increase the baud rate with communication detail settings.

If no device value can be collected, it is collected when the trigger device is turned on next time. The device values when the trigger device is turned on next time are to be collected.

#### (4) Consistency between the device values in the controller and the collected device values

If the number of target devices of logging is large, the device values in the controller may be inconsistent with the collected device values.

In this case, set an interlock to prevent the device values in the controller from being changed until logging by the GOT is completed.

The logging status can be check by [Logging Notification Device].

→9.2.6 [Logging] dialog

#### (5) Timing at which processing is stopped or pauses

##### (a) Timing at which collecting device values is stopped or pauses

In the following cases, no device value is collected even though the trigger condition is satisfied.

Collecting device values pauses, and thus the device values may not be collected normally.

(especially when device values are collected in short intervals)

Timing	Corrective action
When saving logging data to a data storage or file server	<ul style="list-style-type: none"> <li>In the file save mode, increase [Log Storage Number].</li> <li>Using [Logging Notification Device], prevent the trigger condition from being satisfied during writing.</li> </ul>
When clearing the logging data in the buffering area	<ul style="list-style-type: none"> <li>Make sure that the trigger condition is satisfied after the Buffer Historical Data Cleared device is turned on.</li> </ul>
When logging data is accessed by the historical trend graph or historical data list display	<ul style="list-style-type: none"> <li>Reduce the number of devices monitored by the historical trend graph or historical data list display.</li> </ul>
When switching between screens (GT21 only)	<ul style="list-style-type: none"> <li>Make sure that the trigger condition is satisfied after the screen switching is complete.</li> </ul>

##### (b) Timing at which saving files or clearing the buffering area pauses

In the following cases, saving files or clearing the buffering area is not executed.

Timing	Corrective action
When logging data is accessed by the historical trend graph or historical data list display	<ul style="list-style-type: none"> <li>Reduce the number of devices monitored by the historical trend graph or historical data list display.</li> </ul>

#### (6) Using the historical trend graph or historical data list display

While logging data is being saved into a data storage or file server, the contents of the historical trend graph or historical data list display is not updated.

### **(7) Files that must not be deleted (only in the file save mode)**

In the file save mode, a number is added to the set file name.

Do not delete the following control data and temporary file.

If either of the following is deleted, logging is not executed normally.

- Control data  
Files that do not have numbers in their name
- Temporary file  
File that has number 0000 in its name

### **(8) When powering off, restarting, or resetting the GOT**

The logging data in the buffering area is deleted.

Save the logging data beforehand by using the file creation trigger or the storage trigger as necessary.

### **(9) When the GOT is powered off before the storage trigger conditions are satisfied**

In such a case, even though you have configured the setting to save data into a data storage or file server, the logging data in the buffering area will be lost and will not be saved into the data storage or file server for restoration.

On GT27, GT25, or GT23, use the SRAM power-failure backup function in combination so that the logging data in the buffering area can be saved into the SRAM user area before the storage trigger conditions are satisfied.

⇒9.2.3 ■ 3 SRAM power-failure backup function

### **(10)Precautions for removing an SD card**

When you open the SD card cover or turn off the SD card access switch, the files are saved automatically.

Before removing the SD card, make sure that the file saving is complete by checking one of the following conditions.

- The Drive Status Notification signal (system signal 2-2.b0, b1) is turned off.
- The SD card access LED is turned off.

⇒9.2.6 [Logging] dialog

The save process may take a few minutes to complete.

### **(11)Logging file conversion by the utility**

The logging data in the buffering area is deleted.

Save the logging data beforehand by using the file creation trigger or the storage trigger as necessary.

### **(12)Character code and conversion destination file**

If a device comment or logging name contains any character other than ASCII and Shift JIS characters, convert the relevant file as shown below.

- Convert the file to Unicode text format.
- Turn on the Character Code for CSV Conversion signal (GS522.b2), and convert the file to CSV format.

### **(13)Using a Unicode text file**

For the precautions for using Unicode text files, refer to the following.

⇒9.2.3 ■ 7 Creating a Unicode text file or CSV file

### **(14)Opening a CSV file by Microsoft Excel**

When a Unicode text file or CSV file that has been created through the logging function is opened by Microsoft Excel, the standard style of Microsoft Excel is applied. Depending on the setting, data of logging date and others may be displayed in a style different from the actual setting. To check whether the display is different from the actual style or not, open the Unicode text file and the CSV file by a text editor. The style that the GOT has output can be checked.

### **(15)Editing exported files**

If a device in use has a name starting from 0, the 0 may be deleted by a function of applications for editing files.

If the file is saved after the first 0 is deleted, the file cannot be imported normally.

When using a device that has a name starting from 0, edit the file with a text editor.

**(16) Time data in a CSV file and the interval for a logging trigger**

After a logging file (\*.G2L) is converted to CSV format, the time data will be stored with an accuracy of 1 second. If the interval for the logging trigger is not set to an integral multiple of 10 (×100 ms), a time lag may exist between the interval and the time data in the CSV file.

Example) When the interval for the logging trigger is set to 11 (×100 ms)

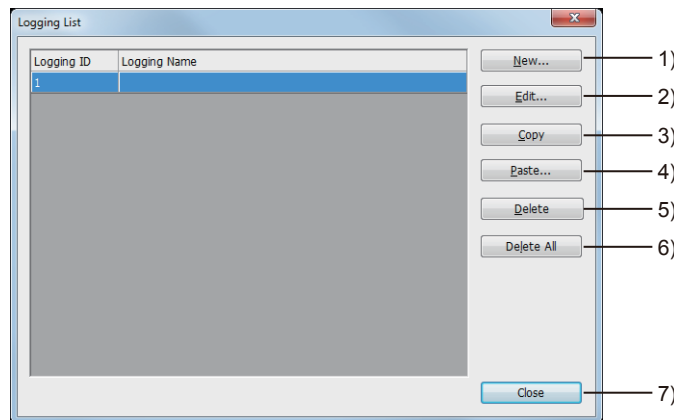

**9.2.5 [Logging List] dialog**

Displays the list of the logging settings and manages the settings.

- Step 1 Select [Common] → [Logging] from the menu.
- Step 2 The [Logging List] dialog appears.

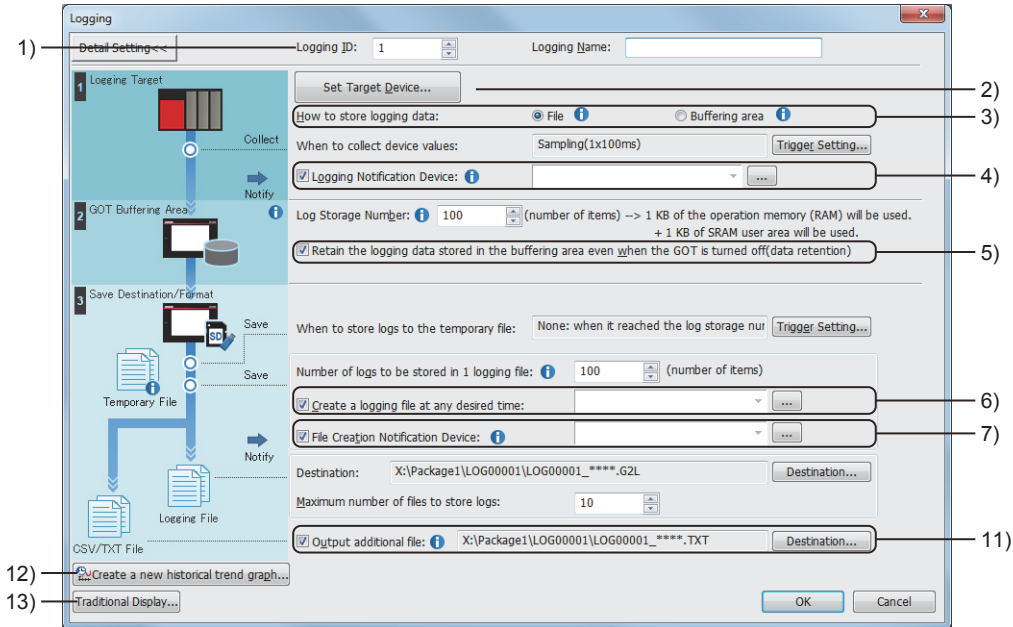

- 1) **[New] button**  
Sets logging newly.  
Clicking this button displays the [Logging] dialog.
- 2) **[Edit] button**  
Changes a selected logging setting.  
Clicking this button displays the [Logging] dialog.
- 3) **[Copy] button**  
Copies a selected logging setting.
- 4) **[Paste] button**  
After clicking this button, set [Destination ID] of the copied logging setting. The copied data is pasted as the logging setting of the set logging ID in the logging list.
- 5) **[Delete] button**  
Deletes a selected logging setting.
- 6) **[Delete All] button**  
Deletes all the logging settings.
- 7) **[Close] button**  
Closes the [Logging List] dialog.

## 9.2.6 [Logging] dialog

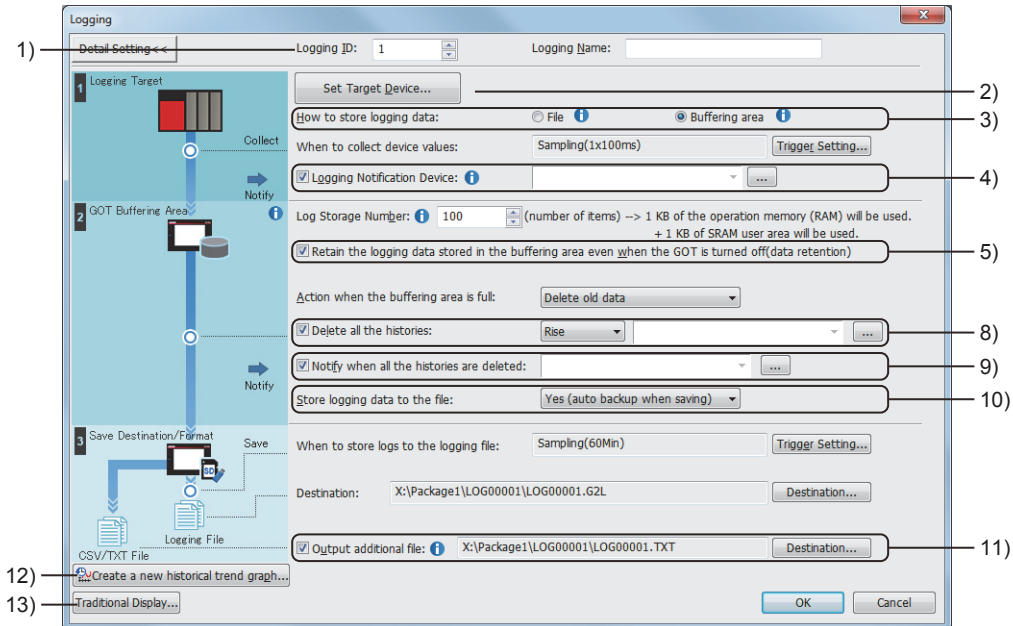

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ ■ 1 [Destination] dialog (for saving a logging file)
- 2 [Destination] dialog (for saving a CSV or TXT file)
- 3 [Screen Selection] dialog

- When [How to store logging data] is set to [File]

- When [How to store logging data] is set to [Buffering area]

The following shows the reference section related to each setting item.

### 1) [Logging ID]

⇒(1) Logging ID

### 2) [Set Target Device] button

⇒(3) Device

### 3) [How to store logging data]

⇒9.2.3 ■ 1 Logging mode

- [File]

- 9.2.3 ■ 4 File save mode
  - [Buffering area]
    - 9.2.3 ■ 5 Buffer historical mode
- 4) **[Logging Notification Device]**
  - (1) Logging Notification device
- 5) **[Retain the logging data stored in the buffering area even when the GOT is turned off(data retention)]**
  - GT21 does not support this item.
  - 9.2.3 ■ 3 SRAM power-failure backup function
- 6) **[Create a logging file at any desired time]**
  - (1) Saving data
- 7) **[File Creation Notification Device]**
  - (2) Notify File Creation device
- 8) **[Delete all the histories]**
  - (4) Buffer Historical Data Cleared device
- 9) **[Notify when all the histories are deleted]**
  - (4) Buffer Historical Data Cleared device
- 10) **[Store logging data to the file]**
  - (1) Saving data
- 11) **[Output additional file]**
  - (3) Saving logging data in Unicode text file format or CSV file format and displaying it with a personal computer
- 12) **[Create a new historical trend graph] button**
  - (1) Display by the historical trend graph or historical data list display
- 13) **[Traditional Display] button**
  - 9.2.7 [Logging] dialog (traditional display)

The following setting items are not available in the standard display.  
To set these items, switch the [Logging] dialog to the traditional display.

- [Full Notification Signal Device]
- [Buffer Full Alert Capacity]
- [Logging Count Device]
- [Use missing logging data detection function] (Not available to GT21)
- [Writing Notification Device]
- [Writing Error Notification Device]

The set contents are held even after the display is switched.

## ■ 1 [Destination] dialog (for saving a logging file)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the location to which a binary file (\*.G2L) is saved.

### 1) [Drive Name]

Select a destination drive.

The following shows selectable items.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [N:Network Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

⇒ 1.2.7 Drive configuration of the target GOT for data transfer

### 2) [Folder Name]

Set the name of the folder where files are stored.

In the default setting, [Package Folder Name] selected from [Common] → [GOT Type Setting] is set as the folder name.

⇒ 12.4 Restrictions for Folder Names and File Names used in GOT

### 3) [File Name]

Set the name of the files to be saved.

In the default setting, LOG □ is set for the file name. (□ indicates the logging ID.)

⇒ 12.4 Restrictions for Folder Names and File Names used in GOT

### 4) [Add date information to the file name]

Adds the date (year, month, and day) and time (hour, minute, and second) to the file name when the file is saved. The date and time information of the first event in the logging file is used.

### 5) [Specify the date/time format for file output]

Set the format of the date and time displayed in a Unicode text file or CSV file.

Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog.

⇒ 6.3.2 Date/time format settings

### 6) [Specify the date/time format for file output]

Available to GT27 and GT25.

This item appears when [Drive Name] is set to [N:Network Drive].

Automatically creates a folder for each GOT to save logging files.

Each folder is named as the IP address of each GOT.

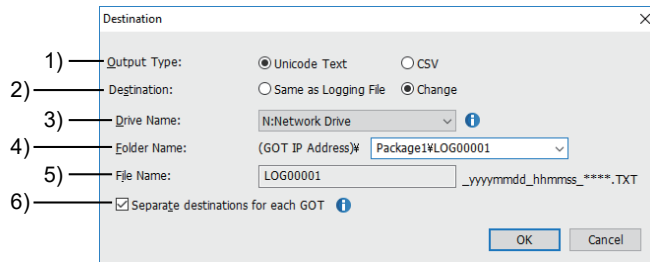

⇒ 5.3.15 ■ 4 Creating a folder for each GOT

## ■ 2 [Destination] dialog (for saving a CSV or TXT file)

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

Set the location to which a Unicode text file or CSV file is saved.

### 1) [Output Type]

Select the file format to be additionally output.

The following shows selectable items.

- [Unicode Text]: Saves a binary file (\*.G2L) and a Unicode text file.
- [CSV]: Saves a binary file (\*.G2L) and a CSV file.

### 2) [Destination]

Select the save destination folder for the additionally output file.

The following shows selectable items.

- [Same as Logging File]  
Saves the output file to the location to which the logging file is saved.
- [Change]  
Saves the output file to a location different from the location to which the logging file is saved.  
Set [Drive Name] and [Folder Name].

### 3) [Drive Name]

Select a destination drive.

The following shows selectable items.

- [A:Standard SD Card]
- [B:USB Drive]
- [E:USB Drive]
- [F:USB Drive]
- [G:USB Drive]
- [N:Network Drive]
- [X:Current Drive]

For the available drives by GOT model, refer to the following.

⇒ 1.2.7 Drive configuration of the target GOT for data transfer

### 4) [Folder Name]

Set the name of the folder where files are stored.

In the default setting, [Package Folder Name] selected from [Common] → [GOT Type Setting] is set as the folder name.

⇒ 12.4 Restrictions for Folder Names and File Names used in GOT

### 5) [File Name]

Displays the name of the logging file.

### 6) [Specify the date/time format for file output]

Available to GT27 and GT25.

This item appears when [Drive Name] is set to [N:Network Drive].

Automatically creates a folder for each GOT to save files.

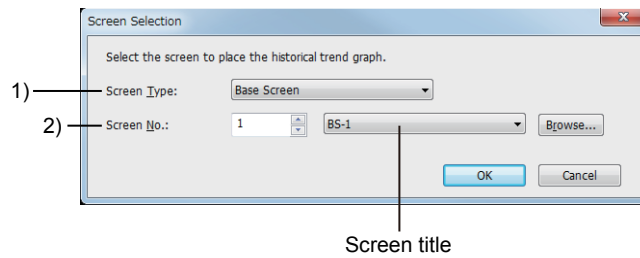

Each folder is named as the IP address of each GOT.

⇒ 5.3.15 ■ 4 Creating a folder for each GOT

### ■ 3 [Screen Selection] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Select the screen in which a historical trend graph is placed.

#### 1) [Screen Type]

Select the type of the screen in which a historical trend graph is placed.

The following shows selectable items.

- [Base Screen]
- [Window Screen]
- [Mobile Screen] (GT27 and GT25)

#### 2) [Screen No.]

Set the number of the screen in which a historical trend graph is placed.

The setting range is [0] to [32767].

A target screen is selectable from among screen titles as well.

To place a historical trend graph on a new screen, select [A new screen will be created.] for the screen title.

Click the [Browse] button to select a screen in thumbnail view in the [Screen Image List] dialog.

- **[Screen Type]**  
Select the type of a screen to be opened.
- **Screen image list**  
Displays screen images.
- **Jump**  
Specify a screen number and click the [Jump] button to select the screen in the screen image list.

## 9.2.7 [Logging] dialog (traditional display)

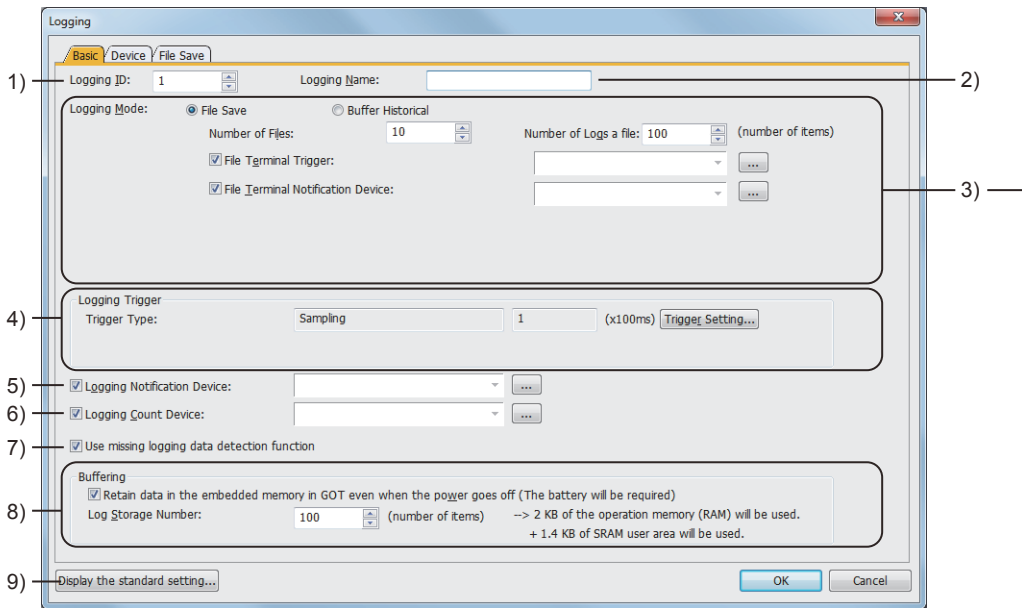

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ■ 1 [Basic] tab
- 2 [Device] tab
- 3 [File Save] tab

### ■ 1 [Basic] tab

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the logging mode, logging trigger, and buffering area.

When [Logging Mode] is [File Save]

When [Logging Mode] is [Buffer Historical]

#### 1) [Logging ID]

Set a logging ID for using the logging function.

The setting range is [1] to [32767].

→ 9.2.3 ■ 8 Management of logging setting

#### 2) [Logging Name]

Set a logging name.

Up to 32 characters can be set. A set logging name is displayed in a Unicode text file and CSV file.

#### 3) [Logging Mode]

Select the logging mode.

For the details of the logging mode, refer to the following.

→9.2.3 ■ 1 Logging mode

Item	Description
[File Save]	<ul style="list-style-type: none"> <li>• [Number of Files]: Specify the number of files to be saved into a data storage or file server. The setting range is [1] to [9999].</li> <li>• [Number of Logs a file (number of items)]: Set the number of events to be saved to a logging file. The setting range is [1] to [65500]. Specify a value equal to or larger than the value set for [Log Storage Number].</li> <li>• [File Terminal Trigger]: Set the file creation trigger to start saving logging data to a file at an intended timing. →6.1.1 How to set devices</li> <li>• [File Terminal Notification Device]: Set the Notify File Creation device to notify that logging data is being saved upon turning on [File Terminal Trigger] (file creation trigger). This item is available only when [File Terminal Trigger] is enabled. →6.1.1 How to set devices</li> </ul>
[Buffer Historical]	<ul style="list-style-type: none"> <li>• [Buffer Save]: Set whether to save the logging data in the buffering area into a data storage or file server. To not to save the logging data into a data storage or file server, select [No]. The data is not saved to a file, and the logging does not pause. Select [No] for the high-speed logging. To save the logging data into a data storage or file server, select [Yes]. The logging data can be restored from the data storage or file server upon turn-on of the GOT. To save a backup of the logging file to be overwritten, select [Yes (auto backup when saving)]. If the logging data is corrupted, the data in the backup file is read.</li> <li>• [Action When Buffer is Full] Select an action when the number of logging data points stored in the buffering area reaches [Log Storage Number]. When [Delete old data] is selected, the oldest data is deleted and new logging data is added. When [Add no item] is selected, no device value is collected even though another trigger condition is satisfied.</li> <li>• [Full Notification Signal Device] Set a device for notifying that the available space of the buffering area for saving logging data falls below the setting of [Buffer Full Alert Capacity]. →9.2.3 ■ 5 Buffer historical mode</li> <li>• In [Buffer Full Alert Capacity], set the timing (the number of currently available logging data points that can be saved: 0 to 255) to notify that the available space of the buffering area is small. If the number of currently available logging data points falls below this setting, [Full Notification Signal Device] is turned on.</li> <li>• [Buffer Historical Data Clear]: Set a device for deleting the logging data temporarily saved in the buffering area. →9.2.3 ■ 5 Buffer historical mode</li> <li>• [Buffer Historical Data Clear Alert]: Set a device for notifying that clearing the buffering area is completed using [Buffer Historical Data Clear].</li> </ul>

4) [Logging Trigger]

Click the [Trigger Setting] button to set conditions for collecting device values in the [Trigger Setting] dialog.

→6.2.2 Setting Trigger Types

5) [Logging Notification Device]

Set a device for notifying that the device values of a controller are being collected to the buffering area.

→9.2.3 ■ 2 Device

6) [Logging Count Device]

Set a device for notifying the number of collection times of device values after the GOT is started.

→9.2.3 ■ 2 Device

7) [Use missing logging data detection function]

GT21 does not support this item.

Enables the missing logging data detection function.

→9.2.3 ■ 9 Missing logging data detection function

8) [Buffering]

Item	Description
[Retain data in the embedded memory in GOT even when the power goes off (The battery will be required)]	GT21 does not support this item. Select this item to save the logging data in the buffering area to the SRAM user area. →9.2.3 ■ 3 SRAM power-failure backup function
[Log Storage Number]	Set the number of logging data points temporarily saved in the buffering area. The setting range is [1] to [32767].

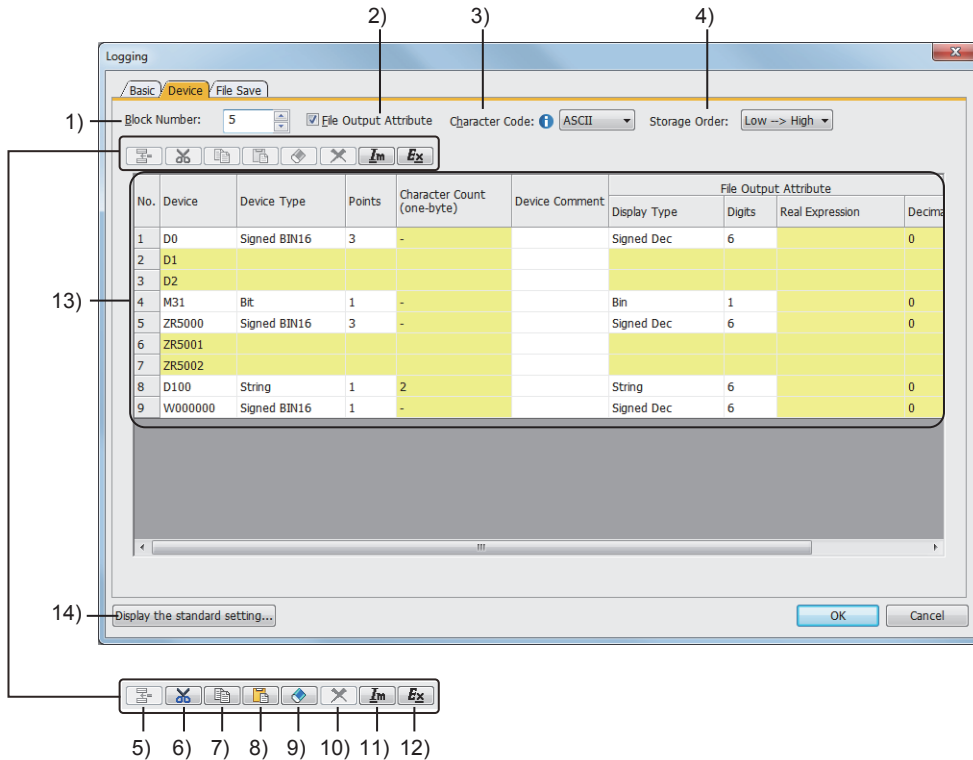

9) **[Display the standard setting] button**

Switches the [Logging] dialog to the standard display.  
 The set contents are held even after the display is switched.  
 →9.2.6 [Logging] dialog

■2 **[Device] tab**

Set the target device for collection.

1) **[Block Number]**

Set the number of blocks of the logging setting.  
 →9.2.3 ■ 8 Management of logging setting  
 The setting range depends on the GOT model.

- For GT27, GT25, GT23, and GT SoftGOT2000  
 The setting range is [1] to [250].
- For GT21  
 The setting range is [1] to [20].

2) **[File Output Attribute]**

Select this item to change the style of the device value that is to be output to a Unicode text file or CSV file.  
 After selecting this item, set [File Output Attribute] on the right side of [Device Comment].  
 This setting is available only when [File Save] is selected for [Logging Mode].

3) **[Character Code]**

Select a character code.  
 The following shows selectable items.

- [ASCII]
- [Unicode]
- [S-JIS]
- [GB]
- [KS] (for GT27, GT25, GT23, and GT SoftGOT2000)
- [Big5]

4) **[Storage Order]**

Select the order in which character codes are stored.  
 The following shows selectable items.

- [Low->High]

- [High-->Low]

5) **[Insert Block] button**

Inserts a block.  
Select a column when inserting a block.

6) **[Cut] button**

Cuts a selected item.  
This operation can also be performed from the right-click menu.

7) **[Copy] button**

Copies a selected item.  
This operation can also be performed from the right-click menu.

8) **[Paste] button**

Pastes a selected item.  
This operation can also be performed from the right-click menu.

9) **[Clear] button**

Clears the device comment when [Device Comment] is being selected.  
Returns the number of displayed digits to the initial value when [Digits] is being selected.

10) **[Delete] button**

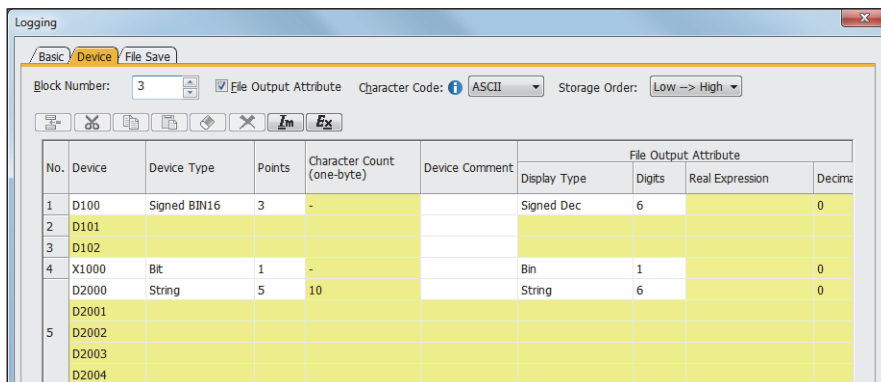

Deletes a selected line setting.

11) **[Import] button**

Imports the setting edited in a Unicode text file or CSV file to GT Designer3.

12) **[Export] button**

Saves the setting in the [Device] tab with a Unicode text or CSV file.  
You can edit the exported file in spreadsheet software and others.  
The edited file can be imported with GT Designer3.  
The following shows the file format of the exported file.

	A	B	C	D	E	F	G	H	I
1	Logging								
2	Block Number	3	File Output Attribute	Yes	Character Code	ASCII	Storage Order	Low -> High	
3									
4	Device	Device Type	Points	Device Comment	Display Type	Digits	Real Expression	Decimal Point	Fill with Zeros
5	D100	Signed BIN16	3		Signed Dec	6		0	No
6									
7									
8	X1000	Bit	1		Bin	1		0	No
9	D2000	String	5		String	6		0	No

When importing or exporting files in the multiple-language input environment, use Unicode text files.  
The characters of multiple languages can be imported or exported normally by using Unicode text files.

13) **Device list**

Lists the device values to be collected.

Item	Description
[Device]	Set devices that are targets of the logging function. ⇒6.1.1 How to set devices

Item	Description
[Device Type]	<p>Select the data type of the device to be set. The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [Bit]</li> <li>• [Signed BIN 16]</li> <li>• [Unsigned BIN 16]</li> <li>• [Signed BIN 32]</li> <li>• [Unsigned BIN 32]</li> <li>• [BCD16]</li> <li>• [BCD32]</li> <li>• [Real]</li> <li>• [String]</li> </ul>
[Points]	<p>Set the number of devices to be collected in block units. Devices starting from the start device are set sequentially for the set number. The maximum number of devices that can be set depends on the setting of [Device Type].</p> <ul style="list-style-type: none"> <li>• [Bit]: [1]</li> <li>• [Signed BIN16], [Unsigned BIN16], [BCD16], or [String]: [1] to [250]</li> <li>• [Signed BIN32], [Unsigned BIN32], [BCD32], or [Real]: [1] to [125]</li> </ul>
[Character Count (one-byte)] ([Character Count] when [Unicode] is selected for [Character Code])	<p>Maximum number of characters to be collected. This item is displayed when [String] is selected for [Device Type]. The settings of [Points] and [Character Code] determine the setting value.</p> <ul style="list-style-type: none"> <li>• When [Unicode] is selected for [Character Code] The maximum number of characters equals the value in [Points].</li> <li>• When an item other than [Unicode] is selected The maximum number of characters equals the value in [Points] multiplied by 2. A two-byte character is counted as two characters.</li> </ul>
[Device Comment]	<p>Set a device comment. Up to 32 characters can be set. A set device comment is displayed in a Unicode text file and CSV file. The column width can be adjusted to display the whole set device comment.</p> <div style="text-align: center;"> <p>Extend the column width.</p> </div>

Item	Description
[File Output Attribute]	<p>Set the style of the device value that is to be output to a Unicode text file or CSV file. Select [File Output Attribute] on the right side of [Block Number] to set the style.</p> <ul style="list-style-type: none"> <li>• [Display Type]: Select the data display type. The setting range depends on the setting of [Device Type]. ⇒(1) Relationship between the settings of [Device Type], [Display Type], and [Digits]</li> <li>• [Digits]: Set the number of the digits displayed. The setting range depends on the setting of [Display Type]. If the number of the digits of a collected value exceeds the number of set digits, the value is output intact. When [Display Type] is set to [String], if a collected character string contains a null character in the range of the set number of digits, the characters preceding the null character are displayed. When the number of characters collected is less than that of the set digits, spaces are added. ⇒(1) Relationship between the settings of [Device Type], [Display Type], and [Digits]</li> <li>• [Real Expression]: Select the expression type of the real number. Set this item when [Real] is selected for [Display Type]. The following shows selectable items. <ul style="list-style-type: none"> <li>· [Exponential Expression]</li> <li>· [Fixed Decimal]</li> </ul> <p>Example) When the device stores 123.4567 and [Decimal Point] is set to 3  · Display using [Exponential Expression]: 1.235E+002 (The value in the exponential expression is rounded off to the third decimal place.)  · Display using [Fixed Decimal]: 123.457 (The value is rounded off to the third decimal place.)  When [Device Type] is set to an item other than [Real], [Real Expression] is fixed to [Fixed Decimal].  The value set for [Decimal Point] is handled as the number of decimal places.  Example) When the device stores 12345 and [Decimal Point] is set to 2  Device value output to a file: 123.45 (The last two digits of the value are handled as the decimal places.)</p> </li> <li>• [Decimal Point]: Set the number of digits of decimal numbers. Set this item when [Real] is selected for [Display Type]. The setting range is [0] digits to [30] digits.</li> <li>• [Fill with 0]: Select this item to display 0 before the device value. When the collected device value is 125 and [Digits] is 6, 000125 is displayed with this item selected.</li> </ul>

#### 14) [Display the standard setting] button

Switches the [Logging] dialog to the standard display.

The set contents are held even after the display is switched.

⇒9.2.6 [Logging] dialog

#### (1) Relationship between the settings of [Device Type], [Display Type], and [Digits]

The selectable items for [Display Type] vary depending on the setting of [Device Type].

The setting range of [Digits] also varies depending on the setting of [Display Type].

[Device Type]	[Display Type]	Setting range of [Digits] <sup>*1</sup>
[Bit]	[Bin]	[1]
	[Bit]	[3]
[Signed BIN16]	[Signed Dec]	[1] to [13]
	[Hex]	[4]
	[Octal]	[6]
	[Bin]	[16]
	[Real]	[1] to [32]
[Unsigned BIN16]	[Unsigned Dec]	[1] to [13]
	[Hex]	[4]
	[Octal]	[6]
	[Bin]	[16]
	[Real]	[1] to [32]

[Device Type]	[Display Type]	Setting range of [Digits] <sup>*1</sup>
[Signed BIN32]	[Signed Dec]	[1] to [13]
	[Hex]	[8]
	[Octal]	[11]
	[Bin]	[32]
	[Real]	[1] to [32]
[Unsigned BIN32]	[Unsigned Dec]	[1] to [13]
	[Hex]	[8]
	[Octal]	[11]
	[Bin]	[32]
	[Real]	[1] to [32]
[BCD16]	[Unsigned Dec]	[1] to [13]
	[Real]	[1] to [32]
[BCD32]	[Unsigned Dec]	[1] to [13]
	[Real]	[1] to [32]
[Real]	[Real]	[1] to [32]
[String]	[String]	[1] to [500]

\*1 When [Real Expression] is set to [Fixed Decimal], the value set for [Digits] is handled as the number of digits of the integer portion.

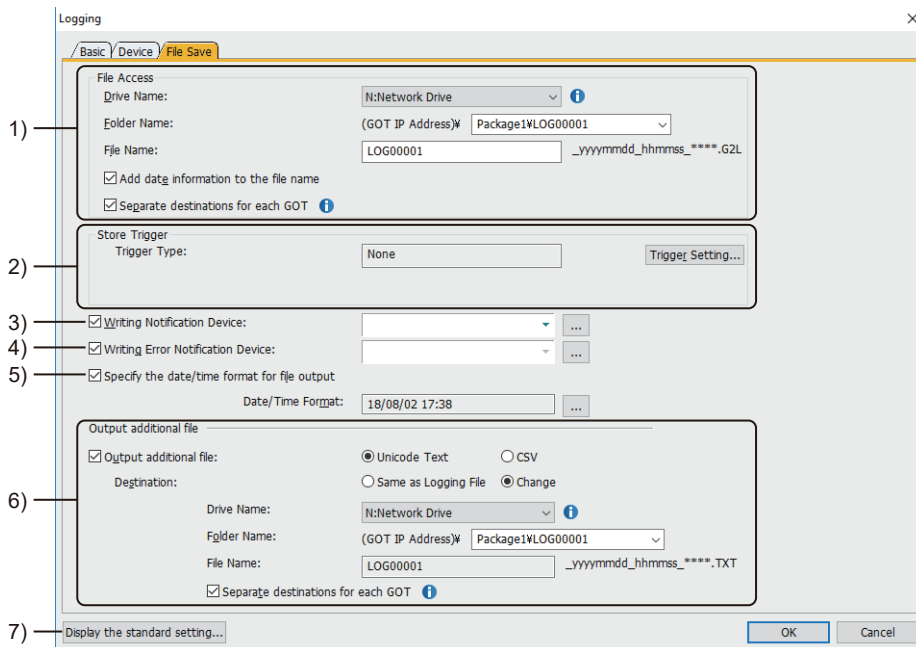

The sum of the values set for [Digits] and [Decimal Point] must be 32 or less.

### 3 [File Save] tab

Configure the settings to save the logging data in the buffering area into a data storage or file server. This tab appears in the following cases.

- When the file save mode is selected
- When [Buffer Save] is enabled for the buffer historical mode

#### 1) [File Access]

Set the file that stores logging data.

Item	Description
[Drive Name]	<p>Select a destination drive.</p> <p>The following shows selectable items.</p> <ul style="list-style-type: none"> <li>• [A:Standard SD Card]</li> <li>• [B:USB Drive]</li> <li>• [E:USB Drive]</li> <li>• [F:USB Drive]</li> <li>• [G:USB Drive]</li> <li>• [N:Network Drive]</li> <li>• [X:Current Drive]</li> </ul> <p>For the available drives by GOT model, refer to the following.</p> <p>→1.2.7 Drive configuration of the target GOT for data transfer</p>
[Folder Name]	<p>Set the name of the folder where files are stored.</p> <p>In the default setting, [Package Folder Name] selected from [Common] → [GOT Type Setting] is set as the folder name.</p> <p>→12.4 Restrictions for Folder Names and File Names used in GOT</p>
[File Name]	<p>Set the name of the files to be saved.</p> <p>In the default setting, LOG □ is set for the file name. (□ indicates the logging ID.)</p> <p>→12.4 Restrictions for Folder Names and File Names used in GOT</p>
[Add date information to the file name]	<p>Adds the date (year, month, and day) and time (hour, minute, and second) to the file name when the file is saved.</p> <p>The date and time information of the first event in the logging file is used.</p>
[Specify the date/time format for file output]	<p>Available to GT27 and GT25.</p> <p>This item appears when [Drive Name] is set to [N:Network Drive].</p> <p>Automatically creates a folder for each GOT to save logging files.</p> <p>Each folder is named as the IP address of each GOT.</p> <p>→5.3.15 ■ 4 Creating a folder for each GOT</p>

## 2) [Store Trigger]

Click the [Trigger Setting] button to set conditions for collecting device values in the [Trigger Setting] dialog.

→6.2.2 Setting Trigger Types

## 3) [Writing Notification Device]

Set a device for notifying that the logging data is being saved.

→9.2.3 ■ 2 Device

## 4) [Writing Error Notification Device]

Set a device for notifying an error when saving the logging data has failed.

→9.2.3 ■ 2 Device

## 5) [Specify the date/time format for file output]

Set the format of the date and time displayed in a Unicode text file or CSV file.

Click the [...] button, and set the date/time formats in the [Date/Time Setting] dialog.

→6.3.2 Date/time format settings

## 6) [Output additional file]

Set these items to save a Unicode text file or CSV file when the logging data is saved.

→12.5 Precautions for Using Unicode Text File

Item	Description
[Output additional file]	<p>Select the file format to be additionally output.</p> <ul style="list-style-type: none"> <li>• [Unicode Text]: Saves a binary file (*.G2L) and a Unicode text file.</li> <li>• [CSV]: Saves a binary file (*.G2L) and a CSV file.</li> </ul>
[Save Destination]	<p>Select the save destination folder for the additionally output file.</p> <ul style="list-style-type: none"> <li>• [Same as Logging File]: Saves the output file to the location to which the logging file is saved.</li> <li>• [Change]: Saves the output file to a location different from the location to which the logging file is saved.</li> </ul> <p>Set [Drive Name], [Folder Name], and [Separate destinations for each GOT]. The setting method is the same as the one for [File Access] to store a logging file. [File Name] displays the name of the logging file.</p>

## 7) [Display the standard setting] button

Switches the [Logging] dialog to the standard display.

The set contents are held even after the display is switched.

→9.2.6 [Logging] dialog

## 9.2.8 [Logging File Conversion] dialog

GT27 GT25 GT23 GT21 SoftGOT2000 GS

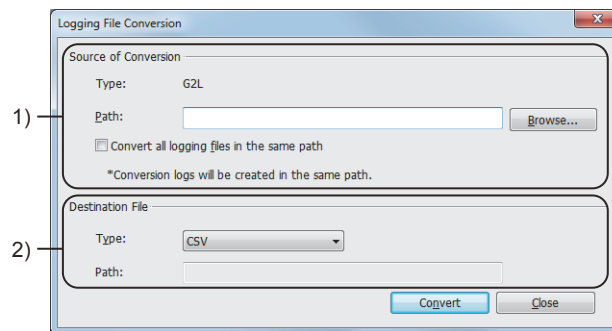

A binary file (\*.G2L) stored in the data storage with GT Designer3 can be converted into a Unicode text file or CSV file. Since the file is converted with GT Designer3, converting is processed without any load on the GOT.

**Step 1** Store the binary file by either of the following methods.

- Transferring with GT Designer3  
Select [Communication] → [Read from GOT...] from the menu to transfer a file to the personal computer.
- Storing by using the data storage  
Save logging data to the data storage and read the data in the data storage using the personal computer.

**Step 2** Select [Tools] → [Resource Data Conversion] → [Logging File] from the menu in GT Designer3 to display the [Logging File Conversion] dialog.

Set the following items and convert a binary file into a Unicode text file or a CSV file.

### 1) [Source of Conversion]

Item	Description
[Type]	Displays the file type of the conversion source file.
[Path]	Specify a path of the conversion source file.
[Convert all logging files in the same path]	Check this item to convert all files (G2L files only) that have the same path. When the conversion is executed after this item is checked, a conversion log is automatically created to the specified path. You can check the full path of the converted files, the conversion results (OK, NG), or the creation date of files in the conversion log.

### 2) [Destination File]

Item	Description
[Type]	Select a file type of a file to be created after the conversion. The following shows selectable items. <ul style="list-style-type: none"> <li>• [CSV]</li> <li>• [Unicode Text]</li> </ul>
[Path]	Displays the path of a file to be saved at the destination, which is the same path as the one of the conversion source file.

## 9.2.9 Relevant settings

---

GT27 GT25 GT23 GT21 SoftGOT2000 GS

Set the relevant settings other than the specific settings for the logging function as required. The following shows the functions that are available by the relevant settings.

### ■ 1 GOT internal device

⇒ 1.2.6 ■ 1 (1) GOT internal devices (GB, GD, and GS)

Function	Setting item
Saving the data in the buffering area to data storage (Buffer Flash Forced Saving signal) <sup>*1</sup>	GS520.b0
Changing the character code to Unicode when a binary file is converted to CSV format (Read device)	GS522.b2

\*1 If the setting for saving the logging data in the buffering area to the data storage is not configured (if [Buffer Save] in the logging setting is set to [No]), the data cannot be saved to the data storage.

## 9.3 Executing the Batch Write or Batch Read on Multiple Devices ([Recipe])

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### 9.3.1 Overview of the recipe function

GT27 GT25 GT23 GT21 SoftGOT2000 GS

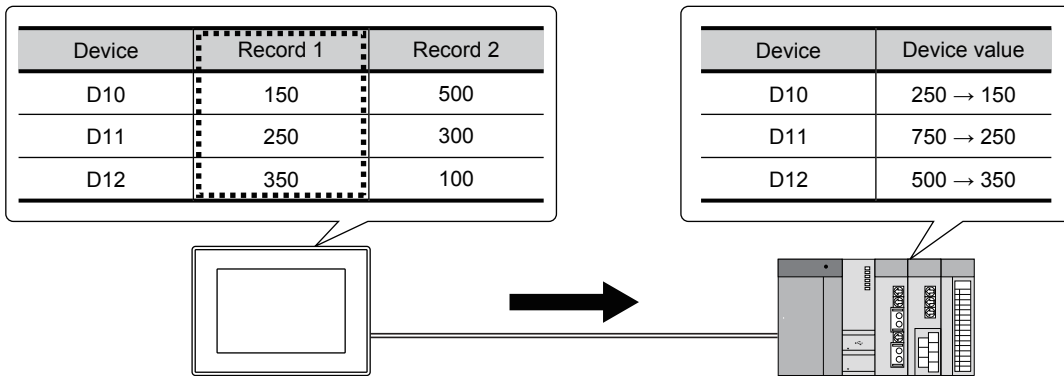

The recipe function collectively writes or reads values to or from multiple devices.

#### ■1 Writing device values

Preset values are written to multiple devices.

You can set multiple combinations of device values (records) to be written.

Example) Writing the values of record 1

#### ■2 Reading device values

Values are read from multiple devices.

The read values are saved as the values of a record in a data storage or the SRAM user area.

Example) Saving the read device values in record 2

## 9.3.2 Specifications of the recipe

GT27 GT25 GT23 GT21 SoftGOT2000 GS

- ⇒ ■ 1 Contents of a recipe setting
- 2 Types of writing and reading methods
- 3 Recipe data
- 4 Specifications of the recipe file

### ■ 1 Contents of a recipe setting

GT27 GT25 GT23 GT21 SoftGOT2000 GS

A recipe setting consists of target devices, combinations of values to be written (records), trigger devices, and other fields. Device values are read or written in units of recipe settings.

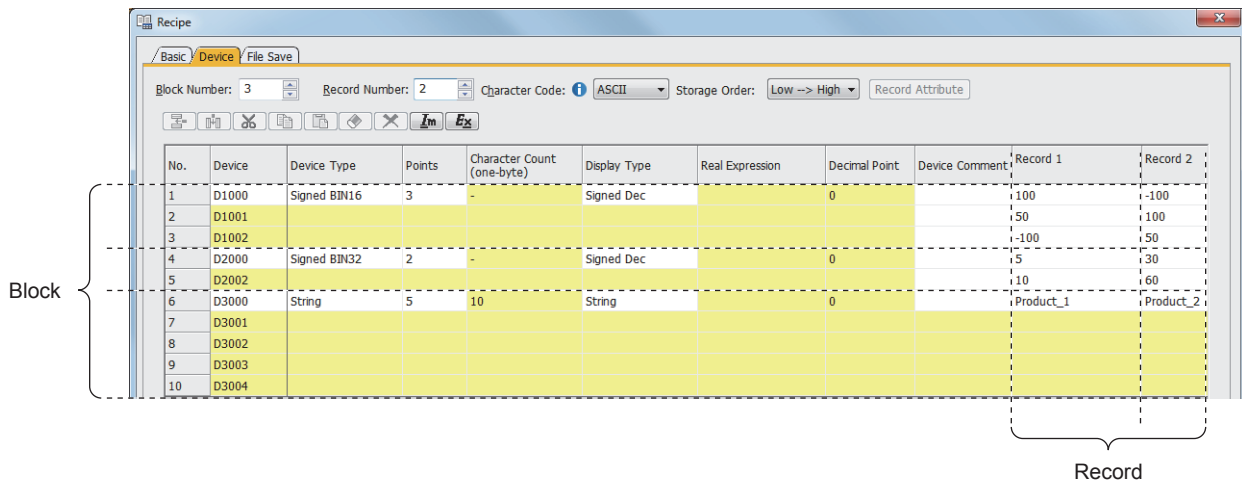

Each recipe setting has a recipe number used to specify the recipe data to be written or read.

The maximum number of recipe settings depends on the GOT model.

GOT	Number of recipe settings per project	Setting range of recipe No.
GT27, GT25, GT23, GT SoftGOT2000	Up to 2500 settings	1 to 32767
GT21	Up to 256 settings	

Set recipe settings in the [Recipe] dialog.

⇒ 9.3.7 [Recipe] dialog

For the details of blocks, devices, and records, refer to the following.

- ⇒ (1) Block
- (2) Device
- (3) Record

#### (1) Block

Target devices are set in units of blocks.

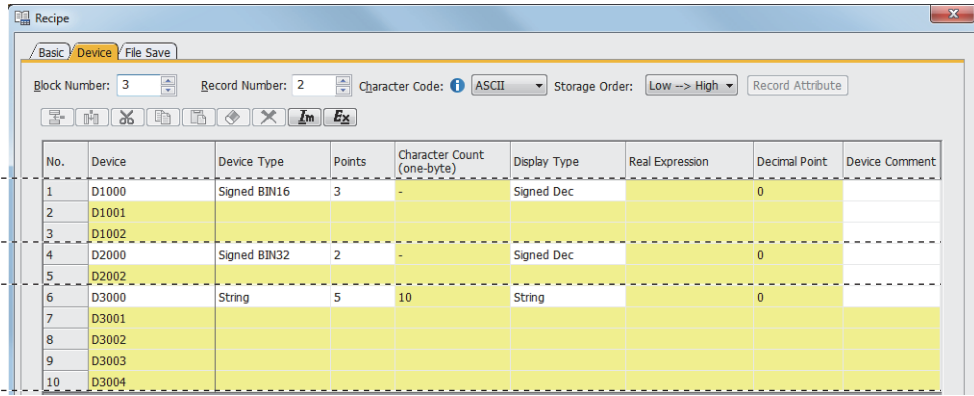

Up to 2048 blocks can be set in one recipe setting.

Set target devices, device types, and number of devices by block.

To set different types of devices in one recipe setting, arrange the devices by block according to their type.

To set consecutive devices as target devices in one block, set the number of devices.

Example) Setting example of blocks

Block	[Device]	[Device Type]	[Points]
Block 1	[D1000] Three consecutive devices (D1000 to D1002) are set as target devices.	[Signed BIN16]	3
Block 2	[D2000] Two 32-bit-equivalent consecutive devices (D2000 to D2003) are set as target devices.	[Signed BIN32]	2
Block 3	[D3000] Five consecutive devices (D3000 to D3004) are set as target devices.	[String]	5

**(2) Device**

Multiple devices to which values are written, or from which values are read.  
The following shows the maximum number of target devices that can be set.

**(a) Number of devices per recipe setting**

The number of devices that can be set per recipe setting (the total of all blocks) depends on the number of records to be set.

- 256 records or less: 65536 devices
- 257 records or more: 8192 devices

**(b) Number of devices per block**

The number of devices that can be set per block depends on the number of records to be set.  
However, when [Device Type] is [String], up to 2048 devices can be set regardless of the number of records.

- 256 records or less: 32768 devices
- 257 records or more: 8192 devices

**(c) Maximum number of devices per project**

When recipe files are saved in drive C or D of GT21, the numbers of devices and records are restricted as follows.

- The number of devices per recipe setting is calculated by using the expression "the number of devices × the number of records". The total number of devices in all recipe settings must be 8000 or less.

**(3) Record**

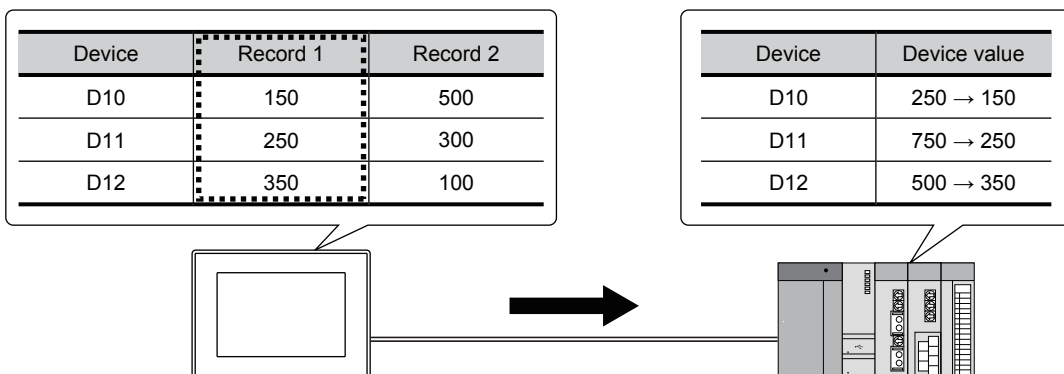

Values of target devices are managed in units of records.  
Up to 2000 records can be set in one recipe setting.

**(a) When writing device values**

Specify values to be written to devices in units of records.

One record can be specified for one write.

Example) Writing the values of record 1

## (b) When reading device values

The values read from devices are saved as one record.

One record can be specified for one read.

Example) Saving the read device values in record 2

## ■ 2 Types of writing and reading methods

GT27 GT25 GT23 GT21 SoftGOT2000 GS

### (1) Writing methods

The following writing methods are available when the GOT writes the values of a record into the target devices of a controller.

#### (a) Trigger device per project

Specify a recipe number and a record number with applicable devices to write the values of the record into the target devices of a controller.

The trigger device is shared among all the recipe settings in one project.

The trigger condition is satisfied only by turning on the trigger device.

For the setting and operating procedures, refer to the following.

⇒9.3.3 ■ 1 (1) Writing device values using a trigger device per project

#### (b) Trigger device per recipe setting

Specify a record number with an applicable device to write the values of the record into the target devices of a controller. (When the recipe setting has only one record, the record number does not need to be specified.)

Up to two trigger devices can be set. The following setting can be configured: Device values are written only when both of the trigger conditions are satisfied.

Each trigger condition is satisfied by turning on or off a trigger device.

For the setting and operating procedures, refer to the following.

⇒9.3.3 ■ 1 (2) Writing device values using a trigger device per recipe setting

#### (c) Recipe operation window

Specify a recipe file in the recipe operation window to write the values of the record into the target devices of a controller.

To write device values in the recipe operation window, recipe files are necessary.

For the setting and operating procedures, refer to the following.

⇒9.3.3 ■ 1 (3) Writing device values in the recipe operation window

#### (d) Recipe display (record list)

Use a key code switch to write a record selected on the recipe display (record list).

This method requires the applicable key code switch.

For the setting and operating procedures, refer to the following.

⇒8.14 Placing a Recipe Display (Record List)

8.2.11 [Key Code Switch] dialog

### (2) Reading methods

The following reading methods are available when the GOT reads values from the target devices of a controller into a record.

#### (a) Trigger device per project

Specify a recipe number and a record number with applicable devices to read values from the target devices of a controller into the record.

The trigger device is shared among all the recipe settings in one project.

The trigger condition is satisfied only by turning on the trigger device.

For the setting and operating procedures, refer to the following.

→9.3.3 ■ 2 (1) Reading device values using a trigger device per project

#### (b) Trigger device per recipe setting

Specify a record number with an applicable device to read values from the target devices of a controller into the record. (When the recipe setting has only one record, the record number does not need to be specified.)

Up to two trigger devices can be set. The following setting can be configured: Device values are read only when both of the trigger conditions are satisfied.

Each trigger condition is satisfied by turning on or off a trigger device.

For the setting and operating procedures, refer to the following.

→9.3.3 ■ 2 (2) Reading device values using a trigger device per recipe setting

#### (c) Recipe operation window

Specify a recipe file in the recipe operation window to read values from the target devices of a controller into the record. To read device values, recipe files are necessary.

For the setting and operating procedures, refer to the following.

→9.3.3 ■ 2 (3) Reading device values in the recipe operation window

#### (d) Recipe display (record list)

Use a key code switch to read a record selected on the recipe display (record list).

This method requires the applicable key code switch.

For the setting and operating procedures, refer to the following.

→8.14 Placing a Recipe Display (Record List)

8.2.11 [Key Code Switch] dialog

### ■ 3 Recipe data

The recipe data includes the target devices, records, and device comments based on a recipe setting.

The records in the recipe data are subjected to reading and writing.

You can save the recipe data into a data storage or the SRAM user area.

Set the save destination in the [Recipe] dialog ([Basic] tab).

→9.3.7 ■ 1 [Basic] tab

The recipe data is handled differently depending on the save destination setting.

- When [Recipe Data Save Location] is set to [Data Storage (Recipe File)(read and write)]
  - (1) Saving the data into a data storage
- When [Recipe Data Save Location] is set to [Embedded Memory in GOT (read and write)]
  - (2) Saving the data into the SRAM user area
- When [Recipe Data Save Location] is set to [Not save (record value write only)]
  - (3) Not saving the data

#### (1) Saving the data into a data storage

The recipe data is saved to a recipe file in the specified drive (data storage) of the GOT.

The records in the recipe file are subjected to reading and writing.

To edit the recipe data, transfer the recipe file to a personal computer.

The following shows the available drives of the GOT.

- Drive A
- Drive B
- Drive C (GT2103-P)
- Drive D (GT2107-W, GT2105-Q, GT2104-P, and GT2104-R)
- Drive E
- Drive F
- Drive G
- Drive X (current drive)

For the available drives by GOT model, refer to the following.

→1.2.7 Drive configuration of the target GOT for data transfer

Some GT21 models have drive C or D.

No data storage is required to use drive C or D.

## (2) Saving the data into the SRAM user area

Not available to GT21.

The recipe data is saved into the SRAM user area of the GOT.

No recipe file is created.

The records of the recipe data in the SRAM user area are subjected to reading and writing.

In this case, the following operations are not available.

- Operations in the recipe operation window

The SRAM user area space is limited.

Only the following fields are saved accordingly. For the other fields, the recipe settings in the project are used.

- Record name
- Record attribute
- Values of the record

To use device comments or other fields, or large amounts of recipe data, save the recipe data to a recipe file in the data storage.

For the details of the SRAM user area, refer to the following.

⇒9.3.3 ■ 10 Saving recipe data into the SRAM user area

## (3) Not saving the data

The recipe data is not saved.

No recipe file is created.

The records in a recipe setting in the project are subjected to writing.

In this case, the following operations are not available.

- Writing device values in the recipe operation window
- Reading device values

Select not to save the recipe data for write operations only.

## ■ 4 Specifications of the recipe file

⇒(1) Recipe file

(2) Recipe file format

(3) Configuration of the recipe file

### (1) Recipe file

A recipe file contains recipe data.

The records in the recipe file are subjected to reading and writing, and the contents of the file are editable.

Set whether to use the recipe file per recipe setting.

To use a recipe file, set [Recipe Data Save Location] to [Data Storage (Recipe File)(read and write)] in the [Recipe] dialog ([Basic] tab).

⇒9.3.7 ■ 1 [Basic] tab

A recipe file is automatically created when all of the following conditions are satisfied at writing or reading.

- [Recipe Data Save Location] is set to [Data Storage (Recipe File)(read and write)] in the [Recipe] dialog.
- The writing or reading method is using a trigger device per project or per recipe setting.
- No recipe file exists.

For the behavior when a recipe file is used, refer to the following.

⇒9.3.2 ■ 3 (1) Saving the data into a data storage

### (2) Recipe file format

The following file formats are available for recipe files.

#### (a) Binary format (\*.G2P)

A recipe file is created in binary format (\*.G2P).

One file is created for one recipe setting.

To edit such a recipe file on a personal computer, convert it to CSV or Unicode text format.

In this case, unlike a recipe file originally in CSV or Unicode text format, the file still contains multiple records after its format is converted.

#### (b) CSV format (\*.CSV)

A recipe file created in CSV format (\*.CSV) is used intact.

To edit such a file on a personal computer, the file format conversion is not required.

One recipe file contains one record only. Recipe files are created for each record.

The record number is added to the end of the file name.  
 Example) Recipe file with record number 3: ARP00001\_0003.CSV

**(c) Unicode text format (\*.TXT)**

A recipe file in Unicode text format (\*.TXT) is used intact.  
 To edit such a file on a personal computer, the file format conversion is not required.  
 One recipe file contains one record only. Recipe files are created for each record.  
 The record number is added to the end of the file name.  
 Example) Recipe file with record number 3: ARP00001\_0003.TXT

For how to set the file format, refer to the following.

→9.3.7 ■ 1 [Basic] tab

**(3) Configuration of the recipe file**

The following shows the configuration of a recipe file in CSV or Unicode text format.  
 To edit a recipe file in binary format (\*.G2P) on a personal computer, convert it to CSV or Unicode text format.  
 Only the following items can be edited.

- Record name
- Record attribute
- Record
- Device comment (when edit is allowed in the recipe setting)

	A	B	C	D	E	F	G	H	I
1)	GT2K_RECIP		0						
2)	RECIP ID		DEVCOMT CNV	32					
3)	RECIP NAME	Recipe_1							
4)	DEVIC NUM								
5)	RECORD NUM								
6)	DATE ORDER	YYYY/MM/DD hh:mm:ss							
7)	LOCAL TIME								
8)	TIME INF ORDER								
		DEV.COMMENT	DEV.TYPE	DISP.TYPE	DEV.SIZE	1	2	3	4
10)	RECORD_NAME					Product 1	Product 2	Product 3	Check
11)	RECORD_ATTR					P	P	P	
12)	UPDATE								12/12/2014 18:33
13)	1	Material_A-1	BIN16	DEC	1	100	150	300	300
14)	2	Material_B-1	BIN16	DEC	1	10	20	30	30
15)	3	Material_B-2	BIN16	DEC	1	50	40	30	30
16)	4	Material_C-1	BIN16	DEC	1	255	0	100	100
17)	5	Material_C-2	BIN16	DEC	1	100	255	0	0
18)	6	Material_C-3	BIN16	DEC	1	0	100	255	255
19)	7	FLG_1	BIT	BIT	1	OFF	OFF	OFF	OFF
20)	8	FLG_2	BIT	BIT	1	OFF	OFF	OFF	OFF
21)	9	Name	STRING	ASC	5	Product_1	Product_2	Product_3	Product_3

**1) Recipe No.**

Recipe number of a source recipe setting

**2) Number of characters in the device comment to be converted**

Number of characters in a target device comment when the recipe file is converted from CSV or Unicode text format to binary format (\*.G2P).  
 This item is output when [Include device comments in conversion target] is selected in the [Basic] tab in the [Recipe] dialog.

**3) Recipe name**

Name of a source recipe setting

**4) Total number of devices**

Total number of devices in a source recipe setting

**5) Number of records**

Number of records in a source recipe setting

**6) Order of date and time**

Order of date and time output when the records are updated

**7) Time zone**

Difference between Greenwich Mean Time and local time

**8) Time information**

Information on time data

- L: Local time

**9) Record No.**

Record number of each record

**10) Record name**

Each record name

Up to 32 characters can be set.

#### 11) **Record attribute**

Record attribute of each record.

The following shows the items to be selected.

- Blank column: Device values can be changed.
- P: Device values cannot be changed.
- N: No device value

#### 12) **Record update time**

Time at which the device values of a record are updated to the read ones

#### 13) **Line number**

Line number of each line

#### 14) **Device comment**

Comment for the device in each line.

Up to 32 characters can be set.

Set the number of characters applied at the conversion in [Maximum number of characters] in the [Basic] tab of the [Recipe] dialog.

#### 15) **Device type**

Type of the device in each line

- BIT: Bit
- BIN16: Signed 16-bit binary
- BIN16\_Unsigned: Unsigned 16-bit binary
- BIN32: Signed 32-bit binary
- BIN32\_Unsigned: Unsigned 32-bit binary
- BCD16: 16-bit binary-coded decimal
- BCD32: 32-bit binary-coded decimal
- REAL: Real number
- STRING: Character string

#### 16) **Display format**

Display format of the device in each line

- BIT: Bit
- DEC: Signed decimal
- UNSIGNED\_DEC: Unsigned decimal
- REAL\_FLOAT: Real number (exponential expression)
- REAL\_FIX: Real number (fixed-point number)
- ASC: ASCII code
- UNI: Unicode
- S-JIS: Shift JIS code
- KS: KS (Korean)
- GB: GB (Simplified Chinese)
- BIG5: BIG5 (Traditional Chinese)
- BIN: Binary number
- OCT: Octal number
- HEX: Hexadecimal number

#### 17) **Number of devices**

Number of devices in each line

#### 18) **Record**

Device values of each record.

Edit the value according to the device type.

Multiple records are managed in a recipe file, which is converted from binary format (\*.G2P).

Only one record is managed in a recipe file, which is originally created in CSV or Unicode text format.

### 9.3.3 How to use the recipe

**GT27** **GT25** **GT23** **GT21** **SoftGOT2000** **GS**

- ➔ ■ 1 Writing device values
- 2 Reading device values
- 3 Editing recipe files
- 4 Converting a recipe file
- 5 Operations with the recipe display (record list)
- 6 Operations in the recipe operation window and utility
- 7 Using a GOT1000 advanced recipe file (\*.G1P)
- 8 Operations with GOT special registers (GS) (Recipe special control)
- 9 Link with the recipe display (record list) by using GOT special registers
- 10 Saving recipe data into the SRAM user area

The following shows how to set a recipe setting.

**Step 1** Click [Common] → [Recipe] → [Recipe] from the menu to display the [Recipe List] dialog.

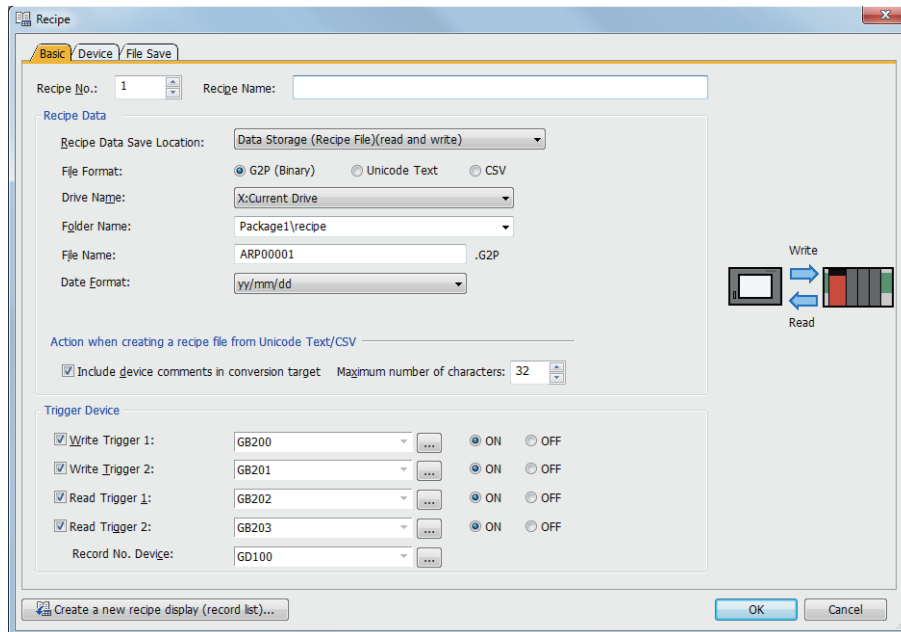

➔9.3.6 [Recipe List] dialog

**Step 2** Perform one of the following operations to display the [Recipe] dialog.

- Click the [New] button.
- Select a recipe setting and click the [Edit] button.

➔9.3.7 [Recipe] dialog

**Step 3** Set necessary items in each tab in the [Recipe] dialog, and click the [OK] button to complete the recipe

setting.

- [Basic] tab  
Set the recipe number and the trigger device for writing or reading values per recipe setting.
  - [Device] tab  
Set the target device and record.
  - [File Save] tab  
Set the desired file format and save destination when converting a binary recipe file (\*.G2P) by using a trigger device.
- ⇒9.3.7 ■ 1 [Basic] tab  
9.3.7 ■ 2 [Device] tab  
9.3.7 ■ 3 [File Save] tab

## ■ 1 Writing device values

- ⇒(1) Writing device values using a trigger device per project
- (2) Writing device values using a trigger device per recipe setting
- (3) Writing device values in the recipe operation window
- (4) Writing device values using the recipe display (record list)

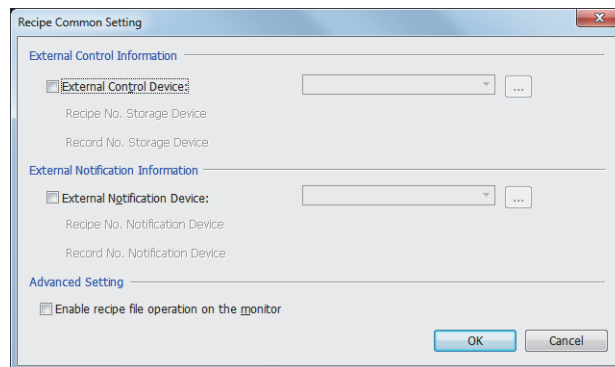

### (1) Writing device values using a trigger device per project

#### (a) Setting in GT Designer3

**Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.

⇒9.3.5 [Recipe Common Setting] dialog

**Step 2** Select [External Control Device], set a device, and click the [OK] button.

Consecutive devices, starting from the device set in [External Control Device], are automatically set in [Recipe No. Storage Device] and [Record No. Storage Device].

Bit 0 of the device set in [External Control Device] is set as the write trigger device (per project).

⇒9.3.5 ■ 1 [External Control Device]

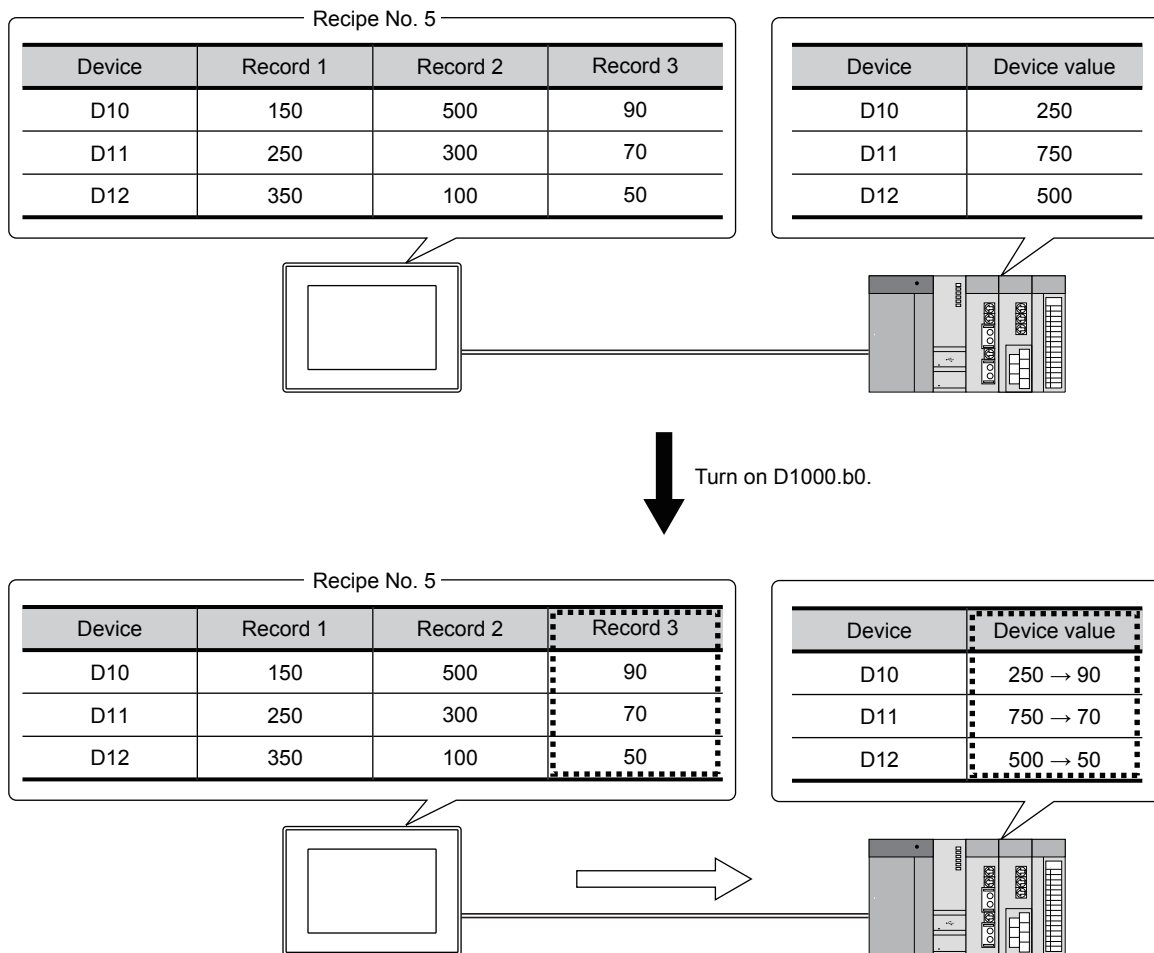

#### (b) Operation on the GOT

Input values into the Recipe No. Storage device and the Record No. Storage device respectively, and then satisfy the condition of the write trigger.

The values of the specified record will be written into the target devices.

Example) Writing record 3 in recipe No. 5

- [External Control Device]: D1000
- [Recipe No. Storage Device]: D1001 = 5
- [Record No. Storage Device]: D1002 = 3

**(2) Writing device values using a trigger device per recipe setting**

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

**(a) Setting in GT Designer3**

**Step 1** Select [Common] → [Recipe] → [Recipe] from the menu to display the [Recipe List] dialog.

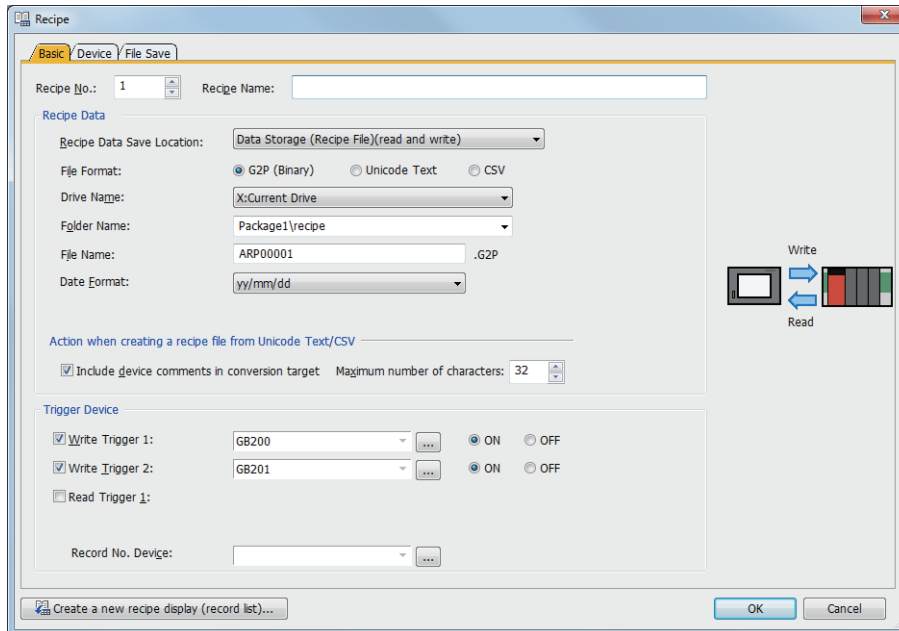

→9.3.6 [Recipe List] dialog

**Step 2** Perform one of the following operations to display the [Recipe] dialog.

- Click the [New] button.
- Select a recipe setting and click the [Edit] button.

→9.3.7 [Recipe] dialog

**Step 3** Set the following items in the [Basic] tab, and click the [OK] button.

- [Recipe Data Save Location]  
Set the save destination of the recipe data.
- [Write Trigger 1]  
Select this item to set a device and its trigger condition (ON or OFF).
- [Write Trigger 2]  
Set this item as required.
- [Record No. Device]  
Set a device.  
When the number of records is one, record 1 is always specified, and thus no setting is required.

**(b) Operation on the GOT**

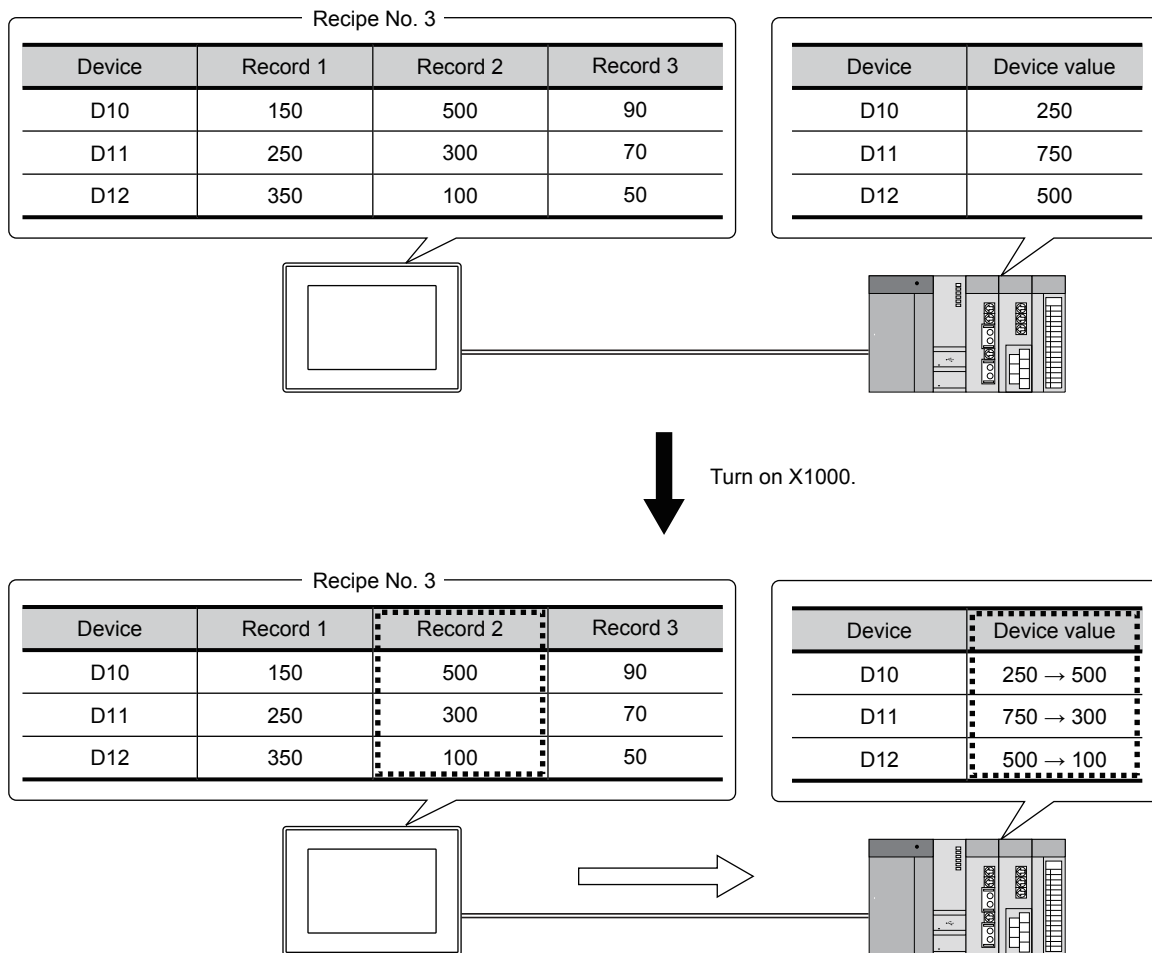

Input a value into the Record No. device, and then satisfy the condition of the write trigger.

The values of the specified record will be written into the target devices.

Example) Writing record 2 in recipe No. 3

- [Write Trigger 1] of recipe No. 3: X1000 (Trigger condition: ON)
- [Record No. Device] of recipe No. 3: D1100 = 2

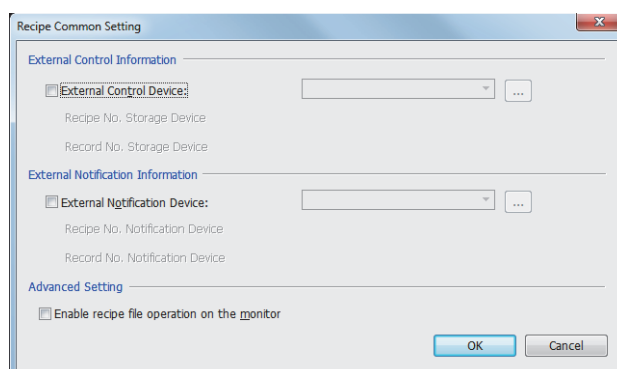

### (3) Writing device values in the recipe operation window

GT27 GT25 GT23 GT21 SoftGOT2000 GS

#### (a) Setting in GT Designer3

**Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.

⇒ 9.3.5 [Recipe Common Setting] dialog

**Step 2** Select [Enable recipe file operation on the monitor], and click the [OK] button.

**Step 3** To display the recipe operation window on the monitor screen, use a special function switch ([Switch Action]: [Recipe Information]).

For the special function switch settings, refer to the following.

⇒ 8.2.9 [Special Function Switch] dialog

#### (b) Procedure on the GOT

Perform one of the following operations to display the recipe operation window.

- Touch a special function switch ([Switch Action]: [Recipe Information]).
- Touch the [Oper.] button on the [Recipe information] screen in the utility.

For the recipe operation window and the operations in the utility, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

#### (4) Writing device values using the recipe display (record list)

For the setting and operating procedures for the recipe display (record list), refer to the following.

⇒8.14.2 How to use the recipe display (record list)

### ■ 2 Reading device values

- ⇒(1) Reading device values using a trigger device per project
- (2) Reading device values using a trigger device per recipe setting
- (3) Reading device values in the recipe operation window
- (4) Reading device values using the recipe display (record list)

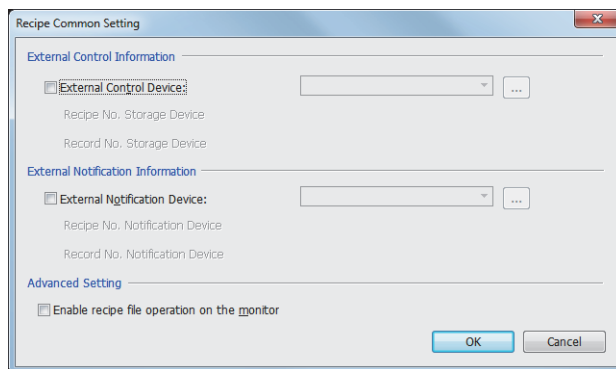

#### (1) Reading device values using a trigger device per project

##### (a) Setting in GT Designer3

**Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.

⇒9.3.5 [Recipe Common Setting] dialog

**Step 2** Select [External Control Device], set a device, and click the [OK] button.

Consecutive devices, starting from the device set in [External Control Device], are automatically set in [Recipe No. Storage Device] and [Record No. Storage Device].

Bit 1 of the device set in [External Control Device] is set as the read trigger device (per project).

⇒9.3.5 ■ 1 [External Control Device]

##### (b) Operation on the GOT

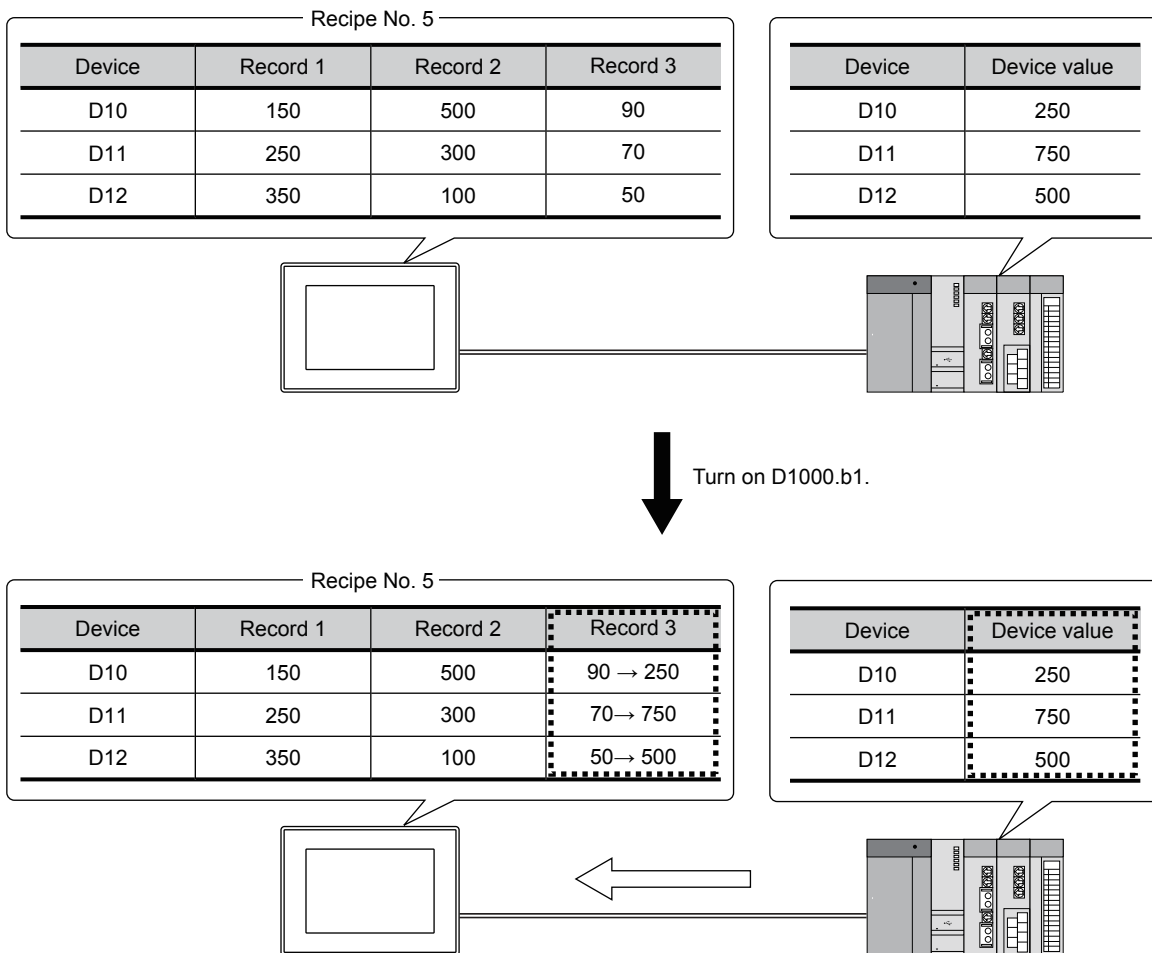

Input values into the Recipe No. Storage device and the Record No. Storage device respectively.

Then, satisfy the condition of the read trigger.

The values of the specified record will be overwritten with the values read from the target devices.

Example) Reading device values and overwriting record 3 in recipe No. 5

- [External Control Device]: D1000
- [Recipe No. Storage Device]: D1001 = 5
- [Record No. Storage Device]: D1002 = 3

**(2) Reading device values using a trigger device per recipe setting**

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

**(a) Setting in GT Designer3**

**Step 1** Click [Common] → [Recipe] → [Recipe] from the menu to display the [Recipe List] dialog.

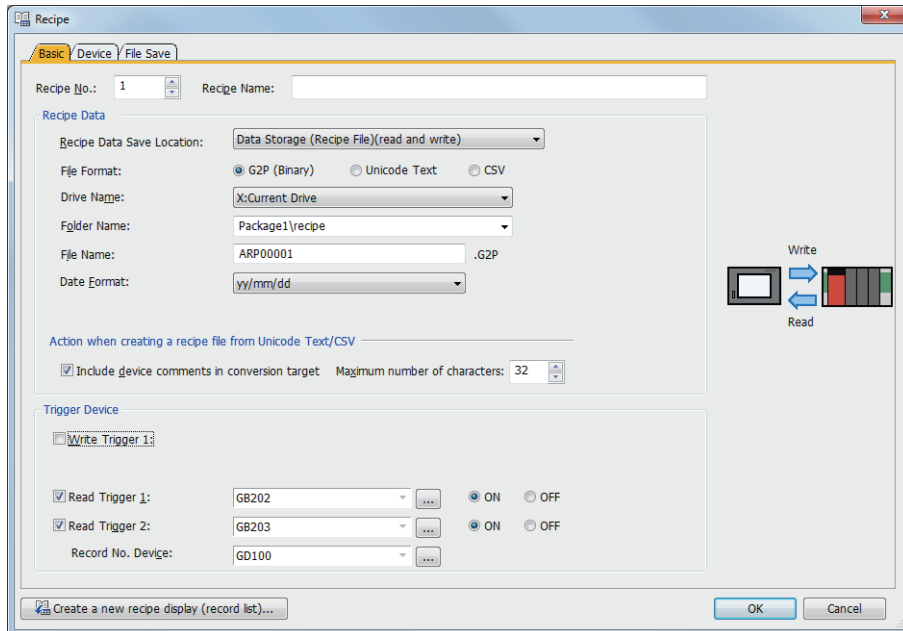

→9.3.6 [Recipe List] dialog

**Step 2** Perform one of the following operations to display the [Recipe] dialog.

- Click the [New] button.
- Select a recipe setting and click the [Edit] button.

→9.3.7 [Recipe] dialog

**Step 3** Set the following items in the [Basic] tab, and click the [OK] button.

- [Recipe Data Save Location]  
Set the save destination of the recipe data.
- [Read Trigger 1]  
Select this item to set a device and its trigger condition (ON or OFF).
- [Read Trigger 2]  
Set this item as required.
- [Record No. Device]  
Set a device.  
When the number of records is one, record 1 is always specified, and thus no setting is required.

**(b) Operation on the GOT**

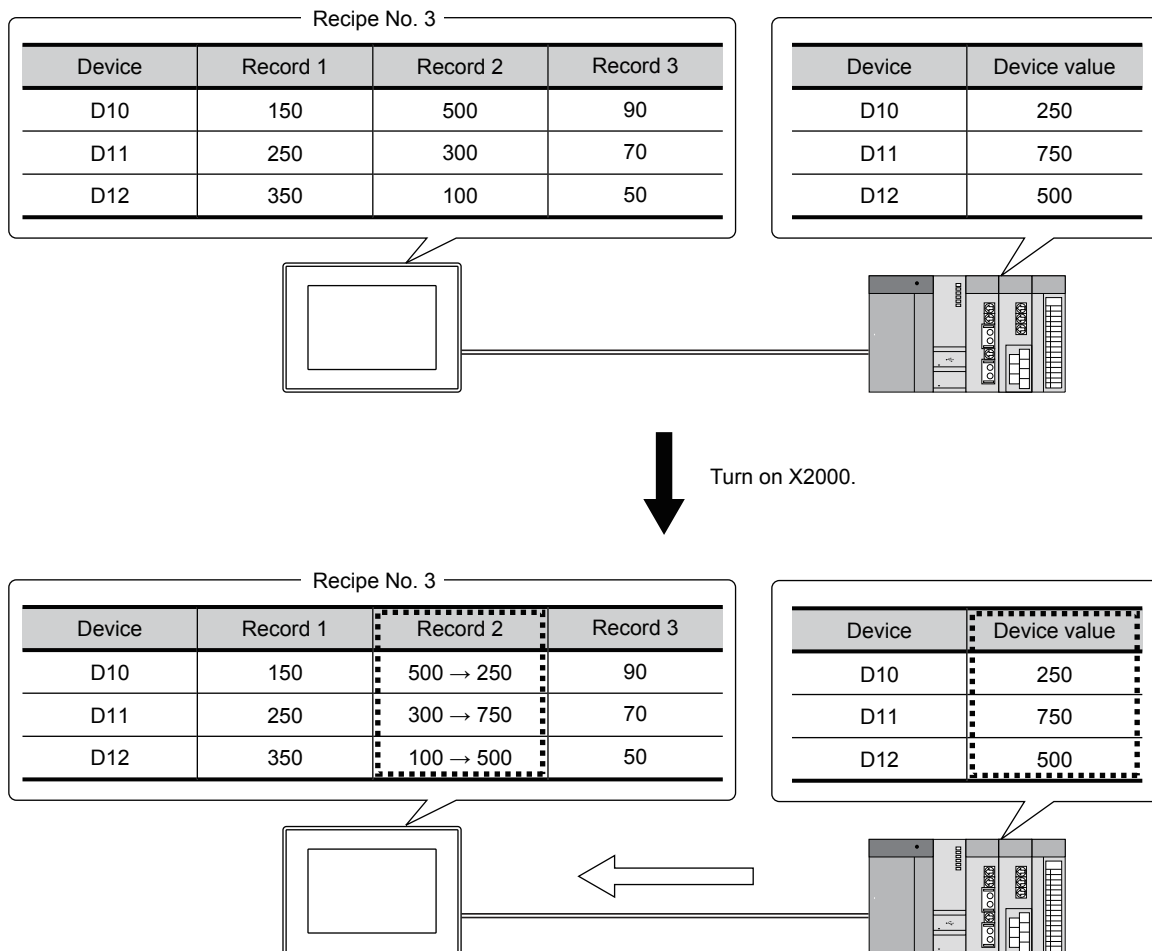

Input a value into the Record No. device.

Then, satisfy the condition of the read trigger.

The values of the specified record will be overwritten with the values read from the target devices.

Example) Reading device values and overwriting record 2 in recipe No. 3

- [Read Trigger 1] of recipe No. 3: X2000 (Trigger condition: ON)
- [Record No. Device] of recipe No. 3: D1100 = 2

**(3) Reading device values in the recipe operation window**

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

**(a) Setting in GT Designer3**

**Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.

⇒ 9.3.5 [Recipe Common Setting] dialog

**Step 2** Select [Enable recipe file operation on the monitor], and click the [OK] button.

**Step 3** To display the recipe operation window on the monitor screen, use a special function switch ([Switch Action]: [Recipe Information]).

For the special function switch settings, refer to the following.

⇒ 8.2.9 [Special Function Switch] dialog

**(b) Procedure on the GOT**

Perform one of the following operations to display the recipe operation window.

- Touch a special function switch ([Switch Action]: [Recipe Information]).
- Touch the [Oper.] button on the [Recipe information] screen in the utility.

For the recipe operation window and the operations in the utility, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

#### (4) Reading device values using the recipe display (record list)

For the setting and operating procedures for the recipe display (record list), refer to the following.

⇒8.14.2 How to use the recipe display (record list)

### ■3 Editing recipe files

- ⇒(1) Transferring a recipe file using a data storage
- (2) Transferring a recipe file directly between a personal computer and the GOT
- (3) Importing a recipe file by using a special function switch (Recipe data operation)
- (4) Exporting a recipe file by using a special function switch (Recipe data operation)

You can transfer recipe files to a personal computer to edit, and then transfer them back to the GOT to use.

The following shows how to transfer a recipe file between the GOT and a personal computer.

For a recipe file in CSV or Unicode text format, edit the file on a personal computer directly.

For a recipe file in binary format (\*.G2P), convert the file to CSV or Unicode text format, and then edit it on a personal computer.

After editing a recipe file, convert the file back to binary format (\*.G2P) and then use it on the GOT.

The following shows how to transfer a recipe file between the GOT and a personal computer.

If the save destination of the recipe data is set to the SRAM user area, no recipe file will be created.

To edit the recipe data stored in the SRAM user area on a personal computer, export the data to a recipe file.

⇒9.3.3 ■4 Converting a recipe file

#### (1) Transferring a recipe file using a data storage

Install a data storage that contains a recipe file to a personal computer, and read the file.

Then, install the data storage that contains the edited recipe file to the GOT to use the file.

#### (2) Transferring a recipe file directly between a personal computer and the GOT

Connect a personal computer with the GOT to read a recipe file.

Recipe files cannot be written from a personal computer to the GOT.

⇒4.3 Transferring the Data between the Personal Computer and the GOT

**(3) Importing a recipe file by using a special function switch (Recipe data operation)**

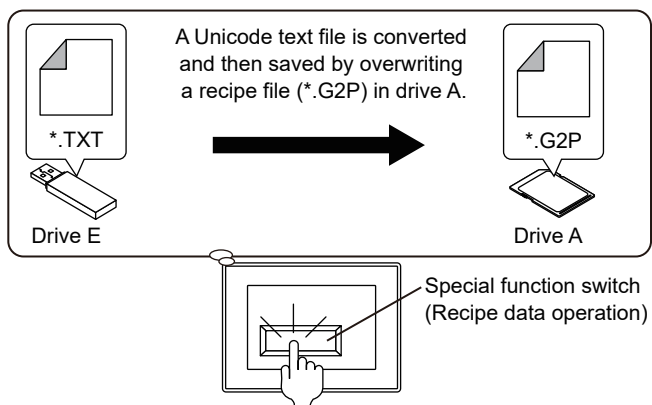

**GT27 GT25 GT23 GT21 SoftGOT2000 GS**

The behavior of the special function switch (Recipe data operation) varies depending on the recipe data save destination setting.

**(a) When the save destination is set to the data storage (recipe file)**

This operation is available for a recipe file in the binary format (\*.G2P) only. When you touch a special function switch ([Switch Action]: [Recipe Data Operation]), the recipe file (\*.G2P) having the specified recipe number is overwritten with the data from the import source file. The import source file must be in the binary format (\*.G2P), CSV format (\*.CSV), or Unicode text format (\*.TXT). When you use an import source file in the CSV format (\*.CSV) or Unicode text format (\*.TXT), the file is converted to the binary format and then saved on the GOT. (The conversion source file is not deleted.) When you use an import source file in the binary format (\*.G2P), the file is saved without conversion.

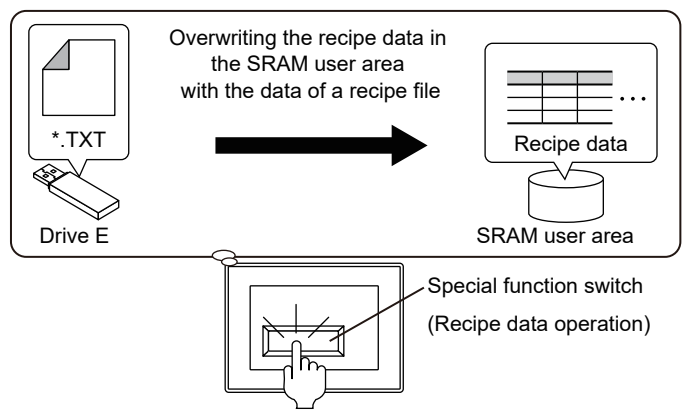

Example) When importing a Unicode text file in drive E to a recipe file (\*.G2P) in drive A

**(b) When the save destination is set to the SRAM user area**

When you touch a special function switch ([Switch Action]: [Recipe Data Operation]), the recipe data in the SRAM user area is overwritten with the data from the import source file. The import source file must be in the binary format (\*.G2P), CSV format (\*.CSV), or Unicode text format (\*.TXT).

Example) When importing data from a Unicode text file in drive E into the recipe data in the SRAM user area

- (c) When not saving the recipe data  
The data of a recipe file cannot be imported.

**(4) Exporting a recipe file by using a special function switch (Recipe data operation)**

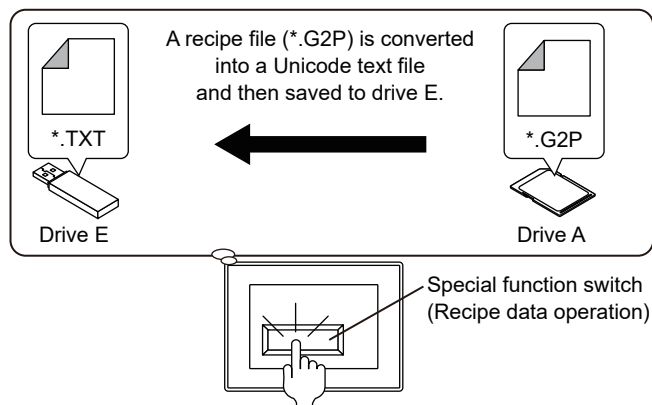

The behavior of the special function switch (Recipe data operation) varies depending on the recipe data save destination setting.

**(a) When the save destination is set to the data storage (recipe file)**

This operation is available for a recipe file in the binary format (\*.G2P) only.  
When you touch a special function switch ([Switch Action]: [Recipe File Operation]), the recipe file having a specified recipe number is saved to a specified folder.  
The export destination file must be in the binary format (\*.G2P), CSV format (\*.CSV), or Unicode text format (\*.TXT).  
When you specify the CSV format (\*.CSV) or Unicode text format (\*.TXT) for the export destination file, the export source file is converted to a specified file format and then saved on the GOT.  
When you specify the binary format (\*.G2P), the file is saved without conversion.

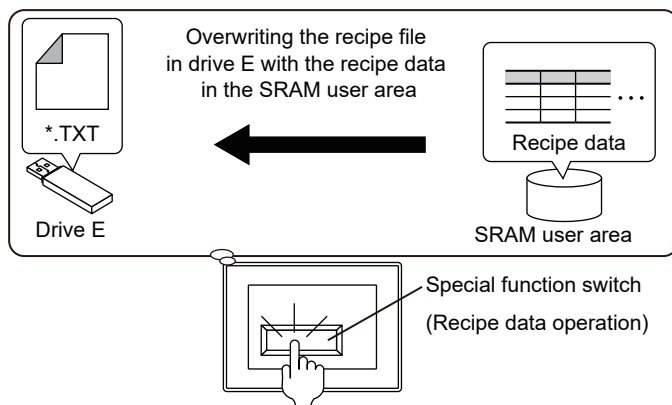

Example) When exporting a recipe file (\*.G2P) in drive A to drive E

**(b) When the save destination is set to the SRAM user area**

When you touch a special function switch ([Switch Action]: [Recipe Data Operation]), the recipe data in the SRAM user area is saved to a recipe file in a specified folder.  
The export destination file must be in the binary format (\*.G2P), CSV format (\*.CSV), or Unicode text format (\*.TXT).

Example) When exporting the recipe data from the SRAM user area into the recipe file (\*.TXT) in drive E

- (c) When not saving the recipe data  
The recipe data cannot be exported.

**4 Converting a recipe file**

- (1) Converting a recipe file using a trigger device per project
- (2) Converting a recipe file in the recipe operation window
- (4) Converting a recipe file with GT Designer3

(4) Converting a recipe file with GT Designer3

The following shows how to convert the format of a recipe file.

(1) Converting a recipe file using a trigger device per project

Use a trigger device to convert a recipe file on the GOT.

Convert files one by one.

The behavior when the trigger condition is satisfied varies depending on the recipe data save destination setting.

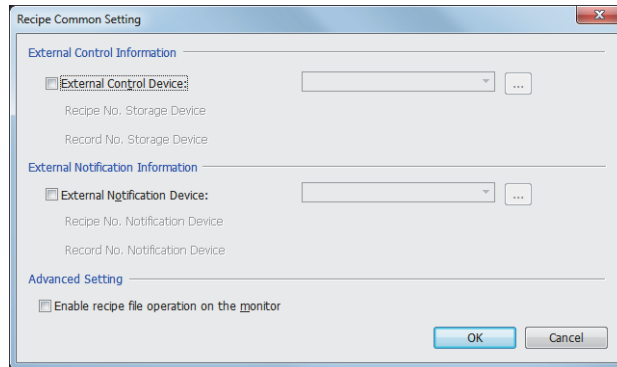

(a) Setting in GT Designer3

Set a trigger device used for conversion in the common setting.

Set the file format and save destination of conversion destination files for each recipe setting.

**Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.

⇒9.3.5 [Recipe Common Setting] dialog

**Step 2** Select [External Control Device], set a device, and click the [OK] button.

Consecutive devices, starting from the device set in [External Control Device], are automatically set in [Recipe No. Storage Device] and [Record No. Storage Device].

Bit 8 of the device set in [External Control Device] is set as the Convert Recipe File signal, and bit 9 is set as the Reverse-convert Recipe File signal.

⇒9.3.5 ■ 2 [External Notification Device]

**Step 3** Select [Common] → [Recipe] → [Recipe] from the menu to display the [Recipe List] dialog.

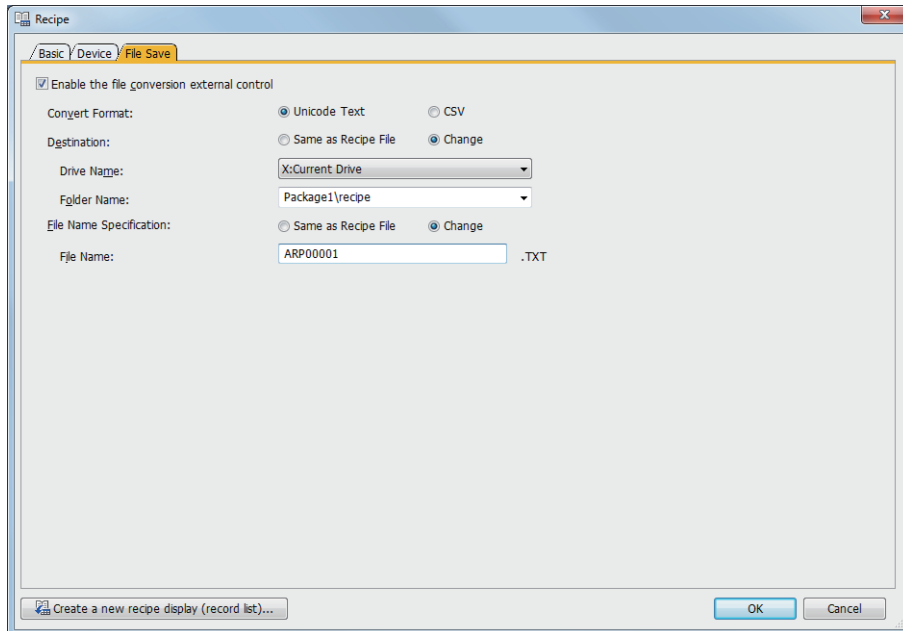

⇒9.3.6 [Recipe List] dialog

**Step 4** Perform one of the following operations to display the [Recipe] dialog.

- Click the [New] button.
- Select a recipe setting and click the [Edit] button.

⇒9.3.7 [Recipe] dialog

**Step 5** Set the following items in the [File Save] tab, and click the [OK] button.

- [Enable the file conversion external control]  
Select this item.
- [Convert Format]  
Select the file format to which a recipe file is converted.
- [Destination]  
Set this item as required.
- [File Name Specification]  
Set this item as required.

**(b) Conversion operation (Recipe data save destination: data storage (recipe file))**

Specify the recipe number of a target recipe file with an applicable device, and satisfy the condition of the conversion trigger.

The file format of the recipe file will be converted.

The conversion source file remains intact.

The trigger depends on the file format to which a recipe file is converted.

- To convert a recipe file from binary format (\*.G2P) to the set format  
Turn on the Convert Recipe File signal (bit 8 of the external control device).
- To convert a recipe file from the set format to binary format (\*.G2P)  
Turn on the Reverse-convert Recipe File signal (bit 9 of the external control device).

Example) Converting the recipe file (\*.G2P) of recipe No. 5 to Unicode text format (\*.TXT)

- [External Control Device]: D1000
- [Recipe No. Storage Device]: D1001 = 5

Turn on the Convert Recipe File signal (D1000.b8).

**(c) Conversion operation (Recipe data save destination: SRAM user area)**

Input the recipe number of the import or export source file into the Recipe No. Storage device.

Then, satisfy the condition of the conversion trigger.

The recipe data will be imported from a recipe file into the SRAM user area, or exported from the SRAM user area into a recipe file.

After an export operation, the source data will remain in the SRAM user area.

Use the following trigger devices.

- To export the recipe data from the SRAM user area into a recipe file  
Turn on the Convert Recipe File signal (bit 8 of the external control device).
  - To import the recipe data from a recipe file into the SRAM user area  
Turn on the Reverse-convert Recipe File signal (bit 9 of the external control device).
- Example) Exporting the data of recipe No. 5 from the SRAM user area to a Unicode text file (\*.TXT)

- [External Control Device]: D1000
- [Recipe No. Storage Device]: D1001 = 5

Turn on the Convert Recipe File signal (D1000.b8).

## (2) Converting a recipe file in the recipe operation window

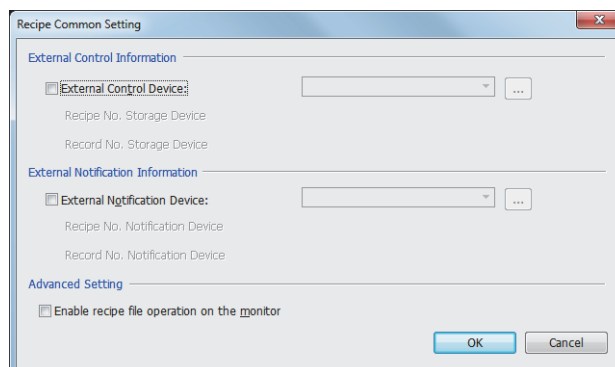

Convert a recipe file in the recipe operation window on the GOT.  
Convert files one by one.

In this window, the conversion operation cannot be performed to the recipe data stored in the SRAM user area.

### (a) Setting in GT Designer3

- Step 1** Select [Common] → [Recipe] → [Recipe Common Setting] from the menu to display the [Recipe Common Setting] dialog.
- ⇒9.3.5 [Recipe Common Setting] dialog

- Step 2** Select [Enable recipe file operation on the monitor], and click the [OK] button.

- Step 3** To display the recipe operation window on the monitor screen, use a special function switch ([Switch Action]: [Recipe Information]).

For the special function switch settings, refer to the following.

⇒8.2.9 [Special Function Switch] dialog

### (b) Conversion operation

Perform one of the following operations to display the recipe operation window.

- Touch a special function switch ([Switch Action]: [Recipe Information]).
- Touch the [Oper.] button on the [Recipe information] screen in the utility.

For the recipe operation window and the operations in the utility, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

## (3) Converting a recipe file in the utility

Convert a recipe file on the [Recipe information] screen on the GOT.

Convert files one by one.

In this window, the conversion operation cannot be performed to the recipe data stored in the SRAM user area.

⇒GOT2000 Series User's Manual (Utility)

#### (4) Converting a recipe file with GT Designer3

Convert a recipe file on a personal computer.  
 Multiple files can be converted at a time.  
 Since the file is converted with GT Designer3, no processing load is put on the GOT.

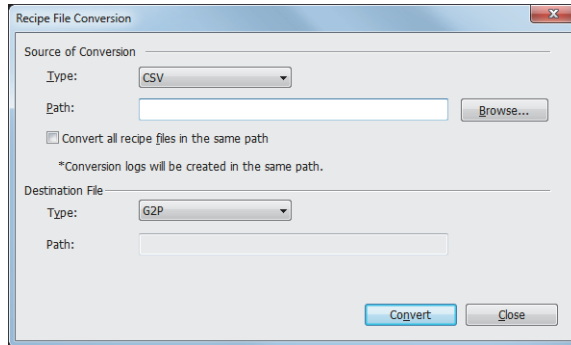

**Step 1** Transfer a recipe file to a personal computer from the GOT with one of the following methods.

- Transfer a recipe file with a data storage.
- Transfer a recipe file by connecting the personal computer with the GOT.

⇒4.3 Transferring the Data between the Personal Computer and the GOT

**Step 2** Click [Tools] → [Resource Data Conversion] → [Recipe File] from the menu to display the [Recipe File Conversion] dialog.

⇒9.3.8 [Recipe File Conversion] dialog

**Step 3** Set the following items, and click the [Convert] button. The converted recipe file is stored in the destination set in [Path] of [Destination File].

The conversion source file remains intact.

- [Type] in [Source of Conversion]  
 Select the file format of the conversion source file.
- [Path] in [Source of Conversion]  
 Set the storage location of the conversion source file.
- [Type] in [Destination File]  
 Select the file format of the conversion destination file.
- [Path] in [Destination File]  
 Set the storage location of the conversion destination file.

#### ■ 5 Operations with the recipe display (record list)

The recipe display (record list) object lists the records of a recipe on the GOT.  
 The following operations are available on the object by using applicable key code switches.

Operation	Description
Change record name	Rename a record.
Read record	Read a record from the PLC.
Write record	Write a record to the PLC.
Verify record	Verify the device values of a record against those of the PLC.
Delete record	Delete a record.

For operating the recipe display (record list), refer to the following.

⇒8.14 Placing a Recipe Display (Record List)

## 6 Operations in the recipe operation window and utility

GT27 GT25 GT23 GT21 SoftGOT2000 GS

The recipe operation window is not available on GT21.

The following operations are available in the recipe operation window in the utility.

Operation		Description
Recipe operations *1	Write	Writes the values of a specified record to the devices of a controller. →9.3.3 ■ 1 (3) Writing device values in the recipe operation window
	Read	Reads device values from a controller, and overwrites the values of a specified record in a recipe file with the read values. →9.3.3 ■ 2 (3) Reading device values in the recipe operation window
	Verify	Verifies that the values of a record in a recipe file match the device values of a controller. Used to check if the read values are applied to the recipe file.
	Save as	Reads device values from a controller, and creates a recipe file to save the read values.
Copy		Copies a recipe file.
New folder		Creates a folder.
New recipe		Creates a recipe file.
Convert		Converts the file format of a recipe file. →9.3.3 ■ 4 (2) Converting a recipe file in the recipe operation window
Rename		Renames a recipe file.
Delete		Deletes a recipe file.
Move		Moves a recipe file.

\*1 The recipe data stored in the SRAM user area cannot be manipulated.

For the recipe operation window and the operations in the utility, refer to the following.

→GOT2000 Series User's Manual (Utility)

## 7 Using a GOT1000 advanced recipe file (\*.G1P)

GT27 GT25 GT23 GT21 SoftGOT2000 GS

You can use a GOT1000 advanced recipe file (\*.G1P) to create a GOT2000 recipe file (\*.G2P).

### (1) Setting in GT Designer3

Set the following with GT Designer3 (GOT2000) according to the advanced recipe file (\*.G1P) used.

**Step 1** Select [Common] → [Recipe] → [Recipe] from the menu to display the [Recipe List] dialog.

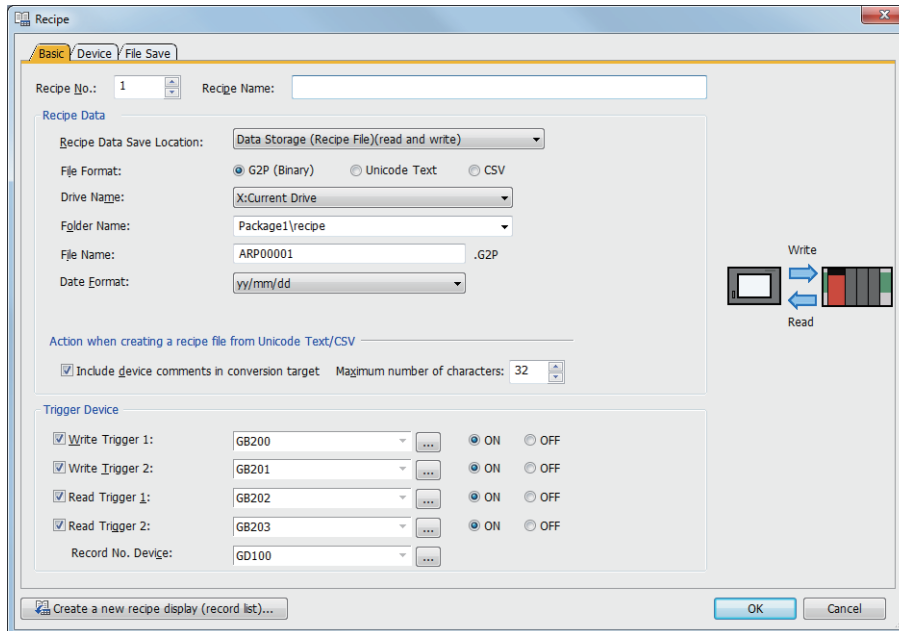

→9.3.6 [Recipe List] dialog

**Step 2** Perform one of the following operations to display the [Recipe] dialog.

- Click the [New] button.
- Select a recipe setting and click the [Edit] button.

→9.3.7 [Recipe] dialog

**Step 3** Set the following items in the [Basic] tab.

- [Recipe Data Save Location]  
Select [Data Storage (Recipe File)(read and write)].
- [File Name]  
Enter the same file name as the advanced recipe file (\*.G1P) used.

**Step 4** Set the following items in the [Device] tab according to the advanced recipe file (\*.G1P) used, and click the [OK] button.

- [Block Number]
- [Record Number]
- [Device Type] of each block
- [Points] of each block

## (2) Preparation on a personal computer

Store the advanced recipe file (\*.G1P) in the location, which is set in [Folder Name] in the [Basic] tab of the [Recipe] dialog.

Do not store a recipe file (\*.G2P) in the same location.

If a recipe file (\*.G2P) has already exist, another recipe file (\*.G2P) is not created.

## (3) Procedure on the GOT

To use an advanced recipe file (\*.G1P) to create a GOT2000 recipe file (\*.G2P), write or read device values by using a trigger device per project or per recipe setting.

The advanced recipe file (\*.G1P) remains intact.

The following settings of the advanced recipe file (\*.G1P) are applied to the created recipe file (\*.G2P).

- Number of blocks
- Number of records
- Device type
- Points
- Device comment
- Record name
- Record update time (to which the GOT2000 time zone is applied, by using the source time zone as GMT 00:00)
- Record attribute
- Device values of records

## (4) Precautions for using an advanced recipe file (\*.G1P)

### (a) When the settings of an advanced recipe file (\*.G1P) are not applied

In the following cases, a recipe file (\*.G2P) is created by using a recipe setting of GT Designer3 (GOT2000) instead of an advanced recipe file (\*.G1P).

- The advanced recipe file (\*.G1P) to be used is not stored in the location, which is set in [Folder Name] in the [Basic]

tab of the [Recipe] dialog.

- The recipe settings in GT Designer3 (GOT2000) are inconsistent with those of the advanced recipe file (\*.G1P) to be used.
- The advanced recipe file to be used is damaged.

**(b) Applying the recipe file (\*.G2P) created based on an advanced recipe file (\*.G1P)**

The recipe file (\*.G2P) cannot be used as a GOT1000 advanced recipe file (\*.G1P).

**(c) Saving an advanced recipe file (\*.G1P) into the SRAM user area**

You cannot save an advanced recipe file (\*.G1P) directly into the SRAM user area.

Create a recipe file (\*.G2P) based on an advanced recipe file (\*.G1P), and then import data from the created file to the SRAM user area.

For information on how to import data from a recipe file (\*.G2P) to the SRAM user area, refer to the following.

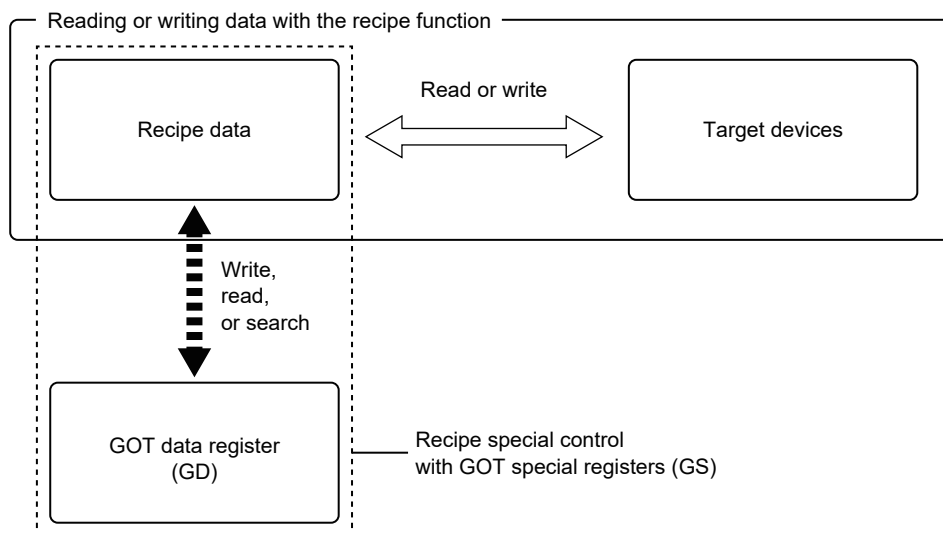

→9.3.3 ■ 4 Converting a recipe file

**■ 8 Operations with GOT special registers (GS) (Recipe special control)**

With the specific GOT special registers (GS), you can read a record from recipe data into GOT data registers (GD) or overwrite the values of a record with those of GDs.

This recipe special control also enables you to check or edit the recipe data.

The following lists the actions of the recipe special control.

Action		Description	Reference
Resetting notification devices		Reset the Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) to 0.	→(2) Resetting notification devices
Reading	Reading a record (in whole)	Read a record from the recipe data by specifying a record number. The read record will be stored into the specified GOT data registers (GD).	→(3) Reading a record (in whole)
	Reading a record (in part)	Read part of the data in a record from the recipe data by specifying a record number and row. The read record will be stored into the specified GOT data registers (GD).	→(4) Reading a record (in part)
	Reading device comments	This action is available when the save destination of the recipe data is set to the data storage (recipe file). Read the device comments from the recipe data. The read device comments will be stored into the specified GOT data registers (GD).	→(5) Reading device comments

Action		Description	Reference
Writing	Writing a record (in whole)	Overwrite a record in the recipe data with the values of GOT data registers (GD) by specifying a record number.	→(6) Writing a record (in whole)
	Writing a record (in part)	Overwrite a record in the recipe data with the values of GOT data registers (GD) by specifying a record number and target rows.	→(7) Writing a record (in part)
	Writing device comments	This action is available when the save destination of the recipe data is set to the data storage (recipe file). Overwrite the device comments in the recipe data with the values of GOT data registers (GD).	→(8) Writing device comments
Outputting recipe information		Output the following recipe information of a specified recipe setting: recipe No., recipe file format, recipe name, numbers of records, blocks, and rows, and total number of devices.	→(9) Outputting recipe information
Searching	Performing a search by record name	Search recipe data for a record by record name. The record number of the matching record is stored in the Recipe Special Control No. device (GS1012).	→(10) Performing a search by record name

### Point

#### (1) Recipe data targeted for the recipe special control

The recipe special control is usable only for the recipe data saved in a data storage or the SRAM user area. To use the recipe special control, set [Recipe Data Save Location] to [Data Storage (Recipe File)(read and write)] or [Embedded Memory in GOT (read and write)] in the [Recipe] dialog ([Basic] tab).

#### (2) Execution timing of the recipe special control

Execute the recipe special control when no recipe process is performed by the recipe function.

#### (3) Precautions when using a text display or text input object

In the recipe special control, a recipe name, record name, or device comment is stored in Unicode, starting from the least significant bit.

When a device storing the above data is used in a text display or text input object, configure the following settings in the setting dialog of the object.

- Select [Unicode] for [Character Code] in the [Device/Style] tab.
- Select [Display in order of High -> Low] in the [Extended] tab.

#### (1) GOT special registers (GS) used for the recipe special control

You can use the Recipe Special Control Action device (GS1801) to specify the control action, and turn on the Execute Special Control signal (GS1800.b2) to execute the control.

For some actions, you must preset values in GS1802 to GS1808 and the GOT data registers (GD).

The following lists the GOT special registers (GS) used for the recipe special control.

- Read device list

Device	Name	Function
GS1800	b0 to b1	Use prohibited
	b2	Execute Special Control Trigger signal When this signal is turned on, the recipe special control is executed. Set the control details with GS1801 to GS1808. Execute the recipe special control when no recipe process is performed by the recipe function.
	b3 to b13	Use prohibited
	b14	Clear Touch Switch Operation Status Information signal Not used
	b15	Use prohibited
GS1801	Recipe Special Control Action	Specify the control action. The action varies with the stored value. <ul style="list-style-type: none"> <li>• 0: Resets the Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) to 0.</li> <li>• 1: Reads a record from the target recipe data into GOT data registers (GD).</li> <li>• 2: Overwrites the values of a record in the target recipe data with the values of GOT data registers (GD).</li> <li>• 4: Outputs recipe information to GOT data registers (GD).</li> <li>• 5: Searches the target recipe data based on the values of GOT data registers (GD).</li> </ul>

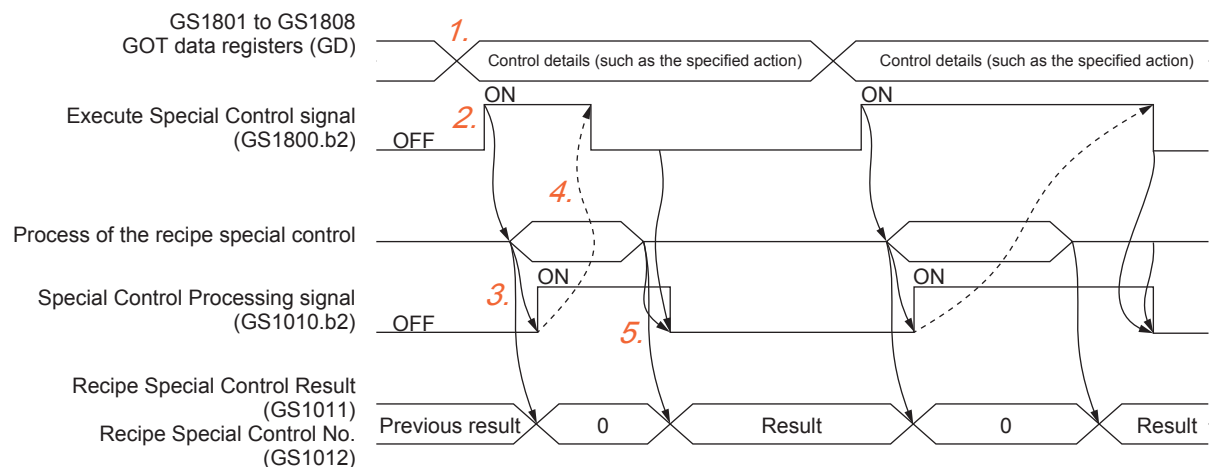

Device	Name	Function
GS1802	b0	Control Record Information signal When this signal is turned on, record information (record No., record attribute, and record name) is set as the control target.
	b1	Control Date of Update signal When this signal is turned on, the update date and time of a record is set as the control target.
	b2	Control Record Data signal When this signal is turned on, the device values of a record are set as the control target.
	b3	Control Device Comment signal When this signal is turned on, device comments are set as the control target.
	b4 to b15	Use prohibited -
GS1803	Recipe Special Control Start GD Device No.	Specify the start device number of the GOT internal devices (GD) to be used. The data type must be unsigned 16-bit binary.
GS1805	Recipe Special Control Recipe No.	Specify the recipe number of a target recipe setting.
GS1806	Recipe Special Control Record No.	Specify the record number of a target record.
GS1807	Recipe Special Control Row No.	Specify the start row of a record as necessary. Subtract 1 from a target row number, and then set the result as the value of GS1807. Example 1) To specify row No. 1, set GS1807 to 0. Example 2) To specify row No. 65536, set GS1807 to 65535.
GS1808	Recipe Special Control Points	Specify the number of target rows of a record as necessary. Starting from the row specified with GS1807, the specified number of rows are targeted for the recipe special control.

• Write device list

Device	Name	Function
GS1010	b0	Import-in-progress signal Not used
	b1	Export-in-progress signal Not used
	b2	Special Control Processing signal Turns on when the recipe special control is executed. Turns off after the control is complete and the Execute Special Control signal (GS1800.b2) is turned off.
	b3 to b13	Use prohibited -
	b14	Touch Switch Operation Completed signal Not used
	b15	Touch Switch Operation Error signal Not used
GS1011	Recipe Special Control Result	Stores the result of the recipe special control. • 0: Normal completion • Value other than 0: Error For the details of errors, refer to the following. →(12) Error code list This device is reset to 0 upon turn-on of the Execute Special Control signal (GS1800.b2).
GS1012	Recipe Special Control No.	Stores a record number as the search result. This device is reset to 0 upon turn-on of the Execute Special Control signal (GS1800.b2).

To notify the completion of the recipe special control, check that the Special Control Processing signal (GS1010.b2) is on, and then turn off the Execute Special Control signal (GS1800.b2) to turn off GS1010.b2.

- Step 1** Preset values in GS1801 to GS1808 and the GOT data registers (GD) as necessary.
- Step 2** Turn on the Execute Special Control signal (GS1800.b2).
- Step 3** The recipe special control starts, and the Special Control Processing signal (GS1010.b2) turns on.  
The Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) are reset to 0.
- Step 4** Check that GS1010.b2 is on, and then turn off GS1800.b2 by using trigger actions or other methods.
- Step 5** Upon completion of the recipe special control, GS1010.b2 turns off.  
GS1011 stores the result of the control.  
If you execute the recipe special control to search for a record, GS1012 stores the search result.

## (2) Resetting notification devices

You can reset the Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) to 0.

Set the Recipe Special Control Action device (GS1801) to 0, and then turn on the Execute Special Control signal (GS1800.b2).

## (3) Reading a record (in whole)

You can read record information, date of update, and all the device values of a target record.

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function
GS1801	1	The device value must be set as shown on the left to specify this action.
GS1802	b0	0 or 1 When this bit is turned on, record information (record No., record attribute, and record name) is set to be read. (The record attribute refers to the settings of [Not to set the device value] and [Not to overwrite the device value in a recipe file].) Set this bit as necessary. You can set this bit together with GS1802.b1 and GS1802.b2.
	b1	0 or 1 When this bit is turned on, the update date and time of a target record is set to be read. Set this bit as necessary. You can set this bit together with GS1802.b0 and GS1802.b2.
	b2	0 or 1 When this bit is turned on, the device values of a target record are set to be read. Set this bit as necessary. You can set this bit together with GS1802.b0 and GS1802.b1.
	b3	0 The device value must be set as shown on the left.
GS1803	0 to 65535	Specify the start device number of the GOT internal devices (GD) that store the read data. Reserve the GOT internal devices (GD) according to the size of data to be read. • Record information: 34 word devices required • Date of update: 4 word devices required • Device values of a record: The required number of word devices varies with the device types and number of devices that are targeted for the control. For the specifications of storing data and each data size, refer to the following. →(a) Record information, date of update, and device values of a record
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.
GS1806	1 to 2000	Specify the record number of a target record.
GS1807	0	The device value must be set as shown on the left.
GS1808	0	The device value must be set as shown on the left. When this device stores 0, all the device values of a target record are read to the GOT data registers (GD).

When the save destination of the recipe data is set to the data storage (recipe file), the operation is as follows: if no recipe file exists in the data storage, a recipe file will be created automatically and the special recipe control will start. If the recipe file format is set to [CSV] or [Unicode Text], the created file contains the specified record only.

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

→(12) Error code list

#### (4) Reading a record (in part)

You can read record information, date of update, and the device values in the specified rows of a target record. Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function
GS1801	1	The device value must be set as shown on the left to specify this action.
GS1802	b0	0 or 1 When this bit is turned on, record information (record No., record attribute, and record name) is set to be read. (The record attribute refers to the settings of [Not to set the device value] and [Not to overwrite the device value in a recipe file].) Set this bit as necessary. You can set this bit together with GS1802.b1 and GS1802.b2.
	b1	0 or 1 When this bit is turned on, the update date and time of a target record is set to be read. Set this bit as necessary. You can set this bit together with GS1802.b0 and GS1802.b2.
	b2	1 The device value must be set as shown on the left. When this bit is turned on, the device values of a target record are set to be read. You can set this bit together with GS1802.b0 and GS1802.b1.
	b3	0 The device value must be set as shown on the left.
GS1803	0 to 65535	Specify the start device number of the GOT internal devices (GD) that store the read data. Reserve the GOT internal devices (GD) according to the size of data to be read. • Record information: 34 word devices required • Date of update: 4 word devices required • Device values of a record: The required number of word devices varies with the device types and number of devices that are targeted for the control. For the specifications of storing data and each data size, refer to the following. ⇒(a) Record information, date of update, and device values of a record
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.
GS1806	1 to 2000	Specify the record number of a target record.
GS1807	0 to 65535	Specify the start row to be read. Subtract 1 from a target row number, and then set the result as the value of GS1807.
GS1808	1 to 65535	Set the number of rows to be read.

When the save destination of the recipe data is set to the data storage (recipe file), the operation is as follows: if no recipe file exists in the data storage, a recipe file will be created automatically and the special recipe control will start. If the recipe file format is set to [CSV] or [Unicode Text], the created file contains the specified record only.

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

## (5) Reading device comments

You can read device comments.

This operation is available when the save destination of the recipe data is set to the data storage (recipe file).

Note that device comments must be read independently of the other data (such as record information).

If the target recipe file is in the binary format (\*.G2P), the device comments are read from the file.

If the target recipe file is in the CSV or Unicode text format (\*.CSV or \*.TXT), the device comments are read from the corresponding recipe setting in the project.

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function	
GS1801	1	The device value must be set as shown on the left to specify this action.	
GS1802	b0	0	The device value must be set as shown on the left.
	b1	0	The device value must be set as shown on the left.
	b2	0	The device value must be set as shown on the left.
	b3	1	When this bit is turned on, device comments are set to be read. You cannot set this bit together with GS1802.b0, GS1802.b1, and GS1802.b2.
GS1803	0 to 65535	Specify the start device number of the GOT internal devices (GD) that store the read data. Reserve the GOT internal devices (GD) according to the size of data to be read. • Device comment: 32 word devices × Specified number of rows For the specifications of storing data and each data size, refer to the following. ⇒(b) Device comment	
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.	
GS1806	1 to 2000	Specify the record number of a target record.	
GS1807	0 to 65535	Specify the start row to be read. Subtract 1 from a target row number, and then set the result as the value of GS1807.	
GS1808	1 to 65535	Set the number of rows to be read.	

If you execute the recipe special control for a recipe setting without the corresponding recipe file, a recipe file is created automatically and then the control starts. (Only when the recipe file format is set to [G2P (Binary)])

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

### (6) Writing a record (in whole)

You can overwrite record information (record name only) and all the device values of a target record.

Store the write source data in GOT data registers (GD).

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function
GS1801	2	The device value must be set as shown on the left to specify this action.
GS1802	b0	0 or 1 When this bit is turned on, record information (record name only) is set to be overwritten. Set this bit as necessary. You can set this bit together with GS1802.b1 and GS1802.b2.
	b1	0 or 1 This bit is disabled because the date of update cannot be overwritten.
	b2	0 or 1 When this bit is turned on, the device values of a target record are set to be overwritten. Set this bit as necessary. You can set this bit together with GS1802.b0 and GS1802.b1.
	b3	0 The device value must be set as shown on the left.
GS1803	0 to 65535	Specify the start device number of the GOT data registers (GD) that store the write source data. Store the write source data in the GOT data registers (GD) according to the specifications of storing data. <ul style="list-style-type: none"> <li>Record information: 34 word devices required</li> <li>Date of update: 4 word devices required</li> <li>Device values of a record: The required number of word devices varies with the device types and number of devices that are targeted for the control.</li> </ul> For the specifications of storing data and each data size, refer to the following. ⇒(a) Record information, date of update, and device values of a record
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.
GS1806	1 to 2000	Specify the record number of a target record.
GS1807	0	The device value must be set as shown on the left.
GS1808	0	The device value must be set as shown on the left. When this device stores 0, all the device values of a target record are overwritten.

When the save destination of the recipe data is set to the data storage (recipe file), the operation is as follows: if no recipe file exists in the data storage, a recipe file will be created automatically and the special recipe control will start.

If the recipe file format is set to [CSV] or [Unicode Text], the created file contains the specified record only.

The date and time at which the device values of a record are overwritten is stored as the update date and time of the record.

If [Not to overwrite the device value in a recipe file] is selected in the record attribute setting, overwriting the device values results in an error. (If both record information and device values are set to be overwritten, record information is also not overwritten.)

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

## (7) Writing a record (in part)

You can overwrite record information (record name only) and the device values in the specified rows of a target record. Store the write source data in GOT data registers (GD).

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function
GS1801	2	The device value must be set as shown on the left to specify this action.
GS1802	b0	0 or 1 When this bit is turned on, record information (record name only) is set to be overwritten. Set this bit as necessary. You can set this bit together with GS1802.b1 and GS1802.b2.
	b1	0 or 1 This bit is disabled because the date of update cannot be overwritten.
	b2	1 The device value must be set as shown on the left. When this bit is turned on, the device values of a target record are set to be overwritten. You can set this bit together with GS1802.b0 and GS1802.b1.
	b3	0 The device value must be set as shown on the left.
GS1803	0 to 65535	Specify the start device number of the GOT data registers (GD) that store the write source data. Store the write source data in the GOT data registers (GD) according to the specifications of storing data. • Record information: 34 word devices required • Date of update: 4 word devices required • Device values of a record: The required number of word devices varies with the device types and number of devices that are targeted for the control. For the specifications of storing data and each data size, refer to the following. →(a) Record information, date of update, and device values of a record
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.
GS1806	1 to 2000	Specify the record number of a target record.
GS1807	0 to 65535	Specify the start row to be written. Subtract 1 from a target row number, and then set the result as the value of GS1807.
GS1808	1 to 65535	Set the number of rows to be written.

When the save destination of the recipe data is set to the data storage (recipe file), the operation is as follows: if no recipe file exists in the data storage, a recipe file will be created automatically and the special recipe control will start. If the recipe file format is set to [CSV] or [Unicode Text], the created file contains the specified record only.

The date and time at which the device values of a record are overwritten is stored as the update date and time of the record.

If [Not to set the device value] is selected in the record attribute setting, the device values in the unspecified rows are overwritten with 0.

If [Not to overwrite the device value in a recipe file] is selected in the record attribute setting, overwriting the device values results in an error. (If both record information and device values are set to be overwritten, record information is also not overwritten.)

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

→(12) Error code list

## (8) Writing device comments

You can overwrite device comments.

This operation is available when the save destination of the recipe data is set to the data storage (recipe file).

Note that device comments must be overwritten independently of the other data (such as record information).

To overwrite device comments, satisfy all the following conditions.

- A binary recipe file (\*.G2P) is used.
- [Include device comments in conversion target] is selected when a recipe file in the CSV or Unicode text format is

converted back to the binary format.

Store the write source data in GOT data registers (GD).

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function	
GS1801	2	The device value must be set as shown on the left to specify this action.	
GS1802	b0	0	The device value must be set as shown on the left.
	b1	0	The device value must be set as shown on the left.
	b2	0	The device value must be set as shown on the left.
	b3	1	When this bit is turned on, device comments are set to be overwritten. You cannot set this bit together with GS1802.b0, GS1802.b1, and GS1802.b2.
GS1803	0 to 65535	Specify the start device number of the GOT data registers (GD) that store the write source data. Store the write source data in the GOT data registers (GD) according to the specifications of storing data. • Device comment: 32 word devices × Specified number of rows For the specifications of storing data and each data size, refer to the following. ⇒(b) Device comment	
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.	
GS1806	1 to 2000	Specify the record number of a target record.	
GS1807	0 to 65535	Specify the start row to be written. Subtract 1 from a target row number, and then set the result as the value of GS1807.	
GS1808	1 to 65535	Set the number of rows to be written.	

If you execute the recipe special control for a recipe setting without the corresponding recipe file, a recipe file is created automatically and then the control starts. (Only when the recipe file format is set to [G2P (Binary)])

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

## (9) Outputting recipe information

You can output information on the specified recipe setting.

Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function
GS1801	4	The device value must be set as shown on the left to specify this action.
GS1803	0 to 65535	Specify the start device number of the GOT internal devices (GD) that store the read data. Reserve the GOT internal devices (GD) according to the size of data to be read. • Record information: 40 word devices required For the specifications of storing data and each data size, refer to the following. ⇒(c) Recipe information
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.
GS1806	0	The device value must be set as shown on the left.
GS1807	0	The device value must be set as shown on the left.
GS1808	0	The device value must be set as shown on the left.

After the control is complete, the Recipe Special Control Result device (GS1011) stores 0.

If an error occurs, GS1011 stores a value other than 0.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

## (10) Performing a search by record name

You can search for a record that has the specified record name.

When the target recipe files are in the CSV or Unicode text format (\*.CSV or \*.TXT), each file contains one record only. Each time the recipe file corresponding to a record is not found, the specified recipe setting in the project data is searched. Set GS1801 to GS1808 as shown below, and then turn on the Execute Special Control signal (GS1800.b2).

Device	Set value	Function	
GS1801	5	The device value must be set as shown on the left to specify this action.	
GS1802	b0	1	When this bit is turned on, a record having the specified record name is searched for.
	b1	0	The device value must be set as shown on the left.
	b2	0	The device value must be set as shown on the left.
	b3	0	The device value must be set as shown on the left.
GS1803	0 to 65535	Specify the start device number of the GOT data registers (GD) that store the record name for search. Store the name in the GOT data registers (GD) according to the specifications of storing data. • Record name for search: 32 word devices required For the specifications of storing data and each data size, refer to the following. →(d) Record name for search	
GS1805	1 to 32767	Specify the recipe number of a target recipe setting.	
GS1806	0 to 2000	Specify the record number of a record from which a search starts. The search is performed in ascending order of the record numbers. When this device stores 0, the search starts from record No.1.	
GS1807	0	The device value must be set as shown on the left.	
GS1808	0	The device value must be set as shown on the left.	

When the save destination of the recipe data is set to the data storage (recipe file), the operation is as follows: if no recipe file exists in the data storage, a recipe file will be created automatically and the special recipe control will start. (Only when the recipe file format is set to [G2P (Binary)])

Upon completion of the control, the Recipe Special Control Result device (GS1011) and the Recipe Special Control No. device (GS1012) store a value according to the search result.

- If the matching record is found, GS1011 stores 1, and GS1012 stores the record number.
- If no matching record is found, GS1011 and GS1012 each store 0.

If an error occurs, GS1011 stores a value other than 0 and 1.

For the error codes and corrective actions, refer to the following.

⇒(12) Error code list

If a recipe file in the CSV or Unicode text format (\*.CSV or \*.TXT) causes an error during a search, the Recipe Special Control No. device (GS1012) stores the record number of the recipe file.

If the error has been caused by any other reason, GS1012 stores 0.

## (11) Specifications of storing data in GOT data registers (GD)

When you execute the recipe special control to read data, the GOT data registers (GD) store the read data as shown below.

Store the write source data to the GOT data registers (GD) in the same manner.

### (a) Record information, date of update, and device values of a record

- Record information

To store record information, reserve 34 word devices.

Example) Start device: GD1000

GD1000	Record No.	} 34 word devices
GD1001	Record attribute	
GD1002	Record name	
⋮		
GD1033		

Order	Stored data	Details
Start device	Record No.	This device is disabled and skipped at the time of writing data.

Order	Stored data	Details
2nd device	Record attribute	<ul style="list-style-type: none"> <li>• b0: With or without initial device values (0: With, 1:Without)</li> <li>• b1: Writable or write-protect (0: Writable, 1: Write-protect)</li> <li>• b2 to b15: Use prohibited</li> </ul> This device is disabled and skipped at the time of writing data.
3rd device to the 33rd device	Record name	The data is stored in Unicode. If a record name has 31 characters or less, the name is stored with a termination character (0) appended. If a record name has 32 characters, the name is stored with no termination character appended.

• Date of update

To store the date of update, reserve four word devices.

Example) Start device: GD1000

GD1000	Month and year	} 4 word devices
GD1001	Date and hour	
GD1002	Minute and second	
GD1003	Day of the week	

Order	Stored data	Details
Start device	Month and year	<ul style="list-style-type: none"> <li>• b8 to b15: Year (Data type: BCD)</li> <li>• b0 to b7: Month (Data type: BCD)</li> </ul> This device is disabled and skipped at the time of writing data.
2nd device	Date and hour	<ul style="list-style-type: none"> <li>• b8 to b15: Date (Data type: BCD)</li> <li>• b0 to b7: Hour (Data type: BCD)</li> </ul> This device is disabled and skipped at the time of writing data.
3rd device	Minute and second	<ul style="list-style-type: none"> <li>• b8 to b15: Minute (Data type: BCD)</li> <li>• b0 to b7: Second (Data type: BCD)</li> </ul> This device is disabled and skipped at the time of writing data.
4th device	Day of the week	<ul style="list-style-type: none"> <li>• b8 to b15: Use prohibited</li> <li>• b0 to b7: Day of the week (0: Sunday, 1: Monday, 2: Tuesday, 3: Wednesday, 4: Thursday, 5: Friday, 6: Saturday)</li> </ul> This device is disabled and skipped at the time of writing data.

• Device values of a record

For storing the device values of a record, the required number of word devices varies with the device types and number of devices in the record.

The device values of a record are stored in the order specified in the recipe setting.

Example)

Start device: GD1000

Target devices of a record: Bit (1 device), Signed BIN16 (2 devices), BCD32 (1 device), and String (5 devices)

GD1000	Bit (1 device)	} 10 word devices
GD1001	Signed BIN16 (2 devices)	
GD1002		
GD1003	BDC32 (1 device)	
GD1004		
GD1005	String (5 devices)	
GD1006		
GD1007		
GD1008		
GD1009		

Device type	Required number of word devices	Details
Bit	1	Only the value of bit 0 is applied.
Signed BIN16	1	-
Unsigned BIN16	1	-

Device type	Required number of word devices	Details
Signed BIN32	2	-
Unsigned BIN32	2	-
BCD16	1	-
BCD32	2	-
Real	2	-
String	Specified number of devices	The specified number of word devices are used. Data is stored in the specified character code.

- Reading record information, date of update, and devices values of a target record simultaneously

The record information, date of update, and device values are stored in that order.

Example)

Start device: GD1000

Data of a record to be read: record information, date of update, and device values

Record information	GD1000	Record No.	} 34 word devices
	GD1001	Record attribute	
	GD1002	Record name	
	⋮		
	GD1003		
Date of update	GD1034	Month and year	} 4 word devices
	GD1035	Date and hour	
	GD1036	Minute and second	
	GD1037	Day of the week	
Device values of a record	GD1038	Bit (1 device)	} 10 word devices
	GD1039	Signed BIN16 (2 devices)	
	GD1040		
	GD1041	BDC32 (1 device)	
	GD1042		
	GD1043	String (5 devices)	
	GD1044		
	GD1045		
	GD1046		
GD1047			

#### (b) Device comment

To store one device comment, reserve 32 word devices. For two or more device comments, multiply 32 word devices by the specified number of rows.

Example)

Start device: GD1000

Specified number of rows: 5

GD1000	Device comment (1st row)
⋮	
GD1031	⋮
⋮	
GD1128	Device comment (5th row)
⋮	
GD1159	

} 160 word devices

Order	Stored data	Details
Start device to the 32nd device	Device comment	Storing one device comment requires 32 word devices.

The data is stored in Unicode.

**(c) Recipe information**

To store recipe information, reserve 40 word devices.

Example) Start device: GD1000

GD1000	Recipe No.
GD1001	File format
GD1002	Recipe name
⋮	
GD1033	
GD1034	Number of records
GD1035	Number of blocks
GD1036	Number of rows
GD1037	
GD1038	Total number of devices
GD1039	

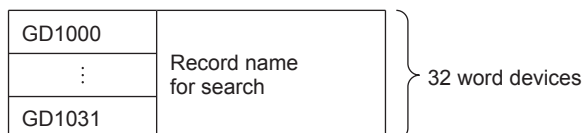

} 40 word devices

Order	Stored data	Details
Start device	Recipe No.	-
2nd device	File format	Recipe file format <ul style="list-style-type: none"> <li>• 0: Does not use a recipe file.</li> <li>• 1: Binary format (*.G2P)</li> <li>• 2: CSV format (*.CSV)</li> <li>• 3: Unicode text format (*.TXT)</li> </ul>
3rd device to the 34th device	Recipe name	The data is stored in Unicode. If a record name has 31 characters or less, the name is stored with a termination character (0) appended. If a record name has 32 characters, the name is stored with no termination character appended.
35th device	Number of records	-
36th device	Number of blocks	-
37th and 38th devices	Number of rows	Number of rows of the recipe setting
39th and 40th devices	Total number of devices	Total number of devices of the recipe setting

**(d) Record name for search**

To store a record name for search, reserve 32 word devices.

Example) Start device: GD1000

Order	Stored data	Details
Start device to the 32nd device	Record name for search	The data is stored in Unicode. The stored record name (including the termination character (0)) is used as the search criterion.

## (12)Error code list

The following lists the error codes that are stored in the Recipe Special Control Result device (GS1011) and the corrective actions.

Error code	Cause and corrective action
-1	Any of the set values in GS1801 to GS1808 is incorrect. Correct the set values.
322	The specified device number is outside the device range for GOT data registers (GD). Specify a device number within the device range.
345	A binary-to-BCD conversion error occurred. Make sure that the data types of the target device values are the same as the device types set in the recipe setting.
575	Device comments cannot be overwritten because the recipe file is not in the binary format (*.G2P) or [Include device comments in conversion target] is not selected in the [Recipe] dialog ([Basic] tab). Select [Include device comments in conversion target] in the recipe setting in the project.
576	The specified row number is nonexistent. Specify an existent row number.
581	An invalid recipe file exists. Delete the invalid recipe file.
582	Creating a recipe file has failed. Check that the following conditions are satisfied, and then execute the recipe special control again. <ul style="list-style-type: none"> <li>• A data storage is installed on the GOT.</li> <li>• The SD card cover is closed.</li> <li>• The SD card access switch is turned on.</li> <li>• The installed data storage has enough free space.</li> </ul>
583	Writing data to the target recipe file has failed. Check that the following conditions are satisfied, and then execute the recipe special control again. <ul style="list-style-type: none"> <li>• The data storage is not write-protected.</li> <li>• The recipe file is not write-protected.</li> </ul>
584	Writing data to the target recipe file has failed. Do not remove the data storage during the recipe special control.
585	Reading data from the target recipe file has failed. Do not remove the data storage during the recipe special control.
586	The specified recipe number is nonexistent. Specify an existent recipe number.
587	The specified record number is nonexistent. Specify an existent record number.
588	The target record cannot be overwritten because the record is write-protected. Disable the write protection for the target record in the recipe setting in the project, or specify another writable record.
589	The recipe special control cannot be executed because the target recipe setting is set not to use a recipe file. Execute the recipe special control for a recipe setting that is set to use a recipe file.
591	The contents of the target recipe file do not match the source recipe setting. Correct the recipe setting in the project, and then write the data to the GOT again.

■ 9 Link with the recipe display (record list) by using GOT special registers

The following GOT special registers store information of the recipe display (record list).

- GS1013: Stores the recipe number for the records displayed on the recipe display (record list).
- GS1014: Stores the record number selected on the recipe display (record list).

With GS1013 and GS1014, you can specify a recipe number and a record number on the recipe display (record list), and perform operations such as the following.

- Write the values of GS1013 and GS1014 to the PLC CPU devices (Recipe No. Storage device and Record No. Storage device specified in the recipe common setting), and run a sequence program to turn on the trigger device of the target recipe process.
- Write the values of GS1013 and GS1014 to the GOT special registers (GS1805 and GS1806), and turn on the trigger device of the recipe special control.

For the recipe common setting, refer to the following.

→ 9.3.5 [Recipe Common Setting] dialog

For the recipe special control, refer to the following.

→ 9.3.3 ■ 8 Operations with GOT special registers (GS) (Recipe special control)

(1) Application example

Example) Checking the device values of a record selected on the recipe display (record list) and writing the values to target devices

Execute the recipe special control to read the device values of the record selected on the recipe display (record list), and display the read values on numerical display objects.

Check the values on numerical display objects, and write the values to target devices.

Configure the following settings on GT Designer3.

Object	Description
Switch	<p>Inputs data to the GOT special registers (GS1801 to GS1803, GS1807, and GS1808), and executes the recipe special control.</p> <p>Set the following actions to run in top-to-bottom order as shown below.</p> <ul style="list-style-type: none"> <li>• [Word Set]: Write 1 to GS1801.</li> <li>• [Word Set]: Write the start device number of GOT data registers (GD) to GS1803. (The start device number is user-configurable, and the GD devices store the device values of a record.)</li> <li>• [Word Set]: Write the value of GS1013 to GS1805.</li> <li>• [Word Set]: Write the value of GS1014 to GS1806.</li> <li>• [Word Set]: Write 0 to GS1807.</li> <li>• [Word Set]: Write 0 to GS1808.</li> <li>• [Bit Set]: Turn on GS1802.b2.</li> <li>• [Bit Reset]: Turn off GS1802.b0.</li> <li>• [Bit Reset]: Turn off GS1802.b1.</li> <li>• [Bit Reset]: Turn off GS1802.b3.</li> <li>• [Bit Momentary]: Turn on GS1800.b2 while the switch is being touched.</li> </ul>
Key Code Switch	<p>Writes the device values of a record to target devices.</p> <p>Use the applicable key code switch that is placed automatically upon placement of the recipe display (record list).</p> <p>When placing the applicable key code switch manually, configure the following settings.</p> <ul style="list-style-type: none"> <li>• Select [Recipe Display (Record List)] for [Key Code Type].</li> <li>• Select [Load record] for [Action].</li> </ul>
Numerical Display	<p>Displays a device value of the record that has been read by the recipe special control.</p> <p>Place numerical displays corresponding to the number of target devices.</p> <p>Set the numerical displays according to the types of devices in the record.</p>
Recipe Display (Record List)	<p>On this object, select a recipe number and a record number that are targeted for the recipe special control.</p> <p>In [Recipe No.], specify a target recipe number.</p>

Perform the following operations on the GOT.

1. Select a record on the recipe display (record list).

2. Touch the switch dedicated to the recipe special control.  
3. Check the device values of the record, and touch the key code switch to write the values.

- Step 1** On the recipe display (record list), select a record to write its device values to target devices.  
**Step 2** Touch the switch dedicated to the recipe special control to display the device values of the selected record on the numerical displays.  
**Step 3** Check the displayed values, and touch the applicable key code switch to write the values to target devices.

## 10 Saving recipe data into the SRAM user area

You can save recipe data into the SRAM user area.

Values are readable from the target devices of a controller into the SRAM user area instead of a data storage.

The SRAM user area space is limited and used for the other functions as well.

Before saving the recipe data, make sure that the SRAM user area has enough free space.

### (1) Specifications of the SRAM user area

The following functions can save data into the SRAM user area.

- User alarm observation
- System alarm observation
- Logging function
- Recipe function

Applicable function	Number of settings	Size
User alarm observation	Max. 10	500 KB (total)
System alarm observation	Max. 1	
Logging function	Max. 20	
Logging	Max. 20	

### (2) Priority in the SRAM user area

When the free area in the SRAM user area is used, the priority is applied.

To use this backup function regardless of the priority, the total capacity of the data handled by each function must be 500 KB or less.

The following shows the priority among the functions.

Priority in the SRAM user area	Function
High ↓ Low	User alarm observation ↓ System alarm observation ↓ Recipe function ↓ Logging function

When multiple IDs are set for one function, the higher priority is applied to the smaller ID.

### (3) Deleting and backing up the data in the SRAM user area

The data saved in the SRAM user area is deleted under the following conditions.

- Project data and system applications are written to the GOT when [Initialize SRAM user area when writing project data/OS] is selected in the [Communicate with GOT] dialog.
- The SRAM user area is initialized by using [SRAM management] in the utility.
- The clear trigger device set in [Buffering] of the user alarm observation setting or the system alarm observation setting turns on.

To retain the data saved in the SRAM user area, execute the backup/restoration function in the utility.

For the details of the backup/restoration function, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

### (4) Precautions for using the SRAM user area

Data may not be saved into the SRAM user area due to some reasons, including the setting change of an applicable function and physical memory corruption.

#### (a) Normal conditions

The data collected by each applicable function is saved to the SRAM user area.

#### (b) Setting change

If the size of data to be collected by the user alarm observation, system alarm observation, or logging function is changed, the data of the function saved in the SRAM user area will be deleted.

- When the size is reduced:  
The data is saved to the initialized area. The remaining area is reserved as a free area.
- When the size is increased:  
The area used is initialized and the data is saved to another area.

If the area required for saving the data is insufficient, an error occurs.

If an error occurs, initialize the SRAM user area, reduce the data size to 500 KB or less, and save the data again.

Example) When the size for ID 1 is increased from 100 KB to 200 KB

#### (c) Setting deletion

When the setting of each function is deleted, the SRAM user area used for saving the data is reserved as an unused area. Initialize the unused area to use it.

For the initialization of the SRAM user area, refer to the following.

⇒GOT2000 Series User's Manual (Utility)

Example) When the setting of ID 1 is deleted

#### (d) Others

If the data saved in the SRAM user area is not restored at the GOT startup, a system alarm occurs.

In such a case, check the battery status.

- When the battery status is normal:  
A part of the SRAM user area may be damaged.  
Initialize the SRAM user area.

⇒GOT2000 Series User's Manual (Utility)

- When the voltage is low:  
Replace the battery.

If the data is still not restored after the battery is replaced, initialize the SRAM user area.

For information on how to replace the battery, refer to the following.

→ GOT2000 Series User's Manual (Hardware)

For the initialization of the SRAM user area, refer to the following.

→ GOT2000 Series User's Manual (Utility)

## 9.3.4 Precautions

---

This section explains the precautions for using the recipe function.

- ■ 1 Precautions for drawing
- 2 Precautions for editing recipe files
- 3 Precautions for use
- 4 Precautions for using the Character Code for CSV Conversion signal (GS522.b2)
- 5 Precautions for using the SRAM user area

### ■ 1 Precautions for drawing

#### (1) Number of blocks and maximum number of target devices

To specify the number of target devices more than the number of blocks, set consecutive devices in blocks.

Depending on the number of blocks and the setting of [Points], specifying the number of target devices up to its upper limit may be unavailable.

Example) When 2048 is set in [Block Number] and 1 is set in [Points] of all the blocks

According to the upper limit of the number of blocks, up to 2048 devices can be set.

#### (2) Number of blocks and processing time

When a large number of blocks are set in a recipe setting, processing time for writing and reading may increase.

To shorten the processing time, reduce the number of blocks.

#### (3) Influence by recipe file size

A large recipe file requires more space in a data storage, takes a long writing or reading time, and influences others.

The following shows methods to reduce the size of a recipe file.

- Reduce the number of characters in device comments.
- Reduce the number of digits of the record initial values.
- Exclude device comments from the conversion target.

#### (4) Project size and recipe setting

The project size (ROM or RAM) must be equal to or smaller than the capacities of the GOT storage memory (ROM) and operation memory (RAM).

Depending on the recipe setting (including the number of records, number of target devices, and record initial values) and other function settings, setting items may not be set up to each upper limit due to the project size.

#### (5) Save destination of recipe files

Do not specify the same save destination on the GOT for recipe files and for files of other functions (such as the alarm function).

Only recipe files can be displayed or operated on the [Recipe information] screen in the utility.

When a recipe file and a file of other functions are stored in the same folder, the folder cannot be deleted on the [Recipe information] screen.

#### (6) Editing the file to which recipe data is exported

If a device in use has a name starting from 0, the 0 may be deleted by a function of applications for editing files (Microsoft Excel or others).

If the file is saved after the first 0 is deleted, the file cannot be imported normally.

When using a device that has a name starting from 0, edit the file with a text editor.

#### (7) Reflecting the device values of a record to the project data

The project data holds the initial device values of records in a recipe setting.

Even if you change a device value of a record on the GOT, the change is not automatically reflected to the project data.

To reflect the change made on the GOT to the project data, use GT Designer3 to import the recipe file from the GOT to the project data.

- 4.3 ■ 3 Reading the data from the GOT
- 9.3 ■ 2 [Device] tab

**(8) When setting a string-type label or tag for the recipe target device**

Set [Device Type] to [String].

**(9) Character code when a string-type label or tag is set for the device whose [Device Type] is set to [String]**

If you set a string-type label or tag for the device whose [Device Type] is set to [String], set the character code according to the type of the label or tag.

- System label Ver.1: ASCII code or Shift JIS code
- System label Ver.2 and global label: ASCII code, Unicode, or Shift JIS code
- OMRON NJ/NX tag: Unicode
- AB native tag: ASCII code

**■2 Precautions for editing recipe files**

**(1) Character code and conversion destination file**

If a device comment or record name contains any character other than ASCII and Shift JIS characters, convert the relevant file as shown below.

- Convert the file to Unicode text format.
- Turn on the Character Code for CSV Conversion signal (GS522.b2), and convert the file to CSV format.

**(2) Editing a recipe file having more than 251 records**

If a recipe file in binary format (\*.G2P) has more than 251 records, use a text editor or Microsoft Excel 2007 or later to open the file.

**(3) Editing a device comment**

Set a device comment within the maximum number of characters.

Characters exceeding the maximum number of characters cannot be applied to a reverse-converted recipe file.

Set the maximum number of characters used for a device comment in [Maximum number of characters] in the [Basic] tab of the [Recipe] dialog.

**(4) Editing a Unicode text file**

For the precautions for using Unicode text files, refer to the following.
